of polite learning, but of geometry and astronomy, as then understood. She finally entered upon the study of philosophy, and obtained so high a reputation, that she was strongly solicited to become a preceptress in the school in which Ammonius, Hierocles, and other celebrated philosophers, had presided. Actuated by the love of science, she accepted this invitation, and her fame soon became so great that the votaries of philosophy crowded to Alexandria from all parts. She was distinguished by a ready elocution and graceful address, which, united with deep erudition and sound judgment, procured her the admiration of all her hearers. What rendered her more admirable, she discovered none of the vanity or pride of learning, and although eminently beautiful, never gave occasion to the slightest suspicion against her chastity. In consequence of these attractive qualities, the house of Hypatia became the general resort of all the persons of learning and distinction in Alexandria, and among others, of Orestes the governor, a man of liberal education, who frequently sought her company. At this time the patriarchal chair of Alexandria was filled by Cyril, a prelate in the highest degree intolerant and haughty, who was guilty of the outrage of encouraging the populace to plunder the property of the Jews. Orestes resenting this improper conduct, laid the affair before the emperor, who declining to interpose his authority, Alexandria became a frequent scene of tumult between the partizans of the governor and of the bishop. In one of these broils an attack was made on the life of the governor himself, and the respect paid by Cyril to the remains of one of the executed ringleaders, which he consecrated as those of a martyr, rendered him and Orestes irreconcilable enemies. In the rancour of religious bigotry and infuriate intolerance, the intimacy of the governor with Hypatia produced the anger and jealousy of Cyril; and in consequence she was much calumniated by his monkish partizans and the Christian populace, as if guilty of fomenting the breach between the bishop and Orestes. Their blind resentment at length led them to a conspiracy against her life, and a furious band of assassins, headed by one Peter, a reader, seized upon her as she was returning home from the schools, dragged her through the streets of Alexandria, stripped her naked, and finally tore her limb from limb, with circumstances of the greatest barbarity, and committed her mangled members to the flames. This horrible circumstance necessarily reflected the deepest disgrace upon Cyril, and the church of Alexandria, and although attempts have been made to remove all imputation from the bishop of having concerted this atrocity, the haughty cruelty of his temper, his unjust persecution of the Jews, his oppressive and ini-

quitous treatment of the Novatian Christians, but above all, the protection he is said to have afforded to the immediate perpetrator of the murder of Hypatia, render the charge of Damascius, that he either countenanced, or was the contriver of the crime, but too probable. This infamous and disgraceful transaction took place in the year 415, under the reign of Theodosius II.—*Socratis His. Eccles. Suidas. Moreri. Enfield's Hist. of Philos.*

HYPERIDES, an Athenian orator, the contemporary of Demades, Aristotle, and Demosthenes, against the latter of whom he brought that accusation of bribery which procured his banishment. Hyperides had studied rhetoric under Plato and Isocrates, and attained himself to no mean proficiency in the science. It is a curious coincidence that the deaths of all the three eminent men first mentioned, as well as his own, took place in the same year, 322 before the Christian era, when Hyperides being seized, on the demand of Antipater, in the temple of Ceres, was delivered up to that prince, who put him to death. An oration attributed to him is still in existence.—*Saxii Onom.*

HYPERIUS (ANDREW GERARD) the son of a civilian of Ypres, in the Netherlands, where he was born in 1511, and whence he took the name by which he is generally known. His father on his death-bed expressing a wish that he should complete the studies which he had commenced in the Dutch schools at Paris, he entered himself of that university in 1528. After remaining there three years, he went for a twelvemonth to the college of Calvi, in order to perfect himself in philosophy. Becoming suspected of favouring the doctrines of Luther, he found it advisable to retire to England, where he formed a connexion with the family of William, lord Mountjoy, and acted for four years in the capacity of tutor to that nobleman's son. In 1541 he went into Germany, and finally settled at Marburg, where he filled the divinity chair till his death in 1564. He enjoyed a considerable degree of reputation, not only for the knowledge he possessed, but also for the facility with which his mode of instructing communicated it to others. His works fill seven folio volumes. Among them are notes on Scripture, and a great variety of tracts, principally on subjects connected with the study of divinity and the mathematics.—*Saxii Onom. Dupin.*

HYPsicLES, a mathematician of Alexandria, who flourished in the reigns of Marcus Aurelius and Verus. He is principally known as the author of a treatise, entitled "Anaphoricus," which is still extant. An edition of this work appeared at Paris in 1680, with a Latin version, comprised in one quarto volume.—*Fabricii Bibl. Græc*

IBARRA (JOACHIM) an eminent Spanish printer, who may, for his skill and intelligence, be ranked with Baskerville and Bodoni. He was a native of Saragossa, and exercised his profession at Madrid, where he died in 1785, at the age of sixty. The productions of his press are known throughout Europe, and are much esteemed by amateurs for their beauty and accuracy. Two of them are regarded as typographical chefs-d'œuvre, viz. an edition of Don Quixote, 1780, 4 vols. 4to; and the Spanish translation of Sallust, by the Infant Don Gabriel, 1772, small folio. He also printed a magnificent edition of the Bible and a Mosarabic Missal. Ibarra is said to have made some important improvements in the ink which he used for printing, adding to it a certain quantity of Prussian blue.—*Biog. Univ.*

IBAS, bishop of Edessa, in Mesopotamia, in the fifth century, noted in ecclesiastical history on account of the opposite decisions of different councils, relative to the orthodoxy of his sentiments. He was a native of Syria, and was promoted to the see of Edessa, about 436. He was accused before the patriarch of Constantinople of favouring the Nestorian heresy, and abusing Cyril, bishop of Alexandria. After being acquitted, the same accusation of Nestorianism was brought against him the following year, and he was condemned and deposed by the council of Ephesus. In 451 he was declared an orthodox divine, and reinstated in his see by the council of Chalcedon. Several years after his death he was again condemned, as a Nestorian, in the general council held at Constantinople, in 553. A letter concerning the doctrine of Nestorius, written by Ibas, while he was a presbyter, formed a part of the celebrated "Three Chapters," condemned by the latter council as heretical, but received as orthodox by the churches of Africa and Illyria; whence originated a schism which lasted 150 years.—*Dupin. Mosheim. Aikin's G. Biog.*

IBBETSON (AGNES) see Appendix.

IBBETSON (JAMES) an episcopal clergyman, who was educated at Exeter college, Oxford. He became rector of Buskey, in Hertfordshire, and archdeacon of St Albans, and died August 10, 1781, aged sixty-four. He was the author of "Epistola ad Phil-Hebræos Oxonienses," 1743; "A Short History of the General Convocation of the Province of Canterbury;" several single sermons and charges; besides other tracts on ecclesiastical affairs.—**JAMES IBBETSON**, son of the preceding, studied the law and became a barrister. He did not confine his researches to the immediate objects of his profession, but paid much attention to the history and antiquities of his native country, as appears from the following publications:—"A Dissertation on the Judicial Customs of the Saxon and Norman Age," 1780, 4to; "A Dissertation on the National Assemblies under the Saxon and Norman Governments," 1781, 4to. These two dissertations were republished with a third

"On the Folklande and Boelande of the Saxons," in 1782, 8vo. Mr Ibbetson died March 26, 1790, aged thirty-five.—*Clutterbuck's Hist. of Hertfordshire.*

IBBETSON (JULIUS CÆSAR) an ingenious artist, who was a native of Scarborough, in Yorkshire, and was originally a ship-painter, but by the successful cultivation of his talents became eminent for his skill in the delineation of landscape. He accompanied colonel Cathcart on his oriental mission; but in consequence of the death of that gentleman, he returned prematurely with the rest of the embassy. Ibbetson employed himself much in copying the works of Berghem, whose style of painting he imitated with so much success, that he was termed by West, the Berghem of England. His manner as an artist is said to be clear and firm, but sometimes a little hard; and his colouring rather defective. His cattle are touched with great spirit, and the pictures in which they constitute a principal feature, are by far the best of his productions. He died at Masham, in Yorkshire, in 1817. Mr Ibbetson was the author of a work entitled "An Accidence, or Gamut of Oil Painting for Beginners; in which is shown the most easy way of imitating Nature, by means of a simple System, the result of many Years' practice; with a Landscape painted in Oil, by the Author, and all the Tints in Patterns," 1805, 8vo.—*Dayes's Prof. Sketches of Mod. Artists. Watt's Bibl. Brit. Month. Mag.*

IBBOT (BENJAMIN) the son of an English clergyman, incumbent of the living of Beachamwell, in the county of Norfolk, where he was born in 1680. He received a liberal education, and was first a member of Clare hall, Cambridge, but quitted that university in 1700 for Oxford, on a scholarship of Corpus Christi, succeeding to the fellowship annexed six years afterwards. In 1707, Tenison, archbishop of Canterbury, made him one of his domestic chaplains, on which he abandoned a college life, and soon after obtained from his patron the treasurership of the diocese of Wells, and the rectory of the united parishes of St Vedast, Foster-lane, and St Michael le Querne, London. In 1716 he was made king's chaplain, and on George I's visiting Cambridge in the following year, was admitted to the honorary degree of doctor in divinity by the king's command. Dr Ibbot was the Boylean lecturer during the years 1713 and 1714, and the series of discourses delivered by him on this occasion were, as usual, printed in 1727. He subsequently assisted Dr Samuel Clarke, who after his death became his biographer, and edited his theological writings for the benefit of his family, in two octavo volumes, reprinted with additions in 1775. These and a translation of Puffendorf's treatise on the influence of Christianity upon society, and a few poems in Dodsley's collection, are all of his works now extant. In 1724 he obtained a stall at Westminster, but died in the April of the following year.—*Life by Clarke.*

IBN DOREID or **DOREIDI**, a celebrated Arabic poet of the ninth century. He was a native of Bassora, whence he removed when young, in consequence of a foreign invasion, and resided twelve years with a relative at Oman, after which he returned to Bassora. Some years afterwards he went to Fars, with the governor of that province, and was employed in the administration of the finances. Notwithstanding he obtained great riches in this office, he was reduced to indigence by his generosity. Retiring to Bagdat, when his patron was displaced, he attracted the notice of the caliph Moctadez, who gave him a pension of fifty dinars a month. He died at Bagdat, AD 933. Ibn Doreid is reckoned among the principal poets of Arabia, and his works are very numerous, comprising every species of poetical composition. An ode, entitled "Alcassaydeh Almacsoureh," has been commented on by a multitude of Arabian critics; and it has also engaged the attention of modern Orientalists, and been published by Scheidius, at Harderwick, in 1768; and by Haitsma, at Franeker, in 1773, 4to, with a Latin translation.—*Biog. Univ.*

IBN EL ALAM (**ALI BEN AL HASSAN**) a famous Arabian astronomer, and the author of an astronomical table, containing the result of numerous observations made at Bagdat, in the reign of Adadodawla. Unfortunately this work is lost; a circumstance much to be regretted, from the high reputation of Ibn El Alam among his contemporaries. After the death of Adadodawla, he left his country to make a pilgrimage abroad, and died on his return, at Osaila, in 985.—*Id.*

IBN KHILCAN (**SCHEMS-EDDIN ABU 'L ABBAS AHMED**) a distinguished Arabian historian, who was descended from the family of the Barmecides, by Malek, the son of Giaffer, the unfortunate vizier of Haroun al Raschid. Ibn Khilcan was born at Arbel, in 1211, and studied in his youth the poetry, history, jurisprudence, and general literature of Arabia. Early in life he went into Syria, and thence to Egypt; and in 1261, after having filled the office of *cadi* at Cairo, he was promoted to the station of grand *cadi* of the city of Damascus. He continued there till 1270, when he became professor in one of the colleges at Cairo. In 1277 he was re-installed in his post at Damascus, soon after which he joined in the revolt of the governor of that city against the sultan Kelaoun. The attempt was unsuccessful, and Ibn Khilcan was condemned to death for rebellion; but he was afterwards pardoned, and soon restored to his office. He died in a private station at Damascus, in 1282. The principal work of this author is a biographical dictionary, entitled "The Decease of eminent Personages, and the Lives of Contemporaries." An outline of this book was published by M. B. Fred. Tydeman, at Leyden, in 1809, under the title of "Specimen philologicum exhibens Conspectum operis Ibn Chalicani de vites Illustrium virorum, &c.—*Id.*

IBN AL OUARDY or **ALWARDY**, an Arabian geographer and poet of eminence in

the fourteenth century. In his youth he filled the office of deputy to the hakim, or principal judge of the city of Aleppo; but he quitted the judicature to devote his time to the cultivation of science. He composed for the use of the governor of Aleppo, a curious treatise on geography, entitled "The Pearl of Wonders." He was also the author of an abridgement of the chronicle of Abufeda, poems, &c. His death took place in 1330. Several portions of his geographical work have been published by the literati of France and Germany.—*Id.*

IBN YOUNIS (**ALI BEN ABDALRAHMAN**) one of the most illustrious of the Arabian astronomers, born of a noble family, AD 979. The caliph Ayyz directed his attention towards astronomy, and facilitated his studies in that science. Ibn Younis justified by his acquirements the generosity of his patron. He carried on his researches in an observatory near Cairo; and gave the result of his observations in a work, called "Zydj Ibn Younis," the table of Ibn Younis, in which he corrected many of the errors of preceding astronomers. He was also skilled in poetry and music. His death took place AD 1008.—*Notice et Extraits des MSS de la Bibl. du Roi, a Paris. Id.*

IBRAHIM AL SHIRAZI, a famous doctor among the mahometans, who was a native of the city of Shiraz, in Persia, but the period at which he lived is uncertain. He led the life of an ascetic, being wholly employed in devotional exercises, and the study of the moslem law. Many of his works, written in Arabic, are still extant, and are highly esteemed. One of his tracts, entitled "Almo Hab," or "The Good Man," was commented on by Ibrahim al Merouzi, a doctor of the sect of Al Shafei, who died at Cairo, in Egypt, in 951.—*D'Herbelot. Aikin's G. Biog.*

IBRAHIM EFFENDI, a Turk, who was converted to Christianity in the seventeenth century, furnishing an almost solitary example of a moslem convert. He was a member of the body of Ulema, or lawyers, and being skilled in the Persian and Arabic languages, occupied some posts of importance at Constantinople. The perusal of the gospel history produced a conviction on his mind of the truth of Christianity, and having abjured the Mahometan faith, he was baptized at Pera, in 1671. He retired to Venice, and was confirmed in the church of St John the Baptist, in that city. Two years after he assumed the habit of St Dominic, and the name of Paul Anthony Effendi. He left to the library of St John and St Paul, many Arabic, Persian, and Turkish MSS, particularly the four Evangelists, translated into Arabic, with the psalms, canticles, and other books of the Old Testament. He died in 1697, at the age of fifty-six.—*Biog. Univ.*

ICTINUS, an Athenian architect, employed by Pericles in the erection of the Parthenon, or famous temple of Minerva, in the Acropolis of Athens. He wrote a description of that edifice, which is not now extant. Callistrate

is asserted by some to have been his associate in this undertaking; but, according to Vitruvius, Ictinus and Carpon were the joint architects of the Parthenon. Ictinus also erected the temple of Ceres and Proserpine, at Eleusis; and the temple of Apollo Epicurius, in Arcadia. He flourished 450 BC.—*Orlandi Abeced. Pittor. Elmes's Dict. of the Fine Arts.*

IDACIUS, an early monkish historian, whose chronicle commencing with the accession of Theodosius, and bringing down the narrative to the eleventh year of Leo, was edited in 8vo, by Sirmond, at Paris, in 1619. Little more is known of his life, but that he was a Spaniard and a bishop, and flourished in the fifth century. The *Fasti Consulares* have been by some ascribed to him.—*Nouv. Dict. Hist.*

IDES (EVERT YSBRANT) one of the enterprising foreigners employed by the Russian sovereign, Peter the Great. He was a native of Gluckstadt, in Holstein, and entering into the service of the czar, he was in 1692 sent on an embassy to the emperor of China. After his return to Europe he published an account of his journey, at Amsterdam, in 1704. The "Travels of Ysbrant Ides from Moscow to China," were translated into English, and printed in a quarto volume, in 1706.—*Chaufepie. Biog. Univ.*

IETZELER (CHRISTOPHER) a Swiss architect, born at Schaffhausen, in 1734. He first followed the profession of his father, who was a furrier, but having a predilection for the study of mathematics, he relinquished his business and went to Berlin, where he had the advantage of instructions from the celebrated Euler. After travelling in several parts of Europe, he was appointed city architect at home, and the mathematical chair at the gymnasium of Schaffhausen becoming vacant, Ietzeler obtained it, and filled the situation with great distinction, till his death in 1791. He was the author of a description of the new bridge at Schaffhausen; and of a plan of the orphan-house, in the foundation of which he employed a great part of his fortune.—*Biog. Univ.*

IFFLAND (AUGUSTUS WILLIAM) a celebrated German actor and dramatic writer, born at Hanover, April 19th, 1759. His taste for the theatre manifested itself in his infancy; and he was so much affected by the representation of the Rhodogune of Corneille, that his parents would suffer him to be taken to the theatre but very rarely. Nothing however could prevent him from indulging his natural inclination; and his father having declared that he would never permit him to be an actor, he left home privately, and made his debut at Gotha, in 1777. The poet Gotter, who then resided in that city, assisted young Iffland with his advice; and he soon became so distinguished a performer, that he was invited to Manheim, where he became the chief ornament of the court theatre. He was no less famous as a writer than as an actor. His first production was a tragedy, called "Albert of Thurneisen," which was well received by

the public, and was followed by a number of dramatic pieces for the theatre of Manheim, among which may be mentioned, "The Neighbours;" "Daughters to be married;" "The Act of Birth;" "The Idlers;" "Mr Musard;" besides translations from the French of Picard and Duval, and from the Italian of Goldoni. The revolutionary wars at length drove Iffland from Manheim, and he took refuge at Weimar, where he added to his reputation. The king of Prussia at length invited him to Berlin, and entrusted to his direction the entertainments of the court. He died in that city, September 20th, 1814. The works of Iffland are very numerous. An edition of them was published under his own direction at Leipsic, in 1798, 17 vols. 8vo. It comprises, besides forty-seven plays, memoirs of his theatrical career, and reflections on the theory of his art. Madame de Staël said of him, that there was not an accent or a gesture for which Iffland could not account as a philosopher and an artist. His admirers styled him the Moliere of Germany; but French critics do not think him quite entitled to rank with their celebrated countryman.—*Biog. Univ. Biog. N. des Contemp.*

IGNARRA (NICHOLAS) a learned Neapolitan antiquary, born in 1728. He was educated at the college of Urbano, at Naples, and at the age of twenty he taught Greek in that seminary. When Charles III founded the Herculanean academy in 1755, Ignarra was appointed one of the first members. In 1763 he succeeded Mazzochi as professor of sacred literature in the royal university, and in 1771 he became principal professor. In 1782 he was nominated director of the royal printing-office; and two years after, tutor to the hereditary prince Francis of Bourbon. He was made a canon of the cathedral of Naples in 1794; and died in 1808. His principal work is entitled "De Palestra Neapolitana Commentarium," 1770, a very learned production. He also published the life of Mazzochi, and other pieces.—*Biog. Univ.*

IGNATIUS (SAINT) one of the primitive fathers of the church, who suffered martyrdom at Rome during the third persecution of the Christians. He was a Syrian by birth, and an immediate disciple of St John the Evangelist, who, in the sixty-seventh year of the Christian æra, committed the church at Antioch to his pastoral superintendance, as successor to Evodius. Over this bishoprick he presided for upwards of forty years, when the emperor Trajan, after his triumph over the Dacians, entering the city, exercised many severities towards those who professed the Christian faith, and summoned the prelate himself before him, on which occasion Ignatius conducted himself with such boldness in the imperial presence, that he was forthwith sent to Rome, and ordered to be exposed in the amphitheatre to the fury of wild beasts. This dreadful death he underwent with much fortitude, having availed himself of the interval between his sentence and its execution to strengthen by his exhortations the faith of the

Roman converts. After his decease, which took place on the 20th December, 106, his remains were carried to Antioch for interment. Of his works there remain seven epistles, edited in 1645 by archbishop Usher, republished by Cotelerius in 1672, in his collection of the writings of the apostolical fathers, and again printed in 1697 at Amsterdam, with notes, and the commentaries of Usher and Pearson. An English translation of them from the pen of archbishop Wake is to be found among the works of that prelate. There are some other letters of minor importance, which, though the question of their authenticity has met with supporters, are generally considered to have been attributed to him on insufficient authority.—There was also a patriarch of Constantinople of this name, about the middle of the ninth century. He was son to the emperor Michael Curopalata, and on the deposition of his father, assumed the ecclesiastical habit. The uncompromising firmness which he displayed after his elevation to the patriarchal chair in 847, in subjecting Bardas, a court favourite, to the censures of the church, on account of an incestuous connexion, caused him to undergo a temporary deprivation from office. Under Basil, however, he was restored to his former dignity, and presided in his capacity of patriarch at the eighth general council. His death took place about the year 878.—*Cave. Milner's Church Hist. Horsley's Letter to Priestly. Nouv. Dict. Hist.*

IGNATIUS, see LOYOLA.

IHRE (JOHN) professor of rhetoric and politics in the university of Upsal, was born in March 1707. On account of the early death of his father, who was professor of theology at Lund, he was brought up by his grandfather, then archbishop of Upsal. In 1730 he set out on his travels for improvement, and on his return was elected a member of the Academy of Sciences. In 1757 he was made public professor of poetry, and in 1748 was appointed professor of rhetoric and politics, an office the duties of which he discharged with great reputation for forty years. In 1756 he was raised to the rank of counsellor of the chancery; and in 1759 he received the order of the polar star. He died in 1780. His works are, "Conspectus Prælectionum in Linguam Suecanam," 1745, never finished; "Lexicon Dialectorum," 1766; "Glossarium Suio-Gothicum," 2 vols. folio, 1769, a valuable work, well known to philologists. He also wrote on the old catalogue of the Suio-Gothic kings, and on the old West-Gothic laws. In his dissertations "De Runorum, Antiquitate, Patria, Origine, et Occasu," he asserts that the Runic writing was formerly used throughout the greatest part of Europe, and that it was introduced into Sweden in the sixth, and became extinct in the fifteenth century. He was a man of sound judgment and great accuracy, and very generally esteemed.—*Nouv. Dict. Hist. Saxii Onom.*

IKEN (CONRAD) a learned German divine and Oriental scholar, who was a native of Bremen. He studied at Utrecht, and in 1714 be-

came preacher at Lopik, and afterwards Zutphen. In 1719 he removed to Bremen, and the same year obtained the degree of doctor of theology from the university of Utrecht. He was appointed public professor of theology in the gymnasium of Bremen in 1723; and he was also preacher in St Stephen's church, and president of the German society in that city; as likewise a member of the academy of sciences at Berliu. He died in 1753, aged sixty-four. His principal works are, "Hebrew Antiquities," 8vo, of which there are several editions; "Dissertations on remarkable Passages in the Old and New Testaments," 2 vols. folio; and "A Treatise on the Daily Worship of the Temple, from the Talmud, with notes," 4to. All his works are written in Latin.—*Aikin's G. Biog.*

ILDEFONSE (SAINT) bishop of Toledo, in which see he succeeded Eugenius about the year 658. He was born in 585, and studied under St Isidore at Seville. On the death of his tutor he entered into a religious house at Toledo, of which he became the superior, and was thence translated to the superintendance of the diocese. He was the author of a catalogue of writers on ecclesiastical subjects, as well as of some other works now little known, and died in 667.—*Nouv. Dict. Hist.*

ILLIVE (JACOB) was a printer, who applied himself to letter-cutting in 1730, and carried on a foundry and printing-office together. He published some strange productions, one of which was a pretended translation of "The Book of Jasher," 1751, said to have been made by one Alcuin of Britain, but secretly written by Illive himself. In 1733 he also published an oration to prove the plurality of worlds, and that men are apostate angels, who are punished in this life for the sins of a former one. His farrago was spoken at Joiners' hall, and he followed it up by similar productions. He was confined two years in Clerkenwell bridewell, for publishing "Modest Remarks on the late Bishop Sherlock's Sermons," during which period he wrote "Reasons" for a reform of that prison, and other pieces enumerated in Gough's topography. He was deemed not altogether of sound mind. He died in 1763.—*Nichols's Lit. Anec.*

ILLESCAS (GONSALVO) a monk of the sixteenth century, a native of Spain, known as the author of a "History of the Lives of the Popes," written in the language of his country, and printed in two folio volumes, 1570. He survived the publication of his work about ten years. It was reprinted many years after his death, with a continuation by Louis de Babia, bringing down the history to 1605; a farther continuation was afterwards added by Marcos de Guadalaxara.—*Nouv. Dict. Hist.*

ILLYRICUS (MATTHIAS FLACIUS) a Lutheran divine, was born at Albano, in Istria, in 1520. He studied at Venice, Basil, and Tübingen, and made an open profession of the doctrines of the Reformation. This procured him the friendship of Luther and Melancthon, although he subsequently had a dispute with the latter on the subject of concession to the

is manists, which difference of opinion, as usual, produced considerable enmity. He then removed to Magdeburgh, where he wrote several works, and commenced the collection of an ecclesiastical history, denominated "The Centuries of Magdeburgh," the best edition of which is that of Basil, three volumes folio, 1624. In 1557 he became professor of divinity and Hebrew at Jena, but gave up his chair in consequence of a quarrel concerning original sin, with Strigelius. He then removed to Ratisbon, and lastly to Frankfort, where he died in 1575. His principal works are, "Varia Doctorum Piorumque, Virorum de Corrupta Ecclesia Statu," 1557; "Clavis Scripturæ," 2 vols. folio; "Catalogus Testium Veritatis," folio.—*Melchior Adam. Niceron. Moreri.*

IMBERT. There were three of this name. JOHN, a lawyer of Rochelle, was the author of several treatises on French jurisprudence, about the middle of the sixteenth century. Of these the principal are, "Institutiones Forenses," 1541, 8vo; and "Enchiridion Juis scripti Gallia," 1559, 4to. He died about the year 1598. The second, JOSEPH GABRIEL, born in 1654, at Marseilles, studied painting under Le Brun and Vandermeulen, and attained to great eminence as an artist. In 1688, his mind taking a devotional turn, from some disappointment, the nature of which is unexplained, he took the vows as a monk of the Chartreux, but although he thus renounced the world, his pencil continued to be employed on scriptural subjects, and the high altar of the convent belonging to his order in his native city, is adorned with what is considered his chef-d'œuvre. He attained to the advanced age of ninety-five, when he died at Avignon, in 1749.—BARTHOLOMEW, an ingenious French writer, was born in 1747 at Nismes. He was the author of several compositions of merit, both in prose and verse, which obtained a high degree of popularity. Of these the one most favourably received was a poem, which has for its subject the judgment of Paris. His fables, written in the manner of Fontaine, are less esteemed, and are decidedly inferior, both in point and style, to those of the last named writer. He was also the author of some successful dramatic pieces, and of a novel, entitled "Les Egaremens de l'Amour." His literary reputation procured him a seat in the academy of his native city, where he died of an attack of fever in 1790.—*Nouv. Dict. Hist.*

IMHOFF (JOHN WILLIAM) an eminent genealogist, born of a noble family of Nuremberg in 1651. He was a lawyer and senator in that city, and devoted himself to the study of history, politics, and the descents and alliances of all the great houses of Europe. He died in 1728, leaving behind him several voluminous monuments of his industry. These are; "De Notitia procerum Germaniæ," 2 vols. folio; "Historia Genealogica, Italiæ et Hispaniæ," folio; "Familiarum Italiæ, Hispaniæ, Portugalliæ, Magnæ Britanniæ, cum Appendice," each a volume fol.; "Recherches sur les Grandes d'Espagne," 8vo.—*Nouv. Dict. Hist.*

IMPERIALI (JOSEPH RENATUS) a celebrated Roman cardinal, was born April 26, 1651, of an illustrious family of Genoa. He was appointed general of the papal mint, treasurer of the apostolical chamber, and lastly cardinal, in February 1690. He was employed by different popes in the most important affairs, and in the conclave of 1730 was within one vote of being elected pope himself. He died in 1737, universally respected for his probity, love of learning, and general liberality. He ordered by his will, that his noble library should be made public, of which a catalogue was printed at Rome in 1711, folio. This library was long one of the chief ornaments of Rome.—*Nouv. Dict. Hist.*

INA, king of the west Saxons, in the seventh and eighth centuries. He succeeded Ceadwalla about 689, and after having obtained advantages over the people of Kent, in 694, he turned his arms against the Britons, from whom he wrested Somersetshire, and other parts of the west of England. He then made war on the Mercians; but the contest was terminated without much advantage to either party, by a bloody battle which was fought in 715. The latter part of the reign of Ina was spent in works of peace, and, according to the prevailing fashion of the age in which he lived, he closed his days in a monastery, having resigned his crown in 728. This prince appears to have possessed considerable talents, and he is celebrated as the principal legislator of the Anglo-Saxons. His laws, some of which are yet extant, served as the foundation of the code formed by Alfred the Great.—*Henry's Hist. of Gr. Brit. Turner's Hist. of Anglo-Saxons.*

INCHBALD (ELIZABETH) the daughter of a farmer named Simpson, born at Stanningfield, in Suffolk, in the year 1756. Having lost her father at the age of sixteen, she came to London with the view of obtaining an engagement for the stage, when attracting the attention of Mr Inchbald, then an actor of some celebrity, a marriage was the consequence, and she accompanied her husband on several provincial tours, partaking in his engagements. He dying in 1779, she returned to London, and made her debut at Covent-garden as Bellario, in the play of Philaster, October 3, 1780. She continued on the boards about eight years, and from her great personal attractions, which she retained to a late period of her life, as well as from her natural talents, was a popular performer. After her retirement from the stage in 1789, she depended principally on her literary labours for support, publishing several dramatic pieces, most of which had a temporary success, while some are even yet considered as what is technically termed "stock plays." Her works, dramatic and miscellaneous, consist of "A Mogul Tale," a farce, 1784; "I'll tell you what," a comedy; "Appearance is against them," and the "Widow's Vow," farces, 1786; "The Child of Nature," a dramatic piece; the "Midnight Hour," a farce; "Such things are," a play, 1788; "The Married Man," a comedy, 1789;

"Next door Neighbours," a comedy, and "A Simple Story," a novel, in four 12mo vols. in 1791; "Every one has his Fault," a comedy, 1793; "Wedding Day," a comedy, 1794; "Nature and Art," a novel, in two vols. 12mo, 1796; "Wives as they were and Maids as they are," a comedy, 1797; "Lover's Vows," a play from the German of Kotzebue, 1798; "Wise Man of the East," a comedy, 1799; and "To Marry and not to Marry," 1805. She also edited a collection of dramas, entitled the "British Theatre," with biographical and critical remarks, in 25 vols. 12mo, during the period from 1805 to 1809; a similar collection of the most popular farces, in seven vols 12mo; and the "Modern Theatre," in 10 vols. 1809. Her death took place at Kensington, August 1, 1821, in her sixty-sixth year. The "Simple Story" will long preserve the reputation of Mrs Inchbald as a novelist, being a tale of great interest and genuine pathos; and it adds highly to the merit of this ingenious and able woman, that she passed a life attended with many difficulties and temptations, with unsullied reputation.—*Gent. Mag.*

INCHOFER (MELCHIOR) a native of Vienna, born 1534. He was originally intended for the law, and made a considerable proficiency in the study of jurisprudence, but at length resolved to abandon this profession for the church, and taking the vows in 1607 at Rome, became a member of the Jesuit's college in that capital. Thence he went to Sicily, and gave lectures with great success at Messina, in theology and mathematics, out publishing in 1630 a "Letter from the Blessed Virgin to the People of Messina, proved to be genuine," the work gave great offence to the society to which he belonged; nor was it without considerable difficulty that he at length succeeded in appeasing his brethren by an explanation of his views in writing it. If the "Monarchia Solipsorum," a severe satire on the all-grasping policy and ambition of the disciples of Loyola, be indeed his, and not the composition of Scotti, an ex-jesuit, to whom it has also been ascribed, this difference may probably have tended not a little to produce a philippic, scarcely less remarkable for its bitterness than for the ability with which it is executed. The work, however, did not appear till after his death, when it was printed in Holland, and his title to it is altogether very questionable. Inchofer, though a good scholar, was very credulous, many proofs of which may be found in his writings. Of these, the principal, beside those already named, are, "De Motibus Terræ et Solis," 4to; "Historia trium Magorum," 4to; "De Sacra Latinitate," 4to. and an Ecclesiastical History of the Kingdom of Hungary, folio. His death took place in 1648 at Milan.—*Niceron.*

INCLEDON (BENJAMIN CHARLES) generally known by the latter of his Christian names only, an eminent English vocalist, born about the year 1764, at St Kevevan, in the county of Cornwall, where his father is said to have been a respectable member of the

faculty. When only eight years old, the extraordinarily fine tones of his voice, for which he was in after life so distinguished, induced his parents to article him to the celebrated Jackson, of Exeter, under whose tuition he remained as a chorister in Exeter cathedral, until he had attained his fifteenth year. The restraints, however, to which he was necessarily subject in this situation, were highly disagreeable to a boy of his mercurial disposition, and he took an opportunity to quit Exeter abruptly in the year 1779, and to enter as a common sailor on board the Formidable, 98 gun-ship, commanded by rear-admiral (then captain) Cleland. In the royal navy he remained about five years, during which period he sailed to the West Indies, and saw some service. His vocal abilities having attracted the notice of his officers, especially of lord Mulgrave (then captain Phipps), and admirals Pigott and Hervey, he was advised by them to try his fortune on the stage. He accordingly made his first bow to a theatrical audience in Collins's Southampton company, in 1783, as Alphonso, in the Castle of Andalusia. A subsequent engagement, entered into with the Bath manager the following year, introduced him to the acquaintance, and eventually to the friendship, of Rauzzini, who not only did his utmost to bring him before the public in a manner suitable to his talents, but also conferred on him the no less solid benefit of his instructions. In October 1790, he made his *debut* on the London boards, at Covent-garden theatre, with great success in the character of Dermot, in O'Keefe's musical farce of "The Poor Soldier," and rose at once into a degree of popularity, which attended him till the infirmities consequent upon advancing years, and a not very regular mode of life, compelled him to retire from the active duties of his profession. Of the diminution of his powers, however, he never could be persuaded, but constantly attributed his declining popularity to the caprice of the public. His voice, a rich tenor, combined uncommon power, sweetness, and ductility, both in the natural and falsetto, and his intonation was singularly correct, taking his imperfect education into consideration. His articulation was however far from equal to his other qualities, being coarse, not to say vulgar. The better sort of the old English ballad, of which Stevens's "Storm," and Gay's "Black-eyed Susan," are, perhaps, amongst the finest specimens, was decidedly his forte; nor in this style of singing had he ever an equal. Shield wrote many of his airs expressly for him, and never has any one done more justice to his composer. Pecuniary embarrassments, arising from an utter carelessness of money and general imprudence, embittered the latter part of his life, which was closed at Worcester, on the 11th of February, 1826. His remains were carried to Hampstead, in the vicinity of London, and were there interred.—*Gent. Mag.*

INGENHOUSZ (JOHN) a Dutch physician, chemist, and natural philosopher of eminence. He was born at Breda, in 1730 and was

brought up to the study of medicine, which he practised for some years in his native city. In 1767 he took a voyage to this country, to learn the Suttonian method of inoculation for the small-pox. He became acquainted with Dr. after, afterwards sir John Pringle, president of the Royal Society, through whose recommendation he was employed in 1768, to inoculate the children of the royal family of Austria. He went to Vienna for that purpose, and his services were rewarded with a pension of 600 florins. Returning to England, he engaged in medical practice near London, and occupied his leisure with chemical and philosophical researches, which were the subjects of his publications in the Philosophical Transactions, and other works of science. He was also the author of "Experiments on Vegetables," 8vo; "New Experiments and Observations on different Subjects relating to Natural Philosophy," 2 vols. 8vo; and an "Essay on the Food of Plants." He died September 7, 1799, at Bowood, in Wiltshire, the seat of the marquis of Lansdown, who extended his patronage to this ingenious foreigner.—*Biog. Univ. Biog. Nouv. des Contemp.*

INGELO (NATHANIEL) a clergyman of the church of England, known as the author of "Bentivolio and Urania," a religious romance. He received his education at Cambridge, and held a fellowship at Emanuel college, which he afterwards resigned for one at Queen's, in the same university, and held the latter with another, at Eton. His death took place in 1683. His correspondence with Dr Hammond appeared in 1739.—*Harwood's Alumni Eton.*

INGHIRAMI (TOMASO FEDRA) an eminent Italian scholar, was born in 1470. He was taken while an infant under the protection of Lorenzo de' Medici, where he studied with great diligence. He obtained the name of Phedra or Fedra, from pronouncing some extempore Latin verses, while performing that part in Seneca's play of Hippolytus, in order to amuse the audience until some machinery could be rectified behind the scenes. Alexander VI made him canon of St Peters, and afterwards a bishop. In 1495 he was sent as nuncio into the Milanese, to treat with the emperor Maximilian, who created him count palatine and laureate. He was also made librarian of the Vatican, and secretary to the college of cardinals. He died in 1516. He wrote a defence of Cicero; a commentary on the *Ars Poetica* of Horace; a history of Rome; and remarks on Plautus, with additions to that author's *Aulularia*.—*Nouv. Dict. Hist.*

INGRAM (ROBERT) an English clergyman, author of several learned and ingenious treatises on scriptural subjects. He was a native of Beverley, in Yorkshire, where he was born in the spring of 1727, and received the rudiments of a classical education at the grammar-school in that town. Removing in due time to Cambridge, he obtained a fellowship of Corpus Christi college in that university, and was preferred in succession to the benefice of Bridhurst, Kent; Orston, Notts.; and

Wormington and Boxted, in the county of Essex. The titles of his principal essays are, "A View of the Great Events of the Seventh Plague," 1785; "An Account of the Ten Tribes of Israel, being in America, originally written by Manasseh Ben Israel, with Observations," 1792; and "A complete and uniform Explanation of the Prophecy of the Seven Vials of Wrath," printed in 1804, the year of the author's decease.—*Gent. Mag.*

INGRASSIAS (JOHN PHILIP) an eminent physician and medical writer, was born in Sicily, in 1510. He studied medicine at Padua, where he graduated as MD in 1537. He accepted the chair of medicine and anatomy, at Naples, where he obtained great credit and distinction. From Naples he retired to Palermo, and in 1563 Philip II appointed him first physician for Sicily and the neighbouring isles. He adopted such salutary regulations, when the plague raged at Palermo, as put a stop to the calamity, and highly endeared him to the citizens, who would have rewarded him with great munificence, had not he disinterestedly refused to avail himself of their gratitude. He died greatly regretted at the age of seventy. Ingrassias ranks among the improvers of anatomy, by his discovery of the bone, called stapes, in the ear, and by that of the seminal vesicles. He wrote several works on surgery and anatomy, the principal of which is entitled, "In Galeni Librum de Ossibus Commentaria," folio, Massina, 1603. It contains the text of Galen, in Greek and Latin, with a diffuse commentary; the figures are those of Vesalius. In this work Galen is ably defended, but not against the truth of modern discovery.—*Halleri. Bibl. Anat.*

INGULPHUS, abbot of Croyland, and author of the history of that abbey, was born in London about 1030. He received his early education at Westminster, and afterwards went to Oxford, where he applied to the study of Aristotle, and as he says, "clothed himself down to the heel in the first and second rhetoric of Tully." In the year 1051, William, duke of Normandy, then a visitor at the court of Edward the confessor, became so partial to Ingulphus, then of the age of twenty-one, that he made him his secretary. On the return of the duke to Normandy, he also became that prince's prime favourite, and as he himself ingenuously confesses, did not behave with the necessary prudence and moderation. Finding that the courtiers were forming a party to ruin him, he obtained leave from the duke to make a pilgrimage to the Holy Land, and upon his return entered into the order of the Benedictines, at the abbey of Fontenelle, in Normandy, of which he became prior. On the acquirement of the crown of England by duke William, Ingulphus was created abbot of the rich monastery of Croyland, and being in great favour with the king and archbishop Lanfranc, he was enabled to rebuild it, and obtain for it many privileges. He died in 1109. Ingulphus is author of an account of the life of St Guthlac, and also of a history of the monastery of Croyland, which last work is

interspersed with many particulars of the English kings. It was published by sir Henry Savile, in 1596, among the "Scriptores post Bedam," and has been reprinted both at Frankfort and at Oxford, the latter of these editions, dated 1684, being the most complete. The history of Croiland comprises from 664 to 1091.—*Vossii Hist. Lat. Bayle. Pits.*

INNOCENT III, one of the most eminent of the popes, was born in 1161, at Anagni, and was a descendant from the counts of Segni. He was elevated to the papacy at the age of thirty-seven, in succession to Celestine III, in the year 1198. His first care was to unite the Christian princes in a crusade for the recovery of Palestine, and in order to succeed, he began by a cruel persecution of the Albigenses. He treated monarchs with as little consideration as heretics. He put France under an interdict, because Philip Augustus divorced his queen, Ingelburgha, and treated England in the same manner, to be revenged on king John, whom he deposed by a papal bull, which absolved his subjects from their allegiance, a fact which forms a conspicuous portion of English history. He treated Raymond, count of Toulouse, in a similar, but still more insolent and merciless manner. Under him the temporal power of the popes was built upon a solid foundation. Romagna Umbria, the March of Ancona, Orbitello, and Viterbo, acknowledged him for their sovereign, and he reigned in fact from sea to sea. The Roman republic, in her first four centuries, did not possess more territory than this pope. He even conquered Rome itself, subjecting the city to his see the very next day after his consecration. Hitherto the prefect of the city and other magistrates had taken the oath to the emperors, but Innocent boldly insisted upon their swearing allegiance to himself, and was obeyed. The new senate was no longer that of the Romans, but of the pope, and he also abolished the title of consul. It is the province of history to record the political events of this haughty papal reign, but it may be observed, that Innocent III convoked the fourth general council of the Lateran in 1215. His decrees are also famous among canonists, and it was in this pontificate that the celebrated orders of St Dominic and St Francis de Assisi were founded. Innocent died at Perugia, the 20th July, 1216, leaving behind him a character for great abilities, and still greater pride and ambition. From the moment of his exaltation, he resolved to follow the example of Gregory VII, and with equal arrogance, intrepidity, and address, pursued his ambitious plan until he arrived at a height of despotism, beheld with astonishment by all Europe; but to which, to the extreme disgrace of the age, all Europe tamely submitted. It may, however, be at the same time observed, that this same despotism, in its excess, was of no long duration, and that none of the successors of Innocent could play with impunity the same lofty part. He was the author of a variety of theological tracts, a catalogue of which may be seen in Cave and Dupin. The whole of them

were published at Cologne, in 1575, in 2 vols. folio. The most valuable of his works are, his "Epistles," which throw considerable light on the ecclesiastical history of his time, and are serviceable to students in canon law. The most correct edition of these is that of Baluze, Paris, 1682.—*Cave's Hist. Lit. Dupin. Moreri. Nouv. Dict. Hist.*

INNOCENT XI (BENEDICT ODESCALCHI) was the son of a rich banker at Como, in the Milanese, where he was born in the year 1611. His first profession was that of a soldier, which he quitted for the church, and after passing through the intermediate dignities, he was elected pontiff in 1676. This pontiff was chiefly distinguished for his firm probity of character, and determined enmity to France. His opposition to what is in that kingdom called the *regale* or royal rights, on the decease and investiture of bishops, was tenacious in the extreme. He even refused bulls to all the French clergy nominated to benefices, after the famous declaration of the Gallican church in 1682; and at his death more than thirty benefices failed of pastors on this account. He was equally decided in the dispute on the privileged quarters of ambassadors, which nuisance he determined to remove, while Louis XIV, with equal pride, resolved to maintain that of his own representative, although all the rest of the catholic sovereigns agreed to so reasonable a reform. Innocent would not receive the minister directed by Louis to maintain this unreasonable licence, and even interdicted the church, at which he attended, divine service. These disputes were highly favourable to the English revolution, as it induced the pope in 1689, to unite with the allies against James II, in order to lower the influence of Louis XIV. His conduct in this respect has led many catholics to assert, that he sacrificed the catholic religion to his personal resentment, and it was pointedly said, that "to put an end to the troubles of Europe, it was only necessary for James II to become a protestant, and the pope a catholic." Bayle, however, judiciously observes, that the extreme predominance of any great catholic sovereign is injurious to the interests of the papacy, and mentions the similar conduct of Sextus V, another able pope, in relation to Philip II of Spain, and queen Elizabeth of England. Innocent died on the 12th August, 1689, at the age of seventy-eight, leaving behind him the character of an able and economical pontiff, and of an honest and moral man.—*Bayle. Bowers's Hist. of the Popes.*

INVEGES (AUGUSTIN) a jesuit and historian, was born at Siacca in Sicily, in 1595. He quitted the society after teaching philosophy and theology, and betook himself to the composition of history. He died at Palermo, in 1677, at the age of eighty-two. His works are, "The History of Palermo," 3 vols. folio; "History of the terrestrial Paradise," 4to; "La Cartagine Siciliana," 4to; and the "History of Cascamo," in which last work he celebrates the Sicilian vespers as an act which deserved the applause of all historians.—*Nouv. Dict. Hist.*

IPHITUS, king of Elis, in Greece, the son of Praxionidas, and grandson of Oxylus, memorable as the institutor of the famous Olympic games. They are said to have been originally celebrated by Pelops, or according to others, by Hercules, in honour of Jupiter; and after being neglected for several ages, they were restored or re-established by Iphitus. Controversies have arisen, as to the age in which this prince lived. Some chronologers place him 884 BC, but sir Isaac Newton has shown that he probably lived a century later, and that the first games of his institution were held 776 BC.; from which period they were continued without interruption for several centuries. These games were celebrated every fourth year, in the month of July, near Olympia, a city of Elis. The chief exercises at which the competitors contended were, leaping, running, throwing the disc or quoit, darting the spear, and wrestling. Contests of this description were exclusively exhibited at the first institution of the Olympic games; but afterwards racing was admitted, either horse or chariot racing; and at a subsequent period, candidates contended for the prize of skill in music, poetry, eloquence, &c.—*Sharpe's Introduct. to Univ. Hist. Lempriere's Bib. Class.*

IPHICRATES, a famous Athenian military commander in the fourth century before the christian era. He was born in obscurity, but raised himself to eminence in his profession by his courage and talents, early in life. In the war of Corinth, 395 BC. he opposed with success Agesilaus, the warlike king of Sparta. He afterwards commanded a body of auxiliary troops in the service of Artaxerxes, king of Persia, in an expedition to Egypt; and in 368 BC. he relieved Sparta, when invaded by the Theban general, Epaminondas. In the social war he was one of the commanders of the fleet fitted out by the Athenians for the recovery of Byzantium, when, being accused of treachery by one of his colleagues, he defended himself with such spirit, that he was acquitted by his volatile countrymen; but though he lived to a great age, he did not again engage in active service. In the early part of his career he restored to his dominions Seuthes, king of Thrace, whose daughter he married. Iphicrates was a strict observer of discipline, and was the author of some important improvements in the arms and accoutrements of the Athenian soldiery. He was accustomed always to fortify his camp in the field, even in a friendly country; and when once asked why he took so much trouble, he answered, "Because if, contrary to probability, I should be attacked, I may not be obliged to make the disgraceful excuse that I did not expect it."—*Cornelius Nepos. Xenophon.*

IRELAND (**JOHN**) an ingenious writer on works of art, who was a native of Shropshire. He was originally a watchmaker, which occupation he exercised for some years in the metropolis. Having a taste for the fine arts, he became a print and picture-dealer, and also devoted his attention occasionally to literature. He died at or near Birmingham in 1808. His

publications are, "The Emigrant, a poem," 1785, 4to; "Letters and Poems, by John Henderson, with Anecdotes of his Life," 1786, 8vo; and "Hogarth illustrated," 1791, 3 vols. 8vo, which must not be confounded with a volume, entitled "Graphic Illustrations of Hogarth," by the subject of the following article.—*Month. Mag.* vol. xxvi.

IRELAND (**SAMUEL**) originally a silk-manufacturer in Spitalfields, but left his commercial pursuits to become a speculator in scarce books, prints, &c. He published a multitude of picturesque tours, in various parts of England and the continent, embellished with aquatint engravings; but his chief claim to notice arises from his concern in the publication, entitled "Miscellaneous Papers and Legal Instruments, under the hand and seal of William Shakspeare, including the Tragedy of King Lear, and a small fragment of Hamlet, from the original MSS." London, 1796, folio. Of wilful participation in this gross experiment on the credulity of the public he was acquitted, by the declaration of the acknowledged culprit, his son, in an "Authentic Account of the Shakspeare Manuscripts," which appeared in 1796, 8vo; and in a subsequent account of the fabrication of the MSS. published under the title of "Confessions," in 1805, 8vo. Samuel Ireland died in 1800. *Gent. Mag. Watt's Bibl. Brit. Thespian Dict.*

IRENÆUS (**SR**) a christian bishop and martyr of the second century, whose exertions with a view to heal dissensions in the church, especially those which arose in the year 195, respecting the proper time for the celebration of Easter, were not unsuitable to his name. He was born in Greece, and was educated in the christian faith by St Polycarp, who sent him on a mission into Gaul, where he became a distinguished member of the church at Lyons, under Photinus. On the martyrdom of this prelate, Irenæus was appointed his successor in the diocese in 174, and presided in that capacity at two councils held at Lyons, in one of which the Gnostic heresy was condemned, and in the other the Quartodecimani. He also went to Rome, and disputed there publicly with Valentinus, Florinus, and Blastus, against whose opinions he afterwards wrote with much zeal and ability. There are extant several editions of his works: one by Erasmus, printed at Paris in 1575; another by Grabe, at Oxford in 1702; and a third by Massuet, at Paris, 1710, folio. Mr Dodwell published a series of six essays on the writings of this father of the church, which he illustrates by many historical references and remarks. St Irenæus suffered death in the fifth persecution of the Christians under Septimius Severus, AD. 202.—*Cave. Dupin.*

IRENE, empress of the east in the eighth century. She was an Athenian by birth, and became the wife of Leo IV, and the mother of Constantine VI, whom she long kept in a state of tutelage, and after a nominal reign of eighteen years, she caused him to be deprived of his sight, and assumed the sovereignty of

the empire. Her opposition to the Iconoclasts, or enemies of image-worship, at first rendered her popular among her subjects; but her connexion with Charlemagne having created an alarm for the independence of the Greek empire, a conspiracy was formed against her, and she was dethroned by Nicephorus, and exiled to Leshos, where she died in indigence about 805. Her zeal for orthodoxy has procured her from the Latin historians those eulogies which were due to her talents, accompanied as they were by unprincipled ambition and maternal cruelty.—*Gibbon. Aikin.*

IRETON (HENRY) an eminent commander and statesman of the parliamentary party in the civil wars of Charles I. He was descended from a good family, and was brought up to the law; but when the civil contests commenced, he joined the parliamentary army, and by the interest of Cromwell, whose daughter Bridget he married, he became commissary general. He commanded the left wing at the battle of Naseby, which was defeated by the furious onset of prince Rupert, and he himself wounded and made prisoner. He soon recovered his liberty, and took a great share in all the transactions which threw the parliament into the power of the army. It was from his suggestion that Cromwell called together a secret council of officers, to deliberate upon the disposal of the king's person and the settlement of the government. He had also a principal hand in framing the ordinance for the king's trial, and sat himself as one of the judges. Ireton accompanied Cromwell to Ireland in 1649, and was left by him in that island as lord deputy. He reduced the natives to obedience with great vigour and ability, but not without a degree of severity, which amounted to cruelty, never giving quarter to any prisoner who appeared to have been concerned in the Irish massacre. Having crowned his sublunary career with the capture of Limerick, he was seized with a pestilential disease, and died in that city, in November 1651, sincerely lamented by the republicans, who revered him, says Grainger, "as a soldier, a statesman, and a saint." Hume also calls him a memorable person, celebrated for vigilance, capacity, and a rigid exercise of justice, during his unlimited command in Ireland: upon his own principles, the same historian observes, that he was deemed by many, a patriot and ardent lover of liberty. He received a public funeral, but after the restoration his body was taken up and suspended at the gallows with that of Cromwell, and was buried in the same pit.—*Biog. Brit. Hume. Grainger.*

IRIARTE or YRIARTE (JOHN D') a learned Spaniard, distinguished for his acquaintance with archæology. He was a native of Teneriffe, and going to Spain, he obtained the post of royal librarian at Madrid, and was also interpreter in the office of the secretary of state. He published "*Palæographia Græca*," 2 vols. 4to; a Catalogue of the Arabic MSS. in the Library of the Escorial, &c. He was a member of the Royal Academy of Madrid; and his death took place in 1771.—*Nouv. Dict. Hist. Biog. Unit.*

IRIARTE or YRIARTE (THOMAS D') a Spanish poet and political agent of the last century. He was employed as a negotiator at the peace of Basil, and died in 1798. As a poet he is known by his "*Literary Fables*," which have been translated into English; and "*La Musica, Poéma*." Madrid, 1784, 4to.—*Ibid.*

ISDEGERDES, see YESDEGERD.

IRWIN (EYLES) was born of Irish parents at Calcutta, in the East Indies, in 1748. He received his education at a private academy in England, and returned to the east in a civil capacity in 1767, but was suspended in 1777, for his attachment to lord Pigot. He came to England, over-land, to seek redress, which he obtained, and was restored to his former situation at Madras. In 1785 he again visited England, but in 1792 was appointed to superintend the Company's affairs in China. He finally returned to England, where he died in 1817. His works are, "*Adventures during a Voyage up the Red Sea, and a Journey across the Desert*;" "*Bedukah, an Indian Pastoral*;" "*St Thomas's Mount, a Poem*;" "*Eastern Eclogues*;" "*Epistle to Mr Hayley*;" "*Ode on the Death of Hyder Ali*;" "*Triumph of Innocence, an ode on the acquittal of Mr Hastings*;" "*Inquiry into the feasibility of Buonaparte's Expedition to the East*;" "*Buonaparte in Egypt*;" "*Nilus, an elegy on Nelson*;" "*The Failure of the French Crusade*;" "*The Bedouins*;" "*Napoleon, or the Vanity of Human Wishes*" &c.—*Annual Biog.*

ISAAC KARO, a learned Jewish rabbi, a native of Spain, from which country he was forced to expatriate himself by the famous edict of Ferdinand and Isabella, in 1492, ordering all Jews to become converted to Christianity, or to quit their dominions within four months, on pain of death. From Portugal, in which country he first took refuge, he travelled with his family into Palestine, but was unfortunate enough to lose all his children on the journey, as well as his library. This misfortune, combined with other causes, induced him to retire from the world, and he passed the remainder of his days in solitude, employing himself in the composition of a work, partly cabalistical, and partly historical, having for its subject the generations of Isaac, and entitled "*Toledot Jiskach*." Of this treatise there are two editions, one printed at Constantinople in 1518, the other dated Amsterdam, 1708. A Jewish ritual, entitled "*Even Habeser*," has also been ascribed to him by Buxtorf.—*Moreri.*

ISAACSON (HENRY) was born in 1581, in the parish of St Catherine Cree, London, for which city his father served the office of sheriff. Bishop Andrews made him his secretary, and he is farther advantageously known as the author of a valuable system of Chronology, printed in folio. His death took place in 1654.—*Wood's Athen. Oxon.*

ISÆUS, a Grecian orator, was a native of Chalcis, in Syria, and the disciple of Lysias, and master of Demosthenes. He was born

about 418 B.C. and taught rhetoric at Athens with great reputation. Sixty-four orations were attributed to this orator, out of which fifty were deemed genuine. Of these, ten alone now remain, which are published in the "Oratores Veteres Græci" of Stephens, 1665. Of the more recent editions that of Reiske is deemed the best. An excellent translation of the orations of Isæus into English has been given by sir William Jones. He must be distinguished from another eminent orator of the same name who came to Rome, A.D. 97, and who is mentioned with great applause by the younger Pliny.—*Fabricii Bibl. Græc. Moreti.*

ISCANUS (JOSEPHUS) or Joseph of Exeter, a distinguished writer of Latin poetry in the thirteenth century. He was a native of Exeter, and was patronised by his townsman Baldwin, archbishop of Canterbury, with whom he accompanied Richard Cœur de Lion to Palestine. He was the author of an epic poem on the Trojan war, founded on the history of Dares Phrygius; and he wrote another epic, entitled "Antiocheis," on the deeds of king Richard, during his crusade, which the poet had himself witnessed. Warton styles Iscanus "The miracle of his age in classical composition;" and says that Italy had at that time produced no poet equal to him. The Antiocheis is unfortunately lost, with the exception of a few lines, sufficiently beautiful to make us regret the remainder. The poem on the Trojan war has been published in Germany, as the composition of the Roman biographer Cornelius Nepos. Fuller and other English writers have stated, that he became archbishop of Bourdeaux, a mistake which is confuted in the Gallia Christiana of St Marthe. He was however of the ecclesiastical profession. His death happened about 1224.—*Warton's Hist. of Eng. Poetry. Biog. Univ.*

ISELIN (JAMES CHRISTOPHER) an eminent German divine and philological writer of the eighteenth century. He was born at Basil, where his father was assessor of the court of justice; and he pursued his academical studies with such success at his native place, that at the age of fifteen he produced a Latin poem, which was much admired, "On the Passage of the Rhine," by the French. He afterwards spent some time at Geneva, and in the south of France, and returning to Basil in 1701, he was ordained a minister. In 1704 he was elected professor of rhetoric and history in the university of Marburg; and in 1706 he became professor of history and archæology at Basil; in 1711 he was made doctor in theology, and afterwards rector of the university; to which he added the office of public librarian. He was the author of a variety of orations, dissertations, and tracts on divinity, philology, and other subjects, which display to advantage his learning and abilities; and he was the editor of an improved and augmented republication of the historical dictionary of Budæus, in German, six volumes folio. His death took place in 1737, at the age of fifty-six.—*Nouv. Dict. Hist. Aikin's G. Biog.*

ISELIN (ISAAC) an eminent philosopher
BIOG. DICT.—VOL. II.

and ingenious writer, born at Basil, in 1720. He was educated at Gottingen, where he studied jurisprudence and statistics, and on taking the degree of LL.D. he published a thesis, entitled "Tentamen Juris publici Helveticæ." He afterwards visited Paris, and returning home, became a candidate for the professorship of history, in 1754, but he was disappointed of the situation. He was however elected a member of the grand council of Basil, and in 1756 obtained the important office of secretary. He then published a tract entitled "The Dream of a Friend to Mankind," of which there were several editions. He also wrote "Free Thoughts on the Depopulation of my Native City," 1758, 8vo, "The History of Mankind," 2 vols. 8vo, the most important of all his productions; and a periodical work called "Ephemerides of Mankind." In conjunction with Solomon Gesner and Hirzel, he founded the Helvetic Society; and in 1777 he assisted in the establishment of a similar society at Basl, on a plan which he had himself elaborated. He carried on an extensive correspondence, both in Switzerland and in foreign countries, and wrote many articles in a periodical journal called the "German Library," "Deutsche Bibliothek." Iselin died in 1782. *Aikin's G. Biog. Biog. Univ.*

ISEMBERT of XAINTES, a French architect of the twelfth century, who erected the bridges of Xaintes and Rochelle, in France. These works had procured him great reputation, owing to which he was recommended by king John to the citizens of London, in 1201, as an engineer or architect, whose skill might be useful in the completion of the bridge over the Thames then building. This structure was commenced under the direction of a priest called Peter of Colechurch, in 1176; and it was finished in 1209, probably by Isembert. Part of the bridge has been recently taken down, preparatory to the removal of the whole, when the noble structure now in progress shall have been completed. From the manner in which the old bridge was constructed, it appears wonderful that it should have subsisted so long, the workmanship having been executed in a manner which is not very creditable to the architectural science of the twelfth century.—*Stow. Maitland.*

ISIDORE of Miletus, a Greek architect of the sixth century, who, together with Anthemius, was employed by Justinian emperor of the East, to erect the church of St Sophia, at Constantinople. This church is a square building, with a hemispherical cupola in the centre, 108 feet in diameter, and its summit 400 feet from the pavement below. This edifice, which was considered the most magnificent monument of the age, was scarcely finished before the cupola was thrown down by an earthquake. But Justinian had it immediately rebuilt. On the taking of Constantinople by the Turks, the church of St Sophia was appropriated to the worship of the Mahometan conquerors, on which account it has very rarely been visited by Christian travellers;

whence there is reason to believe, that the magnificence and beauty of the building have been exaggerated by fame, and that the edifice and its decorations display more show and splendour than taste or architectural excellence.—*Felibien Vies des Archit. Edit.*

ISIDORE of Pelusium, a saint in the Roman calendar, was one of the most celebrated of the disciples of St John Chrysostom, and lived in the fifth century. He professed the monastic life from his youth, and composed some thousand epistles, of which 2,012 remain, in five books, and are deemed valuable, especially for the information which they contain, in relation to points of discipline and for practical rules. The best edition is that of Paris, 1638, Greek and Latin. In 1738, Heumann attacked the authenticity of a part of these epistles in a tract, entitled "Epistolæ Isidoræ Pelusiotæ maximiâ partem esse confectæ."—*Cave. Lardner. Mosheim.*

ISIDORE of Seville, another saint in the Roman Catholic calendar, and a distinguished Spanish prelate towards the beginning of the seventh century, when he succeeded his brother, Leander, in the see of Seville. He presided at a council held in that city in 619, and at the fourth national council in 633, in which numerous regulations were by his influence adopted, in order to reform ecclesiastical discipline in Spain. He died in the year 636. He was the author of numerous works, which are chiefly compilations, the principal of which are, twenty books of "Origins or Etymologies," Paris, 1601, folio; "A Chronicle from the Beginning of the World to the year 626;" "A Treatise on Ecclesiastical Writers;" "Sentences;" "Commentaries upon the Historical Books of the Old Testament;" "Scriptural Allegories;" "A Book of Proems, or Prolegomena to the Scriptures of the Old and New Testament;" "A Treatise on Ecclesiastical Discipline," in which he mentions seven prayers of the sacrifice still to be found in the Mosarabic mass, which is the ancient Spanish liturgy, of which Isidore was the principal author. The edition of the Missal, 1500, folio, and of the Breviary, 1502, folio, printed by cardinal Ximenes, are very scarce. A collection of canons, attributed to this Isidore, were by a later priest of the same name. Isidore of Seville, who is more admired by later churchmen for learning than discrimination, is frequently ranked among musical writers, much being said by him on the introduction of music into the church in his divine offices. He is sometimes called Isidore the younger, to distinguish him from Isidore, bishop of Cordova, in the fifth century, author of "Commentaries on the Two Books of Kings," the best edition of which is that of Paris, 1601.—*Cave. Dupin. Burney. Rees's Cyclop.*

ISIDORE MERCATOR or PECCATOR lived towards the beginning of the eighth century. He was the author of the spurious collection of canons attributed to Isidore of Seville, containing the pretended decretals of more than sixty popes, from St Clement to

Siricius, and the decrees and epistles from the latter pope to Zachary. The object of this clumsy imposition on a barbarous age was to prove that all ecclesiastical authority duly emanated from the see of Rome, and that councils could determine nothing without its approbation and consent. The spuriousness of this collection has been ably shown by the learned Blondel, in his "Pseudo Isidorus et Turrianus Vapulantes." It is proper at the same time to observe, that they are equally given up by learned and judicious Roman Catholics.—*Fabricii Bibl. Græc. Morevi Mosheim.*

ISIDORE of Charax. A Grecian writer who lived about BC. 300. He wrote various historical works, and a geographical production on Parthia, entitled "Mansiones Parthiæ," which was first published by Hoeschelius, and is contained in the "Geographi Minores," Oxon. 1703.—*Vossii Hist. Græc.*

ISLA (JOSEPH FRANCIS DE) an ingenious Spanish jesuit, who, on the suppression of his order, retired to Italy, and died at Bologna, in 1781. He was the author of a very celebrated work, entitled "Historia del Fra Gerundio de Campazas alias Zotes," Madrid, 1758, tome i, which appeared under the assumed name of Francisco Loben de Salazar, minister of the parish of St Peter, in Villagarcia. It was a bitter satire upon the absurdity, fanaticism, and ignorance, displayed in the preaching of the monks of Spain; and in the first instance was even partially approved by the Inquisition, as a salutary correction; but the jealousy of the Dominicans and mendicant orders being at length roused, the council of Castile suppressed the work and forbade the publication of the second part. Being thus unable to print it in Spain, the author presented it to Mr Baretti, by whose means, with a few omissions, both parts were printed in English in 1771, and afterwards in German, with illustrative notes. Father Isla is regarded by his countrymen as a second Cervantes, and certainly displays a kindred spirit, although the nature of the subject would not allow of equal diversity. Independently of its wit and caustic humour, this work is well worthy perusal for the information which it affords, in regard to Spanish manners among the middling and lower orders, more especially in reference to the influence of the numerous monks, and the nature of the bonds which so intimately connect them with the classes in question.—*Nouv. Dict. Hist. Preface to Translation of Friar Gerund.*

ISLEIF, an Islandic historian of the eleventh century. His father Gysser, having assisted in converting to Christianity the people in the southern part of Iceland, sent his son Isleif to Erfurd, in Germany, to qualify him for the ecclesiastical profession. Having finished his studies, he went to Rome in 1036, and was ordained. In his journey he visited the German emperor, whose favour he conciliated by making him a present of a Greenland bear. Returning to his native country in 1057, he founded the see of Scaltholt, of which he be-

came the first bishop, and he showed his attachment to learning by establishing a school at the same place, where Jona Ogmundus, the first bishop of Høla, and Colerus Vicensis, a Norwegian prelate, both received their education. Isleif wrote *Islandic Annals* and the *History of Norway*, according to Arngrim Jonas; and another writer says that he composed the lives of Harold Fairfax, king of Norway, and his successors to Magnus the Good, who died in 1047, including in his chronicle an account of all the Norwegian families, who had migrated to Iceland, in the reign of the former prince. Isleif died in 1080. He was married, and had a son, named Gysser, after his grandfather, who wrote and translated some historical works.—*Sibbern. Bibl. Hist. Dano-Norweg.*

ISMENIAS, a Theban musician of great skill and eminence, the pupil of Antigenes. His vanity and extravagance are commemorated by various authors as being at least equal to his abilities. Lucian speaks of his having purchased a flute at Corinth, at the price of three talents (about 581*l.*); Pliny records his prodigality in the article of jewels, while Plutarch gives an amusing anecdote of his self-conceit during a sacrifice, in which he was appointed to accompany the ceremony with his music: the omen being delayed, one of the company impatiently snatched the flute from his hand, and began playing himself, when the happy omen appearing, Ismenias, with much self-complacency, declared that the gods had only kept it back so long in order to have the pleasure of hearing his music, and at length bestowed it because they were glad to get rid of the noise of his substitute. When taken prisoner, however, by the Scythians, that rude nation appears to have been insensible to his melody, their king declaring he preferred the neighing of a horse to his most dulcet strains.—There was also a Theban commander of this name, notorious for the address with which he contrived to satisfy the court etiquette of Persia, without compromising his own dignity. When introduced into the presence of the monarch of that empire he let fall his ring, and stooping to pick it up, satisfied the courtiers around him without bending his body otherwise than for his own convenience.—*Biog. Dict. of Mus. Nouv. Dict. Hist.*

ISOCRATES, an eminent Greek orator and rhetorician, was born at Athens, in the eighty-sixth Olympiad, about BC 436. His father, a maker of musical instruments, being ruined by the Peloponnesian war, left him no inheritance beyond a good education. He studied eloquence under Gorgias, Prodicus, and other great masters, but a weak voice and timid disposition preventing him from exercising the talent of public speaking, he opened a school at Chio, and taught the art of rhetoric. He subsequently accompanied Timotheus, son of Conon, to several parts of Greece, and finally taught at Athens, with a reputation which brought him many disciples and considerable emolument. Although he sometimes courted

the great, he was capable of spirited and generous conduct; when Theramenes, proscribed by the thirty tyrants, took refuge at the altar, he rose to speak in his defence, at the hazard of sharing his fate; and after the death of Socrates, when his disciples all took to flight, he had the courage to appear in mourning in the streets of Athens. He passed a long life in peace and honour, and had reached his ninety-eighth year at the fatal battle of Cheronæa, when grieved at the calamity which had fallen on his country, he abstained from food four days and expired. There remain of Isocrates, twenty-one discourses, which have been distributed into the moral, the deliberative, the panegyric, and the agonistical, and there are also nine epistles, which bear his name. The style of Isocrates is pure and flowing, but he is seldom lively, rapid, or vehement. He was extremely attentive to the harmony of his periods, and Cicero reckons him among the first who fully melodised Greek prose. He polished all his compositions to excess, but although pleasing to peruse, his eloquence was little adapted to forensic contests, or public assemblies. Among the numerous editions of Isocrates, those of Battie, Cambridge, 1729, and of London, 1749, are now generally preferred.—*Fabrici. Bibl. Græc. Moreri. Aikin's G. Biog.*

ISTHVANFIUS (NICHOLAS) a noble Hungarian, distinguished as an historical writer. He studied in the Italian universities of Pavia and Bologna; after which he served in the army, and obtained the favour of the emperor Maximilian II, and his son Rodolph, king of Hungary. The latter employed him in a negotiation with the Turks, and rewarded him for his services with the office of vice palatine of Hungary. Towards the close of his life he undertook to write the history of the events which had occurred in his own age and country, which task he completed in thirty-four books, in the Latin language, and the work was published in 1622, and has been several times reprinted. Having become blind previous to his death, which occurred in 1615, Isthvanfius dictated the last four books of his work to his secretary.—*Biog. Univ.*

ITHON (JOHN de) an astrologer and reputed magician of the fourteenth century, who was a party in a law-suit which displays the miserable ignorance and superstition of that age. There still exists in the court rolls of the manor of Hatfield, near the isle of Axholme in Yorkshire, under the date of 1337, a complaint of one Robert de Rotheram against John de Ithon, "for not completing an agreement he had made with the said Robert, to sell him on a certain day then appointed, for the sum of threepence farthing (one farthing of which the said Robert had paid down as earnest), *one devil*, properly bound in a bond, *Diabolum ligatum in quodam ligamine*. That the said Robert had demanded said John to deliver him said devil, according to agreement, but in vain; wherefore he prays the court, &c. &c." It appears by the same document, that John de Ithon having been sun-

moned, attended the court, and did not deny the agreement, which indeed was doubtless produced on the occasion. The court, however, refused to take cognizance of the cause, not by any means on account of its absurdity, but from their persuasion "that such a suit should not subsist among Christians."—*Blount's Law Tenures*.—See PARKER (GUSTAVUS.)

ITLIGIUS (THOMAS) a German ecclesiastic of the reformed religion, born 1644, at Leipsic, where his father filled the professor's chair in the faculty of medicine. He received the rudiments of a liberal education in the university of his native place, and became professor, first of philosophy, and afterwards of divinity, there, having completed his studies at Rostock and Strasburg. He was a voluminous author, principally on historical and ecclesiastical subjects. Among his writings are, "Bibliotheca Patrum Apostolicorum Græco-Latina;" "Dissertatio de hæresiarchis;" "Historia Syuodum nationalium in Gallia reformata habitarum;" "Historiæ ecclesiasticæ primi et secundi seculi selecta Capita;" "Prolegomena ad Josephi opera;" "Exhortationes Theologicæ;" and "Liber de bibliothecis et catenis Patrum." Besides several papers in the Leipsic acts, and a treatise on volcanoes. His death took place in 1710.—*Moreri. Saxii Onom.*

ITURBIDE (—) a Mexican officer, who, in the course of the political changes which took place in his native country, raised himself for a short time to supreme authority, but was unable to maintain his station. He was born at Valladolid in Mexico, in 1790, being the son of a native of Biscay, who emigrated from Spain at the age of twenty-eight, and settling in America, married a Creole lady of considerable fortune. The son was bred a farmer, and possessing a robust constitution, and an active and enterprising disposition, he entered into the militia of his native province, and thus became acquainted with military service. In 1810 he was a lieutenant in the army, and his professional merit led to his farther promotion. The share he had in suppressing the insurrection of Morales, induced the government of Mexico to give him the rank of colonel. He was also made commander of Bahia; but on being deprived of that post he withdrew from the service of the state, and retired to his plantation. Subsequent events opened a new career for his ambition. He was invited to take the command of an army destined to the South, and he marched to Acapulco, in the latter part of 1819. There he matured a plan, the professed object of which was the emancipation of Mexico from the yoke of Spain, the independence of the country, and the extension of freedom to all orders of the people. In the summer of 1820, Iturbide was declared emperor of Mexico; and there appeared some prospect that the political convulsions which had so long agitated the colonial provinces, would be terminated by this new union, under an independent sovereign. But he was unable per-

manently to maintain his authority against public distrust, and the conflicting claims of rival chiefs. In the beginning of 1823, he found himself obliged to leave the Mexican territories; previously to which, however, he had attached to his interest a considerable number of the officers of the army, and created a strong prejudice in his favour in one or two of the provinces. After the abdication of Iturbide, the province of Guadalaxara or Jalisco became the scene of the plots and machinations of his partizans. The conduct of the governor, Quintanor, especially, left no doubt of his attachment to the cause of the ex-emperor, or of his hostility to the federal government. He had promoted Garcia, a relative of Iturbide, and given a military station to baron Rosenberg, a German, who had manifested the strongest devotion to the exiled chief, and had been on that account ordered to quit the dominions of Mexico. Exclamations of "long live the emperor!" were heard in the capital of the province, and the governor rather encouraged than repressed these indications of the spirit of the people. His conduct was not unobserved by the federalists; and an expedition was despatched to crush the incipient conspiracy against the state. Quintanor vainly endeavoured to collect an efficient force. He was deserted by his troops and made prisoner: while Garcia, Rosenberg, and others, were killed in the field, or shot as traitors. About the time of the miscarriage of this ill-concerted insurrection, Iturbide sailed from England, where he had for some time resided, and having reached the Mexican coasts, landed in disguise, near Soto la Marina, on the 14th of July 1824. The ex-emperor was accompanied by a friend named Beneski, who applied to general Garza, the commander of the province of New Santander, for passports, pretending that they were for persons who had visited Mexico on a mining speculation. Garza granted a passport to the applicant, but refused to grant another till he should see the individual for whom it was wanted. The next day he was informed that Beneski had again landed with two other persons, and proceeded to the interior. A party was sent after them, and they were overtaken and brought back. Iturbide was immediately recognized by general Garza, who had been his companion in arms. The decree issued by the congress, declaring Iturbide a traitor, if he should dare to land on the Mexican territory, was then read to him; but general Garza, not choosing to be the immediate executioner of public justice, sent his prisoner towards Mexico, to await the decision of the congress. His fate was but a short time delayed, for the congress ordered his immediate execution; and he was accordingly shot as soon as the sentence arrived, on the evening of his reaching Padillo. The federal government on his abdication had settled on him a large pension, on condition of his residing in Italy, and after his catastrophe 8000 dollars were granted to his widow and children. He is said to have possessed great military talents, and considerable strength of

character. It has been asserted that he professed an intention to follow the example of Washington, had he been successful; but admitting his sincerity, it may be questioned whether he would have been so far proof against the intoxication of power, as to have persevered in his purpose.—*Ann. Reg.*

ITURRIGARAY (————) viceroy of Mexico, whose name is permanently connected with the great revolution which has taken place in that country. He was elevated to his office at an advanced age, and in 1808, when the news arrived in America of the events which had taken place in Spain, he was so alarmed that he offered to resign his authority. The offer was not accepted, but this act of weakness encouraged subsequent commotions. A conspiracy was formed against him; the officers of his guard were implicated in the scheme, and a merchant, at the head of 400 Spaniards, entering his palace at midnight, made the viceroy a prisoner, September 15, 1808. He was placed in the prison of the inquisition, where he died some time after.—*Biog. N. des Contemp.*

IVES or YVES, a celebrated French bishop, was born in the territory of Beauvais in 1035, and raised to the see of Chartres in 1092. He particularly signalized his zeal against Philip I of France, who had put away his wife Bertha, and taken Bertrade, the wife of the count of Anjou, by means of an informal divorce. When this disagreement was composed, Ives confined himself to his clerical functions, and laid several religious foundations. He died in 1115, and Pius V, by a bull dated December 18, 1570, permitted the monks of the congregation of Lateran to celebrate the festival of St Ives. There exist of his compiling, "A Collection of Decrees," "Exceptiones Ecclesiasticarum regularum;" besides twenty-two sermons, and a chronicon, all collected in 1647, and published in one volume folio. A collection of canons, published in the "Bibliotheca Patrum," under the title of "Pannonia, or Pannonia," are attributed to this bishop.—*Moreri. Cave. Saxii Onom.*

IVES (EDWARD) an English traveller of the 18th century. He was a surgeon by profession, and sailed for the East Indies in that capacity, in 1754, with admiral Watson. After the death of that officer in 1757, he left the service, and returned to England. Part of his passage was overland, as he went up the Tigris and visited Mosul, Aleppo, and other places, previously to embarking again at Latakia, for the island of Cyprus, whence he sailed to Leghorn, and then took his route through Italy, Germany, and Holland, to England, where he arrived in March 1759. He published an account of his voyage to India, and the events which occurred there in 1755, 56, and 57, and travels from Persia to England, by an unfrequented route, containing much interesting information. He died September 25, 1786.—*Biog. Univ.*

IVES (JOHN) a respectable antiquary, was the only son of a merchant at Yarmouth, in Norfolk, where he was born in 1701. He was

educated at Caius college, Cambridge, where however he did not long remain, but returned to Yarmouth, and by his acquaintance with Mr Martin, of Palgrave, acquired that taste for antiquities by which his short after life was distinguished. In 1771 he was elected FSA. and FRS. in 1772, and by the patronage of the earl of Suffolk, the office of Suffolk herald-extraordinary was revived in his favour. In 1771 he issued proposals for printing an account of Lothingland hundred, in Suffolk, and in 1772 composed the preface to Swinden's History and Antiquities of Great Yarmouth. In 1773 he published "Select Papers" from his own collection, of which second and third numbers appeared in 1774 and 1775. Among these are, archbishop Sharpe's "Remarks on English Coins;" sir W. Dugdale's "Directions for the use of Records;" "Annals of Gonville and Caius College, Cambridge," &c. In 1773 he also published "Remarks upon the Garianonum of the Romans." He died of a deep consumption, when he had just entered his twenty-fifth year, in June 1776. He left a very valuable library and collection, which was sold in 1777.—*Nichols's Lit. Anec. Noble's College of Arms.*

IVETAUX (NICHOLAS VAUQUELIN, seigneur des) a French poet and man of letters, born in 1559 at Fresnaye, near Falaise. He was the son of the lieutenant-governor of the city of Caen in Normandy, and at his father's death succeeded him in his appointment, but the gaiety of his disposition rendering the comparative retirement of a provincial town irksome to him, he went to the metropolis, and becoming distinguished for the brilliancy of his parts, was selected by the "Fair Gabrielle" to fill the situation of tutor to the young duke of Vendosme, her son by Henry IV. He was subsequently placed in the same capacity about the person of the dauphin, afterwards Louis XIII, but occasioned great scandal through his irregularities, which injured his advancement, and drew on him the pointed reprobation of Richelieu. Finding himself neglected at court, he retired upon his pension to a house he had at St Germain, and passed the remainder of his life in the grossest sensuality. Of his writings the best known are, "Institution d'un Prince," a clever poem, and a variety of smaller poetical pieces, to be found in the collection, called "Les Delices de la Poesie Française." He died at Germigny in 1649.—*Nouv. Dict. Hist.*

IWAN BASILOWITZ I, czar of Muscovy, surnamed the Great. He was born in 1433, and succeeded his father in 1462. The country was then divided into a number of petty principalities, some of them nominally subject to the czar, or grand duke, and all together with him tributary to the Mongul Tartars. Iwan rendered the petty chiefs dependent on his power, or seized their territories, subjugated the potent republic of Novogorod, and emancipated himself from the yoke of the Monguls. He extended his dominions in various directions, and during his reign ambassadors arrived at Moscow from the empe-

ror of Germany, the pope, the grand seignor, and other European powers. This prince, who is considered as the founder of the Russian empire, died in 1505.—IWAN BASILOWITZ II, grandson of the preceding, was born in 1530, and reigned from 1533 to 1584, when he died. He was a cruel but enlightened prince, who in a fit of passion killed his own son. He conquered the Tartar province of Kasan in 1552, and that of Astrakan in 1554; and he took possession of Livonia, but was compelled to relinquish his conquest by the Poles. In 1582 he established the first printing press at Moscow, and he instituted the famous body of guards called Strelitzes. In the reign of Iwan, Thomas Chancellor, an English navigator, visited the Russian port of Archangel, when the czar sent an embassy to queen Elizabeth, and a treaty was made, which commenced the intercourse since subsisting between the two countries. The discovery of Siberia in 1581, was another remarkable event in the reign of this sovereign.—See YERMAK.—*Mod. Univ. Hist. Coxe's Travels in Russia.*

IXNARD (MICHAEL D') architect and director of buildings to the elector of Treves. He was a native of Nismes, and was employed by the prince of Montauban; and afterwards accompanying the cardinal de Rohan to Strasburg, he was by him recommended to several of the German princes. Though quite unacquainted with literature, he possessed much skill in his profession. The principal edifices built from his designs, or under his direction,

were the commercial hall at Strasburg, called Hotel du Miroir, the electoral palace of Clemensbourg at Treves, and the abbey of St Blaise, in the Black Forest. The plans of these and other structures of Ixnard, were engraved and published at Paris in 1782. He died at Strasburg, August 21, 1795.—*Biog. Univ.*

IZAACKE (RICHARD) a native of the city of Exeter, where he was born in the year 1624. He was educated at Exeter college, Oxford, and finally became town clerk and chamberlain of his native city, where he died in 1700. He compiled the "Antiquities, or Memorials of the City of Exeter," 8vo, 1677, which was reprinted in 1724 by his son, with considerable additions.—*Wood.*

IZIOCALT II, the fourth king of Mexico, who mounted the throne in 1433, after the murder of his nephew, Chiluaopoca. This prince may be regarded as the real founder of the Mexican empire. Under his reign all the warlike nations on the borders of the lake of Mexico were reduced to subjection; and he conquered the Tepeacans, and made their kingdom a province of his empire. He fortified and embellished his capital, formed a body of laws for his subjects, and changed the political system of the Mexican government. He also first constructed bridges of communication from the islands on which the city of Mexico, (like Venice,) is built, to the continental borders of the lake. This prince died, regretted by his people, in 1445.—*Biog. Univ.*

J A B

JAAPHAR EBN TOPHAIL, a learned Arab of the twelfth century, known as the author of a philosophical romance, entitled the "History of Hoi Ebn Yokdan." The object of this work (which has been translated into Latin by Pococke, Oxford, 1671, and by Ockley into English, 8vo, 1708) is to prove that the light of nature is sufficient to lead mankind to a knowledge of the Deity without the aid of Revelation. His death is supposed to have taken place in 1198.—*Moreri. Brucker.*

JABLONOWSKY (JOSEPH ALEXANDER, von) a noble Polisher, born 1712, who preferring a life of literary ease to the cares of his precarious senatorial dignity, left the country, and retired to Leipsic, where he became the founder and patron of a learned society still in existence, and called after his name. He published an essay on Slavonic poetry, and the "Lives of Twelve Generals." His death took place in 1777.—*Rees's Cyclop.*

JABLONSKI. There were several learned and ingenious authors of this name in the last century. DANIEL ERNEST, the elder, was a native of Dantzic, born November 20, 1660. He studied at various Dutch and German universities, and coming to England, was for a short period a member of that of Oxford. On his return to the continent he took holy orders,

J A B

and settling in the Prussian dominions, after acting in his ministerial capacity at Königsberg, Magdeburg, and other provincial towns, became eventually an ecclesiastical counsellor at Berlin and president of the academy there. He was an able divine, moderate and conciliatory in his religious opinions, and laboured earnestly, though unsuccessfully, both by his preaching and his writings, to heal the breach in the reformed church between the Lutherans and Calvinists. Besides several devotional treatises of his own, he published a Latin translation of Bentley's Boylean Lectures, remarkable for its grammatical accuracy and the purity of its style. He died in the spring of 1741.—His brother, THEODORE, born also at Dantzic in 1654, died ten years before him. The latter cultivated a taste for philosophy and general literature with great success, and was the author of several works of merit, to which his diffidence did not allow him to affix his name. Among these are, a French and German dictionary, printed in 1711; "A Course of Ethics," written in the German language, 1713; "A Universal Dictionary of Arts and Sciences," in French, 1721; and a translation into German of Tacitus De Moribus Germanorum, 1724. He obtained the post of counsellor to the king of Prussia at Berlin,

and held the appointment of secretary to the Royal Academy of Sciences in that capital till his death.—PAUL ERNEST, nephew to the last-mentioned personage, and son to his brother, Daniel Ernest, was born in the Prussian metropolis in 1693. He inherited the talents of the family, and applying himself to the study of theology, filled the professor's chair in that science at Frankfort-on-the-Oder. He was the author of a very erudite treatise on the mythology of ancient Egypt, entitled "Pantheou Egyptiacum," 8vo, 3 vols.; also of "Institutiones Historiæ Ecclesiastica," 8vo, 2 vols.; "Disquisitio de Linguâ Lycaonica," and "De Memnone Græcorum." His death took place in 1757.—CHARLES GUSTAVUS JABLONSKI, of the same family, was a member of the Literary and Scientific Society of Halle. He is known as the author of a clever history of insects. His death took place in 1787.—*Nouv. Dict. Hist. Bibl. Germanique*, vol. xxii.

JACKSON, DD. (CYRIL) an eminent divine, was born in 1746, at Stamford, in Lincolnshire, where his father was a medical practitioner. He received his education at Westminster school, whence he was removed to Christchurch college, Oxford, where he graduated DD, in 1781. He was appointed sub preceptor to his present majesty, and for his services in that capacity was made canon of Christchurch; and on the elevation of Dr Bagot to a bishoprick, succeeded him in the deanery. As Dr Jackson avoided the press, he will be chiefly remarkable to posterity as having declined the mitre, both as Irish primate and English bishop. He died in 1819. His brother, Dr WILLIAM JACKSON, born at Stamford in 1750, became bishop of Oxford in 1811, and died in 1815. Bishop Jackson translated a mathematical tract by Eratosthenes into Latin, and was an able divine.—*An. Biog.*

JACKSON (JOHN) a learned Hebraist and warm polemic, son to a clergyman, who held the living of Lensy in Yorkshire, where he was born April 4, 1686. His father sent him to the grammar-school at Doncaster, whence he removed him in due time to Jesus college, Cambridge, and placed him under the tuition of the celebrated Oriental scholar, Simon Oekley, with a view of his entering the church. Having taken orders, the corporation of Doncaster in 1712 presented him to the rectory of Rossington, in their gift, notwithstanding the strong leaning which he now exhibited towards Arianism, in his religious opinions. The university, however, was less accommodating, and on his application to be admitted master of arts, refused him his degree. Being elected a brother of Wigston's hospital, in Leicester, he afterwards went to reside in that society, but openly professing and advocating his principles, the neighbouring clergy were roused into opposition, so that he was refused the use of the pulpit, and on one occasion even the Eucharist. Dr Clarke, master of the hospital, dying in 1729, the duke of Rutland, patron of the establishment, nominated Mr Jackson as his successor, and he would have obtained a stall at Salisbury but for the free-

dom of his tenets, evinced in his attacks on bishop Warburton, and other defenders of the trinity. Besides these and other controversial tracts, he was the author of a valuable work in three quarto volumes, printed in 1752, under the title of "Chronological Antiquities." A new edition of the Greek Testament, which he had long had in contemplation, and for which he had amassed a large collection of notes and other materials, he did not live to complete, dying May 12, 1763, and leaving behind him the character of a sincere, learned, honest, well-meaning, but violent man.—*Life by Dr Sutton. Nichols's Lit. Anec.*

JACKSON (THOMAS) dean of Peterborough, a learned divine, born of a good family at Willowing, in the palatinate of Durham, 1579. From Queen's college, Oxford, he removed on a fellowship to Corpus Christi, in the same university, in 1606, and in 1624, obtained the vicarage of Nevcastle, having taken his doctor's degree in divinity two years previously. In 1630, being chosen head of his college, he resigned his living, and three years afterwards obtained, through the influence of his friend, the bishop of Durham, a stall in Winchester cathedral. About the same time he was made a king's chaplain, and in 1638, obtained the deanery of Peterborough. Dr Jackson left behind him many valuable tracts on devotional subjects, in which the most complete familiarity with the writings of the early Christian authors is evinced; but his principal work consists of a commentary on the apostles' creed, a performance combining great learning and research with the display of much critical ability. This, together with his other works, was printed in 3 folio vols. 1672, and is highly spoken of by bishop Horne as well as others. His death took place in 1640. *Biog. Brit. Fuller's Worthies.*

JACKSON (WILLIAM) commonly known among musicians as "Jackson of Exeter," an excellent composer, and a man of considerable literary attainments. He was born in 1730 at Exeter, where his father was a respectable tradesman, and received the rudiments of a classical education, with a view to his following one of the liberal professions. His taste for music displayed itself however so decidedly while he was yet a youth, that his friends were reluctantly induced to place him under Travers, the organist of the cathedral belonging to his native city. Having passed two years in the metropolis, where he availed himself of the instructions of some of the best musicians of his day, he returned to Exeter in 1750, and succeeding eventually to the situation of organist, there passed the remainder of his life. In 1782 he published two small octavo volumes, containing "Thirty Letters on various Subjects," which were well received, and went through three editions. He also printed in 1791 some "Observations on the present State of Music in London," a work which excited a considerable sensation at the time. His musical compositions are still justly popular, and are distinguished by the chasteness of their conception, the ingenuity

of their construction, and their truth of expression. In addition to his other accomplishments, Mr Jackson was no mean proficient in painting, and several of his landscapes are remarkable for the striking effects produced by his successful introduction of strong and partial lights. His death was occasioned by an asthmatic complaint, in 1804.—*Censura Lit. Rees's Cyclop.*

JACKSON (WILLIAM) a native of Ireland, and a clergyman of the established church, who rendered himself notorious by his intrigues against the government of his country, towards the close of the last century. In the early part of his life he was connected with the dutchess of Kingston, who made him her chaplain, and to whom he rendered some literary services in her correspondence with Footc, relative to his comedy "A Trip to Calais," designed as a satire on that lady. Jackson went abroad in the employ of the dutchess, and resided some years in France. There he became acquainted with some of the revolutionary politicians, who sent him to England to learn the state of the country preparatory to a hostile invasion. He arrived in London in January or February 1794, and finding the people of England not so ripe for a revolution as he had probably expected, he went to Ireland, where he was detected in carrying on a treasonable correspondence with persons in France, describing the state of Ireland at that period, recommending invasion, and even pointing out the measures necessary for effecting it with advantage. Being arraigned on this charge, April 23, 1795, he was convicted, after an able defence by his counsel, Messrs Curran and Ponsouby. On the 30th of the same month, being brought up to receive judgment, he died in court, while his advocates were about to move an arrest of judgment. It appeared that he had taken poison; but the verdict of a coroner's jury having stated, that they were ignorant how or by whom the poison was administered, the property of the deceased (said to have been about 200*l.* a year) was preserved to his family, instead of escheating to the crown.—*Ann. Reg.*

JACOB. There were two learned Hebrew Rabbis of this name. The elder, surnamed BEN NAPHTALI, flourished in the fifth century of the Christian æra. He was educated at Tiberias, as a Masorite, and is said to have invented, in conjunction with his friend Ben Aser, the Masoretic points, since commonly used in distinguishing the vowels of the Hebrew language. The year 476 is generally assigned as the epoch of this invention, which is said to have been confirmed by a Jewish synod held at Tiberias.—The second, JACOB BEN HAJIM lived in the sixteenth century, and edited the celebrated Masora and Hebrew bible, with the Chaldee paraphrase and rabbinical commentaries annexed, which appeared in 1525 at Venice, in four folio volumes.—There was also an Hungarian fanatic of this name in the thirteenth century, who pretended a commission from the Virgin to liberate Louis the ninth from the Saracens at Damietta. But the government

discountenancing the crusade, his project failed, and he himself fell by the hand of a butcher.—*Simon's Crit. Dict.*

JACOB (EDWARD) a writer on topography and antiquities, who was a fellow of the society of Antiquaries, and died in 1788, at Feversham, in Kent, where he practised as a surgeon. He republished the old play of Arden from Feversham, in 1770, with a preface, "in which some reasons are offered in favour of its being the earliest dramatic work of Shakespeare now remaining: and the genuine account given of the murder [of Arden] from authentic papers of the time." He was also the author of a "History of the Town and Port of Feversham, in Kent," with plates, London, 1774, 8vo; "A Catalogue of the more perfect Plants growing spontaneously about Feversham; with a select view of the Fossils of the Island of Sheppey," 1777, 8vo; and a paper in the *Archæologia*.—*Watt's Bibl. Brit.*

JACOB (GILES) an English writer in the various literary departments of jurisprudence, biography, and the drama. He was born at Romsey, in Hampshire, in 1686, and served his time as clerk to a solicitor of eminence in that county. He entertained a strong partiality for the drama, and even wrote two pieces for representation, "The Soldier's last Stake," and "Love in a Wood." The encouragement which they met with was not however sufficient to induce him to continue this species of composition, but a work which he printed afterwards, containing memoirs of the English dramatic poets, under the title of the "Poetical Register," was more favourably received. He also published a great variety of writings on subjects connected with his profession, the principal of which, a "Law Dictionary," in one volume folio, has gone through several editions, the best of which is that by Ruffhead and Morgan. He died in 1744.—*Bowles's Edition of Pope. Biog. Dram.*

JACOB (HENRY). There were two of this name, father and son. The elder, founder of the first independent or congregational church in England, was a native of Kent, and became a commoner of St Mary Hall, in the university of Oxford, where he graduated as AM. On taking orders, he was preferred to the benefice of Cheriton, near Hythe, but found it expedient to quit both his living and the country, on account of a polemical tract, in which he avowed his separation from the church on conscientious grounds. During the term of his expatriation, he resided in the Low Countries, but returned at length to England, and became pastor to the first formal congregation of Independents. He was the author of numerous controversial tracts, one of which in particular contained a warm attack upon the sect of Brownists. He afterwards went to America, about the year 1624, and died in that country. His son, of the same name, born in 1607, was an excellent Oriental scholar, having studied first at Leyden, under Erpenius, and afterwards at Oxford, in which latter university he obtained a fellowship at Merton col-

lege. After graduating both in arts and physics, he was ejected from his fellowship by the parliamentary commissioners, on the decline of the royalist party. Besides his "Delphi Phœnicizantes," an edition of which was published by Dickenson, he was the author of many curious and learned works, most still in manuscript, a list of which may be seen in our authorities. His death took place in 1652, at Canterbury, whither he had retired after his deprivation, and where for some time previously to his decease he had struggled hard against the united attacks of disease and poverty.—*Athen. Oxon. Biog. Brit. Arts. Jacob and Dickenson.*

JACOB (JOSEPH) a nonconformist divine of the last century. He was born about 1667, his family being quakers, among whom he was educated. In early life he was a linen-draper in London; but after the Revolution, in the course of which he displayed some political zeal, he studied at a dissenting academy, to qualify himself for the ministry. About 1697 he set up a weekly lecture at a meeting-house in Thames-street, whence he was expelled for his imprudent censures of government, in his public discourses. His friends built him a new chapel in Southwark, in 1698; and he proceeded forthwith to establish a peculiar class of sectaries, distinguished by some exclusive rites and observances. "In this reformed church all periwigs, then almost universally worn, were discarded; the men wore whiskers upon their upper lips, in which Mr. Jacob set them an example; and an order passed for the regulation of the women's garb. The members of this church were not allowed to attend public worship at any other place, not even if their business occasionally called them to a distance; nor were they suffered to intermarry with other churches. The relations of life could be filled up only from this perfect society; nor could any person, excepting Mr Jacob, be safely employed to solemnize the marriage union. Some persons, not conforming to the new rules, were forthwith excommunicated; but this harsh usage only offended others, who withdrew in consequence. This proved a great detriment to Mr Jacob; and in the end his church dwindled away, so that he was obliged to quit his meeting-house, about the year 1702." He however procured another, but pursuing the same eccentric course, his followers gradually deserted him, previously to his death, which took place June 26th, 1722. He is said to have possessed good natural talents, and was not destitute of literary acquirements, as appears from his publications, consisting of a "Catechism," 1702, 12mo; "The Covenant to be the Lord's People under Joseph Jacob's Pastoral Charge, with an Appendix," 1706, 12mo; and two or three sermons.—*Wilson's Hist. and Antiq. of Dissenting Churches.*

JACOB JOHN, an Armenian mechanic, who deserves notice for having introduced the art of printing into Persia. He was a native of Zulpha, and in 1641 he held the office of principal joiner to the king of Persia. He dis-

tinguished himself by several useful mechanical inventions; and having visited Europe, on his return to Ispahan he constructed a printing-press, and cast types from matrices cut by himself. With this apparatus he printed the Epistles of St Paul and the seven penitential Psalms, in the Armenian language. He had intended an edition of the whole Bible; but the opposition of the Persian scribes or copyists frustrated his undertaking.—*Nov. Dict. Hist. Aikin's G. Biog.*

JACOB (LOUIS) a Carmelite monk of the seventeenth century, born in 1608, at Chalons sur Saone. He was a learned man, and acted as librarian to the President de Harlay and Cardinal de Retz, by the interest of the latter of whom he obtained the office of almoner to the king of France. His principal work is his "Bibliotheca Pontifica," a catalogue raisonné of the papal library at Rome, printed by him in 1642. He also wrote an account of the principal libraries in the world, as also "Bibliotheca Gallica;" "Bibliotheca Parisiana," and a treatise, "De Claris Scriptoribus Cabilonensibus." His death took place in 1670.—*Niceron. Dibdin's Bibliomania.*

JACOBÆUS (OLIGER) an eminent Danish physician and philosopher, son of the bishop of Jutland, in which peninsula he was born at Arhusen, in 1651. He was nearly connected, by his mother's side, with the Bartholin family, of whom Gaspar Bartholin, his maternal grandfather, superintended his education, while his first wife was the daughter of Thomas Bartholin, on whose death he afterwards composed a funeral oration. Having studied for some years at Copenhagen, he visited the greater part of the north of Europe, and on his return obtained the professorship of medicine and natural philosophy in the university attached to the Danish capital. King Christiern the fifth appointed him his librarian and superintendent of the royal museum, in which capacity he published a catalogue of the rarities, both in art and science, contained in that collection, as also an eulogium upon his royal patron after his decease. His other works are, two treatises on the natural history of frogs and lizards; "Compendium Institutionum Medicarum;" "F. Ariosti de oleo Montis Zibinii;" "Gaudia Arctoi Orbis ob thalamos augustos Fred. et Ludov.;" and a few miscellaneous poems, written in elegant Latin. The death of his wife, by whom he had six children, affected him strongly, and though he afterwards took another, he survived these second nuptials but a short time, dying in 1701, at Copenhagen.—*Moreri. Saxii Onom.*

JACOBATIUS or JACOBBAZZI (DOMINICO) bishop of Lucera, employed in various important affairs by pope Sixtus IV, and created cardinal in 1517. He died in 1524. This prelate left a "Treatise on Councils," in Latin, which, although deemed of little intrinsic value, is sold very dear. The first edition is of Rome, 1583, folio, but it is also in the last volume of P. L'Abbé's Councils, and the Paris edition, got up for that publication, is

alone esteemed, and no copy of L'Abbé's Councils is deemed perfect without it. The re-impression of Venice is not esteemed.—*Nouv. Dict. Hist. Chalmers's Biog. Dict.*

JACOBI (JOHN GEORGE) a German poet, who was a native of Dusseldorf. In 1758 he became a student of theology at Göttingen, whence he removed to Helmstadt, but finished his education at the former university. He was made professor of philosophy and rhetoric at Halle; and having formed an acquaintance with the poet Gleim, through his interest he obtained a prebend in the church of St Boniface, at Halberstadt. The emperor Joseph II in 1784 gave him the chair of belles lettres at Fribourg, which he retained during the remainder of his life, the termination of which occurred January 4, 1814. Jacobi was an imitator of the French poets Chapelle, Chaulieu, and Gresset. His "Journey in Winter," and "Journey in Summer," are light and amusing compositions, consisting of verse and prose, which have been translated into French, and published at Hamburg and at Lausanne. He also wrote "Epistles," in verse and prose; "Songs;" "Cantatas;" "Operas;" "Comedies;" "Romances;" "Fables;" "Dissertations;" and "Sermons." Jacobi was likewise engaged as editor of the "Iris," a periodical journal, which contributed much to spread among the Germans a taste for polite literature; and he enriched with his productions the "German Library of the Fine Arts," published by professor Klotz; "The German Mercury," of Wieland, &c.—*Biog. Univ. Biog. des Contemp.*

JACOBI KLËST (baron von) a Prussian diplomatist and statesman, memorable for his conduct in relation to the assassination of the French envoys at the congress of Rastadt, in 1799. He commenced his career in 1791, as envoy from Prussia, at the court of Vienna. He had the same office at Rastadt, where he was insulted by the Austrian bussars on account of his endeavours to prevent the outrage above alluded to. He published an account of the execrable affair, with a particular statement attested by his signature, in which he formally denounced the Austrian colonel Barbacsy, as responsible for the assassination of the French plenipotentiaries, and the consequences which might result from that outrage. He was despatched on a mission to England in 1805, to excuse the occupation of Hanover by the troops of the king of Prussia. Notwithstanding his success, he was obliged to leave London; but he returned thither on hostilities taking place between France and Prussia, and remained in England till 1817. He died at Dresden towards the close of that year.—*Biog. Nouv. des Contemp.*

JACOBS. There were two eminent artists of this name. **JURIAN**, a native of Switzerland, born 1610, studied under Francis Snyders, and is celebrated for the spirit with which his animals are depicted, especially in his hunting pieces.—**LUCAS JACOBS**, more generally known as Lucas Van Leyden, from the place of his birth, was a pupil of Cornelius

Engelbrecht, and excelled both in oils and in distemper; he was also a good engraver, and died in 1533, in his thirty-ninth year.—*Pilkington. D'Argenville Vies des Peint.*

JACOBSON (JOHN CHARLES GOTTFRIED) an able technologist, was the son of a shopkeeper at Eltingen, where he was born in 1726. He studied at Leipsic, but in consequence of an unfortunate duel was obliged to abscond, and enter into the service of the elector of Saxony, and subsequently into that of the king of Prussia. During a residence of two years in Berlin, he frequented the different workshops, and enabled himself to publish his "Description of all the Cloth Manufactories in Germany." After the campaign of 1778, he obtained his discharge, and began his "Technological Dictionary of all the useful Arts, Trades, and Manufactures, with an Account of the different Processes, Tools, &c. and an Explanation of the Technological Terms." This was published in four parts, one each year, 4to, commencing with 1781. On account of his zeal and extensive information in this department of knowledge, he was in 1784 appointed inspector of all the royal manufactories in Prussia. He died in September 1789. He was also the author of "A Description of all the Linen, Cotton, and Woollen Manufactories in the Prussian States."—*Hirsching's Manual of Eminent Persons in the 18th Century.*

JACOPONE DA TODI, a descendant of a noble family named Benedetti, settled at Todi, whence he derived the appellation by which he is generally distinguished. He flourished during the latter half of the thirteenth century, and was the contemporary and personal friend of Dante. The loss of his wife, to whom he was tenderly attached, disgusted him with the world, and induced him to retire into a convent of Friars Minor, having previously distributed the greater part of his property among the poor. In this seclusion he appears to have so far regained his tranquillity as to have acquired the title of Il Felice. Much of his leisure time was spent in the composition of devotional hymns and music, and both the words and first melody of the beautiful "Stabat Mater dolorosa," since so celebrated by the compositions of Haydn, Pergolesi, &c. are ascribed to him. He was also the author of a number of sacred canticles, and other poems in the Latin language, a quarto edition of which appeared at Venice in 1617. He survived to a considerable age and died in 1306.—*Moreri. Tiraboschi.*

JACQUELOT (ISAAC) the son of a clergyman of Vassy, born there in 1647. Being educated by his father for the ministry, he afterwards assisted him in his clerical duties, till the revocation of the edict of Nantes compelled him, as well as other divines of the reformed church, to take refuge in Holland. Here he continued for some time preaching occasionally at the Hague and elsewhere, till having been fortunate enough to attract the attention of the king of Prussia, that monarch established him at Berlin in quality of one of

his chaplains. He published a treatise on the Messiah; several epistles to the bishops of the French church; tracts "On the Existence of a Deity;" "On the Conformity of Faith with Reason;" a reply to Bayle, and a critical examination of the theology of that philosopher; a treatise "On the Inspiration of the Scriptures;" another against Socinianism; and two volumes of sermons. His death took place at Berlin in 1708.—*Chau-sepie. Nouv. Dict. Hist.*

JACQUET (LEWIS) a French ecclesiastic, born in 1732 at Lyons. He was a member of the academies of Lyons and Besançon, the latter of which honoured him with the laurel. His best works are a "Parallel between the Greek and French Tragic writers," and a prize essay on the discovery of America, entitled "Idée des quatre Concours." He affected much both to admire and to imitate Rousseau, and died in 1793.—There was also a PIERRE JACQUET, an advocate of the parliament at Paris, about the middle of the last century, who was the author of several works connected with French jurisprudence. Of these the principal are, "Traité des Fiefs;" "Traité des Justices, des Seigneurs, et le Droits indépendans, &c.;" "Commentaire sur la Coutume de Touraine," 4to, 2 vols. His death took place about the year 1766 at Grenoble.—*Nouv. Dict. Hist.*

JACQUET DROZ (PIERRE) a celebrated mechanic, the inventor of curious automatic machines. He was born in 1721, at Chaux de Fond, in the territory of Neufchâtel, and was destined for the profession of an ecclesiastic. After finishing his studies at Basil, he returned to his family, where he found one of his sisters employed in clock-making, an occupation then recently introduced into the country. He was immediately attracted by this pursuit, to which his friends permitted him to devote his attention. He soon found out a method of adapting to a common clock, chimes, and also wind-instruments. He then undertook to discover the perpetual motion, and in the prosecution of this chimerical object he made some important discoveries. Having constructed an improved pendulum, (apparently on a plan resembling that of Harrison,) he obtained the patronage of the earl marshal, the governor of Neufchâtel, who sent him to Madrid to exhibit his pendulum to the king of Spain. The artist took with him several other pieces of mechanism, the ingenuity of which attracted much admiration. On his return from Spain he continued to exercise his skill, and produced among a number of wonderful automata, the writing figure, which by means of internal machinery, formed regular and connected characters. An astronomical pendulum was the last work of this ingenious artist, who died at Bienne, November 28th, 1790.—HENRI LOUIS JACQUET DROZ, son of the former, was born 1752. He studied mathematics at Nancy with great success. At the age of sixteen he displayed his predilection for those mechanical operations in which his father had been so skilful; and about six

years after, he took with him to Paris several specimens of his workmanship, among which were an automaton draughtsman, and a female figure, which played on the harpsichord. He constructed likewise two artificial hands, for the convenience of a person who had been deprived of the use of those members. The famous Vaucanson, on seeing these pieces of mechanism, was struck with astonishment, and exclaimed to the inventor, "Young man, you have commenced your inventions where I would have terminated mine." This artist having passed some years in London and at Geneva, died at Naples in 1791. The former of these mechanics has sometimes been confounded with JEAN PIERRE DROZ, another ingenious artist, who was born at Chaux de Fond in 1746, and died at Paris in 1822. He was connected with Mr Boulton, of Birmingham, in the coinage of copper for the English government; and he displayed his talents in the construction of a balance of extraordinary accuracy for the Parisian mint.—*Biog. Univ. Dict. Hist.*

JACQUIER (FRANCIS) a jesuit of Vitry, born 1711, eminent for his knowledge both of languages and the mathematics. He edited, with the assistance of Le Sueur, the "Principia" of Newton, in 4 vols, 4to, and was the author of a clever treatise on algebra. His other works are, "Riflessioni sopra alcune difficoltà spettanti i danni della cuppola di S. Pietro," 4to; "Institutiones Philosophicæ," 12mo, 5 vols; and "Descrizione d'un istromento per far conogni facilita Orologi solari." His death took place at Rome in 1788.—*Nouv. Dict. Hist.*

JACQUIN (ARMAND PIERRE) a miscellaneous writer, born at Amiens in 1721. He studied divinity, and was chaplain in the cathedral of his native city, when in 1771 he obtained an employment in the service of the count de Provence (Louis XVIII). Two years after he became historiographer to the count d'Artois, the present French king. He died about 1780. Among a number of useful publications of which he was the author, may be mentioned, "Entretiens sur les Romains," 1754, 12mo; "Discours sur la Connoissance et l'Application des Talens," 1760, 12mo; "De la Santé," 1762, 12mo; "Lettres Parisiennes sur le desir d'être heureux," 1758, 1761, 2 parts, 12mo.—*Biog. Univ.*

JACQUIN (NICHOLAS JOSEPH) a celebrated botanist, who was a native of Leyden. He was born in 1727, and was educated for the medical profession. His countryman Van Swieten, induced him to visit Vienna, where his botanical science procured him the notice of the emperor Francis I, who sent him to the West Indies, to collect curious plants for the gardens of Schoenbrun. He commenced his voyage in 1754, and returned to Germany, after an absence of six years, with a rich store of plants from the Antilles, Jamaica, St Domingo, and Curassoa. He published in 1760 an account of his researches and collections, with which he had enriched the gardens of Schoenbrun, and of the university of Vienna,

which were under his direction. Two years after appeared his catalogue of plants growing in the neighbourhood of Vienna; and in 1773 a magnificent work, entitled "Flora Austriaca," folio, with five hundred coloured engravings. He engaged in the practice of medicine in the Austrian metropolis; and also occupied the professorships of chemistry and botany in the university of that city. His numerous and useful labours were rewarded by a patent of nobility; he was created a baron in 1806, decorated with the cross of the order of St Stephen, and made a counsellor of mines and coinage. He was also a corresponding member of the Academy of Sciences at Paris, and of many other learned associations. He died October 24th, 1817. A list of his numerous scientific publications may be found in the annexed authorities.—*Biog Univ. Biog. Nouv. des Contemp.*

JADELOT (NICOLAS) a learned physician, born in 1738, at Pont-à-Mousson, in the university of which place his father was a professor. After having passed through his studies with great reputation, and taken his degrees in medicine, he was made professor of anatomy and physiology in 1768. The university being transferred to Nancy in 1768, Jadlot removed thither, and resided in that city till his death, in 1793. He was the author of "Tableau de l'Economie animale," Nancy, 1769, 8vo; "Mémoire sur les Causes de la Pulsation des Arteres," 1771, 8vo; "Cours complet d'Anatomie," 1773, folio, descriptive of the anatomical plates of Gautier d'Agoty; "Physica Hominis sani, sive Explicatio Functionum Corporis Humani," which last is the most important of his productions, and has passed through several editions.—*Biog. Univ. Biog. Nouv. des Contemp.*

JAEGER (JOHN) a celebrated lutheran divine, was born at Stutgard, in 1647; his father being a counsellor to the duke of Wirtemberg. After he had finished his education he was entrusted with the education of duke Eberhard III, with whom he travelled into Italy. On his return he received various promotions, until in 1702 he became professor of divinity, and chancellor of the university. He died in 1720. His principal works are "Ecclesiastical History compared with Profane History;" "A System of Divinity;" several pieces upon mystical divinity, in answer to Fenelon, Poiret, &c.; "Observations upon Puffendorf and Grotius de jure Belli et Pacis;" "A Treatise of Laws;" "An Examination of the Life and Doctrine of Spinoza," &c. All his works are in the Latin language.—*Moreri. Saxii Onom.*

JAGEMANN (CHRISTIAN JOSEPH) an ingenious writer on the belles lettres and fine arts, who was librarian to the dutchess of Weimar. He was the author of a description of Tuscany; a history of the arts and sciences in Italy, 3 vols, 8vo; a magazine of Italian literature, 8 vols, 8vo; the life of Galileo; an Italian and German dictionary, 2 vols, 8vo; and an Italian grammar, and chrestomathy. He died in 1804.—*Zopf's Hist. Polit. Eccles. et Lit.*

JAGO (RICHARD) one of the minor poets of this country, in the last century. He was the son of a clergyman, who held the living at Beaudesert, in Warwickshire, where he was born in 1715. He received his education at a grammar-school at Solihull, in his native county, and at University college, Oxford, and he obtained the degree of MA in 1738. Having taken holy orders, he was inducted to the living of Harbury, which was succeeded by farther preferment. His first poetical production which attracted notice, was "An Elegy on the Death of a Blackbird," published in the *Adventurer*; and in 1757 appeared his principal work, a descriptive poem, entitled "Edge Hill," the subject of which probably was suggested by his residence in the neighbourhood of that place. He was vicar of Snittersfield, in Warwickshire, and rector of Kimcote, in Leicestershire, at the time of his death, which took place April 8th, 1781. A collective edition of his poems appeared in 1784.—*Lond. Mag.* vol. vi.

JAHN (JOHN) a learned Orientalist, who was canon of the metropolitan church of St Stephen, at Vienna. After having been professor of biblical archæology and theology in the university of that capital, he obtained the chair of Oriental literature, which he held till 1806, when he was obliged to relinquish it on account of his heterodoxy. He died in 1817. Besides Hebrew, Arabic, and Chaldee grammars, he published "Biblical Archæology," 1797-1802, 3 vols, 8vo; a Hebrew bible, 1806, 4 vols, 8vo; "Enchiridion Hermeneutica generalis Tabularum veteris et novi Fœderis," 1812, 8vo; "Appendix ad Hermeneuticam sacram, sive Fasciculi duo Vaticanorum de Messia," 1815, 8vo; "Lexicon Arabico-Latinum," with a collection of pieces in the Arabic language, many of which had never before been published. His works are said to be the most valuable extant, on the philology of the sacred writings; but he has hazarded some singular and bold sentiments on points of doctrine, which may excite the prejudices of some readers, and consequently detract from the utility of his observations and criticisms.—*Biog. Univ.*

JAILLOT (ALEXIS HUBERT) geographer to the king of France, in the last century, was at first a sculptor, but on marrying the daughter of a person who coloured maps, he turned his attention to geography. He engraved many of the maps of the Sansons, the best of which is that of Lorraine. His work, entitled "Récherches, critiques, historiques, et topographiques, sur la Ville de Paris," 5 vols, 8vo, 1772, is deemed a very curious work. He died in 1780.—*Nouv. Dict. Hist.*

JALLABERT (JOHN) an ingenious philosopher of the last century. He was born at Geneva in 1712, and having lost his parents when young, he was persuaded by professor Turretin to apply himself to the study of divinity. Having previously distinguished himself by his application to the exact sciences, he followed the professor's advice, and became a minister of the church in 1737. The ma-

gistrates of Geneva founded for him the professorship of experimental philosophy. After having taken possession of his office, he travelled for improvement in Switzerland, Holland, England, and France; and returning to Geneva in 1759, published an inaugural discourse, "On the Utility of Experimental Philosophy, and its connexion with Mathematics." Some time after he was nominated keeper of the public library of Geneva. The state of his health obliged him to resign his ministerial office in 1744, and for a while suspend his lectures. In 1750 he was appointed professor of mathematics; and two years after he succeeded to the chair of philosophy, on the death of Gabriel Cramer. In 1756 he became a member of the lesser council of Geneva; and in 1765 was made syndic of the republic. He died in 1768. Besides some essays and papers on natural philosophy, he was the author of "Experiences sur l'Electricité," 1748, 8vo, containing an account of all the experiments which he had made or proposed; and he was the first who demonstrated the utility of electricity in the cure of diseases.—*Biog. Univ.*

JAMBlichus, an eminent philosopher, a native of Chalcis, in Cælosyria, who flourished in the beginning of the fourth century. He was the scholar of Anatolius and of Porphyry, and having become perfect in the mysteries of the Plotinian school, he taught with vast reputation, of which however no great account will be taken at present, when it is added, that he professed to perform certain wonders by the aid of invisible beings. His writings discover extensive reading, but his style is inelegant, and he borrows freely, especially from Porphyry. The school of Jamblichus produced many eclectic philosophers, who were dispersed throughout the Roman empire; but the fate of one of the disciples of the school, named Sopater, who was put to death for something connected with his opinions, obliged them to propagate their tenets and practise their mysteries with great reserve, until the revival of the Alexandrian sect under the emperor Julian. The philosophical works of Jamblichus, now extant, are, "The Life of Pythagoras;" "An Exhortation to the Study of Philosophy;" "Three Books on Mathematical Learning;" "A Commentary upon Nicomachus's Institutes of Arithmetic;" and "A Treatise on the Mysteries of the Egyptians, Chaldeans, and Assyrians." St Jerome states that he also wrote a copious commentary on the golden verses of Pythagoras. He died about 333. This Jamblichus must be distinguished from the person of the same name, to whom the emperor Julian dedicates his epistles, for Julian was scarcely born when the successor of Porphyry died. The best editions of Jamblichus are those, *De Myst. Egypt. Chald. et Assy. nec non alii Tractatus philosophici*, Aldus, Venice, 1497; *De Myst. Egypt. nec non Porphyrii Epistola, &c. Gr. et Lat.*, Gale, Oxon. 1678; and *De Vita Pythag. Gr. et Lat.*, Kuster, Amsterdam, 1704, 4to.—*Brucker's Hist. of Philos. Lardner. Saxii Cron.*

JAMES I, king of Scotland, of the house of Stuart, born in 1394, was the son of Robert III, by Annabella Drummond. In 1405 his father sent him to France, in order that he might escape the danger to which he was exposed by the ambition of his uncle, the duke of Albany, but being taken by an English squadron, he and his whole suite were carried prisoners to the Tower of London. Here he received an excellent education from Henry IV of England; and to relieve the tedium of captivity, applied himself to those poetical and literary pursuits, the existing evidences of which do him considerable honour. Robert III died the following year, and James was proclaimed king, but during the remainder of the reign of Henry IV, and the whole of that of Henry V, he was ungenerously detained in England, with a view to prevent the alliance of Scotland with France. Such however was the natural policy which connected these two countries, it did not prevent the apprehended result, although Henry made James accompany his expedition into that kingdom, in order to render the act of opposing him, on the part of the auxiliary Scots, more embarrassing. At length, under the regency of the duke of Bedford, he was restored to his kingdom, after a detention of eighteen years, at which time he was in his thirtieth year, and highly accomplished, both mentally and in the manly exercises. He married Joanua Beaufort, a lady of distinguished beauty, of the blood royal of England, who is thought to be the fair dame alluded to in his pleasing poem of the "King's Qubair," of whom he became enamoured, from beholding her in the royal gardens from the window of his apartments, while a captive in Windsor castle. On his return to Scotland, finding that the duke of Albany and his son had alienated many of the most valuable possessions of the crown, he caused them to be convicted and executed as traitors, and their estates to be confiscated. These and some other strong measures in the resumption of improvident grants, under the regency of the dukes of Albany, were atoned for by the enactment of many good laws in his parliaments; and as far as a lawless nobility would allow them to be put in practice, they much improved the state of society in Scotland. In 1436 he renewed the Scottish alliance with France, by giving his daughter Margaret in marriage to the dauphin, and sending with her a splendid train and a large body of troops. A fruitless endeavour of the English to prevent this marriage, by intercepting the Scottish fleet in its passage, so exasperated James that he declared war against England, and summoned the whole array of his kingdom to assist in the siege of Roxburgh. He was, however, on such had terms with his nobility, in consequence of his endeavours to curb their ambition, and improve his revenue against their interests, that he was obliged to raise the siege and disband his army, under the apprehension of a conspiracy. He then retired to the Carthusian monastery of Perth, which he had himself founded, where he lived in a state of privacy,

which facilitated the success of a plot formed against his life. The chief actors in this tragedy were Robert Graham, and Walter, earl of Athol, the king's uncle, the former of whom was actuated by revenge for the resumption of some lands improperly granted to his family, and the latter by the hopes of succeeding to the crown. By the means of bribery, the assassins gained admission to the king's apartment; and an alarm being raised, the queen's ladies attempted to secure the chamber-door. One of them, Catherine Douglas, thrust her arm through the staple, in which state she remained until it was dreadfully broken by the assailants. The instant the assassins got into the apartments, they dragged the king from his concealment, and in spite of the cries and remonstrances of the queen, who in vain threw herself between them and the object of their resentment, put him to death by multiplied wounds. He perished in the forty-fourth year of his age, and thirteenth of his reign, on the 20th February, 1457, leaving one son and five daughters, and his murder was punished by the deaths of the conspirators in exquisite tortures. The king, who may be said to have fallen a martyr to his attempts to abolish the anarchy and disorder which prevailed throughout his kingdom, obtains no discreditable place among the catalogue of royal authors, by his poems of the "King's Quhair," already mentioned; "Christ's Kirk o' the Green," &c. the latter of which being humourosly descriptive of the manners and pastimes of the age, are still highly relished by those who can appreciate the Scottish dialect. James is also said to have been a skilful musician, and some attribute to him the composition of several of the most admired of the Scottish melodies, but of this Dr Burney is much inclined to doubt. An accurate list of the works of James I will be found in Park's edition of Walpole's Royal and Noble Authors.—*Irvine's Lives of the Scottish Poets. Walpole's Royal and Noble Authors.*

JAMES I of England and VI of Scotland, was the son of Mary queen of Scotland by her cousin, Henry lord Darnley. He was born at Edinburgh castle, in June 1566, at the unfortunate period when his mother was at variance with her husband, and had begun to fix her affections on the earl of Bothwell. In the stormy and disgraceful times which followed, the infant prince was committed to the charge of the earl of Mar, and in the following year, Mary being forced to resign the crown, he was solemnly crowned at Stirling, and from that time all public acts ran in his name. His childhood was passed in civil wars under the regencies of Murray, Mar, and Morton, during which time he resided in Stirling castle, under the tuition of the celebrated Buchanan. His progress in school learning was rapid, but as his character opened, an instability and weakness of temper became manifest, which indicated what, in the sequel, proved to be the case. that he would become an easy prey to flatterers, and his reign be marked by injudicious favouritism. From the first, too, he seems to have imbibed those exalted notions

of the royal authority and divine right which proved so great a snare to his posterity. Some injudicious measures, in the spirit of these opinions, early produced a conspiracy of his nobles against him, who in 1582 took possession of his person at Ruthven castle. A new confederacy, however, effected his liberation, and he again put himself under the sway of his favourite the earl of Arran. The policy of queen Elizabeth, whose apprehensions from the Catholic party in favour of Mary, led her to employ every art to keep up a dissatisfied party in Scotland, was signally assisted by the violent and unprincipled measures of Arran against the connexions of the recent conspirators, many of whom fled to England. When, however, it became apparent that the life of his mother was in danger from the sentence of an English judicature, James, who had hitherto treated her very irreversally, felt himself called upon to interfere. He accordingly wrote a menacing letter to Elizabeth on the subject, appealed to other courts for assistance, and assembled his nobles, who promised to assist him either to prevent or revenge that queen's injustice. When the news of the catastrophe arrived, he rejected with proper spirit the artificial excuses of Elizabeth, and prepared for hostilities; but he was finally prevented from engaging in actual war by a serious consideration of the inadequacy of his resources, and after some time a friendly correspondence was renewed. It is to the honour of James, that one of the first acts of his minority was to reconcile the feuds of his nobility, who for that purpose he invited to a grand festival at Holyrood house. On the threatened invasion of England by Philip II, he judiciously resolved to support Elizabeth against the Spaniards, and was zealously backed by his people for the preservation of protestantism, who entered into a national covenant for its support. In 1589 James married Anne, daughter of Frederick, king of Denmark; and as contrary winds prevented her coming to Scotland, with an ardour and spirit not very common with him, he sailed in quest of her, and consummated the marriage at Upslo. On his return home, after passing the winter in festivities at Copenhagen, he was in some danger from conspiracies against his life: and for several succeeding years of his reign, the history of Scotland displays much turbulence and party contest. In 1600, while the country was in a state of unusual tranquillity, a very extraordinary event took place, the causes of which were never discovered. While the king was upon a hunting excursion, he was invited by the brother of Ruthven, earl of Gowrie, to ride with a small train to the earl's house at Perth. Here he was led to a remote chamber, on pretence of having a secret to communicate to him, when he found a man in complete armour, and a dagger was put to his heart by Ruthven, with threats of immediate death. His attendants being alarmed, came to his aid, Gowrie and his brother were slain, and the king escaped unhurt. In 1603 James succeeded to the crown of England, on the death of Elizabeth, and pro-

ceeded amidst the acclamations of his new subjects to London. One of his first acts was to bestow a profusion of honours and titles on the inhabitants of both countries, in which, as in many other points, he displayed a contrast to the maxims of the late reign. A conference held at Hampton court, between the divines of the established church and the Puritans, afforded James an opportunity of exhibiting his skill in theological controversy, and the ill will he bore to popular schemes of church government. The meeting of parliament also enabled him to assert those principles of absolute power in the crown which he could never practically maintain, but the theoretical claim of which provided the increasing spirit of freedom in the house of Commons with constant matter of alarm and contention. Although James had behaved with great lenity to the Catholics in Scotland, those in England were so disappointed in their expectations of favour, that the famous Gunpowder Plot was concerted in 1605, the object of which was to blow up the king and parliament. Omitting the details of this extraordinary transaction, as an affair of well-known history, it may be observed, that in 1611 James displayed his zeal for orthodoxy by haughtily remonstrating with the Dutch states, for permitting the Arminian Vorstius to hold a professorship in one of their universities, and obtained the unimportant point of his removal. His cares for reducing and improving Ireland do him more honour. In 1612 he lost his eldest son, Henry, a prince of great promise, then of the age of nineteen, and in the following year the eventful marriage took place of his daughter Elizabeth with the elector palatine. About this time, the object of the weak passion of James for handsome favourites was Robert Carr, a youth from Scotland, who in a short time was raised from a court page to be earl of Somerset, and was loaded with honours and riches. The scandalous murder of sir Thomas Overbury, by the machinations of this minion and his infamous countess, put an end to the king's partiality, although he disgracefully pardoned the principals in the murder, while he allowed their agents to be executed. The fate of Somerset paved the way for the similar rise of George Villiers, duke of Buckingham, who went beyond him, both in favour and the rewards attached to it. No circumstance in the reign of James was more unpopular than his treatment of the celebrated sir Walter Raleigh. Soon after the king's accession, that statesman, who had been opposed to the Scottish succession, engaged in a plot to set aside James in favour of the lady Arabella Stuart, for which he was tried and capitally convicted, but being reprieved, was kept thirteen years in prison. In 1615 he obtained his release by dint of money, and was allowed to set out upon an expedition to the South seas, upon a gold mine discovery, with the sentence of death hanging over his head. Being unsuccessful in his objects, moved, as it is supposed, by his desire of an alliance between prince Charles and the

infanta of Spain, James listened to the suggestions of the latter power, and to the great scandal of the whole nation, sir Walter was executed upon his former sentence. The match with the infanta notwithstanding failed, and Charles married Henrietta Maria, daughter of Henry IV of France, with the disgraceful stipulation, that the children should be brought up by their mother until thirteen years of age, to which arrangement the future religious opinions of Charles II and James II may possibly be very fairly attributed. The close of the life of James was signalized by violent contests with his parliament, which prepared dreadful consequences for his successor. He was also much disquieted by the misfortune of his son-in-law, the elector palatine, who, having been induced to accept the crown of Bohemia, and to head the protestant interest in Germany, was stripped of all his dominions by the emperor. Urged by national feelings for the protestant cause, he was at length, in 1624, induced to declare war against Spain and the emperor; and troops were sent over to Holland to act in conjunction with prince Maurice. The defeat of this enterprise, through sickness and mismanagement, it is thought produced the king so much uneasiness as to cause the intermittent fever, by which he was soon after attacked, and of which he died in March 1625, in the fifty-ninth year of his age. James was not destitute of abilities, and possibly entertained very good intentions, but the former were not those of a ruler, and the latter were defeated by pliability and unmanly attachments. His reign, although not unprosperous to his subjects, was inglorious in character and loss of relative influence, and he was neither beloved at home nor esteemed abroad. He received during his life time a great deal of adulation, on the score of his literary abilities, but he merits far more as an encourager of learning, than for any fruits of it displayed by himself, all of which were debased by pedantry and prejudice. His "Basilicon Doron," "The true Law of Free Monarchies," and his answer to cardinal Du Perron, are however deemed honourable to his talents by Hume; but, unfortunately, he is far more remembered for his "Demonology," and his "Counterblast to Tobacco;" the first upholding witchcraft, and the latter being a puerile tirade against the use of the plant which he decries. Upon the whole, the good qualities of James were unstatesmanlike, and his bad ones unmanly and puerile.—*Hume. Hist. of Eng. Walpole.*

JAMES II, king of England, and VII of Scotland, second son of Charles I and of Henrietta of France, was born in October 1633, and immediately declared duke of York. After the capture of Oxford by the parliamentary army, he escaped in 1648, at the age of fifteen, and was conducted to his sister, the princess of Orange. He soon after joined his mother at Paris, and when he had reached his twentieth year, served in the French army under Turenne, and subsequently entered the Spanish army in Flanders, under Don John of

Austria and the prince of Condé. In these campaigns he obtained reputation and experience, although with the display of no very great or shining qualities. At the Restoration, he took the command of the fleet, as lord high admiral. He had previously married Anne, daughter of chancellor Hyde, afterwards lord Clarendon (see article HYDE) and ungenerously attempted to free himself from the union; but the marriage being satisfactorily established he could not succeed. In 1664, he took a leading part in promoting a Dutch war, for the alleged interests of trade, and on the 3rd of June, 1665, with a powerful fleet under his command, engaged that of the Dutch under Opdam, who with his ship was blown up in the action, and nineteen of his squadron were sunk or taken, with the loss of only one on the part of the English. The duke was in the thickest of the fight, and three men of quality were killed at his side; yet his courage was subjected to some imputation, because his ship, while in pursuit of the enemy, slackened sail in the night, by some asserted unauthorised orders on the part of Broucker, his gentleman of the bed-chamber. In 1671 the dutchess of York died, leaving her husband two daughters, who became successively queens of England. Before her death, she declared herself a convert to the Roman Catholic faith, which had been secretly that of the duke for many years, and was now openly avowed by him. This declaration produced a great impression on the people, and laid the foundation of the convictions which finally drove him from the throne. In the Dutch war of 1672, he was again placed at the head of the fleet; and as he lay in Solebay, in conjunction with a French squadron under D'Estrees, he was attacked by De Ruyter, and a furious engagement ensued, in which the earl of Sandwich, second in command, and his ship were blown up, and that of the duke so shattered, that he was obliged to shift his flag to another. On this occasion the Dutch fleet at length retired, but the English ships were too disabled to pursue, and the object of the French had been rather to keep aloof, and act as little as possible. A test act being soon after passed to prevent Roman Catholics from holding public employments, the duke was obliged to resign his command; a result which necessarily induced him to join heartily in the plot of the king and certain of his counsellors, to restore the Roman Catholic religion. In 1671 he took for a second wife Mary Beatrice, of Este, daughter of the duke of Modena, and in 1677 his eldest daughter Mary was, to the great satisfaction of the nation, united to William, prince of Orange. During the violent proceedings on account of the supposed popish plot in 1679, by the advice of the king, he retired to Brussels, and a bill passed the Commons for his exclusion from the throne, which was, however, rejected by the Lords. When the royal party again prevailed, the duke in 1681 was sent into Scotland, where he acted with great rigour, not to say cruelty, to the remnant of the covenanters. It is even said that he some-

times personally assisted at the torture of criminals, and altogether exhibited himself as a man of a severe and unrelenting temper. During the whole of the remaining reign of Charles II, indeed, during which he possessed great influence in the government, he was forward in promoting all the severe measures that disgraced it. At length, the king himself was obliged to check his rigorous severity, and to exclaim to him, in opposition to some violent councils, "Brother, I am too old to go again on my travels—you may if you please." On the death of Charles II, in February 1685, the duke succeeded without opposition, under the title of James II; and from the time of his ascending the throne, notwithstanding his professions to the contrary on his accession, seems to have acted in a steady determination to render himself absolute, and to restore the Roman Catholic religion; and such was the temper of the times, and the diffusion of the doctrine of passive obedience and blind loyalty, if he had confined himself to the former object only he might have virtually succeeded. A slight sketch of this misguided reign will serve to display its character. Having recently disgusted the great majority of his subjects, by attending to mass with all the ensigns of his dignity, he proceeded to levy the customs and excise without the authority of parliament. He even sent an agent to Rome, to pave the way for a solemn re-admission of England into the bosom of that church, and received advice, on the score of moderation, from the pope himself. This preposterous conduct naturally enough encouraged the otherwise crude and ill-concerted rebellion of the duke of Monmouth, the fate and suppression of which form the subject matter for history. The cold, cruel, and unrelenting temper of James was again signally exhibited in the executions on this account. Monmouth paid not unjustly for his rebellion with his life, but the legal proceedings under Jeffreys were brutal and merciless in the extreme; and it is estimated that no fewer than two hundred and fifty one persons suffered in the west of England, by the cruel proceedings of that infamous judge; which it was the custom of the king to give upon, under the name of "Jeffreys's Campaign." The temporary awe, produced by this severity, even in parliament, was so great, that James was encouraged to nearly throw off all disguise, both in regard to religion and government. By virtue of his assumed dispensing power, he rendered tests of no avail, and filled his army and council with Roman Catholics. He put Ireland entirely into their hands, and governed Scotland by a few noblemen who had become converts to the same faith. By a declaration in favour of liberty of conscience, he also sought to gain the favour of the dissenters, who were however too conscious of his ultimate object to be deluded by this apparent liberality. He gradually proceeded to a direct attack on the established church, by the formation of an ecclesiastical commission, which cited before

it all clergymen who had done any thing to displease the court. The rights of the university were also invaded, (see article, *Hougn*), and a mandate was issued to Magdalen college, Oxford, commanding the election of a person as president, who either was a Roman Catholic, or avowed his willingness to become so. A still bolder measure followed, in the publication of a declaration of indulgence in matters of religion, which was ordered to be read by the clergy in all the churches of the kingdom. Seven bishops met, and drew up a loyal and humble petition against this ordinance, which step being considered as an act of disloyalty, they were sent to the Tower. The result of their trial and acquittal forms an interesting portion of English history; but although James had ocular demonstration of the ecstasy of joy their deliverance created in the army itself, he was not deterred from his rash projects; and the birth of a son (afterwards called the pretender) about this time, increased his confidence. Meantime, the innovations, in regard both to the religion and government, gradually re-united opposing interests, and a large body of nobility and gentry concurred in an application to the prince of Orange, who had been secretly preparing a fleet and an army for the invasion of the country. James, who was long kept in ignorance of these transactions, when informed of them by his minister at the Hague, was struck with terror equal to his former infatuation; and immediately repealing all his obnoxious acts, he practised every method to gain popularity. All confidence was however destroyed between the king and the people; and had it been otherwise, a pause in his concessions, when he heard that the prince of Orange was driven back by contrary winds, would have put an end to it. William arrived with his fleet in Torbay, November 4, 1688, and landed his forces, but the remembrance of Monmouth's rebellion, for some time, prevented the people in the west from joining him, until at length several men of rank went over, and the royal army began to desert by entire regiments. Even the king's favourite, Churchill, joined the prince, and the unfortunate James, who had proceeded as far as Salisbury, found it advisable to return. From this time he every day saw himself abandoned by those whom he had most trusted, and when informed that his daughter Anne, married to prince George of Denmark, had put herself into the hands of the insurgents, the unhappy father in agony of heart exclaimed, "God help me, my own children have forsaken me!" Incapable of any vigorous resolution, and finding his overtures of accommodation disregarded, he resolved to quit the country, and first sending off the queen and infant prince to France, under the care of the French ambassador, he himself embarked on board of a ship in the mouth of the Thames. His vessel putting in at Feversham, he was recognised by the people, who detained and insulted him. He was however protected by the gentry, who escorted him to London, where, strange to say, he was re-

ceived with acclamations, and honourably lodged at Whitehall. Fearful that he might be invited to re-assume the reins of government, the prince and his party, by neglect and harsh deportment, endeavoured to make him renew his purpose to leave the kingdom. The plan succeeded; he asked leave to retire to Rochester, where he privately embarked on board a frigate, which conveyed him to Ambleteuse, in Picardy. He thence repaired to St Germain, where he was received with great kindness and hospitality by Louis XIV. In the meantime, the throne of Great Britain was declared *abdicated*, and was filled, with the national and parliamentary consent, by his eldest daughter Mary and her husband William conjointly. Anne, who had equally with her sister been educated a strict protestant, being declared next in succession, to the exclusion of the infant prince. Assisted by Louis XIV, James was enabled in March 1689, to make an attempt for the recovery of Ireland, where the Roman Catholics, possessing the chief power, received him with open arms. Failing in the memorable siege of Londonderry, he returned to Dublin, where he held a parliament; and his temporary authority at this time but too clearly proved that his principles of government had experienced no change. At length William landed in Ireland, and the decisive battle of the Boyne was fought in June 1690. In this action, so important to his interests, James kept at a distance from danger, and showed so little spirit, that it has been thought his former displays of valour were either forced and unnatural, or that his misfortunes had deprived him of all his pristine energy. He soon after returned to France, and buried his disgrace on the retreat of St Germain. All succeeding projects for his restoration proving equally abortive, he spent the last years of his inglorious life, distinguished only by the practices of an ascetic and punctilious devotion. He is even said to have entered into the society of Jesus, from which order he had unhappily chosen his most confidential advisers, to the destruction of his own welfare, and not to the benefit of theirs. He died at St Germain on September 16, 1701, at the age of sixty-eight. The character of James is sufficiently illustrated by the preceding abstract, which shows his prejudices to have been violent, his understanding narrow, and his temper ungenerous, and passively, at least, cruel. At one period of his life he obtained the character of a man of business, but it seems as if he merited it more by regularity and attention, than activity or discrimination. Although cold and grave in manner, he by no means escaped the licentious contagion of his brother's court, and had several avowed mistresses. On the favourable side, he may be said to have been a sort of martyr to principles, such as they were, and to have made himself a sacrifice to what false zeal and defective intellect led him to regard as the cause of duty.—*Hume's Hist. of Eng.*

JAMES (ROBERT) an ingenious physician and medical writer, but best known as the inventor of a specific for the cure of fever. He

was born at Kinverston, in Staffordshire, in 1703, and was well descended, his father being a major in the army, and his mother the sister of sir Robert Clarke. He received his education at St John's college, Oxford; and took the degree of B.M. after which he practised medicine successively at Sheffield, Lichfield, and Birmingham. He subsequently removed to London, and became a licentiate of the college of Physicians. His practice at first was probably not very considerable, and he relied chiefly on his pen for his support. He engaged in the compilation of a "Medicinal Dictionary," which appeared in 1743, in three volumes, folio. In this work, which is very respectably executed, James is said to have been assisted by his friend Dr Johnson, who has warmly eulogized his professional skill, in his Lives of the Poets. A translation from the Latin of Ramazzini's Treatise on the Diseases of Mechanics, with additions, appeared in 1746. He published in 1751, "A Dissertation upon Fevers," the purpose of which was to recommend a peculiar medicine, since known by the name of "James's Powder." For this preparation he procured a patent, and sold it as a secret remedy, by which he exposed himself to the hostility of his professional brethren, who looked upon his conduct as inconsistent with the dignity of the medical character. Anxious to secure from participation the profits of his nostrum, he is said to have inserted in the specification of his patent, an incorrect or imperfect formula for its composition. But James's Powder is now known to be antimoniated phosphate of lime; and a preparation very similar to it, if not exactly the same, has long had a place in the London Pharmacopoeia. In 1755, when the king was at Cambridge, James was admitted by a mandamus to the degree of MD. Notwithstanding the irregularity of his practice, he appears to have been very successful; and the general respectability of his character as a man of science and literary acquirements, enabled him, in a great degree, to triumph over the prejudices excited by a mode of conduct which placed him so near the level of those pests of society, the majority of advertising empirics and vendors of patent medicines. In 1760 he published a work entitled, "The Practice of Physic," 2 vols. 8vo; and subsequently a treatise on canine madness, and a dispensatory. One of his last literary labours was, "A Vindication of the Fever Powder," which was not published till after his death. That event took place March 23, 1776.—*Hutchinson's Biog. Med. Edit.*

JAMES (THOMAS) a learned divine of the establishment, was born in 1571, at Newport, in the Isle of Wight. He was educated at Winchester school, whence he was removed to New college, Oxford, where he obtained a fellowship. He took his degree of MA. in 1598, and the following year published "Philobiblion Richardi Dunelmensis," for which he was made keeper of the Bodleian library. He proceeded in the same spirit to publish "Ecloga Oxonio-Cantabrigiensis," 1600, 4to,

containing a catalogue of the MSS. in each college library at Oxford and Cambridge, as also in the public library at the latter university. In 1614 he graduated as DD, and was promoted to the subdeanery of Wells. He next undertook to collate the MSS of the fathers and ecclesiastical writers, with a view to the detection of interpolations and forgeries; but notwithstanding his zeal and exertions, he could not obtain adequate patronage. He however proceeded a certain length without it, but was prevented from completing his design by death, in 1622, in his fifty-first year. His principal publications are, "Catalogus Librorum in Bibl. Bodleiana," 4to; "Concordantia SS Patrum," 4to; "Apology for John Wickliffe;" "A Treatise of the Corruption of the Scripture, Councils, and Fathers;" "The Jesuits' Downfall;" "Index Librorum prohibitorum a Pontificiis," &c.—*Wood.*

JAMES (RICHARD) nephew of the preceding divine, was born at Newport, in the Isle of Wight, in 1592. He was admitted of Corpus Christi college, Cambridge, in 1608, and took the degree of MA in 1615. Having taken orders, he travelled into Wales and Scotland, whence he proceeded to Shetland, Norway, and Russia, on which latter country he made many written remarks, which were found among his MSS after his death. Returning home, he resumed his literary studies with increased ardour, and was engaged to assist the celebrated Selden in composing his "Marmor Arundeliana," published in 1628. He was also very serviceable in the arrangement of the library of sir Robert Cotton. Declaring boldly with that gentleman his opinions against the illegal extension of the royal prerogative, he was imprisoned in 1629, by order of the house of Lords. He died at the house of sir Thomas Cotton, in 1638, in his forty-sixth year. His character as a scholar stood very high, and if he had been enabled, by clerical preferment, to devote himself uninterruptedly to study, great results might have been expected. His published pieces consisted only of two Latin sermons, and five English ones. A poem on the death of sir Robert Cotton, and a translation of the Octavius of Minutius Felix. He, however, left behind forty-five MSS of his own composition, containing observations on Russia, and many pieces on anti-quinities.—*Ibid.*

JAMES (THOMAS) an English navigator, in the seventeenth century, noted for his expeditions towards the North Pole. He was employed by a society of merchants at Bristol in 1631, together with Luke Fox, to search for a north-west passage. Sir Thomas Roe presented him to Charles I, who encouraged his enterprise. He left Bristol on the 3d of May, and proceeded to Hudson's Bay. After wintering on an island, in the latitude of about 52 degrees, James proceeded northward, and on the 26th of August, 1632, sailed as far as 65 degrees and a half north, where the sea to the north-west was covered with ice. Unable to proceed he returned to England, where he arrived the 22d of October. He published in

1633, "The strange and dangerous Voyage of Captain Thomas James, for the Discovery of a North-west Passage to the South Sea," 4to. Captain James made some discoveries on the coast of Hudson's Bay: to the country on the western side of which he gave the appellation of New Wales. His journal is curious, and contains an interesting account of the sufferings of himself and his companions during their hibernation on the isle of Charlton.—*Biog. Univ. Southey's Omniana.*

JAMES DE VORAGINE, a learned Italian prelate of the thirteenth century, who took his surname from Voraggio, the place of his birth, in the territory of Genoa. He entered into the Dominican order, of which he rose to be general, and was also nominated archbishop of Genoa, by pope Nicholas IV. He was author of a voluminous collection of the lives of the saints, which, notwithstanding the monstrous absurdities with which it abounded, found especial favour at the time. After the first Latin edition of it, printed in 1170, it was translated into English, and from that time to the sixteenth century, underwent more impressions than any other work. He also published numerous sermons, and a curious work, called "Mariale Aureum," containing one hundred and sixty discourses in praise of the Virgin Mary. He was likewise the author of a "Chronicon Januensis Civitatis," published by Muratori, and he is said to have been the first person who published an Italian version of the bible.—*Cave's Hist. Lit. Dupin. Moreri. Landi's Hist. Lit. d'Italie.*

JAMES DE VITRI, a celebrated cardinal in the thirteenth century, so called from the place of his birth, a village near Paris. He was canon of Oignies, then pastor of Argenteuil, and attending the crusades, was made bishop of Acre or Ptolemais. He was created a cardinal in 1230, by Gregory IX, who also made him bishop of Frescati. He was afterwards legate in France, Brabant, and Palestine, in all which missions he discovered much zeal and prudence. He died at Rome in 1244. He left many works, the most curious of which are, an "An Eastern and Western History," a portion of which is printed in Bongars's collection, entitled "Gesta Dei per Francos," and in P. Martenne's *Thesaurus Anecdotorum*. He was also author of "Epistola ad familiares suos in Lotharingia de Capta Damiana," likewise in Bongars's collection; an epistle to pope Honorius III; and sermons on the gospels and epistles for the whole year.—*Ibid.*

JAMESON (GEORGE) a native of Aberdeen in Scotland, born 1586. He devoted himself to the art of painting, and quitted Scotland for the purpose of studying under Rubens, then in the zenith of his reputation. A portrait which he executed of Charles I, obtained for him from that unfortunate monarch, the present of a valuable diamond; court etiquette having been so far dispensed with in his favour, that he was, on account of a defect of vision, allowed to wear his hat while the king sat to him. There are also

several historical pieces, as well as some excellent landscapes, from his pencil. His death took place in 1641.—*Walpole's Auec. Pinkerton's Scot. Gal.*

JAMI (AND ALRAHMAN) a celebrated Oriental poet, regarded as the Petrarch of Persia. He was born in 1414, in the province of Khorasan. His reputation procured him an invitation to the court of the sultan Abusaid, whose patronage he enjoyed, as well as that of his successor, till his death, which happened in 1492. Jami was one of the most fertile among the Persian bards; his works amounting in number to nearly forty. The most interesting of these were united by the author in a collection, which he entitled "Heft Aurenk," i. e. "The Seven Stars of the Bear." They comprise the tales of "Yuseph and Zuleika," founded on the story of the Hebrew patriarch Joseph; and "Mejnoun and Leila," of which there is a French translation, by M. de Chezy. Some of the compositions of Jami have also been translated and published by M. Langlés, in his "Contes, Sentences et Fables tirées d'auteurs Arabes et Persans," 1788.—*Biog. Univ. Dict. Hist.*

JAMIN DE BERMUY (JEAN BAPTISTE AUGUSTE MARIE) a French officer, who was a native of the department of L'Isle et Villaine, and was born in 1773. He became a sub-lieutenant of cavalry in 1790; and after passing through subordinate stations, was in 1795 aide-de-camp of Nansouty, and in 1802 he commanded the eighth squadron of cuirassiers. He was aide-de-camp to marshal Massena, and served with him in 1806, in his Neapolitan campaign. Being made colonel of the royal guards of light cavalry, he went to Spain at the head of that corps in 1808 and distinguished himself particularly at the battle of Ocana, November 9th, 1809. Nominated general of brigade in the following year, he returned to France in 1813, after having given proofs of his bravery at the battle of Vittoria. He served with great credit on subsequent occasions; and in the campaign of 1814 he had the command of a brigade of light cavalry. He was killed at the battle of Waterloo. General Jamin de Bermuy was esteemed one of the best cavalry officers of his time, and had he lived he would probably have reached the highest rank in his profession. He was an officer of the legion of honour, a knight of St Louis, a baron of the empire, and marquis of Bermuy, a title conferred on him for his services in Spain.—*Biog. N. des Contemp.*

JAMYN (AMADIS) an early French poet, contemporary with Ronsard, whose friendship he enjoyed, and to whom he has been by some preferred, on account of the comparative smoothness of his rhythm, and the less inflated style of his verse. After having travelled over great part of Asia Minor and the countries of ancient Greece, he returned to France, and being fortunate enough to attract the notice of Charles IX, by his productions, that monarch appointed him his private reader and secretary. He published seven prose essays

and two volumes of poems. He also completed the translation of the Iliad, begun by Salel, to which he added the three first books of the Odyssey, and was also the author of a treatise, entitled "Discours de Philosophie à Passicharis et à Pdanthe." He died in 1585.—*Nouv. Dict. Hist.*

JANEWAY (JAMES) a nonconformist clergyman of the seventeenth century, a native of Hertfordshire, born about the year 1636. He obtained a studentship at Christ church, Oxford, but lost his situation, together with all hopes of future preferment, in 1662, for his refusal to comply with the provisions of the test act. After his deprivation he came to London, and was for several years pastor to a dissenting congregation at Rotherhithe. Among his works are, "Heaven on Earth;" "The Saint's encouragement to Diligence," &c. both in 8vo; and several other devotional tracts, besides the life of his brother, John Janeway; a treatise, entitled "A Token for Children," which has gone through several editions; and "A Legacy to my Friends," printed after his decease, which took place in 1674.—*Calamy. Granger.*

JANI (CHRISTIAN DAVID) rector of the college of Eisleben, a classical scholar and critic of eminence in the last century. He published a valuable edition of the odes of Horace, and another of the history of Paterculus; and he was also the author of a critical treatise, entitled "Artis Poeticæ Latinæ," libri iv, Halæ, 1774, 8vo. His death took place in 1790.—*Zopf's Univ. Hist. Polit. Eccles. & Lit.*

JANICON (FRANCIS MICHAEL) an able journalist, was born at Paris in 1674. He was an acute thinker as well as an ingenious writer, and although bred originally to the profession of arms, eventually turned his attention with considerable success to the cultivation of letters, especially in the political department of literature. His religious opinions making it convenient for him to quit his native country, he took up his abode in the Netherlands, and was for many years an active contributor to the gazettes of Amsterdam, Utrecht, and Rotterdam, his productions in which journals were equally admired for the soundness of their argument and the elegance of their style. His other works are, "The Present State of the Republic of the United States," 2 vols. 12mo, 1729, and translations of Gavin's satire against Monachism, 4 vols, 12mo, and of Steele's Ladies' Library. He died of an apoplexy in 1730.—*Nouv. Dict. Hist.*

JANOZKI or JANISCH (JOHN DANIEL) a Polish clergyman and man of letters, who was keeper of the Zaluski library at Warsaw. He was born at Wieborg, in 1720, and died in 1786. His works relate to the history of literature in Poland, and afford much valuable information. The most important are, "Letters on Criticism," 2 vols. 8vo; "Account of rare Books in the Zaluski Library," in five parts, Breslau, 1747-1753, 8vo; "A Dictionary of Living Authors of Poland," in two parts, 8vo; "Polonia literata nostri Temporis," &c.—*Aikin's G. Biog. Biog. Univ.*

JANSENIUS (CORNELIUS) a learned Flemish prelate, was born at Hulst, in the year 1510. He was educated at Ghent and Louvain, where he became a proficient in the Hebrew, as well as Greek and Latin languages, and devoted himself to the study of the scriptures. He was appointed professor of divinity at Louvain, and in 1568 was nominated first bishop of Ghent. He composed "A Paraphrase on the Psalms," with copious notes, Louvain, 1569; "Notes on the Book of Proverbs, Ecclesiasticus, the Canticles, and the Book of Wisdom," printed in 1586; "Commentaries upon some Passages in the Old Testament," &c. His chief work, however, was the "Concordia Evangelica," published in 1549, and frequently reprinted, which was regarded by Dupin, as superior to every harmony of the gospels which had previously appeared.—*Moreni. Dupin.*

JANSENIUS or JANSEN (CORNELIUS) bishop of Ypres, so distinguished as giving a name to the sect of Jansenists, was born of catholic parents, at a village, called Akay, near Leerdam in Holland, in 1583. He studied at Louvain, whence he removed to Paris, where, by the recommendation of John du Verger de Hauranne, afterwards celebrated as the abbot of St Cyran, he became tutor in a respectable family. He subsequently repaired, with his friend Du Verger, to Bayonne, where they spent five or six years in an intense study of the writings of St Augustin, until the bishop of Bayonne was induced, by their reputation and acquirements, to make Du Verger a canon in the cathedral, and place Jansenius at the head of a college in that city. On the promotion of the same bishop to the archiepiscopal see of Tours, Du Verger proceeding with him to Paris, Jansenius also gave up his post, and returned to Louvain, after an absence of twelve years, and was appointed principal of the college of St Pulcheria. In 1617 he was constituted professor of divinity, and was selected by the university to take two voyages into Spain, in order to defend its privileges against the encroachments of the jesuits. In 1630 he engaged in a protestant controversy with Voetius, and in 1634, in another, which might be similarly denominated, with a wavering catholic, named Simonis, whom he treated with a harsh and persecuting spirit. About the same time, in consequence of the alliance between Louis XIII and the united provinces, he composed a work, entitled, "Alexandri Patricii Armacani, Theologi Mars Gallicus, seu de Justitia Armorum et Fœderum regis Galliæ," which contains the most virulent exclamation against the countenance afforded by France to the protestants, and asperses the Dutch as rebels and traitors to their native sovereign. For this service, the king of Spain advanced him to the see of Ypres, while, on the other hand, it is said to have been the cause of the deep resentment entertained by cardinal Richelieu against Jansenius and his followers. He had scarcely taken possession of his new see, and commenced his meditated re-

forms, when he was arrested by death in 1638, in the fifty-third year of his age. He left several works which it is unnecessary to enumerate, with the exception of the celebrated production in which he bestowed the labours of twenty years, and which was not published until after his death in 1640, entitled, "Augustinus, seu Doctrina sancti Augustini de Humanæ Naturæ, sanctitate, Ægritudine, Medecina, adversus Pelagianos et Massilienses," folio. This work, which produced the great modern, and probably lasting schism, in the church of Rome, unfolds the doctrine of St Augustine on the constitution and powers of the human nature, in its original, fallen, and renewed state; on sanctifying grace through Christ; and on the eternal predestination of men and angels. It immediately excited the anger of the jesuits as a tacit, but formidable refutation of their opinions concerning human liberty and divine grace; and by their strenuous endeavours it was condemned in 1641, by Urban VIII, in a solemn bull, as infected by several errors which had long been banished from the church. It is the province of history to relate the incessant struggles between the partizans of the opinions of Jansenius, and the jesuits in France and elsewhere, until the condemnation, by Innocent, of the famous five propositions supposed to be contained in the great work of Jansenius. 1. That there are divine precepts which good men are unable to obey for want of God's grace, although desirous to do so. 2. That no person can resist the influence of divine grace when bestowed. 3. That for human actions to be meritorious, it is not requisite that they should be exempt from necessity, but only from constraint. 4. That the semi-pelagians err in maintaining that the human will is at liberty either to resist or receive the aid of preventive grace. 5. That whoever maintains that Christ died for the sins of all mankind, is a semi-pelagian. After this condemnation, bull after bull was required to settle a dispute, in which the most eminent clergy were divided. The persecutions in France of the Jansenists, by Louis XIV, the destruction of the celebrated Port Royal, with the dispersion of its able members, and the subsequent fate of the maintainers of these opinions will be found in the ecclesiastical writings of the seventeenth and eighteenth centuries. It will be obvious that the Arminian and Calvinistic parties in the church of England divide upon nearly the same points as the Jesuits and Jansenists.—*Bayle. Moveri. Mosheim.*

JANSENS. There were three eminent Flemish painters of this name. **ABRAHAM**, a native of Antwerp, was born in 1569. He exhibited great precocity of talent, and was for a while considered as far beyond his youthful competitors in the art, till the rising reputation of Rubens filled him with so much jealousy, that he challenged the latter to paint a picture for the mastery. The invitation was as modestly declined as it was insolently urged, his rival remarking, that public opinion would doubtless do justice to both parties.

In his private character he appears to have been thoughtless, profligate, and given to low debauchery, but his excellence as an artist is attested by his celebrated descent from the cross, in the cathedral at Ghent; his resurrection of Lazarus, in the Dusseldorf gallery, and by several of his other paintings which adorn the walls of the Carmelite convent at Antwerp. The time of his decease is uncertain.—**HONORIUS VICTOR JANSSENS** was born in 1664, at Brussels. The duke of Holstein took him under his protection, and sent him to Rome at his own expense, in order to give him an opportunity of cultivating his talents to the best advantage, by studying the works of the first masters. His progress in painting did not discredit his patron's munificence. He made Raphael his principal model, and on his return enriched the churches of his native country, by various valuable productions of his pencil. His paintings are in general small in size, but highly esteemed. His death took place in 1739.—**CORNELIUS JANSSENS**, who, during his long residence in England, was sometimes called Johnson, was a native of Amsterdam. Portrait painting was the branch of the art to which he principally devoted himself. He arrived in this country in James the First's time, and was considered by many fully equal to Vandyke. The breaking out of the civil wars, and the consequent dispersion of his court friends, induced him at length to return to his native city, where he flourished awhile in considerable reputation, and died in 1665.—*Pilkington. Walpole's Anec.*

JANTET (**ANTHONY FRANCIS XAVIER**) a learned mathematician, born in 1747, at Bief du Fourg, in the mountains of Jura. After finishing his studies, he embraced the ecclesiastical profession; and in 1768 he was employed to teach Latin in the orphan-house at Dole. In 1773 he obtained the chair of philosophy in the college at that place; on the suppression of which establishment, he became professor of transcendental mathematics in the central school of Jura, and he continued in his post after the removal of the school to Besançon, with the title of lyceum. He died of apoplexy, in 1805. His only published work, "Traité élémentaire de Mécanique," 1785, 8vo, is much esteemed. He left in manuscript, a treatise on arithmetic, and other mathematical tracts, besides an etymological dictionary of French words derived from the Hebrew.—*Biog. Univ.*

JARCHI (**SOLOMON BEN ISAAC**) also called Raschi, a learned rabbi of the twelfth century, whose memory and writings are held in much esteem among the Jews. He was born at Troyes, in France, in the year 1104. In 1134 he left his native city for the purpose of travelling, and visited not only a large portion of the European continent, but extended his progress through Russia, Tartary, Persia, Palestine, Egypt, and other Eastern countries. Returning to France, he employed himself in writing Annotations on the Five Books of Moses, the Mishna, Gemara, and Pirke-Avoth,

with such success, as to have acquired the appellation of the "prince of commentators." He died at Troyes in 1180, whence his remains were removed to Prague, in Bohemia, for interment. A Latin translation of his Comment on the Pentateuch was published by Breithaupt, at Gotha, in 1710.—*Moreri*.

JARDINS (MARIE CATHERINE des) a witty and ingenious, but profligate Frenchwoman, the daughter of a provost of Alençon, where she was born in 1640. The consequences of an early intrigue inducing her to abandon the protection of her family, she came to Paris, and for a while trusted to the exertion of her literary talents for support. The productions of her pen during this period of her life were principally romances, although some of her performances are dramatic, occupying altogether twelve duodecimo volumes. Her private character, notwithstanding her acquaintance was much courted by the literati of the day, was most exceptionable. M. de Villedieu, with whom she had formed a connexion, falling in battle, she entered into a matrimonial engagement with the marquis de la Chasse, while it was notorious that a former wife of that gentleman was still living, in a state of separation from her husband. A son was the offspring of this attachment, but the father dying, she shortly after entered into a new arrangement with a near relation. Her death took place at Clinchemare, in 1683. Besides the edition of her works already alluded to, which appeared in 1702, a second was published in fourteen volumes, about twenty years after the first, containing some additional poems, fables, &c. The style of this literary female is rapid and animated, and she had the merit of banishing the lumbering romance of Calprenede and the Scuderis. Like Mrs Behn, Mrs Manley, and other females of similar character in England, she was in the habit of fathering the imaginary adventures in her productions on people of rank and eminence. She also wrote poetry, but very indifferently.—*Moreri*. *Bayle*. *Nouv. Dict. Hist.*

JARDYN (KAREL du) a Dutch painter, celebrated for his animals and landscapes, born in 1640 at Amsterdam. He quitted his native country in order to improve himself by studying the Italian masters, and settling at Venice, died there in 1678. So great a respect was entertained for his character as an artist, that although a Lutheran, his remains were allowed by the government to be interred in consecrated ground.—*Pilkington*. *D'Argenville Vies de Peint.*

JARNOWICK, or **GIORNOVICKI** (GIOVANNI MANE) an eminent musician and violinist, born at Palermo in Sicily, in 1745. He studied the violin under the celebrated Lulli, and was considered by that master as his most accomplished scholar. Having made his debut at the Concert Spirituel in Paris, for ten years he ranked in that capital as the head of his profession; but circumstances obliging him to quit France, in 1782 he repaired to Potsdam, in Prussia, where he enjoyed an equal degree of reputation. Ten years after he came to

England, and was very popular in London, till an unlucky dispute with J. B. Cramer induced him to quit the country. He afterwards accepted an invitation to St Petersburg, and remained in that capital till his death, which was caused by apoplexy in 1804. The character of Jarnovick was as eccentric as his talents were brilliant, and several anecdotes are told of the effects produced by the irritability of his disposition. He piqued himself on his knowledge of the use of the small-sword, and once gave a box on the ear to the celebrated fencer St George, but the chevalier took no farther notice of the assault than by saying, "I admire his talents too much to fight him."—*Biog. Dict. of Mus.*

JARRY (LAURENCE JULLARD du) a French ecclesiastic, eminent both for his pulpit oratory and his poetry; he was born in 1658, at a village whence he derived his name, in the neighbourhood of Xaintes, and at length obtained the priory of Notre Dame, in the place of his nativity. For this piece of preferment he was principally indebted to his own talents, having gained the French academical prizes at Paris, both in the years 1679 and 1714, although on the latter occasion Voltaire was one of the candidates. He enjoyed the friendship of Bourdaloue and Bossuet, and distinguished himself highly as a preacher. His works are, "Le Ministère Evangélique;" "Ouvrages de Piété;" "Poésies Chrétiennes;" Sermons, &c. D^r Jarry died in 1730.—*Moreri*. *Nouv. Dict. Hist.*

JARS (FRANÇOIS de ROCHECHOUART, chevalier de) a French officer, who was a knight of Malta, commander of Lagny le Sec, and abbot of St Satur. He was a man of talents, of a bold and resolute disposition, and was particularly distinguished for his conduct when he was arrested and confined in the Bastille, at the time of the prosecution of Chateaufort, keeper of the seals, in 1633. He was accused of a design to convey the queen mother, Anne of Austria, and her second son, to England; but of this there was no evidence, and the object of the proceedings against him was to procure evidence from him relative to the designs of Chateaufort and other political opponents of cardinal Richelieu. The chevalier de Jars, after eleven months' close confinement, during which he was examined twenty-four times, without inculpating his friends, was transferred to Troyes, where, still retaining his constancy, he was tried before Laffemas, a creature of cardinal Richelieu, and condemned to die. On the scaffold, when he had placed his head on the block, a reprieve was announced, and he was conveyed back to prison, where he continued for some time in a state of insensibility. The story which has been often told of an exhortation made him at the foot of the scaffold, to show his gratitude for the king's clemency, by confessing the treason of the keeper of the seals, and his reply, that "he knew nothing to the disadvantage of his friend; and if he did, he would never betray him," however interesting, appears to be incorrect. D^r Jars was liberated some

time after, and went to Italy. He returned to France after the death of Richelieu, and was employed by cardinal Mazarin. He died in retirement, in 1670.—*Biog. Univ.*

JARS (GABRIEL) an eminent mineralogist, who was a native of Lyons in France. He was born in 1732, and he acquired an early taste for metallurgical researches, in consequence of his father's being interested in some mining speculations. He was educated as an engineer, and in 1757 he was sent by the count de Maurepas to accompany M. du Hamel du Monceau on a visit to the mines of Germany, Hungary, &c. In 1765 he was employed to examine the mines in England and Scotland, and afterwards those of Norway, Sweden, and the Netherlands. Returning to his native country, he was made a member of the Academy of Sciences. He engaged in the task of arranging the collection of minerals he had made, with a view to lay his observations before the public; but his death in 1769 prevented him from executing his design. His brother, who had been his co-adjutor in his researches, compiled from his papers a work entitled, "*Voyages Métallurgiques, ou Recherches et Observations sur une très-grande quantité des Mines d'Or, d'Argent, &c.*" Lyon, 1774, 3 vols. 4to.—*Biog. Univ. Aikin's G. Biog.*

JARVIS (JOHN) an eminent artist, who distinguished himself by his paintings on glass. He was born in Dublin about 1749, and practised his art at first in his native city. He is said to have been indebted to Dr Cunningham for instructions in chemistry, which were of advantage to him in the prosecution of his profession. He removed to London, where he obtained great reputation, and the works which he executed were much admired. He was particularly famous for his exquisite finishing of single subjects; but his most celebrated performance is the west window of New College chapel, Oxford, from the design of sir Joshua Reynolds. He also executed in painted glass a picture of the resurrection, designed by West, in the east window of St George's chapel, Windsor. He died in London, in 1804, greatly regretted by the lovers of the fine arts.—*Dallaway's Obs. on Eng. Archit. Ryan's Biog. Dict. of the Worthies of Ireland.*

JAUCOURT (LOUIS, chevalier de) a French author, the cadet of a noble family, born 1704. He early in life displayed a strong turn for literary pursuits, and abandoned the advantages held out to him by his rank and the fortune of his connexions, in order to indulge his ruling propensity. With this view he became a member of the university of Leyden, where he studied medicine and natural philosophy under the celebrated Boerhaave, directing his attention at the same time to ethics, antiquities, and the belles lettres. On his return to France he assisted Gaubius and his coadjutors in the Museum Sebæanum, was a contributor to the *Encyclopedie*, and in 1740 became editor of the "*Bibliothèque Raisonnée.*" The stadtholder made him a very handsome

offer to take up his residence in Holland but neither the charms of wealth, nor the prospect of court favour, had power to seduce him from the moderate line of life which he had chalked out for himself. He declined the proposals made him, and continued to pursue his quiet unpretending mode of life till his death, in the spring of 1780. M. de Jaucourt was a member of the academies of Stockholm and Berlin, and an honorary fellow of the Royal Society of London. A valuable work of his, of which great expectations were formed, and which occupied six large folio volumes, was lost in manuscript, the vessel which had it on board foundering on its way to Holland. The treatise which thus unfortunately perished, he had compiled with great care and assiduity, and had intended to usher into the world under the title of "*Lexicon Medicum Universale.*"—*Nouv. Dict. Hist.*

JAY (GUY MICHEL le) a French lawyer of the seventeenth century, celebrated as a biblical critic. He was an advocate in the parliament of Paris, but neglected his profession, and ruined his fortune in devoting both his time and means to the publication of a beautiful Polyglott Bible, the superintendance of which occupied him fully from 1628, when it was first commenced, till its appearance in 1645. Cardinal Richelieu would gladly have had this valuable work in ten volumes, folio, which contains the Arabic and Syriac versions, not to be found in that of Ximenes, published under his auspices and name; but the independent spirit of the author induced him to prefer an honorable poverty, rather than to share the credit of his production with a patron, however elevated in rank or character. He afterwards entered into holy orders, and obtained the deanery of Vezelai and the rank of a counsellor of state. His death took place at an advanced age in 1675.—*Id. Moreri.*

JEAN BON ST ANDRE (baron) a French revolutionary statesman, born of a protestant family at Montauban, in 1749. He studied in a college of the Jesuits, and being destined for the mercantile profession, he went to America, but returning to France after suffering three shipwrecks, he became a minister of the reformed church. He exercised that office at the commencement of the revolution, of which he was a warm partizan, and in September 1792, he was nominated deputy to the National Convention, from the department of Lot. He joined the party of the Mountain, voted for the death of the king, contributed to the destruction of the Girondists, and as a member of the Committee of Public Safety, shared in the tyranny of Robespierre. He was on board the French fleet in the battle with lord Howe, on the 1st of June, 1794, as a commissary of the Convention; and he was wounded on that occasion. He subsequently displayed more moderation in his political conduct, which did not, however, prevent a judicial inquiry concerning the transactions in which he had been engaged; but the amnesty which took place in October 1795 having set

him at liberty, he was sent by the Directory as consul to Algiers. Returning home, he was appointed prefect at Mayence, in which station he distinguished himself by his firmness, integrity, and the extent and sagacity of his views; and having held the post thirteen years, he died in December 1815, much regretted throughout the district over which he had presided.—*Biog. Nouv. des Contemp.*

JEANNIN (PIERRE) a lawyer of Burgundy, advocate and afterwards president of the parliament of Dijon. He was born in 1540, and practised during the earlier period of his life in the courts of his native province, till the resistance which he made to the execution of the commands of the government, ordaining the massacre of the Huguenots on the festival of St Bartholomew, though it threw him into temporary disgrace, occasioned him to obtain eventually the countenance and confidence of Henry IV, who called him to his counsels after the ruin of the League. Under this monarch he was charged with the management of several diplomatic negotiations, both with Spain and Holland, and continued after the assassination of Henry, to enjoy the confidence of the queen mother. A collection of his state papers, containing the history of the transactions in which he was personally concerned, appeared in 1656, in one folio volume, and was afterwards printed in two vols. 12mo, in 1659. His death took place in 1652.—*Id.*

JEANROI (DEODATUS) an eminent French physician, regent of the faculty of Paris. He was a native of Nanci, and after having studied under a relative he went to Paris, where he became a member of the Royal Society of Medicine, and distinguished himself by his intelligence and activity. In 1778 he was sent by the government to Dinan, where an epidemic disease was then making great ravages. He succeeded in checking the progress of the infection, though at the expense of his own health; and on his recovery he published a tract, entitled "Premier Memoire sur les Maladies qui ont regne à Dinan, en Bretagne, en 1779." Some time after he contributed to the *Encyclopaedia Methodique* several important articles relative to the diseases of children and other subjects. Occupied entirely with his professional avocations, he escaped the storms of the Revolution, and after long holding a high station among the members of the medical faculty at Paris, he died of dropsy of the chest, March 27, 1816.—*Biog. Nouv. des Contemp.*

JEURAT (EDME SERASTIAN) an ingenious astronomer, who was born in 1755, at Paris, where his father was engraver to the king. In his childhood he manifested a taste for designing and mathematics; and at the age of twenty-two he obtained a prize-medal for a design from the Academy of Painting. In 1749 he assisted in constructing the great map of France, on which Cassini was employed; and in 1750 he published a very useful "Treatise on Perspective." He was appointed professor of mathematics at the mi-

litary school in 1753; but he devoted much of his attention to astronomy, especially in relation to comets; and in 1763 he was admitted a member of the Academy of Sciences. In 1775 Jeurat succeeded Lalande in making the calculations for the "Connaissance des Tempes." He procured the establishment of an observatory at the military school, and was employed in it till his death, March 7, 1803, at which time he was the oldest astronomer in Europe.—*Biog. Univ. Biog. Nouv. des Con.*

JEBB, MD. (JOHN) a celebrated heterodox divine of the last century. He was born in London in 1736, and his father being deau of Cashell, in Ireland, he received his early education in that country. In 1753 he became a student of Trinity College, Dublin, whence he removed the next year to Peterhouse, in the university of Cambridge. He there took the degree of B.A. in 1757, and at the same time commenced private tutor. In 1761 he proceeded M.A. and obtained a fellowship, which he relinquished in 1764, on being presented to the rectory of Orington, in Norfolk, having the preceding year taken the order of priesthood. In 1765 he published, in conjunction with the rev. R. Thorpe and the rev. G. Wollaston, a work entitled, "Excerpta quaedam e Newtoni Principiis Philosophiæ Naturalis, cum Notis Variorum," 4to. In 1766 he returned to Cambridge, and resumed the office of tutor; and in 1768 he delivered a course of lectures on the Greek Testament. He obtained in 1769 three livings in the county of Suffolk, and was appointed chaplain to the earl of Harborough, having married a relative of that nobleman. The freedom of opinion he had expressed in his lectures having given rise to some obloquy, he printed a "Short Account" of them in 1770, republished with additions in 1772. About this period he interested himself warmly in the scheme of archdeacon Blackburne, to procure the legal abrogation of clerical subscription to the thirty-nine articles; and he also endeavoured to effect some improvements in the mode of academical education at Cambridge, in which he was unsuccessful. The freedom of his opinion, on points of doctrine and discipline, having rendered his situation in the university and the church unpleasant, from the hostility excited against him, he determined, with that promptitude of character which marked all his proceedings, to relinquish both his clerical and academical appointments. In September 1775, he resigned all his benefices, and immediately published a justification of his conduct, or at least a statement of the motives by which he was actuated. This disinterestedness, candour, and conscientious attachment to what he conceived to be the cause of truth cannot but command the approbation of all liberal minded persons who differ with him in opinion, and even of those who may be disposed to censure the impetuosity with which he prosecuted his purposes. He left Cambridge in September 1776; and taking up his residence in the metropolis, endeavoured to qualify himself for the profession of physic, which he

bad adopted on leaving the church. He procured a diploma from the university of St Andrews, and being admitted a licentiate of the college of physicians, he commenced practice in 1778. He was chosen a fellow of the Royal Society the same year, and became a contributor to the Philosophical Transactions. His practice is said to have been very successful; but the ardour of his disposition, and the peculiar complexion of his religious and political principles, obstructed his professional progress, and deprived him of those advantages which the respectability of his personal character and his family connexions might otherwise have ensured. In the latter part of his life he actively engaged in the discussions arising from the war which separated the American states from this country; and he was a frequent speaker in the popular assemblies held in the metropolis during the progress of that contest. His death took place March 2, 1786. A collection of his works, theological, political, and medical, was published, with memoirs of his life, by Dr Disney, 1787, 3 vols. 8vo.—*Aikin's G. Biog.*

JEBB, MD. (SAMUEL) an eminent physician and classical scholar, who was a native of Nottingham. He belonged to Peterhouse, Cambridge, and having adopted the principles of the nonjurors, he became connected with the famous Jeremy Collier, to whom he was librarian. While at the university, he published the Dialogue of Justin Martyr with Trypho the Jew, in Greek and Latin. Removing to London, he married the daughter of an apothecary, and engaged in the study of medicine. Subsequently, having procured the degree of MD. he practised as a physician at Stratford, in Essex, and at length retired with a moderate fortune into Derbyshire, where he died in 1772. Dr S. Jebb was the conductor of a classical journal, entitled, "Bibliotheca Literaria," of which a few numbers appeared in 1722; and he edited several publications, the most important of which is the "Opus Majus," of Roger Bacon, 1733, folio. He was uncle to the subject of the last article. One of his sons, sir RICHARD JEBB, bart. MD. who became physician to the king, died in 1787.—*Nichols's Lit. Anec. Aikin's G. Biog.*

JEFFREY (THOMAS) a dissenting minister, rendered memorable by his able defences of Christianity, was born about the year 1700. He was the son of a respectable merchant of Exeter, and received his education under Mr Hallet, to whom he became assistant. In the year 1726 he settled at Little Baddon, in Essex, but in 1728 returned to Exeter, and soon after died. His works, which were principally composed in opposition to those of Anthony Collins, are entitled, "The true Grounds and Reasons of the Christian Religion," 8vo; "Christianity proved from Holy Scripture;" "A Review of the Controversy between the Author of a Discourse, 'Of the Grounds and Reasons of the Christian Religion' and his Adversaries." The controversial labours of Mr Jeffery were highly esti-

mated by Drs. Doddridge and Kennicot.—*Aikin's G. Biog.*

JEFFREYS (GEORGE, lord) baron Wem, commonly known by the name of Judge Jeffreys, was the son of John Jeffreys, esq. of Acton, in Denbighshire, where he was born towards the beginning of the seventeenth century. He was educated at the free-school of Shrewsbury, whence he was removed to that of Westminster; and being subsequently entered at the Middle Temple, he applied himself very assiduously to the law. His father's family being large, his allowance was very scanty, but his industry and ingenuity supplied all deficiencies; and by attending an assize at Kingston during the plague, when few barristers could be met with, he was allowed to plead, although not formally admitted, and continued to practise unrestrained until he attained the highest employments in the law. Soon after commencing his professional career, he was introduced by an alderman of his own name, and probably a relation, among the citizens of London; who soon after chose him their recorder; and to this advancement, and the influence it procured him, may be attributed his introduction at court, and appointment of solicitor to the duke of York. A willing instrument of all sorts of measures, his farther promotion, at such a period, was rapid, and he was appointed successively a Welsh judge and chief justice of Chester, and created a baronet. When parliament began to prosecute the abhorers, he resigned the recordership, and was appointed chief justice of the King's Bench. On the accession of James II, he was one of the great advisers and promoters of all the oppressive and arbitrary measures of that misguided reign; and for his sanguinary and inhuman proceedings against the miserable adherents of Monmouth—atrocities which will consign his name to everlasting ignominy—was rewarded by the vindictive and cold-hearted James with the post of lord high chancellor. What can be said in favour of this despicable adherent, should not, however, be omitted; and it is acknowledged that he usually showed himself an able and impartial judge where political purposes were not to be answered. His deportment on the bench was, however, in the highest degree discreditable at all times, and even when his indignation was properly excited, he indulged in scurrility and abuse of the most degrading description, a practice in which he indulged even to fury against the celebrated Richard Baxter, and all prosecuted parties whose politics or opinions were disagreeable to the court. To this abusive habit he possibly owed the unhappy termination of his disgraceful existence. On the arrival of the prince of Orange, when all was in confusion, the conscious chancellor, who had disguised himself as a seaman, in order to get on board a ship unknown, was detected in a low public-house in Wapping by an attorney, whom he had signally rated in open court. The latter making his discovery known, he was immediately seized by the populace, and carried before the lord mayor, who sent him

to the ords in council, by whom he was committed to the Tower, where he died April 13, 1689, of intemperance and a broken heart. Pennant records a remarkable instance of insult endured by this fallen instrument during his imprisonment. He received, as he thought, a present of a barrel of Colchester oysters, and expressed a great satisfaction that he was still remembered with kindness by somebody, but on opening the barrel, instead of the expected contents, appeared a halter. Jeffreys, whose name has become a received appellation in England for iniquitous judges, left one son, who inherited both his title and intemperate habits. He is said to have been the author of some pieces in the State poems, and of "An Argument in the case of Monopolies," 1639. He died in 1703, and left an only daughter by Charlotte, daughter and heiress of the earl of Pembroke, who married the earl of Pomfret, and after his death presented the noble collection of the Pomfret marbles to the university of Oxford. The deep impression left by the cruelties of Jeffreys in the west of England is strikingly exhibited, by a fact mentioned by Granger, that the amiable countess of Pomfret was insulted on the western road, simply as being the grand-daughter of the execrated Jeffreys.—*Life of George Lord Jeffreys. Life of the Lord Keeper North. Granger. Pennant's London.*

JEFFREYS (GEORGE) an English poet, born in 1678, was son to a gentleman of Weldon, in Northamptonshire, and nephew to the eighth lord Chandos. He was educated at Westminster school, and was removed to Trinity college, Cambridge, where he took his degrees in arts, and was admitted fellow in 1701. He was subsequently called to the bar, but never practised, and after acting for some time as secretary to the bishop of Derry, he spent most of the remainder of his life in the families of his relations, the last two dukes of Chandos. His works are, "Miscellanies, in prose and verse," 4to, among which are two tragedies, "Edwin," and "Merope," both acted at Lincoln's-inn Fields; and "The Triumph of Truth," an oratorio. The anonymous verses prefixed to the tragedy of Cato were by this gentleman, a fact which Addison never knew. He died in 1753, at the age of seventy-seven.—*Nichols's Select Collection of Poetry.*

JEHAN GHIR (ABU'L MAZ'AFFER NOUR EDDIN MOHAMMED) one of the Mogul emperors, son of the famous Akber, whom he succeeded on the throne of Delhi in 1605. He was originally called Selim, to which he added the foregoing appellations on his accession. He was, like all his race of imperial rank, an Oriental despot; but he is said to have been generous, affable, and easy of access to his subjects; and the professors of arts and literature experienced his patronage and support. He died in 1627. This prince composed a work containing memoirs of the first seventeen years of his reign; and made some additions to the historical commentaries of his predecessor, sultau Baber. His wife or mistress, Nourjehan, celebrated equally for her

beauty and wit, has been the theme of numerous Oriental poems and romances, and her adventures have not been neglected by European bards and novelists.—*Biog. Univ. Class.*

JEKYLL (sir JOSEPH) a lawyer and statesman of the eighteenth century. He was a native of Nottinghamshire, and the son of an episcopal clergyman. Being educated for the bar, he distinguished himself in his profession; and becoming connected with the whig statesmen in the reign of queen Anne, he had a seat in parliament, and was one of the managers of the trial of Sacheverel. When George I ascended the throne he was knighted, and raised to the office of master of the rolls. He published a tract relative to the jurisdiction of his court, in consequence of a dispute with the lord chancellor King. His death occurred in 1738, at the age of seventy-four.—*Wood's Athen. Oxon.*

JELAL-EDDIN-ROUMI, a Persian poet, who was a native of Balkh, and died in 1272. He was the author of several works combined under the title of "Kilat elmetsuevy," which signifies a collection of pieces composed of a peculiar kind of verse, consisting of distichs or couplets. Specimens of these poems, translated into English by sir William Jones, were published in a "Discourse on the Mystical Poetry of the Persians and Hindoos."—*Asiatic Researches, vol. iii. Biog. Univ. Class.*

JEMSHID or GIAMSCHID, a Persian sovereign, celebrated in Oriental history, the period of whose existence is somewhat uncertain. He is said to have ascended the throne of Persia about 800 BC, and to have founded the famous city of Istakhar, called by the Greeks Persepolis. To this prince is ascribed the first establishment of public baths, the invention of tents and pavilions, and the use of lime for mortar in buildings. He instructed his subjects in astronomy, and also probably in the mysteries of Sabism, or the worship of the heavenly bodies. But though he is represented as a wise and powerful monarch, he was unfortunate in war; and having been dethroned by Zohak, an Arabian king, he spent the latter part of his life in indigence and obscurity. His son Pheridoun was preserved by the care of the queen from the pursuit of the usurper, and ultimately recovered his father's throne.—*Biog. Univ. Sir John Malcolm's Hist. of Persia.*

JENKIN (ROBERT) a learned English divine, was the son of a gentleman of Minster, in the isle of Thanet. He was born in 1656, and educated at the King's school at Canterbury, whence he was removed as a sizar to St John's college, Cambridge, of which he became a fellow in 1680, and master in 1711. He also held the office of lady Margaret professor of divinity, and precentor of Chichester, but refusing to take the oaths of allegiance to William and Mary, he lost all his preferments but his fellowship, which stood secure until the act passed upon the accession of George I, obliging all who held a post of 5*l.* per annum to take the abjuration oath. On this occasion, Dr Jenkin appears to have surmounted his

own scruples, but suffered so much uneasiness, from being obliged to eject those fellows that were more tenacious, that it preyed upon his spirits, and he sank into childishness. In this state, being removed to the house of an elder brother, he died in 1727, in the seventy-seventh year of his age. His works are, an "Examination of the Authority of General Councils;" "Defensio S. Augustini;" "The Reasonableness of the Christian Religion," which run through six editions, &c. &c. He also translated Tillmont's Life of Apollonius Tyanaeus.—*Nichols's Lit. Anec.*

JENKINS (DAVID) a judge, eminent for his stout-hearted attachment to the cause of Charles I, was born at Hensol, in Glamorganshire, in 1586. After studying at Edmund hall, Oxford, he entered at Gray's inn, and being called to the bar, was made a Welsh judge. He continued in this office until the commencement of civil hostilities, at which time he imprisoned and condemned to death in his circuit several persons, for bearing arms against the king. Being taken prisoner at Hereford, when that city was surprised by the parliamentary forces, he was taken to London, and imprisoned in the Tower. Being carried before the court of Chancery, he denied its authority, on which he was committed to Newgate, impeached of treason, and brought before the house of Commons, where he refused to kneel, and called the house a den of thieves. Provoked by this language, that assembly proceeded to vote him guilty of high treason, and sentenced him to be hanged; on which he observed, that he would suffer "with the Bible under one arm and Magna Charta under the other." A facetious speech from Henry Marten allayed this tempest as regarded his life; but he was fined 1000*l.* for contempt, again committed to Newgate, and his estates sequestered. In the same intrepid manner he continued to resist every overture of the parliamentary party to come in, and remained in Newgate or other prisons until the Restoration. After that event he was designed for one of the twelve judges, but seems to have been set aside as superannuated, without receiving any other mark of kindness for his courage and loyalty. He died at Cambridge, in 1667, aged eighty-one. His works were printed in a small volume in 1648, but as a lawyer he is chiefly known by his "Reports of Cases adjudged in the Exchequer Chamber," folio, 1661 and 1777.—*Biog. Brit. Athen. Oxon.* vol. ii.

JENKINS (sir LEOLINE) a civilian and statesman, was born at Llantrissant, in Glamorganshire, in 1623. He was educated at Jesus college, Oxford, and upon the breaking out of the civil war, took up arms with other students on the side of the king. On the death of the latter he retired to Wales, and became a tutor in the family of sir John Aubrey, and also attended several other families in the same capacity, until interrupted by parliamentary jealousy, he removed with his pupils to Oxford. He was at length obliged to quit the kingdom with them, but returned in

1658, and delivering his scholars up to their respective friends, he lived with sir William Whitmore, in Shropshire, until the Restoration, when he returned to Jesus college, of which he was chosen a fellow, and in 1661 principal, having previously received the degree of LL.D. He received some other marks of distinction at Oxford, but under the patronage of archbishop Sheldon was encouraged to remove to Doctors' Commons, where he was admitted advocate, and in conjunction with other eminent civilians, was appointed to review the maritime laws, and compile a body of rules for the adjudication of prizes, which afterwards became the standard of the class of proceedings in the court of Admiralty. In 1665 he was appointed judge of the same court, and in 1668 of the Prerogative court of Canterbury. In 1672 he was sent ambassador to treat of peace with the Dutch, in which he did not succeed; but subsequently, in conjunction with sir William Temple, was mediator of the treaty of Nimeguen. On his return to England, he was chosen member for the university of Oxford, sworn of the privy council, and made secretary of state, which office he resigned in 1684. On the accession of James II he was again chosen for Oxford, but was never in sufficient health to sit in that parliament, and expired the first of September, 1685. He never married, and left all his estate to charitable uses; and in particular was a great benefactor to Jesus college. His letters and papers were collected under the title of his "Works," in two folio volumes, by W. Wynne, in 1724, which collection bears a high price, and is esteemed a valuable repository of diplomatic information.—*Life prefixed to Works. Biog. Brit.*

JENKINSON (ANTHONY) an English traveller of the sixteenth century. After having visited various parts of Europe, Asia Minor, and Palestine, he was employed, in 1557, by a commercial company, on a mission to Russia. He arrived at Moscow, according to his own account, in December 1557, and was well received by the czar Iwan II. He travelled thence to Bogar or Bochara, in Tartary, and returned to England in May 1561. He was sent again to Russia, and afterwards visited Casbin, on the Caspian sea. He a second time returned to England, and wrote an account of his adventures, which was published by Hakluyt and Purchas. His narrative is interesting, as he gives intelligence relative to countries never visited by any other European traveller; but his authority is somewhat questionable, from the romantic nature of some of his incidents and descriptions; so that some have not hesitated to class him with sir John Mandeville and Fernand Mendez Pinto, the "Great Liar."—*Biog. Univ. Southey's Ombiana.*

JENKINSON (CHARLES) earl of Liverpool, was the eldest son of colonel Jenkinson, the youngest son of sir Robert Jenkinson, the first baronet of the family. He was born in 1727, and educated at the Charterhouse, whence he removed to University college, Ox-

ord, where he took the degree of MA. in 1752. In 1761 he obtained a seat in parliament, and was made under-secretary of state. In 1766 he was named a lord of the Admiralty, from which board he subsequently removed to that of the Treasury. In 1772 he was appointed vice-treasurer of Ireland, and was rewarded with the sinecure of the clerkship of the Pells, purchased back from Mr Fox. In 1778 he was made secretary at war, and on the dissolution of the administration of lord North, joined that portion of it which supported Mr Pitt, under whose auspices he became president of the board of trade, which office he held in conjunction with the chancellorship of the duchy of Lancaster, given him in 1786. In the same year, 1786, he was also elevated to the peerage, by the title of baron Hawkesbury, of Hawkesbury, in the county of Gloucester; and in 1796 he was created earl of Liverpool. He remained president of the board of trade until 1801, and chancellor of the duchy of Lancaster until 1803. His death took place on the 7th December, 1808, at which time he held the sinecures of collector of the customs inwards of the port of London, and clerk of the Pells in Ireland. The earl of Liverpool for a long time shared in all the obloquy attached to the confidential friends of the Bute administration, and in a particular manner was thought to enjoy the favour and confidence of George III, of whom it was usual to regard him as the secret adviser. Having early devoted his attention to political studies, he became exceedingly conversant with the law of nations, and the principles and details of commerce and political arithmetic, which it has been seen he turned to great official account. The earl of Liverpool was the author of the following works: "A Discourse on the Establishment of a Constitutional Fund in England," 1756; "A Discourse on the Conduct of Great Britain in regard to Neutral Nations, during the present War," 1758; "A Collection of Treaties from 1646 to 1673," 3 vols. 8vo, 1785; "A Treatise on the Coins of the Realm, in a Letter to the King," 1805, which latter work obtained very considerable attention.—*Collins's Peerage by Sir E. Brydges.*

JENNENS (CHARLES) generally known by the jocosse appellation which his profusion gained him, of "Solyman the Magnificent." He was a native of Gopsal, in Leicestershire, and employed a large fortune acquired by his family in trade at Birmingham, as well in the encouragement of literature as in the most unbounded hospitality, and in the keeping up of a princely establishment. The selection of the words for Handel's celebrated oratorio, the Messiah, is ascribed to him, and he had in contemplation a splendid edition of the works of Shakspeare, of whom he was a most enthusiastic admirer, on a new plan. In this undertaking he was however less fortunate. Four of the plays only were printed, and those under circumstances which rendered the suppression of the remainder by the death of the author by no means to be regretted in a lit-

rary point of view. Mr Jennens, who in his religious opinions dissented from the church of England, died at Gopsal, in 1773.—*Nichols's Leicestershire.*

JENNER (EDWARD) an English physician, celebrated for having introduced the practice of vaccination, as a preventive of the small-pox. He was the youngest son of a clergyman, who held the rectory of Rochampton and the vicarage of Berkeley, in Gloucestershire, at which latter place the son was born, May 17, 1749. Being destined for the medical profession, he was, after a common school education, placed as an apprentice with a very respectable surgeon, at Sodbury, in his native county. He subsequently visited London, to finish his studies, by attending the lectures of the celebrated anatomist John Hunter. Returning to the country, he settled at Berkeley, as a practitioner of the various branches of his profession. A situation like this afforded but little leisure or opportunity for acquiring distinction, and an occasion presented itself for obtaining a larger field for observation, improvement, and emolument: this however he was induced to decline. The circumstances of the transaction are thus related by Dr Lettsom, in an address to the London Medical Society: "Dr Jenner happened to dine with a large party at Bath, when something was introduced at the table which required to be warmed by the application of the candle, and doubts were expressed by several persons present, whether the most speedy way would be to keep the flame at a little distance under, or to immerse the substance into it. Jenner desired that the candle might be placed near him, and immediately putting his finger into the flame, suffered it to remain some time; next he put his finger above it, but was obliged to snatch it away immediately. 'This, gentlemen,' said he, 'is a sufficient test.' The next day he received a note from general Smith, who had been of the party the preceding day, and who was before that time an utter stranger, offering him an appointment in India, which would ensure him, in the course of two or three years, an annual income of 3000*l.* The offer was referred to his brother, and our Jenner, from his attachment to him, declined it." While at Berkeley, natural history occupied some of his attention, and having ascertained some curious facts relative to the common cuckoo, he drew up a paper, entitled, "Observations on the Natural History of the Cuckoo," which being transmitted to the Royal Society, was published in the Philosophical Transactions for 1788. He had already obtained the reputation of an ingenious practitioner, and a man of talent and science, when he made known to the world the very important discovery which has raised him to an enviable situation among the benefactors of the human race. His investigations concerning the cow-pox were commenced about the year 1776, when his attention was excited by the circumstance of finding that some individuals, to whom he attempted to communicate the small-pox by inoculation, were insusceptible of the disease; and

an inquiry he found that all such patients, though they had never had the small-pox, had undergone the casual cow-pox, a disease common among the farmers and dairy-servants in Gloucestershire, who were not quite unacquainted with its preventive effect. Other medical men were aware of the prevalence of this opinion; but they treated it as a popular prejudice, and Jenner seems to have been the first who ascertained its correctness, and endeavoured to derive from it some practical advantage. He discovered that the variolæ vaccinae, as the complaint has been since termed, having, in the first instance been produced by accidental or designed inoculation of the matter afforded by a peculiar disease affecting the udder of a cow, could be propagated from one human subject to another by inoculation, to an indefinite extent, rendering all who passed through it secure from the small-pox. He made known his discovery to some medical friends, and in the month of July, 1796, Mr Cline, surgeon to St Thomas's hospital, introduced vaccination into the metropolis. So singular and anomalous a fact as the prevention of an infectious disease by means of another, in many respects extremely differing from it, could not but be received with hesitation; and a warm controversy took place on the subject among the medical faculty. This ultimately proved advantageous both to the discovery and the discoverer, as it terminated in establishing the truth of the most important positions which he had advanced, and left him in full possession of the merit due to him as a successful investigator of the laws of nature. The practice of vaccine inoculation was adopted in the army and navy, and honours and rewards were conferred on the author of the discovery. The physicians and surgeons of the fleet presented him with a gold medal, the obverse of which exhibits Apollo as the god of physic, introducing a sailor recovered from vaccination to Britannia, who holds forth a civic crown inscribed with the name of "Jenner;" below is the appropriate motto, "Alba Nautis Stella refulsit." On the reverse is an anchor, and above it, "Georgio Tertio Rege;" below, "Spencer Duce." The diploma constituting him doctor of medicine, was presented to Jenner as a tribute to his talents, by the university of Oxford; he was chosen a fellow of the Royal Society, and of other learned associations; and a parliamentary grant was made to him of the sum of 20,000*l*. The extension of the benefits of vaccination to foreign countries spread the fame of the discoverer, who received several congratulatory addresses from continental potentates. The emperor of Russia, when in this country in 1814, sought an interview with Dr Jenner, treated him with great attention, and offered to bestow on him a Russian order of nobility. He also visited the king of Prussia, marshal Blucher, and the cossack general, count Platoff, the latter of whom said to him, "Sir, you have extinguished the most pestilential disorder that ever appeared on the banks of the Don." On receiving his diploma, Dr Jenner practised as

a physician at Cheltenham, during the season, and that watering-place was his principal residence till he became a widower, when he removed to Berkeley, to spend in retirement the evening of his life. He died suddenly, in consequence of apoplexy, January 26, 1823, and was interred in the parish church of Berkeley. By his wife, whose maiden name was Kingscote, he left a son and a daughter. Dr Jenner was the author of "An Inquiry into the Causes and Effects of the Cow-pox," 1798, 4to; and "Farther Observations on the Variolæ Vaccinae, or Cow-pox," besides various letters and papers on the same subject, published in periodical works.—*Lit. Chron. Ann. Biog.*

JENNINGS (DAVID) a learned dissenting divine of the last century. He was the son of an ejected minister, and was born at Kibworth, in Leicestershire, in 1691. He was educated in London, under some of the most eminent nonconformist tutors; and in 1714 he entered on the pastoral duty. After occupying other situations, he became minister of an independent congregation, meeting in Old Gravel-lane, Wapping, with which he continued to be connected, as long as he lived. In 1713 he was chosen a trustee of the charities of Mr William Coward, and one of his lecturers at the chapel in Little St Helen's, Bishopsgate-street. The next year he obtained the office of theological tutor at an academy supported chiefly by the funds bequeathed by that gentleman. This station he filled with great ability; and published for the use of the students under his care some works of merit, particularly "An Introduction to the Use of the Globes and the Orrery, and also the Application of Astronomy to Chronology, &c." 8vo, 1747. The university of St Andrew's in 1749 conferred on him the diploma of DD. He died September 16, 1762. Dr Jennings was the author of "An Appeal to Reason and Common Sense for the Truth of the Holy Scriptures;" and other religious tracts, besides several sermons; and after his death appeared "An Introduction to the Knowledge of Medals," 8vo; and a treatise on "Jewish Antiquities," 2 vols. 8vo, which is one of the best works extant on the subject, and was republished in 1808.—JENNINGS (JOHN) brother of the foregoing, was also a dissenting minister. He was for some time pastor of a congregation, and master of an academy for students in divinity at Kibworth, whence he removed to Hinckley in 1722, and died there the next year. Besides some theological pieces, he was the author of a "Genealogical Table of the Kings of England, &c.;" and of a valuable little work, called, "Miscellanea in usum Juventutis Academicæ," printed at Northampton, in 1721, 12mo, for circulation only among his pupils.—*Aikin's G. Biog. Wilson's Hist. of Dissent. Churches in London.*

JENNINGS (HENRY CONSTANTINE) an antiquary and virtuoso, more remarkable for the peculiarity of his character and conduct, than for his talents. He was born in 1731, and was the only son of a gentleman possessed of a large estate at Shiplake in Oxfordshire,

who was of the same family with the famous dutchess of Marlborough. After being educated at Westminster school, he became an ensign in the first regiment of foot guards, at the age of seventeen. He held the commission but a short time, and on resigning it, went to Rome, in company with lord Monthermer, son of the duke of Montagu. While in Italy he made a collection of statues and other antiques, with which on his return he decorated his seat at Shiplake, which had descended to him on the death of his father. He now led the life of a man of fashion and fortune, indulging in many expensive follies, among which was keeping race-horses; and having dissipated a great deal of property, and involved himself in pecuniary difficulties, he was obliged to sell a large estate, and retiring into the country, he lived in an economical manner. Soon after he became a prisoner in the King's Bench, where he formed an acquaintance with Mr Horne Tooke. A change of fortune at length took place, and he was not only liberated from confinement, but was settled on an estate he had in Essex, where he gave himself up with enthusiasm to the employment of collecting books, manuscripts, shells, pictures, prints, busts, and curiosities of various other descriptions. From this state of prosperity he was precipitated by an accident which was the result of his own imprudence. Having borrowed a sum of money from a gentleman who was receiver-general for South Wales, the sudden death of that person occasioned the issue of an extent of the crown in aid against the property of his debtor, Mr Jennings, whose museum was hastily sold for a comparatively small sum, to satisfy the claim of government. He himself was soon after an inmate of Chelmsford jail. Here he remained for some years; and on obtaining his freedom, he settled at Chelsea, where he passed much of the latter part of his life. The caprice of fortune had again restored him to affluence; but prudence had not accompanied prosperity, and his pursuits were of a very similar description to those by which he had been previously occupied. A gentleman who visited him at Chelsea, about 1803, has given the following description of this eccentric virtuoso: "On the left hand of the drawing-room door was to be seen a very old and decrepid man, generally clothed in a brown suit of coarse cloth, with immense large silver buttons awkwardly fastened to the breast of his coat. He constantly wore a small hat both at home and abroad, and possessed both a white and a black beaver, the former of which was always selected for great occasions. Sitting in an immense arm-chair, lined with carpet, his body was mechanically placed in a reclining position, approaching nearly to the horizontal. This was effected by invariably reposing his legs and feet on a Roman triclinium, which he valued greatly. This venerable figure, with a sharp and croaking voice, saluted the visitor, whom he recognized by means of a mirror, and to whom he scarcely deigned to turn his head. He appeared to sit

enthroned in all the majesty of virtù, amidst his books, his pictures, and his shells; and never willingly arose, but to gratify himself and his guest by exhibiting some, or all of these objects." Many of the articles in the museum of Mr Jennings had been procured at a price far beyond their value, as appeared, when in consequence of renewed embarrassments, his pictures, shells, &c. were sold by auction, in April, 1816. He was at that time confined in the King's Bench; and within the rules of that prison, at lodgings in St George's fields, he died February 7, 1819. Though Mr Jennings never published any thing, he printed, in 1798, for private distribution, a volume entitled, "Summary and Free Reflections, in which the great Outline only and principal Features of several interesting Subjects are impartially traced, and candidly examined," 8vo.—*Ann. Biog.*

JENNINGS (JOHN) marshal of the court of Sweden, and knight of the polar star. He was of an English family, but was born at Stockholm in 1729. He was sent to England for education, and afterwards studied at Upsal. Mechanics particularly engaged his attention, and he distinguished himself by improving the furnaces used for casting metals; and directed the notice of government to the subject of navigable canals. He carried on the canal of Trollhætta, designed to render navigable the Gotha, one of the most important of the Swedish rivers. In the prosecution of his plans he visited England, Holland, and resided for some time in France. He died in 1773, leaving many proofs of his talents in memoirs on subjects of public utility, written in the Swedish language. He was an active member of the academy of Sciences at Stockholm.—*Biog. Univ.*

JENSON (NICHOLAS) one of the most eminent of the early printers, more generally known by his Latin denomination Jansonius. He was a native of France, born in the early part of the fifteenth century, and is said to have been originally employed by his government to gain an insight into the newly-invented art of printing. The death of the French king terminated his commission, on which he retired to Venice, and then established himself in the then conjoint occupation of printer and letter-founder. The beauty and determinate proportion of the present Roman character is attributed to him, and the neatness of his type is still much admired as being far superior to that of most of his contemporaries. "Decor Puellarum," in Latin; and "Gloria Mulierum," in Italian, were the first books printed by him in 1471, between which year and 1481 several editions of classical authors appeared from his press; but as none are found of a later date, he is supposed to have died soon after the latter period.—*Nouv. Dict. Hist.*

JENYNS (SOAME) a witty and elegant writer, was the only son of sir Roger Jenyns, knight, of Bottisham hall, Cambridge. He was born in London, in 1704, and received a domestic education until the age of seventeen,

when he was entered a fellow commoner of St John's college, Cambridge. He remained three years at the university, and then married early a lady with a large fortune, to whom his father was guardian, but the marriage proved unhappy, and in consequence of an elopement, a separation took place. In his youth Mr Jenyns, with a small and delicate person, sustained the character of a beau, and his first performance, a poem on the "Art of Dancing," published in 1723, was very correspondent with this pretension. In 1741 he was left, by the death of his father, master of a large fortune, on which he entered into public life as representative of the county of Cambridge. He began his career by supporting the declining influence of sir Robert Walpole, and and ever after remained a faithful adherent to the minister for the time being. This conduct secured him the situation of a lord of the board of trade through every change, from 1755, until its abolition in 1780, in consequence of being deemed more beneficial to its own members than to the nation, an opinion which will scarcely be controverted, when it is understood that three of its members at one time were the historian Gibbon, the dramatist Cumberland, and Mr Jenyns. As a country gentleman, the latter appeared to greater advantage than as a politician, officiating as a magistrate with great impartiality, and exercising much hospitality in his neighbourhood. It is however chiefly as an author, wit, and companion that he is to be distinguished, in all which capacities he excited considerable attention. So early as 1757 he published his well-known "Free Inquiry into the Nature and Origin of Evil," the fundamental principle of which is, that the production of good without evil is impossible; that evils spring from necessity, and could not be done away without the sacrifice of some superior good, or the admission of greater disorder. In respect to moral evil, his theory is, that it is permitted, in order to provide objects for the just infliction of physical evils. This paradoxical system, which caused a great sensation at the moment, encountered a severe but masterly critique from Dr Johnson, and numerous answers from other persons, to which the author replied in a preface to a subsequent edition. In 1756 he published a pamphlet on the subject of a national militia; and in 1767 another on the high price of provisions, which claimed only temporary attention. In 1776 appeared his celebrated "View of the Internal Evidences of the Christian Religion," which work created a great sensation, and excited a great diversity of sentiment in regard to its good and evil tendency. The foundation of his reasoning is, that the Christian religion is a system of ethics so superior to, and unlike anything which had previously entered into the mind of man, it must necessarily be divine. In the first instance, the author was generally applauded, but after a while it was deprecated by many as calculated to make an irreparable breach between faith and reason. The charms of style and manner, however, made it very popular. In 1782 appeared his "Disquisitions

on various Subjects," 8vo, which are marked with his usual characteristics of sprightly wit and shrewd observation, but are otherwise vague, fanciful, and declamatory. In these he contends for a pre-existent state of mankind, as a means of accounting for the misery sustained in this present world; but the chief force of his wit and his satire is directed against the principles of civil liberty. This volume produced an admirable piece of poetical satire, entitled, "The Dean and the Squire," by Mason, the dean being Dr Tucker, whose opinions on liberty coincided with those of Mr Jenyns. His last production was entitled, "Thoughts on Parliamentary Reform," which of course he wholly opposed. He died in 1787, at his town house, in Bury-street, leaving a second wife, to whom he had been married thirty-four years. Besides the productions above mentioned, he was the author of some spirited papers in the *World*, and of various poems, received into several of the standing collections, which, although not of the highly imaginative class, are smooth, easy, and elegant, with a pleasant vein of wit and satire. His works have been collected into four volumes, 12mo, with a life prefixed by C. N. Cole.—*Life by Cole. Chalmers's Eng. Poets.*

JEPHSON (ROBERT) a respectable dramatical writer, was born in Ireland in 1736. He received a liberal education, and attained the rank of captain in the 73d regiment; and when his regiment was reduced in 1763, retired on half-pay. Being intimately acquainted with William Gerard Hamilton, that gentleman procured him a pension on the Irish establishment, which was the less difficult, as he was already known at the castle, by having held the appointment of master of the horse to the lord lieutenant, viscount Townshend. By the influence of Mr Hamilton he was again nominated to the same post by the duke of Rutland, and he also became a member of the Irish house of Commons. He died of a paralytic disorder at his house near Dublin in 1803. As a dramatic writer, his claims are chiefly founded on his tragedies of "Braganza," and "The Count of Narbonne," the latter of which borrows its plot from the *Castle of Otranto*. His other and less successful pieces were, "The Law of Lombardy," "Julia," and "The Conspiracy," tragedies; "The Campaign," an opera; and "Love and War," and "Two Strings to your Bow," farces; the last of which is still sometimes repeated. He was also author of "Roman Portraits," a poem, and of "The Confessions of James Baptist Couteau," a satire on the French revolution.—*Life of W. G. Hamilton. Biog. Dram.*

JEROME or HIERONYMUS, a celebrated father of the church, was born of Christian parents, at Striden, on the confines of Pannonia and Dalmatia, in 331. His father, who was a man of rank and property, sent him to Rome for education, where he was placed under the grammarian Douatus, known for his commentaries upon Virgil and Terence. He

had also masters in rhetoric, Hebrew, and divinity, in which he made a great progress. After travelling through France and Italy, he gave up friends and worldly pursuits to seek retirement in the east, and gradually reached Jerusalem, whence he proceeded to Antioch. Here he endured a grievous fit of sickness, on his recovery from which he wandered through several towns and districts in search of a retreat to his mind, which he found in a frightful desert of Syria, scarcely inhabited by any thing but wild beasts, and a few human beings little less ferocious. He was in his thirty-first year when he entered upon this life, in which he spent four years, occupied in an intense study of the scriptures, until his health began to be affected by his application and ascetic discipline. He then repaired to Antioch, where he was ordained a presbyter in 378, by Paulinus. He soon after visited Constantinople, in order to avail himself of the advice and instruction of Gregory Nazianzen; and on his return, accompanied Paulinus to Rome, where his merit and learning soon made him known to pope Damasus, who appointed him his secretary, and also director to the Roman ladies who had devoted themselves to a religious life. During his residence at Rome, he lodged at the house of a matron of the name of Paula, a woman of rank and fortune, who afterwards followed him with her daughters into the east. This event exposed him to some scandal from his opponents, the Origenists, and to more merited censure from the relations and friends of the many weak females whom he thus encouraged in their desertion of their proper duties, and misapplication of their wealth to the support of useless or pernicious institutions. On the death of Damasus, finding his situation at Rome uneasy, he determined to return to the east, and accordingly embarked in 385 with a great number of monks and females whom he had induced to embrace the monastic life. He touched at Cyprus, where he visited Epiphanius, and arriving at Antioch, proceeded thence to Jerusalem and afterwards to Egypt, where, to his great grief, he found the tenets of Origen almost universally prevalent. He at length settled at Bethlehem, where the wealthy and devout Paula founded four monasteries, three for females, and one for males under Jerome. Here he pursued his studies with great ardour, and wrote many of his best treatises; and in these occupations, might have peacefully closed his days, but for his detestation of the opinions of Origen, which involved him in the most acrimonious controversy for many years with John, bishop of Jerusalem, his former friend Rufinus of Aquileia, and Jovinian, an Italian monk. In the year, 410, when Rome was besieged by the Goths, he afforded an asylum to many who fled from thence to Jerusalem, but was very careful to exclude all whom he deemed tinctured with heresy. He died in 422, in the ninety-first year of his age. Jerome is considered the most learned of the Latin fathers, but his knowledge of the Greek and Hebrew languages, although respectable,

was not profound. He was, at the same time rather a declaimer than an orator, and his reasoning upon any subject was seldom either clear, consistent, or concise. He is still more to be decried for his virulence, acrimony, and want of candour in controversy. He was also very superstitious and credulous in a high degree, as his admiration of ascetic discipline and the silly romances of Paul the Hermit and Hilarion sufficiently prove. But notwithstanding these and other defects, so fully proved by Le Clerc in his "Questiones Hieronymianæ," his writings will always be of great value to the biblical student, as furnishing numerous fragments of the ancient Greek translation, and of the opinions of the Jews of that period as to the sense of many Hebrew words and passages. At the same time, as a most industrious and zealous searcher into scripture himself, his opinions are worthy attention in the quarter pointed out. A full enumeration of the works of St Jerome will be found both in Cave and Dupin. The most important of these is a Latin version of the whole "Old Testament," from the Hebrew, accompanied with a corrected edition of the ancient version of the "New Testament," finally adopted by the Roman catholic church, and commonly distinguished by the name of "The Vulgate." The first printed edition of the works of Jerome appeared at Basil, under the care of Erasmus, 1516-1526. There have been several subsequent editions, at Lyons, Rome, Paris, and Antwerp; but the best and most recent is that by father Martianay, a benedictine, Paris, 1693-1706, 5 vols, folio, and that of Vallarsius, Verona, 1734-42, with notes, 11 vols, folio.—*Life by Erasmus. Dupin. Cave. Le Clerc's Questiones Hieronym. Mosheim.*

JEROME of Prague, the intimate friend and associate of John Huss, and like him, a martyr to his zeal against what he deemed the corruption of the church of Rome. He was born at Prague, but in what year is unknown, and having studied at the university of his native city, he proceeded to those of Paris, Heidelberg, and Cologne; and as some say, to Oxford, where he copied the writings of Wickliffe, which he carried with him into Bohemia. He was admitted to the degree of DD. in 1396, but it is not known at what university. Upon his return to Prague in 1400, he entered into a strict intimacy with John Huss, whose doctrines he began to publish in 1408. In the year 1410 he was involved in the censures pronounced by Subinco, archbishop of Prague, against the Hussites; and in the same year went to Poland, at the request of the king, to regulate the university of Cracow. In 1415, when informed of the arrest and imprisonment of Huss, he deemed himself bound in honour to repair to Constance to assist in his defence, but on his arrival, alarmed at the rage which prevailed against reputed heretics, he withdrew to Eberlingen, and sought a safe conduct from the emperor. An equivocal paper of the king was supplied to him, together with a citation

from the council. Aware of the futility of the pretended document, he prepared to return to Bohemia, but was arrested on his way homewards, and placed in the custody of the prince of Salzburg, who finally sent him to Constance, bound in chains. After his examination he was imprisoned in the tower of St Paul's church, and treated with great barbarity. This severity, the solicitations of his persecutors, and his solitary meditations upon the dreadful fate of Huss, at length shook his constancy, and on a third examination, he was induced to sign a paper, approving the condemnation of the doctrines of Wickliffe and Huss. Although some of the council were satisfied, and would have set him at liberty, he was nevertheless detained in custody, and in the course of a few months afterwards, new articles were presented against him, to which he pleaded in solemn assembly; and having resumed his fortitude, he nobly acknowledged that the dread of fire alone had induced him, against his conscience, to condemn Huss and Wickliffe. Poggio, who was present at the trial, in a letter to Aretine, gives an interesting and affecting testimony to the high qualities and exalted deportment of Jerome, in this emergency. His fate was decided on this occasion, being sentenced to a similar death to that of John Huss, which he endured on the 30th May, 1416, when he was burnt to death, and his ashes thrown into the Rhine. The labours of Jerome of Prague, as an author, appear to have been chiefly confined to the assistance which he afforded Huss in his various works. The answers which he gave to the articles preferred against him, may be seen in the twelfth volume Collect. Concil.—*Cave. Freheri Theatrum. Life by Gilpin.*

JERNINGHAM (EDWARD) an ingenious poet and dramatic writer, descended from an ancient Roman catholic family in Norfolk, and brother of sir William Jerningham, bart. He was born in 1727, and when young was sent to the English college at Douay, in Flanders, whence he was removed to Paris. His education being completed, he returned to England, where he became a member of the established church. One of his earliest productions was a poem in favour of the Magdalen institution, which was followed by "The Deserter," 1769; "The Funeral of Arabert, Monk of La Trappe," 1771; "Faldoni and Teresa," 1773; "The Swedish Curate;" "The Fall of Mexico," 1775; "Honorina, or the Day of All Souls," 1782; "The Rise and Progress of Scandinavian Poetry," 1784; "Enthusiasm," 1789; &c. His play, called "Margaret of Anjou," was acted in 1777; "The Siege of Berwick," a tragedy, in 1794; and "The Welsh Heiress," a comedy, in 1795. A collection of his poetical and dramatic works appeared in 4 vols, 8vo, 1806. He also published in the latter part of his life, "An Essay on the mild Tenour of Christianity," and other religious tracts. His death took place November 17th, 1812. The private character of Mr Jerningham was extremely amiable, and he is spoken of with

great respect and esteem by lord Byron, in the notes to his English Bards and Scotch Reviewers.—*Gent. Mag. Watt's Bibl. Brit.*

JERUSALEM (JOHN FREDERICK WILLIAM) a Lutheran divine, born at Osnaburgh, in 1709. Having an ardent passion for knowledge, he visited France and England in pursuit of it; and on his return to Germany, the duke of Brunswick Wolfenbuttel confided to him the education of his son, afterwards killed at the battle of Jena. Jerusalem was also appointed almoner to the court; and he acquired great reputation as a preacher. He formed a plan of education, which gave rise to the *collegium Carolinum*, at Brunswick; and he rendered no less service to society by his writings, than by his schemes for the benefit of youth. The duke gave him the abbey of Riddagshausen, near Brunswick, where he formed a seminary, of which during forty years he was director and principal professor. In 1762 he published "Letters on the Religion of Moses;" and this was followed by "Considerations on the principal Truths of Religion," which was translated into most European languages. He afterwards wrote against Frederick the Great of Prussia, who, pleased with his moderation and learning, invited him to Berlin; but he declined the visit, as he also did the chancellorship of the university of Gottingen, which was offered to his acceptance. He died September 2d, 1789. His posthumous works were published by his daughter, at Brunswick, 2 vols, 8vo, 1792-3. The son of this gentleman was the unfortunate prototype of Werter, the celebrated hero of Goethe's celebrated novel.—*Biog. Univ.*

JERVAS (CHARLES) a portrait painter in the reigns of George I and George II, who acquired considerable reputation, founded on adventitious circumstances rather than on his professional skill. He was a native of Ireland, and for a short time studied under sir Godfrey Kneller. Having visited Italy, he became on his return a fashionable artist; and Pope, to whom he gave instructions in painting, has eulogized his talents. He is said to have been infected with personal vanity to a ridiculous degree. Lady Bridgewater, a celebrated beauty, sitting to him for her picture, he took the liberty to tell her that she had not a handsome ear. "And pray, Mr Jervas," said her ladyship, "what is a handsome ear?" The painter immediately lifted his velvet cap, and pointed to his own auricular organ, as the model of perfection. Jervas died in 1739. Some of his letters have been printed with those of Pope; and he published a very good translation of Don Quixote.—*Lord Orford's Anecd. of Paint.*

JERVIS (JOHN) earl of St Vincent, a gallant and distinguished naval commander, descended of an ancient and respectable family in Staffordshire. He was the second and youngest son of Swynfen Jervis, esq. auditor of Greenwich hospital, and was born at Meaford hall, January 9, 1734 (old style). At the age of fourteen, he was rated a midshipman on board the Gloucester, of fifty guns, on

the Jamaica station, and in 1755 served as lieutenant under sir C. Saunders, in the expedition against Quebec. Soon after being made commander, he was appointed first to the *Experiment* and afterwards to the *Albany sloop*. In 1760 he obtained the rank of post-captain, and commanded the *Foudroyant*, in the action between admiral Keppel and the French fleet in July 1778. In 1782, being then under the orders of admiral Barrington, he engaged and took the *Pegasè*, of seventy-four guns and 700 men; in which exploit he received a severe wound in the head from a splinter, and afterwards obtained the red ribband as a reward for his gallant conduct. In 1794, having accepted the command of a squadron equipped for the West Indies, he reduced Martinique, Guadaloupe, and St Lucie, for which services he received the thanks of Parliament, and the freedom of the city of London in a gold box. On the 14th of February, 1797, being then in command of the Mediterranean fleet of fifteen sail, he engaged and defeated twenty-seven ships of the line belonging to Spain, the smallest carrying seventy-four guns, and seven of them mounting from 112 to 130 each. On this occasion he was raised to the English peerage, by the titles of baron Jervis and earl of St Vincent, from the scene of his glory. To this was added a pension of 3000*l.* a year, for the better maintenance of his dignity, and a gold medal from the king. In 1799 he was created admiral, and in 1801 became first lord of the admiralty, vice earl Spencer; in which capacity he undertook and executed many salutary reforms in naval expenditure, but resigned his post in 1804. In May 1814 he was appointed a general of marines, and July 19, 1821, admiral of the fleet. Lord St Vincent was a man of a strong and acute mind, resolute and unbending in regard to discipline and necessary retrenchment and reform, and also of high gallantry and transcendent genius in his profession, with the leading members of which he was deservedly popular. He died March 15, 1823, in his eighty-ninth year, and though buried privately in the family vault at Stone, a monument was voted by the house of Commons to be erected to his memory in St Paul's cathedral. This national tribute, consisting of a single statue, and bearing a strong resemblance to the gallant and able individual whose services it is designed to commemorate, was opened to public view in September 1826.—*Ann. Biog.*

JESSEY (HENRY) a learned nonconformist divine of the seventeenth century. He was a native of West Rowton, in Yorkshire, of which place his father was minister. He studied at St John's college, Cambridge, and distinguished himself by his proficiency in the Oriental languages. Having been episcopally ordained in 1627, he obtained a living, from which he was soon ejected for nonconformity. He was then received into the family of sir M. Boynton, and removing with his patron to Uxbridge, in 1635, he became minister of a congregation in London. After having en-

dured persecutiⁿ from the episcopalians before the civil war, he engaged in controversy with the triumphant party under Cromwell, on the subject of infant baptism, to which he objected. He however held the living of St. George's Southwark, which he lost at the Restoration. He then officiated as minister of a Baptist congregation; and after having been imprisoned on account of his nonconformity, he died September 4, 1663. His works, relating to theology and biblical literature, are creditable to his learning and abilities; but he principally deserves commemoration on account of his having been engaged in making a new translation of the Bible, which he was prevented from completing by the changes in ecclesiastical affairs, consequent on the return of Charles II.—*Wilson's Hist. and Ant. of Diss. Ch. Crosby's Hist. of the Baptists.*

JESUA (LEVITA) a Jewish rabbi, by birth a Spaniard, who lived in the fifteenth century. He was a man of considerable learning, and his writings are regarded by those of his persuasion as able commentaries on the Talmud. His principal work is entitled "Halichot Olam," (The Ways of Eternity). Constantine l'Empereur translated this treatise from the Hebrew into Latin, and Bachuyson published an edition of it, accompanied by the Latin version, in one 4to volume, at Hanover, in 1714.—*Moreri.*

JEVERI (ISMAEL BEN HAMMAD) a distinguished Arabian lexicographer, born at Farab, in Transoxiana, about the middle of the tenth century. He resided for some time in Egypt, where he applied himself to the study of Arabic, and returning to Khorasan, published there, in 999, the most complete dictionary which the Arabians possess, entitled "Sihah alloghat," the pure language. Golus has inserted a great part of this work in his "Lexicon Arabicum;" and Meninski, more recently has introduced a translation of it into his "Thesaurus Linguarum Orientalium." It was translated into Turkish by Vancouli, Constantinople, 1728, republished for the third time at Scutari, in 1803. Jerveri died, according to some authors, in 1003, at the time when he was engaged in revising his dictionary; and the errors which are found in it are attributed to one of his disciples, who completed the task after his death.—*Biog. Univ. Class.*

JEVON (THOMAS) a dramatic author and actor of the seventeenth century. "The Devil of a Wife, or the Comical Transformation," London, 1695, 4to, claims him as its author, being the original of the standard farce of the "Devil to Pay."—*Biog. Dram.*

JEWEL (JOHN) a learned episcopal divine of the English church, who lived in the reigns of the last sovereigns of the house of Tudor. He was born at the village of Buden, near Ilfracombe, in Devonshire, in 1522. After acquiring the rudiments of learning at school, he was sent to Merton college, Oxford; and in 1539 he was elected a scholar of Corpus Christi, and in the year following took his first degree. He had been initiated in the princi-

ples of the protestant faith, of which he proved a zealous and able champion. His mode of study shows him to have been indefatigable in the acquisition of knowledge, but it was at the expense of his health, which was injured by too close application. On his recovery from a fit of illness he was chosen lecturer on rhetoric, which office he filled with great credit during seven years. In 1544 he was admitted M.A. and on the accession of Edward VI, in 1546, he openly professed the tenets of the reformers, and contracted a particular intimacy with Peter Martyr, who was appointed professor of divinity at Oxford. In 1551 he commenced B.D. on which occasion he delivered an excellent Latin sermon. About the same time he obtained the rectory of Sunningwell, in Berkshire, where he distinguished himself by his zeal and assiduity as a parish priest. When queen Mary succeeded her brother, Jewel was deprived of his office in the university, and though he subscribed to a confession of faith drawn up by the catholics, yet finding that they suspected his sincerity, and were about to prosecute him as a heretic, he withdrew secretly from Oxford, and with some difficulty made his escape to the continent. He proceeded to Frankfort, where he arrived in 1554, and there he made a public confession before the exiled English protestants, of his unfeigned contrition for his late error and weakness. He afterwards went to Strasburg, and became vice-master of a college, established by his friend Peter Martyr. On the death of queen Mary, Jewel returned to England, and was received by the new sovereign with all the favour due to his zeal, learning, and abilities. In March 1559 he was appointed, with other divines, advocate for the protestant cause in a disputation held in Westminster abbey. In 1560 he was raised to the bishopric of Salisbury; and about the same time, in a sermon preached at St Paul's-cross, he challenged the Romauists to produce a single positive testimony, from the works of any of the fathers who lived within six hundred years after Christ, in favour of any tenet in which the catholics differed from the protestants. This challenge led to a controversy with Dr Cole, the deprived dean of St Paul's, and with Thomas Harding, a learned jesuit. Hence also originated the bishop's principal literary work, his famous "Apology for the Church of England," written in elegant Latin, and translated into English by the mother of sir Francis Bacon. Versions were also made of this treatise into German, Italian, French, Spanish, Dutch, and Greek; and it is said to have had more effect in promoting the reformation than any other book that was published. In 1565 the university of Oxford conferred on bishop Jewel the degree of DD.; and the remaining years of his life were devoted to his pastoral duty, and to the defence and support of protestantism. His death took place while on a journey, either at Monkton Farley, or, according to other accounts, at Lacock Abbey, in Wiltshire, the seat of his friend sir Henry Sherington, in September,

1571. His English works, comprising sermons, Scripture expositions, &c. were printed collectively in 1609, folio; and lady Bacon's translation of his "Apology," was republished a few years ago.—*Fuller's Worthies. Abel Redivivus. Biog. Brit. Aikin's G. Biog.*

JEZZAR, or the Butcher, the familiar appellation of the famous pacha of Seide and Acre, who defended the latter place against Buonaparte, during his Syrian expedition. He was born in Bosnia, in the early part of the eighteenth century, and was originally named Ahmed. In his youth he sold himself to a slave-merchant, who took him to Egypt, where he was purchased by the noted Ali Bey, then master of that country. From the situation of a common mameluc, Ahmed, in a few years, was promoted to the office of governor of Cairo. In 1773, when Ali Bey became unfortunate, the emir Yusef confided to the cidevant slave of that prince, the government of Berout, in Syria, in which post he betrayed the trust reposed in him by his benefactor, who, assisted by the sheik Dhaher and a Russian squadron, laid siege to Bercut both by sea and land. Unable to resist the double attack, Jezzar surrendered himself into the hands of Dhaher, and went with him to Acre, where he made his escape. After the death of Dhaher, the capitan pacha Hassan appointed Jezzar pacha of Acre and Syria, and employed him against the partisans of the redoubtable Sheik, who had so long defied the power of the grand seignor. His zeal in this service was recompensed with few marks of favour, and he was made a pacha of three tails, with the title of visir. He took advantage of his situation to extend the boundaries of his government, and in spite of the efforts of the Turkish court to displace him, he retained his authority as long as he lived. This ferocious chief was absolute master of a part of Syria at the period of the French invasion of Egypt. Buonaparte, after having vanquished the mamelucs, endeavoured to make a friend of Jezzar, but the pacha rejected his overtures; and with the aid of a naval force, under sir Sydney Smith, and of M. Phelippeaux, a French engineer, he valiantly defended the city of St Jean d'Acre against the reiterated attempts of Buonaparte to make himself master of it. After a siege of sixty-one days, the couqueror of Egypt was obliged to relinquish his enterprise, and leave Jezzar in full possession of his power. Two years after, general Sebastiani was sent on a mission to the pacha, who received him with civility, and in the intercourse between them he expressed the utmost contempt for the sublime porte, whose defence he had previously undertaken only to serve his own interest. He died at an advanced age, in 1804, leaving behind him immense treasures. He gloried in the sanguinary title by which he is best known, and numerous are the well-attested facts on record, which prove that it was not unmerited.—*Dr E. D. Clarke's Travels. Biog. Univ. Diet. Hist.*

JOACHIM of Calabria, an Italian monk of the twelfth century, who obtained the repu-

tation of a prophet among his contemporaries, and incurred, by his writings, the censure of the church, as a heretic. He was born at Celico, near Cosenza, in the kingdom of Naples, and after receiving the usual education of his age and country, he obtained some employment at court. This he left, to travel to the Holy Land, and on his return to Italy, he took the monastic vows among the Cistercians, and at length became prior, and then abbot of the convent of Corazzo. He relinquished his office, with the pope's permission, in 1183, in order to turn hermit. In his solitude he projected the constitution of a reformed congregation of the Cistercian order, and in 1189 founded the monastery of Flora, in Calabria, over which he presided till his death in 1202. Joachim wrote comments on the scripture prophecies; predictions relating to fifteen popes; a treatise against Peter Lombard, on the Trinity, which was condemned as heretical, by pope Innocent III. There is also a supposititious work, entitled "The Everlasting Gospel," or "The Book of Joachim," which gave rise to another, called "The Introduction to the everlasting Gospel," by a friar of the thirteenth century, the absurdity of which produced a great sensation in the religious world.—*Mosheim's Eccles. Hist.* *Aikin's G. Biog.*

JOAN of Arc, commonly called the Maid of Orleans, one of the most remarkable heroines in history, was the daughter of persons of low rank, in the village of Domremi, near Vaucouleurs, on the borders of Lorraine, where she was born in 1412. She quitted her parents at an early age, and became servant at a small inn, where she acquired a robust and hardy frame, by acting nearly in the capacity of hostler, attending to the horses, and riding them backwards and forwards to water. At this time, the affairs of France were in a deplorable state, and the city of Orleans was so closely besieged by the duke of Bedford, that its fall seemed inevitable. Excited by the frequent accounts of the memorable rencounters at this siege, and affected with the distresses of the country, Joan was seized with a wild desire of relieving them, until her mind incessantly pondering on this favourite object, she fancied that she saw visions, and heard voices exhorting her to re-establish the throne of France, and expel the English invaders. Having communicated this imaginary inspiration to the governor of Vaucouleurs, he forwarded her to Charles VII at Chinon, to whom, in the name of the supreme being, she offered to raise the siege of Orleans, and conduct the king to Rheims. The court at first pretended to hesitate, but after a committee of divines had pronounced her mission to be supernatural, Charles granted her request, and she was exhibited to the people on horseback. The English at first regarded the whole affair with derision; but gradually gave way to the superstitious notions of the age, and became daunted with the idea of a divine vengeance hanging over them. Joan entered the city of Orleans, at the head of a convoy, arrayed in

military garb, and being received as a celestial messenger, by the commandant Dunois, she actually obliged the English to raise the siege, after furiously driving them from their entrenchments. The march of Charles to Rheims followed, and such was the impression produced on the population, that although proceeding through what had been deemed an enemy's country, every place opened its gates to him, and the ceremony of his inauguration took place as predicted. As a mark of gratitude for this service, the king had a medal struck in honour of Joan, and all her family was ennobled, in both the male and female line, of which the former became extinct so late as 1760. The town of Domremi, her native place, was also exempted from taxes for ever. After the coronation of Charles, Joan desired to return to the course of life which became her sex; but Dunois, who thought she might still prove serviceable, induced her to throw herself into the town of Compeigne, then besieged by the duke of Burgundy, and the earls of Arundel and Suffolk. Here, after performing prodigies of valour, she was taken prisoner in a sally, and no efforts being made by the French court to deliver her, she was cruelly condemned by the English, under the pretence of witchcraft, to be burnt alive, which sentence she endured with great courage in 1431, in the nineteenth year of her age. Such are the outlines of this history as generally delivered, but many romantic circumstances are probably overcharged. It has even been doubted, whether she was really put to death, some plausible evidence having been brought forward to prove that she was saved by a trick, on the day of execution, and that she afterwards appeared, and was married to a gentleman of Amboise, a story far more improbable than the facts which it is intended to supercede.—*Histories of England and France.* *Southey's Joan of Arc.*

JOB or AYÛB (SOLOMON) a negro prince, son of the king of Bondou, in Senegambia, to whom the literary world is indebted for some geographical details relative to his native country. In 1730 he was sent by his father to the sea-coast to treat with the English traders, and being taken prisoner by the Mandingos, he was himself sold as a slave to the master of an English vessel. He was allowed to send to inform his father of his misfortune, but the messenger not returning in time he was taken to Maryland, and employed as a labourer in the culture of tobacco. He fled from his master, and being retaken, his story excited curiosity, and he was ransomed by general Oglethorpe and others in the colony and sent to England. He arrived here in April, 1733, and was patronized by sir Hans Sloane, for whom he translated some Arabic MSS. During the fourteen months he resided in this country he attracted much notice; and after having been presented at court, and honoured with valuable presents, he set sail for Africa, and reached Fort James, on the coast of Senegal, the 8th of August, 1734. While preparing to depart for Bondou, he

learnt that his father was dead; and by the return of the vessel which took him out, he sent letters of thanks to his benefactors, but no farther intelligence of him was ever received. He professed the Mahometan faith, and while in England he wrote from memory three copies of the Koran.—*Astley's Collect. of Voyages. Biog. Univ.*

JOCHANAN BEN ELIEZER, a Jewish rabbin of the third century, who compiled what is called the Jerusalem Gemara, a portion of the Talmud. This work consists of the opinions, criticisms, controversies, and decisions of the Hebrew doctors and casuists on points of their ritual, supplementary to the Mischna or text of the Talmud. R. Jochanan's commentary was so obscure, that a new one, called the Babylonish Gemara, was composed in the following century, by rabbi Asce.—*Godwini Moses et Aaron. Nouv. Dict. Hist.*

JOCUNDUS (JOHN) an Italian architect and man of letters in the sixteenth century. He was a native of Verona, and became a Dominican friar. Louis XII sent for him to Paris, where he built the Pont de Notre Dame, across the Seine. He also erected a bridge over the Adige at Verona, and executed many other works. His death took place about 1530. He is said to have discovered in France some of the epistles of Pliny, and the treatise on prodigies, by Julius Obsequens, which were printed by Aldus, in 1508. He also wrote notes and made designs for the illustration of Cæsar's commentaries; and he published an edition of Vitruvius on architecture.—*Tiraboschi. Temanza Vite dei Architetti Veneziani.*

JODELLE (STEPHEN) an early French poet and dramatist, who was a native of Paris. He is represented as having been an universal genius, possessing an extraordinary facility and fluency of composition; as a proof of which we are told that he wrote five hundred Latin verses on a prescribed subject, for a wager, in a single night. He was the author of the first regular tragedy in the French language, his "Cleopatra;" which was acted before Henry II. He also wrote comedies and poems. Though a favourite with the great, Jodelle became the victim of poverty, and died in distress in 1573, at the age of forty-one. On his death-bed he dictated a sonnet, addressed to Charles IX, reproaching his majesty for deserting him in his necessity.—*Bayle. Biog. Univ.*

JOECHER (CHRISTIAN GOTTLIEB) a doctor of theology, and public professor of history at Leipsic. He was born in 1694 in that city, and was instructed by a private tutor in the family of his father, who was a merchant. The latter dying in embarrassed circumstances, in 1720, Joecher found himself under the necessity of writing and lecturing with increased diligence, and became a colleague with Rabener, in the compilation of the German Acta Eruditorum. He died in 1753. The best of his philosophical writings is his "Examen Paralogramum Woolstoni," Leip., 1734, 4to; but that which is best known, is his "General Dictionary of Learned Men,"

1750-1, 4 vols, 4to, to which a supplement was published, by Adelung, 1784-7. He was also author of a treatise on the influence of music on the human constitution, being himself a proficient in that science.—*Saxii Onom.*

JOFFRID, abbot of Croyland, in Lincolnshire, in the twelfth century. If the narrative of Peter of Blois, who wrote in the reign of Henry II, be correct, this ecclesiastic may be considered as the founder of the university of Cambridge. In his continuation of Ingulph's account of Croyland, he says that abbot Joffrid sent a deputation of three learned French or Norman monks, named Odo, Terrick, and William, to his manor of Cottenham, near Cambridge, to teach the people in that neighbourhood, grammar, logic, and rhetoric. These three monks went every day from Cottenham to Cambridge, where they hired a barn, in which they taught those sciences to a great number of scholars, who resorted to them, not only from the town of Cambridge, but from all the country around.—*Maseres's Hist. Angl. Select. Mon.*

JOHANNAEUS (FINNUS) bishop of Skalholt, in Iceland, was born in that island in 1704. He was the son of John Halterson, vicar of the bishop of Skalholt, who sent him to finish his education at Copenhagen. On his return to Iceland, he became successively minister of several places, and at length bishop of Skalholt, where he died at a very advanced age. He distinguished himself by his attention to the history of his native country, and was the author of "Historia Ecclesiastica Islandiæ," Copenh. 1772-1778, 4 vols, 4to; "Historia Monastica Islandiæ," 1775, 4to; and a life of the historian Snorro Sturleson.—*Biog. Univ.*

JOHN, king of England, born in 1166, was the youngest son of Henry II, by Eleanor of Guienne. Ireland being intended for his appanage, he was sent over in 1185 to complete the conquest, but such was the imprudence and insolence of himself and his courtiers, it was found necessary to recal him. Although his father's favourite, he joined his brother Richard in his last unnatural rebellion, and partook with him the curse pronounced by the heart-stricken king and parent on his death-bed. He was left without any particular provision, which procured for him the name of Sans Terre, or Lackland; but on his accession, Richard conferred on him the earldom of Mortaigne, in Normandy, and various large possessions in England, and married him to the rich heiress of the earl of Gloucester. This kindness did not prevent him from forming intrigues against his brother, in conjunction with Philip of France, during his absence in Palestine; but Richard magnanimously pardoned him on his return, and left him his kingdom, in preference to Arthur of Brittany, the son of his elder brother, Geoffry. So imperfectly was the rule of primogeniture then established in England, that no disturbance ensued in that country, although the French provinces of Anjou, Touraine, and Maine declared for Arthur, who was taken under the protection of the king of

France. A war ensued, in which John recovered his revolted provinces, and received homage from Arthur for the duchy of Brittany, inherited from his mother. In 1200 he married Isabella of Angouleme, after divorcing himself on some pretence from his first wife. In 1201 some disturbances again broke out in France, whither he led another expedition, and the young Arthur having joined the malcontents, was captured, and confined in the castle of Falaise, whence he was subsequently removed to Rouen, and never heard of more. The manner of his death is not certainly known; but it was generally believed that John stabbed him with his own hand, and he now became the object of universal detestation. The states of Brittany summoned him to answer the charge of murder, before his liege-lord king Philip, and upon his refusal to appear, the latter assumed the execution of the sentence of forfeiture against him, and in this manner the whole of Normandy was recovered by the French crown, after its alienation for three centuries. John laid the fault of his disgrace upon his English nobles, whom he harrassed by fines and confiscations, but after some ineffectual attempts, he was obliged to acquiesce in a truce in 1206. The pope at this time was the haughty and able Innocent III; who, in consequence of a contested election for the see of Canterbury, nominated a creature of his own, in the person of cardinal Stephen Langton. John, highly enraged, acted with his usual haste and folly; and displayed so much contempt for the papal authority, that Innocent laid the whole kingdom under an interdict. This quarrel lasted some years, and the king, by his tyranny, depriving himself of the support of his nobles, was perplexed on every side. In order to give some lustre to his degraded administration, he undertook expeditions into Scotland, Wales, and Ireland, in which he was successful, and, in particular, quelled all opposition to his authority in the latter. In the mean time, the court of Rome proceeded to a sentence of excommunication against the king, personally, and formally absolved his subjects from their allegiance. Philip of France was again ready to put the sentence against John into execution, and prepared an expedition in the ports of Picardy, which, however, the latter was enabled to oppose. So much disaffection, nevertheless, prevailed, that Pandulph, the pope's legate, induced him not only to receive Langton, as archbishop of Canterbury, but abjectly to resign his kingdoms of England and Ireland to the holy see, in order to receive them again as its vassal, with absolution. This most ignominious compact was executed at Dover in May, 1213, and the pope now regarding England as his own, and jealous of the aggrandisement of Philip, required the latter to desist from hostilities against a country under the protection of the see of Rome. Philip received this mandate with great indignation; but in consequence of a victory over his fleet, was gradually brought to reason. Flushed with this success, John

resolved to endeavour to recover his continental dominions, but the English barons declined their services. In the next year, however, he carried over an army to Poitou, but after some partial successes, was obliged to return in disgrace. John had by this time rendered himself the object of such universal contempt and hatred, that his nobles, who had long felt aggrieved by the usurpation of their sovereigns, and of the reigning one in particular, determined to take hold of so favourable an opportunity to control his power, and establish their privileges. Langton produced to them a copy of the charter of rights granted by Henry I, and at a general meeting in London, in January, 1215, they laid their demands before the king, which he attempted to elude by delay. In the mean time he sought to ingratiate himself with the clergy and the pope, with whom he lodged an appeal against the compulsory proceedings of the barons. The politic pontiff, who found it his interest to support a sovereign who had so far humbled himself, declared his disapprobation of their conduct; but little moved by the declaration, the latter assembled in arms at Oxford, where the court then was, and choosing a general, immediately proceeded to warlike operation. They were received without opposition in London, which so intimidated the king, that he consented to sign such articles of agreement as they thought fit to dictate. Such were the steps which produced the famous Magna Charta, which was signed by John at Runnymede, on the banks of the Thames, on the 19th June, 1215. By this charter, the basis of English constitutional freedom, the nobles were not only protected against the crown, but important privileges were granted to every order of freemen. The passive manner in which John yielded to these restrictions of his power, indicated a secret intention of freeing himself from his obligations. In order to lull the barons into security, he dismissed his foreign forces but in the mean time was secretly employed in raising fresh mercenaries, and in seeking the concurrence of the pope, who absolutely issued a bull, annihilating the charter, as extorted from his vassal, contrary to the interests of the holy see. He even forbade John to pay any regard to its conditions, and pronounced a sentence of excommunication on all who should attempt to enforce it. Thus furnished with spiritual and temporal arms, the king left his retreat, and carried war and devastation through the kingdom. His barons, taken by surprise, could make no effectual resistance, and despairing of mercy from John, sent a deputation to France, in which they offered the crown of England to the dauphin Louis. Philip gladly accepted the proposal, and Louis, with a fleet of 600 vessels, landed at Sandwich, and proceeded to London, where he was received as lawful sovereign. John was immediately deserted by all his foreign troops, and most of his English adherents, but the report of a scheme of Louis for the extermination of the English nobility, whether true or false, arrested his progress at

very critical time for John, and induced many to return to their allegiance. But while the king's affairs were thereby assuming a better aspect, he had the misfortune, in a march from Lynn across the sands into Lincolnshire, to lose, by the sudden flow of the tide, all his carriages and baggage. Being already in a bad state of health, the visitation so aggravated his disorder, that he died at Newark, in October, 1216, in the forty-ninth year of his age, and seventeenth of his reign. No prince in English history has been handed down to posterity in blacker colours than John, to whom ingratitude, perfidy, and cruelty were habitual. Occasional gleams of vigour and energy were, indeed, manifest; but they always proved themselves the mere explosions of rage and anger, and soon subsided into meanness and pusillanimity. His private life was stained with extreme licentiousness, and the best part of his conduct as a ruler, was the attention he paid to commerce and maritime affairs. More charters of boroughs, and incorporations for mercantile pursuits date from him, than from any other of the early kings, and the popular constitution of the city of London was his gift. He left by his second wife a family of two sons and three daughters, and his illegitimate children were numerous.—*Hume. Henry. Aikin's G. Biog.*

JOHN of Pisa (GIOVANNI PISANO) a distinguished sculptor and architect of the thirteenth century. He was the son and pupil of Nicholas of Pisa, an eminent professor of the art of design. He erected the famous Campo Santo, or public cemetery at Pisa, which contains fifty ship-loads of earth brought from Jerusalem, in 1228; such was the superstition of that period. The building consecrated by this curious deposit, has attracted general admiration for its beauty. Christina of Sweden said of it, "Non e un cemeterio, ma un museo." John of Pisa also designed and executed, in Perugia, the monuments of popes Martin IV, Urban IV, and Benedict IX; the Castello dell' Novo, at Naples; the façade of the cathedral of Sienna; and the marble table of the great altar at Arezzo, covered with carvings, figures, foliage, mosaic work, and enamel, which cost 30,000 florins; besides many other works, at Bologna and elsewhere. He died very aged in 1320, and was buried in the Campo Santo.—*Orlandi Abeced. Pittor. Elmes's Dict. of the Fine Arts.*

JOHN SOBIESKI, king of Poland, born in 1624, was the son of James Sobieski, Castellan, of Cracow, a brave general and able statesman. He received a liberal education, and after visiting the various courts of Europe, was made captain of the guards to king Casimir, and rose through all the intermediate ranks to be generalissimo and grand marshal. He performed various exploits against the Cossacks and Turks; and in 1673 gained over the latter the signal victory of Choczim. On the death of Michael, being elected king by the diet, he determined to pursue the Turkish war with vigour, and by his brilliant successes he induced the porte to agree to the favourable

treaty of 1676. A revolt taking place against the emperor, in Hungary, which was supported by the Turks, he was induced, in 1683, to make an alliance with the court of Vienna, which capital he relieved, in conjunction with the imperial forces, in the most gallant manner, when closely besieged by the Turks, whose camp was entirely routed by a grand attack, on the 11th September, 1683. Sobieski was considered by the people of Vienna as their deliverer, and all Europe gave him the glory of an action so opportunely salutary to the Christian cause. He followed up this success with other advantages, and having obtained a cession of Moldavia and Wallachia, endeavoured without effect to unite them to his dominions. This was his last warlike enterprise; and he passed the remainder of his life with less glory, in the advancement of his family by alliances, and in the discreditable accumulation of riches, in order to secure the crown to his son. This conduct, to which he was incited by the intriguing spirit of his consort, a noble French woman, rendered his death less regretted than from his great actions and qualities might have been expected. This event took place in June, 1696. Sobieski was not only a brave and consummate commander, but eloquent, learned, and scientifically informed, beyond most of his country men.—*Mod. Univ. Hist.*

JOHNES (THOMAS) an English gentleman who distinguished himself by the cultivation of literature. He was born in 1748, at Ludlow in Shropshire, and after having studied at Eton, he went to Jesus college, Oxford, and proceeded to the degree of M.A. in 1783. He had previously made the tour of Europe, and formed his taste from the survey of the productions of ancient and modern art in France and Italy. Possessing an estate at Hafod in Cardiganshire, he obtained a seat in parliament for the borough of Cardigan, and subsequently for the county of Radnor. He also held the office of auditor for the principality of Wales, and was colonel of the Carmarthenshire militia. As a country gentleman he laudably occupied himself in the improvement of his landed property, by planting trees to a very considerable extent. He also built for himself an elegant mansion, and collected a noble library, to which he added a typographical establishment, whence proceeded the works on which his literary reputation is founded. They consist of splendid editions of the chronicles of Froissart and Monstrelet; Joinville's memoirs of St Louis; the travels of Bertrand de la Brocquiere in Palestine; and Ste Palayé's life of Froissart, all translated by himself from the French. In March, 1807, Mr Johnes's literary pursuits experienced a severe interruption, in consequence of a fire, which nearly destroyed his house at Hafod, and a great part of his library, especially a number of curious Welsh MSS. The latter part of his life was also embittered by the death of his daughter, an amiable and accomplished young lady. His death took place April 4th,

1816.—*Month. Mag.* vol. xxiv. and xliii. *Ann. Biog.*

JOHNSON (CHARLES) a lively dramatic writer, was originally a member of the law, which he quitted, and commenced writing for the stage, and being tolerably successful, and much liked by the frequenters of Wills, and Button's coffee-houses, his benefit nights were so patronised, that being prudent in his expenses, he contrived to live respectably. At length, marrying a young widow, with a small fortune, he set up a tavern in Bow-street, Covent-garden, which, however, he quitted on her death, and lived privately on an easy competence. The date of his birth is unknown; but he existed in the reigns of Anne, George I, and George II, and died in 1748. On some trivial pique, Pope noticed him in his *Dunciad*, but as the worst said of him was that he was fat, it did him little injury. He wrote nineteen pieces, a list of which may be seen in the *Biographia Dramatica*; of these a comedy, called "The Country Lasses," was the most popular.—*Biog. Dram.*

JOHNSON (JOHN) a learned but changeable divine, was born at Frensbury in Kent, in 1662, being the son of the vicar of that place. He was educated at the king's school, Canterbury, whence he was removed to Corpus Christi college, Cambridge, where he took the degree of M.A. in 1685, and soon after entered into orders. In 1687 he was collated to the vicarage of Boughton, with which he enjoyed that of Herne Hill, by sequestration. In 1697 he obtained the living of St John's, in the isle of Thanet, to which the town of Margate belongs, and soon afterwards was presented to that of Appledore, and finally in 1707, was inducted to the vicarage of Cranbrook, where he died in 1725. At the revolution he was one of the clergy who complied with the new order of things; but in consequence of imbibing some disgust with the low church and dissenting party, while resident at Cranbrook, he became first an admirer of Sacheverell, and at length a flaming nonjuror. He was not, however, disposed to make all the required sacrifices to these principles, and consequently was obliged to submit, which he did with great reluctance. His works are, "The Case of Pluralities and Non-residence rightly stated;" "Holy David and his old English translation cleared," in answer to the exceptions of Baxter; "The Clergyman's Vade Mecum;" "The Canonical Codes of the Primitive Church to 787;" "The Propitiating Obligation in the Holy Eucharist;" "The unbloody Sacrifice and Altar unveiled and supported;" a piece which caused much discussion, as favouring the real presence; and lastly, "A Collection of Ecclesiastical Laws." *Life by Brett.*

JOHNSON (MAURICE) an able antiquary, was born at Spalding, in Lincolnshire, and bred to the law in the Inner Temple, after which he settled in his native place, and formed a society for the cultivation of the knowledge of English antiquities. He had by his only lady no less than twenty-six children, sixteen of

whom sat down to his table at the time. He died in 1755. He collected many materials for a history of Carausius, and several of his commentaries are in the collection of the Antiquarian Society.—*Nichols's Lat. Anec.*

JOHNSON (SAMUEL) a clergyman, distinguished for his zeal in the cause of civil liberty, was born in 1649, in the county of Stafford. He was educated at St Paul's school, London, whence he was removed to Trinity college, Cambridge. After taking orders, he was presented to the living of Corringham, in the hundreds of Essex, which residence not agreeing with his health, he removed to London. Rendered conspicuous by his taste for political discussion, he soon acquired the acquaintance of the heads of the opposition to the arbitrary measures of Charles II; and during the time that lord Russel, with his coadjutors, were promoting the bill for excluding the duke of York, he published a tract, entitled, "Julian the Apostate," meant as a refutation of the doctrine of passive obedience by Dr Hickee. For this book he was prosecuted in the court of king's bench, and sentenced to fine and imprisonment. Inability to pay the fine caused him to be confined in the rules of the prison, where he was privately assisted by the benefactions of his political friends, and continued to disperse several pieces against popery. His sufferings in this cause were brought to their height by a paper, which he drew up in 1686, when the army was encamped upon Hounslow Heath, entitled, "An humble and hearty Address to all the English Protestants in the present Army." For this production he was committed to close custody, tried before the king's bench, and condemned to stand in the pillory in three places, to pay a fine of 500 marks, and to be publicly whipped from Newgate to Tyburn. Before the execution of this disgraceful sentence, he was deprived of his orders by the ecclesiastical commission, at the head of which were bishops Crew, Sprat, and White. Induced by a bribe, a popish priest undertook an application to James II to remit the whipping; but James, who never forgave, said that as he had the spirit of a martyr he must suffer like one. He bore all these indignities, including the whipping, which was inflicted with great severity, with the firmness and alacrity of the martyr, which he was deridingly called, and, happily, some informality in the process of degradation preserved to him his living. With unbroken spirit he continued to employ his pen in the same cause, until the revolution changed his situation. He wrote two pieces in favour of that great rational change, and in 1689 the proceedings against him were reversed, and he was offered the deanery of Durham. Unhappily he had fixed his expectations upon a bishopric, for which station, even his friends thought him both deficient in calmness and worldly prudence. In the end, he received a present of 1000*l.* and a pension of 300*l.* per annum, for the life of himself and his son. He continued to write in favour of king William with much strength of reason, but with a degree of acrimony which produced

some personal annoyance from opposing partisans, which had little effect upon a man of so determined a spirit. Notwithstanding his attachment to the new government, he freely censured many of its acts, and even contended for annual parliaments. His jealousy of standing armies also rendered him averse to the wars which made them necessary. He appeared last as an author in 1697, when he was attacked by a gradual decline, which carried him off in 1703. His works, collected into one folio volume, were published in 1710, and re-edited in 1713. With great firmness, this undaunted character was wholly free from enthusiasm, but possessed a strength of temper which many called turbulent and meddling, forgetting that it was the natural consequence of the mode of conduct which his principles induced him to pursue.—*Biog. Brit.*

JOHNSON, LL.D. (SAMUEL) one of the most distinguished writers of the eighteenth century. He was born at Lichfield, in Staffordshire, in 1709, in which city his father was a small bookseller. He was the elder of two sons, the younger of whom died in his infancy; and he inherited from his father a robust body and active mind, together with a scrofulous taint which impaired his sight and hearing, and a strong disposition to morbid melancholy. He also derived from the same source a marked attachment to high church principles, and a decided predilection for the family of Stuart. The character of the elder Johnson will indeed be sufficiently obvious, from the fact that he took his son to London to be touched for the evil by queen Anne. He received his early education, partly at the free-school of Lichfield, and partly at Stourbridge, Worcestershire; and on returning from

school, he remained two years at home. Having acquired reputation from his exercises, particularly of the poetical class, a neighbouring gentleman of the name of Corbet offered to maintain him at Oxford as companion to his son. He was accordingly entered of Pembroke college in 1728, being then in his nineteenth year; but he seems to have exhibited no marked attention to his studies in the first instance, and the state of indigence into which he fell by the neglect of the promised assistance, on the part of the family by whose advice he was sent to Oxford, appears to have produced a degree of mental anxiety, which he is said to have attempted to conceal by affected frolic and turbulence. Still he acquired credit by occasional poetical compositions in the Latin language; but, after all, left Oxford, after a residence of three years, without taking a degree. About this time, according to his own account, he received a strong religious impression from the perusal of "Law's Serious Call to a devout and holy Life." Soon after his return to Lichfield, his father dying in very narrow circumstances, he was constrained to accept the situation of usher at the grammar-school of Market Bosworth. This situation, his impatience under the haughty treatment of the principal, soon induced him to quit; and he passed some time as a guest with a medical

schoolfellow, settled at Birmingham. Here he wrote essays for one of the journals, and translated from the French, father Lobo's travels in Abyssinia. Returning to Lichfield, he published proposals for the republication of the poems of Politian, with a life, and a history of modern Latin poetry, which prospectus was but little attended to. Disappointed in this scheme, he offered his services to Cave, as a contributor to the Gentleman's Magazine, which, however, was but a slight step towards a maintenance; and in 1735 he sought to improve his condition by a marriage with Mrs Porter, the widow of a mercer. Her fortune of 800*l.* was a dowry of some moment to a suitor in the situation of Johnson; and the fact of her being twice his own age, and possessed of no pretension to personal attraction, renders his subsequent description of this union as a "love match on both sides" the more extraordinary. He now took a large house at Edial, with a view to take pupils and boarders, but the plan did not succeed; and after a year's trial, he resolved to seek his fortune in London, in company with one of his own few pupils, the celebrated David Garrick. In March 1737, the two adventurers accordingly arrived in the metropolis, Johnson with his unfinished tragedy of Irene in his pocket, and with little to depend upon but his slender engagement with Cave. At this time he became acquainted with the reckless and unfortunate Savage, and in some respects his personal conduct seems to have been unfavourably affected by the intimacy; but from irregularity of this nature he was soon recovered by his deeply-grounded religious and moral principles. His first literary production, which attracted notice in the metropolis, was his "London, a poem," in imitation of the third satire of Juvenal, which production was highly and deservedly praised by Pope. He soon after made an attempt to obtain a Dublin degree of MA. through a recommendation to Swift, in order to obtain the mastership of a free grammar-school in Leicestershire, but could not succeed. Failing in this attempt, his engagement in the Gentleman's Magazine led to a new exercise of his powers in the composition of parliamentary debates, which being then deemed a breach of privilege, were published under the fiction of debates in the senate of Lilliput. The extraordinary eloquence displayed in these productions was almost exclusively the product of his own invention; but it is probable that he adhered more faithfully to the tenor of the arguments of the real speakers than to their language. He however confesses himself that he "took care the whig dogs should not have the best of it." His attachment to the Jacobites was also farther manifested by the composition of a humorous pamphlet, in 1739, entitled, "Marmor Norfolciense," consisting of a supposed ancient prophecy in Latin monkish rhymes. For some years longer the Gentleman's Magazine received the chief of his attention. For this miscellany he composed several excellent biographical articles, and in 1744

published his celebrated "Life of Savage" separately. In 1747, after the failure of a number of abortive projects, he sent out his plans for an English Dictionary, in an admirably composed pamphlet addressed to the earl of Chesterfield, who, however, concerned himself very little in the success of the undertaking. The time that he could spare from this compilation, which has been justly accounted a wonderful exertion of industry, was allotted to various literary avocations. In the same year he furnished Garrick with his admirable prologue, on the opening of Drury-lane theatre; and in 1749 published another admired imitation of Juvenal, which he entitled "The Vanity of Human Wishes." In the same year his tragedy of Irene was produced at Drury-lane theatre, under the auspices of Garrick. It was performed thirteen nights with but moderate applause, and Johnson, satisfied that he was not formed to excel in the drama, wisely gave up the endeavour. In March 1750, appeared the first paper of "The Rambler;" the gravity of the tone of which, notwithstanding its acuteness of observation, richness of illustration, and dignity of expression, prevented it from obtaining a wide circulation as a periodical paper, although when collected into volumes, the author himself lived to see it reach a tenth edition. A short time before the appearance of the Rambler, half self-deluded by his political dislike of Milton, he hastily adopted the imposture of Lauder, in his attempt to fix the charge of plagiarism on that great poet. When undeceived, however, he insisted upon Lauder's signing a formal recantation; and, possibly as some atonement, wrote a prologue to Comus, when acted for the benefit of Milton's grand-daughter. In 1752 the death of his wife proved a severe affliction; not long after which event he charitably and benevolently took Mrs Ann Williams under his roof, the blind and destitute daughter of an impoverished Welsh physician. In the year 1755 was published his long-expected Dictionary, to which his name appeared with the degree of MA. obtained from the university of Oxford, by the good offices of Mr Warton. The approaching publication of this work, lord Chesterfield had favourably announced, some months before, in two papers of "The World;" but Johnson, conscious of having received no sort of support or encouragement from that nobleman during its progress, addressed to him a well-known letter, replete with pointed sarcasm and manly disdain. This epistle will ever remain an admirable reproof to men of rank, who affect the title of patrons of literature, while they treat its professors with haughtiness and neglect. The Dictionary was received by the public with very general applause; and although its neglect of the northern etymologies, and the defects rendered apparent by more recent research, have somewhat lessened its original reputation, it still remains the leading work of the kind in the English language. In its progress, however, this great work had done nothing beyond merely supporting him; and it appears, from

an arrest for a very trifling sum, in the year subsequent to its publication, that his necessities continued undiminished. An edition of Shakspeare, "The Idler," with occasional contributions for a literary magazine, formed the desultory occupation of several succeeding years. In 1759 he wrote his celebrated romance of "Rasselas, Prince of Abyssinia," which fine performance he composed in the evenings of one week, in order to defray the funeral expenses of his aged mother. At length, in 1762, the Bute administration granted him a pension of 300*l.* per annum, which he accepted, after a short struggle against the receipt of a favour from the house of Hanover. His own sarcastic definition of the word *pensioner* in the Dictionary was naturally enough quoted upon this occasion; but the sterling and acknowledged merits of the man formed a satisfactory apology. His advanced reputation and amended circumstances now considerably enlarged his acquaintance, and he became member of a weekly club in Gerrard-street, Soho, composed of the most eminent men of talents of the day, and also commenced that intercourse with the Thrale family which produced him so much social and hospitable enjoyment. In 1765 appeared his long-promised edition of Shakspeare, which was ushered in by an admirable preface; out the work itself did not altogether answer public expectation, owing principally to the superficial acquaintance of the commentator with the writings of the age in which Shakspeare flourished. In 1770, although his pension was given without conditions, his attachment to the monarchical side in general politics, led him to compose a pamphlet, entitled, "The False Alarm," in favour of the resolution of the house of Commons, in the affair of Wilkes,—that expulsion implied incapacity of reelection. This production was followed by "Thoughts on the late Transactions in Falkland's Island, against the conduct of Spain in regard to that unprofitable possession;" "The Patriot," written on the eve of a general election, in 1774, and "Taxation no Tyranny," a more considerable effort, which made its appearance in 1775, against the arguments of the American colonists, relative to the power claimed by the mother country to tax them at pleasure. This pamphlet, although vigorously composed, was more dictatorial than argumentative, and abounding, as it did, with irritating sarcasm, did little service to the cause thus espoused. At this time, Johnson was encouraged in a view of obtaining a seat in parliament, but meeting with no encouragement from the ministry, the scheme was dropped. In 1773 he made a tour to the western isles of Scotland, in company with his friend Boswell, of which he gives a highly instructive account, in his "Journey to the Western Isles of Scotland." In this production he pronounced decidedly against the authenticity of Ossian, which sentence involved him in a personal broil with Macpherson. In 1775 he received the diploma of LL.D. from the university of Oxford, and soon after visited

France, in company with the *Thrales* and *Ba-*
retti. His last literary undertaking was his
 "Lives of the Poets," which was completed
 in 1781; they were written to prefix to an edi-
 tion of the works of the principal English poets,
 and in a separate form, comprise 4 vols. 8vo.
 With an occasional exhibition of political
 bias, and strong prejudices, a conspicuous
 instance of which is supplied by the life of
 Milton, they form a valuable addition to Eng-
 lish biography and criticism. The concluding
 portion of the life of this eminent man was
 saddened with the loss of many old friends, and
 by declining health, rendered doubly distress-
 ing in his case by a morbid apprehension of
 death, which neither his religion nor philoso-
 phy could enable him to bear with decent com-
 posure. A superstitious trait in his feeling
 of the former seems, indeed, to have rendered
 it more a subject of terror and of awe, than of
 hope or comfort. In 1783 he was greatly
 alarmed by a paralytic stroke, and his health
 never wholly recovered the shock, although he
 lived to the 13th December, 1784. For some
 days previously he retained all his horror of
 dissolution, but he finally died with devotional
 composure. This event took place in his
 seventy-fifth year, and his remains were in-
 terred in Westminster abbey with great sole-
 munity, being attended by a respectable body of
 eminent characters, and his statue has been
 placed in St Paul's cathedral. From the nu-
 merous and copious biographical tributes to
 the memory of Dr Johnson, and especially
 that of Boswell, few persons have been made
 so well-known to the public, either as authors
 or men. In the former capacity he is possibly
 more to be admired for vigour and strength,
 than for novelty of conception. No writer
 delivers moral maxims and dictatorial sen-
 tences with more force, or lays down defini-
 tions with more grave precision. He also excels
 in giving point to sarcasm, and magnificence to
 imagery and abstraction. His critical acumen,
 setting aside personal and political prejudices,
 was likewise very great, but he is utterly
 averse to the easy and familiar, both in his style
 and sentiment; the former of which formed
 an era in English composition. The admira-
 tion of its exuberance of words of Latin ety-
 mology, and its sonorous rotundity of phrase,
 after having betrayed some able writers into
 injudicious imitation, has duly subsided, and the
 share of influence which remains has indisputa-
 bly improved the general language. As a man,
 Dr Johnson was in mind as in person, tena-
 cious, powerful, and rugged, but capable of
 acts of benevolence and of substantial gener-
 osity, which do honour to human nature. His
 strong prejudices have been already men-
 tioned, and it is to be regretted that his admi-
 rable conversational and argumentative powers
 were sullied by dictatorial arrogance, and the
 most offensive impatience of contradiction,
 qualities that were unhappily heightened by the
 extreme deference and lavish admiration with
 which he was treated on arriving at the
 summit of his reputation. The effect was
 possibly more injurious to himself than his

hearers, as it evidently fostered the seeds of
 bigotry and intolerance, with which he set out
 in life. Upon the whole, however, both the
 moral and intellectual character of Dr Johnson
 stands very high, and he may be regarded
 without hesitation as one of the most eminent
 in the foremost rank of distinguished writers
 of the eighteenth century. His works were
 published collectively in 11 vols. with a life of
 the author, by sir John Hawkins, 1787, and in
 12 volumes by Murphy, in 1792.—*Biogra-*
phy of Johnson by Boswell, Hawkins, Mur-
phy, &c. Aikin's Gen. Biog.

JOHNSON (SAMUEL) a dramatic writer
 and performer, distinguished for the eccen-
 tricity of his character and his productions.
 He was a native of Cheshire, and by profes-
 sion a dancing-master, but afterwards took to
 the stage. He was the author of "Hurlo-
 thrumbo, or the Supernatural," a comedy,
 acted at the Haymarket in 1729, which ap-
 pears to have been one of the most extrava-
 gant and the most popular of his dramas.
 The others are, "Cheshire Comics," 1730;
 "The Blazing Comet," 1731; "The Mad
 Lovers, or the Beauties of the Poets," 1732;
 "All Alive and Merry," 1733; "A Fool
 made wise," 1741; and "Sir John Falstaff
 in Masquerade." He died in 1773.—*Thespian Dict.*

JOHNSON (THOMAS) an English botanist
 of the seventeenth century, was born at Selby
 in Yorkshire, and bred an apothecary in Lon-
 don. He was first known to the public by a
 small piece, entitled "Iter in agrum Cantia-
 num," 1620, which was followed by a new
 edition of Gerard's Herbal. He greatly dis-
 tinguished himself in the cause of Charles I,
 and in consequence, to reward both his
 science and his loyalty, was honoured with the
 degree of MD. from the university of Oxford.
 He likewise reached the rank of lieutenant-
 colonel in the king's army, but in a skirmish
 near the Basing-house received a wound, of
 which he soon after died, in September 1644.
 Besides the works above-mentioned he was
 author of "Mercurius Botanicus," London,
 8vo; "De Thermis Bathonicis," and a trans-
 lation of the works of the French surgeon,
 Ambrose Pare, 1643 and 1678.—*Pulteney's*
Bot. Sketches.

JOHNSON (THOMAS) an eminent classical
 scholar, was a native of Oxfordshire, and edu-
 cated at Magdalen college, Cambridge, of
 which he was afterwards a fellow. He took
 the degree of MA. in 1692, after which he left
 the university and married. He was assistant
 at Eton and Ipswich, and himself kept a school
 at Brentford and other places; but neither the
 time of his birth nor of his death are accurately
 known. His character is said to have been
 reckless, but he was an excellent scholar. He
 is best known as the editor of "Sophocles,"
 Oxford and London, 1705 and 1746, 3 vols.;
 "Grætius de Venatione cum notis;" "Cebæ-
 tis Tabula;" "Græcorum Epigrammatum de-
 lectus;" "Questiones Philosophicæ;" "An
 Essay on Moral Obligations." He was also
 one of the editors of Stephens's *Thesaurus*
Lingue Latine.—*Harwood's Alumni. Eton.*

JOHNSON (sir WILLIAM) a military officer, who served with distinction in North America, in the middle of the last century. He was a native of Ireland, and was descended from a good family long settled in that country. Early in life he went to America, under the care of his uncle, sir Peter Warren, KB. and entering into the army, he gradually rose to the rank of colonel. In 1755 he was appointed to the command of an expedition fitted out against the French fort of Crown Point, when, though the main object of the undertaking was not effected, the colonel gained considerable fame by defeating a body of Indian, Canadian, and French troops, commanded by baron Dieskau, who was taken prisoner. The British general was rewarded for his conduct on this occasion, by a baronetcy, and a gratuity from parliament of 5000*l*. He had settled on the Mohawk river, and had not only acquired a considerable estate, but had also ingratiated himself both with the American settlers and the neighbouring Indians. His ability as a negotiator was displayed in his intercourse with the latter, with whose manners and customs he was intimately acquainted. He made a treaty with the Senecas (one of the revolted tribes of the Iroquois, and the most formidable enemies of the English), which was concluded at his house at Johnson's-hall, where he appeared April 3, 1764, as English agent and superintendant of Indian affairs for the northern parts of America, and colonel of the six united nations. He died at his seat at Johnson's-hall, in the province of New York, in 1774, much regretted for his private worth as well as for his abilities, which had been so usefully exerted in the cause of his country. He was the author of a paper on the "Customs, Manners, and Languages of the Northern Indians of America," published in the 63d volume of the Philosophical Transactions.—*Betham's Baronetage, Watt's Bib. Brit.*

JOHNSTON (ARTHUR) a Scottish physician, poet, and epigrammatist, born at Caskieben, in Aberdeenshire, 1587. He became at an early age a member of the university in the neighbourhood of the place of his nativity, but went to the continent without graduating, and after studying some time at Rome and Padua, took the degree of doctor of medicine in the latter university in 1610. He afterwards journeyed through Italy and over the greater part of the north of Europe, till he eventually married and settled at Paris, in which capital many of the compositions by which he distinguished himself were written. In 1632, having spent upwards of forty years in foreign travel, he returned to his native country, and became principal of the university of Aberdeen. Laud, archbishop of Canterbury, attending Charles I into the north, was much pleased with him, and took him under his protection, a favour which he requited by dedicating an elegant paraphrase of the Psalms in Latin verse to his patron. The interest of the primate obtained him the appointment of physician in ordinary to the king,

on which he came to reside in London, but died soon after of a dysentery, while on a visit to a married daughter at Oxford, in 1641. Besides the paraphrase alluded to, he was the author of a collection of Latin epigrams; the "*Musæ Aulicæ*," &c. and edited a selection from the works of Scottish authors, entitled "*Poëtarum Scotticorum deliciae*."—*Memoirs by Benson. Beattie's Dissertations.*

JOHNSTON (JOHN) a Polish physician and natural philosopher of great eminence, born at Sambter 1603. He spent a considerable time in this island, occupied in those studies, his proficiency in which afterwards gained him so much reputation throughout Europe. He had scarcely attained his nineteenth year on his first arrival in England, and after residing for some time at Cambridge, became a member of the university of St Andrew's. Thence he removed to Leyden, and graduated as MD. in that university, receiving also an honorary degree from Cambridge. He was the author of a Latin work, called "*The Wonders of Nature divided into Ten Classes*;" the natural histories of fishes, of birds, beasts, and insects, contained in four different treatises; and two others, entitled, "*Dendrographia*," and "*Syntagma Dendrologicum*." His death took place in 1675.—*Moreri. Saxii Onom.*

JOHNSTONE or **JOHNSON** (CHARLES) an ingenious inventive writer, was a native of Ireland, and descended from the Johnstons of Annandale. He was born in the early part of the last century, and after receiving a good education, was called to the bar, and came over to England to practice, but being afflicted with deafness, confined himself to the employment of a chamber counsel. His success not being great in this way, he turned his attention to literature; and his first literary attempt was the celebrated "*Chrysal*, or the *Adventures of a Guinea*," 2 vols. 12mo, a work which attracted so much attention, that the author was induced to add two volumes to his first work, which were equally well received. The secret springs of some political intrigues on the continent were unfolded in this production, which, together with smart and piquant sketches of many distinguished characters of the day, including statesmen, noblemen, women of quality, citizens, and persons of every description, who had claimed any share of public notice, rendered it exceedingly popular. As usual, in such works, however, some truth is blended with much fiction, and although in regard to known personages, little is absolutely without foundation, much exaggeration prevails. His exposure of the orgies of a club of fashionable profligates, held at the seat of a dissipated nobleman in Buckinghamshire, produced no small sensation at the time. He wrote other works of a similar class; in which much knowledge of life and manners is united to a considerable talent for spirited caricature. The names of them are, "*The Reverie*, or a *Flight to the Paradise of Fools*," 1762, 2 vols. 12mo; "*Assacts*, *Prince of Betlis*," 1774, 2 vols; "*The Pil-*

grim, or a Picture of Life," 1775, 2 vols.; and the "History of John Juniper, Esq. alias Juniper Jack," 1781, 3 vols. In 1782 he embarked for India, where he employed himself in writing essays for the Bengal newspapers, and finally became a joint proprietor of one himself, by which and other speculations he obtained considerable wealth. He died in Calcutta about 1800.—*Gent. Mag.* lxi.

JOHNSTONE (Chevalier de) a Scottish officer, attached to the Stuart family, during their attempts to gain possession of the throne of Great Britain in the middle of the last century. He was the only son of James Johnstone, merchant, of Edinburgh, and was related by alliance or descent to some of the first families in Scotland. Being educated in the principles of the Jacobites, he left Edinburgh privately, on hearing of the landing of the pretender in 1745, and joined that unfortunate prince, to whom he for some time was aid-de-camp, after having acted in the same capacity to lord George Murray. After the battle of Preston-Pans, he held a captain's commission, and served in the actions which subsequently took place. When the battle of Culloden had ruined the cause of his master, he sought for safety in flight; and he was fortunate enough to escape to Paris, where, after subsisting for a while on the bounty of the government to the Scots exiles, he entered into the service of France, and was sent to the French colonies in North America, whence he returned on the conquest of Canada by the English. He appears to have spent the remaining part of his life in France, and died in that country at an advanced age. His latter years were employed in writing an interesting work, published at London in 1820, under the title of "Memoirs of the Rebellion in 1745 and 1746, translated from a French MS, originally deposited in the Scots' College at Paris," 4to.—*Preface to the Memoirs.*

JOHNSTONE (GEORGE) an English diplomatist, who was one of the commissioners sent out with the earl of Carlisle and Eden, (lord Auckland) to treat with the congress of the American states, during the war of independence. He was the son of a Scottish baronet, and was educated for the maritime profession. In 1760 he was appointed master and commander in the royal navy, two years after post-captain, and in 1763 he was made governor of West Florida. Returning to England, he obtained a seat in the house of Commons, first for Appleby and then for Cockermouth. In consequence of some reflections which he threw out in a speech in parliament, he fought a duel in 1770 with lord George Germaine, afterwards viscount Sackville. He also displayed his zeal in discussions relative to the affairs of the East India Company, and distinguished himself by a violent attack on the conduct of lord Clive. His death took place in 1787. He was the author of a tract entitled, "Thoughts on our Acquisitions in the East Indies, particularly in Bengal," 1771, 8vo.—*Lempriere's Univ. Biog.*

JOHNSTONE (JAMES) an ingenious phy-

sician and physiological writer of the last century. He was a native of Annan in Scotland, and was educated at Edinburgh, where he took the degree of MD. in 1750. He then settled as a medical practitioner at Kidderminster, where he published a tract on malignant fever, a disease in the treatment of which he had been very successful; and in this work he noticed the effect of the mineral acids in counteracting contagion, a fact of which he claimed the discovery. He subsequently removed to Worcester, and died in that city, at the age of seventy-one, in 1802. He was the author of "Medical Essays and Observations, with Disquisitions relating to the Nervous System," 1795, 8vo. This work contains an essay on the ganglions of the nerves, exhibiting some novel and important ideas relative to the use of those parts of the nervous system. He also published several medical papers in the Philosophical Transactions and in periodical journals, and two biographical essays.—*Hutton's Abr. of the Philos. Trans.* vol. xi.

JOINVILLE (JOHN SIRE de) seneschal of Champagne, an eminent French historian of the age of Lewis IX. He accompanied that prince in his first crusade or expedition to Egypt, in 1249, when he shared his master's captivity, and the hardships and dangers with which it was attended. The result of this undertaking convinced him of the impolicy of the king's views; and he excused himself from joining in the second and more unfortunate crusade of the French monarch, on the plea of having been ruined by the first. He employed himself at home in writing the memoirs of Lewis IX or St Lewis, and his work is one of the most interesting documents existing relative to the history of the middle ages. He appears to have finished this production in 1309, when he must have been more than ninety years old. His memoirs were published in 1668, with notes by Ducange, and at the Louvre, 1761, folio, from a more correct MS. Mr Johnes, of Hafod, printed his English translation of Joinville's work in 1807, 2 vols. 4to.—*Aikin's G. Biog. Biog. Univ.*

JOLIVET (JEAN BAPTISTE MOYSE, count de) counsellor of state, and commandant of the legion of honour, was before the Revolution an advocate. In 1790 he was chosen by his fellow citizens administrator of the department of Seine and Marne, and afterwards deputy to the legislative assembly, in which he always ranged himself with the constitutionalists. He had the courage to denounce the jacobin club before the National Convention, just before the 10th of August, 1792, notwithstanding which he escaped in safety from the perils of that stormy period. In 1795 he was appointed conservator-general of mortgaged property [des hypotheques]. In 1798 he published a work, entitled, "De l'Impôt sur les Successions, et de l'Impôt sur le Sel, et Comparaison de ces deux Impôts, soit entre eux, soit avec les Contributions directes." This was followed by another financial tract. After the accession of Napoleon, he was introduced into the council of state, and subsequently

charged with the organization of the four new departments on the left bank of the Rhine. On his return to Paris he was made a commandant of the legion of honour. He retained the office of counsellor of state till 1814. His death took place in 1818, at the age of sixty-four. Besides the works already noticed, he was the author of a treatise on the fundamental principles of social government; another on the boundary of the Rhine; and a third, entitled "De l'Expertise."—*Biog. Nouv. des Contemp.*

JOLY (GUY) a French writer of the seventeenth century, the confidential secretary of cardinal de Retz. He held also the situations of syndic of the Hotel de Ville, at Paris, and of king's counsellor at the Chatelet. Besides a variety of tracts of minor importance, he compiled, under the title of memoirs of his times, an interesting account of the transactions of the period from 1648 to 1665, in which the private history of his patron is included. An English version of this work appeared in 1775.—*Moreri. Nouv. Dict. Hist.*

JOLY (MARK ANTHONY) a French dramatic writer. He was born in 1672, and was the son of the keeper of a coffee-house at Paris, which was the resort of men of letters. At one of their entertainments, the tale of madame Murat, entitled "Le Palais de la Vengeance," became the subject of conversation. Animated by the discussions of the literati which he witnessed, Joly shut himself up in his chamber, and speedily composed a rhymed drama in three acts, which he called "L'Ecole des Amants." He offered to read this piece to the literary visitors of the coffee-house, and it was found to possess so much merit, that it was performed at the theatre in 1718, and was received with great approbation. He produced several other pieces, but all inferior to the first, with the exception of "La Femme Jalouse," acted in 1726. He obtained the office of censor royal, and died in 1753.—*Biog. Univ.*

JOLY (MARY ELIZABETH) a distinguished French actress, born at Versailles in 1761, and died at Paris, May 5, 1798. She commenced her theatrical career in 1781, and soon rose to great eminence as a representative of the Soubrettes of the French drama, particularly excelling in the chambermaids of Moliere. She subsequently appeared in more lofty characters, as Ines de Castro, and Athalia. In 1793 she was imprisoned among other political victims, and only obtained her liberty on condition of performing at the theatre of the Republic. She soon after quitted that theatre to join the company which performed at the theatre de Louvois. For some years she was the delight of the French metropolis, but was at length attacked with a disease of the chest, which ultimately proved fatal. She was married to M. Dnlomboy, who published a collection of verses consecrated to her memory.—*Biog. Univ. Biog. Nouv. des Contemp.*

JOMELLI (NICOLÒ) a celebrated composer and musician of the last century, born in 1714, at Aversa, in the Neapolitan dominions,

where he studied the rudiments of the science of which he afterwards became so distinguished a professor under the canon Muzillo, but completed his musical education under Leo and father Martini. At the age of twenty-three he produced his first opera, "L'Errore Amaro," at the Florentine theatre in Naples, the enthusiasm excited by which, and some of his subsequent compositions, placed his name at once in the first rank of popular favourites. Jomelli afterwards visited Bologna, Rome, Venice, and most of the other principal cities of Italy, carrying away the palm every where from all his rivals. On his return to Naples however he was not so fortunate, and the chagrin he experienced in consequence of the failure of his "Ifigenia," in 1773, produced a paralytic stroke. From this affection he partially recovered, and even composed the most celebrated of all his church music, the sublime "Miserere," for two voices, subsequently, but died the following year, and was honoured with a public funeral. Besides a great variety of devotional pieces, he was the author of thirty-six operas, all of which, with the single exception of the one above mentioned, met with the most unqualified success.—*Burney's Hist. of Mus. Biog. Dict. of Mus.*

JONAS (ARNGRIM) a learned Islandic writer, distinguished as an historian and antiquary. He was pastor of Melstadt, in Iceland, and coadjutor of the bishop of Holum, Gudbrand Thorlak, whose life he published at Copenhagen, in 1630. He is said to have studied astronomy under the celebrated Tycho Brahe, and was well skilled in that science; but his works relate principally to the history of Iceland. Among them are the following: "Brevis Commentarius de Islandia, quo Scriptorum variorum Errores deteguntur, ac quorundam Convitiis in Islandos occurrunt," Hafn. 1593, 8vo; "Crymogæa, seu Rerum Islandicarum Libri III.," "Epistola pro Patria Defensoria," Hamb. 1618, 4to; "Anatome Blefkeniana," [see BLEFKEN (DITHMAR)]; "Specimen Islandiæ Historicum, et magna ex parte Chorographicum," Amst. 1643, 4to. This last was a posthumous publication, as the author died in 1640, in the ninety-fifth year of his age. He also translated the "Jomsvikinga Saga," from the Islandic into Latin. Among the northern antiquaries and historians there are few, if any, who are held in higher estimation than Arngrim Jonas.—*Sibbern Bib. Hist. Dano. Norv. Biog. Univ.*

JONAS, or JONÆ (RUNOLPH) an Islandic scholar, who was the son of a clergyman. He studied in the university of Copenhagen, and became rector of the school of Holum, in Iceland. In 1649 he removed to Copenhagen, obtained the title of master of arts, and was placed at the head of the academy of Christianstadt in Scania. He died of the plague in 1654. His works are, "Lingue Septentrionalis Elementa," 1651; and "Grammatica Islandicæ Rudimenta," which display to advantage his acquaintance with northern literature.—*Biog. Univ.*

JONES (EDWARD) a modern Welsh poet,

who enjoyed the honour of being bard to the prince of Wales. He was a native of Merionethshire, and by profession a musician, highly distinguished for his skill as a performer on the harp. He published "Musical and Poetical Relics of the Welsh Bards;" "Minstrel Serenades for the Harp and Piano-forte;" "Lyric Airs," containing specimens of the music of various countries; and "Terpsichore's Banquet." The pardonable predilection of Mr Jones for the primitive language of his native country, rendered him a zealous defender and expositor of its merits, in relation to which his industry and research could be equalled only by his enthusiasm. He died in 1821.—*Biog. Dict. of Mus.*

JONES (GRIFFITH) a miscellaneous writer, born in 1721, and died September 12, 1786. He was the author of a great number of works translated from the French, and published anonymously; and he edited the London Chronicle, and was coadjutor with Dr Johnson in the Literary Magazine, and with Smollett and Goldsmith in the British Magazine. He also, in conjunction with his brother Giles Jones, secretary to the York-buildings water-works company, and Newbery, the bookseller, produced the popular little story-books, for the amusement of children, published by the latter.—*Biog. Univ. Jones's Biog. Dict.*

JONES (HENRY) a dramatic writer, was a native of Drogheda, in Ireland, the date of whose birth is unknown. He was bred a bricklayer, but attached to the muses, he showed a portion of talent which secured him some respectable attention, and being recommended in 1745 to the earl of Chesterfield, then lord lieutenant of Ireland, that nobleman brought him with him to England, and recommended him to many of the nobility. He also patronized a large subscription to his poems, and even took upon himself the alteration and correction of his tragedy of the Earl of Essex, which he introduced to the managers of Covent-garden. Jones was, however, at once capricious in temper and defective in economy, and after experiencing many reverses, chiefly in consequence of his own imprudence, he died in great distress in April, 1770. His principal performance was the tragedy of the Earl of Essex, already mentioned; an unfinished tragedy, called the "Cave of Idra," and a few poems, which although not contemptible, do not exceed mediocrity.—*Biog. Dram.*

JONES (1760) the reviver of classical architecture in England, in the beginning of the seventeenth century. He was a native of London, where his father was a cloth-worker, and was born about 1572. Destined when young for a mechanical employment, he emerged from obscurity by dint of talent, and attracted the notice of that great patron of the fine arts, the earl of Arundel, and of William, earl of Pembroke, the latter of whom supplied Jones with the means of visiting Italy, for the purpose of studying landscape painting. He went to Venice, where the works of Palladio

inspired him with a predominant taste for the sister art of architecture, in the practice of which he rose to almost unrivalled eminence. His reputation procured him the post of first architect to Christiern IV, king of Denmark, who visiting his brother-in-law, James I, in 1606, brought Jones with him to England. He was induced to remain here, and was appointed architect to the queen, and subsequently to Henry, prince of Wales; besides which he had a grant in reversion of the office of surveyor to the board of works. After the death of the prince he again visited Italy, and remained there some years, till the surveyorship becoming vacant, he returned home to occupy it. During this interval he extended his knowledge and improved his taste, from the examination of the models of ancient and modern art, and acquired a fund of ideas for the exercise of his genius in the beautiful edifices which he afterwards designed and executed. The banquetting-house at Whitehall (intended as an adjunct to a magnificent palace), still remains a splendid monument of the skill and science of this great architect. The church of St Paul, Covent-garden (recently rebuilt after the original design); some houses on the west side of Lincoln's-Inn-Fields; and the water-gate, at York-buildings in the Strand, may also be considered as specimens of his ability. He was appointed, in the reign of James I, commissioner for the repairing of St Paul's cathedral; but the works there were not commenced till the following reign. The edifice in question (afterwards ruined by the memorable fire in the reign of Charles II), was a massive Gothic pile, erected in different ages. In restoring a portion of it in the ancient style, Jones succeeded but indifferently; and he heightened the ill effect of his work by the incongruous addition of a Roman portico, beautiful in itself, but disagreeable, because misplaced. He committed a similar error at Winchester cathedral, another Gothic building, in which he erected a screen in the style of classic antiquity. Like his celebrated successor, Wren, he seems not to have duly felt or appreciated the peculiar character and distinctive beauties of the pointed style of building, of which so many fine specimens remain in the ecclesiastical structures of the middle ages in England, France, and Germany. He built the front of Wilton-house, in Wiltshire, for Philip, earl of Pembroke, and was much employed both by the court and by many of the nobility and gentry, so that he realized a handsome fortune. His talents were often put in requisition for the purpose of designing the scenery and decorations for masques, a species of dramatic entertainment, fashionable in the early part of the seventeenth century. In these pieces the dialogues and songs were composed by Ben Jonson, who quarrelled with Jones, and abused him in epigrams and satires. The enmity of the poet was not the only misfortune to which the architect was exposed. Being a Roman catholic and a partizan of royalty, he suffered in the civil war, and in 1646 he was forced to pay a fine of 545*l.* as a malignant or cava-

lies. The ruin of the royal cause and the death of the king, distressed him greatly; and at length worn down by sorrow and suffering, he died July 21, 1652. He is said to have been well acquainted with geometry, and was competently skilled in various branches of literature and science. As an author he is known by a work relative to that curious monument of former ages, Stonehenge, on Salisbury plain, published after his death, by his son-in-law, Mr Webb. The object of this treatise, composed by the command of king James I, is to prove that Stonehenge was erected by the Romans, and was an hypæthral temple, dedicated to the god Cælus. This opinion is supported with much ingenuity, and though it has been often reprobated as erroneous and absurd, it is by no means the most improbable or indefensible speculation to which the structure in question has given rise. A collection of the architectural designs of Inigo Jones was published by Kent, in 1727 and 1744; and others more recently by Ware, and by Leoni.—*Walpole's Anecd. of Paint. &c. Biog. Brit. Edit.*

JONES (JEREMIAH) a learned English dissenting divine, was born, as it is supposed, of parents in opulent circumstances, in the north of England, in 1693. He was educated by the rev. Samuel Jones, of Tewkesbury, who was also tutor of Chandler, Butler, and Secker. After finishing his education he became minister of a congregation of protestant dissenters near Nailsworth, in Gloucestershire, where he also kept an academy. He died in 1724, at the early age of thirty-one. His works are, a Vindication of the former Part of St Matthew's Gospel, from Mr Whiston's Charge of Dislocations, &c. 1729; "A new and full Method of Settling the Canonical Authority of the New Testament," 1726, 2 vols, 8vo, which was followed by a third volume. These works, which are highly esteemed by the learned world, have been since republished by the conductors of the Clarendon press of Oxford.—*Month. Mag.* April, 1803. *Gent. Mag.* lxxiii.

JONES (OWEN) a Cambrian antiquary, whose memory is associated with an institution, the object of which is to collect and preserve the monuments of the ancient literature and customs of Britain. This gentleman carried on for many years the trade of a frier in the metropolis, and died at his house in Thames-street, in 1814, aged seventy-four. He was a native of Denbighshire, in North Wales, and was enthusiastically interested in the antiquities of the principality. He published at his own expense, all the ancient poetry which could be collected, together with various historical documents, under the title of "The Archaeology of Wales," 3 vols, 4to; besides the entire works of the celebrated Cambrian bard, Dafydd ab Gwilym, and other productions. He also procured transcripts of the unpublished Welsh poetry anterior to the end of the seventeenth century, forming about 60 vols, 4to. In 1772 Mr Jones, in conjunction with several other persons, formed the *Gwyneddigion* (or Cambrian) Society, for the purpose of patronizing the bards of Wales,

and promoting the study of the ancient British language, and of the national music as performed on the harp. Prize medals and other rewards were offered for the production of the best musical or poetical compositions by the society, of which Mr Jones was considered as the father and founder.—*Month. Mag.*

JONES (PAUL) a naval officer in the service of the Americans, during the war which separated the colonies from Great Britain. He was born at Selkirk, in Scotland, in 1736, and going to America when very young, he became a denizen of that country. In 1775 he obtained a commission from the congress, and sailed in a squadron commanded by commodore Hopkins, destined against New York. His bravery was rewarded with the rank of captain, and he was appointed to the command of a frigate of thirty-six guns. He sailed across the Atlantic, and in 1777 he made a descent at Whitehaven, where he destroyed the shipping in the harbour; and afterwards landing in Scotland, he attacked the mansion of lord Selkirk, and carried off the plate and furniture. It is said, however, that his design was against the liberty, and not the property, of lord Selkirk, and that he purchased the booty from his crew and restored it to his lordship. After taking the Drake sloop of war, off Carrickfergus, he sailed for Brest, where he obtained a reinforcement of three ships, with which he scoured the English seas. Meeting with the Baltic fleet near Flamborough Head, on the coast of Yorkshire, convoyed by the Serapis frigate and the Countess of Scarborough, a very severe action took place, in which Jones was victorious, and the Serapis was captured. Arriving at L'Orient in February 1780, he was invited to Paris, and was received with high honours by Louis XVI, who presented him with a valuable sword. He returned to America in 1781, when the congress voted him a medal of gold, and appointed him to the command of a seventy-four gun ship. He afterwards served under d'Estaing, in the expedition against Jamaica. In 1792 he offered his services to the French government, wishing to be employed as an admiral, but his proposal was not accepted. He died at Paris in July that year.—*Biog. Univ. Biog. Neut. des Contemp.*

JONES (WILLIAM) an eminent mathematician, was born in 1660, in the isle of Anglesea, North Wales. His parents were yeomen or small farmers, who gave him the best education their circumstances would allow, consisting of reading, writing, accounts, and the Latin grammar. Addicted very early to the study of the mathematics, he began his career of life by teaching these sciences on board of a man of war. In his twenty-second year he published a compendium of the Art of Navigation, which was much approved; and in his naval capacity was present at the capture of Vigo. On his return to England he established himself as a teacher of mathematics in London, where, in 1706, he published his "Synopsis Palmariorum Matheseos," or a new introduction to the mathematics,

which work is still held in considerable estimation. Highly respected in his private capacity, he obtained the friendship of the most eminent persons of the period in which he lived, and among others, of lord Hardwicke, who conferred upon him the office of secretary of the peace. He was also in the habits of intimacy with sir Isaac Newton, Halley, Mead, Dr Johnson, and the earl of Macclesfield, in whose family he resided at Sherborne, and who, on his endurance of a considerable loss by the failure of a banker, conferred on him a sinecure place of considerable emolument. He had, previously to this event, become, first a member, and then vice-president of the Royal Society. While at Sherborne he married Miss Nix, a lady of great mental endowment, who brought him three children, one of whom was the distinguished subject of the next article. Mr Jones died of a polypus of the heart in July 1749. Besides the works already mentioned, he was the author of several mathematical and other papers in the Philosophical Transactions, which are distinguished by neatness, accuracy, and perspicuity. According to Mr Nichols, he had also made considerable progress in a general introduction to the mathematical and philosophical works of Newton, the MSS of which he left in the hands of lord Macclesfield. These have never seen the light, and the statement has neither been confirmed nor disproved by any memoranda found among the papers of his celebrated son. It was the good fortune of Mr Jones to discover among the papers of the mathematician Collins, which fell into his hands, a tract of Newton, entitled, "Analysis per Quantitatem Series, Fluxiones ac Differentias; cum Enumeratione Linearum tertii ordinis;" which he published with the consent of its great author, and thereby, when the dispute ran high between Leibnitz and the friends of Newton, concerning the invention of fluxions, contributed materially to the decision of the question in favour of his countryman.—*Lord Teignmouth's Memoirs of Sir W. Jones. Nichols's Lit. Anec. Hutton's Math. Dict.*

JONES (sir WILLIAM) an eminent lawyer, and most accomplished scholar, the son of the subject of the preceding article, was born in London on the 28th of September, 1746. He lost his father when only three years of age, and the care of his education fell on his mother, a lady of uncommon mental endowments. At the close of his seventh year he was placed under Dr Thackeray, at Harrow, who was so impressed by his happy genius, that he observed, were Jones left naked and friendless on Salisbury-plain, he would make a way to fame and fortune. Dr Sumner, who succeeded Dr Thackeray, thought equally highly of him, and scrupled not to declare that he believed he knew more of Greek than himself. In 1764 he was entered of University college, Oxford; and his mother, who devoted herself entirely to his welfare, fixed her residence in that city. Here his ardent desire to acquire the Oriental languages induced him to support, at his own expense, a native of Aleppo, quali-

fied to instruct him in the true pronunciation of the Arabic language; and as it was soon perceived that he would not mispend his time, the college tutors allowed him to follow his own plans unmolested. His great object was to obtain a fellowship to spare his mother the expense of his education; but not succeeding to his wishes, he accepted in 1765 the offer of becoming tutor to lord Althorpe, the present earl Spencer, and some time after he obtained a fellowship also. He availed himself of a residence at the German Spa, with his pupil, in 1767, to acquire the German language; and on his return he distinguished himself by translating into French, a Persian life of Nadir Shah, brought over in MS by the king of Denmark, at the request of the under secretary of the duke of Grafion. Another tour to the continent, with his pupil and family, followed, which occupied his time until 1770; when his tutorship ceasing, he entered himself as a law student in the Temple. He did not, however, wholly sacrifice literature to his professional pursuits; but on the appearance of the life and works of Zoroaster, by Anquetil du Perron, he vindicated the university of Oxford, which had been attacked by that writer, in an able pamphlet in the French language, which he wrote with great elegance. He also published in 1772, a small collection of poems, chiefly from the poets of Asia, and he was the same year elected a fellow of the Royal Society. In 1774 appeared his work, "De Poesi Asiatica," containing commentaries on Asiatic poetry in general, with metrical specimens in Latin and English, which excited great attention both at home and abroad. He was soon after called to the bar, and in 1776 made a commissioner of bankrupt. About this time his correspondence with his pupil evinced the manly spirit of constitutional freedom by which he was actuated; and to his feelings on the American contest, he gave vent in a very spirited classical Latin ode to liberty. In 1778 appeared his "Translation of the Orations of Isæus," with a prefatory discourse, notes, and commentary, which for elegance of style, and profound critical and historical research, excited much admiration. In the mean time he rapidly advanced in professional reputation, although his opinion of the American contest stood in the way of his progress to legal honours. In 1780 he was respectably supported in a contest for the representation of the university of Oxford, but did not succeed. The disgraceful tumults of the same year induced him to write a pamphlet "On the Legal Mode of suppressing Riots;" and in the following winter he completed a translation from the Arabic of seven poems, of the highest repute. He also wrote an ode on the marriage of lord Althorpe, and another in the fervid and free strain of Alcæus, commencing "What constitutes a state?" which is familiar to all the literary admirers of liberty. These pursuits did not prevent a professional "Essay on the Law of Bailments." He distinguished himself in 1782 among the friends

to a reform in parliament, and also became a member of the Society for Constitutional Information. The same year he drew up a short "Dialogue between a Farmer and a Country Gentleman, on the Principles of Government," for the publication of which tract the dean of St Asaph, afterwards his brother-in-law, had a bill of indictment preferred against him for sedition. Upon this event he sent a letter to lord Kenyon, then chief-justice of Chester, owning himself the author, and defending his positions. This event, however, added to the want of union among the members of opposition, seems to have damped his political ardour, and on the accession of the Shelburn administration, through the influence of lord Ashburton, he obtained what had long been the chief object of his ambition, the appointment of judge in the supreme court of judicature, Bengal, to which he was nominated in March 1783, and knighted. He soon after married Miss Shipley, daughter to the bishop of St Asaph, and embarking with his bride for India, he arrived at Calcutta in September 1783. Here a new field of action opened to him, and he planned a society in that capital similar to the Royal Society of London, of which new institution he was chosen the first president. He then applied himself with ardour to the study of the Sanscrit, and his health soon suffering from the climate, he took a journey through the district of Beuares, during which cessation of public duties he composed a tale in verse, called "The Enchanted Fruit, or the Hindoo Wife;" and a "Treatise on the Gods of Greece, Italy, and India." In 1785 a periodical work, entitled, "The Asiatic Miscellany," was begun at Calcutta, to which he communicated several poetical compositions of the minor kind; among which were nine hymns, addressed to as many Hindoo deities. He next employed his active mind in planning the compilation of a complete digest of the Hindoo and Mahometan laws, with a view to the better administration of justice among the natives. This work he did not live to finish, but its subsequent accomplishment was entirely owing to his recommendation and primary labours. His object in this instance was, to secure a due attention to the rights of the natives; and he showed himself equally jealous of those of the British inhabitants, by opposing an attempt to supersede the trial by jury. The publication of the "Asiatic Researches," or memoirs of the society to which he had given birth, also engrossed much of his attention; and it need scarcely be added, that he enriched them himself with a number of curious and interesting papers. In 1789 he gave to the world the translation of an ancient Indian drama, entitled "Sacontala, or the Fatal Ring," which, for its novelty of manners, imagery, and design, is extremely curious. A work which had long employed this indefatigable genius and scholar, being a translation of the "Ordinances of Menu," a famous Indian legislator, appeared early in 1791, being a very interesting work to the

student of ancient manners and opinions. In the December of the preceding year, lady Jones had been obliged to proceed to England for the recovery of her health, and sir William was to have followed, when he had concluded the Hindoo and Mahometan digest. Unhappily, however, he was seized in April 1794 at Calcutta with an inflammation of the liver, which terminated his existence on the 27th of the same month, in the forty-eighth year of his age. Few men have died more respected and regretted than this amiable man and eminent scholar, who as a linguist has scarcely ever been surpassed. His acquaintance with the history, philosophy, laws, religion, science, and manners of nations, was most extensive and profound. As a poet, too, he would probably have risen to great eminence, if his ardour to transplant foreign beauties, and professional and dissimilar pursuits had allowed him to cultivate his own invention with sufficient intensity. His private character was estimable in all the domestic relations, and he was equally liberal and spirited in public life. The memory of sir William Jones received many testimonies of respect, both in England and India. The directors of the East India company voted him a monument in St Paul's cathedral, and a statue in Bengal; but the most effectual monument of his fame was raised by his widow, who published a splendid edition of his works in 6 vols, 4to, 1799, and also at her own expense placed a fine marble statue of him, executed by Flaxman, in the anti-chamber of University college, Oxford. He died without issue.—*Memoirs by Lord Teignmouth. Nichols's Lit. Anec. Rees's Cyclop.*

JONES (WILLIAM) an episcopal clergyman, eminent for his learning, ability, and public spirit. He was born in 1726, at Loxwick, in Northamptonshire, and received part of his education at the Charterhouse school, London, whence he removed to University college, Oxford. Here there became a convert to the philosophy of Hutchinson, and having formed an acquaintance with Mr Horne, afterwards bishop of Norwich, he persuaded him to adopt the same system; and these two gentlemen distinguished themselves as the principal champions of the Hutchinsonian doctrines. Mr Jones took the degree of B.A. in 1749, and having entered into orders, he became curate of Finedon, and afterward of Wadenhoe, both in his native county. His first publication was "A full Answer to Bishop Clayton's Essay on Spirit," 1753, 8vo; and in 1757 appeared his "Catholic Doctrine of the Trinity, proved from Scripture," which passed through many editions. He next turned his attention to natural philosophy, and made experiments with a view to elucidate the peculiar system he had adopted. The fruit of his researches was, the publication of "An Essay on the first Principles of Natural Philosophy," 1762, 4to. In 1764 archbishop Secker presented him to the vicarage of Bethersden, in Kent; and in the next year to the rectory of Pluckley, in the same county. At the latter place he wrote "Remarks on the Confes-

sional" of archdeacon Blackburne, and produced some other tracts. About 1776 he took up his residence at Nayland, in Suffolk, where he held the perpetual curacy; and soon after he exchanged his living of Pluckley for the rectory of Pastou, in Northamptonshire. In 1781 he published "Physiological Disquisitions, or Discourses concerning the Natural Philosophy of the Elements," 4to; previously to which he had been admitted into the Royal Society. His next production was, a "Course of Lectures on the figurative Language of the Holy Scripture," 1787, 8vo. Alarmed at the progress of democratic principles, on the occurrence of the French Revolution, he employed his pen in the composition of "A Letter from Thomas Bull to his Brother John," which was widely circulated by the friends of government; and he also published a collection of tracts, under the title of "The Scholar armed against the Errors of the Times," 2 vols, 8vo. On the death of his friend bishop Horne, he published "Memoirs of his Life, Studies, and Writings," 8vo, 1795, of which a second edition appeared in 1799, with a prefixed exposition of the theological and philosophical doctrines of Hutcheson. In 1798 he was presented to the sinecure rectory of Hollingbourne, in Kent, which he did not long enjoy, dying February 6, 1800, in consequence of a paralytic stroke.—*Gent. Mag. Aikin's G. Biog.*

JONSIUS (JONN) a learned German philosophical and philosophical writer in the seventeenth century, was born at Rendsburg in Holstein in 1624. He was educated in his native place, and afterwards removed to Frankfurt, where he cultivated literature and philosophy with great success, but died prematurely at the age of thirty-five. He was the author of a dissertation "De Historia Peripatetica," published at Hamburg, 1652, 4to, which has led the learned world to regret that his continuation of the same subject has never reached the public. He also wrote, "De Ordine Librorum Aristotelis Fragmentum;" "De Spartiis aliisque nonnullis Epistola ad Marquardum Gudium;" and "De Scriptoribus Historiæ Philosophicæ," 1659, 4to, which last work was republished by Dornius, in 1716, 4to, with a continuation to the editor's own time.—*Fabricii Bibl. Græc. Saxii Onom.*

JONSON (BENJAMIN) one of our most celebrated English poets, the contemporary and friend of Shakespeare, whom he has been accused by some, but on insufficient grounds, of regarding with envious and malignant feelings. He was the posthumous son of a clergyman, who had suffered considerable privations for his religious opinions, and was born June 11, 1574, at Westminster; at the grammar-school of which city he was placed under Camden, at an early age; till his mother marrying again to a person who held the humble occupation of a bricklayer, young Ben, as he was even then familiarly called, was taken home abruptly by his father-in-law, and employed by him as an assistant in his trade. The ardent spirit of the future poet revolted against his condition;

he fled from home, and entered the army as a private soldier, in which capacity he served with much commendation from his officers on the score of personal courage, during a campaign in Holland. Returning to England, he quitted the service, and although his straitened circumstances threw in his way obstacles of no common magnitude, he determined on applying himself to literary pursuits. With this view he contrived to enter himself of St John's college, Cambridge, but his failing resources, eagerly as he desired it, prohibited him from continuing long at the university. He went to London, and commenced at once author and actor by profession, two callings then frequently combined. His progress as a performer was not rapid, and before he could make any great impression in his favour, a quarrel with a brother actor seemed to close every avenue against this method of gaining a reputation. He had made his debut at the Curtain, an obscure theatre on the skirts of the town, and a difference arising between him and another member of the company, a duel ensued, which terminated in the death of his antagonist, while he himself received a wound in the sword-arm. He was seized and imprisoned, and narrowly escaped with life, the consequences of this rencontre. During his confinement, he is reported to have become, through the intervention of a Roman Catholic priest, a convert to that communion, and to have remained so during a space of twelve years, when he resumed his former opinions. His first attempt at dramatic composition, in the prosecution of which he is said to have been much encouraged, if not actually prompted by Shakspeare, was in 1598, when his "Every Man in his Humour," still considered a standard piece, was printed; and from this period he seems to have produced a play annually for several years, besides writing occasionally masques and interludes for the entertainment of the court. The favour he had enjoyed there, was not however sufficient to protect him from the consequences of a severe and im prudent satire on the Scottish nation, in a dramatic piece which he wrote in conjunction with Marston and Chapman, entitled, "Eastward Hoe." The anger of the court favourites was at once by this unfortunate sally drawn upon his head. He was a second time committed to prison, and only by a timely submission saved his nose and ears, which he was condemned to lose in the pillory as a libeller. By his address however, he soon contrived to reinstate himself in the favour of a monarch, to whose pleasures the effusions of his muse had become necessary; and for the remainder of that reign he continued in high favour as a kind of superintendent of the court revels, enjoying at the same time the friendship of all the wits and literati of the age. After a tour made through France in 1613, in the progress of which, with his usual carelessness, he managed to affront cardinal Du Perron, he returned to England, and afterwards obtained the honorary degree of AM, from the university of Oxford. On the death of the poet laureate,

Benjamin Jonson was appointed his successor, and the salary of one hundred marks attached to that post, was, on his petition, raised to the sum of one hundred pounds, by Charles the First. But neither this addition to his income, nor a subsequent gratuity from the same royal source, could save him from the usual consequences of pecuniary improvidence. Disease supervened on poverty, and an attack of palsy at length carried him off on the 16th August, 1637. As an author, Jonson may fairly claim considerable distinction. His "Alchymist," "Epicene," and "Volpone," besides being admirable as to plot and development, exhibit traits of pungent humour, strong conception, and powerful discrimination. The remainder of his dramas are doubtless very inferior; his tragedies of *Sejanns* and *Catiline* are too learned and declamatory, either for the closet or the stage, and a great portion of his comedy is low, forced and unnatural. Contrary to Shakespeare, he deals rather in passing manners and eccentricities than in general nature, but supplies no mean notion of the follies of his times. His poetry is occasionally illuminated by vigorous and pleasing passages, and a few of his short pieces, poems, and especially the "Hymn" from *Cynthia's Revels*, his epitaph on the countess of *Pembroke*, and some of his songs and "Underwoods" are excellent. Besides his dramatic and poetical productions, he was the author of a variety of miscellaneous works, among which are an "English Grammar," "Discoveries," &c. Several editions of his works have been published, the last and most complete of which is that by Mr Gifford. A curious tradition prevailed with respect to the deposition of his remains in Westminster abbey, where a handsome tablet has been erected to his memory in Poet's corner, inscribed "O Rare Ben Jonson." The same words are found on several small square stones in the floor of the abbey, under one of which it was generally believed his corpse was buried in a perpendicular position. This was ascertained a few years since to be the fact, his coffin being discovered so situated in one of the aisles during the preparations making for a recent interment.—*Biog. Brit. Johnson's Lives of the Poets.*

JORDAENS (JACOB) an artist of the Flemish school, a native of Antwerp, born in that city in 1594, died 1678. He studied painting under Van Oort, whose son-in-law he afterwards became. Rubens, too, gave him some instruction in the art, and if tradition be to be believed, viewed the progress of his pupil with more of jealousy than complacency. The pictures of Jordaens, which are principally historical, and portraits, are executed with a degree of brilliancy as well as correctness, but little to be expected from the extreme rapidity with which he worked.—*Pilkington.*

JORDAN. There were several of this name. THOMAS JORDAN, an English dramatic writer, flourished in the early part of the seventeenth century, and is known as the author of a masque, an entertainment about that period much in vogue at court, and also of

two comedies. Langbaine speaks of his literary talents with respect.—JOSEPH JORDAN, afterwards knighted for his services, distinguished himself as an able naval officer in the fight against the Dutch fleet at Solebay, in 1672, on which occasion he commanded a division of the English force.—JOHN CHRISTOPHER JORDAN, a German antiquary of considerable learning and research, is advantageously known as the author of some excellent annotations on the works of Livy, Polybins, Diodorus Siculus, and Dionysius of Halicarnassus. He was counsellor to the king of Bohemia, and died in 1740.—CHARLES STEPHEN JORDAN, a native of Berlin, born about the commencement of the last century, acquired some reputation for his literary attainments, and obtained early in life the favour of the prince royal of Prussia, afterwards Frederic the Great. The prospects held out by this distinguished patronage may be supposed to have influenced him in abandoning the clerical profession. Under this prince's auspices he became vice-president of the Academy of Sciences, established in the capital, of which he was a native, and was farther advanced by his royal patron to several situations of emolument as well as honour. Jordan travelled through France, Holland, and England, and published a somewhat satirical account of his tour. He was also the author of a "Miscellany of Literature, Philosophy, and History," and a "Life of M. de la Croze." At his death, which took place in 1745, Frederic erected a monument to his memory, inscribed, "To Jordan, the friend of the Muses, and of the King."—*Nour. Diet. Hist.*

JORDAN (CAMILLE) a French revolutionary statesman, favourably distinguished for his opposition to the tyranny of the jacobins. He was born at Lyons in 1771. Becoming a member of the convention, he defended his native city when it was denounced as a focus of counter-revolution, and receptacle of assassins and banditti. His zeal only served to endanger his own safety, and he was obliged to retire to Switzerland, and afterwards to England. Returning subsequently to France, he was, in March 1797, elected a deputy from the department of the Rhone to the Council of Five Hundred. The change of measures which took place a few months after, called the revolution of the 8th of Fructidor, rendered him again an exile. He went to Switzerland, and thence to Weimar. When Buonaparte had subverted the power of the directory, Camille Jordan returned home. In 1802 he published a tract, entitled "Vrai sens du Vote Nationale sur le Consulat a vie;" and under the empire of Napoleon he remained a private citizen. After the restoration of the royal family, he displayed his attachment to the government under the charter; and in 1814 he received letters of nobility, and was decorated with the order of the legion of honour. He was a member of the chamber of deputies, and died at Paris, May 19, 1821. He possessed considerable talents for literature, and besides many political pieces, he was the

author of some biographical eulogies.—*Dict. des H. M. du 13me. S. Biog. Nouv. des Contemp.*

JORDAN (**DOROTHEA**) an English actress of great eminence in various departments of the drama. Her father, captain Bland, of a respectable Irish family, eloped with her mother, who was a native of Wales, by whom he had a numerous offspring. The subject of this article adopted the theatrical profession, for the support of herself and her mother, and made her first appearance at Dublin, in the character of Phebe, in "As you Like it;" but her talents first attracted particular attention in the walk of tragedy. Being ill-treated by Mr Daly, the Dublin manager, she left Ireland, and obtained an engagement at the theatre of York. There she assumed the name of Mrs Jordan, by which, though never married, she was subsequently known. In this situation she continued three years, with a great increase of her professional reputation, which at length led to her removal to the metropolis, where she speedily became a favourite with the public. She made her first appearance before a London audience as Peggy, in the *Country Girl*; and in that character, in *Nell*, in the *Devil to Pay*, and others of a similar cast, she displayed unrivalled excellence. Such, however, was her versatility of talent, that she appeared to almost equal advantage as a tragic actress, where the tender, rather than the violent and lofty feelings of the mind, were to be portrayed. Her long theatrical career was terminated by her retirement to France, where she resided in obscurity, and at length died without a relative or friend near her, to soothe the hours of sickness, or bestow on her remains the decent rites of sepulture. Circumstances so strangely contrasted with those of the former life, and long and well-known connexion of this admirable actress with a branch of the royal family, increased the regret which was felt at the loss of an individual, distinguished alike by the peculiar benevolence of her disposition, and the splendour of her talents; and even whose failings had resulted from situations and circumstances which went far to mitigate the moral censure which they incurred. Her death took place at St Cloud, July 5, 1816.—*Gent. Mag. Theat. Dict.*

JORNANDES, a Gothic historian. He was son of Wamuthe an Alan, and flourished during the reign of the emperor Justinian. He was secretary to the Gothic kings of Italy, and was made bishop of Ravenna. He is the author of a work on the history of the Goths, entitled, "De Rebus Geticis," composed in the year 552. It is little more than an abridgment of a lost work on the same subject by Cassiodorus. He likewise composed another work, "De Regnorum et Temporum Successione," in which the account of Roman affairs is a transcript from Florus. He is blamed for suppressing whatever was discreditable to his countrymen, and for attributing to them all the great actions of the Scythians; but his work is still deemed valuable, for information not otherwise to be met with.—*Vossii Hist. Lat.*

JORTIN, DD. (**JOHN**) an eminent scholar and divine, was born in London, in 1698. His father, a native of Brittany, came to England on the revocation of the edict of Nantz, and became gentleman of the privy chamber to king William, and secretary to several admirals, with one of whom, sir Cloudesley Shovel, he perished at sea. Young Jortin was educated at the Charter-house, whence, in May 1715, he was removed to Jesus college, Cambridge. Here, under the instruction of Dr Thirlby, he acquired so high a character for learning and acuteness, that he was recommended by his tutor to Pope, to extract the notes from Eustathius, to print with his translation of the *Iliad*. He graduated B.A. in 1719, and A.M. in 1722, in which year he published a small collection of Latin poems, entitled "Lusus Poetici," which are highly esteemed, both for sentiment and diction. He took orders in 1724, and was presented by his college in 1727 to the vicarage of Swavesey, near Cambridge; but the following year he married, and resigned his living, in order to settle in London, where he served a chapel of ease to the parish of St Giles in the Fields. In 1730 he published four sermons on the Christian religion; and in 1731, in conjunction with some learned coadjutors, gave to the world "Miscellaneous Observations upon Authors, Ancient and Modern," 2 vols, 8vo. In 1751 archbishop Herring gave him the living of St Dunstan's in the East, and in the same year appeared the first volume of his "Remarks upon Ecclesiastical History." Of this work, the preface to which is exceedingly admired for its liberality and candour, four volumes more were published in 1752 and 1754, and two more after his death in 1773. In 1755 he was made DD. by archbishop Herring, and published "Six Dissertations upon various Subjects," one of which, on the state of the dead, as described by Homer and Virgil, drew upon him an attack from Warburton, whose doctrine, in his "Divine Legation of Moses," it materially controverted. In 1758 he published his "Life of Erasmus," 4to; in 1760 another quarto volume, entitled "Remarks upon the Works of Erasmus." In 1762 his friend, Dr Osbaldiston, succeeding to the see of London, he was made his domestic chaplain, admitted a prebend of St Paul's, and in a few months afterwards received the living of Kensington, the duties of which he performed for the remainder of his life. In 1764 he was made archdeacon of London, and was offered the rectory of St James's, which he declined, being unwilling to forsake his parish of Kensington, where he lived a life of study with constitutional serenity until his death, August 27, 1770, in the seventy-second year of his age, leaving one son and one daughter. The private character of Dr Jortin was highly estimable. He possessed a spirit which raised him above every thing mean and illiberal, and would not allow him to stoop for preferment, or spare his reprehension of persons in high station, whom bigotry or delusion rendered enemies to merit. He

also possessed considerable sensibility, and no small share of humour, and with simple, or almost rustic manners, he evinced great urbanity and benevolence of heart. Besides the works already mentioned, Dr Jortin was the author of "Remarks upon Spenser," 1734, 8vo; "Remarks on Seneca;" "Remarks on Tillotson's Sermons;" "Letters to Mr Avison, on the Music of the Ancients," and various other miscellaneous productions, all of which appear in two volumes of tracts, 'Philological, Critical, and Miscellaneous.' Seven volumes of his "Sermons and Charges" were also published after his death in 1771 and 1772.—*Memoirs of Life and Writings by Dr Disney.*

JOSE (ANTONIO) a Portuguese jew, eminent as a dramatic writer. He produced many popular comic pieces and farces, distinguished by a fund of genuine humour and satirical wit. During ten years his dramas were frequently represented with undiminished success. He lived in the early part of the last century, when the inquisition still possessed much power and influence. José, unfortunately for himself, not having a due fear of this terrible tribunal before his eyes, became the victim of Portuguese bigotry and superstition. Among his farces, which are exceedingly comic, two in particular excited the indignation of the holy office. In one of them a criminal was introduced, conversing at the gallows with his confessor, as may be supposed, in a style not the most edifying. For these productions the unlucky author was prosecuted before the court of inquisitors, and burnt at the last auto-da-fé in 1745. After this appalling catastrophe, the theatrical managers prudently abstained from performing the plays of this dramatist.—*London Mag.* vol. iii.

JOSEPH II, emperor of Germany, son of Francis of Lorraine and the empress queen Maria Theresa, was born at Vienna in March 1741. He was brought up with great devotional strictness by his mother, which austerity seems to have early disgusted him. In order to preserve his morals, he was also married to an accomplished princess, Isabella of Parma, at the early age of nineteen. He was chosen emperor on the death of his father in 1765, but possessed little real power, his mother remaining in her own right, queen of Hungary and Bohemia, and sovereign of Austria and the Low Countries. The young emperor was distinguished by the simplicity of his manners, ardent desire of information, and anxious wishes for social and political improvement. In 1769 he made the tour of Italy incog. and on his return paid a visit to the king of Prussia, at Neis in Silesia; the consequence of which meeting appeared in the unprincipled partition of Poland between Austria, Russia, and Prussia, the first treaty for which was signed in 1772. The same interview might possibly also have led the emperor to undertake the various ecclesiastical reforms which he soon after attempted, such as the regulation of holidays, the restriction of religious mendicancy and the sale of church lands for the

benefit of the clergy; all of which was good in itself, but too hastily put into practice. He also honourably distinguished himself by using his influence to ameliorate villeinage in Bohemia. In 1777 he became involved in a war with Saxony and Prussia, in consequence of some not very defensible claims upon Bavaria. In these hostilities nothing very decisive took place in the field, but they terminated under the mediation of France and Russia, in a manner which taught the emperor moderation. In 1780 he had an interview with the empress Catharine of Russia, in Lithuania, whence he accompanied her to St Petersburg. In the same year the death of the empress-queen left him at liberty to pursue his ecclesiastical measures with less opposition. Some strong edicts followed, regulating and moderating the intercourse with the court of Rome, and one, evincing much enlightened liberality, granting full toleration to the protestants, and the extension of the privilege of subjects to the Jews. In 1781 he travelled into Holland and the Netherlands, and carried into effect a project of resuming the line of fortresses, called the Dutch barrier; he also gave token of his intentions to open the navigation of the Scheldt. His return to Vienna was marked by still more decisive steps, in reduction of the power of the church. He suppressed numerous religious houses; disclaimed all subordination in secular affairs to the Roman see, and took such rapid strides towards complete emancipation, as induced Pius VI to seek, by the humiliating expedient of a visit to Vienna, to avert such onerous changes. The aged pontiff accordingly repaired to that capital in March 1782, but although treated with respect, he could produce very little alteration in the emperor's plans of policy. In 1784 he alarmed the united provinces with two important claims, one upon the town of Maestricht, and the other for a free navigation of the Scheldt. In October in that year, he sent a vessel from Antwerp, with orders to refuse being searched by the Dutch guard-ships, or to pay duty at their ports. His ship being in consequence fired upon, the emperor affected to regard this act as the commencement of hostilities, and the interference of France alone prevented a war. The Dutch, however, were obliged to send a deputation to humbly apologize for the alleged insult, and to bring off the claim on Maestricht. This scheming sovereign, about the same time, resumed his views upon Bavaria, by attempting an exchange of territory, but was again defeated by the calm policy of the aged Frederic. An entire new code of laws also engaged his attention; the general object of which was, to establish a more equitable relation between crime and punishment. It abolished the too indiscriminate forfeiture of life, but substituted punishments which were even more appalling, and upon the whole exhibited little legal regulative ability in this important branch of social economy. In 1787 he had an alarming contest with his subjects in the Low Countries, owing to his determination to introduce the same system of eccle-

erastic, and civil government which he had established in his other hereditary dominions. He issued two edicts in one day, destroying the small share of constitutional freedom which they enjoyed, in virtue of their charter of rights, and tending to the entire subversion of all the ancient forms of administering justice. The people, under the influence of a rich and powerful clergy, were already much disaffected, and his attempts to innovate upon the plan of public instruction, completed their disgust. The states of Brabant with great spirit refused to grant supplies, until the obnoxious edicts were repealed, and the result was, that the emperor at that time thought proper to give up the point. In 1787 he had a second interview with Catharine, in her new city of Cherson, and being brought into complete accordance with her views, he took the field against the Turks in 1788, as her ally, and a campaign ensued, in which the capture of Choczim was almost the only trophy of their united exertions; but the succeeding campaign was more glorious and successful, and the Turkish empire seemed verging towards its ruin. In the mean time Joseph, unable again to quit Vienna, was labouring under a rapid decline of health, which was not amended by the renewal of the flame in the Low Countries, occasioned by a breach on his part of the condition by which peace had been restored. Military executions took place in some of the cities, and a general gloom and despair prevailed. At length, in 1789, an open insurrection broke out, conducted with so much valour and ability, that the imperial troops were defeated, the cities of Ghent, Bruges, Louvain, and others, were taken possession of by the insurgents, and the states of Flanders finally declared that the emperor had forfeited all title to sovereignty. Joseph also, on his death-bed was farther mortified by a remonstrance from the Hungarian nobility, demanding the restoration of their ancient privileges, which he granted, with some conditions in favour of toleration, and the amelioration of the condition of the peasantry, which did him much honour. He died with perfect calmness and composure 20th of February, 1790, in the forty-ninth year of his age, and having no issue, was succeeded by his brother Leopold. Joseph was, doubtless, in regard to his own subjects, a well-meaning sovereign, and possessed many private virtues; but he was too ambitious and arbitrary for an efficient reformer; not to mention that he defeated his own purposes by the inconsistent multiplicity of his views. He also exhibited an injudicious disregard of the previous habits, ideas, and opinions of those whom he was desirous to benefit, a mistake to which reformers of the most opposing descriptions are equally liable. Joseph II, on this account, while he attempted more, possibly effected less, than any other sovereign of a kindred disposition.—*Annual Reg.*

JOSEPH BEN GORION, or GORIONIDES, is supposed to have been a Jew of Languedoc, who lived about the end of the

ninth, or the beginning of the tenth century. There is extant a history by him of the Jewish war, written in Hebrew, which appears to have been compiled out of the Rufinian version of Josephus, and has been attributed to the latter; but its later origin is detected by its numerous anachronisms. Gagnier translated this work into Latin, Oxford, 1706, and there is also an edition in Hebrew and Latin, 1704, 4to.—*Moreri. Saxii Onom.*

JOSEPH (FATHER) a French Capuchin friar, distinguished as the political associate of cardinal Richelieu. His proper name was Francis le Clerc du Tremblai, and his father was a president of the parliament of Paris, in which city the son was born in 1577. He displayed a disposition for study and retirement when young, and resisted the wishes of his friends, who would have procured him a counsellor's robe, or commission in the army, instead of which he chose to be an ecclesiastic. He entered among the Franciscans in 1599, and for a while he devoted himself to the proper duties of his profession. He acquired eminence as a preacher, displayed his zeal as a missionary, founded a convent at Saumur, and a new order of Benedictine nuns of Calvary at Augers. But the girdle of St Francis had not extinguished the seeds of ambition in the breast of father Joseph; who becoming acquainted with cardinal Richelieu, participated in the power of that unprincipled statesman, whose secretary, privy-counsellor, and *ame damnée* (as he was satirically styled) he continued to be during a great part of the cardinal's ministry. Father Joseph died in 1638, just as he was about to obtain the grand object of his wishes—a cardinal's hat.—*Nouv. Dict. Hist. Moreri.*

JOSEPH (FATHER) a Catholic missionary in Persia, of Roman descent, whose family name was Sebastiani. He resided for a long time at the court of the Persian sovereign, Fath-Ali-Shah, where he possessed considerable influence, which he exerted in behalf of the English, and thus made himself an object of jealousy and suspicion to the agents of the French government. He was a skilful mechanic and physician; and spoke the Arabic, Persian, Greek, and Hindoo languages, besides being well acquainted with those of his native country. In 1816 he visited London, for the express purpose of selling some copies of the works of the Persian poet Hafiz, with a Latin translation by himself, accompanying the original text. M. Joubert, employed by Buonaparte in Persia in 1805, has published an account of his travels, containing some details relative to this singular personage, and his problematical occupations.—*Biog. Nouv. des Contemp.*

JOSEPHINE, the wife of Napoleon Buonaparte, and for a while the partner of his imperial power. Her name was Rose Tascher de la Pagerie, and she was born at Martinique, in the West Indies, June 24, 1763. Greatly distinguished for her beauty in her youth, she was brought to France by her father, and married to M. de Beauharnois, governor-general of the Antilles. In 1787 she went to Marti-

nique, in consequence of the illness of her mother, and remained there three years. The revolutionary commotions in that colony endangered her safety, and she hastily departed from the island to seek refuge in France. There fresh dangers awaited her, and she narrowly escaped participating in the fate of her husband, who was one of the victims of the tyranny of Robespierre. On the fall of that dictator, Madame Beauharnois was released from prison. To Tallien she is said to have owed her liberty, and she repaid the benefit by allowing him a pension, which was continued to him after her death by her son, Eugene Beauharnois. Barras, another of the statesmen of that period, procured the restoration to the widow of her late husband's property. Soon after, she became acquainted with Napoleon Buonaparte, whose serious attachment was followed by their union in 1796. He was then commander of the army of Italy, whither she accompanied him. When he had embarked on his expedition to Egypt, she retired to Malmaison, and employed her leisure in forming a museum of curious objects of art, and commencing a collection of exotic plants. When her husband was elevated to the station of first consul, she beneficially exerted the powerful influence she had over him; and to her, many exiles owed the erasure of their names from the list of emigrants, others the recovery of their estates, or such favours as their various situations might require. Such was her general affability and beneficence, that she appears fairly to have merited the compliment paid her by her victorious helpmate, who said to her, "Si je gagne les batailles, c'est vous qui gagnez les cœurs." When Buonaparte assumed the imperial title and authority, a divorce was proposed by some of his partisans, on account of his having had no issue by his wife. But he then rejected their counsel, and she was crowned empress at Paris, and queen of Italy at Milan. Her son was subsequently married to the princess of Bavaria; and her daughter Hortensia to Lewis Buonaparte, made by his brother king of Holland. At length she was destined to lose her exalted station, being divorced to make way for the elevation of the princess Maria Louisa of Austria to the imperial throne of France. Josephine is stated to have submitted to this measure without opposition, expecting probably to retain a greater share of power and influence than in the sequel fell to her share. During the Russian campaign she went to Italy to attend her daughter-in-law, whose husband was then viceroy of that country. Malmaison was her principal residence, where she continued to amuse her leisure with botanical studies, and making collections of scarce plants. She retained a strong affection for Napoleon, whose abdication occasioned her unfeigned distress, notwithstanding she experienced various marks of attention from the emperor Alexander and the king of Prussia, when they entered France. She was at that period labouring under illness, and died generally regretted, in the arms of her children and

friends, May 29 1814.—*Biog. Nouv. des Contemp.*

JOSEPHUS (FLAVIUS) an eminent Jewish historian, was born at Jerusalem A.C. 37, when Caligula was emperor. His father, Mattathias, was descended from the ancient high priests of the Jews, and by his mother's side he was of the royal lineage of the Asmoneans, or Maccabees. He was educated in the knowledge of the Jewish law, and at the age of sixteen was induced to join the Essenes, but afterwards became a strict and zealous member of the sect of Pharisees. At the age of twenty-six he visited Rome, and by means of an introduction to Poppæa, afterwards the wife of Nero, procured the release of some priests whom Felix had sent prisoners to that capital. On his return to Judea, he was made governor of the two Galilees, in which capacity he bravely defended Jotapha against Vespasian. He was however taken prisoner, but his life was spared at the intercession of Titus, who became his patron, and whom he accompanied to the siege of Jerusalem. He was sent to his countrymen with offers of peace, but was treated with great contumely as a deserter. At the capture of the city he was enabled to deliver his brother and several of his friends without ransom. He accompanied Titus back to Rome, where he was rewarded with the freedom of that city, and received a pension and other marks of favour from Vespasian and his son, as a mark of gratitude to whom he assumed their family name of Flavius. He employed his leisure in drawing up those works which have perpetuated his name. These are, his "History of the Jewish War, in Seven Books;" his "Jewish Antiquities, in Twenty Books;" two books against Apion, of Alexandria, a great adversary of his nation; a "Discourse on the Martyrdom of Maccabees;" and a "Treatise on his own Life." All these are written in Greek, and his style is by Photius held to be easy, pure, and even eloquent. Few works are more interesting than his account of the Jewish war, of the incidents of which he was a spectator. In respect to his fidelity, different opinions prevail: in his Jewish Antiquities his accounts frequently vary from those of Scripture, and generally in circumstances which he thinks will shock the prejudices of his Gentile readers. He is also led by his zeal for the honour of his nation to much exaggeration, and affects to believe that all knowledge and wisdom originated in Judea; but upon the whole, however, his works are much esteemed. They have been frequently published with Latin versions, but the best editions are those of Hudson, Oxford, 1720, 2 vols, folio; and Havercamp, Amsterdam, 1727, 2 vols, folio. They have been translated into English by L'Estrange and Whiston, the latter of whom doubts the authenticity of, and rejects the discourse on the Maccabees. Josephus lived beyond the thirteenth year of the reign of Domitian; but the exact date of his death is uncertain.—*Life prefixed to Works. Lardner. Cave.*

JOSSÉ (PETER) a distinguished pharma-

cautca. chemist, who was a native of Paris. He was educated under Rouelle and Laborie, both eminent for their skill in medicinal chemistry. In 1777 he published an analysis of the Columbo root, and another tract; and soon after he made known a new process for the preparation of martial aethiops, or the black oxide of iron. In 1779 he was chosen a member of the college of Pharmacy; and in 1784 adjunct professor of chemistry in that college, where he at length obtained the office of provost, and died in 1799. His analytical experiments on opium, his researches concerning aether, &c. afford sufficient proofs of his professional skill and science.—*Biog. Univ.*

JOUBERT (BARTHOLOMEW CATHERINE) a French general, who was a native of Pont-de-Vaux, in Bresse. He was born in 1769, and was destined for the bar by his father. At the age of fifteen he forsook his studies to go to La Fere, in Picardy, where he entered a regiment of artillery. But his discharge being obtained, he was sent to Lyons to continue his education, and at the beginning of the Revolution he was a student at the university of Dijon. In December, 1791, he enlisted as a military volunteer, and served as a serjeant in the army of the Rhine. In April, 1792, he was made a sub-lieutenant, and displayed great courage and activity in the campaign of general Anselme against the Austrians and Sardinians. Joubert was taken prisoner by the latter in September, 1793; and on his return home, he distinguished himself by opposing the Jacobin agents of the Convention, who were tyrannizing in the neighbourhood of his native place. In 1794 he was appointed adjutant-general; and having signalized his bravery at the battle of Loano, under Kellerman, in November, 1795, he was made general of brigade on the field of battle. In 1796 he again attracted notice at Montenotte, as well as at Millesimo, Cava, Montebaldo, Rivoli, and above all in the Tyrol, where, though opposed by a bold and warlike people, he succeeded in penetrating the defiles of Inspruck. He was afterwards opposed to the Russian general Suwarrow, and was killed at the battle of Novi, 1799. Much of the future success of the French in Italy may be ascribed to the exertions of general Joubert, who, by the boldness and promptitude of his manoeuvres, and the impetuosity of his attacks, trained his troops to that confidence and courage which contributed to render them victorious. The personal character of this officer is said to have been tainted by the rapacity which disgraced many of his comrades. After the taking of Turin, the king of Sardinia offered to give him two valuable paintings. "We should be both blameable," said Joubert; "you in giving them to me, and I, if I were to accept them."—*Biog. Univ. Biog. Nouv. des Contemp.*

JOUBERT (LAURENT) a learned French physician of the sixteenth century, was born at Valence, in Dauphiny, in 1529. He studied medicine at Montpelier and Paris, and in the sequel held the situation of first physician in ordinary to Henry III, and the post of chan-

cellor of the university of Montpelier. His Latin works, which are written with correctness and elegance, have often been reprinted. He also published some medical treatises in French, one of which is on "Laughter," its causes and effects, 1579, 8vo. His most popular work however was entitled, "Erreurs populaires, touchant la Medicine," Bourdeaux, 1579, which, owing to a broad vein of humour, and no small levity of manner, went through ten editions in six months. He died the 21st of October, 1583.—*Niceron. Rees's Cyclop.*

JOURDAIN (ANSELME LOUIS BERNARD BRECHILLET) an eminent French dentist and surgeon, who was a native of Paris. After having studied at the college of Harcourt, and among the jesuits of Rouen, he returned to the metropolis, being destined by his father for the legal profession. He preferred that of surgery, and being left at liberty to follow his own inclination, he became a pupil of M. Morand, at the Hotel Dieu. He subsequently devoted his attention to the structure and diseases of the teeth; and after having long enjoyed the reputation of being one of the most skilful surgeon-dentists in Paris, he died there, January 7, 1816, aged eighty-one. M. Jourdain was the author of "Nouveaux Elements d'Odontalgie," 1756, 12mo; "Essais sur la Formation des Dents, comparée avec celle des Os," 1766, 12mo; "Traité des Maladies et des Operations, réellement chirurgicales, de la Bouche et des Parties qui y correspondent," 1773, 2 vols, 8vo; besides several other publications, periodical papers, and contributions to the works of others.—*Biog. Nouv. des Contemp.*

JOURDAIN (AMABLE LOUIS MARIE MICHEL BRECHILLET) son of the foregoing, born at Paris in 1788. He was designed for the law, and placed with a notary to acquire the necessary information. At the age of seventeen he was so struck at hearing the splendid eulogies bestowed on the Orientalist, Anquetil du Perron, then recently deceased, that he determined to devote himself to the same branches of learning which had been cultivated by that distinguished scholar. He became the pupil of M. M. Silvestre de Sacy and Langles, and prosecuted his purpose with so much success, that the office of adjunct-secretary of the school of Oriental languages was created in his favour. He held it till his death in 1818. His principal work is entitled, "La Perse, ou Tableau de l'Histoire, du Gouvernement, de la Religion, de la Literature, &c. de cet Empire," 1814, 5 vols. 18mo. He was one of the contributors to the "Biographie Universelle," the "Annales des Voyages," the "Mines de l'Orient," &c. and at the time of his decease he was engaged in writing the history of the family of the Barmecides.—[See Art. HAROUN AL RASHID.]—*Biog. Univ. Biog. Nouv. des Contemp.*

JOUSSE (DANIEL) an eminent French lawyer of the last century. He was a native of Orleans, and was educated at the college of Plessis Sorbonne, at Paris, where he distinguished himself by his attachment to the

study of mathematics. In compliance with the wishes of his friends, he prepared himself for a judicial situation; and in 1734 he was installed in the office of counsellor of the presidency of Orleans, which he filled with great reputation till his death in 1781. His works are very numerous, comprising, "Nouveau Traité de la Sphère, avec un Discours sur les Eclipses," 1755, 12mo; "Eloge de M. Pothier;" besides many treatises on the municipal law of France, which are highly esteemed.—*Biog. Univ.*

JOUVENCI or JOUVENCY (JOSEPH DE) an eminent jesuit, was born at Paris, September 14, 1643. He taught rhetoric with uncommon reputation, at Caen, La Fleche, and Paris, and at length was invited to Rome, in order to continue the "History of the Jesuits" with more freedom than he could have assumed at Paris. His principal works are, two volumes of speeches; a small tract, entitled, "De Ratione Discendi et Docendi;" and Notes, in Latin, on Persius, Juvenal, Terence, Horace, Martial, Ovid, &c. with the fifth part of the "History of the Jesuits," all which productions are written in pure Latin. In his history of the Jesuits he attempts to justify Pere Guignard, the jesuit, who suffered for encouraging the bigotted assassin Chatel, in his attempt on the life of Henry IV, on account of which suspicious casuistry the parliament of Paris prohibited the work.—*Moreri. Saxii Onom.*

JOUVENET, (JOHN) an historical painter, born at Rouen, Normandy, 1644. He received his first instructions from his father, but his principal teacher was Poussin. He possessed much facility of invention, and was therefore employed to adorn the apartments of Versailles and the Trianon. He also painted the twelve apostles, each figure fourteen feet high, in the hospital of the Invalids at Paris. He has exhibited more eccentricity than taste in all his works. In the decline of life he lost the use of his right side by palsy, and was induced to practice with his left hand, by which means he was enabled to finish a ceiling which he had begun in the hall of the parliament of Rouen, and a large piece of the Annunciation in the choir of Notre Dame, at Paris, with no apparent diminution of ability. He died in 1717.—*D'Argenville Vies des Peint. Pilkington.*

JOVELLANOS (DON GASPAR MELCHIOR DE) a Spaniard of distinguished eminence in various branches of literature. He was born at Gijon, in Asturias, in 1749. Endowed with great talents by nature, he studied with so much success, as when young to have acquired a knowledge of jurisprudence, history, archæology, the learned languages, and the belles lettres. At the age of twenty-one he was admitted into the Royal Academy of Madrid; and about the same time Charles III nominated him counsellor of state, and entrusted him with some important affairs. He continued in favour while that prince lived, and was employed for a while under the next sovereign. The war with the French republic, as well as

the peace of 1794, left Spain loaded with debt, and Jovellanos proposed, for the relief of the national difficulties, a tax on the property of the higher orders of the clergy. This proposition they resented as a kind of sacrilege, and the minister was exiled to the mountains of Asturias; though his project was afterwards carried into execution. In 1799 he was recalled and made minister of justice for the interior; but he had held the office only eight months, when he was displaced, and banished to the island of Majorca, where he was confined in the convent of the Carthusians. He did not recover his liberty till 1803, after the invasion of Spain by the French, and the fall of the Prince of Peace, Don Manuel Godoy, to whom his disgrace was attributed. He subsequently became a member of the supreme junta; and Joseph Buonaparte, during his transient sovereignty, nominated Jovellanos minister of the interior, which office however he did not choose to accept. His predilection for the French during the troubled scenes which followed, subjected him to suspicion, and he was accused of holding intelligence with them, and endeavouring to promote their plans for the subjugation of Spain. Being denounced as a traitor, he was murdered during a popular insurrection, in 1812. He published a collection of lyric poems, with a comedy entitled "The Honourable Delinquent," at Madrid, in 1780; and he was the author of a tragedy called "Pelayo," represented at Madrid, in 1790; and of an excellent translation of Milton's Paradise Lost. His discourses and memoirs relative to subjects of public utility are very numerous, and many of them important; but the work which does him most honour is his "Informe sobre la ley Agraria," Madrid, 1795.—*Blaquiere's Hist. Rev. of the Spanish Revolution. Biog. Univ.*

JOVINIAN, an Italian monk of the fourth century, who was persecuted for his rational opinions in disfavour of celibacy, fasting, and supererogatory austerity. He taught that all those who adhered to the vows made at their baptism, and led a life of piety and temperance were equally entitled to the rewards of futurity with those who passed their days unwedded, and in the constant endurance of self-inflicted mortification. For propagating these sentiments he was cut off from the communion of the church by Syricius, bishop of Rome, who, by means of Ambrose, had his doctrines formally condemned in a council held at Milan in 390. This condemnation only induced him to adhere more firmly to his opinions, on which account he was assailed with much virulence in a treatise by St Jerome. He was at length, together with his followers, scourged, and banished from Rome under the emperor Honorius in 412. Jovinian died in banishment some time after at the island of Boa, on the coast of Dalmatia.—*Basnage Annal. Moreri. Mosheim.*

JOVIUS (PAUL) an Italian historian, was born at Como in 1483. After studying at Pavia, Milan, and Pavia, he took the degree of

MD. and practised for some time, but resigned the medical profession for the composition of history. The first volume of his work, which comprises the events of fifty years, from 1494 to 1544, he presented to Leo X, who gave him a pension, and the rank of knighthood. Having taken orders, he was presented by Adrian VI to a canonry in the cathedral of Como; and was finally made bishop of Nocera by Clement VII. About two years before his death he quitted Como, his usual residence, and took up his abode in Florence, where he died in 1552. His historical works, which are all in Latin, are written with great facility; but they are to be perused with great caution, as he was at once a malignant enemy and a servile flatterer, boasting that he possessed pens of iron and of gold, which he used as occasion required. He was peculiarly favourable to Charles V and the Medici, by the former of whom he was pensioned. His other works are, "De Piscibus Romanis;" Latin poems; the lives of the twelve Visconti, lords and dukes of Milan; a collection of portraits, with inscriptions, entitled "Musæi Joviani Imagines;" descriptions of Great Britain, of Muscovy, and of the lake of Como; and the eulogies of warriors.—His elder brother, BENEDICT, wrote a history of Como; transactions and manners of the Swiss; with letters; translations from the Greek and Latin poems.—*Roscoe's Leo X. Sarii Onom.*

JOY, or JOYE, (GEORGE) an early promoter of the Reformation, was a native of the county of Bedford, and educated at Peterhouse, Cambridge, where he graduated M.A. in 1517. In 1527, being the friend of Tindale, he was accused of heresy, and obliged to return to Germany, where he continued for many years. He was concerned in the superintendance of Tindale's bibles, printed at Antwerp, and finally returned to his native country, but the time of his death is unknown. Besides his translation of part of the Bible, he published "On the Unity and Schism of the Ancient Church," 1534; "The Subversion of More's False Foundation," 1534; "Commentary on Daniel," from Melancthon, and other works enumerated by Tanner.—*Lewis's History of the Translations of the Bible.*

JOYCE (JEREMIAH) an ingenious and industrious writer on general literature and science. He first became known to the public in consequence of his being included in the state prosecution with Hardy, Horne Tooke, Thelwall and others. He had previously been domestic tutor to the sons of earl Stanhope, who gave a splendid entertainment, on the return of Mr Joyce to his lordship's seat at Cheve-ning, in Kent, after his liberation. Not long after, he relinquished this situation, and settling in London, devoted himself to writing for the press. One of the first employments in which he was thus engaged, was as coadjutor with Dr George Gregory, in the compilation of the Cyclopædia, which was published as the work of the latter. The success of this undertaking gave rise to another work on a similar plan, which bore in the title-page the

name of Mr William Nicholson, but of which Mr Joyce is said to have been the principal author. He subsequently wrote "Scientific Dialogues;" "Dialogues on Chemistry;" "Letters on Natural Philosophy;" &c. Mr Joyce, who was a protestant dissenter, and of the clerical profession, died at Highgate, near London, in 1816.—*Month. Mag.*

JUAN (Don) or DON JOHN of Austria, the natural son of the emperor Charles V, and the great military hero of his age. He was born at Ratisbon, February 25, 1546, and his mother is said to have been a German female, named Barba Blomberg; but from the secrecy with which he was brought up, it has been supposed that some extraordinary and disgraceful mystery was attached to his origin. His relation to the emperor was not acknowledged till after the death of that prince, when the jealousy of Philip II would have destined his brother to the cloister; but he was ultimately allowed to follow his inclination, in the practice of martial exercises and the study of the art of war. He was first employed in 1570, against the Moors of Grenada, whom he reduced to subjection. The next scene of his success was the Gulph of Lepanto, where he gained a memorable victory over the Turks, October 7, 1571. He afterwards took from them Tunis, Biserta, and other places on the coast of Africa. In 1576 he was sent to Flanders, with the title of governor of the Netherlands. The inhabitants were in a state of revolt, and he at first attempted to reduce them to obedience by concessions, but not succeeding he had recourse to arms. He took Namur by stratagem, and attacking the insurgents on the plain of Gemblours, December 31, 1577, he obtained a signal victory. He died at Bonges, near Namur, on the 1st of October following, not without suspicion of being poisoned.—*Biog. Univ.*

JUAN II (don) the natural son of Philip IV of Spain, by Maria Calderona, an actress, born in 1629. He was made grand prior of Castile, and in 1647 he commanded the Spanish army in Italy, and took the city of Naples. He afterwards served in Flanders and in Portugal, and being unsuccessful, he was exiled by the regency, after the death of his father. Under Charles II he was recalled to Madrid, and made prime minister. He died in 1679. The life of this prince has been written by Gregorio Leti.—*Nouv. Dict. Hist. Biog. Univ.*

JUAN Y SANTACILIA (don GEORGE) a learned Spanish mathematician and natural philosopher, who was a native of Orihuela, in the kingdom of Valencia. Having entered at the age of fifteen into the royal marine guards, while yet young he was appointed commander of a corvette, in which he made several voyages to America. The reputation he had acquired as an officer and a man of science, occasioned his appointment, together with D. Antonio de Ulloa, to accompany Messrs Bouguer and la Condamine to Peru, in 1735, to measure a degree of the meridian at the equator. On his return to Spain, he was

made a captain in the navy, and afterwards farther promoted. Much of his attention was directed to the improvement of marine architecture; and the flourishing state of the Spanish marine about 1770, was in a great measure the fruit of his exertions. He died at Cadiz, June 21, 1774, aged sixty-two. He was the author of an "Historical and Geographical Dissertation on the Line of Demarcation between the Dominions of Spain and Portugal," and "Observations on Astronomy and Physics, made in the Kingdom of Peru," both composed in conjunction with D. A. de Ulloa; besides which he produced a treatise on navigation, and another on the construction of ships, the latter of which has been translated into French and English.—*Biog. Univ.*

JUBA II, king of Numidia, was the son of the first of the name, who, taking part with Pompey against Cæsar, sought a Roman death, after being defeated by the latter. The younger Juba, then a boy, was led as a captive in Cæsar's triumph over his father; but the victor compensated for that humiliation by bestowing on him an excellent education, in consequence of which he became one of the most learned men of his time. He was in great favour with Augustus, whom he adhered to against Antony, and who bestowed upon him the kingdom of Gætulia. He also gave him to wife Cleopatra Selene, the daughter of Cleopatra, by Anthony. Juba governed his dominions with great justice and lenity, and became the author of many learned works, comprising the history and antiquities of the Arabians, Assyrians, and Romans; the history of painting and painters; that of theatres; and treatises on plants and animals. They are quoted by Pliny, Strabo, Plutarch, Tacitus, and others; but of all these a few fragments only have reached modern times. Juba died AD. 24.—*Vossii Hist. Græc. Nouv. Dict Hist*

JUDAH, or JEHUDAH HAKKADOSH, or the saint, a rabbi, famous for his learning and riches, who lived in the time of the emperor Marcus Antoninus, by whose order he is said to have compiled the "Mischna," a new digest of the oral law, and of the commentary of the most famous Jewish doctors. His Mischna, or first Talmud, comprehends all the laws, institutions, and rules of life, which, besides the ancient Hebrew Scriptures, the Jews held themselves bound to observe, notwithstanding the obscurities and inconsistencies in which it abounded, it soon obtained credit as a sacred book; and it subsequently received additions and improvements by other celebrated rabbis, which were published in the fifth century, by Jochannan-ben-Eliezer, under the title of the "Gemara." An edition of the "Mischna" was published by Surenhusius, at Amsterdam in 1698, in six volumes, folio.—*Mod. Univ. Hist. Enfield's Hist. of Phil.*

JUDAH CHIUG, a learned Jewish rabbin, who was born at Fez, and studied among the Arabians. He practised as a physician in the northern part of Africa in 1040; but the

period of his death is uncertain. He was the author of several works on the Hebrew language, written in Arabic, still in manuscript. They are reckoned very valuable, and were translated into Latin by Gagnier; and it has been lamented that the fruit of his labours has not been given to the public.—*Biog. Univ.*—JUDAH RAV, or RAB, the son of Ezechiel, reputed one of the most famous among the disciples of Judah Hakkadosh. He founded or restored six celebrated schools in the vicinity of Babylon, whence proceeded those collections of Jewish traditions which compose the Babylonian Gemara, or Talmud. Judah Rav succeeded rabbi Samuel in the school or academy of Naherda, AD. 250. The Gemara of Babylon was first published in 1520, fol.—*Id.*

JUDAH (LEO) a learned protestant divine, was the son of John Judah, a priest of Alsace, by a concubine, and was born in 1482. He was sent in 1502 to finish his academical studies at Basil, where he became acquainted with Zuinglius, and imbibed from him such impressions as induced him to embrace the principles of the reformation. Having obtained his degree as M.A. he was appointed minister of a Swiss church, where he preached boldly in defence of protestantism. He afterwards became still more celebrated as the pastor of St Peter's in Zurich; for his exertions both with the pen and in the pulpit. He undertook a translation from the Hebrew into Latin, of the Old Testament, but before it was completed he fell a martyr to his application, in June, 1542, in the sixtieth year of his age. The translation was finished by other hands, and published the following year. He was also the author of "Annotations on the Books of Genesis and Exodus." Some particulars of Judah and his translations may be found in a book written by a divine of Zurich, entitled "Vindiciæ pro Bibliorum translatione Tigurina," 1606.—*Melchur Adam. Simon's Bibl. Crit.*

JUDAS LEVITA, or JUDAS HALLEVI, a Jewish rabbin, who was the son of Samuel Hallevi, a Spaniard, and was born in 1090, and died in 1140. He was a philosopher, grammarian, and poet, and was profoundly skilled in all the learning of the age in which he lived. It is said that going on a pilgrimage to Jerusalem, as he advanced on foot towards the holy city, rending his garments and reciting aloud lamentations for the miseries of his people, he was observed by a Mahometan horseman, who, enraged at his conduct, rode over him and trampled him to death. He wrote in Arabic, a curious work in defence of Judaism, entitled "Sepher Haccozri," which was translated from an Hebrew version into Latin, by Buxtorf, and published at Basil, 1660, 4to; and there is a Spanish translation extant, by Agendana.—*Biog. Univ.*

JUDEX (MATTHEW) one of the principal writers of the centuries of Magdeburg, was born Sept. 21, 1528, at Tippolswald, in Misnia. He studied in the first instance at Dresden, but removed afterwards to Wittemberg, whence he repaired to Magdeburg, where he

taught the second form for some years, and then became professor of divinity at Jena. He was not, however, allowed to retain this situation, and endured so many persecutions and vexations, that his days appear to have been shortened by them, as he died in the prime of life in 1564. He wrote a great many books, one of which, "De Typographiæ Inventione," Copenhagen, 1566, 8vo, is very rare. The centuries of Magdeburg, in which he largely assisted, was published under the title of "Historia ecclesiastica congesta per Magdeburgenses et alios," the best edition of which is that of Basil, 13 vols, folio, 1562.—*Moreri*.

JUGLER (**JOHN FREDRICK**) an eminent Saxon writer on philology and literary history. He was born near Naumburg, in 1714. After having been for some time employed in the useful office of a teacher of youth, he was nominated counsellor to the king of England, and inspector of the equestrian academy of Lunenburg. He died in 1791. His principal literary production is entitled "Bibliotheca Historiæ Literariæ selecta," 3 vols, 8vo, founded on Struve's Introduction to the History of Literature. He was also the author of memoirs of eminent European statesmen and lawyers, 6 vols, 8vo; a dissertation on the use of libraries, and other works.—*Biog. Univ.*

JULIA DOMNA, called also *Pia Felix Augusta*, born about AD. 170, at Apamea, or at Emesa, in Syria, where her father, Bassianus, was priest of the sun. She married Severus, who afterwards became emperor of Rome, and is said to have partly owed his elevation to her councils. He was much attached to her, and she exercised great influence over him, till the exposure of her intrigues obliged him to separate himself from her. In retirement she devoted herself to literature, and became the patroness of the learned. Philostratus, at her request, wrote his life of Apollonius Tyanaeus; and Diogenes Laertius dedicated to her his memoirs of Philosophers. After the death of Severus, she in vain endeavoured to prevent the quarrels between her sons. Caracalla, however, when he had murdered his brother, suffered her to exercise a great portion of the sovereign authority. She witnessed his assassination and dethronement, and died soon after in 217, aged forty-seven.—*Gibbon. Biog. Univ.*

JULIAN (**FLAVIUS CLAUDIUS JULIANUS**) a Roman emperor, brother of Julius Constantine, brother of Constantine the Great. He was born at Constantinople in 331, and was only six years of age when the massacre of the collateral branches of the Flavian family took place, in which he and his brother Gallus alone were saved. The two princes were sent to different towns for education, and were instructed in the studies and exercises suitable to their birth, and were not only initiated in the Christian religion, but admitted to the inferior offices of the ecclesiastical order. When Gallus was declared Cæsar, Julian was released from the restraint under which he had previously laboured, and received an ample patrimony. On the fall of his brother he,

however, partook of his disgrace, but was preserved by the friendship of the empress, Eusebia, and allowed to retire to Athens, where he assumed the manners of an ancient philosopher, and showed his predilection for the ancient religion, by obtaining initiation into the celebrated mysteries of Eleusis. He was at length, by the influence of the empress, recalled to court; and in 365 married to her sister Helena, and declared Cæsar. He was, in the first instance, sent into Gaul, where he repressed the Alemanni, and other barbarians, with great skill and bravery, and obtained so much reputation, that the envy of Constantius being excited, he directed a large portion of the army of Gaul to proceed to the frontiers of Persia. Julian was reduced to great difficulties by this mandate, but gave the necessary orders, the ultimate consequence of which was, a mutiny on the part of the soldiers; who, in spite of the earnest entreaties of their general, declared him emperor. Historians differ as to his sincerity on this occasion; he himself strenuously insists on the compulsory nature of the event, to which he was obliged to yield, while the ecclesiastical writers opposed to him, naturally enough, represent him as the planner of the whole affair. Having complied, however, he determined to maintain his new station with firmness; and solicited, in the name of himself and army, from Constantius, a confirmation of the title of Augustus, and offered to remain content with Gaul, Spain, and Britain. The emperor at once refused acquiescence; on which Julian appealed to his army, and returned a letter to Constantius, which amounted to a declaration of war. At the same time he threw off the disguise, which he had hitherto maintained, in regard to religion, and declared himself a votary of the ancient faith. Julian then resolved to make himself master of the provinces of Illyrium, but was detained at Aquileia, which was held by the troops of Constantius, who was personally approaching at the head of his veteran legions. The seasonable death of the latter, on the confines of Cilicia, prevented the approaching conflict, and made Julian sole emperor, who entered Constantinople amidst universal acclamations in December, 361, being then in his thirty-first year. He had passed the period of youth with a degree of temperance and forbearance very unusual in his rank and station; nor did his elevation produce any difference in this respect, for disregarding all idle pomp and trifling amusements, he diligently occupied himself in the duties of government. His good qualities were, however, sullied by vanity, affectation, and scholastic pedantry; while his zeal for the religion to which he had become a convert, was debased by childish credulity and superstition. To counteract the ascendancy acquired by the Christian religion, he composed an elaborate work, which was followed by the unexceptionable measure of an edict of general toleration. This of course produced the re-opening of many of the heathen temples; and imperial example and influence necessarily multi-

plied re-conversion. He even attempted to revive Judaism, by rebuilding the temple of Jerusalem; but the workmen are said to have been interrupted by extraordinary irruptions of fire, which, as confirmatory of prophecy, have been deemed miraculous. Zeal of this nature can seldom be impartial; and although Julian forbore direct persecution, he systematically pursued measures of a nature to degrade his Christian subjects, and behaved with great injustice and severity, by debarring all of that religion from acting as teachers of grammar, rhetoric, or the liberal arts. He also excluded them, in great part, although not by direct laws, from posts of trust or honour; and obliged them to make ample amends for the destruction of the Pagan temples in preceding reigns, as also to restore lands and revenues which had been converted to the use of their own religion. All these cares on the subject of religion did not exclude a passion for military glory. He resolved upon an expedition against Persia, and spent the winter of 362 in Antioch, in preparation for that event. Here he created great dissatisfaction by removing a Christian church which occupied the ancient site of the temple of Apollo at Daphne, in order to restore that worship. The unconcealed ill-humour of the people, happily produced nothing more severe from the emperor than a satire, entitled "The Misopogon, or Beard-hater," in which he lashed their follies and vices with some literary skill, but with a degree of levity not always consistent with his station. In the spring of 363 he left Antioch on his grand expedition against Persia, and proceeded with considerable success until the siege of Ctesiphon, when he was much embarrassed by the desertion of his Armenian auxiliaries, and the growing discontent of his army. He however persevered, as it is said, with a weak desire of imitating Alexander, until involved in great difficulties by treacherous guides, he was finally obliged to retreat. Meantime the whole force of Persia assembled, and harassed the Romans on every side; in opposition to which, Julian performed every duty both of officer and soldier. At length, a sudden attack being made in the rear of the army, the emperor rushed to the scene without his cuirass, and putting the assailants to flight, eagerly led the pursuit. While thus engaged, a javelin, discharged by one of the fugitives, pierced the ribs of the emperor, who fell senseless from his horse, in a state which announced approaching dissolution. Sensible of his condition, he pronounced a farewell speech to his principal officers; and after directing the disposal of his private property, entered into a metaphysical discussion on the nature of the soul, with his attendant philosophers. Exhausted by these efforts, he called for a draught of cold water, and as soon as he had swallowed it, calmly expired on June 26, 363, in the thirty-second year of his age, and at the expiration of about twenty months from the death of Constantius. The character of no eminent person has been more differently represented by friends and enemies, than that

of Julian; a fact by no means surprising; seeing that he was regarded as a deserter and inveterate foe by one religious party, and as a convert and a hero by another. It is obvious that he possessed many great qualities, but was more a mystic than a philosopher, even in his own sense of that character. Of his writings, which are composed with great purity in the Greek language, "The Cæsars," which, in the form of a fable, discusses the characters of several preceding emperors, is the best known. Marcus Antoninus appears to have been his hero. Besides his answer to St Cyril, he wrote some other discourses, epistles, &c.; and his rescripts in the Theodosian code show that he made more good laws in his short reign, than any emperor who ever preceded or followed him. His works were published in Greek and Latin, by Spanheim in 1696 2 vols. folio; and a selection from them, in English, by Duncombe, in 1784, translated principally from La Bletterie.—*La Bletterie's Life of Julian. Musheim. Gibbon.*

JULIAN (Count) governor of Andalusia in Spain, and of Ceuta in Africa, in the beginning of the eighth century. He defended for a long time the latter fortress against the Moors, from 703 till 710; but Roderic, the Gothic king of Spain, having dishonoured Cava, or Florinda, the daughter of count Julian, the latter in revenge made a league with the Moors, and thus facilitated the conquest of the peninsula. The fate of this betrayer of his country is uncertain; but it is probable that his new allies, suspecting him of designs to produce a fresh revolution, threw him into prison, where he perished. Sir Walter Scott and Dr Southey have both produced poems on the Moorish conquest of Spain.—*Gibbon. Univ. Hist.*

JULIANA, a female who possessed great influence at the court of the Mogul emperors of Hindostan in the earlier part of the last century. She was born in Bengal in 1653, and was the daughter of a Portuguese named Augustin Dias d'Acosta. After having suffered shipwreck, she went to the court of the great Mogul Aurengzeb, whose favour she conciliated by presenting him with some curiosities which she had preserved. Being appointed superintendant of the harem of that prince, and governess of his son, Behadur Shah, she had an opportunity of rendering some important services to the latter, who succeeded to the crown in 1707, under the title of Shah Aulum. He was under the necessity of defending his newly acquired authority against his brothers by force of arms; and in a battle which took place, Juliana, mounted on an elephant by the side of the emperor, animated him by her advice, when his troops began to give way; and to her exhortations he was indebted for the complete victory which he obtained. Her services were rewarded with the title of princess, the rank of the wife of an omrah, and a profusion of riches and honours. Shah Aulum had such an opinion of her talents, that he was accustomed to say, "If Juliana were a man, I would make him my vi-

sier." Jehander Shah, who became emperor of Hindostan in 1712, was equally sensible of her merit; and though she experienced some persecution when that prince was deposed by his nephew in 1713, she speedily recovered her influence, and retained it till her death in 1733.—*Biog. Univ.*

JULIEN (PIERRE) a native of Paulien in France, known as one of the most eminent sculptors of the last century. He was born in 1731, and first applied himself to the study of the art in which he afterwards so much excelled, at Lyons, where he carried off the academical prize. He then went to Paris, and placed himself under Coustou, whose associate he eventually became. Julien visited Rome in the year 1768, and left behind him several admirable specimens of his ability, executed in that capital. About ten years afterwards appeared the principal production of his chisel, "The Dying Gladiator." This chef d'œuvre gained him a seat in the academy. Many of his best works still excite the admiration of connoisseurs in the French metropolis. His death took place in 1804.—*Nouv. Dict. Hist.*

JULIEN (SIMON) a Swiss artist, born at Carigliano in 1736. His contemporaries bestowed on him the appellation of "The Apostle," in allusion to the emperor of the same name, and to his own abandonment of the French school of painting for that of Italy. Vanloo was his first master and model; but a subsequent residence at Rome improved his taste, and produced the change of style alluded to. An historical picture of the triumph of Aurelian, is the most celebrated of his productions. Julien obtained a seat in the French academy, but his emoluments did not keep pace with his reputation, and he died in 1799 in very indigent circumstances.—*Nouv. Dict. Hist.*

JULIO ROMANO, a celebrated Roman painter, whose family name was *Pipi* or *Pippi*. He was born in 1492, and was a student in the school of Raphael, with whom he became a great favourite. He displayed extraordinary fertility of invention and grandeur of taste, united with a vast fund of knowledge respecting every thing connected with his art. His colouring, however, is defective, and his manner has been esteemed hard and dry; whence his designs have attracted more approbation than his finished paintings. After the death of his master, who made him one of his heirs, he was employed to finish the works left imperfect by that great artist, particularly the hall of Constantine in the Vatican. He was courted by pontiffs, kings, and princes; and was particularly patronised by the duke of Mantua, in whose service he exercised his talents both as a painter and architect. In the latter capacity he was so much distinguished, that on the death of San Gallo, architect of St Peter's at Rome, he was nominated to the vacant office; but while preparing to take possession of it, he was seized with illness, and died at Mantua in 1546, when he was interred in the church of St Barnabas in that city. His most famous work as a painter is

a saloon, in which the destruction of the giants by Jupiter is represented in fresco: but he has obtained a disgraceful share of notoriety on account of some indecent designs, commonly called Aretine's figures, which he made to be engraved by Marc Antonio, who was imprisoned at Rome, when the painter made his escape from the merited punishment by flight.—*Vasari. Sandrart. Orlandi Abeced Pitt. Pilkington.*

JUNCKER (CHRISTIAN) a learned German writer on the history of literature. He was born at Dresden in 1668, of poor parents, who however bestowed on him a good education. After completing his studies he became successively co-rector of the gymnasium of Schleusingen, rector of the college of Eisenach, and in 1713 of that of Altenburgh. He died in 1714, of grief for the loss of his wife, whom he outlived only five days. Among his works, written in Latin, are a Sketch of the History of Periodical Journals; Dissertations on learned Women; the Life of Job Ludolph; Synoptic Tables of the History of Philosophy and General Literature. He was also the author of an account of the library of Eisenach, and an introduction to the geography of the middle ages, both in German.—*Nouv. Dict. Hist. Biog. Univ.*

JUNCKER (JOHN) a German chemist, who was physician to the Orphan house at Halle, and a professor in the university of that city. He was born near Giessen in 1691, and died in 1759. His works are very numerous, and were much esteemed by his contemporaries, though the progress of science has rendered them in some measure obsolete. They are written in Latin, including "Conspectus Formularum Medicarum," 1730, 4to; "Conspectus Chemiæ in forma Tabularum," 1730-1744, 2 vols, 4to; and "Conspectus Materiae Medicæ," 1760, 4to.—*Biog. Univ.*

JUNCTIN or GIUNTINO, a Florentine mathematician of the sixteenth century. He became a Carmelite friar, but afterwards apostatized; and having for some time led a wandering and licentious life, he went to France, and abjured the Catholic religion. Settling at Lyons, he became corrector of the press, and afterwards is said to have acquired a large fortune as a banker or usurer. His death is reported to have taken place in 1590, in consequence of his being buried under the ruins of his library. He was the author of a commentary on the treatise of Sacrobosco, "De Sphæra;" and he also wrote on astrology, on the comet of 1577, and on the reformation of the calendar by pope Gregory XIII.—*Nouv. Dict. Hist. Bayle.*

JUNGE (JOACHIM) in Latin, Jungius, one of the most eminent philosophers of the seventeenth century. He was born at Lubeck in 1587; and losing his father in his infancy, his surviving parent with some difficulty found means to send him to the university of Rostock in 1606, where he studied mathematics with extraordinary diligence and success. He removed to Giessen; and having taken the degree of MA. in 1609, he obtained the ma-

thematical chair, which he resigned in 1614, to devote himself to philosophical researches. He afterwards studied medicine; and having visited Italy, he took his degrees in that faculty at Padua, and then returned to practise as a physician at Rostock. He wished to have founded an academy there for the cultivation of natural science; but he was forced to relinquish that plan, on account of some illiberal misconception of his designs. He became professor of mathematics at Rostock in 1624; but not finding his situation pleasant, he removed to Helmstadt, and then to Brunswick. He was again recalled to Rostock, whence he went in 1629 to Hamburg, to occupy the place of rector of the school of St John. He then commenced his opposition to the Aristotelian philosophy, recommending in his lectures the substitution of science, founded on experiment, to the antiquated systems of the schools. This innovation procured him many enemies among the partisans of Aristotle; but he continued to propagate his opinions till the infirmities of old age interrupted his labours. He then resigned a part of his employments, and died a few years afterwards, September 23d, 1657. Junge, like his great contemporary, lord Bacon, seems to have contributed much to enlighten mankind by overturning erroneous systems in philosophy. Leibnitz ranks him scarcely below Descartes, and beside Copernicus, Galileo, and Kepler. He published little, but left a vast quantity of MSS, whence several valuable works were taken and published by his disciple, John Vaget. His "Isagoge Phytoscopica," 1678, 4to, contains traces of a plan for the classical arrangement of vegetables, which afforded useful hints to Ray and Linnæus.—*Chaufepie. Biog. Univ.*

JUNGER (JOHN FREDERIC) a German dramatist of the last century. He was a native of Leipsic, and became director of the theatre of Vienna, where he died in 1797. His dramatic works form three collections: The comedies of Junger, 5 vols. 8vo; his Comic Theatre, 3 vols. 8vo; and his posthumous theatrical productions, 2 vols. 8vo. He also published some romances. Junger is reckoned among the best of the comic poets of Germany.—*Zopf's Univ. Hist.*

JUNGERMAN. There were two brothers of this name, natives of Leipsic. **GODFREY**, the elder, filled the chair as law professor in the university of his native city. He was a sound classical scholar, and superintended the publication of a Greek translation of the commentaries of Cæsar, in two quarto volumes, as well as of a Latin one of the pastoral of Longus. He also published an edition of the works of Julius Pollux. Godfrey Jungerman died in 1610 at Hanau.—**LEWIS**, his younger brother, survived him till 1653, when he died at Altorf. He was eminent as a naturalist, especially in botany, on subjects connected with which branch of philosophy he left several useful treatises. Among his writings are, "Cornucopia Floræ Giessensis;" "Hortus Eystettensis;" and "Catalogus Plantarum."
Moreri.

JUNIUS (ADRIAN) or *A. de Jonghe*, a Dutch physician and man of letters in the sixteenth century. He was born in 1512, at Hoon in Friesland, where his father was a burgo-master. After studying in his native country and at Paris, he went to Bologna, and took the degree of MD. In the latter part of the reign of Henry VIII he settled in England, and was physician to the duke of Norfolk. He published a Greek and Latin lexicon, which he dedicated to Edward VI, and thereby exposed himself to the censure of the court of Rome, though he protested he was a good Catholic. In the reign of queen Mary he published a Latin poem, entitled "Philippis," in honour of her marriage with Philip of Spain. In 1564 he was at Copenhagen, and had the office of physician to the king of Denmark; but the climate not agreeing with him, he returned to Holland, and settled at Haerlem. When that city was besieged by the Spaniards in 1572, Junius withdrew to Armuyden, and thence to Middleburg, where he died in 1575, his life having been shortened by regret for the loss of his library, and other misfortunes resulting from the capture of Haerlem. He was acquainted with seven languages besides his mother tongue; and such was the extent and variety of his erudition, that he was reckoned among his contemporaries second only to Erasmus. His works, besides those mentioned before, are, "Nomenclator Omnium Rerum;" Latin poems; notes on ancient authors; translations from the Greek; and philological tracts.—*Baule. Moreri. Teisier, Eloges des H. S.*

JUNIUS (FRANCIS) or *F. du Jon*, a learned French Protestant divine of the sixteenth century, who was a native of Bourges. Being sent to Lyons when young, to qualify himself for a diplomatic office, he became a convert to infidelity; but returning home was reclaimed by his father, who next sent him to study at Geneva, where he supported himself by acting as a tutor to others, while preparing for the clerical profession. In 1565 he was appointed minister of the Walloon church at Antwerp, where he was exposed to some danger from the inquisition, and was at length obliged to remove to Germany. In 1568 he officiated as chaplain in the army of the prince of Orange during his expedition to the Netherlands. In 1573 he went to Heidelberg, at the invitation of the elector palatine, to be employed with Tremellius in translating the Old Testament into Latin; and this is the work by which he is at present best known. He was afterwards theological professor at the college of Neustadt, and then in the university of Heidelberg. In 1592 he removed to Leyden to fill the same office, and died there of the plague in 1602. His works, which are numerous, relate to divinity, and biblical and classical literature.—**JUNIUS (FRANCIS)** son of the foregoing, eminent as a philological writer. He was born at Heidelberg in 1589, and received his education at Leyden. He first engaged in the military profession, which he forsook to devote himself to literary pursuits. In 1620 he

accompanied Thomas, earl of Arundel, to England, and for thirty years he resided in the family of that distinguished nobleman, to whom he was librarian. He devoted his attention chiefly to the study of the northern languages, and went to Germany for the purpose of investigating the Saxon as still spoken in a part of that country. He returned to England in 1674, and passed some time at Oxford, whence he removed to the house of his nephew, Isaac Vossius, at Windsor, in August 1677, and died there about three months afterwards. His works are, a treatise "De Picturna Veterum," 1637, 4to; "Observations in Willeramii Francicam paraphrasin Cantici Canticorum," 1655, 8vo; and a Gothic Glossary, in five languages, part of which only was published, by the rev. Edward Lye, in 1743.—*Bayle. Wood's Athen. Oxon. Aikin's G. Biog.*

JUNOT (ANDOCHE) a French general, who raised himself to eminence by his talents. He was born in low life, in 1771, and at the age of twenty he entered into the army as a volunteer. He had arrived at the rank of lieutenant when he was noticed by Buonaparte, who placed him on his staff. He accompanied his master in his Egyptian expedition, and became a great favourite, owing chiefly to the daring courage which he exhibited in the field of battle. He was made lieutenant-general, and in 1806 governor of Paris, and colonel-general of hussars. The next year he was sent ambassador to Lisbon, with orders to take possession of Portugal on the removal of the royal family to Brazil. He remained there two years, and was honoured with the title of duke of Abrantes. The battle of Vimiera, in which he was opposed to sir A. Wellesley, [duke of Wellington] put an end to his authority in Portugal. Notwithstanding his ill success he was trusted and employed by Buonaparte, who appointed him captain-general and governor of the Illyrian provinces. He died in 1813. Though little acquainted with literature, Junot was fond of books, and collected a valuable library, of which a catalogue was published in 1813, 8vo.—*Biog. Univ.*

JURIEU (PETER) a celebrated protestant divine, was the son of a minister of the same persuasion at Mer, a small town near Blois, where he was born in the year 1637. He received part of his education in Holland, but completed it in England, under his maternal uncle, Peter du Moulin, and received orders in the church of England. On the death of his father he was called to succeed him, and the French protestants disapproving episcopal ordination, he submitted to be re-ordained according to the form of Geneva. He was subsequently chosen professor of Hebrew at Sedan, and discharged the duties of his station with great reputation. At the same time he signalized himself as a rigorous defender of orthodoxy, and both by his writings and conduct involved himself in continual quarrels and controversy. In 1673 appeared his "Pre-servative against a change of Religion," to counteract the effects of "The Exposition of

the Catholic Faith," by Bossuet; and in 1681 he published anonymously a piece, entitled "La Politique du Clergé de France," which excited a great sensation by its merited severity. On the dissolution of the university of Sedan, by the intolerance of Louis XIV, Bayle, who had been introduced by Jurieu to the philosophical chair of that establishment, had now the means of returning the favour by securing that of divinity for his friend at Rotterdam. In 1681 Jurieu published his "Parallel between the History of Calvinism and that of Popery," in answer to the history of Calvinism by Maimbourg. This work, although ably written, was so much excelled in popular estimation, by a criticism on the same book by Bayle, that its author began to indulge a dislike towards the latter, which soon amounted to confirmed enmity. In 1686 he published a work, entitled "The Accomplishment of the Prophecies," &c. In this work he imagined that he had discovered a true key to the mysteries of the Apocalypse, which he asserted contained indications of the approaching downfall of popery in France. The weakness which he displayed on this occasion produced much ridicule; and among many strictures, serious and satirical, there appeared in 1690 a work, entitled "Important Advice to the Refugees, on their approaching Return to France," written in a felicitous vein of poignant humour, as there is little reason to doubt, by Bayle. As already shown (see article **BAYLE**) the growing hatred of Jurieu now changed into rage and fury, and he persecuted his old friend with the most extraordinary virulence. The same litigious temper led him also to accuse and stigmatise several refugee ministers, whose opinions differed from his own, toleration in his estimation being the greatest of all heresies. The opposition of many spirited antagonists; the refusal of government to second him with the arm of power; and, above all, the condemnation of many of his own opinions by the synods, produced him in return much mortification, and a lowness of spirits was thereby engendered, under which he sank in 1713, in the seventy-sixth year of his age. He possessed learning and abilities, but was bigotted, intolerant, and fanatical. His principal works besides those already mentioned, are, "La Justification de la Morale;" "Letters Pastorales;" "Traité de l'Unité de l'Eglise;" "Traité de la Nature et la Grace;" "Histoire des Dogmes et des Cultes;" the latter of which is by far the most able of his productions. *Nouv. Dict. Hist. Des Maizeaux' Life of Bayle.*

JURIN (JAMES) a learned and ingenious physician, who was born in 1684. He studied at Trinity college, Cambridge, of which he became a fellow; and on leaving the university he settled in London, where he obtained the office of physician to Guy's hospital. He was also for several years secretary to the Royal Society; and died in 1750, while president of the College of Physicians. He distinguished himself by the application of mathematical

science to physiology, and he published in the Philosophical Transactions for 1718 and 1719 calculations of the muscular power of the heart, which involved him in a controversy with Dr Keill, and M. Senac. He likewise wrote on the causes of distinct and indistinct vision; and his opinions on that subject were animadverted on by Mr Robins, to whom Dr Jurin published a reply. He was the author of several publications in favour of inoculation for the small-pox; and many papers from his pen, on medical, physiological, and philosophical topics are to be found in the Philosophical Transactions.—*Eloy, Dict. Hist. de la Med. Rees's Cyclopad.*

JUSSIEU (ANTHONY de) an eminent botanist and physician, who was born at Lyons in the latter part of the seventeenth century. He became a doctor of the medical faculty of Paris, and he studied botany under Tournefort, whose system he adopted and improved. In 1712 he was admitted a member of the Royal Academy of Sciences at Paris, and he was likewise professor of botany at the Jardin du Roi. He made a botanical tour in Spain and Portugal, whence he imported several plants, which he described in the Memoirs of the Academy of Sciences. He died in 1758. Among his works are, "Eloge de M. Fagon, avec l'Histoire de Jardin Royal de Paris, et une Introduction a la Botanique;" and "Discours sur le Progrès de la Botanique;" besides additions to some of the works of Tournefort.

—JUSSIEU (BERNARD de) brother of the preceding, and distinguished for his attention to similar studies. He was born in 1699, and having studied medicine, in 1723 he was made a doctor of the faculty of Paris. He also obtained the place of botanical demonstrator at the Jardin du Roi, and was a member of the Academy of Sciences. Louis XV, who consulted him on the formation of a botanical garden at Trianon, had a high esteem for him; but his modesty prevented him from profiting by the king's favour. He visited England, where he was made a fellow of the Royal Society; and after a life devoted to science, he died in 1777. He published an improved edition of "Tournefort's History of the Plants growing in the Environs of Paris," 1725; and a "Catalogue of the Trees and Shrubs which may be reared about Paris," 1735; besides papers in the Memoirs of the Academy of Sciences.—JUSSEU (JOSEPH de) a third brother of the same family with the former. He was born in 1704, and was educated for the medical profession; but he chiefly distinguished himself as a man of science. In 1735 he went to Peru, as botanist, with the academicians sent from France and Spain, to measure a degree of the meridian. He did not return with his associates, but remained in South America thirty-six years, during which period he made many important observations relative to the natural history of the country; though the world was deprived in some measure of the benefit of his discoveries by the unfortunate loss of his diary. He returned to France in a very debi-

lited state of health, and after being reduced almost to a state of second childhood, he died in 1779.—*Novv. Dict. Hist. Biog. Univ. Hutchinson's Biog. Med.*

JUSTEL (CHRISTOPHER) a French statesman and juridical writer of the seventeenth century. He was a native of Paris, and became counsellor and secretary to Louis XIII. His intimate acquaintance with ecclesiastical antiquities and the canon law, was displayed in several learned publications, among which were, "Codex Canonum Ecclesie Universæ;" "Codex Canonum vetus Ecclesie Romanæ;" and "Codex Canonum Ecclesie Africanæ;" besides which he left valuable MS collections. He was also the author of a genealogical history of the house of Auvergne. He died in 1649, aged about sixty-nine.—JUSTEL (HENRY) son of the foregoing, born at Paris in 1620, succeeded his father as royal secretary and counsellor. He published at Paris in 1661, "Bibliotheca Juris Canonici veteris," 2 vols. folio, from his father's MSS, the remainder of which he presented to the university of Oxford. Being a protestant, he retired to England on the revocation of the edict of Nantes, and was appointed librarian to the king. His death took place in 1693. *Moreri. Aikin's Gen. Biog. Chalmers's Biog. Dict.*

JUSTI (JOHN HENRY GOETLOB de) a skilful German mineralogist of the last century. He studied at Jena in 1720, where he was patronized by the professor of political economy, whose lectures he attended. The irregularity of his conduct having obliged him to leave the university, where he had gained some literary reputation, he enlisted as a common soldier in the service of the king of Prussia. He rose to the rank of sub-lieutenant, and was then cashiered and imprisoned for disobedience to his colonel. He made his escape, and settled at Leipsic, where he supported himself by writing for the press. A thesis on political economy, which he had maintained at Jena, having attracted notice, he was invited to Vienna to become professor in the Theresian college. He did not however obtain that office, but was made counsellor of the mines, in which capacity he visited the mines of Austria and Hungary. In 1755 he went to Gottingen, where he lectured on political economy and natural history. He resided at Copenhagen in 1758, and subsequently travelling in Wirttemberg, he was arrested in consequence of having offended the king of Prussia by his writings. Though he at length obtained his liberty, he involved himself in new difficulties, and died in confinement in the fortress of Custrin in 1771. Besides many translations from the French, he was the author of a "Treatise on Money;" a "Treatise on Mineralogy;" "Miscellanies on Chemistry and Mineralogy," 3 vols. 8vo; 'A complete Treatise on Manufactures,' 2 vols. 8vo.—*Biog. Univ.*

JUSTIN, a Latin historian, supposed to have lived in the second century under Antoninus Pius. Nothing is known concerning his family or condition, but one of the MSS of

His works calls him M. Junianus Justinus. His history is merely an abridgment of that of Trogus Pompeius in forty-four books. Justin writes with considerable purity; his reflections, although obvious, are sensible, and his style occasionally rises to eloquence. He can however only be regarded as a minor historian, and his book is chiefly used as an elegant compendium for the youthful Latin student. Justin has been illustrated by the most able annotators, and particularly by Grævius. The best editions of him are that of the last-mentioned critic; of Hearne, 1705, 8vo; of Gronovius, 1719 and 1760; and of Fischer, 1757.—*Fabricii Bibl. Lat. Harwood's Classics. Saxii Onom.*

JUSTIN, surnamed the Martyr, one of the earliest and most learned writers of the Christian church. He was the son of Priscus, a Greek by nation, and was born at Flavia Neapolis, anciently called Sichem, a city of Samaria in Palestine, towards the close of the first century. He was educated in the Pagan religion, and after studying in Egypt, became a Platonist, until, in the year 132, he was led by the instructions of a zealous and able Christian to embrace the religion of the gospel. He subsequently went to Rome, in the beginning of the reign of Antoninus Pius, and drew up his first apology for the Christians, then under a severe persecution, in which he shows the cruelty and injustice of the proceedings against them. He was also equally zealous in opposing alleged heretics, and particularly Marcion, against whom he wrote and published a book. He not long after visited the East, and at Ephesus had a conference with Trypho, a learned Jew, to prove that Jesus was the Messiah, an account of which conference he gives in his "Dialogue with Trypho." On his return to Rome he had frequent disputes with Crescens, a cynic philosopher, in consequence of whose calumnies he published his second apology, which seems to have been presented to the emperor Marcus Aurelius in 162. It produced so little effect, that when Crescens preferred against him a formal charge of impiety for neglecting the Pagan rites, he was condemned to be scourged, and then beheaded, which sentence was put into execution in 164, in the seventy-fourth or seventy-fifth year of his age. Justin Martyr is spoken of in high terms of praise by the ancient Christian writers, and was certainly a zealous and able advocate of Christianity, but mixed up its doctrines with too much of his early Platonism. There are several valuable editions of his works, the best of which are those of Maran, Paris, 1742, folio, and Oberthur, Wurtzburgh, 1777, 3 vols. 8vo.—*Cave. Lardner. Saxii Onom.*

JUSTINIAN I, emperor of the East, was born of obscure parentage, in that part of Thrace anciently called Dacia. When his uncle Justin attained the purple, he made Justinian a sharer in the imperial power, the exclusive possession of which he obtained on his benefactor's death in 527. He was then in his forty-fifth year, and distinguished for de-

votional austerity; but immediately upon his elevation he solemnly espoused Theodora, an actress and courtesan, whose influence over him was unbounded. He even associated her with himself in the sovereignty, and by her pride and avarice on the one hand, and spirit and munificence on the other, she both disgraced and honoured the ascendancy bestowed on her. Justinian began his administration with a violent persecution of sectaries and heretics, which made him a great favourite with the ecclesiastical writers of the age. Theology was indeed his favourite study, and engrossed too much of his attention from other affairs. His reign was however memorable for many important transactions of a civil and military nature, among which may be enumerated the Persian and African-Vandal wars, so successfully terminated by Belisarius, (see his article.) The latter general also delivered his master from the effects of a rebellion produced by the factions of the circus, in which revolt thirty thousand persons are said to have been slain. The principal event, however, which has rendered the reign of Justinian interesting to posterity, was the celebrated reformation of the Roman jurisprudence, which took place under his auspices and patronage. The person to whom the work was principally confided was Tribonian, a lawyer of various and extensive attainments, who, aided by competent associates, completed the Justinian code from the Gregorian, Theodosian, and Hermogenian codes in 529. Its publication was followed in 533 by that of the "Pandects" or Digests, being a compilation of the opinions or decisions of former civilians; and by the "Institutes," an elementary treatise for the use of students. Lastly, the laws of modern date, and Justinian's own edicts, were in 541 thrown into one volume, under the title of the "Novellæ," or new code, which completed the important legislative labours of this reign. A passion for building was also entertained by Justinian, who displayed his piety in the erection of numerous churches, among which are the celebrated Sancta Sophia, now subsisting as the principal mosque of the Turkish empire. Bridges, hospitals, aqueducts, high roads, fortresses, and all kinds of works of public utility, were likewise undertaken throughout the various provinces of the empire. The progress of the Gothic king Totila in Italy, although finally repressed by Belisarius and Narses, produced considerable anxiety to the declining age of the emperor, whose uneasiness was much increased in 559, by a sudden incursion of the Bulgarians, through the long wall of Constantinople. These invaders were however checked by the valour and skill of Belisarius, and their final retreat purchased by a sum of money. The close of the life of Justinian was embittered by a conspiracy among his principal officers; and an accusation being thrown out against Belisarius, that great man was disgraced and imprisoned, although subsequently declared innocent, and restored to his honours. Justinian, broken with years and cares, expired in 565, in the thirty-ninth year

of his reign, and eighty-third of his age. Notwithstanding his general favour with the church, at the time of his death, he was about to publish an edict in favour of an opinion of the incorruptibility of the body of Christ, which was not deemed perfectly orthodox, so that his decease was deemed providential. In other respects, his increasing jealousy, and the heavy pecuniary burthens which he imposed upon his subjects, made him die unlamented. The introduction of silk into Greece by two Persian monkish missionaries, is an event in this reign which merits being recorded.—*Gibbon. Mosheim. Milner's Church Hist.*

JUSTINIANI (ST LAWRENCE) the first patriarch of Venice, was descended from a noble family, and born in that city in 1381. This prelate died in 1485, and was canonized in 1690 by Alexander VIII. He left several works of piety, which were printed at Brescia, in 2 vols. folio, 1506, and again at Venice in 1755, with a life by his nephew.—*Moreri.* **JUSTINIANI (BERNARD)** nephew of the above, was born at Venice in 1408. He received a learned education, and took his doctor's degree at Padua. He was sent for to Rome by pope Calixtus III, who employed him in several commissions; and on his return to Venice he was sent ambassador to Louis XI of France. He was afterwards employed in several embassies, made a member of the council of ten, and finally elected procurator of St Mark, the second dignity in Venice. He died in 1489. He was author of a "History of Venice," which has been esteemed as the first regular attempt of the kind, and also a life of his uncle, as mentioned in the preceding article. His letters and speeches were also printed, but were afterwards suppressed. Of the same family, which is still honourably distinguished in Italy, was the marquis **VINCENT JUSTINIANI**, who employed Millan, Blomart, and others to engrave his gallery, Rome, 1642, folio, of which splendid work much inferior impressions were taken about 1750.—*The abbé BERNARDO JUSTINIANI*, author of the "Origin of the Military Orders," Venice, 1692, 2 vols. folio, was also descended from a collateral branch of the same family.—*Chauvepie. Ginguene Hist. Lit. d'Italie.*

JUSTINIANI (AUGUSTIN) bishop of Nebo, was of the same noble family as the foregoing. He was born at Genoa in 1470, and entered into the order of St Dominic at Paris in 1488. Being of distinguished learning, pope Leo X made him bishop of Nebo in Corsica, but he afterwards accepted the invitation of Francis I to settle at Paris, where he became his almoner and regius professor of Hebrew. He perished in a voyage from Nebo to Genoa in 1536, with a high character both for conduct and erudition. He composed several pieces, the most considerable of which is "Psalterium Hebraicum, Græcum, Arabicum, et Chaldaicum, cum tribus Latinis interpretationibus et glossis," being the first psalter of the kind which appeared in print. He also wrote *Annales de Republica Genoensi*, Genoa, 1537, and was editor of "Porchetti Victoria

advorsus impios Hebræos."—*Tiraboschi. Moreri. Nouv. Dict. Hist.*

JUVENAL (DECIUS JUNIUS) a celebrated Roman satirist, is supposed to have been born at Aquinum in Campania, about the beginning of the reign of Claudius. He was either the son by birth or adoption of a rich freedman, who gave him a liberal education, and bred him up to the study of eloquence. He passed about half his life in the pursuits of the bar, when, as appears from some of Martial's epigrams, he acquired considerable reputation. His first essay in poetical satire was directed against the player Paris, a great favourite with Domitian, on which account the satirist was sent into honourable banishment, under pretence of being nominated to the command of a cohort in the army quartered at Pentapolis, on the frontiers of Egypt and Lybia. On the death of Domitian, he returned to Rome; and his thirteenth satire, addressed to Calvisius, appears to have been written in the third year of Adrian, when the poet was above seventy years old. He is supposed to have died in the year 128, at the age of eighty. Sixteen satires of Juvenal have reached posterity, and stand pre-eminent in the class of those which castigate vice in preference to folly. Many of his maxims are delivered with great force and elevation, but the moral indelicacy of his age renders him extremely gross in much of his portraiture, a defect which risks the contagion of vice from the very indignation of virtue. As a poet, he has more point and animation than taste; and in style he is occasionally inflated and negligent, retaining however a rich vein of poetry and picturesque expression. Of Juvenal, the best editions are the Variorum of Grævius, the Delphin, and that of Casaubon. This poet has been ably translated into English by Dryden, Gifford, &c.—*Vossii Poet. Rom. Crusius Hist. Rom. Poets. Saxii Onom.*

JUVENCUS (CAIUS VECTIUS AQUILINUS) one of the first Christian poets, was born of a noble family in Spain about the year 330. He wrote the life of Christ in Latin verse, in which he followed the four evangelists almost word for word, but with little poetical ability, and in defective Latin. This work, which is entitled "Historiæ Evangelicæ," lib. iv. may be found in the Bibliotheca Patrum, and also in the Corpus Poetarum. The best separate edition is that of Rome, 1792, 4to.—*Fabricii. Bibl. Lat. Med. Moreri.*

JUXON (WILLIAM) bishop of London, and subsequently archbishop of Canterbury, prelate of distinguished mildness, learning and piety. He was born in the city of Chichester in 1582, and educated at Merchant Tailors' school, whence he removed in due course, in 1598, on one of the scholar-ships attached to that seminary to St John's college, Oxford. The law appears to have been his original destination, and he even went so far as to enter himself a member of one of the inns of court. It is supposed that the friendship he contracted at this period of his life with his fellow collegian, Laud, might subsequently

induce him to take orders, on which he obtained the livings of St Giles, Oxford, and of Somerton. In 1621 he was elected to the presidency of St John's, and by the continued patronage of his friend, was raised in rapid succession to the deanery of Worcester, 1627; the clerkship to the royal closet, 1632; the bishopric of Hereford, 1633; and to that of London before the expiration of the same year. Favoured by the same influence, he also secured the personal countenance and esteem of Charles I in so high a degree, that in 1635 he was appointed lord high treasurer of England. The nomination of a churchman to this dignified and responsible situation, a circumstance which had not occurred for several preceding reigns, excited a strong sensation among the puritanical party, who made it the ground of severe invective against the government, and more particularly against the primate, who was with justice suspected of being the principal adviser of the measure. With regard to Juxon personally, however, there seems to have been no ground of complaint, since, on his resignation of the office, after having held it something less than six

years, the integrity and ability with which he discharged its various duties, were admitted on all hands. During the whole progress of the unhappy contest which followed, he maintained an unshaken fidelity to the king, whom he attended during his imprisonment in the Isle of Wight and on the scaffold, on which occasion he received from the hand of Charles, the moment previous to his execution, the diamond George, with directions to forward it to his son. After the king's death, the parliament threw him into confinement for contumacy, in refusing to disclose the particulars of his conversation with the king, but he was soon released, and continued to live in privacy until the restoration. He was then called again into public life, and to added dignity, being raised to the primacy. Archbishop Juxon survived his elevation little more than two years, dying June 4, 1663. His remains were deposited at his own desire in the chapel of St John's college, Oxford, where his memory is deservedly held in veneration, as a liberal benefactor and an ornament to the foundation.—*Biog. Brit.*

K A B

KAAS (NICHOLAS) a wise and patriotic Danish statesman. He was born in 1535, and studied in the universities of Germany. In 1573 he was made chancellor of Denmark; and on the death of king Frederic II, in 1588, he was nominated the first of the four regents to govern the kingdom during the minority of Christian I. Being attacked with a mortal disease before the coronation of that prince, he sent for the young monarch when he lay on his death-bed, and addressed him in the following terms:—"Sire, I promised your father, in his last moments, that I would do all in my power to see the crown placed on the head of your majesty. Since that satisfaction is denied me, I will at least contribute to that event, by placing in your hands the key of the place, where, since the death of your august father, the crown and other regalia have been preserved. Take it in the name of God, and wear the crown with glory; sway the sceptre with wisdom and clemency; bear the sword with justice; and keep the globe with judgment." He died in 1594. His correspondence with learned foreigners has been published in the epistolary collection of Chytræus; and the "Law of Jutland," printed at Copenhagen, 1590, 4to, is said to have been principally reviewed, corrected, and much augmented by the care of the chancellor Kaas.—*Biog. Univ.*

KABRIS (JOSEPH) a Frenchman, the peculiarity of whose adventures entitles him to some notice. He was born at Bordeaux, and having entered into the naval service of his country, he was taken prisoner during the last war, and conveyed to England. He obtained

K A B

permission to become a sailor on board a South Sea whaler, and the vessel being wrecked on the coast of the island of Noukahiwa, in the Pacific ocean, Kabris fell into the hands of the inhabitants, who are cannibals. They were on the point of slaying him, to feast on his carcass, when he was saved by the intercession of the king's daughter, a young girl, who shortly after became his wife. He was then invested with the marks of distinction peculiar to the royal family, and installed in the office of chief-justice of the island. He administered the laws, according to his own account, much to the satisfaction of the people, a task rendered comparatively easy by the simplicity of their institutions. A thief is punished by tying him to a tree for several days; an assassin is killed by the family of the victim, and his body divided among the different tribes; while the traitor is flayed alive, and thrown into the sea, as not worthy even of being eaten. Kabris had for nine years been in the enjoyment of domestic happiness and legal reputation among the Noukahiwans, when he was carried away, as he stated, while asleep, by the Russian navigator, captain Krusenstern. When he arrived at Petersburg, he was appointed professor of swimming, in the imperial school for the navy. He returned to France in 1817, intending, after visiting Bordeaux, to go back to his wife and family at Noukahiwa. To raise funds for his expenses on his journey, he exhibited himself to the public at Paris and elsewhere, his face being tattooed in the New Zealand style of decoration. While on his travels for this purpose, he died suddenly at Valenciennes, in 1822.—*Lit. Chron.*

KADLUBKO, or **KADLUBEK** (VINCENT) a Polish historian, who was a native of Karouw in Gallicia, and became provost of Sendomir. He was nominated to the bishopric of Cracow in 1208, and after holding the see ten years, he resigned it to become a cistercian monk, and died in a Gallician monastery of his order in 1223. He was the author of a work published in 1612, under the title of "Historia Polonica, cum Commentario anonymi," reprinted at Leipsic in 1712. The history of Kadlubko finishes at the year 1202, but there is a continuation by his commentator to 1424. His work is valuable for its general accuracy and fidelity.—*Biog. Univ.*

KAEMPFER (ENGELBERT) a Westphalian physician, born at Lemgow in 1651. Having prosecuted the study of natural philosophy with great success at Dantzic, Thorn, Cracow, and Upsal, he travelled into Persia in quality of physician to the Swiss embassy, and proceeding afterwards to Batavia, accompanied that sent by the Dutch authorities to the Japanese isles in 1690 in a similar capacity. Three years after he returned to Europe, and having passed some time in the capital and other parts of the United States, during which period he graduated as MD at Leyden, retired to the place of his nativity, where he published in 1712 an account of his philosophical pursuits during his stay in the East, and a catalogue of the botanical and other rarities he had taken that opportunity of collecting. His other works are, a "History of Japan," of which there is an English translation in two folio volumes; "Decas Observationum Exoticarum;" and "Amenitates Exoticæ." His death took place at Lemgow in 1716.—*Rees's Cyclop.*

KAIN (HENRY LEWIS le) a celebrated French actor, who was born at Paris April 14, 1728. He was originally a maker of surgeons' instruments, and owed his theatrical debut to an introduction to Voltaire, who, struck with his talents for the buskin, drew him from his shop, and by his advice and instruction qualified him to appear on the Parisian stage. It is somewhat remarkable that the poet never saw his protégée perform in public, as Le Kain made his first appearance as an actor a few days after Voltaire set out for Prussia; and when after a long absence he returned to Paris, the tragic hero had descended to the tomb. Le Kain made his debut in the character of Brutus, September 4, 1750. In spite of some physical imperfections, he succeeded admirably in exhibiting the more violent emotions of the mind, and raised himself to the head of his profession. He was unfortunately addicted to vicious indulgences, consequent probably to his former habits of life, which injured the respectability of his private character, and debilitated his constitution. His habits of low debauchery at length occasioned his death, which took place, owing to an inflammation of the bowels, in 1778, at the age of forty-nine. He is said to have left behind him the sum of one hundred thousand crowns, which he had accumulated by the

exercise of his professional abilities.—*Nonn's Dict. Hist.*

KALKBRENNER (CHRISTIAN) a native of Munden in Prussia, born there of Jewish parents in 1755. He displayed at an early age a strong passion for music, which his friends, seeing the bent of his genius, encouraged, with a view to his practising that science as a profession. He was first placed by them under Emanuel Bach, master of the chapel to the elector of Hesse-Cassel, whence having made considerable progress, both in the practical and theoretical knowledge of his art, he removed to Berlin, and entered the service of prince Henry of Prussia, brother to Frederic the Great. In 1798 he made a musical tour through Germany, Italy, and France, and settled finally at Paris, where his reputation obtained him the appointment of singing master to the academy of music. In this situation he continued till his death in 1806. He was the author of five operas, "La Veuve de Malabar;" "Democritus;" "La Femme et le Secret;" "Olympie;" (which was unsuccessful); and "Enone;" as well as of several didactic treatises on music; but his most valuable literary production is his "Histoire de la Musique." This work, of which he only lived to complete the first volume, printed in 1802, contains much valuable information on the state of music among the ancient Hebrews and Greeks.—*Biog. Dict. of Mus.*

KALM (PETER) a Swedish traveller and natural philosopher of the last century, born in 1715. He made a progress during 1747 and the two following years through a considerable portion of North America, and on his return to Abo, where he was botanical professor, published his travels, with a copious account of the productions of the soil, and the natural curiosities of the countries he had visited. There is an English translation of this work by Forster, printed in 1771. Kalm subsequently travelled over several parts of the Russian dominions, with the view of increasing his information as a naturalist, and died soon after his return in 1779.—*Rees's Cyclop.*

KANT (IMMANUEL) a celebrated German professor of logic, metaphysics, and moral philosophy, who has obtained much celebrity in his own country, as the founder of a new philosophical sect. He was born at Königsberg in Prussia, in 1724, and his father, who was of Scottish extraction, was a saddler in humble circumstances. He was instructed in reading and writing at the charity-school of his parish, whence, by the kindness of an uncle, a wealthy shoemaker, he was sent to the collegium Fredericianum. His favourite study at the university was that of mathematics and the branches of natural philosophy connected with them; and on the completion of his academical education, he accepted the situation of tutor in a clergyman's family. After remaining a teacher for some years he returned to Königsberg, and supported himself by private instruction, until in 1746, being then only twenty-two years of age, he began his literary career with a small work, entitled

"Thoughts on the Estimation of the Animal Powers, &c." In 1754 he acquired great reputation by a prize essay, on the revolution of the earth round its axis, and was admitted to the degree of MA. He then commenced a course of lectures on the pure and practical mathematics, and from time to time published works which are now of little importance, compared with his new metaphysical system, the first traces of which are to be found in his inaugural dissertation, written in 1770, when he was appointed a professor in the university of Königsberg. Seated at length in the chair of metaphysics, his subsequent productions were almost all of that nature, until in 1781 he published his "Critique of Pure Reason," which contains the system commonly known under the title of the "Critical Philosophy." To this work in 1783 he published a second part, entitled "Prolegomena for future Metaphysics, which are to be considered as a Science." In 1786 he was appointed rector of the university of Königsberg, to which office he was again called in 1788, and though now far advanced in life, he continued his literary industry by the publication of numerous works in farther development of his philosophical principles until 1798, in which year he took leave of the public as an author, and gave up all his official situations. He lived for some years afterwards in a state of corporeal and mental decay, until released by death on the 12th of February 1804. Kant was a man of high intellectual endowments, and possessed so clear a conception, and so strong a memory, that he obtained an acquaintance with almost every science by reading only, and by the extraordinary faculty by which he retained every thing which had once passed through his mind. The Kantian or critical philosophy has been very generally admitted in Germany, and for a time banished every other from the protestant universities. When duly considered, however, by the veteran and unprejudiced metaphysician, it will be found to discover little which is new beyond its phraseology and classification, and it is already beginning to give way, even in the country which gave it birth. Any adequate explanation of a system, remarkable at once for subtlety of reasoning and obscurity of phraseology, will not be expected in an abridgment of this kind. We therefore refer to an able view of its fundamental principles, in the supplement to the Encyclopedia Britannica; to Nitsch's General and Introductory View of Professor Kant's Principles, &c.; and to Dr Willich's Elements of the Critical Philosophy, all which accounts have been written with a view to English readers, and more especially the last, which professes to give an adequate statement of the origin and tendency of all the works of this philosopher.—*Encyclop. Brit. Aikin's G. Biog.*

KÄSTNER (ABRAHAM GOTHELF) an eminent mathematician and professor of mathematics at Gottingen, was born at Leipsic in 1719. He exerted himself in conjunction with the most celebrated geometers of Germany,

Segner and Kästen, to restore to geometry its ancient pretensions, and to introduce more precision and accuracy of demonstration into the whole of mathematical analysis. Germany is in consequence indebted to Kästner for several able works on every part of the pure and practical mathematics, as also for a "History of the Mathematics," 2 vols. 1797. To scientific skill he added the rarely accompanying talent of poetical and epigrammatic humour, as appears by several works of that description. He died in 1800.—*Tilloch's Philos. Mag. Biog. Univ.*

KATE (LAMBERT TEN) a Dutch divine, who distinguished himself by his researches relative to the language of his native country. He published, in two volumes quarto, "An Introduction to the Knowledge of the Dutch Language," Amsterdam, 1723; besides which he was the author of a dissertation on the connexion between the Gothic tongue and the Dutch; a life of Jesus Christ; and a memoir on the beau-ideal in the arts of painting, sculpture, and poetry. He also collected a rich cabinet of pictures, &c. which evinced his taste and skill in the fine arts.—*Biog. Univ.*

KAUFFMAN (MARIA ANGLICA) the daughter of a Swiss painter, who herself attained to considerable eminence as an artist. She was born at Coire in 1740, and studied painting both at Rome and Venice; from which latter city she came to England at the invitation and under the patronage of the Wentworth family. After residing many years in this country, during which period she obtained a seat among the royal academicians, she contracted a marriage with the chevalier Zucchi, a native of Venice and a professor of her favourite art, whom she accompanied to Italy, and continued to reside in that country for the remainder of her life. Many of her most admired productions remain in England, and a large proportion of them have been engraved by Bartolozzi and others. Her death took place in 1807 at Rome.—*Edition of Pilkington by Fuseli.*

KAUNITZ (WENCESLAUS ANTHONY, prince) a German statesman, who was a native of Vienna. He was one of a numerous family, and was therefore at first destined for the church, but he quitted that profession for politics. In 1737 he was made a counsellor of state, and two years after he was sent as imperial commissioner to the diet of Ratisbon. In 1742 he was employed as minister plenipotentiary at the court of Sardinia; and in 1744 made minister of state for the kingdoms of Hungary and Bohemia. He was next occupied with the affairs of the Netherlands, and in 1748 he assisted at the treaty of Aix-la-Chapelle. The empress Maria Theresa then conferred on him the order of the golden fleece, and sent him as envoy to Paris. After being again employed in the Netherlands, he returned to Vienna in 1753, and took the office of chancellor of state, in addition to that of supreme director of the affairs of the Netherlands and of Lombardy, with the rank of minister of state, which he retained till his

death. His most important public service was the conclusion of the treaty of alliance between Austria and France in 1756. He was made a prince of the German empire in 1764, and survived that period about thirty years, dying June 27, 1794, at the age of eighty-three. He enjoyed to the last the confidence of the reigning sovereigns; but the later years of his life were spent in philosophical retirement.—*Aikin's Gen. Biog. Biog. Univ.*

KAYE, in Latin, Caius. There were two eminent scholars of this name in the sixteenth century, contemporaries and heads of colleges in their respective universities of Cambridge and Oxford, concerning the comparative antiquity of which seats of learning they carried on a warm controversy with each other. JOHN KAYE, the elder of the two, was born at Norwich in 1510, and was educated for the medical profession, first at Gonvil-hall, Cambridge, of which society he was elected a fellow, and afterwards at Padua and Bologna, in which latter university he graduated as MD. On his return to England he became physician to the court, and retained that office during three successive reigns. He also now became a munificent benefactor to the society in which he had commenced his education, and which still bears his name in lieu of its former designation of Gonvil-hall. This foundation he augmented by a liberal provision for the maintenance and education of twenty-three scholars, besides other large endowments, for the perpetual support of which he bequeathed the principal part of his property at his decease. Dr Kaye was himself the first master of this increased establishment, now known as Caius college, and added to the old building the quadrangle, also called after himself. Besides the controversy already alluded to, which commenced by his "History of Cambridge," in which he makes the foundation of that university to be coeval with the reign of the emperor Theodosius, he was the author of treatises "On the English Breed of Dogs;" "On rare Plants and Animals;" "On the Hot Springs of England;" "On the correct mode of Pronouncing the Greek and Latin Languages;" "De Ephemera Britannica;" and some medical tracts, "De Medendi methodo;" "Hippocrates de Medicamentis," &c. He died at Cambridge in 1573, surviving scarcely by a year his namesake and opponent, Dr THOMAS KAYE, who was a native of one of the northern counties of England, and who having graduated as AB, at University college, Oxford, took holy orders, and was elected fellow of All Souls. He was afterwards appointed public registrar, but for some irregularly lost the situation. This alleged misconduct, of whatsoever nature it might have been, does not appear to have impeached his moral character, as almost immediately subsequent to the death of Mary, we find his name enrolled as having been presented to a stall in Salisbury cathedral. This piece of retirement, in less than three years, was followed up by his elevation to the headship of the college in which he had matriculated.

Besides the treatise, entitled "Assertio Antiquitatis Oxoniensis Academiae," to which we have before referred, and of which an edition appeared in 1730, in two octavo volumes, comprising the arguments of both the disputants, he also published a translation of Erasmus's work on St Mark's gospel.—*Biog. Brit. Wood.*

KAZWINI (ZACHARIAH BEN MOHAMMED BEN MAHMOUD) an Arabian geographer and naturalist of the thirteenth century. He was a native of Casbin in Persia, and according to some authors he studied jurisprudence, and became *cadi* of Wacet and of Hillah, in Irak-Arabi. He is supposed to have died in 1283. Little is known of his personal history, but many of his works are still extant, the merit of which is such as to have gained him the title of the Arabian Pliny. The most important of his productions is divided into two parts, the first relating to astronomy, and the second to the terrestrial elements. He also wrote a description of the earth, and history of its inhabitants; and, according to D'Herbelot, he likewise produced a history of Casbin. Bochart, Hyde, Jahn, Assemani, Wahl, sir W. Ouseley, and other modern Orientalists, have availed themselves of the labours of this learned Arabian.—*Biog. Univ.*

KEACH (BENJAMIN) a baptist minister, born at Stokehaman in Buckinghamshire, in 1640. In 1664 he was sentenced to stand in the pillory for the publication of a book, called the "Child's Instructor," after which he was chosen pastor of a baptist congregation in Southwark, where he died in 1704. He was author of two works in the manner of Bunyan's *Pilgrim's Progress*, which made a great noise in their day, entitled "The Travels of Godliness," and "The Travels of Ungodliness." He is now best known by his "Tropologia, or Key to open Scripture Metaphors," folio, 1682, reprinted in 1778, and by his "Exposition of Parables."—*Crosby's Hist. of the Baptists.*

KEATE, FRs (GEORGE) an English author of the last century, born in 1729, at Trowbridge in Wiltshire. He received the rudiments of his education at Kingston grammar-school, after which he travelled for some time on the continent, and became acquainted at Geneva with Voltaire, to whom he some years afterwards addressed a poetical epistle, under the title of "Ferney." Having become a member of the Inner Temple soon after his return from abroad, he prosecuted the study of the law until called to the bar, but he seems never to have practised as an advocate, although at the time of his decease he was a benchler of the society to which he belonged. His writings are, "Ancient and Modern Rome," a poem, 1760; "Account of the Republic of Geneva," 1761; "Poetic Epistle from Lady Jane Grey to Lord Guildford Dudley," 1762; "The Alps, a descriptive Poem," 1763; "Netley Abbey," 1764; "The Temple Student," 1765; "Ferney," (the poem already alluded to,) 1769; "The Monument in Arcadia," a drama, 1773; and "Sketches from Nature," 2 vols, 1779. Captain Henry

Wilson, in 1783, was shipwrecked on one of the Palos or Pelew Islands, and afterwards succeeded in returning to England, in a vessel built by his crew upon the spot, with the assistance of the king, Abba Thulle, whose son, Lee Boo, accompanied him to Europe. This gentleman placed his papers in Mr Keate's hands, who, from that source, compiled his "Account of the Pelew Islands;" which was his last work, his death taking place in the summer of 1797. Mr Keate was a member both of the Royal and Antiquarian societies.—*Gent. Mag.*

KEATING (GEOFFRY) an Irish historian of English extraction, who flourished in the early part of the seventeenth century. He was a native of Tipperary, and educated for the priesthood of the church of Rome, and having received the degree of DD. from a foreign university, became a distinguished preacher. Being well versed in the ancient Irish language, he undertook to collect the remains of the early history and antiquities of the island, and formed them into a regular narrative, which he drew up in the Irish language, and finished about the time of the accession of Charles I. A due notion may be entertained of this production when it is added, that it commences from the planting of Ireland after the deluge, and extends to the seventeenth year of Henry II, and gives the lives and reigns of one hundred and seventy-four kings of the Milesian race, replete with fictitious personages and fabulous incidents, which, however, it is said the compiler gives as such, and only supposes that real facts may be mixed up in them. This work was translated into English by Dermot O'Connor in 1723, and published in London in a folio volume, of which a new edition, with splendid plates of the arms of the principal Irish families, appeared in 1738. Keating, who also wrote an "Elegy on Lord Decies," and some other pieces of a religious kind, is supposed to have died about the middle of the seventeenth century.—*Harris's Edition of Ware's Ireland.*

KEATS (JOHN) a young English poet, of extraordinary promise, and almost as extraordinary performance, was of humble origin, and born October 29, 1796, at a livery-stable, kept by his grandfather in Moorfields. In childhood he was sent to Mr Clarke's school at Enfield, where he remained till the age of fifteen, and was then bound apprentice to Mr Hammond, a surgeon, in Church-street, Edmondton. On leaving Mr Hammond, he attended St Thomas's hospital; but his inclination to poetry having been cultivated by his teachers at school, who marked his unusual turn of mind, and meeting when he came out in the world with the other encouragements of it natural to literary and stirring times, he found himself unable to pursue his profession, and gave way entirely to the ambition of becoming a great poet. What induced him to exhibit this ambition with the more eagerness was an introduction he had at this time to Mr Leigh Hunt, who was struck with admiration at the specimens

of premature genius laid before him. Mr Keats's first volume of poems, many of which were written in his teens, accordingly made its appearance in 1817, when he was in his twenty-first year. This was followed by "Endymion, a Poetic Romance," in 1818; and in the year 1820 he published his last and best work, "Lamia, Isabella, and other Poems," all which publications excited remarkable attention. Mr Keats's poetical faculty was of a nature to make its way into notice under any circumstances, and would unquestionably have done so; but the political and other opinions to which his attention had been early directed, the public connexions to which he was introduced, and the generous enthusiasm, natural to great talents, which would not allow him to conceal either, soon brought on him a host of critics, some of whom were but too happy to mask their political hostility under the guise of public zeal. An attack from a review, the conductors of which were actuated by this motive, completed the difficulties with which Mr Keats had to contend; and his constitution never having been very strong, and undergoing a severe shock in the illness and death of a younger brother, whose bedside he had attended when he ought to have been nursing an illness of his own, not to mention some other perplexities of a nature too delicate, though unfounded, to be mentioned here, he put forth his last volume with little hope of its doing any thing but shew what he might have done; and withdrew into silence and the arms of his friends to die. It is certain, that he had made up his mind to this premature end a good while before it took place. During his sufferings, which were considerable, owing to the consciousness of what he might have performed, the disdain of his own physical weakness, which subjected him to impressions from his enemies that be otherwise despised, and above all, to a very tender hope which he had reason to indulge, and which he now saw he must give up in this world, he nevertheless exhibited a manly submission, and took a pleasure in showing himself sensible of the attentions he experienced. After residing some months in the houses of Mr Charles Brown, Mr Leigh Hunt, and other friends at Hampstead, he prevailed upon to try the climate of Italy, where he arrived, but without effect, in the month of November, 1820, accompanied by his friend Mr Severn, a young artist of great promise, since well known as the principal English student at Rome; and in Rome, on the 27th of December following, in the arms of this gentleman, who attended him with undeviating zeal, he expired, completely worn out, and wearied of life. His lingering death-bed was so painful to him, that he used eagerly to watch the countenance of the physician, in hopes of seeing what others would have called the fatal sentence; yet so sweet was his natural taste of life, and so irrepressible his poetical tendencies to the last, that a little before he died, speaking of the grave he was about to occupy, he said "He felt the daisies

growing over him." He was interred in the English burying-ground, near the monument of Caius Cestius, and not far from the grave in which was soon after deposited his poetical mourner, Mr Shelly, who had made him the handsomest offers to come and live with him in Tuscany. It is a mistake to attribute Mr Keats's death, as lord Byron has done among others, to the attacks of the critics; and his lordship was told of it, before the passage to that purpose in *Don Juan* appeared; but a lively couplet, with a good rhyme to it, is hard for a wit to part with. The attacks may have accelerated, and undoubtedly embittered his death; but the cause of it was a consumptive tendency, of an extreme kind, and of long standing. When his body was opened, there was scarcely any portion of lungs remaining. The physicians declared, that they wondered how he could have held out so long; and said, that nothing could have enabled him to do it but the spirit within him. Mr Keats had a very manly, as well as delicate spirit. He was personally courageous in no ordinary degree, and had the usual superiority of genius to little arts and the love of money. His patrimony, which was inconsiderable, he freely used in part, and even risked altogether, to relieve the wants of others, and farther their views. He could be hot now and then; and perhaps was a little proud, owing to the humbleness of his origin, and the front he thought it necessary to present to vulgar abuse. He was handsome, with remarkably beautiful hair, curling in natural ringlets. Mr Keats's poems have been so often criticised both by friends and enemies, and have succeeded, since his death, in securing him so unequivocal a reputation as a highly promising genius, that it will be necessary to say comparatively little of them here. If it was unlucky for his immediate success, that he came before the public recommended by a political party; it was fortunate for him with posterity, that he began to write at a period when original thinking, and a dependance on a man's own resources, were earnestly inculcated on all sides. Of his standing with posterity we have no doubt. He will be considered, *par excellence*, as the young poet; as the one who poured forth at the earliest age the greatest unequivocal exuberance, and who proceeded very speedily to show that maturity brought him a judgment equal to the task of pruning it, and rendering it immortal. He had the two highest qualities of a poet, in the highest degree—sensibility and imagination. His *Endymion*, with all its young faults, will be a store-house for the lovers of genuine poetry, both young and old; a wood to wander in; a solitude inhabited by creatures of superhuman beauty and intellect; and superabundant in the luxuries of a poetical domain, not omitting "weeds of glorious feature." Its most obvious fault was a negligence of rhyme ostentatiously careless, which, by the common law of extremes, produced the very effect he wished to avoid—a pressure of itself on the reader. The fragment of *Hyperion*, which was his last per-

formance, and which extorted the admiration of lord Byron, has been compared to those bones of enormous creatures which are occasionally dug up, and remind us of extraordinary and gigantic times.—*Original Com.*

KEBLE (JOSEPH) an English lawyer of almost incredible industry, though as it would seem of little practice in his profession. His father, Richard Keble, was a sergeant-at-law during the commonwealth, and his own birth took place about the year 1632. Having gone through a course of university education at Jesus college, Oxford, and being appointed, by the interest of his father with the dominant party, a fellow of All Souls in 1648, he entered himself of Gray's Inn, and in 1658 was called to the bar. Three years afterwards he began to signalize himself by the constant regularity of his appearance in the court of King's Bench, where from that time to the day of his decease, a period of nearly half a century, he occupied himself incessantly with writing out reports of the various cases which came before the court, being himself, it is confidently asserted, never once professionally employed there, even so much as to make a motion. At the chapel, belonging to his inn of court, Mr Keble was no less persevering, and after his decease copies of upwards of 4000 sermons, delivered by various preachers in that place of worship, were found in his hand-writing. His printed works include, "A new Table to the Statute Book," compiled in 1674; "An Explanation of the Laws against Recusants," 1681, 8vo.; "An Assistance to Justices of the Peace," folio; "Reports from the King's Bench," folio, 3 vols.; an essay "On Human Nature;" and another, "On Human Actions." But by far the greatest proof of his unwearied assiduity, appears in upwards of one hundred folio and fifty quarto volumes of manuscript which he left behind him. His death took place suddenly in the month of August 1710.—*Biog. Brit.*

KECKERMAN (BARTHOLOMEW) an eminent Prussian Calvinist divine and philosophical professor, was born at Dantzic in 1571. He received the first rudiments of learning from James Fabricius, and studied divinity and philosophy at the university of Wittemberg. He subsequently became Hebrew professor at Heidelberg, and finally co-rector of the celebrated academical institution in his native city. In this capacity he proposed to initiate students in philosophy in a more compendious manner, and with that view drew up a great number of systems and treatises of logic, ethics, metaphysics, physics, astronomy, &c; and was so assiduous in writing and teaching, that his health became irreparably injured, and he died in 1609, at the early age of thirty-eight. His works were published at Genoa in 1684, in 2 vols. folio, the most valuable part of which consists of his systematic treatises on rhetoric, &c.—*Melchior Adam, Moreri.*

KEDER (NICHOLAS) an antiquary and artist, born at Stockholm in 1659. After having finished his studies in Sweden, he

travelled into other countries, to acquire a knowledge of foreign languages, and to make a collection of medals and of designs of ancient monuments. On his return home he was made archaeological assessor of the chancery, and Charles XI employed him to arrange a cabinet of Roman medals. He was consulted relative to the devices, inscriptions, and emblems on the medals struck by the government; and on the occasion of his having letters of nobility conferred on him in 1719, a commemorative medal was made with the inscription *Nobilis qui bonus*. He died in 1735. His works consist of a treatise, entitled "Thesaurus Nummorum Sueo-Gothicorum;" dissertations in Latin; his own life in the same language, inserted in the "Acta Litteraria Suecicæ," 1747; and a poem in French.—*Biog. Univ.*

KEENE (EDMUND) bishop of Ely, the son of an alderman of Lynn in the county of Norfolk, where he was born in 1713. From the Charterhouse school he removed to Caius college, Cambridge, but quitted that society in 1739, on being elected fellow of Peter-house. His brother, sir Benjamin Keene, procured him the following year, from sir Robert Walpole, the valuable benefice of Stanhope in the diocese of Durham, in the gift of the crown. Eight years afterwards, on the death of Dr Whalley, he was chosen head of his college, and was called on in his turn to serve the office of vice-chancellor of the university. In 1752 he was raised to the episcopal bench, as bishop of Chester, and two years afterwards resigned his university appointments. Bishop Mawson dying in 1770, Dr Keene was translated to the see of Ely, the revenues of which diocese he much improved, as well as the general condition of the pecuniary resources of the bishopric, by procuring an act of the legislature, enabling him to part with the old and dilapidated palace which then occupied the site of Ely-place on the north side of Holborn, and to erect with the proceeds the present episcopal residence in Dover-street, Piccadilly; the surplus of revenue derived from this source, after the erection of the new building, being estimated at upwards of 5000*l.* per annum. Dr Keene as a prelate was celebrated for his unaffected piety, learning, and munificence; his death took place in 1781.—*Chalmers's Biog. Dict.*

KEILL (JOHN) an eminent mathematician and natural philosopher of the last century. He was born at Edinburgh in 1671, and studied in the university of that city, under the mathematical professor, David Gregory. On the removal of that gentleman to Oxford, Mr Keill went with him, and was admitted a student of Balliol college. There he exhibited experiments illustrative of the Newtonian philosophy, by means of an apparatus of his own invention; and he likewise acquired great credit by his examination of Dr Burnet's Theory of the Earth, and of Whiston's Speculations on the same subject. In 1700 he read lectures on natural philosophy, as deputy for the Sedleian professor, sir Thomas Millington

He published in 1701, his "Introductio ad veram Physicam," which was several times reprinted, and was translated into French, about 1708 he was chosen a fellow of the Royal Society; and at that period he carried on a controversy with Leibnitz, relative to the discovery of the doctrine of fluxions, in which Keill advocated the cause of sir Isaac Newton, in opposition to the claims of Leibnitz. In 1709 he was appointed treasurer to the German exiles from the palatinate, and he attended them to the settlements provided for them by our government in America. He returned home next year, and was made Savilian professor of astronomy at Oxford. He not long after defended the philosophy of Newton against the Cartesians, in a paper presented to the Royal Society, "On the Rarity of Matter and the Tenuity of its Composition." In 1711 he received the appointment of decypherer to the queen; and in 1713 the university of Oxford conferred on him the degree of MD. He published in 1715 an edition of Euclid's Elements, and three years after, a Latin work on astronomy, which he translated into English, and printed in 1721, under the title of "An Introduction to the true Astronomy, or Astronomical Lectures, read in the Astronomical School of the University of Oxford." This was his last labour in the cause of science, as he died September 1st, 1721.—KEILL (JAMES) younger brother of the foregoing was born in 1673, and studied medicine at Edinburgh, and afterwards at Leyden. Returning to England he read lectures on anatomy both at Oxford and Cambridge, and obtained the diploma of MD. at the latter university. In 1703 he settled as a physician at Northampton, and practised there with much reputation till his death, which happened in 1719, owing to that horrible disease a cancer in the mouth. He was the author of a popular compendium of the Anatomy of the Human Body, 12mo; and he carried on a controversy with Dr Jurin, and published several physiological tracts and papers in the Transactions of the Royal Society, of which he was a fellow.—*Biog. Brit. Martin's Biog. Philos.*

KEISER (REINHARD) an eminent musician and composer of Leipzig, born 1673, and educated in the university belonging to his native city. He is considered as the father of German melody, and possessed a fancy as inexhaustible as original, being the author of one hundred and eighteen operas, in all of which is discernible the vigour of a fertile imagination, corrected by study and experience. Of these, his "Circé," brought out at Hamburg, in 1734, was the last and most beautiful. He was for many years director of the opera-house at Hamburg, and on one occasion saved that concern from absolute ruin, by his exertions in bringing out no fewer than eight new operas in one year. Keiser died in 1735; and it is much to be regretted that, from the scarcity of the scores, his writings are now comparatively little known.—*Biog. Dict. of Mus.*

KEITH (JAMES) a brave and experienced

warrior, as well as an able and successful politician, field-marshal of Prussia, and the confidential friend of its sovereign. He was descended of a noble house in Scotland, being the youngest son of William Keith, earl-marshal of that kingdom, and was born in 1696. As the cadet of a family more illustrious than wealthy, the law was marked out for him by his father, as the pursuit by which he was to attain to competence and reputation; but the breaking out of the rebellion in 1715 developed at once his military propensities, and gave the future colour to his fate. His mother, herself warmly attached to the house of Stuart, added her persuasions to the dictates of his own inclination, and nothing more was wanting to induce him, at the early age of nineteen, to join the Pretender's standard. The issue of the battle of Sheriffmuir, so unfortunate to the cause he had embraced, drove him into voluntary exile; he escaped from the conflict wounded and with difficulty, and effected a retreat to France. Here he subsisted for some time on supplies furnished him from Scotland, and applied himself with great diligence and perseverance to the study of mathematics and military tactics, having previously made considerable progress in classical and general literature, under the auspices of the celebrated Ruddiman. In 1717 he quitted Paris for Italy, whence he proceeded to Spain, in the capital of which kingdom he was fortunate enough to obtain the countenance and friendship of the duke of Liria, who procured him a command in Ormond's Irish brigade. He subsequently accompanied his patron, when appointed ambassador to Russia, where, through the duke's recommendation, he obtained the rank of lieutenant-general from the czarina, who also conferred on him the order of the black eagle. In the Russian service he continued several years, distinguishing himself as well in the field as in the cabinet, during the wars of the country of his adoption with Turkey and Sweden. In the revolution, which ended by the elevation of the czarina Elizabeth to the throne, he also took a prominent part; but at length, on some disgust, he requested and obtained his dismissal. On leaving Russia he went to Berlin, where the king of Prussia, to whom his abilities were well known, received him with open arms, and raised him to the distinguished and responsible post of governor of his metropolis, and field-marshal of his forces. He made him also his confidential companion, selecting him as his associate in a tour which he made incognito through part of the north of Europe. In the subsequent wars of that martial monarch, field-marshal Keith continued to display the greatest military talent as well as zeal in his service, till his career was finally closed by a cannon-shot, in the unfortunate battle of Hochkirchen, fought on the 14th of October, 1758.—*Chalmers's Biog. Dict.*

KEITH (THOMAS, a native of Brandsburton, near Beverley, Yorkshire, born 1759. Having received a respectable education from his parents, and finding himself on their de-

crease much straightened in his pecuniary resources, he came to London in 1781, with the view of turning his talents to account, and soon acquired distinction as a mathematician. In 1804 his reputation as an accountant procured him the appointment of secretary to the master of the king's household, to which was added six years afterwards, the professorship of geography and sciences to the princess Charlotte of Wales. In 1814 the situation of accountant to the British Museum becoming vacant, the archbishop of Canterbury conferred it on Mr Keith, who retained it till the day of his death, June 29, 1824. His writings are, "The Complete Practical Arithmetician," 1789, an abridgment of which afterwards passed through several editions. An "Introduction to the Science of Geography;" "An Introduction to the Theory and Practice of Plane and Spherical Trigonometry," 1801; a "Treatise on the Use of the Globes," 1805; and "Elements of Geometry," 1814. He also superintended the publication of several editions of "Hawney's Complete Measurer," and "Paterson's Book of Roads."—*Gent Mag.*

KELLERMANN (FRANCIS CHRISTOPHER) duke de Valmy, peer and marshal of France, senator, grand cordon of the legion of honour, grand cross of the order of St Louis, &c. He was born at Strasburgh in 1735, and entered into the army as a private hussar at the age of seventeen. His ardour, intelligence, and passion for arms soon attracted the observation of his superiors; and having given manifest proofs of his talents and courage in the seven years' war, he was made an officer, and rapidly promoted, till in 1788 he was made a quarter-master general. Having adopted with enthusiasm the principles of the revolution, he was in 1792 appointed commander of the army of the Moselle. He then effected a junction with Dumourier, on the plain of Champagne; and on the 17th of September he greatly distinguished himself by his defence of the position of Valmy, which contributed much to the success of the campaign. He next served under Custine, who denounced him to the National Convention; and though he justified himself against the accusation of that officer, several similar attacks followed; and at length he was arrested and confined in the military prison of the abbey at Paris. Fortunately his trial did not take place till after the expiration of the reign of terror, and he was acquitted. In 1795 he took the command of the army of the Alps and Italy; but he was soon superseded by Bonaparte. On his return to Paris in 1798, he was nominated a member of the military board, established by the directory. In 1801 he was president of the conservative senate, and the following year made a marshal of the empire. Under Napoleon he served with credit in Germany and Prussia; but having in 1814 voted for the restoration of royalty, he continued to be employed under the new regime till his death in 1820.—*Biog. Nouv. des Contemp. Dict. des H. M. du 13me. S.*

KELLEY, alias **TALBOT** (**EDWARD**) a famous reputed alchymist and necromancer, was born at Worcester in 1555, and educated at Gloucester hall, Oxford. Wood observes, that being of an unsettled mind, he left Oxford abruptly, and was guilty of some crime in Lancashire, for which he lost his ears. He afterwards became an associate of the learned and credulous Dr Dee, in his ridiculous incantations and Rosicrucian impostures, to whose article we refer for their adventures in Germany, previous to their quarrel and separation in 1589. For some time after Kelley contrived to live handsomely by his impostures, until the detection of some of his impositions induced the emperor Rodolph to imprison him. He had the address however to obtain his release, and is even said so far to have conciliated the emperor, as to obtain the honour of knighthood. He was soon detected in new knaveries, and being imprisoned a second time, he attempted to escape from a window, by means of his sheets, but falling to the ground from a considerable height, he expired soon after, in consequence of the bruises which he received, in 1595. His works are, "A Poem of Chemistry," and "A Poem of the Philosopher's Stone," both inserted in Ashmole's *Theatrum Chymicum Britannicum*; a treatise, his right to which however is questioned, entitled, "De Lapide Philosophorum," published at Hamburg in 1676, 8vo; and several Latin and English discourses printed in Dr Meric Casaubon's "True and faithful Relation of what passed for many years between Dr John Dee and some Spirits." According to Linden in his treatise "De Sripitis Medicis," Kelley was also author of "Fragmenta, aliquot edita a Combachio Geismar," 1647, 12mo; several of his MSS. are in the Ashmolean museum at Oxford.—*Athen. Oxon.* vol. i. *Weaver's Funeral Monuments.*

KELLGREN (**JOHN HENRY**) a Swedish poet and man of letters, born in 1751. He studied in the university of Abo in Finland, and afterwards delivered lectures on literature at that place. He then removed to Stockholm, where he distinguished himself by his talents for poetry and the drama. He was fortunate enough to obtain the patronage of the king, Gustavus III, and was one of the first members of the Swedish academy founded by that prince. He died April 12, 1795. The works of Kellgren consist of odes, epistles, and tragedies; translations from Horace, Tibullus, and Voltaire; and essays on moral philosophy; and he was also conductor of a periodical journal.—*Biog. Univ.*

KELLISON (**MATTHEW**) an English Catholic divine of considerable eminence as a controversial writer, was born in Northamptonshire about 1560, and brought up in the family of lord Vaux, whence he was sent for education to the English colleges at Douay and Rheims. He afterwards went to Rome, where he remained seven years, and on his return was created DD., and became chancellor of the university of Rheims. After a residence of twelve years at Rheims, he removed to Douay

in 1613, and was declared president of that college by a patent from Rome. He died January 1, 1641. His works are, "Survey of the New Religion;" "Reply to Sutchille's Survey of the New Religion;" "Oratio coram Henrico IV;" "The Gagg of the Reformed Gospel;" "Examen Reformationis;" "The Right and Jurisdiction of the Prince and Prelate;" "A Treatise on the Hierarchy of the Church;" "A brief and necessary instruction for the Catholics of England," &c. Sutcliffe and Montague were his chief Protestant controversial opponents.—*Dodd's Church Hist.*

KELLY (**HUGH**) a dramatic and miscellaneous writer, was born in 1739, on the banks of the lake of Killarney in Ireland. His father was a person of good family, in reduced circumstances, who being obliged to depend upon his own personal industry in Dublin, could do no better than supply his son with a small portion of education, and apprentice him to a stay-maker. He accordingly served out his time in that capacity, and then repaired to London, where he met with no success in his own business; but having attained the friendly notice of an attorney of reputation, who employed him in his office, he remained in this situation until by accidental acquaintance with some booksellers he was enabled to cultivate his literary inclinations, by becoming editor to the Ladies' Museum and other periodical publications, in which his light vein of poetry and facility in the composition of minor essays, soon procured him ample employment. His industry enabled him to cope with the added difficulties of a wife and rising family; and politics also engrossing a share of his attention, he wrote many pamphlets on public affairs, and among others a "Vindication of the Administration of Mr Pitt." "The Babblers," a collection of essays in two volumes; "Louisa Mildmay;" and a poem in imitation of the Rosciad of Churchill followed; and in 1767 appeared his first comedy of "False Delicacy," the decided success of which led to the composition of "A Word to the Wise." The latter was driven from the theatre by a report that he was employed to write for the ministry; but a liberal subscription by the court party when the piece was published, made him ample amends in a pecuniary point of view. A tragedy called *Clementina* succeeded, but it met with little attention; and aware of the political hostility which existed against him, he induced a friend to father his "School for Wives," which was received with decided approbation, and acknowledged by the real author when its success was ensured. In the mean time he resolved to study the law, and entering himself a member of the society of the Middle Temple, he was called to the bar in 1774. His next dramatic production was the "Romance of an Hour," which was succeeded by the "Man of Reason," the last of his dramatic attempts; for, injured by his too sedentary application, an abscess formed in his side, which terminated his existence on the 3d of February, 1777, in the thirty-eighth year of his age. He left a widow and five

children, for whose benefit his play of "A Word to the Wise" was performed before a crowded audience about a month after his death. His works were also collected and purchased in 4to, with a life of the author. Kelly was a lively and versatile writer of respectable, but not commanding talent; and his drama is ingenious, but too pathetic and sentimental for a due infusion of the vis comica; on which account, although a few of his pieces were popular for a season, not one of them retains the stage.—*Life as above.*

KELLY (JOHN) a learned English clergyman, a native of Douglas in the isle of Man, where his ancestors had from time immemorial possessed a small freehold. He was born in 1750, and was educated at the free grammar school of Douglas, and was led by his early sympathies to pay a particular attention to the vernacular dialect of the Celtic tongue, which was spoken in the island. His skill in the Manks language, of which at the age of seventeen he sought to compile a grammar and dictionary, introduced him to bishop Hildesley, who employed him in translating the Bible into the Manks tongue, and ordained him a minister of the episcopal congregation of Ayr in Scotland. Here he was engaged by the duke of Gordon to attend the studies of the marquis of Huntley, and through the same patronage he obtained the rectory of Copford in Essex. On the attainment of this preferment he entered at St John's college, Cambridge, and attained the degree of LL.D. In 1803 he published "A Practical Grammar of the Ancient Gaelic, or Language of the Isle of Man," and in 1805 issued proposals for "A Triglot Dictionary of the Celtic Tongue, as spoken in the Highlands of Scotland, Ireland, and the Isle of Man," which last was nearly completed when the sheets were destroyed by the fire on the premises of Mr Nichols the printer. Doctor Kelly died in 1809.—*Gent. Mag.*

KELLY (MICHAEL) the son of a wine merchant of Dublin, of the same name, who for many years acted as master of the ceremonies at the castle. The subject of this article was born in the year 1762, and at a very early age gave proofs of a strong genius for music, which his father encouraging, placed him under the best masters which the Irish metropolis could furnish. Rauzzini being at this time engaged in Dublin, gave him lessons in singing, and prevailed on his friends to send him to Naples, where he arrived in his sixteenth year, and was much patronized by sir William Hamilton, the British minister at that court, studying under Fineroli, at the Conservatorio La Madona della Loretto. He also received lessons from Aprili, the first singing-master of his day, who procured him an advantageous engagement at Leghorn. He subsequently performed with success at most of the Italian theatres, in quality of *primo tenore*; and travelling into Germany, was one of the original singers in the "Nozze di Figaro" of Mozart, with which celebrated composer he contracted a close intimacy during his stay at Vienna, where he had accepted an engagement in the

service of the emperor Joseph. By this monarch he was much caressed, till having a length obtained permission for a year's absence in order to visit his friends in Ireland, he never returned to the continent, but settled in London. Here he made his first appearance at Drury Lane theatre in April 1787, as Lionel, in the opera of "Lionel and Clarissa," and retained his situation as first singer at that theatre, the musical performances of which he also directed till his final retirement from the stage. In 1797 he furnished the music to "A Friend in Need;" "The Castle Spectre," &c. which in the succeeding year he followed up by the most popular of all his compositions, the airs, marches, &c. in Colman's musical romance of "Bluebeard." From this period till 1819 he continued to write, and in the course of the intervening years set upwards of sixty pieces, most of which were successful. For some time previous to his decease he had been partially deprived of the use of his limbs by a paralytic affection; his faculties and memory were however spared him to the last. Of the latter an evidence exists in his "Reminiscences," an amusing work, in two volumes, 8vo, which appeared a few months previously to his decease, replete with anecdotes of his contemporaries and familiars. His death took place at Ramsgate on the 15th October, 1826.—*Biog. Dict. of Mus. Kelly's Reminiscences.*

KEMBLE (JOHN PHILIP) one of the most eminent tragedians of the British stage since the days of Garrick. He was the eldest son of Roger Kemble, manager of a company of comedians at Prescot in Lancashire, in which county he was born February 1757, and received the rudiments of education at the Roman Catholic seminary of Sedgely park, Staffordshire. With the view of qualifying him for one of the learned professions, he was afterwards placed by his father at the college of Douay, where he early distinguished himself by his proficiency in elocution. On his return to England, having completed his academical pursuits, he entered immediately upon the profession of an actor, for which he had long exhibited a decided predilection, performing at Liverpool, York, Edinburgh, and other provincial towns of inferior note. At this period of his life he produced a tragedy on the story of Belisarius, which was acted at Liverpool, besides altering and adapting to the stage several of the works of the early English dramatists. He also printed, about the same time, a volume of "Fugitive Pieces," in verse, with the appearance of which he was however so dissatisfied, that on the very day after their publication, he bought up and destroyed every copy he could recover. One which escaped his hands has since been sold by Mr King, the auctioneer, for *Sl. 5s.* Mr Kemble appeared for the first time in London on the Drury-lane boards, September 30, 1783, in the part of Hamlet, and was received with great applause; it was not, however, till the secession of Smith from the stage in 1788, that he took that decided lead in tragedy which

he ever after maintained. In 1787 he married Mrs Brereton, daughter of Mr Hopkins, the prompter of Drury-lane theatre. On the succession of Mr King, Mr Kemble succeeded to the management of Drury-lane theatre, which he enjoyed with only a short interruption till 1801, during which period the drama was much indebted to him for various and considerable improvements. He also used the influence which his situation gave him in restoring to the stage several old plays of merit, as well as in bringing forward many new productions, some of which were considerably altered and improved by himself. Among these are said to be "Deaf and Dumb," "The Stranger," "Siege of Belgrade," &c. In 1794 he brought out a musical entertainment of his own, founded on the incidents of a French novel, and entitled "Lodoiska," which had a great run at the time, and has since been revived with benefit to the theatre. In 1802 he visited the continent, and having passed twelve months at Paris and Madrid, returned to London, when he purchased a sixth share of Covent-garden theatre, and became manager of that establishment. Here he continued his career with great success, till the destruction of the theatre by fire in 1809. In the autumn of the same year, the present edifice being constructed, opened with an increase of prices, which, together with certain obnoxious arrangements in regard to the private boxes, created for a series of nights the disturbances known by the name of the O P riots, and gave rise to a contest between the management and the public, in which the former was at length worsted. Mr Kemble took his farewell of the stage on the 23d of July 1817, on which occasion he was complimented with a public dinner and other honourable tokens of esteem; and shortly after retired to the continent, where he died at Lausanne in Switzerland, February 26, 1823, of a paralytic attack, after a few hours' illness. As an actor, Kemble was of the school which qualifies spontaneous conception and feeling with profound consideration, measured dignity, and learned precision. His merits were therefore differently appreciated by the admirers of the drama, according to their various theories, in respect to impulsive or reflective personation. By all however he was regarded as a highly gifted actor, and the impression which he made in characters more immediately adapted to his style of excellence, such as Cato, Coriolanus, Hamlet, John, Jaques, Penruddock, &c. will last as long as the recollection of them. His management both of Drury-lane and Covent-garden theatres, but especially of the latter, was also marked by the exhibition of much refined and accurate taste, in the rectification of scenic decoration, and the adoption of appropriate costume, adding thereby both to the splendour and illusion of the drama. The learning, elegant manners, and accomplishments of Mr Kemble, introduced him into the best company in reference both to rank and talent, by whom he was at once

courted and esteemed; and taken altogether he may be regarded as a conspicuous instance of the compatibility of his profession with dignified self-estimation and general respect.—GEORGE STEPHEN KEMBLE, brother of the foregoing, an able actor. He was born May 3, 1758, at Kingstown in Herefordshire; his mother, herself an actress, having played that very night the part of Anne Bullen, in the play of Henry VIII, was put to bed just at the time when, as queen, she was supposed in the drama to have given birth to the princess Elizabeth. He was originally destined for the medical profession, and apprenticed to a surgeon at Coventry, but soon quitted it for the stage, and after going through the usual ordeal of the provinces, appeared at Covent-garden September 24, 1783. He afterwards became successively manager of the theatres of Edinburgh, Glasgow, Liverpool, and Newcastle, and acting manager at Drury-lane. On the stage he was chiefly remarkable for playing Falstaff, it is said without stuffing. His last appearance on the boards was in the part of sir Christopher Curry, May 20, 1822, a fortnight before his death.—*Ann. Biog. Boaden's Life of Kemble.*

KEMP, Mus. D. (JOSEPH) a musical composer of great respectability, born in 1778 at Exeter, in the cathedral of which city he was early placed as a chorister under the celebrated William Jackson, at that time organist there. In 1802, having obtained the situation of organist in Bristol cathedral, he removed thither, and in the same year composed one of his best anthems, "I am Alpha and Omega," for the benefit of the "Institution for affording Assistance to the Widows and Orphans of Clergymen in indigent Circumstances." In 1807 a prospect of advancement in his profession opening to him in the metropolis, he went to London, and although disappointed in the immediate views which brought him up, continued to reside there till 1814, when he returned to his native city. His war anthem, "A Sound of Battle is in the Land," performed by him at Cambridge in 1809, as an exercise for his bachelor's degree in music, was much admired; and the favourable impression it produced occasioned a dispensation being granted to him of the time usually deemed necessary to be passed between the taking that degree, and attaining that of doctor in the same science, to which he was admitted in the July of the same year. While in London, Dr Kemp delivered several courses of lectures at the Russel and other institutions, in which he explained his "New System of Musical Education, proving the Science to be one of Simplicity, arising out of a Scale of Nature." He died May 22, 1824. His principal works are, his "New System," printed on upwards of 100 cards; "Twenty Psalmical Melodies;" "The Jubilee," an entertainment performed at the Haymarket; "The Siege of Ischia," an opera; and "The Vocal Magazine," with a variety of songs, glees, duets, &c.—*Biog. Dict. of Mus.*

KEMPELEN (WOLFF ANG, baron von) fa-

mous as the inventor of the automaton chess player, was a native of Presburg in Hungary. He displayed much talent when young as a mechanic; and as early as 1769 he announced the completion of his automaton or autoceides, which afterwards attracted so much attention. In 1783 the chess-playing figure was first exhibited at Paris; and it afterwards made its appearance in London, where it surprised and puzzled those who witnessed its performance. It consisted of a figure in a Turkish dress, seated at a table, the top of which was marked as a chess-board. The arms of the automaton, by means of internal machinery, was capable of executing about a dozen motions, which it appeared to perform spontaneously, so as to play a game at chess with any visitor. Baron Kempelen or his assistant was always present on these occasions, to direct by some incomprehensible method the motions of the figure. While the movements were taking place, the noise of a fly-wheel was heard; and after a certain time the machinery required winding up like a clock, before it could again be brought into action. Various conjectures have been advanced as to the means by which the action of this machine was directed. The most probable of which is, that a child was concealed in a drawer under the table which supported the chess-board. It is true that the whole cavity beneath the table, as well as the body of the figure, was opened and exhibited to the spectators previously to the commencement of an exhibition; but as the inside of the automaton and the space under the table were not shown at the same time, the child might move from one part to the other, so as to deceive those who witnessed the performance. It is easy to conceive that by means of some audible signal, the baron might have directed the evolutions of the automaton. This very ingenious man also constructed a speaking figure, of which he published an account in a curious work, entitled "La Mécanisme de la Parole, suivi de la Description d'une Machine Parlante, et enrichi de 27 Planches," Vienne, 1791, 8vo, also printed in German. He contrived likewise a printing-press for the use of Mademoiselle Paradis, a famous blind musician. As specimens of his literary talents, he published German poetry; a drama, called "Perseus and Andromeda; "The unknown Benefactor," a comedy, &c. He died at Vienna in 1804.—*Biog. Univ. Edinburgh Encyclop. Art. Automaton.*

KEMPIS (THOMAS à) rendered eminent by the popularity of his devotional tract, was born in 1380 at Kemp, a village in the diocese of Cologne, whence he took his name. He studied in a seminary of considerable repute at Deventer, where he was admitted on a foundation for the charitable instruction of the children of persons in humble circumstances. Here he became distinguished for his piety and attachment to a contemplative life; on which account in 1399 he obtained letters of recommendation from the founder of the monastery of regular canons of Mount St. Agnes,

in the district of Zwoll, of which his brother was prior. After a probation of six years, he received the habit of the order, and in 1423 was ordained a prior. He spent the remainder of a long life in the assiduous practice of the prescribed duties of the cloister, and in composing sermons, devotional treatises, and lives of devout persons. He died in 1471, in the ninety-second year of his age, leaving a high reputation for humility, benevolence, and sanctity. His works, which are chiefly practical and devotional, are written in a pleasing, animated, and impressive style, not untinged with enthusiasm; and of these a collection was printed at Antwerp, 1615, 3 vols. 8vo. Many of them have been translated into various languages, particularly the celebrated treatise "De Imitatione Christi," which however has also been attributed to John Gersen, a benedictine abbot, who lived some time before Kempis; and a long controversy, the particulars of which may be seen in our authorities, existed for sixty years, without settling the point. This celebrated work was translated into English by Dr Stanhope, and first printed in 1696.—*Frœheri Theatrum. Cave. Dupin. Gent. Mag.* vols. 83 and 84.

KEN (THOMAS) a learned and pious dignitary of the English church, who was a native of Berkhamstead in Hertfordshire, and was educated at Winchester school and New college, Oxford. He obtained a fellowship in Winchester college in 1666, and subsequently a living in the Isle of Wight, and a prebendal stall at Westminster. About 1679 he went to Holland to officiate as chaplain to the princess of Orange, and afterwards to Tangier, as chaplain to the earl of Dartmouth. In every station which he held, he exhibited a conscientious propriety of conduct and unyielding morality, which procured him the respect of the licentious court of Charles II; and strange as it may appear, conciliated the favour of that profligate prince. For, residing at Winchester when the king, attended by his female favourites, visited that city, his house was destined by his majesty's harbinger for the lodging of Nell Gwynn; but Dr Ken, thinking such an inmate unsuitable for a man of his function, positively refused to admit her. When the king was informed of his conduct, he coolly said, Mrs Gwynn must find lodgings elsewhere; and to the surprise of his courtiers, he took the first opportunity to promote this conscientious supporter of the dignity of his character. Dr Ken became a chaplain to Charles II, in whose reign he was made bishop of Bath and Wells. His firmness of principle was again exemplified in his petition to James II, against reading the declaration for liberty of conscience, in which he was associated with archbishop Sancroft and five other prelates, with whom he encountered the memorable prosecution, the event of which greatly contributed to weaken the authority of the misguided monarch. After the revolution, bishop Ken refused to take the oath of allegiance to king William, in consequence of which he was deprived of his preferment. He

was however highly respected by those who held opposite sentiments; and queen Anne bestowed on him a pension. He resided much with the family of Thynne at Longleat in Wiltshire, and died there in 1711. His works, consisting of sermons, poems, &c. were published in 4 vols. 8vo. 1721, with an account of his life by his nephew, sergeant Hawkins.—*Aikin's G. Biog.*

KENNEDY (JAMES) bishop of St Andrew's, Scotland, and founder of the college of St Salvador. He was the younger son of James Kenedy, of Dunmure, by the countess of Angus, his wife, daughter of Robert III, and was born about 1405 or 1406. Entering into holy orders, he was preferred by James I to the bishopric of Dunkeld; and in 1440 advanced to that of St Andrew's. During the minority of James III, he was appointed one of the lords of the regency, but in fact enjoyed the whole power, and conducted himself with great prudence. He died in 1446, and was interred in the collegiate church, in the precincts of St Salvador, which college or university he liberally endowed for the maintenance of a provost, four regents, and eight bursars or exhibitors. He is said to have written some political advices, entitled "Monita Politica," and a "History of his Own Times," both of which are probably lost.—*Mackenzie's Lives.*

KENNEDY (JOHN) a physician, born in Scotland, who resided some years at Smyrna, and died at an advanced age in 1760. He is recognised as an antiquary of considerable abilities, but very little is known of his personal history. He wrote a dissertation on the coins of Carausius, of which 256 were in his own possession, in which he maintained that Oriana was that emperor's guardian goddess, while Dr Stukeley affirmed that she was his wife. It is lamentable to add, that this foolish controversy produced much needless exasperation.—*Nichols's Lit. Anec.*

KENNEDY (JOHN) a clergyman of the establishment, who was rector of Bradley in Derbyshire, where he died in 1770. He was deemed a skilful mathematician, and was author of "A Scripture Chronology," 8vo; "An Examination of Jackson's Chronological Antiquities," 8vo, "The Doctrine of Commensurability," 8vo. He also attempted a perfect chronology of the Hebrew Bible, in regard to which his opinions were controverted by Ferguson, and by the rev Thomas Bowen of Bristol, in the Christian Magazine.—*Gent. Mag.*

KENNET (WHITE) a learned English prelate, born at Dover in 1660. He was the son of a clergyman, and was educated at Westminster school and Edmund hall, Oxford, where he applied closely to study, and entered the lists as a political partizan, by the publication, in 1680, of a pamphlet, which greatly offended the whigs of that period. The next year he published a ballad, in which he advocated similar sentiments; and in 1684 appeared his translation of the "Encomium Morie" of Erasmus. About the same time he

took the degree of MA. and was presented to the living of Ambrosden in Oxfordshire. In 1686 he made public a translation of Pliny's panegyric on the emperor Trajan, which was considered as a covert eulogium on the reigning monarch, James II; but he regarded the imputation as injurious to his character, and therefore warmly contradicted it. While out on a shooting-party, in 1689, his skull was fractured by the bursting of his gun, in consequence of which he was obliged to undergo the operation of trepanning, and ever after wore a black patch on the injured part. At Oxford he distinguished himself as an eloquent preacher, and an active academical tutor. In 1693 he obtained the rectory of Shottesbrook in Berkshire; in 1699 he became DD. and the next year was appointed minister of St Botolph's, Aldgate, London. He was made archdeacon of Huntingdon in 1701, at which time he engaged in a controversy with Dr Atterbury, relative to the power of the English convocation. He now indeed courted the patronage of the whigs, whom he had formerly satirized, and through the influence of the duke of Devonshire he obtained the deanery of Peterborough. His opposition to Sacheverel exposed him to much obloquy, and he was denounced as an enemy to the queen and her government. Considered as a traitor to the cause he had first espoused, various means were adopted to render him odious, among which was the representation of the dean under the character of Judas, in a painting of the last supper, which was placed as an altarpiece in the church of Whitechapel, by order of the rector Dr Welton. This picture attracted much notice, and being deservedly reprobated, it was at length removed by the direction of the bishop of London. Dr Kennet maintained his popularity in spite of all opposition, and in 1718 he was promoted to the bishopric of Peterborough, which he held till his death in 1728. The works of bishop Kennet relate to antiquities, ecclesiastical history, and theology; and they display considerable talent and industry. He assisted in editing a collection of English historians, 3 vols. folio; and published "Parochial Antiquities, attempted in the History of Ambrosden, Burcester, and other adjacent parts," 1695, 4to, since reprinted; "The Register and Chronicle, ecclesiastical and civil," 1728, fol. both which works are still held in estimation. *Aikin's G. Biog. Univ.*

KENNET (BASIL) younger brother of the bishop, born in 1674. He was educated for the same profession at Corpus Christi college, Oxford, of which he became a fellow in 1697. Through the interest of his brother, he was made chaplain to the English factory at Leghorn, a situation which exposed him to some danger from the power of the Inquisition. Orders were issued for his imprisonment; but the remonstrances of lord Sunderland, the secretary of state, secured his freedom, and he retained his post till ill health obliged him to return home. He died soon after at Oxford in 1714. Among his publications, which relate

chiefly to theology and classical literature, is a treatise on Roman Antiquities, which was reckoned the best work on the subject till it was superseded by the late production of Dr Adam.—*Biog. Univ. Chalmers's Biog. Dict.*

KENNICOTT (BENJAMIN) an eminent episcopal divine and biblical critic, who was a native of Totness in Devonshire, where his father was parish clerk. After being educated in a grammar school at Totness, he obtained the office of master of a charity school in the same place. His disposition for study attracted the observation of some friends, by whose assistance he became a student of Wadham college, Oxford, in 1744. Here he applied himself with assiduity to theological researches; and in 1747 he gave a specimen of his talents in "Two Dissertations, the first on the Tree of Life in Paradise, and the second on the Oblations of Cain and Abel." Soon after he was chosen to a fellowship at Exeter college; and as a tribute to his merit, the degree of B.A. was conferred on him without the payment of the usual fees. He proceeded M.A. in 1750, about which time he formed the design of collating the Hebrew MSS. of the Old Testament; and in 1753 he published a tract, entitled, "The State of the printed Hebrew Text of the Old Testament considered," the object of which was to draw the attention of the public to his undertaking. Some of the members of the university viewed this scheme with apprehensive alarm; and Mr Hurne, afterwards bishop of Norwich, wrote a pamphlet, entitled, "A View of Mr Kennicott's Method of correcting the Hebrew Text, with three Queries formed thereon, and humbly submitted to the Consideration of the Learned and Christian World." These and other animadversions which his plan provoked, did not however deter the learned critic from proceeding; and accordingly having obtained a liberal subscription, he commenced his task of collation in 1758, from which period he published annual accounts of the progress which he made. He was now presented to the vicarage of Culbam in Oxfordshire, and appointed one of the preachers at Whitehall. He took the degree of DD. in 1761, and a pension of 200*l.* was bestowed on him by the king. In 1767 he obtained the office of keeper of the Radcliffe library; and in 1770 he was made a prebend of Westminster, which preferment he exchanged for a canonry at Christchurch. His death took place August 18, 1783. The Hebrew Bible of Dr Kennicott, with the various readings of MSS. appeared in 1776, 2 vols. folio, to which he added, "Dissertatio in Vetus Testamentum Hebraicam, cum variis lectionibus," 1780, folio. He also published tracts and sermons; and wrote "Remarks on select Passages of the Old Testament," printed after his death.—*Chalmers's Biog. Dict. Aikin's G. Biog.*

KENRICK (WILLIAM) a miscellaneous writer of some celebrity, was born at Watford in Hertfordshire. He was brought up to the business of a rule-maker, which he quitted with a view to cultivate literature; and he

might have ensured respectability had his conduct been equal to his abilities. He procured a doctor's degree at Leyden, and seems to have appeared for the first time as an author in a pamphlet, entitled "The Grand Question debated; or an Essay to prove that the Soul of Man is not, neither can it be Immortal," 1751. This he immediately answered himself in a "Reply," to prove the exact reverse, a piece of quackery in which he often indulged afterwards, when desirous of attracting attention to his productions. He followed up these publications with "The Kapelion;" "The Pasquinade," in imitation of the Duuciad; and similar minor poetical attempts, which attracted little notice. In 1758 appeared his "Epistles, Philosophical and Moral," which afford the best specimens of his poetry. About the same time he engaged as a writer in the *Monthly Review*, and in 1765 published "A Review of Dr Johnson's new edition of Shakspeare," and thereby produced a controversy, in which however Johnson himself took no part. In 1766 he produced his not unamusing comedy, entitled Falstaff's Wedding, in professed imitation of Shakspeare; which piece went through two editions, but was only performed once for a benefit. He soon after wrote another comedy, called "The Widowed Wife," which had but middling success. In 1770 and 1771 he published two pieces on the perpetual motion; and in 1772 was involved in a law suit with Garrick, whom he libelled in an abusive poem, entitled "Love in the Suds." In 1773 he collected the works of Lloyd, and produced "The Duellist," a comedy which lasted only one night. He also compiled a "Dictionary of the English Language," 4to, which is a work of some talent. In 1774 he delivered lectures on Shakspeare; and the following year commenced "The London Review," which contained many critiques of merit, contaminated however by personal hostility, and a malignant and vituperative style. He also undertook translations of the works of Buffon and Voltaire, and certainly exhibited great literary industry. He died in 1779, less lamented than he might have been, had he exerted the talents which he possessed in a manner more honourable to literature, and considerative of the claims and feelings of others.—*Monthly Rev. Encyc. Brit.*

KENT (EDWARD, duke of) fourth son of George III, king of Great Britain, was born Nov. 2, 1767. He was educated in England by Dr Fisher, afterwards bishop of Salisbury, and was then removed to Gottingen, and subsequently to Geneva, where he remained until 1790, when he proceeded in a military capacity to Gibraltar. He subsequently served under lord Dorchester in Canada, and in 1795 fought under sir Charles Grey at the capture of St Lucie. In 1794 he again repaired to America, and served as major-general until 1796, when he became lieutenant-general, and returned to England. In 1799 he was created duke of Kent and Strathern, and earl of Dublin, and the same year revisited America, but returned again in 1800. In 1802 he was

made governor of Gibraltar; but his notions of discipline being exceedingly rigid, (a failing which produced great military dissatisfaction wherever he commanded,) so dangerous a mutiny followed, that he was recalled the following year. In 1818 he married the youngest daughter of the duke of Saxe Coburg, and the widow of the prince of Leinengen. Having been led into expenses, which exceedingly diminished his income, he laudably adopted a plan of strict economy, and led a very retired life, first in Germany and then in England, to reduce it to practice. In May 1819 his duchess produced him a daughter, who was called Alexandrina Victoria, the first of which names was adopted in compliment to the Russian emperor Alexander. This princess at present immediately following the duke of Clarence in the succession, may be deemed heiress presumptive of the crown in the second generation. Soon after this event, the duke of Kent retired to Sidmouth for the benefit of his health; but while resident there he was attacked by a pulmonary complaint, which carried him off very suddenly on the 23d of January, 1820. The duke of Kent was a prince of respectable endowments; and the liberal patron of every feasible scheme for the relief and improvement of his fellow creatures, a fact which made his military severity the more remarkable. The truth however was, that he had the improvement of the moral condition of the soldiery very much at heart, and sought their benefit by incompatible means. His Royal Highness was an excellent letter-writer, and pleasing orator; and at the time of his death was highly popular, and generally respected. His widow still survives, and with her brother, prince Leopold, the husband of the late lamented princess Charlotte, at present assumes the principal guardianship of the infant princess, who is so likely to become the future sovereign of Great Britain.—*Peerage. Ann. Biog.*

KENT (JAMES) an English musician, of deserved credit for the simplicity and harmony of his sacred compositions. He was born in 1700 at Winchester, and educated in the choir of that cathedral under Vaughan Richardson, till his talent procured his removal to the Chapel Royal, where, under Dr Croft, he laid the foundation of his future excellence. He became subsequently organist, first to the chapel of Trinity college, Cambridge, and eventually succeeded to a similar situation in his native city, where he remained till his decease in 1776. Few pieces of cathedral music are more generally popular than his anthems, "Hear my Prayer" and "My Song shall be of Mercy."—*Biog. Dict. of Mu*

KENT (WILLIAM) an ingenious artist, was born in Yorkshire in 1685. He was apprenticed to a coach-painter, but conscious of superior talent, repaired to London, where he obtained patronage, and was enabled by the munificence of some friendly gentlemen to repair to Rome, and to study under cavalier Luti. He also became acquainted with

lord Burlington, who, on their return to England, lodged him in his house, and obtained him employment as a painter in the walks both of history and portrait. In these departments of art however he never obtained celebrity, his talent lying chiefly in ornamental architecture, some specimens of which at Holkham, Stowe, and other places, are much admired. He is also regarded by Horace Walpole as the inventor of modern gardening, which he rendered more natural, graceful, and pleasing. He leaped the sunk fence, says the last-mentioned writer, and saw that all nature was a garden. He likewise broke up the old uniformity of straight lines and corresponding parts, and threw wood, water, and ground into the beautiful shapes presented by nature. The taste of Pope is supposed to have aided that of the artist, and when time shall have defaced the works of the latter, his fame will live in the poet's allusion to the scenes of Esher,

"Where Kent and Nature vied for Pelham's love.

The patronage of queen Caroline and several persons of rank procured for him the places of master-carpenter, architect, principal painter, and keeper of the pictures to the crown. He died at Burlington house in 1748, aged sixty-five, and was buried at Chiswick.—*Walpole's Anec. of Paint.*

KENYON (LLOYD, lord) an eminent English lawyer, the son of Lloyd Kenyon, esq. of Gredington in Flintshire, where he was born in 1753. After having been articled clerk to an attorney in the country, he became a student at Lincoln's inn, and commenced barrister in 1761. He practised first in the court of Chancery, and then in that of the King's Bench, where he distinguished himself by his defence of lord George Gordon, on his indictment for treason in 1780. He was made attorney general in 1782, then a Welsh judge; and in 1784 was promoted to the office of master of the rolls. He succeeded lord Mansfield as chief justice of the court of King's Bench in 1788, when he was raised to the peerage. He died in 1802.—*Brydges's Edit. of Collins's Peerage.*

KEPLER (JOHN) a celebrated astronomer and mathematician, known in the annals of science as the discoverer of the laws of motion of the planetary bodies which compose the solar system. He was the son of a military officer, and was born at Wiew in the duchy of Wirtemberg, December 27, 1571. The narrow circumstances of his father exposed him to difficulties in the progress of his studies, but the native energy of his mind enabled him to overcome them, and he took his degrees in philosophy at Tubingen. In 1591 he became the pupil of Michael Mästlinus, an eminent mathematician, under whom he made a great progress. He soon after applied himself to divinity, and acquired some fame as a preacher; but he relinquished the gown for a profession more suited to his inclinations, and in 1594 obtained the mathematical chair in the university of Gratz in Styria. In 1596 he

married a lady of noble family, and two years after he was expelled from his office in consequence of his professing the Protestant faith; but he was soon recalled by the states of Styria. At length he received an invitation from Tycho Brahe to settle at Prague as his assistant in the prosecution of his astronomical researches, under the patronage of Rodolph, emperor of Germany. He consequently resigned his post, and removed with his family and library to Bohemia in the year 1600. His own illness on his arrival, and the death of the Danish philosopher in the following year, prevented Kepler from co-operating with him in his scientific pursuits, but he was introduced to the emperor, who ordered him to complete the tables begun by Tycho Brahe, which were to be called the "Rodolphine Tables." On this work he was occupied during the greater part of the remainder of his life, and he carried it on and completed it amidst the inconveniences and obstacles which arose from the irregular payment of his pension from the emperor, and of the expenses attending the undertaking. In 1609 he published a specimen of the work, and in 1627 it issued from the press in a finished state. About two years after he retired to Sagan in Silesia, where he again suffered from want of punctuality in the payment of his pension. This obliged him to take a journey to Ratisbon to obtain the arrears due to him, and the fatigue of travelling brought on an illness which put an end to his life soon after his arrival in that city, in the month of November 1630. Among his numerous scientific productions may be mentioned his "Cosmographical Mystery," 1596; "Optical Astronomy," 1604; "Account of a new Star in Sagittarius," 1605; "New Astronomy, or Celestial Physics," in Commentaries on the Planet Mars; "New Ephemerides, from 1617 to 1620;" "Copernican Astronomy," 1618, 1622; "Harmony of the World," and a treatise on "Comets;" besides which he wrote on chronology, the geometry of solids, trigonometry, logarithms, and dioptrics. To this great philosopher we owe the discovery of the true figure of the orbits of the planets, which he demonstrated to be ellipses; and he farther showed that the planets describe areas proportioned to their periodic times of revolution; and that the squares of their periodic times are proportioned to the cubes of their mean distances. Such are the principles of planetary motion, generally denominated the laws of Kepler.—*Martin's Biog. Philos. Hutton's Mat. Dict. Aikin's G. Biog.*

KEPPEL (AVGUSTUS) a celebrated English admiral, the second son of William earl of Albemarle. He entered the sea service at an early age, and accompanied admiral Anson round the world. Having by his professional zeal and ability gradually reached distinction in the service, in 1778 he was appointed to the command of the channel fleet. On the 12th of July in that year, he fell in with the French fleet under count d'Orvilliers off Ushant, when an engagement ensued, which, although par-

tial, was very warm while it lasted. A short delay becoming necessary to repair damages, when that labour was accomplished, the admiral made signal for his van and rear divisions to assume their proper stations. This order was obeyed with great alacrity by sir Robert Harland, who led the van; but sir Hugh Palliser, commanding the rear, took no notice of the signal, and refused to join his commander until night prevented a renewal of the battle. The conduct of the rear admiral being fiercely attacked in the public papers, he demanded of his commander-in-chief a formal disavowal of the charges brought against him. The latter, although he had made no complaint himself, indignantly refused; on which admiral Palliser immediately exhibited articles of accusation against him, although he had a second time sailed with him, and had not before uttered a syllable to his prejudice. The lords of the Admiralty immediately fixed a day for the trial of admiral Keppel, who was honourably acquitted, and received the thanks of both houses of parliament for his services. Palliser was next tried, and reprimanded; but the public indignation was so great, that he was obliged to resign his seat in the house of Commons, and to vacate several offices which he held under government. In 1782 admiral Keppel was raised to a peerage under the title of viscount Keppel baron Eldon, and was at two different periods appointed first lord of the Admiralty. He died in October 1786 unmarried. He was regarded as very able in his profession, and a man of great integrity and humanity.—*Collins's Peerage.*

KERALIO (LEWIS FELIX GUINEMENT de) an ingenious man of letters, who was a native of Rennes in Brittany. He embraced the military profession, and after having attained the rank of major, he retired from the service with the decoration of the order of St Louis. He then fixed his residence at Paris, where he devoted his time to the study of literature and the education of his daughter. About 1756 he was called to Parma to undertake the office of governor to the infant don Ferdinand, who had at the same time for his tutor the abbé Condillac. Soon after he became professor of tactics at the military school under the patronage of the duke de Choiseul, which post he filled with great reputation till the period of the Revolution, when on the establishment of military schools in the provinces, he was nominated inspector general. He also was made commandant of a battalion of the national guard of Paris. His death took place at Grosley, in the vale of Montmorency, December 10, 1793. He was the author of "Histoire de la Guerre des Russes et des Turcs, en 1736—39, et de la Paix de Belgrade," 2 vols. 12mo; "Histoire de la Guerre entre la Russie et la Turquie, et particulièrement de la Campagne de 1759, avec des Notes et des Observations," 1773, 4to; besides other works original and translated.—*Biog. Univ.*

KERGUÉLIN TREMAREC (YVES JOSEPH de) an eminent French navigator, born at Brest about 1745. He entered young into

the navy, and obtained the rank of lieutenant in 1767. After being employed on an expedition to the coast of Iceland, to protect the whale fishery, he was sent by his government on a voyage of discovery to the South Sea. On his return, he gave a flattering account of a supposed continent towards the South Pole, some points of which he had visited. He was sent in 1773 to make farther discoveries; but the result of his researches only served to show the little value of the country he discovered; and he was arrested and confined in the castle of Saumur, after his return to France, on the charge of having ill-treated one of his officers. In his prison Le wrote several memoirs relative to maritime affairs; and having at length obtained his liberation, he again engaged in the sea service. He died in 1797. Kerguelin published accounts of his voyage to Iceland, and likewise of his southern expeditions. His name is preserved in the appellation of an island in the southern hemisphere, Kerguelin's land, or the Isle of Desolation.—*Biog. Univ.*

KERI (JOHN) a learned Hungarian prelate of the seventeenth century. After completing his studies, he became a member of the religious order of the hermits of St Paul, and was some time after taken from the cloister to be made bishop of Sirmium, whence he was translated to the see of Wätzen. He died at Tyrnau in 1685. Besides many other works, he was the author of a curious history of the invasions of Hungary by the Turks, entitled "Ferocia Martis Turcici."—KERI (FRANCIS BORGIA) a native of Zemplin in Hungary, who entered into the society of the jesuits, among whom he was for some time professor of philosophy and mathematics. He cultivated astronomy with much success, and made some improvements in the telescope. He died at Buda in 1769, leaving behind him the reputation of great worth and learning. His literary reputation depends on his works relative to the history of the eastern empire, entitled "Imperatores Orientis compendio exhibitum, ex compluribus Græcis Scriptoribus, a Const. Mag. ad Const. Ult." 1744, folio; and "Imperatores Ottomanici a capta Constanti-nopoli," 1749, folio, in nine parts, continued by Father Nich. Schmit.—*Nouv. Dict. Hist. Biog. Univ.*

KERR (ROBERT) a surgeon at Edinburgh, who distinguished himself as an industrious writer. He was a member of the Royal and Antiquarian Societies of Edinburgh, and devoted himself principally to the cultivation of the physical sciences; relative to which he published several works, original and translated. He died in May 1814. Among the productions of his pen are Lavoisiers's "Elements of Chemistry;" Berthollet's Essay on Bleaching; and Cuvier's Essay on the Theory of the Earth, translated from the French; "The Animal Kingdom, or Zoological System of Linnæus," 1792, 4to; "The Natural History of Quadrupeds and Serpents," 1802, 4 vols. 8vo; "A General View of the Agriculture of the County of Berwick," 1809, 8vo; "Me-

moirs of the Life of William Smellie," 1811, 2 vols. 8vo; and a "General Collection of Voyages," 18 vols. 8vo.—*Watt's Bibl. Brit. Biog. Univ.*

KERSAINT (ARMAND GUY SIMON, count de) a native of Paris, of a family belonging to the province of Brittany. He entered into the navy, and served with credit previous to the commencement of the French revolution. He connected himself with the philosophical, whose writings prepared the way for that event; and in 1788 he published a pamphlet, entitled "Le Bon Sens," 8vo, in which he attacked the privileged orders. In the constituent assembly he was often consulted on naval affairs, and his measures being opposed, he warmly attacked his adversaries in his speeches and in the public journals. He took an active part in the proceedings of the national convention, and became a member of the jacobin club; but after the dispersion of that society in 1791, he joined the more moderate party of the Girondists. He attempted in vain to stop the career of the terrorists; and on the trial of the king, he proposed an appeal to the people, and the seclusion of the monarch till the restoration of peace. Finding his efforts unavailing, he sent in the resignation of his seat in the convention. Called to account for his conduct, he defended himself with firmness, and refused to resume his place. His friends made great efforts to save him from the proscription which awaited him, but in vain; for having endeavoured to conceal himself he was discovered, and put to death December 4, 1793, at the age of fifty-two. Besides writing tracts on naval and political affairs, he was engaged with Condorcet and others in the "Journal de la Société de 1789," 13 vols. 8vo.—*Biog. Univ. Dict. des H. M. du 18me. S.*

KETT (HENRY) an able divine and an accomplished scholar, born at Norwich in 1761. He commenced his education at the grammar-school of his native city, under Mr Lemon, and benefited also much by the occasional assistance and instructions of the celebrated Dr Parr. In 1777 he was removed by his friends to Oxford, and entered as a commoner at Trinity college in that university, where he obtained a scholarship the following year. In 1783 he graduated as AM, and soon after succeeded to a fellowship, and became one of the college tutors. In 1790 he was appointed Bampton lecturer, and in October 1793, became a candidate for the professorship of poetry against Mr Hurdis, but lost the election by a minority of twenty votes. In 1808 he resigned his tutorship, and shortly afterwards all his college offices, though he still continued a resident of Oxford till the winter of 1823, when he retired to Charlton in Gloucestershire, on his marriage with Miss White, a lady of that place. Mr Kett's death was occasioned by incautiously venturing out of his depth while bathing, when on a visit to his friend sir J. Gibbons of Stanwell, June 30, 1825. The only church preferment of which he died possessed, was the perpetual

curacy of Hykeham, Lincolnshire, a sinecure, although in the course of his university career most of the valuable benefices belonging to his college had been by turns at his option, all of which he systematically and disinterestedly declined in favour of his juniors. By his will the bulk of his property, amounting to 25,000*l.*, was bequeathed, after his widow's decease, to three charitable institutions, of which the Radcliffe Infirmary was one. His writings, devotional and miscellaneous, consist of contributions to the "Olla Podrida," a series of essays published by him in 1787, in conjunction with Mr Munro and Dr (afterwards bishop) Horne; "Juvenile Poems," 1793. This collection of youthful effusions he afterwards took some pains to suppress, being perhaps principally incited by the criticisms of his friends, who freely professed themselves of opinion that his poetic powers were not of the first order. To this circumstance his friend and fellow collegian Warton, alluded in an epigram, which derived its point from a personal peculiarity of Mr Kett, and which probably tended to enforce his desire of calling in these productions of his early muse; it runs thus—

"Our Kett not a poet!

Why how can you say so?

For if he's no OVID,

He's surely a NASO.

He also published, "History the Interpreter of Prophecy," 1798, a treatise evincing much reflection and extensive reading, which has received the marked approbation of bishops Tomline and Porteus, to the former of whom the author bequeathed the copy-right. It has gone through several editions. "A Tour to the Lakes of Cumberland and Westmoreland," followed in the same year; and in 1802 appeared the work by which he is most generally known, his "Elements of General Knowledge," which ran rapidly through nine editions. His other works are, "Logic made easy," 1809; "Emily, a Moral Tale," 1809 and 1812; a new edition of "Headley's Beauties of English Poetry, with a Life of the Author," 1810; and "Flowers of Wit," 2 vols. 12mo, 1814. He is also said to have left behind him in MS. a translation of Lubinus' collection of Greek Proverbs, with notes; a work in which he had been some years engaged.—*Gent. Mag.*

KETTLEWELL (JOHN) was born at North Allerton in Yorkshire, March 10, 1653. He was educated at the free-school of his native town, whence he was sent to Edmund-hall, Oxford, and in 1675 obtained a fellowship in Lincoln college. He entered early into orders, and was very young when he wrote his celebrated book, entitled "Measures of Christian Obedience," although not published until 1681. In 1682 lord Digby presented him to the living of Coleshill in Warwickshire; but refusing to take the oaths to William and Mary at the Revolution, he was deprived of it in 1690, and retired to London, where he continued to write and publish books as he had done during his residence in the country. He

died of a consumption in 1695, at the age of forty-two. His works are collected and printed in 2 vols. folio.—*Memoirs of his Life*, 1718 *Biog. Brit.*

KEULEN (LUNOLPH van) a Dutch geometer, who taught mathematics at Breda and afterwards at Amsterdam. He acquired great celebrity by his calculation of the approximate correspondence between the diameter of a circle and its circumference. In this respect he far surpassed Archimedes, Metius, Vieta, and other mathematicians, who had preceded him. He died at Leyden in 1610, and was buried in the church of St Peter in that city. His writings consist of a treatise in Dutch, of which Snellius published a translation, entitled "De Circulo et adscriptis," 1619, 4to; "The First Principles of Arithmetic and Geometry;" and "Geometrical Problems."—*Montucla's Hist. of the Mathematics. Biog. Univ.*

KEYSLER (JOHN GEORGE) a German antiquary, who was a native of Thornau. He was born in 1639, and after having finished his studies at the university of Halle, he travelled in Germany, France, and the Netherlands, as tutor to the sons of count Giech Buchau. He subsequently undertook the tuition of the grandsons of baron Bernstoff, minister of state to the elector of Hanover, with whom he visited several parts of Europe. He was in England in 1718, when he was chosen a fellow of the Royal Society. The latter part of his life was spent in retirement, under the patronage of his pupils in Hanover, where he died in 1743, aged fifty-four. He was the author of a work of much learning and research, entitled "Antiquitates Selectæ Septentrionales et Celticæ," 1720; and of travels through Germany, Bohemia, Hungary, &c. of which there is an English translation.—*Nouv. Dict. Hist.*

KHILKOFF (ANDREW JACOB LEVITCH) a Russian prince, who was sent by Peter the Great ambassador to Sweden in 1700. He had scarcely arrived there when war broke out between Russia and Sweden; and Charles XII, irritated against the cabinet of Moscow, took the unjustifiable step of imprisoning the Russian ambassador, who remained in confinement nearly twenty years. He employed himself in writing the history of his native country, a work which became very popular in Russia. Being set at liberty on peace taking place, he died in his way home, at the isle of Aland in October 1718.—*Biog. Univ.*

KIDDER (RICHARD) bishop of Bath and Wells, a prelate of considerable learning and ability. Wood assigns Sussex as the county which gave him birth; other accounts state him to have been a native of Suffolk. He received a university education at Emmanuel college, Cambridge, of which he became a member in 1649. Succeeding to a fellowship of this society, he took holy orders, and obtained from the college the benefice of Stanground, Huntingdonshire, of which he was deprived in 1662, for refusing episcopal ordination. His firmness or his conviction, however, appear at length to have given way, as

he afterwards, on conforming, was presented to the living of Rayne in Essex, by the earl of Essex. In 1674 he was collated to St Mary Outwich in the city of London, seven years after which he obtained a stall in Norwich cathedral, and in 1681 was farther promoted to the deanery of Peterborough. In 1691 bishop Ken being deprived of the see of Bath and Wells, on account of his adherence to the cause of James II, dean Kidder was selected by William as his successor, and he was in consequence raised to the episcopal bench. Two years after his elevation he preached the Boylean lecture, and continued to preside over his diocese for more than twelve years, till the memorable storm which passed over most parts of the west of England, on the night of the 26th of November 1703. On this occasion the bishop and his wife had retired to rest, when they were overwhelmed by the sudden fall of a stack of chimnies in the episcopal palace at Wells, and were not extricated till life in both had become extinct. Many of the bishop's works survive him, the principal of which are, a "Demonstration of the Messias," in three parts, originally printed in three octavo volumes, with his Boylean lecture annexed, and again in folio; "A Commentary on the Pentateuch," in 2 vols. 8vo, his preface to which drew him into a controversy with Le Clerc, who has published the correspondence, written in elegant Latin, in his "Bibliothèque Choisie;" also "The Young Man's Duty;" "Charity directed;" and other devotional and polemical tracts.—*Biog. Brit.*

KIEN-LONG, emperor of China, distinguished for his love of literature, was born in 1710, and succeeded his father, Yuntschin, in 1735. He lived in a state of peace until 1759, when he engaged in war with the Songarians, and taking possession of all Calmuc Tartary, he extended his dominions to the frontiers of Siberia and Bucharia. The conquest of Calmuc Tartary also gave him virtual possession of Thibet, and he secured his conquest by establishing strong garrisons. He was in his turn annoyed by an invasion on the part of the sovereign of Ava, in which great ravages were committed, but the enemy finally retreated. Kien-Long favoured the Christian religion, but rather in a private than in a public manner, as in 1753 he interdicted its exercise by a formal order, and he had previously even persecuted those who openly professed it. The missionaries were in consequence obliged to proceed with great caution, although several of them were in the emperor's service, and treated with great respect, as men of science and learning. On the suppression of the jesuits in 1774, China was less visited by scientific persons than heretofore, which induced Kien-Long to send to Canton, and invite artists and learned men of all the European nations, and particularly astronomers. This sovereign possessed on his own part a taste for poetry and natural history. Of his poetical talents we have specimens in his panegyrics on the tea-plant and on the Tartarian capital of Moukden both of which eulogies have been

translated into French by father Amot, missionary at Pekin, who also supplied a version of a poem by the emperor in Chinese verse, on the conquest of Calmuc Tartary. Kien-Long, resolving to immortalize the remembrance of his victories by the graver, engaged French artists to copy some Chinese paintings, in which they were represented, but Louis XV had them engraved for him at his own expense. The larger Chinese collection on agriculture contains several poems of this monarch on rural occupations and incidents; and he established a library of no fewer than 600,000 volumes, containing copies of all the most interesting works in China. Into this collection he admitted three books, written by the jesuits, on the Christian religion. A description of the Chinese empire, which appeared in Busching's Magazine, was also compiled by his order. Kien-Long seems to have been of a mild and benevolent disposition upon the whole, although occasionally represented as otherwise. He died at Pekin, 1786, after a reign of fifty years.—*Hirsching's Manual of Eminent Persons who died in the Eighteenth Century.*

KIERNANDER (JOHN ZECHARIAH) a zealous missionary, was born at Akland in Sweden, November 21, 1711. He was educated at the university of Upsal, and at the age of twenty-four repaired to Halle in Saxony, where he was patronized by professor Franke, who recommended him to the English society for promoting Christian knowledge. Under the auspices of the latter, he was sent out a missionary to Cuddalore, on the surrender of which to the French in 1758, he removed to Calcutta, and opened a school, preaching sometimes in the English and at others in the German and Portuguese languages. In 1767 he laid the foundation of a new church at Calcutta, the expense of which, amounting to 8000*l.* fell chiefly on himself; and he also erected a school close to it for two hundred and fifty children. Embarrassed by these efforts, his church was seized by his creditors, but was redeemed by the pious interference of Mr Grant. He subsequently accepted the office of chaplain at the Dutch settlement of Chinsura, on the capture of which in 1795, he removed once more to Calcutta where he died in April 1799.—*Asiatic Ann. Reg.*

KILLIGREW. There were three brothers of this name, equally distinguished by their loyalty, wit, and talents, who flourished under the two Charleses. They were the sons of sir Robert Killigrew, a knight of a good family. WILLIAM, the eldest, was born in 1605, at Hanworth, Middlesex, and after going through the usual course of a university education at St John's college, Oxford, made the tour of Europe. On his return to England he obtained a place at court, as one of the gentlemen ushers of the privy chamber to Charles I, with the government of Pendennis castle. During the civil wars he suffered materially both in purse and person, in consequence of his obstinate adherence to the royal cause, in

recompense for which he received after the restoration the honour of knighthood; and on the marriage of Charles II. obtained the post of vice-chamberlain. This situation he enjoyed more than two and twenty years, employing his leisure hours in the cultivation of a taste for the drama and general literature. He composed four plays, "Selindra," "The Siege of Urban," "Ormasdes," and "Pandora," Oxford, folio. 1666. These pieces, though now forgotten, were popular in their day, and received the approbation of the poet Waller in particular. His other writings are, "Midnight and Daily Thoughts," and the "Artle's Midnight Thoughts of a Gentleman at Court," 8vo, two essays written in the decline of life on the instability of human happiness. He died in 1693.—THOMAS, the second, was born in 1611, and died before his elder brother in 1682. He was one of Charles I's pages, and on the decline of the king's party, accompanied the prince of Wales into exile. During this his forced absence from England, he visited France, Italy, and Spain; and after the restoration, was appointed by the new king, with whom he was a great favourite, one of his grooms of the bedchamber. A lively vein of pleasantry, combined with a certain oddity both of person and manner, appear to have placed him high in the good graces of Charles, who would frequently allow him free access to his person when characters of the first rank and dignity in the state were refused it, till Killigrew at length became almost the inseparable companion of his monarch's more familiar hours. He wrote eleven pieces for the stage, which have been collected and printed in one volume folio, 1664; but we look in vain in them for traces of that facetiousness and whim, which, together with the encouragement he received from royalty, procured him the appellation of "King Charles's jester." He lies buried in Westminster abbey.—HENRY, the youngest of the three, was one year younger than his brother Thomas, whom he survived about six years. He was educated for the church at Christchurch, Oxford, and acted for a while as chaplain to the cavaliers. In 1642 he graduated as doctor in divinity, and obtained a stall at Westminster. From this piece of preferment the parliamentary party ejected him during the Commonwealth, when he, in common with the rest of his family, underwent considerable deprivations; but on the re-establishment of monarchy, he was fortunate enough to obtain, in addition to the restoration of his prebend, the living of Wheathamstead, Herts, and the mastership of the Savoy. He appears in his youth to have possessed the same bent towards the drama which marked the other two, and even wrote a tragedy when only seventeen years old, under the title of "The Conspiracy." In 1652 he published a corrected version of this piece, changing the name to that of "Pallantus and Eudora." These are extant, beside several sermons of his composition.—The females of this family boast also several names distinguished in the annals of

literature. DAME CATHERINE KILLIGREW, wife of sir Henry, a descendant of the same stock, knighted for his diplomatic services, was celebrated as one of the most accomplished scholars of her day. She was the daughter of sir Anthony Cooke, of Giddy hall, Essex, born about the year 1530, and to a familiar acquaintance with the classical as well as some of the Oriental languages, united considerable poetic talent. Her death took place in 1600. ANNE KILLIGREW, daughter of the divine mentioned in a former part of this article, was born in 1660. She gave strong indications of genius at an early age, and became equally eminent in the sister arts of poetry and painting, as well as distinguished for her exemplary piety and venerated virtue amidst the seductions of a licentious court. She was one of the maids of honour to the duchess of York, of whom, as well as of her husband, afterwards James II, she executed portraits. She fell a victim to the small-pox in the summer of 1685, and has not only been characterised by Wood as "A grace for beauty and a muse for wit," but has also been celebrated by the greatest of her literary contemporaries, John Dryden. Several historical paintings of hers are in existence, and a quarto volume of her poems appeared the year after her decease. The ode written by Dryden on this lady, is peculiarly admired by Dr Johnson. She was buried in the Savoy chapel, where is a very neat monument with a Latin inscription, commemorating her beauty, accomplishments, and virtues. Praised as she has been, Wood asserts, that she was even superior to the commendations so freely bestowed on her.—*Sing. Dram. Ballard's Learned Ladies.*

KIMBER. There were two English authors of this name in the last century, father and son. Of these, ISAAC the elder, born at Wantage, Berks, in 1692, was a dissenting minister at Nantwich, Cheshire, and afterwards preached to a congregation which assembled at a chapel in Old Artillery lane, London. His principal source of income however was derived from the booksellers, for whom he compiled a "History of England," 4 vols. 8vo; a "Life of Bishop Beveridge," prefixed to an edition of his works; a "Life of Oliver Cromwell," 8vo; together with a variety of discourses, essays, &c. some of which appeared in the London Magazine. His death took place in 1758. His son EDWARD, born 1719, was apprenticed to a bookseller, but quitted the business early in life for the army, in which he served a campaign in America. On his return to England he left the service, and became an author by profession, in which capacity, besides editing the London Magazine, to which his father had been a principal contributor, he also published a "History of England," in ten octavo volumes; a peerage and a baronetage of the United Kingdoms; and "The Adventures of Joe Thompson," a novel. He died in 1769.—*Chatmers's Sing. Diet.*

KIMCHI, the name of three learned Jewish rabbis, who flourished about the close of

the twelfth, and the commencement of the thirteenth centuries. Of these, DAVID and MOSES were the sons of rabbi JOSEPH, born in Spain, and though both eminent for their literary attainments, and their familiar acquaintance with many Oriental languages, yet David far exceeded both his father and brother in reputation. He is considered as the best grammarian of his nation, and his writings are still regarded as standard works among the Jews. Of these the best known to the general reader are, an excellent grammar and lexicon of the Hebrew tongue, which furnished Buxtorf with the materials for his "Thesaurus" and "Lexicon Linguae Hebraeae." His commentaries on the books of the Old Testament are also highly esteemed. His grammar first appeared at Venice in 1545, and was soon followed by a treatise on the Hebrew radicals. Rabbi David passed the principal part of his life in Narbonne, and in the schism which took place between the Spanish and French Jews in 1232, respecting the books of Raimonides, was appealed to by both sides as an arbitrator. He lived to an extreme old age, and died in 1240. The best edition of his "Dictionarium Talmudicum" is that of 1506, folio.—*Moreri*.

KING (EDWARD) a poet of the seventeenth century, chiefly memorable as having been the subject of Milton's monody, entitled *Lycidas*. He was in 1632 a fellow of Christ's college, Cambridge, and appears to have been distinguished alike for his private worth and for his literary abilities. As his celebrated eulogist informs us—

"He knew

Himself to sing, and build the lofty rhyme." He was unfortunately drowned in 1637, in his passage to Ireland from Chester. Some of his compositions have been published in Nichols's Collection of Poetry.—*Chalmers's Biog. Dict.*

KING (EDWARD) a very profound and erudite English antiquary. He was a native of Norwich, and studied at Clare hall, Cambridge, and afterwards at Lincoln's inn, where having completed his education as a lawyer, he was called to the bar. He obtained the office of recorder of King's Lynn in Norfolk; but was chiefly distinguished for his attention to literature. He was chosen a fellow of the Royal society in 1767, and three years after, he became a fellow of the society of Antiquaries. Of the latter he was elected president, Feb. 21, 1784, after the death of Dr Milles; but circumstances induced him to resign the office on the 23d of April following, when lord De Ferrars, afterwards marquis Townshend, was chosen in his stead, and Mr King withdrew entirely from the society. Whilst he continued connected with that learned association, he published several valuable papers in the *Archæologia*, particularly a series of "Observations on Ancient Castles." He subsequently produced a most elaborate work in three volumes folio, entitled "Munimenta Antiqua," comprising a variety of information relative to English architecture anterior to the Norman

conquest, the result of much personal research and extensive reading. He also published a tract relating to Oxford castle; but he did not confine his attention to archæology, for besides some smaller pieces, he was the author of a treatise entitled "Morsels of Criticism, tending to illustrate some few Passages in the Holy Scripture upon philosophical Principles, and an enlarged View of Things," 1788, 4to. This production, as well as his "Remarks on the Signs of the Times," 4to, displays a partiality for fanciful speculation, more or less observable in all the works of this learned and ingenious writer. He died in London, April 16, 1807.—*Gent. Mag.*

KING (GREGORY) a draughtsman and writer on heraldry in the seventeenth century. He was a native of Lichfield, and after being educated at a grammar school in that place, he became secretary and assistant to sir William Dugdale; and having acquired a knowledge of engraving, he was afterwards employed by Ogilby in executing the plates for some of his numerous compilations. In 1677 he obtained the office of rouge dragon, and subsequently that of Lancaster herald; and he also was secretary to the commissioners of public accounts, and to the comptrollers of the army. Besides a political tract, he published "The Order of the Installation of Prince George of Denmark, Charles Duke of Somerset, and George Duke of Northumberland," as knights of the garter; and a similar work relating to the Installation of Henry duke of Norfolk, Henry earl of Peterborough, and Lawrence earl of Rochester. He died in 1712, aged 64.—*Chalmers's Biog. Dict.*

KING (DR HENRY) a divine and poet of the seventeenth century. He was the son of Dr John King, bishop of London, whom James I, by what may fairly be termed a royal pun, used to style "The King of Preachers." The son of this prelate was born in 1591, and was educated at Westminster school and Christ's college, Oxford, where he took the degree of MA. Having been ordained, he was made chaplain to James I, and after enjoying some inferior benefices, in 1638 he was promoted to the deanery of Rochester, and in 1641 he became bishop of Chichester. This preferment he lost on the subversion of the episcopal government in the church, but recovered it at the restoration of Charles II. He died in 1669. His works consist of sermons and other religious publications, besides "A poetical Version of the Psalms;" "Poems, Elegies, Paradoxes, and Sonnets," 1657, 8vo; and poetical pieces in Greek and Latin.—*Fuller's Worthies. Wood's Athen. Oxon.*

KING (JOHN GLEN) an English divine and writer on ecclesiastical antiquities. He was born in Norfolk in 1731, and received his education at Caius college, Cambridge, where he proceeded B.A. in 1752, and M.A. in 1763. He subsequently obtained the degree of DD. and became a fellow of the Royal and Antiquarian Societies. In 1764 he was appointed chaplain to the English factory at Petersburg, and while in that situation he composed a

work, entitled "The Rites and Ceremonies of the Greek Church in Russia; containing an Account of its Doctrine, Worship, and Discipline," 1772, 4to; and in 1778 he published "A Letter to the Bishop of Durham, containing some Observations on the Climate of Russia and the Northern Countries, with a View of the Flying Mountains at Zarsko Sello, near St Petersburg," 4to. Returning to his native country, he obtained the rectory of Wormley in Hertfordshire, in 1783; and he afterwards officiated as preacher at a chapel in the metropolis. He died in 1787. He published in the *Archæologia* "Observations on the Barberini Vase;" and at the time of his death he was engaged in writing on numismatics.—*Aikin's Gen. Biog.*

KING (PETER) baron king of Ockham, an eminent English lawyer and theological writer. He was born in 1669, in the city of Exeter, where his father carried on the business of a grocer. He was intended for the same occupation, but displaying a strong inclination for literature, Mr Locke, his maternal uncle, persuaded his father to send him to the university of Leyden. He appears to have turned his attention chiefly to divinity, and the fruit of his studies appeared in a work, entitled "An Inquiry into the Constitution, Discipline, Unity, and Worship of the primitive Church," 8vo; but on his return from Leyden, he became a student of the Inner Temple, and in 1699 he was introduced into the House of Commons, as member for Beerlston in Devonshire. He did not however relinquish his theological researches, having published in 1702, "The History of the Apostle's Creed," as the author of which he is principally known in the literary world. In 1708 he was chosen recorder of London, and received the honour of knighthood. He was appointed by the house of Commons, one of the managers of the trial of Dr Sacheverel in 1709; and in 1712 he appeared as the gratuitous defender of the famous Whiston, on his prosecution for heresy. On the accession of George I, in 1714, he was made chief justice of the Common Pleas, and nominated a member of the privy council; and in 1725 he succeeded lord Macclesfield as lord chancellor, when he was raised to the peerage. He resigned the seals in 1733, and died in July the next year.—*Biog. Brit. Aikin's G. Biog.*

KING (RICHARD) a clergyman of the church of England, whose polemical writings attracted some notice. He was a native of Bristol, and was educated at New college, Oxford, where he proceeded MA. in 1774, and also obtained a fellowship. He afterwards became vicar of Steeple Morden in Cambridgeshire; and in 1782 he married the daughter of sir Francis Bernard, a lady distinguished for her literary talents. He was likewise rector of Worthing in Shropshire, and held both livings till his death in 1810, at the age of sixty. He is best known as the author of "Letters from Abraham Plymley to his brother Peter, on the Catholic Question;" besides which he published a treatise on the In-

spiration of the Scriptures; and another on the alliance between Church and State.—*Gent. Mag.*

KING (THOMAS) a distinguished theatrical performer and dramatic writer, born in London in 1730. He is said to have been articulated to an attorney, but led by inclination he left the lawyer's desk to join a company of players. In 1748 he made his first appearance at Drury-lane theatre, and after performing two seasons without attracting much notice, he repaired to Bath, and also went to Ireland, where his path to professional eminence was less obstructed by the interests of rival performers. Having established his reputation as a comic actor, he returned to Drury-lane in 1759, and soon became a great favourite with the public. In 1763 he produced a musical entertainment, called "Love at First Sight," in which for the first time he exhibited a specimen of his talents as a vocalist. In 1766 he arrived at the height of his reputation by his performance of the part of lord Ogleyby, in the *Clandestine Marriage*. In 1770 and 1771 he was manager and part proprietor of the Bristol theatre, which situation he relinquished for a share in the theatre of Sadler's Wells. He disposed of his interest in the latter in 1782, and became deputy manager at Drury-lane, where he remained about six years, and then visited Dublin and Edinburgh. Returning to London in 1789, he performed at Covent-garden, but soon resumed his former station at Drury-lane theatre, and held it till 1801, when he withdrew from the stage, in consequence of a dispute with some of the proprietors. He survived his final retreat about four years, dying December 11, 1805. Besides the piece already mentioned, he was the author of "Neck or Nothing," a farce; "A Peep behind the Curtain, or the New Rehearsal," a comedy; "Wit's last Stake," a comedy; and "Lover's Quarrels," altered from Vanbrugh.—*Biog. Dram. Thesp. Dict.*

KING (WILLIAM) a man of wit and learning, who flourished at the beginning of the last century. He was born in London in 1663, and received his education partly under Dr Busby at Westminster, whence he removed to Christ Church college, Oxford. He took the degree of MA. in 1683, and commenced author, by publishing a refutation of the errors of Varillas, relating to Wickliffe, in his *History of Heresies*. He now entered on the study of jurisprudence, and having taken his doctor's degree, he became an advocate in the ecclesiastical court. In 1694 he published "Animadversions upon the pretended Account of Denmark," designed as an answer to lord Molesworth's work relative to that country. Dr King's piece procured him the office of secretary to the princess, afterwards queen Anne. He produced in 1698, "A Journey to London," a burlesque on Dr Martin Lister's *Journey to Paris*; which was followed by the "Transactioneer," a satire on the Royal Society, and its president sir Hans Sloane. In 1702 or 1703 he went to Ireland,

where he was made judge of the Admiralty, commissioner of prizes, keeper of the records, and vicar-general to the primate; but he reaped little emolument from these lucrative places, owing to his indolence and inattention. Returning to England in 1708, his friends procured him the office of gazetteer, which he soon resigned, and died December 25, 1712, of disease brought on by intemperance. He assisted in the tory journal, called the "Examiner;" and published a translation of Ovid's *Art of Love*, and other pieces of light poetry. His "Original Works in Prose and Verse," 1776, 3 vols. 8vo, were edited by Mr John Nichols.—*Biog. Brit. Johnson's Lives of the Poets.*

KING (WILLIAM) a learned Irish prelate, who was a native of Antrim, but of Scottish extraction. He received his education at Trinity college, Dublin, where he took the degree of B.A. in 1670, and that of M.A. in 1673, when he was ordained a deacon. The next year he entered into full orders, and was appointed chaplain to the archbishop of Tuam in 1676. He was subsequently made a prebend and precentor of Tuam, chancellor of the church of St Patrick at Dublin, and minister of St Werburgh's parish in that city. His zealous opposition to the measures of the Roman Catholic party, in the reign of James II, insured his preferment after the expulsion of that prince. In 1688 he was promoted to the deanery of St Patrick's, and in 1691 he was consecrated bishop of Derry. In 1702 he was translated to the archiepiscopal see of Dublin; and in 1717 he was nominated one of the lords justices of Ireland, an office which he also filled in the years 1721 and 1723. He died May 8th, 1729, aged seventy-nine. He was distinguished for his wit as well as his learning. Having been disappointed in his expectations of being raised to the primacy of Ireland on the death of archbishop Lindsey, it being assigned as a reason for passing him over, that he was too far advanced in years,—he received Dr Boulter, the new primate, at his first visit, without paying him the customary compliment of rising to salute him, apologizing for the apparent incivility by saying, "My lord, I am sure your grace will forgive me, because you know *I am too old to rise.*" Archbishop King is principally noted at present as the author of a treatise, "*De Origine Mali,*" the object of which is to show that the presence of natural and moral evil in the world is not inconsistent with the power and goodness of the supreme being. This work provoked the animadversions of the celebrated Bayle, as it impugned his arguments on the Manichean system. Some remarks on it were likewise published by Leibnitz, whose objections, as well as those of other opponents, are considered in the additions to an English translation of the work, by Law, afterwards bishop of Carlisle.—*Biog. Brit. Aikin's G. Biog.*

KING (WILLIAM) an ingenious writer of the last century. He was born near London in 1685, and received his education at Balliol college, Oxford, where he proceeded LL.D. in

1715. He was made secretary to the duke of Ormond, and afterwards to the earl of Arran, successive chancellors of the university; and he subsequently became principal of St Mary-hall, and public orator. His death took place in 1763. He edited some of the works of Dr South, and published many tracts in the Latin language, chiefly on temporary topics; besides which he wrote an amusing autobiographical work, containing anecdotes of his contemporaries, which made its appearance only a few years since, in an octavo volume.—*Nichols's Lit. Anec.*

KINGSTON (ELIZABETH, duchess of) was born in 1720, and was the daughter of colonel Chudleigh, governor of Chelsea college, who dying while she was young, left her almost unprovided for. She resided with her mother, who, though the interest of Pulteney, afterwards earl of Bath, procured her the post of maid of honour to the princess of Wales, the mother of his late majesty. Her wit and beauty procured her many admirers, and in spite of the levity of her manners, a serious offer of marriage from the duke of Hamilton. But while that nobleman was on the continent, Mrs Hammer, the aunt of Miss Chudleigh, with whom she was on a visit, persuaded her niece to marry privately captain Hervey, a naval officer, afterwards earl of Bristol. She soon conceived a violent dislike of her husband, heightened by the discovery that she had been deceived into an opinion that the duke of Hamilton had forgotten her. Her marriage, which took place August 4th, 1744, was kept a secret, and her refusal of advantageous proposals of marriage which she subsequently received, offended her mother, and subjected her to reproaches which induced her to go abroad. She went in company with a major in the army, with whom she proceeded to Berlin, where they parted. She is said to have been well received by the king of Prussia, and also at the court of Dresden; and on her return to England (as Miss Chudleigh) she resumed her situation of maid of honour. Desirous of breaking off her union with captain Hervey, she adopted the infamous expedient of tearing the leaf out of the parish register, in which her marriage was entered; but repenting of this step in consequence of her husband's succeeding to the peerage, she contrived to have the leaf replaced. Not long after, the duke of Kingston made her a matrimonial offer, on which she endeavoured to procure a divorce from lord Bristol. He at first opposed her scheme; but at length he assented to it, and she obtained the wished-for separation. On the 8th of March 1769 she was openly married to Evelyn Pierrepont duke of Kingston, on whose death in 1773 she found herself left mistress of a splendid fortune under the condition of her not again becoming a wife. But she was not permitted to enjoy her riches undisturbed. The heirs of the duke commenced a suit against her for bigamy, in consequence of which she was tried before the house of Lords, and was found guilty; but on her pleading the privilege of peerage, the

usual punishment of burning in the hand was remitted, and she was discharged on paying the fees of office. Her property had been so secured that it was not affected by this process. The remainder of the life of this remarkable woman was spent abroad, and she died at her seat near Fontainebleau in France, August 28, 1788.—*Biog. Univ.*

KIPLING, DD. (THOMAS) dean of Peterborough and regius professor of divinity at Cambridge, of St John's college in which university he was a member. In 1792 he preached the Boyle's lecture, but never printed it; and the year following a Mr Fred, fellow of Jesus college, publishing some opinions hostile to the established church, Dr Kipling accepted the unpopular office of promoter or prosecutor against him in the university courts, a proceeding which terminated in Mr Fred's expulsion, and drew upon himself some severe strictures from the pen of Dr Edwards, a unitarian clergyman. Dr Kipling died in February 1821. His works are, "The Elementary Parts of Dr Smith's Complete System of Optics," 4to, 1778; "Codex Theodori Beza Cantabrigiensis, Evangelia et Apostolorum Acta complectens, quadratis Literis Græco-Latinis," folio, 2 vols. 1793; "The Articles of the Church of England, proved not to be Calvinistic," 8vo, 1802; and an 8vo pamphlet, entitled "Certain Accusations brought lately by the Irish Papists against British and Irish Protestants examined," 1809.—*Gt. Mog.*

KIPPIS (ANDREW) an eminent dissenting divine and biographer, was born at Northham, March 28, 1725, being the son of a silk hosier of that town. He was educated under Dr Doddridge at Northampton, and in 1746 became minister of a dissenting congregation at Boston in Lincolnshire. In 1750 he removed to Dorking in Surrey, and in 1753 succeeded Dr Hughes, as pastor to a dissenting congregation in Prince's-street, Westminster. His settlement at Westminster laid the foundation of an extensive connexion with the general body of protestant dissenters; and on the death of Dr Jennings in 1763, he was appointed classical and philological tutor to the academy supported in London by the funds of William Coward, esq. and sustained that office with great approbation for more than five and twenty years. In 1767 he received the degree of DD. from the university of Edinburgh, and in 1778 and 1779 became a fellow of the Society of Antiquaries and of the Royal Society. On the discontinuation of Coward's academy, he assisted some time in another institution formed at Hackney, for the education of ministers and others in the dissenting connexion; but in a few years afterwards resigned his share in the conduct of it. He died of a fever, originating in a cold caught on a journey on the 5th of October 1795, leaving behind him a high and merited reputation for learning, conduct, and abilities. Dr Kippis was a frequent writer in the Monthly Review, and laid the foundation of the "New Annual Register." On the application of the dissenters in 1772, for the enlargement of the

act of toleration, he wrote a "Vindication" of that proceeding. In 1783 he published "Considerations on the Provisional Treaty with America." He was also author of lives of sir John Pringle, captain Cook, Dr Doddridge, and Dr Lardner; that of captain Cook singly, and those of the others to be prefixed to new editions of their works. But the literary undertaking to which Dr Kippis devoted his principal attention during the later years of his life, was an improved edition of the "Biographia Britannica." This work has attained considerable reputation, but was conducted on a plan so elaborate, that no termination of it on the same scale is ever likely to be attempted. The labours of Dr Kippis extended only to five folio volumes, forming a very small part of the projected plan. His candour and liberality as a biographer are conspicuous; but his anxiety to make all his authorities testify for themselves, gives a diffuse undigested result, which might have been beneficially avoided by more spirit and decision in regard to the value of their information.—*Rees's Cyclop. Gt. Mag. Aikin's G. Biog.*

KIRBY (JOHN JOSHUA) a native of Parham in Suffolk, who, from the humble condition of a house painter, raised himself by his talents and industry to a respectable rank among the artists of his day, and was elected a fellow both of the Royal and Antiquarian Societies. He was born in 1716, and first attracted public notice by a series of drawings, which he published, taken from the monumental and other antiquities of the county in which he lived. A treatise on perspective, which he edited in 1754, increased his reputation, and introduced him to the knowledge of the earl of Bute, through whose interest he was appointed drawing-master to queen Charlotte, and clerk of the works at Kew palace. His other writings are, "The Perspective of Architecture," 2 vols. folio, 1761, printed at the expense of the late king; "A Map of Suffolk," 1766, originally drawn by his father, and a vindication of the principles laid down in his work on Perspective against the attacks of an Italian named Sirgatti. He is also known as the father of the celebrated Mrs Trimmer. Mr Kirby died in 1774.—*Chalmers's Biog. Dict.*

KIRCHER (ATHANASIUS) a learned German jesuit, born at Fulda, about the commencement of the seventeenth century. Having completed his education at Wurtzburg in Franconia, he became in 1635 a member of the college belonging to his order at Avignon. Father Kircher was a good Orientalist, as well as an excellent mathematician, but the fanciful nature of some of his studies has caused most of his productions to be considered rather curious than useful. The elucidation of hieroglyphics was a favourite pursuit with him, in his attempts to unravel which, he occasionally fell into some singular absurdities. His industry as a writer was unwearied, the whole of his works occupying no fewer than twenty volumes in folio, eleven in quarto, and three in octavo. Of these the principal are, his "Œdipus Ægyptiacus," 4 vols. folio;

"Obeliscus Ægyptiacus;" "Phonurgia Nova;" "Ars magna sciendi Combinatoria;" "Prælectiones Magneticae," fol.; "Itinerarium extaticum," 4to; "Mundus Subterraneus," 2 vols.; "Musurgia Universalis," 2 vols. folio; "Turris Babel;" "China Illustrata;" "Primitiæ Gnomonicæ Catoptricae," 4to; "Arca Noë;" "Polygraphia," folio; "Organum Mathematicum;" "Lingua Ægyptiaca restituta;" "Ars magna lucis et umbræ," folio, &c. &c. In his "Musurgia" he lays claim to the invention of the Æolian harp; and in his "Phonurgia Nova," to that of the speaking trumpet. He was afterwards professor of Hebrew and mathematics at Rome, where he died in 1680.—There were also two protestant divines of the same name in Germany about the same period. CONRAD KIRCHNER, a native of Augsburg, is advantageously known as the compiler of an excellent concordance of the Old Testament in Greek and Hebrew, the corresponding words of the former language being arranged throughout under those of the latter. This work was printed at Frankfort in 1607.—The other, JOHN KIRCHER, was born at Tübingen in the dutchy of Wirtemberg, and made some noise by his conversion from protestantism to the Romish church, the reasons for which change he published, and provoked several answers from the Lutheran champions. He went into Hungary in 1640, and is supposed to have died there soon after.—*Moreri*.

KIRCHMAN (JOHN) a native of Lubeck in Germany, eminent for his classical attainments. He was born in 1575, and having acquired the rudiments of a learned education in his native city, went in 1593 to Frankfort on the Oder. Here he continued to prosecute his studies with equal perseverance and success till 1597, when he proceeded to Jena, and afterwards entered himself of the university of Strasburg. The state of his finances precluding all possibility of indulging from his own means his favourite propensity, which led him to foreign travel, he was at length fortunate enough to acquire the confidence of a rich citizen of Luneburg, who sent him through France and Italy at his own expense, in quality of tutor to his son. On his return in 1602 he settled at Rostock, where the following year, his reputation as a sound scholar obtained him the professorship of poetry. In 1604 he published the work by which he is most advantageously known to posterity, a dissertation "On the Funeral Ceremonies used among the Romans." He also published another work, "De Annulis," which was much esteemed as a correct illustration of that branch of antiquities. He was much employed in education, and a great many scholars were sent to him from the various cities of Germany. While at Rostock, he contracted a marriage, and was at length called to preside over the university of Lubeck. He left many works behind him, among which, in addition to the one already mentioned, are "The Horoscope of the Duke of Mecklenburgh," and treatises on logic and rhetoric. He performed the functions of rec-

tor of the university of Lubeck with great care, which however did not prevent it from declining. His death took place in 1643.—*Nouv. Dict. Hist. Moreri*.

KIRKLAND (THOMAS) an ingenious medical and surgical writer and practitioner, who studied at the university of Edinburgh, and took the degree of MD. He established himself as a physician at Ashby-de-la-Zouch, in Leicestershire, where he pursued his professional career to the advanced age of seventy-seven, and died in 1798. In the early part of his life he attended the family of lord Ferrers at Stanton Harold, where he was called when that nobleman shot his steward, Mr Johnson. Dr Kirkland behaved with great spirit and address on that unfortunate occasion, and was principally instrumental in procuring the arrest of the homicide. As a surgeon he distinguished himself by a controversy with Mr Pott, relative to the propriety of amputation in cases of compound fractures. He also wrote on gangrene, fevers, puerperal diseases, apoplectic and paralytic affections, &c.; but his principal performance is entitled, "An Inquiry into the present state of Medical Surgery," 1783, 1786, 2 vols. 8vo.—*Gent. Mag. Reuss. Edit.*

KIRSTENIUS (PETER) a celebrated physician, was born at Breslau in Silesia, in 1577. He was the son of a merchant, who died while he was an infant, and he was designed by his guardians for trade; but in consequence of his avidity for knowledge, being allowed to embrace a learned profession, he was sent to study physic at several of the German universities. Having heard a high character of the works of Avicenna, he resolved to study Arabic in order to read them in the original language. He took the degree of MD. at Basil, and returning to Breslau, was made rector of the college in that city; but at length he confined himself wholly to the practice of physic and the cultivation of the Arabic language, in which he printed such works as he deemed most useful. He was finally invited by the celebrated chancellor Oxenstiern to Sweden, and was made medical professor at Upsal, where he died in 1640. He is author of "Grammatica Arabica;" "Tria Specimena characterum Arabicorum;" "Decas Sacra Canticorum Arabicorum;" "Vitæ quatuor Evangelistarum ex codice Manuscripto Arabice;" "Liber Secundus Canonis Avicennæ;" "Liber de vero usu et abusu Medicinæ;" "Notæ in Evangelium S. Matthæi ex collatione textuum Arabicorum, Syriacorum, Ægyptiacorum, Græcorum, et Latinorum."—*Moreri*.

KIRWAN (RICHARD) a distinguished modern writer on chemistry, geology, and the kindred sciences. He was a native of the county of Galway in Ireland, and was educated at the university of Dublin, where he took the degree of LLD. He devoted himself with great ardour to chemical and mineralogical researches, and became a member of the Royal Irish academy, and also a fellow of the Royal Society. He published in the Philosophical Transactions for 1781, 1782, and 1783,

"Experiments and Observations on the Specific Gravities and Attractive Powers of various Saline Substances;" which important subject he farther prosecuted in the Philosophical Transactions for 1785. In 1784 appeared his "Elements of Mineralogy," 2 vols. 8vo, which was translated into German by Crell, and subsequently republished with additions and improvements. In 1787 he published an "Essay on Phlogiston and the constitution of Acids," designed as a defence of the theory of chemistry advanced by Dr Priestley. This very ingenious production was translated into French by the advocates for the anti-phlogistic hypothesis, and published with animadversions on the rival system, which made a convert of Dr Kirwan, whose rejection of the principles he had so ably supported, had a considerable influence in producing the revolution which took place in chemical science. He produced, besides the foregoing works, "An Estimate of the Temperature of different Latitudes," 1787, 8vo; a treatise on the Analysis of Mineral Waters, 8vo; and another on Logic, 2 vols. 8vo; to which may be added, various communications to the learned societies to which he belonged. At Dublin he founded an association for the express purpose of cultivating mineralogy; and as a geologist he distinguished himself by advocating what has been called the Neptunian theory of the earth, in opposition to that of Dr James Hutton. His death occurred in 1812.—*Gent. Mag.*

KIRWAN (WALTER BLAKE) an Irish divine, eminent for his popularity as a preacher. He was born at Galway in 1754, and educated at the English Catholic college of St Omers, whence he removed to Louvain, where he took priest's orders, and became professor of philosophy. In 1778 he was appointed chaplain to the Neapolitan embassy in London, and attained some fame by his exertions in the pulpit. In 1787 he resolved to conform to the establishment, and preached to his first protestant congregation in St Peter's church, Dublin. His skill in the delivery of charity sermons was so great, that in 1788 the governors of the general daily schools of several parishes in Dublin entered into a resolution, "That from the effects produced by the sermons of the rev. Walter Blake Kirwan, from the pulpit, his officiating in this metropolis was considered a peculiar national advantage, and that vestries should be called to consider the most effectual method to secure to the city an instrument, under providence, of so much public benefit." In the same year he was preferred to the prebendary of Howth, and to the rectory of St Nicholas, Dublin, and finally presented to the deanery of Killala. Wonders are told of his attraction as a preacher, and it was often necessary to keep off the crowds from the churches in which he preached by guards and palisadoes. He died exhausted by his labours, October 27, 1805, leaving a widow with two sons and two daughters, to the first and last of whom was granted a pension of 300*l.* per annum. In

1814 a volume of his sermons was published, which is the only work of his which reached the press.—*Life prefixed to Sermons.*

KLAPROTH (MARTIN HENRY) a very eminent German writer on chemistry and mineralogy. He was chemical professor at Berlin, and particularly distinguished himself by his skill in the analysis of various substances, especially those belonging to the mineral kingdom. He discovered the metal called uranium, and ascertained the properties of tellurium and titanium; and he also discovered the zircon earth and the mellitic acid. His analytical researches, which are extremely interesting and important, are chiefly comprised in his "Beiträge zur chemischen Kenntniss der Mineralkörper," Berlin, 1800, 1810, 5 vols. 8vo; and "Chemische abhandlungen gemischten inhalts," Berlin, 1815, 8vo. Selections from his chemical essays have been translated into English. Klaproth died, far advanced in years, in the beginning of 1817.—*Biog. Univ.*

KLEBER (J. B.) a French military officer of distinction under the republican government. He was a native of Strasburgh, and is said to have been an architect, which profession he relinquished for the army, and entered into the service of the bishop of Munster, which he left in 1783 for that of France. He rapidly obtained advancement during the first revolutionary commotions, and in 1793 he was employed against the royalists of La Vendee. He was afterwards removed to the army of Ardennes, and then to that of the Sambre and Meuse, in which he displayed great skill in his manœuvres during the campaign of 1794, when he was a general of a division. In 1795 he commanded at Dusseldorf, and in 1796 he contributed much to the success of Jourdan at the opening of the campaign. The directory gave him the command of the army of the Sambre and Meuse, which he resigned to Hoche. After the treaty of Campo Formio, he passed to the army professedly destined for the invasion of England; and he then accompanied Buonaparte in his expedition to Egypt. He was wounded at the attack of Alexandria, but he marched into Syria, where he commanded the corps of observation during the siege of Acre, and the rear-guard in the ensuing retreat. When Buonaparte left Egypt, Kleber was appointed commander of the army in his room, a situation of great difficulty and danger, from the state of the French troops and the power of the enemies to whom they were opposed. He however captured the city of Cairo, and made an alliance with Murad Bey. The unpromising situation of affairs induced him to enter into negotiations for the removal of the French army from Egypt, but before that event took place he was assassinated by an Arab, in 1800.—*Biog. Univ. Dict. Hist. des H. M. du 18me. S.*

KLEIN (JAMES THEODORE) an eminent naturalist, who was born at Königsberg, in 1685. He became secretary to the senate of Dantzic, a situation which afforded him leisure for the cultivation of science. He carried on an extensive correspondence, and wrote on

almost every department of natural history. Cuvier represents him as having been a most industrious student, but deficient in taste and genius. He was a member of the Academy of Sciences of St Petersburg, of the Royal Society of London, and of the Institute of Bologna, and one of the founders of the Society of the Lovers of Natural History of Dantzic. He died in 1759. A list of his works, which are very numerous, may be found in our authorities.—*Biog. Univ. Gronovii Bibl. Regni Animal. et Lapid.*

KLEIST (EWARD CHRISTIAN VON) a Pomeranian by birth, who, by the exercise of his poetical abilities on the subject of the seasons, has been by some considered the German Thomson. He was born in 1715 at Zoblin, and after serving with credit in the Danish army, entered that of Prussia, in which he obtained a commission as major to the regiment Von Haussen. He fell in action, gallantly fighting against the Russians at Kunnersdorf in the August of 1759. Besides his celebrated poem on "Spring," printed in 1749, he was the author of some idylls, which are considered scarcely inferior in simple elegance to those of Gesner. He also wrote a series of moral essays, which possess much merit; a romance entitled "Cissides;" and a professional treatise on military tactics, which appeared in the year of his death.—*Nouv. Dict. Hist.*

KLINGENSTIERNA (SAMUEL) a Swedish philosopher and mathematician, born near Lindköping in 1689. He studied at Upsal, where he first applied himself to the law, in compliance with the wishes of his friends; but he relinquished this pursuit for the more congenial study of mathematics. In 1723 he composed two dissertations on the height of the atmosphere, and on the improvement of the thermometer, which were inserted in the memoirs of the Royal Society of Upsal. In 1727 he commenced travelling in Germany, France, and England, and returned to Sweden in 1730. He was then confirmed in the post of professor of mathematics, which had been promised to him during his travels. He held it till his death, October 23th, 1785. Klingenskierna is principally distinguished for his researches relating to optics, and he was the author of many memoirs on various branches of philosophy and mathematics, in the Transactions of the academy of Stockholm, the Royal Society of Upsal, and the Royal Society of London, of which last he was a foreign associate. He also published the Elements of Euclid in Latin; and Muschenbroeck's Natural Philosophy in Swedish.—*Biog. Univ.*

KLOPSTOCK (FREDERIC THEOPHILUS) an eminent German poet, was born at Quedlinburg, July 2, 1724. His father, a man of singular, but elevated character, was bailiff of the place, and he was the eldest of eleven children. After an elementary education at home, he was sent to the college of his native place, where he made himself familiar with the learned languages, and attempted compositions both in prose and verse. In the latter,

he wrote some pastorals, and even meditated his future epic of "The Messiah," to which he was excited by a patriotic wish to exalt the poetic character of Germany, in opposition to the sneers of certain French writers, who denied to its natives the possession of any sort of talent for poetry. In 1745 he was removed to the university of Jena, where he studied theology; but in the midst of his academical pursuits, he found leisure to sketch the first three cantos of "The Messiah," which he composed in German hexameters, regardless of the asserted unfitness of the Teutonic languages for the rules of Greek and Latin prosody. In 1746 he removed to Leipsic, and became member of a society of literary young men, who occasionally published their essays in a paper, entitled "The Bremen Contributions," in which he inserted his completed cantos of the Messiah. He subsequently quitted Leipsic, and became tutor in the house of a relation named Weiss, about which time an amatory, but unrequited attachment, gave a peculiar hue to his poetical labours. At length the publication of ten books of his "Messiah," made his name celebrated throughout Germany, and acquired him hosts both of admirers and of critics. The former were chiefly among those who were equally alive to poetry and devotion; while the latter were composed of stern theologians who disliked the mixture of scripture history with poetical invention, and of rigid grammarians who carped at his innovations in regard to style and versification. Klopstock himself profited by these controversies, but wisely forbore to mingle in them. In 1750 he travelled into Switzerland, where he was received with great respect, and he became so pleased with the scenery of that country, and the simple manners of its inhabitants, that he intended to spend the remainder of his life there, when he received an invitation from baron Bernstorff to reside at Copenhagen, with assurances of such a pension as would permit him to devote himself solely to literature. He acceded to this proposal, and proceeding to Copenhagen, by way of Hamburg, he there became acquainted with Miss Muller, an amiable young lady of literary talents, who having read his Messiah with enthusiasm, had ardently desired to see the author. The steps by which this acquaintance ripened into tenderness, are described with great beauty and simplicity in his well-known letters, written when she had become his wife, to Samuel Richardson, and afterwards published in that writer's correspondence. The reception of Klopstock at Copenhagen was highly cordial, and the manner in which he passed his life is most interestingly described in the same letters. He lost this amiable and affectionate lady in childhood a few months after the foregoing pleasing account was sketched, and to perpetuate her memory he published in 1759 some literary productions which she left behind her. He lived chiefly at Copenhagen until 1771, when he removed as Danish legate to Hamburg; and he subsequently became counsellor to the

marquis of Baden, who rewarded him with a pension. He employed the latter part of his life chiefly in the revision of his *Messiah* and other works, and died at Hamburg March 14, 1803, in the seventy-ninth year of his age. He was interred with great solemnity. Klopstock, as a poet, is distinguished by exuberance of imagination and sentiment; but amidst his sublimity, which is very great, he is apt to lose himself in metaphysical abstractions, and his excess of feeling sometimes approaches to extravagance. The *Messiah*, in twenty cantos, containing twenty thousand hexameter lines, proves at once his fertility and prolixity. His odes, lyric poems, and dramas are all much admired by his countrymen, but the latter are better adapted to the closet than the stage. A great portion of the poetical merit of Klopstock consists in his noble and energetic style and diction, which unhappily can scarcely be appreciated out of Germany. He was also a prose-writer of no mean rank, and his "Grammatical Dialogues" in particular are much esteemed.—*Mem. of Fred. and Mary Klopstock. Rees's Cyclop. Nouv. Dict. Hist.*

KLOTZ (CHRISTIAN ADOLPHUS) an eminent German scholar and critic, was born in 1738 at Bischofswerden near Dresden. He showed a very early attachment to letters, which induced his father, who was a clergyman, to spare no expense in his education. After acquiring the rudiments of learning by private tuition, he repaired to Gortitz, and studied the Greek and Latin classics under Baumgarten. Here he distinguished himself favourably by the composition of a Latin poem on the destruction of Zittau, and by a treatise in defence of Curio against Plutarch and Don Cassius. In 1758 he removed to Leipsic, where he took a part in the "Acta Eruditorum," and wrote two satirical pieces, entitled "Mores Eruditorum" and "Genius Sæculi," the severity of which against the prevailing taste for classifying and generalizing science, produced him a host of enemies. In 1761 he published "Opuscula Poetica," and repaired from Leipsic to Jena, where he opened a school. The next year however he accepted a professorship at Göttingen, and published a treatise "De Veracundia Virgilio;" "Miscellanea Critica;" and applied himself with great assiduity to the study of ancient gems and paintings. His celebrity now produced him offers from more than one German prince, but for some time he preferred the chair of philosophy at Göttingen, to which he was appointed by the king of Great Britain. Some attacks on his reputation at Göttingen at length induced him to accept the invitation of the king of Prussia to become professor of philosophy at Halle, previously to his departure to which town, he published, "Historia Humanorum Contumeliosorum et Satyricorum." At Halle he published a second work of the same kind, and also established a literary society. He died in 1771, and just before his death revised all which he had written on coins, and published "Opuscula Nummaria quibus Juris Antiqui Historiæque nonnulla

capita explicantur." Besides the works already mentioned, he wrote, "Oratio pro Lipsii Latinitate;" *Libellus de Minutiarum Studio;* "Animadversiones in Theophrasti Characteres Ethicos;" "Dissertatio de felici Audacia Horatii;" "Elegiæ;" "Carmina;" "Funus Petri Burmanni;" "Ridicula Literaria;" and various other pieces and dissertations, a list of which may be seen in our authorities.—*Harles de Vitis Philologorum. Rees's Cyclopadia.*

KLUIT (ADRIAN) a Dutch historian and juridical writer. He was born at Dort in 1735, and studied at Utrecht, where he became a proficient in ancient literature. He was employed as a teacher in several schools, and at length was made rector of that of Middleburg, where he obtained a professorship in 1776. Three years after he was nominated professor of archæology, and Dutch history and diplomatics at Leyden. His political opinions occasioned his removal from the chair in 1795, notwithstanding which he continued his lectures and literary labours till 1802, when he was restored to his office. In 1806 he was constituted professor of statistics under the regal government. His death took place January 12, 1807, owing to the destruction of his house from the explosion of a boat laden with gunpowder, which was moored to the quay near which he resided. Among his principal productions is his history of the political affairs of Holland to 1795, 5 vols. 8vo.—*Biog. Univ.*

KNELLER, bart. (sir GODFREY) an eminent portrait painter, was born at Lubeck about 1648. His father, who was surveyor-general of the mines to count Mansfelt, designed him for a military life, and he was sent to Leyden to study mathematics and fortification. Subsequently perceiving his decided bent for painting, he wisely acquiesced, and placed him under Bol and Rembraadt at Amsterdam. He visited Italy in 1672, where he became a disciple of Carlo Maratti and Bernini, and painted several historical pieces and portraits both at Rome and Venice. He did not however remain long in Italy, and on his return he was induced to visit England, in company with his brother John Zachary Kneller, in 1674. They were recommended to a Hamburg merchant, for whom Godfrey painted a much admired family picture, which being seen by the duke of York, the latter introduced the painter to Charles II, by whom he was much patronised. He was equally favoured by James II and William III, for the latter of whom he painted the beauties at Hampton-court, and several of the portraits in the gallery of admirals. He also took the portrait of the czar Peter for the same sovereign, who in 1692 knighted and made him gentleman of the privy chamber. Queen Anne continued him in the same office, and George I made him a baronet. He continued to practise his art to an advanced age, and had reached his seventy-fifth year at his death in 1723. His interment took place in Westminster abbey, under a splendid monument erected by Rysbrach, on which appears an epitaph by Pope. Kneller as an artist is

accused of sacrificing his just reputation to love, on many occasions his negligence being extreme. The airs of his heads are extremely graceful, and his colouring is lively, true, and harmonious, his drawing correct, and his disposition judicious. On the other hand he displays a singular paucity of imagination in his pictures; even in his portraits, the heads alone merit much attention, the attitudes, action, and drapery being insipid, unvarying, and ungraceful. Wealth was his leading object, and that he attained, spending however with great freedom. He was extravagantly vain, possessed a fund of humour, and a lively talent at repartee, many pleasant specimens of which have been duly recorded. About seventy-five of his heads have been engraved.—*Walpole's Anec. D'Argenville Vies de Peint. Biog. Brit.*

KNIGGE (ADOLPH FRANCIS FREDERICK, baron von) a German philosopher and man of letters, born near Hanover in 1757. He studied at Gottingen, and after having made some campaigns as a military man, he visited many of the courts and cities of Germany, more in the character of a philosophical observer of men and manners, than as a candidate for wealth or honours. He died May 6, 1796, at Bremen, where he belonged to the collegiate chapter. Baron Knigge published many works on philosophy, morals, and the belles lettres, in a popular style, which procured him much reputation among his contemporaries. The best of his productions is his treatise "Über den Umgang mit Menschen"—Of Commerce with Mankind.—*Biog. Univ.*

KNIGHT, esq. (RICHARD PAYNE) an eminent patron of learning and the fine arts, to the study and encouragement of which he devoted a great portion of his time and ample fortune. His father, a man of large landed property, from a dread lest the delicacy of his son's constitution should be still farther impaired by the discipline of a public school, kept him at home till his fourteenth year, prohibiting, from the same motive, almost all application to study; but on his decease, which took place at that period, young Knight was placed at a large seminary, where he soon distinguished himself by his love for, and progress in, classical literature. The pursuit of this, his favourite study, formed afterwards the principal relaxation from his public duties, as representative of Ludlow, for which borough he sat in several successive parliaments. In every thing connected with *virtù* he was eminently skilled, and his opinion eagerly consulted; while the splendid collection of ancient bronzes, medals, pictures, and drawings assembled in his museum at his house in Soho-square, evinced equal proofs of his taste and liberality. The whole of this valuable collection he bequeathed at his death to the British museum, a patriotic legacy which was afterwards legalized by an act of parliament, passed expressly for that purpose. As an author he distinguished himself by the force and depth of his critical acumen, the variety of his knowledge, and his perfect familiarity with the domestic habits and customs of the ancients.

His principal prose writings are, "An Account of the Remains of the Worship of Priapus, lately existing at Isernia in the Kingdom of Naples, and its connexion with the Mystic Theology of the Ancients," 4to, 1786; an "Analytical Essay on the Greek Alphabet," 4to, 1791; "Analytical Inquiry into the Principles of Taste," 8vo, 1805, and "Prolegomena in Homerum," reprinted in the Classical Journal. In his capacity of poet, he published "The Landscape," a didactic poem, 8vo, 1794, a review of which he afterwards printed in 1795; "The Progress of Civil Society," a didactic poem, 4to, 1796, and a monody to the memory of Fox, 8vo, 1806. His last work was "The Romance of Alfred." Among his manuscripts is said to be a curious and valuable correspondence with the late John Philip Kemble, on the subject of the Greek drama. In politics Mr Knight was a whig of the old school. He died April 23, 1824, aged seventy-six.—*Ann. Biog.*

KNIGHT (SAMUEL) an English divine, born in 1674 in London, where he was brought up at St Paul's school, and afterwards removed to Trinity college, Cambridge. He is principally known as the author of a well written and interesting life of Dr John Colet, dean of St Paul's, and founder of the establishment in which he received the rudiments of his education. Dr Knight also published a similar biographical memoir of the dean's learned contemporary and friend, Erasmus, which is replete with much valuable information. He was fortunate in obtaining some rich ecclesiastical preferments, holding the vicarage of Chippenham and the rectories of Borough-green and Bluntesham, with a stall in Ely cathedral, and the archdeaconry of Berkshire. His death took place in 1746, when his remains were deposited in the chancel at his living of Bluntesham in Huntingdonshire.—*Aikin's G. Biog. Dict.*

KNIGHTON or **KNYGHTON** (HENRY) an English ecclesiastic and historian, who flourished during the latter moiety of the fourteenth century. He was a canon of Leicester abbey, and besides a chronicle of events from the Norman invasion to his own times, wrote a more detailed account of the life and actions of Richard II, with the circumstances which led to, and accompanied the usurpation of the crown by Bolingbroke. This work is to be found in the collection of 1652.—*Nicolson's Hist. Lib.*

KNOES (OLAUS ANDERSON) a learner Swede, born about the middle of the eighteenth century. After having been for some time a tutor in the university of Upsal, where he obtained the degree of master of arts, he became professor at the gymnasium of Skara, in the province of Westgothia. He died in 1804. Professor Knoes deserves notice as the historian of Swedish literature. His works are "Historia Academiae Upsaliensis," part i—vii, Upsal, 1757—90; and "Historiola literaria Vestrogothiæ Latinorum Poetarum," part i—viii; besides dissertations and letters.—*Biog. Univ.*

KNOLLES (RICHARD) author of an able and well-known history of the Turks, was born in Northamptonshire, and was entered at the university of Oxford about 1560. He is said to have been a fellow of Lincoln college, which he left to be master of the free-school of Sandwich in Kent; and he proved himself adapted to the situation, by publishing for the use of his scholars, a compendium of the Latin, Greek, and Hebrew Grammar, London, 1600. Aiming at the higher character of historian, he composed his "History of the Turks," folio, 1610, being the labour of twelve years. It has passed through several editions, and is executed in a manner which has transmitted his name with honour to posterity. Several continuations have appeared, the last of which is that of sir Paul Rycaut. Knolles is also author of the lives and conquests of the Ottoman kings and emperors, until 1610, and "A Brief Discourse on the Greatness of the Turkish Empire." He likewise translated Bodin's "Six Books of a Commonwealth." Dr Johnson thought so highly of Knolles's history, that he was of opinion nothing could have prevented him from being more popular, but the remoteness and barbarity of the people whose story he relates.—*Athen. Oxon. Johnson's Rambler*, No. 122.

KNORR (GEORGE WOLFGANG) a German engraver, born at Nuremberg, December 30, 1705. Till the age of eighteen he followed the occupation of a turner, after which he adopted that of engraving. He also cultivated painting, and executed some landscapes. Later in life the study of books gave him a taste for natural history, to which he principally devoted his talents. He published "Thesaurus Rei Herbariæ Hortensisque universalis, &c." 1750, folio; "Deliciæ Naturæ selectæ," folio; and a collection of monuments, &c. from ancient sepulchres. He died in 1758.—*Biog. Univ.*

KNOTT (EDWARD) a learned English jesuit, whose real name was Matthias Wilson, and who is chiefly known by the part which he sustained in the controversy with Chillingworth. He was born at Pegsworth in Northumberland, in the year 1580, and having been educated, took priest's orders, and in his twenty-sixth year entered among the jesuits. He taught divinity at the English college at Rome, and was afterwards appointed provincial of England. He died in London, in January 1656, and was buried in the church of St Pancras. This jesuit was the author of several controversial works, in which he displayed great acuteness and learning. It was in answer to him that Chillingworth wrote his "Religion of the Protestants," to which Knott rejoined by a work entitled "Infidelity unmasked," wherein the latitude of principle displayed by his opponent afforded him several advantages.—*Biog. Brit. Moreri.*

KNOWLES (THOMAS) an able English divine and excellent classical scholar, born in 1723 at Ely, and educated in the grammar-school of that city, whence he removed on a scholarship to Pembroke hall, Cambridge. Of this society he in due course became fellow,

and obtained eventually a stall in the cathedral belonging to his native place, with the livings of Ickworth, Chedburgh, and Winston, and the lectureship of St Mary's at Bury, in which latter place his death occurred in 1802. He was the author of a great variety of devotional and controversial tracts, among which are a series of twelve sermons, on the existence and attributes of the Deity, printed together in one octavo volume; "Lectures for Passion Week;" six epistles of "Advice to a Young Clergyman;" "Primitive Christianity in Defence of the Trinity;" a "Reply to Clayton's Essay on Spirit;" "On the Divine Legation of Moses;" "On Charity and Sunday Schools;" "The Tithe Bill;" "The Test Act," &c. &c. and a sermon on the ceremony of episcopal confirmation, as practised in the church of England.—*Gent. Mag.*

KNOX (JOHN) the chief instrument and promoter of the reformation in Scotland. He was descended from an ancient and honourable family, and born at Gifford in East Lothian, in 1505. He received his primary education at the grammar-school of Haddington, whence he was removed to the university of St Andrews, where he received the degree of MA. much before the usual age. Having embraced the ecclesiastical profession, he began as usual with the study of scholastic divinity, in which he so much distinguished himself, that he was admitted into priest's orders before the time appointed by the canons. He soon became weary of the subtle theology of the schools, and resolved to apply himself to that which was more plain and practical. This alteration of opinion led him to attend the sermons of Thomas Guillaume or Williams, a friar of eminence, who was so bold as to preach against the pope's authority; and he was still more impressed by the instructions of the celebrated George Wishart, so that he quickly relinquished all thoughts of officiating in the church of Rome, and became tutor to the sons of the lairds of Long Niddrie and Ormiston, who had embraced the reformed doctrines. Here he contrived to preach not only to his pupils, but to the people of the neighbourhood, until interrupted by cardinal Beaton, archbishop of St Andrews, who obliged him to abscond, and he thought of retiring to Germany. The persuasion of the fathers of his pupils, and the assassination of Beaton by the Leslies, encouraged him to remain; and he took shelter under the protection of the latter in the castle of St Andrews, where he instructed his scholars; and notwithstanding the opposition of the sub-prior and clergy of St Andrews, he preached the principles of the reformation with extraordinary courage and boldness. This continued until the castle of St Andrews surrendered to the French in July 1547, when he was carried with the garrison into France, and remained a prisoner on board the galleys until the latter end of 1549. Being then set at liberty, he passed over to England, and arriving in London, was licensed either by Cranmer or the protector Somerset, and appointed preacher, first at Berwick, and after-

wards at Newcastle. In 1552 he was appointed chaplain to Edward VI, and preached before the king and council at Westminster, who recommended Cranmer to give him the living of Allhallows in London, which he declined, not choosing to conform to the English liturgy as it then stood. It is even said that he refused a bishopric, regarding all prelacy as savouring of the kingdom of antichrist. He however continued his practice as an itinerary preacher, until the accession of Mary in 1554, when he quitted England, and sought refuge at Geneva, where he had not long resided, before he was invited by the English congregation of refugees, then at Frankfurt, to become their minister. He unwillingly accepted this invitation, at the request of John Calvin, and continued his services until embroiled in dispute with Dr Cox, afterwards bishop of Ely, who strenuously contended for the liturgy of king Edward. Knox, in his usual style of bold vituperation, having, in a treatise published in England, called the emperor of Germany as great an enemy to Christ as Nero, his opponents accused him to the senate of treason, both against the emperor and queen Mary, on which he received private notice of his danger, and again retired to Geneva, whence, after a residence of a few months, he ventured in 1555 to pay a visit to his native country. Finding the professors of the protestant religion greatly increased in number, and formed into a society under the inspection of regular teachers, he finally joined them, and produced so great an effect by his exertions, both in Edinburgh and other places, that the Roman catholic clergy, alarmed at his progress, summoned him to appear before them in the church of the black friars in that metropolis, on the 15th May 1556. This summons he purposed to obey, resting on the support of a formidable party of nobles and gentry, which so alarmed his opponents, that they dropped the prosecution. Thus encouraged, he continued preaching with additional energy and boldness, and was even induced to write to the queen regent, Mary of Lorraine, a letter, in which he earnestly exhorted her to listen to the Protestant doctrines. While thus occupied, he was strongly invited to pay a visit to the English congregation at Geneva, and he accordingly departed for that place in July 1556. He was no sooner gone, than the bishops summoned him to appear before them, and as that was impossible, they passed sentence of death against him as a heretic, and burnt him in effigy at the cross at Edinburgh. Against this sentence he drew up an energetic appeal, which was printed at Geneva in 1558, previously to which, he was invited to return to Scotland, and had actually reached Dieppe on his way, when he received other letters recommending delay, which epistles he answered by such strong remonstrances against timidity and backsliding, that those to whom he addressed them entered into a solemn bond or covenant, dated December 3, 1557, "that they would follow forth their purpose, and commit themselves and what-

ever God had given them into his hands, rather than suffer idolatry to reign, and the subjects to be defrauded of the only food of their souls." Knox in the mean time had returned to Geneva, where he published his treatise entitled, "The First Blast of the Trumpet against the monstrous Regiment of Women," chiefly aimed at the cruel government of queen Mary of England, and at the attempt of the queen regent of Scotland to rule without a parliament. A "Second Blast" was to have followed, but the accession of queen Elizabeth to the throne of England, who was expected to be friendly to the Protestant cause, prevented it. In April 1559 he would have visited England, but was prevented by the resentment felt by Elizabeth at his late treatise; he therefore proceeded directly to Scotland, where he found a persecution of the protestants just ready to commence at Stirling. With his usual intrepidity he hurried to the scene of action to share the danger, and mounting a pulpit, by a vehement harangue against idolatry, he inflamed the people with extreme rage. The indiscretion of a priest, who, immediately on the conclusion of this discourse, was seen preparing to celebrate mass, and to decorate the altar for that purpose, precipitated his hearers into direct violence, and a general attack was made on the churches of the city, in which the altars were overturned, the pictures destroyed, and the images broken into pieces. The people next proceeded to the monasteries, which massy fabrics they almost levelled to the ground, and acted with a degree of energy and fury which nothing could for the moment resist. As these riotous proceedings were censured both by the reformed preachers, and by the leaders of the same party, historians have agreed to regard them as an unconcerted outrage, and a mere accidental eruption of popular fury. From this time Knox continued to promote the reformation by every means in his power; and by his correspondence with the secretary Cecil, was chiefly instrumental in establishing the negotiation between "The Congregation" and the English, which terminated in the march of an English army into Scotland. Being joined by almost all the great men of the latter country, these forces soon obliged the French troops, who had been the principal support of the tyranny of the regent, to quit the kingdom, and the parliament was restored to its former independence. Of that body, the majority had embraced Protestant opinions, and no opportunity was omitted of assailing the ancient religion, until at length the presbyterian plan, recommended by Knox and his brethren, was finally sanctioned; the old ecclesiastical courts being abolished, and the exercise of religious worship, according to the rites of the Romish church, prohibited. In August 1561, the unfortunate Mary, then widow of Francis II, king of France, arrived in Scotland to reign in her own right. She immediately set up a mass in the royal chapel, which being much frequented, excited the zeal of Knox, who was equally intolerant with the leaders of the conquered party, and is

the face of an order of privy council, allowing the private mass, he openly declared from the pulpit, "that one mass was more frightful to him than ten thousand armed enemies, landed in any part of the realm." This freedom gave great offence, and the queen had long and angry conferences with him on that and other occasions, in which he never paid the slightest homage, either to sex or quality. He preached with equal openness against the marriage of Mary with a papist; and Darnley, after his union, being induced to hear him, he observed in the course of his sermon that "God set over them, for their offences and ingratitude, boys and women." The share taken by this ardent and intrepid minister in the ensuing unhappy transactions is subject rather for history than biography. In the year 1567 he preached a sermon at the coronation of James VI, when Mary had been dethroned, and Murray appointed regent. In 1572 he was greatly offended with a convention of ministers at Leith, for admitting the titles of archbishop and bishop to remain during the king's minority, although he approved of the regulations adopted in reference to their elections. At this time his constitution was quite broken; and he received a great additional shock by the dreadful news of the atrocious massacre of St Bartholomew. He had however strength enough to preach against it, which he desired the French ambassador might be acquainted with; but soon after took to his bed, and died on the 24th of November, 1572. He was interred at Edinburgh, several orders attending, and particularly the earl of Morton, that day chosen regent, who, as soon as he was laid in his grave, thus exclaimed, "There lies he who never feared the face of man, who hath been often threatened with dag and dagger, but yet both ended his days in peace and honour: for he had God's providence watching over him in an especial manner when his life was sought." The character of this eminent reformer has been sketched with great candour and impartiality by Dr Robertson, in his history of Scotland, who, in observing upon the severity of his deportment, impetuosity of temper, and zealous intolerance, justly observes, that the qualities which now render him less amiable, fitted him to advance the reformation among a fierce people, and enabled him to encounter dangers, and surmount opposition, to which a more gentle spirit would have yielded. This is a truth which can be rejected neither by warm admirers on the one hand, nor by those who, imbued with the tolerant notions of a more enlightened era, are shocked at the absence of moderation on all sides. That John Knox was a man of exalted principles, great intellectual energy, undaunted intrepidity, and exemplary piety and morality, will be freely admitted by the impartial of every class. He was twice married, and had two sons by his first wife, who were educated at St John's college, Cambridge, of which they became fellows. His writings, in addition to those already mentioned, are "A faithful Admonition to

the Professors of the Gospel of Christ in the Kingdom of England," 1554; "A Letter to Queen Mary, Regent of Scotland;" "A steady Exhortation to England for the speedy embracing of Christ's Gospel." After his death appeared his "History of the Reformation of Religion within the Realm of Scotland," at the end of the fourth edition of which, Edinburgh, 1732, folio, are appended all his other works.—*McCrie's Life of Knox. Robertson's Hist. of Scot.*

KNOX (ROBERT) an English mariner in the East India service, was born about 1641. He went to sea in a ship commanded by his father in 1660, and was wrecked on the coast of Ceylon, in which island he remained a captive among the natives for twenty years. At the expiration of that time he contrived to escape to a Dutch settlement, whence he obtained a passage to Batavia, and thence to England. In 1681 he published his "Historical Relation of the Island of Ceylon." He was cousin to Strype, the historian.—*Preface to the above Work.*

KNOX, DD. (VICESIMUS) an eminent divine, author of a variety of works both in theology and polite literature. He was born December 8, 1752, and educated at Merchant Tailors' school, whence he proceeded in due course upon a fellowship to St John's college, Oxford. On the death of his father, he was chosen his successor in the head-mastership of Tunbridge grammar-school, over which he presided thirty-three years, till, retiring in 1812, he was himself in turn succeeded by his son. He held the livings of Riemwell and Ramsden Crays in Essex, and the chapelry of Shipbourne in Kent. His works, many of which have been translated into various European languages, are, "Essays Moral and Literary," 3 vols. 8vo and 12mo; "Liberal Education," 2 vols. ditto; "Winter Evenings," 3 vols. ditto; "Personal Nobility, or Letters to a Young Nobleman," 1 vol. 12mo; "Christian Philosophy," 2 vols. 12mo; "Considerations on the Nature and Efficacy of the Lord's Supper," 1 vol. 8vo; and a pamphlet "On the National Importance of Classical Education;" with a variety of sermons on different occasions. He also published for the use of his school, expurgated editions of Horace and Juvenal, and a series of selections from the works of the best English authors, generally known as "Elegant Extracts" and "Elegant Epistles." On the commencement of the war consequent on the breaking out of the French Revolution, several pamphlets in opposition to the belligerent councils which prevailed, were generally attributed to him, as well as a translation of Erasmus's "Bellum dulce inexpertis," printed with the signature "Antipolemus." He is also regarded as the author of a searching tract, entitled, "The Spirit of Despotism," published anonymously in 1794, and since reprinted. Dr Knox wrote the Latin language with great purity and elegance both in prose and verse, paying the greatest attention to the harmony and rhythm of his sentences. His death took

place at Tunbridge, September 6, 1821.—*Ann. Biog.*

KNOX (WILLIAM) under secretary of state in the American department, previous to the independence of the United States. He published "Extra Official State Papers, for the Preservation of the Constitution and Promotion of the Prosperity of the British Empire," 1789, 8vo; and "Observations upon the Liturgy," containing proposals for a reformation of that part of the church service. He died in 1810, at the age of seventy-eight.—*Orig.*

KNUTZEN (MATTHIAS) a formal professor of Atheism of the seventeenth century. He was a native of Holstein, but first broached his opinions at Königsberg, in Prussia, and in consequence of assuming, that all ideas of God and religion should be laid aside, and the dictates of reason and conscience be alone pursued, his followers were denominated Conscientiarists. He gave the substance of his doctrines in a short letter dated from Rome, from which it appears, that he denied the existence of both a good and an evil principle, deemed churches and priests useless, and held that there is no life beyond the present, for which conscience is a sufficient guide. He made some noise in his day, and was answered by the Lutheran professor Musæus. He however died in obscurity, as the date of his death is not recorded.—*Moreri. Chauvèpie.*

KNUTZEN (MARTIN) professor of philosophy at Königsberg in Prussia, was born in 1713, and died in 1751. He left several learned works, the principal of which are, "Systema Causarum efficientium;" "Elementa Philosophiæ Rationalis, Methoda Mathematica demonstrata;" "Theoremata de Parabolis Infinitis;" and a "Defence of the Christian Religion," 4to, in German.—*Nouv. Dict. Hist.*

KOBURGER (ANTHONY) a printer of the fifth century, who exercised his profession at Nuremberg with so much distinction, that Badius Ascensius styles him, "Librarium Princeps, et inter fideles atque honestos mercatores non inferiori loco positus;" and he praises him for the beauty and accuracy of his typography. He printed editions of the Bible and other works, which are much in request among book-collectors. His death took place in 1513.—*Biog. Univ.*

KOCH (CHRISTOPHER WILLIAM) professor of public jurisprudence at Strasburgh, a writer distinguished for his laborious researches concerning the antiquities of the middle ages. He was born in 1737, and was educated at the university of Strasburgh, under the celebrated Schoepflin. History, genealogy, and the canon law were the pursuits which chiefly engaged his attention. After publishing an academical dissertation on collation to ecclesiastical dignities and benefices, he produced in 1789 his commentary on the German pragmatic sanction. He succeeded to his professorship on the death of Schoepflin in 1771, and became head of the diplomatic school, whence proceeded many statesmen and ministers. The progress of the French Revolu-

tion for a time interrupted his literary pursuits, and having been chosen a member of the legislative assembly, his patriotic opposition to the measures of the Jacobins occasioned his imprisonment. After eleven months captivity, he was liberated on the fall of Robespierre, and he was then called, by the unanimous voice of his fellow citizens, to the direction of the department. He quitted this office in 1795 to resume his professional duties, which were again interrupted by public employments. In 1810 he was made honorary rector of the academy of Strasburgh, which office he held till his death, October 25, 1813. He was the author of a "View of the Revolutions of Europe, from the Overthrow of the Roman Empire in the West to our own Times," 3 vols. 8vo; a history of treaties since the peace of Westphalia, and other valuable works.—*Biog. Univ.*

KOCHANOWSKI (KOCAN) a Polish nobleman, who was one of the best poets his country has produced. He was born in 1532, and studied in Germany, after which he visited Paris, Rome, and Padua, where his talents attracted great notice. He made acquaintance with the chancellor Zamoyski, who became his zealous patron. On his return to Poland, king Sigismund wished to have engaged him in his service; but he preferred the indulgence of his literary taste in retirement to rank and honours. He died about 1584. His works have procured him great celebrity among his countrymen; and his version of the Psalms of David obtained for him the appellation of the Pindar of Poland. His compositions may be found in the "Selection of Polish Authors," printed at Warsaw, 1803-1805, in twenty-six volumes.—*Biog. Univ.*

KOEHLER (JOHN BERNARD) a native of Lubeck, distinguished in the last century as a classical scholar. At the age of seventeen he published a dissertation on the Deities who presided over marriage among the Greeks and Romans. In 1766 he was nominated professor of history and philosophy in the university of Kiel; and from 1781 to 1786 he occupied the chair of the Greek and Oriental languages, at Königsberg. His death happened April 3, 1802. Koehler published Remarks on Dion Chrysostom, 1765; Notes and Observations on Theocritus, 1767; tracts on Roman Law; a German translation of the Iphigenia in Aulis of Euripides; and made collections for an edition of Hesiod; besides writing articles in periodical journals, and other literary labours.—*Biog. Univ.*

KOEHLER, or KOELER (JOHN DAVID) one of the most industrious writers of the age in which he lived. He was born in 1684 near Leipzig, and studied at Wittemberg, where he devoted himself to history and the belles lettres. He became secretary to baron de Strahlen, whom he quitted in 1710 for the professorship of logic at Altorf, and he was soon after made librarian to the university. In 1714 he obtained the chair of history, and in 1717 he was appointed tutor to the marquis of Brandeburgh Bayreuth. Notwithstanding

his various engagements, he published a considerable number of valuable works, chiefly relating to history and archaeology, of which a list may be seen in our authority. The emperor Charles VI, as a mark of respect for his talents, gave Kœtler his portrait, suspended from a chain of gold. He became at length professor of history at Gottingen, and retained the situation for twenty years, dying March 10, 1755.—*Biog. Univ.*

KOENIG. There were several of this name: **GEORGE MATTHIAS**, the first upon record, was a Franconian, born in 1616 at Altorf, where his father had the superintendance of the public library. On his decease he was succeeded by his son, whose learning and abilities also procured him the professorships of Greek and poetry. He compiled a Latin Biographical Dictionary of considerable merit, printed in one quarto volume in 1678. His death took place about the year 1699.—**JOHANN GERARD KOENIG**, a physician of Courland in Lithuania, born 1723, was a pupil of the celebrated botanist Linnæus. He visited various countries, especially Iceland and the East Indies, keeping up throughout his travels a regular correspondence with his old instructor, on the subject of their mutual study. Much of this has appeared, and the late sir Joseph Banks purchased several manuscript works of this philosopher, respecting the natural productions of the regions he had gone through. He died in India in 1785.—There were also two brothers in the last century, **DANIEL** and **SAMUEL KOENIG**, natives of Switzerland. Of these the former translated "Arbuthnot on Ancient Coins" into the Latin language, of which Reitz afterwards published an edition at Utrecht in 1756; Daniel was killed in his twenty-second year at Franeker by the mob, who, in a popular commotion, fell upon him under the supposition that he must be a French spy, as he had been heard to converse in that language. Samuel was a good mathematical scholar, and filled the professor's chair at Franeker in philosophy and ethics. He afterwards settled at the Hague, on the invitation of the prince of Orange, who made him his librarian. Maupertuis, at that time president of the academy at Berlin, of which Koenig was a member, quarrelled with him, and by his influence with the body, procured his expulsion, in consequence of an attack levelled at himself; but an able "Appeal," prevented any diminution of reputation to the discarded associate, who died in 1757.—*Nouv. Dict. Hist. Hutton's Math. Dict.*

KOENIGSMARCK (**MARIA AURORA**, countess of) the daughter of a Swedish general officer, and born in the territory of Bremen, about 1673. Left to the care of her mother, in consequence of the death of her father, who was killed at the siege of Bonn, she was carefully educated at Hamburg. In her seventeenth year her mother died; and this misfortune was followed by the loss of her brother, count Philip de Koenigsmarck. That nobleman, after having rendered his name infamous in England by his share in the assassination of

Mr Thynne, (for which the persons he employed were executed,) was suspected of an intrigue with the wife of George I, then elector of Hanover, by whose order Koenigsmarck was privately put to death. He left a considerable fortune in the hands of his bankers at Hamburg, and they refused to surrender it to his heirs, on the pretext that there was no legal evidence of his decease. Aurora and her two sisters went to Dresden to implore justice from the elector of Saxony, Frederic Augustus; and that prince, notorious for his gallantry, smitten with the charms of the beautiful supplicant, left no means untried to seduce her, and at length succeeded. In 1696 she became the mother of a son, named Maurice, known in history as the famous count Saxe. Illness, succeeding her confinement, having given occasion to her being supplanted in the heart of her fickle admirer by a new favourite, she retired to the abbey of Quedlinburg, where she employed herself in the education of her son. The elector however still retained a great esteem for her, and in 1702 he sent her on a diplomatic mission to his formidable enemy Charles XII of Sweden, with whom his claims to the throne of Poland had involved him in a hazardous contest. The countess could not obtain an interview with the stern warrior, on which she pleasantly said, "She was very unlucky to be the only person in the world on whom that great prince would turn his back." She afterwards offended Augustus by advising him to displace his principal minister, on which she was forbidden to appear at court. She consoled herself in her retreat by the tenderness of her son, to whose improvement she consecrated the rest of her life. This highly gifted and accomplished female died about 1725. She wrote a great number of odes and other pieces in German, preserved in manuscript at Quedlinburg.—*Biog. Univ.*

KOERNER (**THEODORE**) an eminent German lyric poet, born at Dresden in 1788. In his childhood he manifested an ardent imagination, and a taste for literature, which was encouraged by the attentions of the celebrated Schiller, who was a friend of his father. In 1811 he finished his studies at Leipzig. Being forbidden to attend any of the Saxon universities, on account of his political sentiments, he repaired to Vienna, and became a dramatic writer. His pieces were very successful, and he obtained the post of secretary to the management of the court theatre, with a salary of two thousand florins. Always an enthusiast for the liberty of Germany, the retreat of Buonaparte from Russia inspired him with military ardour, and hastily leaving Vienna, he went to Breslau, and enlisted as a common soldier in the Prussian army. His bravery at the battle of Lutzen procured him promotion. Soon after he was dangerously wounded in an ambuscade. When recovered, he joined the army, and received a lieutenantancy as the reward of his conduct in an engagement on the 8th of October, 1812; but he lost his life ten days after on the plains of Leipzig. The

poetical productions of this modern Tyrtæus were collected and published at Vienna in 1814, under the title of "The Lyre and the Sword."—*Biog. Univ.*

KOLBE, or KOLBEN (PETER) a Dutch writer, chiefly known as the author of an account of the Cape of Good Hope. He was born in 1675 in the principality of Bayreuth, where his father was a receiver of the taxes. He studied at Nuremberg under Eimmart, director of the school of painting, eminent for his skill in astronomy; in which science Kolbe made so much proficiency as enabled him to give lectures at Halle, where he entered himself a student of the university in 1700. He afterwards travelled with baron von Krosie, privy counsellor of Prussia; and in 1705 he went to the Cape of Good Hope, and was appointed secretary to the colonies of Stellenbosch and Drakenstein. He continued in this situation ten years, when becoming afflicted with blindness, he returned to Europe. He afterwards recovered his sight, and became rector of the school of Newstadt on the Aisch, where he remained till his death, December 31, 1726. He wrote a tract, "De Aquis Capitis Bonæ Spei," inserted in the *Acta Eruditorum*, Lips. 1716; and "A Description of the Cape of Good Hope," Nuremberg, 1719; folio, which has been translated into English and various other languages. A vehement attack was made upon the accuracy and veracity of Kolben by the French abbé de La Caille, who described his work as more resembling a series of fables than an authentic narrative. On the other hand, Foster, in his "Voyage round the World," ascribes the censures of La Caille to interested motives, and asserts that it would be easy to refute almost every criticism which the abbé has passed on this intelligent and entertaining traveller. The great number of accounts of the Cape of Good Hope published since the works of these writers, render the settlement of the question at present of very little moment.—*Aikin's G. Biog. Biog. Univ.*

KOMARZEWSKI (JOHN BAPTIST) a Pole of a noble family, who was knight of several orders, FRS. of London, member of the Literary Society of Warsaw, &c. He received a good education under the patronage of one of the ministers of king Stanislaus Augustus; and he was employed by that prince on several important missions to the courts of Russia, Germany, and Turkey. His services were rewarded with the rank of lieutenant-general, first aide-de-camp to the king, and intendant general of mines. On the partition of Poland, he went to Russia; but refusing the offers of Catherine II, who would have retained him in her service, he finally settled at Paris, where in 1809 he published a "Hydrographical Chart of Poland," with the construction of which he had been charged by the late king. He also invented an instrument useful to miners, called the Subterranean Graphometer. He died at Paris in 1810, aged sixty-six. Besides his labours as a man of science, he was the author of a political

tract, entitled "Coup d'œil rapide sur les causes réelles de la decadence de la Pologne," 1806, 8vo.—*Biog. Nouv. des Contemp.*

KOOTEN (THEODORE VAN) a classical scholar and Latin poet, born at Leeuwarden in the United Provinces, in 1749. He studied at Franeker, and in 1772 became rector of the Latin school of Campan; in 1779 he removed to Middleburg, and in 1784 he succeeded the learned Schrader, under whom he had been educated, at Franeker. The political commotions which took place in Holland obliged him to quit his office and his country in 1787, when he went to Paris with his friend and colleague, Walckenaer, or Valckenaer, son of the celebrated Hellenist. He returned to Holland in 1795, and occupied a public situation, which he left to accompany M. Walckenaer on an embassy to Spain, and returning with that gentleman, he resided with him during the remainder of his life. He died in 1814. He distinguished himself as an elegant writer of Latin poetry, and a collection he published, under the title of "Deliciæ Poeticæ," Amsterdam, 1792, 1805, 8vo, contains many of his compositions; while his critical skill appears in his publication of "Incerti auctoris (vulgo Pindari Thebani) Epitome Iliados Homerica," 1809, 8vo.—*Biog. Nouv. des Contemp.*

KORTHOLT (CHRISTIAN). There were two learned theologians of this name: the elder, a native of Burg in the island of Fermeren, was born in January 1633. Having received the rudiments of a classical education in the place of his birth, he visited Sleswick, Leipsic, Jena, and other German universities, and at length settled at Rostock as Greek professor, in 1662. Better prospects opening to him, through the countenance of the reigning duke of Holstein, he retained his chair little more than three years, when he removed to Kiel as professor of divinity, and eventually succeeded to the vice-chancellorship of that university. He published a variety of tracts on subjects connected with religion. Among others, essays "On the Pagan, Mahometan, and Jewish Religions;" "On the Origin and Nature of Christianity;" "On the Persecutions of the Primitive Church;" "On the three Impostors, Herbert, Hobbes, and Spinoza," 4to; "On the State and Progress of Schools and Academies, more especially in Germany," folio; "On the Harmony of Reason with Revelation;" "On the Nature of Philosophy," &c. His death took place in the spring of 1694.—His grandson of the same name was born about the year 1709, and was the author of an "Account of the British Antiquarian Society," and an edition of the letters of Leibnitz, written in the French and Latin languages, the former contained in one, the latter in four volumes. He also wrote several devotional tracts, in his capacity of divinity professor in the university of Göttingen, where he died in 1751.—*Nouv. Dict. Hist.*

KOSCIUSKO (THADDEUS) a celebrated Polish patriot. He was of noble descent, but

his family being by no means wealthy, he was educated in the military school at Warsaw, where he made a great progress in the study of mathematics and drawing. He was, in consequence of his proficiency, nominated one of four students sent at the expense of the establishment to improve their knowledge in France. On his return to Poland he had a commission given him: but being refused promotion, he determined to go to America, where war was then carrying on between Great Britain and her colonies. There he became adjutant to general Washington, and acquired by his talents and bravery the esteem of those with whom he served, and he was also rewarded with the cross of the Cincinnati. After the conclusion of the war he lived in retirement in his native country till 1789, when he was made a major-general in the army by the diet, in which the management of public affairs was vested. He was afterwards employed as a general of division under the younger Poniatowski, when he displayed great zeal, skill, and courage, in opposition to the attempts of the Russians against the independence of Poland. Finding his efforts for freedom paralysed by the weakness or treachery of others, he gave in his resignation, and was afterwards forced to become an exile from his country. He had retreated to Leipzig in 1793, when the Polish army and the people in general, impatient under the yoke of Russia, were ready for insurrection. All eyes were turned towards Kosciusko, whom they chose for their leader, and messengers were sent to him from Warsaw to acquaint him with the schemes and wishes of his compatriots. In compliance with the invitation, he proceeded towards the frontiers of Poland; but apprehensive of compromising the safety of those with whom he acted, he was about to defer his enterprise, and set off for Italy. He was however persuaded to return, and arriving at Cracow at the very time when the Polish garrison had expelled the troops of Russia, he was chosen, on the 24th of March 1794, generalissimo, with all the power of a Roman dictator; and he immediately published an act, authorising insurrection against the foreign authorities, and established a new government. He then proceeded to support colonel Madalinski, who was pursued by the Russians; and having joined that officer, they attacked and defeated the enemy on the 4th of April, with inferior numbers. His army now increased to nine thousand men, the insurrection extended to Warsaw, and in a few days the Russians were driven from that palatinate. Kosciusko united his forces with those of general Grochowski, and found himself at the head of an army, fifteen thousand strong. He obtained some advantage over the Russians on the 8th of June, at Szezakociny; but the king of Prussia arriving to the assistance of the enemy, Kosciusko suffered a defeat, and was exposed to great personal danger. From this period he waged a disadvantageous warfare against his too powerful opponents till the 4th of October, when he was completely defeated and

taken prisoner, at the battle of Maniejawice. He was sent to Russia, and confined in a fortress near St Petersburg, till the accession of Paul I, who, through real or affected admiration of the character of Kosciusko, set him at liberty. In May 1797, he took his departure for the American United States, where he was honourably received by the government and people. He returned to Europe the following year, and settled in France, where he passed a great part of the remainder of his life. Buonaparte in vain endeavoured to engage him in his ambitious schemes for the subjection of Poland, and even made use of the name of Kosciusko in his proclamations; but the wary and disinterested patriot comprehended the nature of his designs, and rejected his overtures. He died at Soleure, in Switzerland, on the 16th of October, 1817.—*Dict. des H. M. du 18me S. Biog. Nouv. des Contemp.*

KOSTER (HENRY) an ingenious writer, born in Portugal of English parents. He made a voyage to Brazil, where he resided six years, and having acquired an intimate knowledge of the country, he published in London, in 1816, an interesting account of his travels, reprinted in 2 vols. 8vo, in 1817. He died at Pernambuco, in South America, in 1820, at the age of twenty-six.—*Biog. Nouv. des Contemp. London Mag.*

KOSIHA BEN LOUKA, a Christian philosopher of Baalbek in Syria, who wrote in the reigns of the successors of Haroun al Raschid. His love of science induced him to go to Constantinople, where he made a collection of valuable works in the Greek language, previously unknown to the Arabians. On account of his learning he was called to Bagdad to translate into Arabic the writings of the Greeks; and when he had completed his task he retired into Armenia, where he died about the end of the ninth century. Among the principal labours of Ben Louka are translations of the "Aphorisms" of Hippocrates; the "Barulcus," of Hero of Alexandria, of which the original is not now extant; and a work of Autolykus on Astronomy. An enumeration of the books composed and translated by this philosopher may be found in the first of the annexed authorities.—*Cassiri Billiet. Arabico-Hispan. Escorial. tom. i. Biog. Univ.*

KOTHE'EDDIN or COTBEDDIN (MOHAMMED BEN MOHAMMED) an Arabian historian, who was a native of Mecca. When Yemen was conquered by the Turks in 1569, Kothe'eddin was appointed professor in one of the four colleges of the sacred city, where it was his duty to explain the koran according to the doctrines of the sect of the Hattaites, to which he belonged. He is said also to have studied medicine. His death took place in 1580. He wrote a valuable narrative of the Ottoman conquest of Yemen; and an account of the Holy City, i. e. Mecca, comprising curious details not to be found elsewhere.—*Biog. Univ.*

KOTZEBUE (AUGUSTUS FREDERICK FER-

DINAND (VON) was born May 3, 1761, at Weimar, in Germany, where his father was a counsellor of legation. He is said to have manifested a talent for poetry when only six years old. His education was commenced at the gymnasium of his native place, and completed at the academies of Duisbourg and Jena. He was destined for the profession of law, but he wished to become a man of letters; and there was scarcely any branch of literature which did not in some degree engage his attention. At the age of twenty he was invited to St Petersburg, by the Prussian ambassador, who was the friend of his father, and who procured him the office of secretary to M. de Bauer, general of engineers. On his death, Kotzebue was nominated by the czarina a counsellor, and placed in a judicial situation at Revel, where in 1783 he became assessor of the primary tribunal, and at length president of the government, which post he occupied ten years, with the rank of lieutenant-colonel in the army. Having received his dismissal, he retired to an estate which he possessed at some distance from Narva, and consecrated his leisure to the cultivation of dramatic literature. He had previously produced some pieces for the theatre at St Petersburg, which had contributed to procure him the favour of the empress. In 1792 he was called to the direction of the theatre at Vienna, whither he proceeded: but after a short time he relinquished his new situation, and went to Weimar. He had resided there three years, when the intrigues of his wife, who was a native of Russia, induced him to return thither; but he had scarcely arrived on the frontiers of the empire, when he was arrested by order of Paul I, who suspected him to be the author of some revolutionary pamphlets, in which he was personally attacked. Kotzebue was transported to Kurgau in Siberia; and he published an account of his journey, his residence there, his attempts to escape, and various other adventures, in a very amusing, but apparently not very authentic work, entitled "The most remarkable Year of my Life." He was however soon recalled, and, as he states, well received by the emperor, who confided to his direction the theatre of St Petersburg. This situation he wished to resign, but could not obtain permission to do so till after the death of Paul I. In April 1801, Kotzebue set off for Weimar, where he arrived soon after. Some disputes which he had with Goethe and the two Schlegels induced him to remove to Paris, where he experienced the most gratifying attentions from the French literati; and it is not at all to his credit that he repaid their kindness by the publication of a calumnious work, which he called "My Recollections of Paris." He treated the Italians with equal illiberality in his "Recollections of Rome and of Naples." About the end of 1803 he commenced, in conjunction with M. Merakel, a journal, entitled, "Der Freymüthige"—"The Sincere," in which Napoleon Buonaparte was attacked with virulence. Till 1813 Kotzebue continued

to be employed on literature and politics; and to his pen are ascribed many proclamations and diplomatic papers issued by the cabinet of St Petersburg. He attended the czar in the campaign of 1813 as political secretary to the army; and he was afterwards nominated consul-general of Russia at Königsberg, whence he was called in 1816 to St Petersburg, to be attached to the office of foreign affairs. In 1817 the emperor Alexander authorised him to return to his own country, and appointed him his literary correspondent in Germany, with an allowance of 15,000 roubles, and a commission to give an account of the state of public opinion among the people. The manner in which he executed this employment caused his destruction. His calumnious accusations against the students of the German universities having rendered him the general object of their detestation, one of them, a young enthusiast named Sandt, went to Mannheim, where Kotzebue resided, and killed him in his own house, by stabbing him with a poignard, March 23, 1819. Kotzebue is known in England as a dramatist, in consequence of some of his plays having been translated for the British stage. His "Misanthropy and Repentance," the English version of which has received the unmeaning title of "The Stranger," may be considered as a fair specimen of his talents. He affixed his name to more than three hundred dramas; but many of them were merely retouched by him, having been purchased of their authors, and others are translations.—*Biog. Univ. Biog. Nouv. des Contemp.*

KOULI KHAN, see **NADIR SHAH**.

KRAFT (**GEORGE WOLFGANG**) a German philosopher, who was educated at Tubingen, where he took the degree of M.A. in 1728, and the same year was appointed professor of mathematics at St Petersburg. Five years after he was made lecturer on natural philosophy; and in 1738 he was chosen a member of the Royal Academy of Berlin. His great reputation induced the prince of Wirtemberg, of whose dominions he was a native, to recall him home, to take the chair of mathematics and natural philosophy at Tubingen, where he presided till his death in 1754. Besides several separate works on natural philosophy, he was the author of many interesting and important papers in the Transactions of the Academy of St Petersburg. One of his most remarkable productions is a description of the house built of ice at St Petersburg in 1740, which was published in Russian and German, and of which there is a French translation by P. L. Leroi, 1741, 4to, with plates.—*Biog. Univ.*

KRANTZ or **KRANTZIUS** (**ALBERTUS**) a learned German historian and philosopher of the fifteenth century, born at Hamburg, of the ecclesiastical chapter of which, his native city, he was elected dean in 1498, having been for sixteen years previously professor of theology and philosophy in the university of Rostock. His reputation as an able and upright diplomatist too, was so well established, that

in a dispute which occurred between the courts of Holstein and Denmark, the contending potentates voluntarily submitted their difference, which was of a territorial nature, to his arbitration. He was the author of a Latin "Chronicle of the Kingdoms of Denmark, Sweden, and Norway;" "A History of Saxony from the earliest Periods;" another of the Saxon church, entitled "Metropolis;" a "History of the Ancient Vandals," and a treatise on logic, all written in the same language.—*Moreri. Nouv. Diet. Hist.*

KRASCHENNIKOF (STEPHEN) a Russian traveller and naturalist, born at Moscow in 1712. He was sent in 1733, with three academicians of St Petersburg, to visit Siberia, and collect an account of the country and its productions. After assisting in their researches, he was directed to proceed to Kamtschatka in 1736, where he prosecuted his researches alone till 1738, when he was joined by Steller, who left him two years after, to embark on an expedition with Bering. Kraschennikof returned to Siberia, and proceeded with the academicians to St Petersburg in 1743. His labours were rewarded with admission into the Academy of Sciences, and he was nominated professor of natural history. From the papers of Steller and his own observations he drew up an account of his travels, which he had finished a short time before his death, in 1754. His book appeared at St Petersburg, 2 vols. 4to, 1754; and an abridged English translation was published in London in 1764, 4to, and it was also translated into French and German.—*Biog. Univ.*

KRASICKI (IGNATIUS) count de Siczin, prince bishop of Warmia and archbishop of Gnesnia, one of the most illustrious of the Polish literati of the eighteenth century. The first partition of Poland in 1772 having reduced him under the dominion of Prussia, and consequently deprived him of his functions in the senate of his country, he endeavoured to benefit the public by his writings. He was much esteemed by Frederick the Great, who took pleasure in his lively and spirited conversation. This prince having one day said to Krasicki—"I hope you will take me into Paradise under your episcopal mantle."—The prelate replied—"No, sire, that would be impossible, for your majesty has cut it too short for it to conceal any contraband commodity." His works, both in prose and verse, are much admired by his countrymen; and he particularly excelled in exposing what was ridiculous in national manners. Among his compositions are, "Myszeidos," a heroic poem, in ten cantos, on the story of Popiel, one of the ancient kings of Poland, having been devoured by rats and mice; "Monachnomachia, or the War of the Monks," in six cantos, said to be his chef-d'œuvre; "Anti-Monachnomachia," in six cantos; "Fables;" "The War of Choczim;" and imitations of Ossian. He died March 14, 1801, aged sixty-six.—*Biog. Univ. Biog. Nouv. des Contemp.*

KRAUSE (JOHN GOTTLIEB) a German

writer on philology, who was a native of Silesia. He studied at Breslau, and afterwards at Leipzig, where he proceeded MA. and gave public lectures with great success. At length he became professor of history at Wittemberg, and died there in 1736, aged fifty-two. He conducted the "Neue Zeitungen," or "New Literary Gazette of Leipzig," 1715—1733, 18 vols. 8vo; and "Nova Literaria in Supplemento Actorum Eruditorum divulgata," 1718—1723, 6 vols. 8vo; and he also published "Programma de incrementis studio Historiarum Seculo xviii. allatis," Wittemberg, 1727, 4to; and other works relative to the history of literature; and he deserves to be noticed as the author of the notes to Mencke's treatise on the quackery of the learned, signed Crispinus and Kendalcius, in the Leipzig edition of 1712.—*Biog. Univ.*

KRAUSS, or KRAUS (JOHN BAPTIST) a learned German ecclesiastic, one of the most indefatigable writers which the order of St Benedict has produced. He was born at Ratisbone January 12, 1700. After he had gone through his first studies in different convents of Bavaria, having taken the monastic habit at the age of fifteen, he was sent by his superiors to the abbey of St Germain des Prés, Paris. Returning to Ratisbon in 1724, he occupied various offices in the monastery of St Emmeran, of which he was nominated prince abbot in 1742. He presided there twenty years, dying June 14, 1762. Meusel has given a list of his works on theology, criticism, and history, amounting to forty in number. Among them are, "Catalogus Bibliothecæ Sancti Emmeranni," Ratisb. 1748—50, 4 vols. 8vo; and a history of the abbey of St Emmeran, in German, 1752, 4to.—*Meusel's Gelehrte Deutschland. Biog. Univ.*

KRAY (baron de) an Austrian general, who was a native of Hungary. He entered young into the army, and served as colonel against the Turks. He was promoted to the rank of major-general, and in 1793, 1794, and 1795, he was employed in the Netherlands and upon the Rhine. In 1796 he had a command in the army of Wartensleben, when he so much distinguished himself, that he was made a lieutenant-field-marshal. He displayed in a striking degree his skill and courage in the battles of Altenkirchen, Forcheim, Bamberg, Wetzlar, Giessen, &c. The army commanded by general Werneck having suffered great losses, when opposed by the French under Hoche in 1797, most of the Austrian general officers were tried before a council of war at Vienna, when De Kray was acquitted of blame. He then passed to the army of Italy, and after the death of the young prince of Orange, he had the chief command of the Austrian army. The brilliant manner in which he opened the campaign of 1799, made way for the future triumphs of Melas and Suwarrow. He directed the siege of Mantua, of which he made himself master; and returning to Vienna in February 1800, he was received with great distinction by the emperor Francis. He then succeeded the arch-duke Charles in

the command of the army of the Rhine; but was obliged to retreat before the French, and peace put an end to his military operations. He died at Vienna in January 1801, leaving the reputation of having been one of the ablest of the Austrian generals employed during the French revolutionary wars.—*Dict. des H. M. du 18me. S. Biog. Nouv. des Contemp.*

KROMAYER. There were two German divines of this name, JOHN, the elder, was a native of Cobelen, born 1576. From Eisleben, where he was pastor to a Lutheran congregation, he removed to Weimar, in quality of superintendant, and passed the remainder of his life there. He wrote a paraphrase on the prophetic writings of Jeremiah, 'On the Harmony of the Four Evangelists,' with two other treatises, entitled "Historiæ Ecclesiastica Compendium," and "Examen Christianæ Concordiæ." His death took place in 1643.—**JEROME**, the younger, was nephew to the above, born in 1610 at Zeitz. He studied divinity at Leipsic, and eventually obtained the professor's chair in that science, as well as that of history in the same university. Jerome Kromayer was the author of several polemical and other treatises, written for the most part in the Latin language, the principal of which are, "Historia Ecclesiastica;" "Locis Anti-Syncretistici;" "Scrutinium Religionum;" "Theologia Positivo-polenica;" "Polymathia Theologica," and a Commentary on St Paul's epistle to the Galatians, and on the Book of Revelations. He died in 1670.—*Freheri Theatrum. Moreri.*

KRUDENER (baroness VALERIE DE) a religious enthusiast of recent notoriety, was the daughter of the Russian count Wittowkoff, governor of Riga, where she was born in 1765. At an early age she married baron Krudener, appointed ambassador by Catherine II to the court of Berlin, and subsequently to Venice. Here the secretary of legation fell in love with her, and committed suicide; on which event she wrote a romance, which she entitled after her own christian name, "Valerie." At the breaking out of the French revolution she resided in the south of France; but afterwards returned to Germany, where in 1806 she assumed the character of a prophetess, and pleaded a mission to establish the reign of Christ upon earth. On the fall of Napoleon, she followed the emperor Alexander to Paris, and declared, after the example of many similar visionaries in respect to predominant potentates, that he was appointed regenerator of the world. Her predictions excited much attention; and when the allied sovereigns quitted Paris, she retreated into Switzerland, where she preached the approach of the millennium, which induced thousands of the credulous mountaineers to listen to her mission. At length the states interfered, her followers were dispersed, and after being attended to by a few whose character in society should have preserved them from such delusion, she visited the Crimea, and died at Karasubassar, Dec. 25, 1824.—*Cent. Mag.*

KRUNITZ (JOHN GEORGE) a German physician and natural philosopher of eminence, who was a native of Berlin. He studied at Gottingen, Halle, and Frankfort on the Oder, at which last university he received the degree of MD, after having written an inaugural thesis, "De Matrimonio multorum morborum remedio," 1749, 4to. He commenced practitioner of physic at Frankfort, but meeting with little success, he removed to Berlin, where he distinguished himself as one of the most indefatigable writers in a country in which literary industry is common. The most considerable of his productions is an "Economico-technological Eucyclopadia," or general system of political, domestic, and moral economy, of geography, of natural history, and of the arts, commenced in 1773, and continued through seventy-two volumes, 8vo, to the article "Leiche," a corpse, beyond which the author was prevented from proceeding by his death, which took place in 1796. The work has been continued by the brothers F. J. and H. G. Floerke; and in 1818 they had reached only the letter R, and the 120th volume of this interminable publication. Krunitz, who was a member of several learned societies, co-operated in many periodical works on medicine, natural history, &c.—*Biog. Univ. Biog. Nouv. des Contemp.*

KRUSEMARK (BARON DE) a Prussian general and statesman, descended of a family distinguished for military services. Having acquired a knowledge of diplomatic details, and the interests of different courts, he was employed in several missions by the court of Berlin. In 1806 the king of Prussia sent him to attempt the negotiation of peace with Buonaparte; and not succeeding, he was despatched to St Petersburg, where he formed a coalition which led to the treaty of Tilsit. In the course of 1809 he was appointed ambassador to the court of France, and he sustained that function in 1813, but subsequent events obliged him to quit the country. A correspondence ensued between baron Krusemark, prince Hardenburg, and the duke of Bassano, which has been preserved as affording interesting materials for a history of the times. After the conclusion of the peace of Paris in 1814, he was sent envoy extraordinary from the court of Berlin to Vienna, where he died in 1821.—*Biog. Nouv. des Contemp.*

KRUSINSKI (JUDAS THADDEUS) a Polish jesuit, who was born about 1677. Destined from his youth to the missionary service in Persia, he was sent to Ispahan, where his extensive acquaintance with the Oriental languages enabled him to gain important and interesting information. In 1720 he was nominated advocate-general of the missions in Persia; and father Barnabas de Milan, bishop of Ispahan, made him his secretary and interpreter. He returned to Europe in 1725, and settled at Kaminiék in 1729. He removed to Jaroslaw and Lemberg in 1741; and in 1748 he went to the diet of Warsaw as chaplain to count Tarloni; but he passed the latter year

of his life at Kaminiék, and died in 1754. Krusinski wrote in Latin a circumstantial and accurate account of the overthrow of the dynasty of the Sophis of Persia, and the conquest of that country by the Afghans. Father Der Cerceau's "Histoire de la dernière Revolution de Perse," 1728, 2 vols. 12mo, is a translation of this work made from the manuscript. A Turkish version by the author was printed at Constantinople in 1729, from which there is extant a Latin translation by professor J. C. Clodius of Leipsic, 1731, 4to; and the original memoirs of Krusinski at length appeared in 4to, from the Lemberg press, in 1734, together with a dissertation by the author, "De Legationibus Polono-Persicis." This genuine edition is a work of extreme rarity.—*Biog. Univ.*

KÜH (EPHRAIM MOSES) a German poet, born of a Jewish family at Breslau, in 1731. His early disposition for study induced his father to propose making him a rabbin; but he had no taste for the subtleties of the Talmud, and wished to devote his time to the belles lettres. He was placed in a financial situation at Berlin under his uncle, where he cultivated the society of Mendelssohn, Lessing, Ramler, and other men of letters, and so entirely neglected the care of his fortune, that at length he was allowed to follow his inclinations, and his friends allowed him a pension for his support. He travelled in Holland, France, and Italy, carrying with him his library. On his return to Germany he was attacked with hypochondria, which degenerated into insanity. It was in the lucid intervals of his unfortunate malady that he composed his best poetical pieces. Medical means removed his mental disease; but in 1785 he was seized with palsy, and died at Breslau, April 3, 1790. He is said to have left in manuscript more than five thousand poems, from which a selection was made by Ramler, printed at Zurich in 1792, 2 vols.—*Biog. Nouv. des Contemp.*

KUHLMAN (QUIRINUS) a visionary enthusiast of the seventeenth century, born in 1651 at Breslau. In early life he was a youth of great promise, and when only fifteen years of age wrote a treatise on ethics and a book of epigrams; but being attacked with a severe fit of illness in his eighteenth year, his brain became affected, and on the recovery of his bodily strength, his diseased imagination gave vent to the wildest absurdities. He pretended to have acquired the faculty of foreknowledge, and of holding communion with invisible spirits. These day dreams acquired additional force from the perusal of Jacob Behmen's works, which he met with in Holland the following year; while, the more to confirm him in his extravagancies, a worthy associate appeared in the same country, in the person of one John Rothe, a self-styled prophet. To this fanatic Kuhlman dedicated a treatise, which he printed at Leyden in 1674, under the title of "Prodomus quinquennii mirabilis," expressing the utmost faith in his pretensions, and the most unbounded veneration for

his person. His thoughts, however, appear not to have been so exclusively confined to spiritual subjects as he would have had it believed, inasmuch as he was neither averse to the pleasures of the table, nor to female society of the most equivocal description. After visiting several parts of Europe, he travelled into the east, till on his return through Russia, one of his prophecies was of a nature so distasteful to the government there, that he was seized and brought to the stake, at which he perished with the fortitude of a martyr, October 3, 1689.—*Moreni.*

KUINIUS (JOACHIM) an eminent scholar and acute critic of the seventeenth century, born at Gripswalde in Pomerania in 1647. He studied at the universities of Stade and Jena, whence he removed to the Suabian college of Oetingen, of which society he was chosen president in 1669. This situation however he relinquished in 1676, for the Greek professorship at Strasburg, to which he afterwards added that of Hebrew. His editions of the works of Pausanias, Diogenes Laertius, and Aelian, are much admired for the deep erudition displayed in the annotations. He also wrote a commentary on Julius Pollux, and published a series of philosophical questions drawn from the books of the Old and New Testaments, in 4to. His death took place in 1697.—*Niceron. Moreni.*

KULM (JOHN ADAM) a physician and anatomist, born at Breslau in 1680. He studied at several German universities, and graduated at Halle in 1715. After having travelled in Holland and Germany, he went to Dantzic, and became professor of natural philosophy and medicine at the gymnasium in that city. He was a member of the Academia Curiosorum Naturæ, and of the Royal Academy of Berlin, in whose collections many of his memoirs were published; but he chiefly distinguished himself by his anatomical tables with engravings, printed in German in 1728, and republished in France, Germany, Holland, and Italy. He died in 1745.—*Juecher's German Biog. Dict. Biog. Univ.*

KUNCKEL (JOHN) a native of Huysum in the duchy of Sleswick, born in 1630. He was an able chemist, and distinguished himself by several important discoveries in that branch of science, especially by the extraction of phosphorus from urine. He was much esteemed by several of the German princes, and chosen a member of the Imperial academy, but at length entered the service of the king of Sweden, who caressed him much, and even admitted him into the order of nobility. Besides a treatise which he wrote on the discovery already mentioned, he also published an account of some improvements in the art of making glass, and was the author of some ingenious "Chemical Observations" printed in 1678 at London, in one duodecimo volume. He died at Stockholm in 1703.—*Nouv. Dict. Hist.*

KUNRATH, or KHUENRATH (HENRY) a German chemist, or rather alchemist, born in Saxony, about 1560. After having finished his studies, he travelled over Lower Germany,

and going to Basil, took the degree of M.D. in 1583. He practised as a physician at Ham-
burgh, and afterwards at Dresden, where he
died in 1605. He published several curious
works in a mystical style, the most important
of which is his "Amphitheatrum sapientiae
aeternae solius vere, Christiano-kabbalisticum,
divino-magicum, &c." Hanau, 1609, folio.—
KUNRATH (CONRAD) supposed to have been
the brother of the preceding, was a skilful
chemist, and was the author of a treatise on
distillation; and another on hellebore, ros-
solis, wormwood, sugar, &c.—*Biog. Univ.*

KUSTER (LUDOLF) a learned Westph-
alian of great critical acumen and research,
born at Blomberg in 1670. His own abilities
and the interest of his patron, baron Span-
heim, procured him at an early age, the ap-
pointment of tutor in the family of the count
de Schwerin, prime minister to the king of
Prussia, for his services in which capacity, he
was rewarded with a pension of 400 livres, and
a promise of the first vacant professorship in
the university. Kuster then, in his 25th year,
proceeded to visit the principal libraries in
Holland, Germany, and France, chiefly with
the view of collating the principal manu-
scripts of Suidas, an edition of whose works
he had it in contemplation to publish. At
Paris he was especially successful, and from
three copies in the Royal Library there, re-
stored many passages and fragments before
unpublished. This laborious work he at length
completed in England, and printed it at the
Cambridge press in 1705, on which occasion
that university not only presented him with
the honorary degree of LL.D. but made him
some flattering offers as an inducement to a
protracted residence there. These however
he thought proper to decline, and returned to
Berlin, where the promised professorship
awaited him. He was afterwards appointed
to superintend the Royal Library, but be-
coming, from some unknown cause, dissatis-
fied with his situation, resigned both his chair
and office after a very short time; and once
more repairing to Holland, dedicated his time
to the bringing out a new edition of Aristop-
hanes, which appeared at Amsterdam in 1710.
In the mean time his religious opinions, ori-
ginally conformable with those of Luther, ap-
pear to have undergone a material change,
which the jesuits of Antwerp, during his tem-
porary residence in that city, acted upon so
strongly as to draw from him in 1713, an ab-
juration of Protestantism. The king of France
now rewarded his learning or his conversion,
by the grant of a pension of 2000 livres, and
ordered his name to be inserted in the list of
the associates of the academy of Inscriptions.
He did not however survive this event more
than three years, dying at Paris in the au-
tumn of 1716 of an abscess. Kuster not
only wrote the Latin language with singular
purity and elegance; but was still more cele-
brated for his thorough acquaintance with the
Greek, to the cultivation of which tongue, in-
deed, he more professedly directed his atten-
tion, and but few scholars of his age were con-

sidered able to compete with him in this re-
spect. His principal works, in addition to
those already mentioned, are a "Critical Lis-
quisition on the History of the Poet Homer;"
a new edition, in Greek and Latin, of "Iam-
blichus' Life of Pythagoras," 4to; a treatise
"On the Use of Medical Terms among the
Greeks," considered a very useful book;
"Bibliotheca Novorum librorum ab 1697, us-
que ad 1699," in 5 vols.; "Bibliotheca Li-
brorum collecta a L. Neocoro;" "Diatriba
Anti-Gronoviana;" "Diatriba de Musæo
Alexandrino; and "Sepulchri Nasonum Pic-
turae Antiquæ."—*Biog. Univ. Dibdin's Edi-
tion of Harwood's Classics.*

KÜTTNER (CHARLES GOTTLÖB) a Ger-
man traveller, born in Saxony in 1755. He
studied at Leipzig, and after having been for
eight years a teacher at Basil, he undertook
the education of an Irish nobleman. He
afterwards travelled, as tutor to young Eng-
lishmen, through most of the countries of
Europe, and at length died at Leipzig, February
14, 1805. He understood several languages,
and had acquired extensive knowledge of
mankind. He wrote in German, "Letters on
Ireland;" "Letters of a Saxon in Switzer-
land;" "Travels in Germany, Denmark, &c.;"
and "Observations on England."—*Biog. Univ.*

KUTZOW, or KOUTOUSOFF SMO-
LENSKY (MICHAEL LAVRIONOVITCH GOLE-
MITCHEFF, prince of) a famous Russian ge-
neral and minister of state, born in 1745. He
was educated at Strasburgh, where he learnt
the French and German languages. At the
age of sixteen, he commenced his military
career as a corporal in the artillery; and
shortly after he became a lieutenant in the re-
giment commanded by Suwarow. In 1762 he
was chosen aide-de-camp to the prince of
Holstein-Beck, and was made a captain. In
1764 he went to Livonia, and made five cam-
paigns against the Poles; and then served
under count Romanow in the war with Tur-
key, when he particularly distinguished him-
self at the battles of Pruth, Kagoul, and
on other occasions. He behaved with equal
gallantry in the Crimea in 1772 and 1773;
and in 1782 he arrived at the rank of colonel.
In November 1784, he was appointed a major-
general, and hostilities having again taken
place between the Russians and Turks, he
commanded, from August 1787 to July 1788,
a separate corps destined to cover the southern
frontier, and prevent the enemy from passing
the Bog. He was afterwards employed under
prince Potemkin at the siege of Oczakow,
where he was dangerously wounded; and on
his recovery he joined Suwarow before Ismai-
low, and was present at the sanguinary assault
and capture of that place. In 1791 he was
made a lieutenant-general, and on the 28th of
June that year he added to his fame at the
battle of Matchine, which terminated the
Turkish war. In 1793 and 1794 he was Rus-
sian ambassador at Constantinople; and on
his return he commanded in Finland. Under
Paul I he continued to be employed in Fin-
land, and afterwards in Holland. The emperor

Alexander appointed him military governor of St Petersburg; and on the occurrence of hostilities between France and Austria, Kutuzow commanded the Russian army destined to assist the Austrians. His services were rewarded with the grand cordon of the order of Maria Theresa. He was present at the battle of Austerlitz, which was fought in opposition to his advice, and which was so disastrous to the combined forces. In 1808 he commanded the army of Moldavia; and in 1809 he was governor of Lithuania. His next service was against the Turks, when his success in capturing the army of the grand visier, Nadir Pacha, in November 1811, was recompensed with the title of count, and the portrait of his sovereign set with diamonds. He afterwards concluded the treaty of Bucharest, May 16, 1812, on which account he was made a prince of the Russian empire. A new war with France becoming inevitable, the talents of Kutuzow were again put in requisition, and the emperor nominated him president of the council of state, and generalissimo of his armies. On the 26th of August, 1812, this general commanded the Russians against Buonaparte, in the obstinately contested and bloody battle of Borodino, in which the invaders gained the advantage, notwithstanding the talents and bravery of the Russian chief, who was rewarded by his master with the rank of field-marshal. The French gained possession of Moscow; but the emperor Alexander refusing to treat with Buonaparte, the latter was obliged to relinquish his hardly earned conquest, and commenced his retreat. The disasters which befel the French, and the exploits of Kutuzow, who followed them into Prussia, cannot be particularly detailed. While his forces, after having expelled the invaders from their native country, were assisting in the liberation of Germany, the Russian general was attacked with a mortal disease. He died April 16th, 1813, at Breslau in Silesia.—*Biog. Univ. Biog. Nouv. des Contemp.*

KUYP or CUYP (ALBERT) a painter of great originality and merit, was born at Dort in 1656. He was the son of an able landscape painter, whom however he far exceeded, and became one of the most agreeable artists that ever lived. He particularly excelled in the purity and brilliancy of light, and he was not surpassed, even by Claude or any other painter, in an accurate representation of the atmosphere, and of the lightsome effects of sunshine. The works of this artist, of whose life very little is known, embellish some of the finest collections in England; and as they are very highly finished, that circumstance, added to the number of them, implies a long life. The gallery of the marquis of Stafford in par-

ticular contains some highly valued pictures by Kuyp.—*Pilkington. Rees's Cyclop.*

KYDERMYNSTER (RICHARD) a monkish historian and controversialist, who flourished towards the close of the fifteenth and the commencement of the succeeding century. He is supposed to have derived his name from the town so called, which has been considered that of his birth, though some accounts state him to have been a native of Worcester. He was of the order of St Benedict, received his education at Oxford, and is principally known as the author of a history of Winchcombe monastery in Gloucestershire, a religious establishment, of which he became the superior. This work however has not yet appeared in print, the only treatise of his published, being a polemical attack on the doctrines of Luther, which issued from the press in 1521. His death took place in 1531.—*Athen. Oxon. Dodd's Ch. Hist.*

KYNASTON (sir FRANCIS) an English knight, one of the esquires of the body to king Charles I. He was born at Otley in Shropshire, 1587, and became at first a member of Oriel college, Oxford, but quitted that society as well as the university for Cambridge, where he graduated. He makes a respectable figure among the poets of his day, and wrote, not English, but Latin verse, with facility and elegance. His best specimen of the latter, is a translation of the "Troilus and Cressida" of Chaucer. His other works are, "Cinthiades," 1641, and "Leoline and Sydanis." A literary club, dignified by its members with the sounding title of "Musæum Minervæ," was founded by him, but on the death of the president in 1642, the society was dissolved.—There was also JOHN KYNASTON, an English clergyman, born at Chester about the year 1728. He became fellow of Brazenose college, Oxford, in 1751, and was the author of a treatise "De Impietate C. Cornelio Tacito falso objectatâ," which, though originally written as a college exercise, was subsequently printed, and gained its author great credit. He died in 1783.—*Athen. Oxon. Censura Literaricæ*, vol. ii.

KYRLE (JOHN) surnamed by Pope "the man of Ross," an English gentleman, who possessed an estate of 500*l.* a year at Ross in Herefordshire, where he died in 1754, at the age of ninety. Dr Warton, in his Essay on the Writings and Genius of Pope, says, Kyrle was the Howard of his age, and that he deserved to be celebrated beyond any of the heroes of Pindar. The splendid eulogium of the poet on the man of Ross is too well known to need repetition; and it is sufficient to remark, that it is believed to be substantially founded on truth.—*Lempriere's Univ. Biog.*

LABADIE (JOHN) a celebrated French enthusiast, was born at Bourin Guienne, in 1610. He was educated at the Jesuits' college at Bourdeaux, and in consequence of his aptitude, his master sought to engage him in their fraternity, and succeeded, after the death of his father, who was gentleman of the bedchamber to Louis XIII. He continued among the Jesuits until 1639, during which time he distinguished himself by many visionary opinions, and by an attempt to imitate the ascetic life of St John the Baptist. At length he obtained his dismission from the society, a release which he had ardently desired, and proceeded to Paris, where he acquired the patronage of the bishop of Amiens, who presented him to a prebend. He was soon after deputed, with another ex-jesuit, to visit a convent of females at Abbeville, where it is said that he took such liberties, under the plea of spiritual abstraction, as rendered it necessary for him to retire, under another name, to Bazas, where he acquired the confidence of the bishop, which he lost in a similar manner. Strange to say, he was enabled to play the same part a third time, by practising a similar deception on the archbishop of Thoulouse. Constrained once more to abscond, after some more disguises and adventures, in October 1650, he embraced the Protestant religion at Montauban. Being chosen pastor in that town, he preached with great reputation for eight years, and advanced his favourite opinions in regard to spirituality and mental prayer, with considerable success. Bayle relates a curious anecdote of the freedoms which, in the exercise of this spiritual devotion, he endeavoured to take with a young lady, whom he sought in marriage; but that inquisitorial author seems not to rest implicitly on his authorities. He was finally banished from Montauban for some intemperate interference with a Catholic funeral, and withdrew to Geneva, whence he repaired to Middleburgh, where he was invited to become pastor to a Walloon congregation. In this situation he acquired great influence and authority, and began to avow his peculiar opinions without reserve. These were sufficiently wild and mystical, but assuming the attractive guise of ardent contemplative devotion and pure spirituality, and being recommended by powerful eloquence, he acquired some distinguished converts, and among others, the celebrated Anna Maria Schurman of Utrecht, and the princess Elizabeth, daughter of the elector palatine. In 1667, he engaged in a controversy with the pastor of the Walloon church at Utrecht, which dispute and its consequence, after occupying the notice of several synods, were referred to that of Dort, which assembly, on the refusal of Labadie to appear, deposed him. In contempt of this decree, he collected a crowd of his followers, who broke open the church of Middleburgh, in which he preached and administered the communion; an act of intemperance which led to his expulsion from Zealand. He was then obliged to submit, and

sought an asylum between Utrecht and Amsterdam, where he erected a little community, and set up a press. About this time he sought to unite with the famous Antoinette Bourignon, who was too fond of exclusive sway herself to listen to his overtures. In 1670 he removed, under the protection of the princess palatine, to Hervorden in Westphalia, but was soon constrained to remove to Erfurt, whence he was driven by the wars to Altona, where he died in 1672 in the arms of Mademoiselle Schurman, who had accompanied him in all his migrations. He was the author of a variety of publications, besides his treatises on mental prayer, to which he gave such quaint titles as "The Herald of King Jesus," "The Empire of the Holy Ghost;" "The Holy Decades," &c. all of which have reached merited obscurity. The sect formed by this turbulent enthusiast, having been kept up principally by his own imposing manners and commanding eloquence, soon fell into oblivion upon his death, and few or no traces of it are at present visible.—*Bayle. Moreri. Mosheim.*

LA BASTIE (JOSEPH BIRDARD baron de) a learned antiquary, born at Carpentras in Dauphiny, in 1703. Having finished his studies at the college of his native place, he determined, against the wishes of his friends, to become a recluse, and took refuge among the jesuits at Avignon. His ardour, however, was subdued by the persuasion of one of his uncles, and he entered into the army; but he afterwards became a lawyer and a magistrate. An acquaintance which he formed with the president Bouhier inspired him with a passion for antiquities, and he was chosen an honorary member of the academy of Inscriptions. He died in 1742. He published a valuable edition of the "Science des Medailles," of Father Jobert; and many dissertations on numismatics and other branches of archæology in the memoirs of the academy to which he belonged.—*Biog. Univ.*

LABAT (JOHN BAPTIST) a celebrated voyager and writer of travels, was born at Paris in 1663. At the age of twenty he entered the Dominican order, and after acting as professor of philosophy at Nancy, he embarked in 1693 for the West Indies, in quality of a missionary. After occupying for a considerable time the cure of Macouba in Martinique, he returned to Europe in 1705, and landing at Cadiz, travelled through Spain to Italy, where he remained several years, during which time he composed his "Nouveau Voyage aux Isles de l'Amerique," 6 vols. Paris, 1772, which is a lively, pleasant production, and was exceedingly well received. His residence in Spain and Italy furnished materials for another work, published in 1730, under the title of "Voyage du Pere Labat en Espagne et en Italie," 8 vols. 12mo. He also assisted as compiler and editor of various publications of a kindred nature on the authority of others. Father Labat died at Paris in 1738.—*Moreri. Nouv. Dict. Hist.*

LABBE (PHILIP) the name of a learned jesuit of Bourges, born in 1607. He distin-

guished himself highly as a philosopher, critic, and general scholar, and was a professor of morals and philology at Paris. Among his works, which are numerous and valuable, are treatises "De Scriptoribus Ecclesiasticis," 2 vols. 8vo, and "De Byzantina Historiâ Scriptoribus," folio; "Nova Bibliotheca MSS. Lib." folio, 2 vols.; "Bibliotheca Biblicarum," folio and 4to; "Bibliotheca Anti-Janseniana," 4to; "Conciliorum Collectio Maxima," folio, 17 vols.; "Concordia Chronologica," folio, 5 vols.; "Concordia Sacræ et Profanæ Chronologiæ," 12mo; "Chronologue François," 6 vols. 12mo; "Notitia Dignitatum omnium Imp. Roman." 12mo; "Eruditæ Pronuntiatiônis Catholici Indices," 12mo, and the lives of several eminent fathers of his order. His death took place in 1667.—*Nouv. Dict. Hist.*

LA BÉDOYÈRE (CHARLES ANGÉLIQUE FRANÇOIS HUCHET, count de) born of an ancient and noble family at Paris in 1786. At the age of twenty he entered into the army, and became an officer of the imperial guard, in which he served at the battle of Eylau, and afterwards in the campaign of Pomerania. In 1808 and 1809 he was attached to the staff of Eugène Beauharnois, as aide-de-camp. He then served in Spain under marshal Lannes, and was severely wounded at Tudela. In the Russian expedition, so disastrous to the French and their commander, La Bédoyère was colonel of the 112th regiment of infantry during the retreat from Moscow, and he distinguished himself at the head of his troops in 1813, at the battles of Lutzen and Bautzen in Saxony. After the abdication of Napoleon, he returned to Paris, and his corps being reduced, he was in 1815 made colonel of the seventh regiment of infantry, in garrison at Grenoble. When the ex-emperor landed in France, La Bédoyère joined him at Vizille, and he was the first officer who brought a regiment to his assistance. His devotion was rewarded with the post of aide-de-camp to Napoleon; he was made also general of brigade, soon after lieutenant-general, and raised to the peerage. At the battle of Waterloo he is said to have been one of the last who left the field, and he returned to Paris, and took his seat in the chamber of peers. There he in vain endeavoured to oppose the progress of events, and on the capitulation of the metropolis, he followed the army beyond the Loire. When the troops were disbanded, he determined to emigrate to America, aware of the fate which awaited him should he remain in France. Having however ventured to visit Paris, to take leave of his wife, he was discovered and arrested. Being tried before a military commission, August 4, 1815, he was condemned to suffer death, and the sentence was executed a few days afterwards.—*Biog. Nouv. des Contemp.*

LABERIUS (DECIMUS) a Roman knight in the last age of the republic; who having acquired some celebrity as a dramatic author by the composition of the short satirical pieces then popular, Julius Cæsar, at that time fast rising to absolute power, compelled him to

appear, himself, upon the stage in one of his own "Mimes." The angry poet, however, with equal wit and courage, contrived to render his disgrace the means of annoyance to his persecutor, whom he took that opportunity of lashing unmercifully, though present, in an extempore address preserved by Aulus Gellius. Laberius died in the year 44, or as some say 46 before the Christian æra.—*Vossii Poet. Lat. Bayle.*

LA BLANCHERJE (MAMMES CLAUDE PAHIN de) a French writer, born at Langres in 1752. After having finished his studies at Paris, he made a voyage to the French colonies in America, where his feelings revolted at the treatment of the negro slaves, and he speedily returned home. At Paris he opened a general board of correspondence for the arts and sciences, to spread the knowledge of improvements through the different countries of Europe. At the commencement of the Revolution he emigrated to England, and resided in London in a house once occupied by sir Isaac Newton, a circumstance of which he took advantage, to attract the public attention. He obtained the patronage of the duke of Buccleugh, who procured him a pension from government, to which he was principally indebted for his future support. He died in London in 1811. He was the author of "Extrait du Journal de mes Voyages, ou Histoire d'un jeune Homme pour servir d'École aux Peres et aux Meres," Paris, 1776, 2 vols. 12mo; and a literary journal commenced in January 1779, and continued under different titles to eight volumes 4to; besides other works.—*Biog. Univ. Biog. Nouv. des Contemp.*

LABOUREUR. There were three French authors of this name, CLAUDE LE LABOUREUR, a monk of St Barbe in the early part of the seventeenth century, was the author of a commentary on the Lyons breviary, printed in 1643; he also published a history of the religious foundation to which he belonged, another of the house of St Colombe, a tract on heraldry, &c.—Of his two nephews, JEAN, the elder, born at Montmorenci in 1623, is said in early life to have been a menial servant. In his twenty-first year he accompanied the French embassy to Warsaw, and on his return published an account of his journey. He subsequently embraced a religious life, rose to be king's almoner, and a commander of St Michael, with the rich priory of Jurigné. He wrote a "History of Charles VI of France;" "Memoirs of the Marechal de Guebriant;" "Monuments of illustrious Persons interred in the Church of the Celestines at Paris," 4to, 1642; "Genealogies of the Budos and other noble Breton Families;" "Memoirs of Michael du Castelnau," &c. His death took place in 1675.—Louis, the younger, known as the author of some miscellaneous pieces in verse, died in 1679.—*Nouv. Dict. Hist.*

LACARRY (GILES) a French jesuit, born in 1605, who became successively professor of polite literature, philosophy, and theology. Notwithstanding that he performed missions

and went through various departments of business in the society, he found time to be the author of several useful works in illustration of the history of his country. Of these the most considerable are, "Historia Galliarum sub Prefectis Prætorii Galliarum," 1672, 4to; "Historia Coloniæ à Gallis in externas Nationes Missarum," 1677, 4to; "De Regibus Franciæ et Lege Salica;" "Historia Romana," 1671, 4to, including the period from Julius Cæsar to Constantine, and illustrated by medals; "Notitia Provinciarum Imperii utriusque, cum Notis," 1675, 4to. He also gave editions of Velleius Paterculus and of Tacitus de Moribus Germanorum.—*Niceron. Moreri.*

LA CHABEAUSSIÈRE (ANGE ÉTIENNE XAVIER POISSON DE) perpetual secretary to the philotechnic society, and a member of many literary associations in France and elsewhere. He was born at Paris in 1752, and was educated at the college de Quatre Nations. He was designed for the ecclesiastical profession, but he preferred that of arms, and was admitted among the guards of the count d'Artois. In that corps he contracted an intimacy with Dalleryrac, in conjunction with whom he wrote a comic opera, called "L'Eclipse totale." He became a popular dramatist, and many of his works display considerable comic talent. During the Revolution he was imprisoned, and narrowly escaped becoming a victim to the tyranny of Robespierre, on whose fall he was liberated. In 1798 he was appointed administrator of the opera; but he held the office only a short time. He died at Paris, September 10, 1820. Besides his plays, he was the author of "Œuvres diverses," 1811, 8vo; "Poesies galantes et gracieuses d'Anacreon, Bion, Moschus, Catullus, et Horace, traduites ou imitées en vers," 813, 8vo; "Apologues Moraux," 1814, 8vo; a translation of Tibullus, published under the name of Mirabeau; and a prose translation of the Æneis, remaining in MS.—*Biog. Nouv. des Contemp.*

LA CHAPELLE (abbé de) a French philosopher of the last century. He cultivated mathematical science with great success, and contributed much by his writings to promote a taste for philosophical researches. He held the office of royal censor, and was a member of the academies of Lyons and Rouen, and a fellow of the Royal Society of London; but he lived much in retirement, dividing his time between the society of a few scientific friends and his literary occupations. He died at Paris about 1792. He was the author of some valuable treatises on mathematics, and of two curious works, entitled, "Le Ventriologue, ou l'Engastrimythe," 1772, 12mo; and "Traité de la construction du Scaphandre, ou du Bateau de l'Homme," 1774, 8vo.—*Biog. Univ. Biog. Nouv. des Contemp.*

LA CLOS (PETER AMBROSE FRANCIS CHODERLOS de) born at Amiens in 1741, entered at the age of eighteen into the corps of royal artillery, and the following year he was made a sub-lieutenant. He was a captain in 1778, when he was sent to the isle of Aix to construct a fort. In 1789 he was supernume-

rary secretary to the last duke of Orleans, whom he followed to England towards the close of that year. On his return to Paris in July 1791, La Clos became one of the principal conductors of the famous Jacobin "Journal des Amis de la Constitution." He soon relinquished this office, and retired from the army; but in 1792 he resumed his profession. Being appointed governor of the French establishments in India, he was preparing to go thither in 1793, when he was arrested and committed to prison. After the events of the 9th of Thermidor, he was liberated, and obtained a civil situation. Buonaparte employed him as a military officer, and he served in the artillery on the Rhine, and in Italy, with the rank of general of brigade. He died at Tarentum in Italy, October 5, 1803. As a literary man La Clos is known as the author of a licentious novel, entitled "Les Liaisons Dangereuses," which affords too just a picture of the dissolute and revolting manners of French society before the Revolution. He also wrote "Poesies Fugitives," said to be graceful and spirited; and a letter to the French academy, designed to depreciate the character of marshal Vauban as an engineer.—*Biog. Univ. Biog. Nouv. des Contemp.*

LACTANTIUS (LUCIUS CÆLIUS OR CÆCILIANUS FIRMIANUS) an eminent father of the church, was, as some say, an African, but according to others, a native of Fermo in the marche of Ancona. The former is most likely, as he studied rhetoric at Sicca, a city of Africa, under Arnobius, and attained so high a reputation by a production called "Symposium," or "The Banquet," that when Dioclesian entertained a design to render Nicomedia a rival to Rome, he appointed Lactantius to teach rhetoric in that city. It is by some supposed that he was originally a Pagan, and converted when young to the Christian religion; but Lardner thinks otherwise, and that he was a Christian during the persecution of Dioclesian is unquestionable. It appears that owing to the unprofitableness of his profession, or other causes, he existed in very narrow circumstances, which it is however reasonable to conclude were amended when appointed by the emperor Constantine Latin preceptor to his son Crispus, after whose untimely death he appears to have been again neglected. Little more is known of his personal history except that he lived to an advanced age, but the exact time of his death is not recorded. As a Christian writer, Lactantius is thought to treat divinity too philosophically, but at the same time he is deemed the most eloquent of all the early ecclesiastical authors, and his Latinity has acquired him the title of the Christian Cicero. His principal work is entitled, "Institutiones Divinæ," libri VII, which is an able and spirited reply to two heathen writers of note, who published pieces against Christianity. Of this treatise he published an abridgment, and added to it another tract, entitled "De Ira Divina." He was also author of a treatise "De operibus Dei," in which he vindicates the

doctrine of God's providence, by demonstrating the excellence of his principal work, man; in illustration of which, he gives an elegant description of the properties of the human body and mind. Other works are attributed to him, as "Two Books to Æsclepiades;" "Eight Books of Letters;" a poem, entitled "The Fishes," in hexameter verse; and lastly a well-known book, called "De Mortibus Persecutorum," which is however thought not to belong to Lactantius by the most able critics. The poems "De Phœnice," "De Pascha," and "De Passione Domini," although contained in most of the editions of his works, are now generally deemed spurious. The latest and best edition of Lactantius is that of the abbé Lenglet, Paris, 1746, 2 vols. 4to.—*Cave's Hist. Lit. Dupin. Lardner.*

LACY (JOHN) a dramatic writer, who lived in the reign of Charles II. He was a native of Doncaster in Yorkshire, and was at first bred a dancing-master, but subsequently became a lieutenant in the army. Possessed of a good person, and a large share of humour, he was finally tempted to quit the military profession for the stage, on which as a comedian he was universally admired; and held in such esteem by Charles II, that the king had his picture painted in no fewer than three characters. He was author of the following comedies, none of which however became stock pieces: "The Dumb Lady;" "Sir Hercules Buffoon;" "Old Troop;" and "Sawney the Scot." He died in 1681.—*Biog. Dram.*

LADVOCAT (JEAN BAPTISTE) a learned French jesuit, professor of Hebrew and divinity in the university of Paris, and afterwards librarian to the Sorbonne. He was a native of Champagne, born in the diocese of Toul in 1709. Dr Kennicott derived much valuable assistance from him, especially in the collation of manuscripts in the king's library at Paris, as did also De Vosgiens in the compilation of his Geographical Dictionary. His own works consist of a "Dissertation on the Councils;" "Letters on the Authority of the original Texts of Holy Writ;" an "Historical Dictionary," in two octavo volumes, reprinted with additions, in four; "Critical Remarks on certain new Translations of the Scriptures from the Hebrew;" a "Dissertation on the sixty-seventh psalm;" and a "Grammar of the Hebrew Language." He died in 1765.—There was also a metaphysical writer of this name at Paris, LOUIS FRANÇOIS LADVOCAT, dean of the chamber of accounts, born 1644, who after a life prolonged to nearly a century, died there in 1735.—*Biog. Univ.*

LAER (PETER DE) usually called Bamboccio, according to some from his personal deformity; but it is more reasonably conjectured by Baldinucci and Lanzi, that he was so denominated from his painting such subjects as the Italians call "Bambocciato," as fairs, festivals, huntings, masquerades, &c. This celebrated painter was born at the village of Laeren near Naardeu, in 1613. His parents being in easy circumstances, allowed him to follow his early inclination for painting, and

after having him instructed in the elementary principles of design, sent him to Italy for improvement. During a residence of sixteen years at Rome, he was distinguished at once for the vivacity and amiability of his disposition, and lived in habits of intimacy with Nicholas Poussin and Claude; and in company with those celebrated artists, made designs of the most interesting monuments in the vicinity of Rome. After acquiring considerable reputation in that capital, he was at length induced, by the earnest entreaties of his friends, to return to Holland, and in 1639 he quitted Rome with much regret, and settled at Haarlem. He quickly attained great celebrity, which he maintained unrivalled, until obliged to share it with Wouvermans, the development of whose talents excited much uneasiness in Laer. The pictures of the latter are finely composed; his figures and animals are spirited and correct, and his colouring rich and vigorous. Although inferior to Wouvermans in neatness and delicacy of pencil, he excels him in energy of touch, in the intelligent management of the chiar'-oscuro, and in fertility of invention. The works of Bamboccio being scarce, are held in high estimation, and he etched several plates from his own designs, in a very masterly manner. Want of economy, added to the rivalry of Wouvermans, which lessened his employment, reduced him to indigence in his latter days; and a severe asthmatic attack being added to his other afflictions, life became insupportable, and he is said to have terminated his existence by throwing himself into a well in 1673, at the age of sixty.—*Bryan's Dict. of Paint. and Eng.*

LAET (JOHN DE) a writer of the seventeenth century, distinguished by his knowledge in history and geography. Scarcely any thing is known of his life, except that he was a director of the Dutch East-India Company, and intimate with Saumaise. He died in 1640, leaving some very useful works behind him, the chief of which are, "Novus Orbis," Leyden, 1633, folio; an account of America, which has been much used by later geographers; "Historia naturalis Brasilie," folio, 1640; "De Regis Hispaniæ Regnis et Opibus," 8vo; "Respublica Belgarum;" "Gallia;" "Turcici Imperii Status;" and "Persici Imperii Status." The four last of these works form part of the little books called "Reipublicæ," printed by Elzevir. He latterly employed himself in an edition of Vitruvius, which was also printed by Elzevir, 1649. His account of America involved him in a controversy with Grotius, concerning the origin of the Americans, in which that eminent scholar was evidently defeated; and as usual on such occasions, lost his temper in consequence.—*Chaufepie. Burigny's Life of Grotius.*

LA FERTE IMBAULT (MARIA THERESA GEOFFRIN, marchioness de) daughter of the celebrated madame Geoffrin, born at Paris in 1715; married in 1733 to the marquis de la Ferté, great grandson of the marshal of that

name; and died at Paris in 1791. She distinguished herself not only by her literary talents, but also by her opposition to the philosophical party among the French literati of the last century, with whom her mother had been intimately connected. In 1771 the marquis de Croismare, a man of wit, and a friend of madame de La Ferté Imbault, founded the burlesque order of the Lanturelus, of which he appointed that lady the grand mistress, while he was himself the grand master. This whimsical institution gave rise to a great many songs and lively verses; and it attracted so much attention, that Catherine II was accustomed to advise all the Russian nobles who visited Paris, to become Lanturelus, an honour which was sought by several sovereign princes. The marchioness drew up a series of extracts from the writings of the ancient Pagan and Christian philosophers, for the instruction of the grandchildren of Lewis XV; and she wrote a great number of letters to persons of rank and celebrity, which remain in manuscript in the hands of her husband's relations.—*Biog. Univ. Biog. Nouv. des Contemp.*

LAFITAU (JOSEPH FRANCIS) a French jesuit, who was a native of Bourdeaux, and was employed as a missionary among the savages of North America. On his return to Europe he published a work, entitled "Mœurs des Sauvages Américains comparées aux Mœurs des premiers Temps," Paris, 1734, 4 vols. 12mo; and another on the discoveries and conquests of the Portuguese in the New World, which last was reprinted in 1753, in 2 vols. 4to. He died in 1740.—LAFITAU (PETER FRANCIS) brother of the preceding, was also a jesuit, and obtained considerable reputation as a pulpit orator. He was employed on a mission to Rome, on the subject of the disputes in France, relative to the bull Unigenitus, when his manners and conversation procured him the favour of pope Clement IX, who made him bishop of Sisteron in Provence, when he left the society of Jesus to preside over his diocese. He died at the castle of Lurs in 1764. Besides some religious works, he was the author of a history of the Constitution Unigenitus; and the history of Pope Clement IX, in which he displayed his zeal against Jansenism.—*Biog. Univ. Nouv. Dict. Hist.*

LAFITE (MARY ELIZABETH de) a French lady, who published several popular works for the use of young persons. She was born at Paris about 1750, and died in London in 1794. Among her productions are, "Reponses à Dénélér, ou Essai d'une Manière d'exercer l'Attention," Lausanne, 1791 12mo; "Entretiens, Drames, et Contes Moraux à l'Usage des Enfans," 2 vols. 12mo, dedicated to the queen of England, and several times reprinted. She also translated into French some of the works of Wieland, Gellert, and Lavater.—*Biog. Univ.*

LAFOSSE (STEPHEN WILLIAM) a French writer of eminence on veterinary surgery in the last century. He was veterinary marshal to the king of France, and he made great im-

provements in the art which he professed, by collecting the information to be found in preceding authors, as well as by his own researches. His works are, "Traité sur le véritable Siege de la Morve des Chevaux," 1749, 8vo; "Observations et Decouvertes faites sur les Chevaux, avec une nouvelle Pratique de la Ferrure," 1754, 8vo; and a memoir published by the academy of Sciences. He died in 1765.—His son, PHILIP STEPHEN LAFOSSE, has published several valuable works relative to the anatomy, diseases, and management of the horse. Haller, in his *Bibliotheca Chirurgica*, notices both the father and son as writers of the first note in the peculiar department of art which they cultivated.—*Biog. Univ. Biog. Nouv. des Contemp.*

LAGARAYE (CLAUDE TOUSSAINT MAROT de) a native of Brittany, distinguished for his philanthropy. He was born at Rennes in 1675, and was educated at the college of Harcourt at Paris. His life and fortune were consecrated to the benefit of his fellow creatures; he founded schools for the young, and hospitals for the sick and aged; and studied medicine and chemistry, with a view to increase his means of becoming serviceable to mankind. In 1736 he published a work entitled, "Recueil Alphabetique des Prognostics dangereux et mortels sur les differens Maladies de l'Homme;" and in 1745 another, called "Chimie hydraulique, pour extraire les Sels essentiels des Vegetaux, Animaux, et Mineraux, avec l'Eau pure," 12mo. He died at Dinan in Brittany in 1755. For a detailed account of the benevolent deeds of this friend of humanity, the reader is referred to the abbé Carron's "Epoux charitables, ou Vie du Comte et de la Comtesse de Lagaraye," Rennes, 1782, 8vo.—*Biog. Univ.*

LAGERBRING (SVEN) a Swedish historian, who was born in 1707, and died in 1788. He was professor of history in the university of Lund in Scania, a counsellor of the chancery, and a member of the academy of history and belles lettres at Stockholm. He is chiefly known as the author of a history of his native country in the Swedish language, in four volumes quarto, the first of which appeared in 1769. This work extends no lower than the year 1457; but Lagerbring also compiled an abridgment of Swedish history to modern times, of which a French translation was published at Paris, 1788, 12mo. He also wrote tracts "De Antrophagis;" "De Statu Rei Literariæ in Suecia per Tempora Unionis Calmariensis;" and "De Vanitate Artis Deciffratoriæ;" besides a treatise on statistics, and many other works.—*Biog. Univ.*

LAGERLOEF (PETER) professor of rhetoric at Upsal, and historiographer of Sweden in the seventeenth century. He was well acquainted with the learned languages, and distinguished himself by his writings in Latin, both in prose and verse. In 1695 he was employed by Charles XI to draw up an historical description to accompany a collection of national monuments, called "Suecia antiqua et hodierna." Among the numerous dissertations

which he published, may be mentioned "Historia Linguae Græcæ," Upsal, 1685, 8vo; "De Antiquitate et Situ Gentis Suonice," 1689; "Observationes in Linguam Suecanam," 1694; and "De magno Sinarum Imperio," 1697. Lagerloef died in 1699, aged 51.—*Biog. Univ.*

LAGERSTROEM (MAGNUS von) counsellor of commerce and director of the Swedish East India company. He was born at Stockholm in 1696, and after studying in some of the German universities, he travelled in Germany and Denmark. He then engaged in trade, which he soon relinquished to become corrector of the press, established at Stockholm by the learned James Wilde, historiographer of Sweden. He now translated several French, German, and Danish works, composed an English grammar, and wrote on political economy. In 1752 he was appointed secretary to the East India company of Gottenburgh, of which he afterwards became a director. In this situation he greatly distinguished himself, by procuring from abroad curious and important objects of natural history, and by aiding and promoting scientific researches. Linnæus, in a dissertation, entitled "Chinensia Lagerstroemiana," described some of the curiosities which this philosopher had procured for the cabinets of his native country; and botanists have consecrated to his memory a genus of plants called Lagerstrœmia. He was a member of the Academy of Stockholm, and of the Royal Society of Upsal. His death took place July 8, 1759.—*Biog. Univ.*

LAGNY (THOMAS FANTEL DE) an eminent French mathematician, was born at Lyons in 1660. He was educated for the bar; but having accidentally met with Fournier's Euclid, and Pelletier's Algebra, he gave himself wholly up to mathematics. In 1686 he came to Paris, and was appointed tutor to the duke of Noailles; and in 1692 published "New and Concise Methods for the Extraction and Approximation of Roots," 4to, which work at once established his fame in this department of science. In 1697 appeared his "New Elements of Arithmetic and Algebra;" and in the same year he was appointed royal professor of hydrography at Rochefort. In 1715 the regent duke of Orleans made him sub-director of the General Bank, in which he lost the greater part of his fortune. He was subsequently appointed a pensioner of the Academy of Sciences, and sub-librarian to the king, and lastly, director of the academy. He died in 1734. Lagny made many important improvements and discoveries, which are found in a great multitude of his papers, printed in different volumes of the Academy of Sciences. Besides the works already mentioned, he published another separate treatise, "On the Cubature of the Sphere;" "A general Analysis, or Method of resolving Problems," published by Richer, under the name of Lagny, now known to be the work of the editor, aided only by the papers of his deceased friend.—*Hutton's Math. Dict.*

LAGOMARSINI (JEROME) a learned je-

suit, one of the first philologers of his time, was a native of Genoa, and born in 1698. He studied at the college of Prato in Tuscany, among the jesuits, and entered into the order in 1713. His superiors in 1721 sent him to the college of Arezzo, to teach the belles lettres. He was afterwards removed to Florence, where he was professor of rhetoric for twenty years. While in that situation he had a literary quarrel with the abbé Lami, who suspected him of being the author of some satirical pieces, which were really written by father Cordara. About 1750 Lagomarsini was called to Rome, and made professor of Greek in the Roman college, where he died in 1773. Besides several works which he published, chiefly relating to classical literature, he left in MS. a collection in thirty volumes, entitled "Testimonia Virorum illustrium Soc. Jesu., ab initio ejusdem repetita Ordine chronologico usque ad nostram hanc Ætatem perpetua, nec unquam interrupta Annorum serie digesta." The object of this laborious undertaking was to justify his order from all the odious imputations to which it had been subjected.—*Biog. Univ.*

LA GRANGE (JOSEPH LOUIS) a very eminent mathematician and philosopher, was born Nov. 25, 1736, at Turin, where his father, who had been treasurer of war, resided in reduced circumstances. In the first instance he was more inclined to classical than to mathematical pursuits, but being accidentally incited by a memoir of Halley, to pay attention to the latter, he made such a progress, that at the age of sixteen he became professor of mathematics at the Royal Artillery school of Turin. When he had discovered the talents of his pupils, most of whom were older than himself, he selected the most able as his more intimate friends, and in this early association originated the academy of Turin. In 1759 this institution published a first volume of transactions, wherein La Grange inserted several important solutions and discoveries, the honour of which he allowed to his friend Foncenex and others; while some appeared in his own name of still greater pretension. In this volume he first applied the theory of recurring consequences, and the doctrine of chances, to the differential calculus. He soon after corrected Newton's calculations of the motions of fluids, and made several useful discoveries in adjustment of the theory of vibration, which labours excited so much admiration from Euler, that he rested not until he was enabled to announce to La Grange, that he was chosen a member of the academy of Berlin. He soon after visited Paris, where he was received by the various men of science with great distinction, and where he published his celebrated "Mecanique Analytique." In 1766 he accepted an invitation to Berlin, and he was appointed director of the academy of that capital, for physical and mathematical science. He soon gained universal esteem, and enriched the memoirs of the academy with a number of highly interesting papers. On the death of Frederic he returned to Paris, and took his seat in the

Academy of Sciences. On the Revolution, he lost his pension; but when the new institutions were formed, he was appointed professor of the Normal-school, and subsequently in the Polytechnic-school, where he found himself more in a capacity which completely suited him. While holding this employment, he published his "Fonctions Analytiques;" his "Leçons sur le calcul," and "Traité de Relations numériques des Equations." He also undertook a new edition of his "Mecanique Analytique," at which revision he laboured with an assiduity that undermined his health, and a decay of nature ensuing, he expired on the 10th April 1813, in his seventy-seventh year. The last few years of the life of this celebrated man of science, were honoured with nearly all the distinction Napoleon could bestow. He was member of the Imperial Institute and Board of Longitude, senator, and count of the empire, grand officer of the Legion of Honour, and grand cross of the Imperial Order of Re-union.—*Life by Delambre.*

LA GUERRE (LOUIS) a painter of history on ceilings, staircases, halls, &c. being an assistant to, and imitator of, the celebrated Verrio. His father was master of the menagerie at Versailles, and he had Louis XIV for his godfather. He was originally intended for the church, but his taste for drawing becoming known to the king, the latter recommended his parents to bring him up a painter. He studied under Le Brun, and at the age of twenty came to England, and was immediately employed by Verrio upon the large work at St Bartholomew's hospital. His work being much approved, he was engaged to paint "The Labours of Hercules" at Hampton court, by king William, as also to decorate the mansions of many of the nobility. In a few years, however, he will be known by little except the satiric line of Pope, "Where sprawl the saints of Verrio and La Guerre." He was seized with an apoplexy while a spectator in Drury-lane theatre in 1721, and expired almost immediately.—*Walpole's Anecd. Pilkington.*

LAINÉZ (ALEXANDER) a French wit and poet, born at Chinay about 1650. Having finished his studies at Rheims, he went to Paris, where he became intimate with the chevalier de Colbert, who took him with him to the army. He afterwards travelled for three or four years in Europe and Asia; and on his return lived chiefly at Paris. His learning was varied and extensive, and his society was much coveted, on account of his shining talents for conversation. He published nothing; but many of his jeux-d'esprit have been preserved, and long after his death, which took place in 1710, a small volume of his poetry was edited by Titon du Tillet.—*Voltaire Siecle de Louis XIV. Biog. Univ.*

LAINÉZ (JAMES) a Spanish ecclesiastic, the associate of the famous Ignatius Loyola, and his successor as general of the order of the jesuits. He was born in 1512, and was educated at the university of Alcalá, where he took the degree of doctor. At Paris he be-

came connected with Loyola, whom he assisted in the foundation of the new community, of which he was one of the first members, and whose constitutions he probably composed. On becoming general of the jesuits, he obtained a papal decree, rendering the office permanent in the person who should be chosen to fill it, and vesting the general with the power of making all sorts of contracts without consulting his brethren; giving authority and authenticity to his comments and explanations of the constitutions, with the power to make new constitutions, or alter the old ones; and also to have prisons independent of the secular authority, for the punishment of refractory members. He thus founded a spiritual *imperium in imperio*, the influence of which, both in church and state, produced important events in every part of the world, while the society continued to subsist. Lainéz was present at the council of Trent, in the character of divine to the papal see, and he distinguished himself no less by his ability than by his zeal for the interests of the church. In 1561 he went to France, and disputed with the Protestants at the conference at Poissy. On his return to Rome, pope Paul IV offered him a cardinal's hat, which he refused. He died in 1565.—*Ribadeneira Vit. Jac. Lainesii. Moreri. Aikin.*

LAING (MALCOLM) a Scottish historian, was born at Stroryre in Orkney in 1762. He was educated at Kirkwall, whence he was removed to the university of Edinburgh, after which he studied law, and was called to the bar. On the death of Dr Henry he completed the unfinished volume of that author's history of England. His chief work is a "History of Scotland," in four volumes, 8vo, in which he gave considerable offence to the chivalrous and Jacobite partizans of Mary queen of Scots, owing to the strong manner in which he sums up against the personal character of that unfortunate sovereign. He served in parliament under the last short administration of Mr Fox, to whose politics he was much attached. His last literary undertaking was an edition of the poems of Ossian, to which he has prefixed a dissertation, in which it is generally agreed that he has proved their inauthenticity, at least to the extent to which authority was claimed for them by Macpherson. Mr Laing died in 1819.—*Gent. Mag.*

LAIRE (FRANCIS XAVIER) a French bibliographer of the last century, born according to some at Vadans, or as others affirm, at Dole in Franche Comté in 1739. He assumed the cov. of a friar Minim at an early age, and devoted his life principally to studies connected with the origin and progress of literature. He was the author of a Latin biographical treatise on the lives and actions of the principal literary characters of the fifteenth century, a French version of which he afterwards published, under the title of "Memoires pour servir," &c. His other works are a "Catalogue of printed Books from the Invention of the Art to the Commencement of the Sixteenth Century," 2 vols. 8vo; "On the Origin and Pro-

gress of the Art of Printing in Franche Compté," 12mo; a supplement to Maittaire's "Annals of Typography;" "Specimen Historicum Typographiæ Romanæ," 8vo; "Epistola ad Abbatem Ugolini;" and "Serie dell' Edizione Aldini," 12mo. He became a great favourite with cardinal Lomenie, who made him his librarian. The time and place of his decease are variously stated, as well as those of his birth, some asserting that it took place at Sens in 1800, others placing it at Paris in the following year.—*Biog. Univ.*

LAIRESSE. There was a family of Flemish painters of this name, of whom GERARD, son to the elder Lairese, has acquired by far the greatest reputation. He was born in 1640 at Liege, and soon outstripped his father, who made him his pupil, in the exercise of his own art. He is particularly distinguished by the high finish with which his pictures are executed, and is considered the Raphael of the Dutch school, nor have any of his countrymen ever equalled him in historical painting. This talented artist was also a good engraver, and understood music scientifically, while of his literary abilities he has left a favourable specimen, in a treatise on the principles of his art. He survived the loss of his sight some years, and died at length at Amsterdam in 1711. His book has been translated into English; and his chef-d'œuvre in painting is considered a large picture of the child Moses trampling on the Egyptian diadem.—His three brothers, ERNEST, JOHN, and JAMES LAIRESSE, were artists of some note, the two former excelling in the delineation of animals, the latter in flowers. Two of his sons also followed the profession of their father, but with inferior pretensions to eminence.—*D'Argenville Vies de Pein.*

LAKE (GERARD) viscount Lake, an English general, who distinguished himself in the East Indies. He was born in 1744, and at the age of fourteen obtained an ensigncy in the foot-guards. He served in Germany during the seven years' war, and in 1781 he was in America, under Cornwallis, when he signalized himself at the siege of New York. After the taking of that place he returned home, and was made aid-de-camp to the king. On war with France taking place, he went to Holland to command the first brigade of guards, and was concerned in several engagements in 1793 and 1794. He was afterwards employed against the Irish insurgents; and in 1800 he was nominated commander-in-chief of the British forces in India. In September, 1803, he gained a victory over the Mahratta army and the French general Perron, on the plain of Dehly, and delivered Shah Aulam, whom they had held in captivity. He afterwards triumphed over Scindia and Holkar, and obliged the latter to conclude a treaty of peace in February, 1806. He returned to England in September, 1807, when, as the reward of his exploits, he was created lord Lake, baron of Dehly and Laswarri, and soon after raised to the rank of viscount, and made governor of Plymouth. He died, after a short illness,

February 21, 1808.—*Biog. Peerage. Biog. Nouv. des Contemp.*

LALANDE (JAMES DE) an eminent French lawyer, born at Orleans in 1622. He became a counsellor of the bailiwick and presidency of Orleans in 1652; and the following year doctor and professor of jurisprudence in the university there. After having filled important municipal offices, he died in 1703. He was the author of several works on law and juridical antiquities, among which are "Commentaire sur la Coutume d'Orleans," 1677, folio; and "Traité de Ban et l'Arriere-ban," 1674, 4to.—*Moreri. Biog. Univ.*

LALANDE (JOSEPH JEROME LE FRANÇAIS DE) one of the most distinguished astronomers of the present age. He was born of an honourable family, at Bourg en Bresse in France, July 11, 1732. Educated with a minute attention to religious duties, he displayed his abilities, when very young, by composing sermons and mystical romances. The remarkable comet of 1744 first drew his attention to the heavenly bodies; and his taste for astronomy was fixed by the observations of father Beraud, mathematical professor at the college of Lyons, on the great eclipse of the 27th of July, 1748. He wished to become a jesuit, that he might devote himself entirely to study; but his friends objecting to this plan, sent him to Paris, where he studied the law, and was admitted an advocate. He became acquainted with Delisle, who had established an observatory in the house in which he resided, and Lalande obtained permission to assist him in his operations. He also attended the lectures on astronomy delivered by Messier, at the College de France; and obtained the friendly patronage of Lemonnier, who lectured on natural philosophy at the same college. The latter procured him a commission to go to Berlin, to make some astronomical observations, with a view to determine the parallax of the moon, and on his return to France, he gave an account of his labours in a memoir published in the Transactions of the Academy of Sciences, at Paris, and of that of Berlin, of which he had been chosen a member. At the age of about twenty-one he was nominated to the place of astronomer, which had been vacant many years. His researches relative to the moon, connected him with La Caille, who had made observations at the Cape of Good Hope, while he was at Berlin; and this circumstance set him at variance with his former friend, Lemonnier, who had a dispute with La Caille. As it was necessary to ascertain with precision the diameter of the moon, Lalande constructed a heliometer of a larger size than any which had been before contrived, with which he made the requisite observations, and extended his researches to other heavenly bodies. He next turned his attention to gnomonics, and composed the article "Cadran," for the Encyclopedie Methodique; and he afforded important assistance to La Caille, in a work on comets. When Maraldi, on becoming a pensioner of the Academy of Sciences, relinquished the direction of the

"*Connaissance des Temps*," Lalande obtained the editorship, and continued to publish that work from 1760 to 1775. In 1762 he published at Paris, a volume, entitled "*Exposition du Calcul Astronomique*;" and about the same time he succeeded Delisle, as professor of astronomy, at the College de France. He now found himself in his proper element; and inspired with an ardent zeal for the improvement of the science which he taught, he attracted around him a number of persons, to whom he imparted instruction almost gratuitously, and made his house a school, whence proceeded a host of young astronomers, who filled the observatories, and introduced into the navy the use of the best instruments, and the most accurate modes of making calculations. His services were well appreciated; and he was received into the naval academy of Brest, and obtained from the government a pension of one thousand francs. In 1764 appeared the first edition of his very valuable "*Traité de l'Astronomie*," in two volumes; enlarged to four volumes in the fourth edition, published in 1780, to which is subjoined a memoir by Dupuis, which formed the basis of his treatise "*De l'Origine des Cultes*," the idea of which he had taken from the lectures of Lalande. The transit of Venus in 1769, occupied much of his attention; and from the various observations transmitted to him, he drew up a "*Mémoire sur le Passage de Venus, observé le 3 Juin, 1769, pour servir de suite, à l'Explication de la carte publiée en 1764*," Paris, 1772, 4to. His "*Reflexions sur les Comètes qui peuvent approcher de la Terre*," and his "*Lettre sur l'Anneau de Saturne*," both attracted much notice at the time of their publication. In 1755 he produced his celestial globe of one foot in diameter; and in 1776 he enriched the supplements to the *Encyclopedie* with many curious articles. He was for a long time one of the contributors to the *Journal des Savans*, having furnished the articles relative to mathematics and natural philosophy. He also assisted in the "*Necrologie des Hommes célèbres de France*;" the "*Journal de Physique*;" the "*Magazin Encyclopédique*;" the "*Acta Eruditorum*;" the "*Philosophical Transactions*," and those of other learned societies. In 1793 he published "*Abrégé de Navigation Historique, theorique, et pratique, avec des Tables horaires*," 4to; and in 1794 he resumed the direction of the "*Connaissance des Temps*," which he retained till 1807. For a long time he published every year "*L'Histoire de l'Astronomie*," which, though little more than a collection of titles of books, and dates of discoveries, forms a useful record for reference. Among the most important future labours of his life may be noticed, his "*Catalogue de mille étoiles circumpolaires*," 1795; "*Histoire de Mathématiques de Montucla*," second edition, 1800, which he completed by the publication of two volumes in 1802; "*Bibliographie Astronomique*," printed at the expense of the government; as was his "*Histoire Celeste Française, contenant les Observa-*

tions de plusieurs Astronomes Français." Though Lalande has been charged with jacobinism and atheism, there seems to be little if any foundation for such aspersions. After the 10th of August, 1792, he hazarded his own life to save Dupont de Nemours, whom he concealed in the observatory of the Mazarin college; and he also protected the abbé Garnier, and gave an asylum in the observatory to some of the priests who had escaped from the massacres at the abbey, and whom he made pass for astronomers. He even wrote a treatise in favour of monarchy; but he was in general too much occupied with the cultivation of science to attend to politics. To rebut the imputation of atheism, we are told that every year in the holy week he was accustomed to have read to him, the "*Passion of Jesus Christ*." By temperance and exercise he preserved his health to an advanced age, and retained to the last moment his characteristic firmness of mind and tranquillity of manners. He died April 4, 1807. At the time of his decease, Lalande was a member of the French board of longitude, and of the legion of honour, and an associate of the principal academies of science in Europe.—*Biog. Univ. Biog. Nouv. des Contemp.*

LALANDE (MICHAEL RICHARD DE) a French musician, born at Paris of poor parents in 1657. He was placed as a singing boy in the choir of St Germain l'Auxerrois, where his talent for music developed itself. Having learnt without a master to play on the violin, he was so piqued at being refused admission into the orchestra of the opera by Lulli, that he broke his instrument, and determined never to touch the violin again. He then applied himself to the harpsichord and organ, on which he acquired a great facility of execution, and obtained reputation as an organist at several of the Parisian churches. He was recommended by the duke de Noailles to Lewis XIV, who made him master of music in the chapel royal, and a knight of the order of St Michael. He died in 1726, leaving numerous motets, ballets, and other compositions, sacred and profane.—*Biog. Univ. Nouv. Dict. Hist.*

LALLEMANT (RICHARD CONTERAY) a French printer, who acquired literary reputation by several good editions of the classics. He was born at Rouen in 1726, and after having finished his studies, entered on the practice of his profession, which was also that of his father. After having filled other municipal offices at Rouen, he became mayor of that city; and Lewis XV gave him letters of nobility. He died April 3, 1807, at the age of eighty-one. Among the works which issued from his press may be mentioned a French and Latin Dictionary; and "*L'Ecole de la Chasse aux Chiens courants*," par Verrier de la Conterie, to which Lallemand prefixed an analytical catalogue of authors who have written on the chase, with critical notes.—RICHARD XAVIER FELIX LALLEMANT DE MAUPAS, brother of the preceding, became an ecclesiastic, and was vicar-general of Avranches. He devoted his time to the culture of

letters, and in 1790 he was elected president of the academy of Rouen. At the Revolution he found an asylum in England, whence he subsequently returned, and presided at the ceremony of the re-installation of the academy of Rouen. He died in that city in 1810. Besides other literary labours, he wrote a memoir on the natural history of speech, which he read to the academy in 1790, and afterwards enlarged, but which has never been published.—*Biog. Univ.*

LALLI (GIOVANNI BATTISTA) an Italian lawyer and poet, was born at Norcia in 1572. He was employed by the courts of Rome and Parma in the government of several places, and died much esteemed for integrity and suavity of manners in 1637. He wrote a poem upon the destruction of Jerusalem, which gave him a place among the best poets of his time; but he was much more happy in his attempts at burlesque, his "Pistole Giocose;" "Domiziano Moscheide," and "Il mal Francese," being among the best pieces of the kind. He also travestied some poems of Petrarch, and the Æneid of Virgil, and wrote a work in his proper profession, entitled "Viridarium Practicarum Materiaram in utroque Jure," which obtained some reputation.—*Moreri. Tiraboschi.*

LALLY (THOMAS ARTHUR, count) a brave, but imprudent, and unfortunate Irish officer in the service of France. He was of a family which had followed the fortunes of James II, and having entered the French army, he signalized himself so much in the battle of Fontenoy, that he was made a brigadier-general on the field of battle. He also drew up the plan of a descent upon England, which would have been put into practice but for the defeat of Charles Edward at Culloden. In 1756 he was selected for his capacity and bravery to restore the French influence in India, for which purpose he was made governor of Pondicherry. It was soon perceived however, that he wanted the prudence, moderation, and disinterestedness, necessary for so distant and critical a scene of action; and after a little partial success against the English, in the first instance, he was finally obliged to retire to Pondicherry, which was besieged and taken by the British on the 16th January 1761, the garrison with Lally being made prisoners of war. On this catastrophe a torrent of invective assailed the unfortunate leader from all quarters, he having offended every body concerned, by his haughty humour, and violent temper and conduct. He was even accused of having sold Pondicherry to the English, notwithstanding the avowed hatred which as a Jacobite he felt for them. He arrived a prisoner of war in England in September 1761, and the following month was allowed to return to France, where, after a long imprisonment, he was brought to trial for treachery, abuse of authority, and unjust exactions. Being found guilty, he was condemned to be decapitated, which sentence he endured with circumstances of great cruelty on the 6th May 1766, in the sixty eighth year of his age. In 1783 his son, Lally Tollandal, obtained possession of the estates of his father,

with a revival of the proceedings, which were manifestly unjust, count Lally being one of those victims to public clamour, like admiral Byng, and many more who have been sacrificed to the unpopularity of an incapable administration; the practice of which iniquity in his case was favoured by the strong temper and turbulent imprudence of his character.—*Nouv. Dict. Hist.*

LALUZERNE (CÆSAR WILLIAM DE) descended of an ancient Norman family, and born at Paris in 1738. Destined from his youth to the ecclesiastical profession, he studied at the seminary of St Magloire, and then at the house of Navarre, and obtained orders in 1762. He was vicar-general of Narbonne in 1765, when he was elected agent-general of the French clergy. Lewis XV in 1770 nominated him to the ducal episcopal see of Langres; and in 1773 he pronounced his majesty's funeral oration at the church of Notre Dame. Called to the assembly of the notables in 1787, he was the following year chosen a deputy of the clergy to the states-general. He was one of the first who proposed the establishment in France of a representative system like that of England; and he advocated other patriotic measures for the relief of his country. He was president of the constituent assembly on the 31st of August, 1789; but he soon after found it necessary to retire to his diocese, and at length he emigrated to Switzerland, whence he removed to Germauy and Italy. Under the government of Napoleon he returned to France; and in 1802 he published a pastoral letter, announcing his submission to the concordat. In 1814 the king invited M. de Lалуzerne to re-assume his rank of duke and peer, and he was soon after made a cardinal. He died at Paris in 1822. His works, which are numerous, include the following: "Dissertation sur la liberté de l'homme;" "Sur l'existence et les attributs de Dieu;" "Instructions pastorales sur le schisme de France," 1808, 2 vols. 12mo; "Dissertation sur les églises catholiques-protestantes," 1816, 2 vols. 12mo; "Dissertation sur la Verité de la Religion," 2 vols. 12mo; "Sur la Différence de la Constitution Française de la Constitution Anglaise," 1816, 8vo; "Sur la Responsabilité des Ministres," 1816, 8vo.—*Biog. Nouv. des Contemp.*

LANANON (ROBERT DE PAUL) a French naturalist of considerable promise, was born at Salon in Provence in 1752, of a respectable parentage. He was designed for the church, and rose to the dignity of canon; but having acquired property by the death of his father and elder brother, he determined to follow the bent of his inclination for the physical sciences. He ascended and explored the Alps and Pyrenees, and upon his return home applied himself with great ardour to the different branches of natural philosophy. He was deeply employed in his great work, "The Theory of the Earth," when the French government projected a voyage round the world. He immediately accepted the offer made him

of accompanying it, and refusing all salary, he sailed with the expedition on the first of August, 1785. On their arrival at Maouna, one of the islands of the southern archipelago, eager to examine the country, he debarked with Langle, the second in command, and after having satisfied their curiosity, they were on the point of returning, when the natives attacked them, and Lamanon and several of the boat's crew fell a sacrifice to their fury. Many of his papers are in the *Memoirs of the Academie des Sciences*.—*Rees's Cyclop.*

LAMARILLIERE (count DE) a French general of artillery, who commenced his military career as a sub-lieutenant in 1757. After having served with distinction in Germany in the seven years' war, he was employed in the island of Guadaloupe. He then published several tracts on artillery, and the casting of cannon, which procured him much reputation. In 1789 he was made a colonel, and in the revolutionary wars he contributed much to the success of the important operations in which he was engaged. His services were rewarded with the rank of general of division in 1795, when he was employed in the army of the Rhine and Moselle, and in Germany. In January 1802 he was called to the senate, and nominated a grand officer of the legion of honour. In 1814 the king made him a peer of France, and a member of the council for the inspection and improvement of the Polytechnic school. He died in 1819. A new edition of his "Reflexions sur la fabrication en général des bouches a feu," was published in 1817; and he was also the author of "Recherches sur les meilleurs effets a obtenir de l'artillerie," 1812, 2 vols 8vo.—*Biog. Nouv. des Contemp.*

LAMBART, DCL. (sir JAMES BLAND BURGESS) an ingenious English writer on subjects connected with politics, poetry, and the drama. He was the son of George Burgess, esq. an officer in the British army, holding the situation of comptroller-general of the customs in Scotland, and was born at Gibraltar June 8, 1752. He was educated at Westminster school, and whence he was removed to University college, Oxford. On quitting the university, he made the tour of France, Italy, Switzerland, and Germany; and on his return entered himself of Lincoln's-inn, by which society he was called to the bar in Easter term, 1777. In the practice of the law as a profession, he continued till the renewal of an intimacy which he had contracted early in life with Mr Pitt and the duke of Leeds, induced him to embark in politics under their auspices; and in 1787 he took his seat in the house of Commons, as member for the borough of Helston in Cornwall. Two years after this, his parliamentary debut, he was appointed to one of the under secretaryships in the foreign office, and in 1794 made a joint commissioner of the privy seal. About this period, in conjunction with another gentleman belonging to the same department, he established the Sun newspaper, under the sanction of the premier, and took a prominent part in conducting it. In 1795 he retired from office with a baronet's patent, and

the appointment of knight marshal of the royal household, devoting himself for the remainder of his life to the enjoyment of literary leisure. Sir James was three times married, and had by his second lady a family of ten children. In 1821 he obtained, under the sign manual, permission to assume the name of Lamb only, by which designation he continued to be known till his death in 1825. Among his writings, which are numerous, are, "Considerations on the Law of Insolvency," 1783, 8vo, and a letter to the earl of Effingham on the same subject; an "Address to the Country Gentlemen of England on County Courts," 8vo, 1789; "Letters on the Spanish Aggression at Nootka," published under the signature Verus, in 1790; "The Birth and Triumph of Love," 4to, 1796, a poem written to illustrate a series of designs by the princess Elizabeth; an epic poem, in eighteen books, on the history and achievements of Richard Cœur de Lion, 8vo, 2 vols. 1801; "The Exodiad," a sacred epic, written in conjunction with Cumberland, 4to, 1807, 1808; "Riches," a play, altered from Massinger's "City Madam," 1810, reprinted afterwards with other dramatic works in 2 vols. 8vo; and "The Dragon Knight," a romance. Towards the close of his life he turned his attention principally to the study of divinity, and in 1819 published his last work, "Reasons for a new Translation of the Bible." In private life he was remarkable for the general amenity of his manners, and was very generally respected.—*Gent. Mag.*

LAMBALLE (MARIE THERESE LOUISE DE SAVOIE CARIGNAN, princesse de) was born at Turin, September 8, 1749, and was married to the duke of Bourbon Penthièvre, whom she soon lost by death, and remained a widow in the flower of youth and beauty. She was appointed superintendant of the household of Marie Antoinette, queen of France, with whom she became a great favourite. Being informed of the intended flight of the royal family to Varennes, madame de Lamballe proceeded to Dieppe, whence she reached England in safety. There she might have found a secure asylum, if friendship for her mistress had not prompted her to return and share her fate. She went with the queen to the prison of the Temple, where she continued till the commune of Paris ordered her removal to La Force. On the 3d of September 1792 she was summoned to appear before her self-constituted judges. When questioned as to her connexion with the queen, she answered, "I have nothing to say. It is indifferent to me whether I die sooner or later: I am prepared for the worst." Some sentiments of admiration and pity were manifested by the people, and several voices demanded her life; but violence prevailed, and being stabbed on the spot with sabres, she was dragged amidst a heap of mangled bodies, and murdered with circumstances of revolting cruelty, which afforded a striking example of the mischievous effects of despotism, in degrading the national character of the infuriated Parisian mob. This instance of their barbarity is the more memorable, as there was no

thing in the conduct or character of the victim which could reasonably have excited the anger of the populace. She is said to have been kind and obliging to her dependants, and to have displayed moderation in the exercise of that power and influence which she derived from her high situation and connexions. Her character has remained free from reproach amidst the storms of the Revolution, and even her cruel murderers and their abettors respected the memory of this unfortunate princess. Some memoirs have recently been published in England, professedly compiled from manuscripts of madame de Lamballe.—*Nouv. Dict. Hist.*

LAMBARDE (WILLIAM) an English lawyer of the sixteenth century, a native of the metropolis, born 1536. He was called to the bar by the society of Lincoln's inn, and rose to be master of the rolls and record-keeper in the Tower of London, the first of which appointments he obtained in 1597, and the latter three years afterwards. Being possessed of considerable property at Greenwich in Kent, (for which county he was a magistrate,) he founded several almshouses in that parish, with a liberal endowment, and died in 1601. Besides a "Perambulation of the County of Kent," in 4to, now scarce, he wrote several professional works. Of these, the principal are a treatise on the ancient law of England, called "Archaionomia;" another on the office and duties of a justice of the peace, under the title of "Eirenarcha;" and "On the office of Constable." After his decease appeared two other productions of his pen, the one "A Topographical and Historical Dictionary," the other a treatise on English courts of justice, entitled "Archeion."—*Life by Nichols.*

LAMBECIUS (PIET) a native of Hamburg, born 1623, distinguished by his early and successful application to classical as well as general learning. Having prosecuted his studies with great perseverance in the Dutch and French capitals, he published, while resident in the latter metropolis, a critical dissertation on the works of Aulus Gellius, entitled, "Prodromus lucubrationum, &c.;" which gained him great credit, especially when the age of the author, who had but just attained his nineteenth year, was taken into consideration. From Paris he proceeded through Italy, and on his return home obtained the historical professorship in the university of his native city, which he was soon after, in 1659, called on to preside over, in quality of rector. This honourable post, however, he filled little more than two years; an ill sorted marriage, contracted on his part from mercenary motives, drove him from Germany, even before the expiration of the honeymoon. He left Hamburg for ever, and repaired, in the first instance, to Rome, where he became a member of the Romish church, and subsequently to Vienna. In this capital his reputation as a man of letters procured him the countenance of the reigning emperor, who made him his librarian; and in this capacity he completed, with considerable care and industry, a cata-

logue of all the manuscripts and other valuable works in the imperial collection. This laborious compilation fills eight folio volumes, and is entitled "Commentarium de Augustissima Bibliotheca Casarea Vindobonensi, libri viii." He was also the author of a work, in two quarto volumes, called "Origines Hamburgenses," containing the annals of his native city, from the commencement of the ninth to the close of the thirteenth century. Lambecius died in 1680, of dropsy.—*Chaufepie. Moreri. Saxii Onom.*

LAMBERT (ANNE THERESE, marquise de) a literary lady of considerable talent, a native of the French metropolis, born 1647. She was married in her nineteenth year to Henri Lambert, marquis de St Bris. In 1686 this union was dissolved by the death of her husband, on which she employed the large fortune left her in patronizing learning and learned men, to whom her mansion was constantly accessible. After her decease, her own writings were collected and published in two duodecimo volumes: they consist principally of "Avis d'une mere a son fils et a sa fille;" "Traité de l'Amitié;" "Nouvelles Reflexions sur les femmes;" "Sur la Vieillesse;" "La Femme Hermite," &c. These works are all marked by much taste, sense, and good feeling. Madame de Lambert reached the advanced age of eighty-six, and died at Paris in 1733.—*Moreri. Nouv. Dict. Hist.*

LAMBERT (GEORGE) an English painter, who obtained some celebrity towards the middle of the last century. His taste led him to imitate the style of Gaspar Poussin, in which he has composed some pictures of acknowledged merit. He also painted scenes from common nature, and presented a picture of that description to the Foundling hospital, which is much admired. The East India house in Leadenhall-street is also decorated with six large pictures, painted by him, of the Company's settlements in India. He died in 1765. According to Edwards, this artist founded the celebrated beef-steak club.—*Edwards's Supplement to Walpole's Anec. Rees's Cyclop.*

LAMBERT (JOHN) a distinguished parliamentary general in the civil wars of Charles I, was descended of a good family, and was a student of law at the commencement of the troubles. He acted as colonel at the battle of Marston Moor, and had a superior command at Naseby. He also gained several advantages against Langdale and Muirgrave in the north, and became a great favourite with the independent party. He served under Cromwell in Scotland, and when Charles II pushed into England, Lambert hung upon his rear with a body of cavalry. After the battle of Worcester, Lambert was intrusted with the motion in the council of officers for creating a protector, but opposed the design of making Cromwell king, as contrary to his own ambitious views, on which account he was deprived by the Protector of his commission, but allowed a pension of 2000*l.* per annum. On the death of Cromwell he returned to public life, and became the soul of the malcontents to the protectorate of

his son Richard. He was successfully employed by parliament to quell the insurrection of sir George Booth in Cheshire; but a petition to parliament, which he instigated his officers to draw up, was deemed so dangerous by that body, that they immediately cashiered him; but such was his temporary influence with the soldiery, that he procured the appointment of a committee of public safety. He encountered however a successful rival in general Monk, who being at this time head of the army of Scotland, began to entertain the design of restoring the monarchy. As he incurred suspicion, the committee deputed Lambert to advance northward with a body of troops to overawe him; but Monk, crossing the Tweed in 1660, while at the same time the parliament resumed its authority, Lambert was deserted by his troops, and soon after arrested and committed to the tower. His sudden escape in April threw Monk into great alarm, but before he could assemble any considerable force from the soldiers, who were flocking to him from all quarters, he was retaken. At the Restoration he was brought to trial, but behaved with so much submission, that though condemned, he was reprieved at the bar, and banished for life to the island of Guernsey; where he survived more than thirty years, amusing his leisure with cultivating flowers, and copying them with his pencil, an art which he had acquired from Baptist Gaspar. He is said to have died a Roman Catholic.—*Hume's Hist. of Eng. Granger.*

LAMBERT (JOHN HENRY) an eminent mathematician and astronomer, was born at Mulhausen in the Sundgau, a town in alliance with the Swiss cantons, on the 29th August 1728. His father was a tailor in humble circumstances, who intended him for his own business, but being sent to a public school, he so distinguished himself by his abilities, that an attempt was made to provide him with the means of studying theology, which however proved unsuccessful, and he was obliged to follow his father's employment. In this situation he spent the greatest part of the night in study; and obtaining an old mathematical treatise, discovered so much ardour and ingenuity, that several learned men were benevolently induced to instruct him gratis, and he successively became clerk to some iron works, and amanuensis to M. Iselin of Basil, who conducted a newspaper, and became his sincere and constant friend. In 1748 this gentleman recommended him to baron Salis, president of the Swiss convention, to become tutor to his children; and aided by the excellent library of his new patron, and the scientific intercourse which he met with in his circle, he enlarged the sphere of his acquirements in an extraordinary degree. After living eight years at Coire, during which period his talents as a philosopher and mechanic were rendered manifest by various scientific compositions and inventions, he repaired in 1756 with his pupils to Gottingen, and soon after published his first separate work, entitled "De la Route de la Lumiere par les Aisrs."

In 1758 he visited Paris with his charge, and became acquainted with d'Alembert and Messier. In 1759 he published his celebrated work "On Perspective;" and in the following year appeared his "Photometry," by which he added a new branch to the science of mixed mathematics. In the three or four following years he published "Letters on the Construction of the Universe;" "A Treatise on the principal Qualities of the Orbits of the Comets;" "New Organon." In 1764 he visited Berlin, and was introduced to Frederic the Great, who admitted him a regular member of the academy of that capital, an appointment which enabled him to devote himself wholly to his favourite studies. He enriched the transactions of various societies with his papers and treatises, all of which bear the stamp of eminent and original genius. Most of his mathematical pieces have been collected in three volumes by himself. The king of Prussia made a considerable addition to his pension a short time before his death, which took place the 25th September 1777 in his forty-ninth year, when he fell a victim to a decline, produced by over application. Lambert forms one of the most conspicuous examples on record, of the mastery which great genius and energy will sometimes exert over untoward circumstances, to the production of the most extraordinary result.—*Rees's Cyclop. Aikin's G. Biog.*

LAMBERT (MICHAEL) a French musician, born at Vivonne in 1610. He was celebrated for the art and taste with which he accompanied himself on the lute; and he is regarded as the first in France who infused genuine grace and feeling into vocal music. He was appointed master of music to the king's chamber; and persons of the first distinction assembled at his house to acquire taste in singing, on which account a species of musical academy insensibly arose. He composed some small motets, and there still remains, by him, a collection of airs in two, three, and four parts, with a continued bass.—*Nouv. Dict. Hist.*

LAMBERT of Schaffinaburg, a celebrated benedictine, who in 1058 undertook a journey to Jerusalem. On his return he composed a chronicle of affairs from Adam to the year 1077, the last twenty years of which is a veritable history of Germany. This chronicle, which was printed in 1669, is contained in the first volume of the German writers, by Pistorius. A monk of Erfurt supplied a continuation until 1472, which is to be found in the same collection.—*Nouv. Dict. Hist.*

LAMBERTI (LEWIS) a learned Hellenist, born at Reggio in Lombardy in 1758. Being designed for the profession of an advocate, he was sent to Modena, to study jurisprudence; but he was more attracted by general literature, and having made some proficiency, he became secretary to the papal nuncio at Bologna. This situation he soon left, and went to Rome, where he became acquainted with the learned antiquary Visconti, who introduced him to the Borghese family, to whom he recommended himself by a work which he composed

on the antiquities and sculptures of the villa Borghese. When the effects of the French revolution were about to extend to Italy, Lamberti returned to Reggio, whence he went to Milan, and in 1796 joined in the measures of Buonaparte for establishing a national republic, of which he became a member of the grand legislative council. General Brune afterwards gave him a place in the executive directory of the Cisalpine republic. After the battle of Marengo had put the French in possession of the north of Italy, Lamberti was made a member of the Italian Institute; and he was subsequently made professor of the belles lettres at the college of Brera, and keeper of the public library. The most important work of Lamberti was the edition of Homer, in Greek, printed by Bodoni at Parma, in folio. He went to Paris to present a copy of this magnificent production on vellum to Buonaparte, who made him a present of 12,000 francs. Among his original works are Italian poems and a drama; and he published a volume of translations from the Greek poets. He died in 1813.—*Biog. Univ.*

LAMBIN (DIONYSIUS or DENYS) a French critic and grammarian of the sixteenth century, born at Moutreuil in Picardy, in 1516. His talents and industry raised him to a most respectable rank among the scholars of his day, and he became, from a lecturer on the Greek language at Aniens, professor royal of philology and the belles lettres in the university of Paris. He was the author of a treatise on the excellence and utility of the Greek tongue, together with rules to be observed in rendering it into Latin; a Life of Cicero; familiar Epistles, &c.; besides two discourses, "De Philosophiâ cum Arte dicendi conjugendâ," and "De Ratiouis principatu et rectâ Institutione." He also published translations into Latin of the Ethics and Politics of Aristotle, and of some of the Orations of Æschines and Demosthenes, together with annotations, valuable for the information they contain on Cicero, Horace, Plautus, and Lucretius. Lambin had been for some time in the service of cardinal Tournon: his religious principles were however in conformity with those of the Huguenots; and soon after the massacre of St Bartholomew in 1572, in which his friend Peter Ramus perished, grief for his loss, and a melancholy apprehension that a similar fate might be reserved for himself, combined to hurry him to the grave in his fifty-sixth year.—*Moreri. Saxii Onom.*

LAMBINET (PETER) a jesuit, eminent as a bibliographer. He was born in the department of Ardennes in France, in 1742, and studied in the college of Charleville, which belonged to the jesuits. Entering into the order, he continued a member of it till its suppression, when he joined the Premonstratensian monks. Them he quitted after some years, and became a secular, with the consent of the abbé-general of the congregation. He published in 1785, "Notice de quelques manuscrits qui concernent l'Histoire des Pays Bas;" and in the "Esprit des Journaux;" several

letters on the *bible des pauvres*; and the Ambrosian Missal; but the most important work of the abbé Lambinet, is his "Recherches historiques, littéraires, et critiques sur l'origine de l'imprimerie, particulièrement sur les premières établissemens au 15^e Siècle dans la Belgique," 1798, 8vo; the second edition of which, forming 2 vols. 8vo, was published in 1810. He died of palsy in 1813.—*Biog. Univ. Biog. Nouv. des Contemp.*

LAMBLARDIE (JACQUES ELIE) a French engineer, born at Loches in Touraine, in 1747. He was intended for the church, but he forsook theology for mathematics; and being admitted into a public school, under Perronet, he was, after five years' study, employed as a sub-engineer on the coast of Normandy. The scientific memoirs which he then composed and the professional skill which he manifested, occasioned the construction of sluices at Trepport and Dieppe to be entrusted to him. In 1783 he was sent as engineer to the port of Harre; and subsequently to the department of the Somme, and also nominated member of the commission for the management of works at Cherbourg. In 1793 he became assistant to Perronet in the school of bridges and highways, and on his death Lamblardie succeeded him, and he was also appointed first director of the Polytechnic school. He died in 1801. His works comprise a memoir on the coasts of Upper Normandy, 1789, 4to; and others on the turning gates of locks, and on different kinds of moveable bridges.—*Biog. Univ. Biog. Nouv. des Contemp.*

LAMBTON (WILLIAM) an English officer, distinguished for his labours in the cause of science. He was a lieutenant-colonel in the army, and was for more than twenty years employed in the East Indies, where he conducted a grand trigonometrical survey of the country. He died January 20, 1823, at Kingin Ghaut, fifty miles south of Nagpour while proceeding in the execution of his duty towards that place. The Transactions of the Royal and Asiatic Societies, of which he was a member, afford ample evidence of the extent and importance of the labours of colonel Lambton, in his measurement of an arc of the meridian in India, extending from cape Comorin to a new base line, measured near the village of Takoorkera, fifteen miles south-east of Ellichpou.—*Ann. Biog.* vol. viii.

LAMET (ADRIAN AUGUSTINE DE BUSSY DE) a learned doctor of the Sorbonne, distinguished as a theological casuist. He was admitted to the college in 1646, and took his degree in 1650. Being related to cardinal de Retz, he adhered to that statesman in his disgrace, and followed him in his retreats to England, Holland, and Italy. On his return to France, he took up his residence at the Sorbonne. Though his birth and talents might have procured him high preferment in the church, he held no benefice, except a priory at Brive la Gaillard. He died in 1691, aged about seventy. After his death was published a work, entitled "Resolutions de plusieurs cas de Conscience," 8vo, of which a more

complete edition was published by the abbé Goujet, with the title of "Dictionnaire des Cas de Conscience, par De Lamet et Fromageau, &c." 1733, 2 vols. folio.—*Biog. Univ.*

LAMEY (ANDREW) a learned writer on history and diplomatics, who was a native of Munster in Germany. He was the pupil of Schoepflin, and afterwards became his co-adjutor. With him he visited the archives and libraries of Alsace, to collect materials for the history of that province in the middle ages. The elector Charles Theodore made him keeper of the Palatine library at Manheim; and in 1763 he was appointed perpetual secretary of the academy newly founded in that capital. He was also made a privy councillor of the elector, and died at Manheim in 1802, aged seventy-five. He published "Codex principis olim Laureshamiensis Abbatiae diplomaticus," Manheim, 1768, 3 vols. 4to; "The Diplomatic History of the ancient Counts of Ravensberg," 1779, 4to; besides a number of dissertations in the Memoirs of the Academy of Manheim.—*Biog. Univ.*

LAMI. There were three celebrated characters of this name in the eighteenth century; of these two were more immediately contemporary. BERNARD LAMI, a native of Mans, born 1610, was educated by the fathers of the oratory in his native city, and in 1658 became a member of their society at Paris. In 1667 he received priest's orders, and became professor of philosophy at Saumur and Angers, but becoming a convert to the opinions of Descartes, his enemies at the latter place procured a royal order, which deprived him of his church preferment, compelled him to abandon his scholars, and retire to Grenoble. There his friend, cardinal le Camus, the bishop, received him, made use of his advice and services in the regulation of his diocese, and admitted him professor of divinity. His works, scientific and theological, are various and much esteemed; they consist of "The Elements of Geometry and Mathematics," 2 vols. 12mo; "A Treatise on Perspective;" "The Harmony of the Gospels," 2 vols. 4to; "The Art of Speaking, with Reflections on Poetry," 12mo; "Apparatus Biblicus," 4to, a valuable work since translated into English; "Discourses on the Sciences;" "De Tabernaculo Fœderis," folio; and "A Demonstration or Evidences of the Truth of Christianity." His death took place in 1715, at Rouen in Normandy.—FRANCIS LAMI, born in 1636 at Montereau, in the diocese of Chartres, served in early life in the army, but quitted the profession of arms for the church, and became a monk of the order of St Benedict. He distinguished himself by his writings against Spinoza, and was considered one of the ablest polemics of the age in which he lived. His works, which are written with much purity and elegance of style, consist of a treatise entitled, "Nouvel Atheisme renversé;" "Traité de la Connoissance de soi même," 12mo, 6 vols; "La Rhetorique du College;" "L'Incredule amené à la Religion, &c.;" "Les Gemissemens de l'Ame sous la

Tyrannie du Corps;" "Lettres Philosophiques;" "Les Premiers Elements, &c.;" and "Conjectures sur divers Effets de Tonnerre." He died in 1711 at St Denys.—GIOVANNI BATTISTA LAMI, a native of Santa Croce in Tuscany, was born in 1697. Having completed his studies at Pisa, he continued to reside for some time in that university, of which he became vice rector. Afterwards he removed to Florence, where he was appointed public librarian, professor of ecclesiastical history, and chaplain to the grand duke, who was much amused by his wit, which equalled his learning. He published a valuable edition of the works of Meursius, in twelve folio volumes. His own writings are, "De Rectâ Christianorum Fide in eo quod Mysterium Divinæ Trinitatis spectat," a work which gave great umbrage to the jesuits, who formally attacked it; "De Eruditione Apostolorum;" "Sanctæ Ecclesiæ Florentinæ Monumenta," folio, 3 vols.; "De Rectâ Patrum Nicænorum Fide;" "Memorabilia Italorum Eruditione præstantium," 2 vols.; "Lezioni d'Antichità Toscane," 4to, 2 vols.; and "Dialogi d'Aniceto Nemesio." His death took place in 1770, or as others say, in 1774, at Florence.—*Fabroni Vita Italorum.*

LAMIA, the name of an Athenian courtesan, the daughter of Cleaor, equally celebrated for the charms of her person and the brilliancy of her wit. She was by profession a flute-player, and excelled most of her contemporaries in the art; but hearing that her favourite instrument was carried to great perfection in Egypt, she travelled into that country, where she became the mistress of Ptolemy Soter. On the defeat of that prince by Demetrius Poliorcetes, about three centuries before the Christian æra, Lamia fell, together with other captives, into the hands of the conqueror, over whom, the handsomest man of the age, she soon acquired a complete ascendancy, although her personal attractions were then considered to be upon the wane. Her influence procured from Demetrius great concessions in favour of her countrymen, the Athenians, who in their gratitude went so far as to raise a temple to her honour, under the denomination of Venus Lamia. Plutarch and Athenæus both bear ample testimony to the qualities of her mind; and if the antique engraving on an amethyst in the king of France's collection give a true portrait of her features, her beauty is still less questionable. The exact time of her decease is uncertain.—*Lempriere's Classical Diet.*

LAMIRAL (DOMINIQUE HARCOURT) a French navigator, born at Lyons about 1750. He entered young into the army, and while in garrison at Havre, he was noticed by M. Eyries, a naval officer, who made him his secretary. His patron being sent to Senegal, as governor of that colony in 1779, took out Lamiral, who was agent of the company of Guiana. The latter remained in Africa till the peace of 783; and returned thither again in 1789. The company being dissatisfied with his conduct, recalled him in 1787. He was imprisoned during the reign of terror, and on the

liberation he obtained some civil employment. He died in 1795. Lamiral was the author of "L'Afrique et le peuple Africain considérés sous tous leurs rapports avec notre Commerce et nos Colonies," Paris, 1789, 8vo; principally designed as a manifesto against the company, from whose service he had been dismissed, but comprising many curious facts and observations." He also published "Mémoire sur Sénégal," 1791, 4to.—*Biog. Univ. Biog. Nouv. des Contemp.*

LAMOIGNON (CHRÉTIEN FRANÇOIS DE) marquis de Baviile, born at Paris in 1644, was the son of Guillaume de Lamoignon, a president of the parliament of Paris, celebrated for the integrity and talent displayed in his "Remonstrances and Discourses." The elder Lamoignon, who died in 1677, in his sixtieth year, himself superintended the education of his son; and did much, both by precept and example, towards forming in him that solid taste and love of literature for which, as well as for judicial ability, he was afterwards so highly distinguished. These pursuits did not interfere with his close application to the study of jurisprudence as a profession; he entered heartily and vigorously into it, and to his manly and unaffected style of eloquence may be attributed in a great measure the first reformation of French pleading, from the bombast and pedantry which had till then disgraced it. In 1673 he was appointed advocate-general to the king, Louis XIV, who honoured him with his personal notice, and on the presidency of the parliament becoming vacant in 1698, conferred that post upon him. In the discharge of the duties of this responsible situation he continued till 1707, when he was permitted to resign it in favour of his son. He survived his retirement from public life only two years. Of his literary works, "La Plaidoyer," and a letter on the death of Bourdaloue alone appeared.—*Moreri. Dict. Hist.*

LA MOTTE (HOUDART DE) see MOTTE.

LAMOURETTE (ADRIAN) a French ecclesiastic, who figured during the Revolution, and was one of its victims. He entered into the congregation of the Lazarists, and in 1789 he was grand vicar of Arras. He was one of those who wished to reconcile religion with philosophy; and his principles having connected him with Mirabeau, he was employed to write the "Projet d'adresse aux Français sur la Constitution civile du Clergé," which that statesman delivered at the tribune of the constituent assembly. In March 1791 Lamourette was nominated to the constitutional bishopric of the Rhone and Loire; and in the month of September following he was admitted into the legislative assembly. He there distinguished himself by his moderation. After the massacres in September 1792, he retired to Lyons; and being made a prisoner on the taking of that city by the republicans, he was sent to Paris, where he suffered under the guillotine, January 10, 1794, at the age of fifty-two. He published "Pensées sur la Philosophie de l'Incredulité," 1786, 8vo; "Pensées sur la Philosophie de la Foi," 1789,

8vo; and several other works.—*Biog. Univ. Biog. Nouv. des Contemp.*

LAMOUREUX (J. V. F.) professor of natural history in the university of Caen, and corresponding member of the institute, was a native of Agen. He published "Dissertations sur plusieurs espèces de Fucus peu connues et nouvelles, avec leurs Descriptions tant, en Latin qu'en Français," Agen, 1805; and he subsequently produced a more important work, entitled "Histoire des polypes coralligenes flexibles, vulgairement nommés Zoophytes," 1816, 8vo. He was engaged on a "Marine Flora," and other scientific works, at the time of his decease, which occurred March 26, 1825. Mr Dawson Turner, says "M. Lamoureux, was a man who, perhaps, deserved more than any other individual at the hands of every student of marine botany. His treatises upon the classification of the Submersed Algae, have been honoured with admission into the Mémoires du Museum d'Histoire Naturelle, and have procured him the distinction of being elected into the National Institute. His subsequent publication on the Corallines, is an admirable manuel, in a very different difficult branch of natural history." In 1817 he published at Caen, an account of a new variety of corn, cultivated with advantage in several parts of the northern provinces of France.—*Biog. Nouv. des Contemp. Turner's Tour in Normandy*, vol. ii. *Dibdin's Tour in Normandy*, &c.

LAMPE (FRÉDÉRIC ADOLPHUS) a Westphalian ecclesiastic, born in 1683 at Dethmold. He became minister to a Lutheran congregation at Bremen, of the university belonging to which city he was afterwards chosen rector, having resigned, in order to fill that situation, the professorships of divinity and ecclesiastical history, to which he had been appointed at Utrecht in 1720 and 1726. He was a man of considerable learning, and his treatise "De Cymbalis Veterum," printed in one volume 12mo, has been highly spoken of. His other works are, "A Commentary on the Gospel of St John," in three vols. 4to; and a "Synopsis of Sacred and Ecclesiastical History." His death took place at Bremen in 1729.—*Bibl. Germanique.*

LAMPILLAS (don FRANCIS XAVIER) a Spanish ex-jesuit, born at Jaen in 1739. He occupied the chair of belles lettres in the college of Seville, when his order was suppressed in 1767. He then retired to Italy, and settled at Genoa, where he devoted himself to the study of the Italian language and literature. He chiefly distinguished himself by his "Saggio storico, or Apology for Spanish Literature," Genoa, 1778-81, 6 vols. 8vo, the object of which was to vindicate the literary character of his countrymen, against the criticisms of Bettinelli and Tiraboschi. The abbé Lanpillas also wrote some Italian poetry. He died at Genoa, in November 1798.—*Biog. Univ.*

LAMPRIIDIUS (ÆTIUS) the name of a Latin historian, who flourished in the early part of the fourth century, under Dioclesian

and Constantine the Great. Of his works there are yet extant the lives of the emperors Antoninus, Commodus, Diadumenius, and Hellogabalus. The life of Alexander Severus, which, according to the Palatine manuscript, is the work of Spartian, has been by other authorities ascribed to him. The four lives first mentioned were printed at Milan, and are to be found in the "Historiæ Augustæ Scriptores," 2 vols. 8vo, 1671.—*Vossii His. Lat.*

LAMPRIIDIUS (BENEDICTUS) a Cremonese, celebrated in the sixteenth century as an elegant Latin poet and an accomplished scholar. In 1521 he removed from Rome, where he taught the classical languages with great reputation, to Padua, and continued to reside in that university till Frederic Gonzaga, duke of Mantua, invited him to his capital, in order to superintend the education of his son. Lampriidius imitated the style of Pindar in some lyric effusions, and that not unsuccessfully; but he is principally known by his epigrams, written in the Greek and Latin languages. His compositions are to be found in the "Deliciæ Poetarum Italorum." His death took place about the year 1540.—*Tivoboschi.*

LANA (FRANCIS DE) an Italian mathematician, born at Brescia in 1637. He was a jesuit, and celebrated as a teacher of philosophy and mathematics. He published in 1670 a work, a collection of inventions, under the title of "Prodrómo all' arte Maestra;" a work, of which another edition appeared in 1684, under the title of "Magisterium Naturæ et Artis," 3 vols. folio. In this production he first gave a hint of the principle of exploring the air by the aid of machines inflated with gas, his treatment of which subject was printed separately at Naples in 1784. He died about 1700.—*Nouv. Dict. Hist.*

LANCASTER (JAMES) an early English navigator, whose name is connected with the establishment of a commercial intercourse between this country and the East Indies. He made a voyage to America in 1591; and he afterwards sailed round the Cape of Good Hope, and visited Ceylon and Pulo Penang, when the mutinous conduct of his crew obliged him to return home. In 1594 he engaged in a predatory expedition to South America, took several prizes, and captured the town of Pernambuco in Brazil. In 1600 he went with a fleet to the East Indies, formed a commercial treaty with the king of Achen, and established a friendly correspondence with the state of Bantam, in the island of Java. He returned to his native country in 1603. Lancaster, in his last voyage procured some information relative to a north-west passage to the East Indies, which occasioned the subsequent expeditions of Hudson and others. Baffin gave the name of Lancaster's Sound to an inlet which he discovered in 74° of north latitude. This navigator, who is said to have received the honour of knighthood, died in 1620.—*Hakluyt. Purchas. Biog. Univ.*

LANCELOT (CLAUDE) a French ecclesiastic, born in 1619 at Paris. The reputation which he early acquired by his progress in

literature, obtained for him the appointment of tutor to the prince of Conti. He afterwards became a member of the monastery of Port Royal, where he lectured on the belles-lettres. His friend, De Barcos, abbot of St Cyran, subsequently induced him to take the vows, as a monk of the order of St Benedict, in his abbey; but when this society was suppressed, and its members dispersed, on the death of their superior, Lancelot was banished to Quimperlay in Lower Brittany, where he died, after three years of exile, in 1695. The "Nouvelle Methode pour apprendre la langue Latine," 8vo, 1664; the "Nouvelle Methode pour apprendre le Grec," 1656, which are known in England as the Port Royal Grammars, were of his composition, as was also "The Garden of Greek Roots," and a treatise "On the Hemina, an ancient Measure," which, from having been published anonymously, have been usually considered the joint production of the members of the society. He also compiled a Spanish, an Italian, and a "General and Rational Grammar," and was the author of a "Dissertation on Sacred Chronology;" a "Life of M. de St Cyran;" a "Selection of Epigrams," 2 vols. 12mo; and "Relation du Voyage d Alet."—*Niceron. Nouv. Dict. Hist.*

LANCELOT (ANTHONY) a learned Frenchman, born in 1675. His father, who was a Parisian tradesman, intended him for the church, gave him a classical education, and obliged him to take the tonsure when young. But disliking his destined profession, he twice ran away from home to avoid embracing it; and at length he was permitted to exchange it for the law. Having finished his studies he was made sub-librarian at the Mazarin college, where he applied himself to the examination of MSS. of the middle ages, and made extracts from the most curious. He then assisted Bourchenu de Valbonnais in his history of Dauphiny, and passed five years in that province, where he made inventories of the principal archives. He was afterwards employed to collect the titles of nobility of the family of Luynes, which undertaking led to the composition of his "Memoires pour les Pairs de France avec les Preuves," printed at Paris, 1720, folio. He was made secretary to the king, and in 1732 he obtained the place of inspector of the royal college. In 1737 he was sent to Nancy, to make an inventory of the archives of the provinces of Lorraine and Bar, then recently united to France. On his return to Paris, he died of apoplexy, November 3, 1740. Lancelot was a member of the academy of Inscriptions, among whose memoirs he published a great number of dissertations relating to the history and antiquities of the middle ages.—*Biog. Univ.*

LANCELOTI, or LANCILLOTI (D. SECONDO) an industrious and ingenious writer, born at Perugia in Italy about 1575. He embraced the ecclesiastical profession, and entered into the congregation of mount Olivet; and having been made an abbot, he travelled through the principal cities of Italy, and be-

came a member of several academies. At Rome he formed an acquaintance with the famous Gabriel Naude, who persuaded him to go to Paris, where he died in 1643, owing to disease brought on by excessive application to study. He was the author of a history of the religious order to which he belonged; of three curious treatises designed to prove that mankind is not degenerated; and another on the impostures of ancient history; and he left behind him a large quantity of manuscripts.—*Biog. Univ.*

LANCISI (GIAMARIA) an Italian physician of eminence, was born at Rome in 1654. He studied philosophy and divinity, but at length chose the profession of medicine, in which he obtained great celebrity, and became professor of anatomy in the college della Sapienza. He was also appointed physician to three succeeding popes, and obtained at once honours, reputation, and fortune. He died in January 1720, at the age of sixty-five, and left a library of more than twenty thousand volumes to the hospital of the Holy Ghost, for the use of the young physicians and surgeons who attended the patients therein. He published an edition of his works, which are highly esteemed, in 2 vols. 4to, 1718, under the title "*Marie Lancisi Archiatri pontificii Opera.*"—*Fabroni Vita Italorum*

LANCRE (PETER de) a famous demonographer of the seventeenth century, who was a native of Bourdeaux. He was descended of a respectable family, and becoming a councillor of parliament, he was sent in that capacity to the provinces of Labourd and Gascony, to superintend the trials of persons accused of sorcery. Being deeply infected with the common error of his time, a belief in the frequency of demoniacal possessions and contracts with the devil, he acted on that opinion, and condemned to death multitudes, who in the present age would be regarded as lunatics or impostors. De Lancre was made for his services a councillor of state, and died at Paris about 1630. Two curious works proceeded from his pen, entitled "*Le Tableau de l'Inconstance des mauvais Anges et Demons,*" 1612, 4to; and "*L'Incredulité et Mécréance du Sortilege pleinement convaincue, ou il est traité de la Fascination de l'Attouchement,*" 1622, 4to.—*Biog. Univ.*

LANCRINCK (PROSPER HENRY) an able artist, was born at Antwerp about 1628. He was designed by his mother, the widow of an officer, for the church; but in consequence of his predilection for painting, she placed him with an artist of eminence at Antwerp, and he soon discovered great skill, especially in landscapes. His mother dying, he became possessed of a small fortune, with which he was induced to try his fortune in England. He met with a reception suitable to his merit; and besides painting many pictures for sir William Williams and others, was much employed by sir Peter Lely in painting the grounds, landscapes, flowers, ornaments, and sometimes even the drapery of his principal pictures. Lancrinck's own performances in

landscape are much admired for invention colouring, and warmth, and he was particularly successful in his skies. He died in August 1692.—*Walpole's Anec. Biog. Brit.*

LANDAIS, or LANDOIS (PETER) the son of a tailor at Vitre in Champagne, who being employed under the tailor of Francis II, duke of Brittany, in 1475, insinuated himself into the good graces of that prince, who made him his grand treasurer. He became one of the most adroit politicians then in Europe; resolute and secret in his schemes, and indefatigable in carrying them into execution; but vindictive and cruel to persons of all ranks who were so unfortunate as to give him offence. Having imprisoned the virtuous chancellor Chauviu, who died in confinement, his conduct provoked such general indignation, that the duke thought it necessary to order a judicial examination of the proceedings of his unworthy favourite. The commissioners of justice hastened his trial, and having condemned him to be hanged, the sentence was executed without waiting for the sanction of the duke, who without doubt intended to pardon him. His execution took place July 19, 1485.—*Moreri.*

LANDEN (JOHN) an eminent English mathematician, was born at Peakirk near Peterborough, in the year 1719. He became an early contributor to the *Lady's Diary*, and in 1754 communicated to the *Philosophical Transactions*, "An Investigation of some Theorems which suggest several remarkable properties of the circle," which paper excited considerable attention. In 1755 he published a volume of "*Mathematical Lucubrations,*" and soon after became agent to earl Fitzwilliam, an employment which he held until within two years of his death. In 1764 appeared his "*Residual Analysis,*" which he never completed; and in 1766 he was elected a fellow of the Royal Society. In addition to many other able papers, he gave, in the sixty-seventh volume of the *Philosophical Transactions*, "*A new Theory of the Rotatory Motion of Bodies, affected by forces disturbing such motion.*" This paper may be seen, among many others equally curious, in a volume of "*Memoirs,*" which he published in 1780. This subject, in respect to which he was led to a different result from the celebrated mathematicians, D'Alembert and Euler, employed him more or less until his death just living long enough to complete a second volume of his "*Memoirs,*" which contains his last labours on the solution of the general problem concerning rotatory motion. His death took place January 15, 1790, in the seventy-first year of his age. Mr Landen was as much esteemed for benevolence and integrity as for his scientific abilities.—*Hutton's Math. Dict. Gent. Mag.* 1790.

LANDINUS (CHRISTOPHER) an Italian scholar, philosopher, and poet, was born at Florence in 1424. After pursuing his studies at Volterra, he was constrained by his father to apply to jurisprudence, but by the favour of Cosmo and Pietro de Medici, he was enabled to devote himself to polite literature, and he

was also appointed by the latter tutor to his son, the afterwards celebrated Lorenzo, with whom an attachment, highly honourable to both parties, took place. Landinus, in his old age, became secretary to the seignory of Florence, and died in 1504. He left several Latin poems, and his notes on Virgil, Horace, and Dante are much esteemed. His philosophical opinions appear in his "Disputationes Camaldulenses," 1480, folio, and Strasburgh, 1508.—*Tiraboschi. Roscoe's Life of Lorenzo de' Medici.*

LANFRANC, an eminent prelate of the eleventh century, distinguished by his learning and abilities, as well as by the firm, though temperate opposition, which he made against the encroachments of the see of Rome. He was by birth an Italian, born in 1605 at Pavia, and after having been for some time a professor of jurisprudence at Avranches, assumed the cowl, and was elected prior of the abbey of Bec in 1044. In 1059 he entered into a dispute with Berengarius of Tours, at Rome, respecting the doctrine of transubstantiation, and maintained the controversy against him, not only personally before the general council held in that city, but continued it subsequently in his writings. Three years after he exchanged his priory for the abbey of St Stephen, at Caen in Normandy; and on William, the sovereign of that dutchy, succeeding to the English throne, by conquest, the interest of that prince procured his election in 1070, to the archbishopric of Canterbury, then become vacant by the deposition of Stigand. In his superintendance of this diocese he was early involved, not only in a contest with Thomas, archbishop of York, respecting the primacy, which he was decided in his favour, but even with the pope himself, whose citation to appear personally before him he positively refused to obey. Lanfranc was an able politician, as well as a most munificent prelate. In his latter capacity, he founded the hospitals of St John, and of Habledown, both in the immediate vicinity of Canterbury, and liberally endowed them, superintending their progress himself with great interest till his death in 1089. His writings were printed in one volume, folio, 1647.—*Hume's Hist. of Eng.*

LANFRANC, or LANFRANCO (GIOVANNI). There were two of this name, the first was a Milanese, who lived in the latter part of the thirteenth century. He practised physic in his native city with great success; but exciting envy by some innovations in the profession, a persecution was raised against him, which forced him to take refuge in France. He was the author of a valuable treatise on surgery, entitled "Chirurgia Magna et Parva." This work first appeared at Venice in 1490, and went through another edition in folio at Lyons, in 1553. His death took place in 1300.—The second, and by far the more celebrated of the two, was an artist of Parma, born in 1581. He was originally a domestic in the service of count Horatio Schotte, who, discovering his talent for design, placed him, first under Agostino Caracci, and on Lis de-

cease under his brother Annibale. His progress with the latter was so great, that in some of the designs which adorn the Farnese palace at Rome, the difference between the master and the scholar is scarcely perceptible. Lanfranco was employed in painting the churches of St James and of St Peter, in the same capital; in the latter edifice, at the express command of Urban VIII, he executed the picture of Christ walking on the water with such success, that the pope, his patron, raised him to the rank of knighthood, in reward for his services. The great excellencies of this artist are manifested in composition and foreshortening; his deficiencies consist in want of correctness and expression. In fresco painting on a large scale, especially in domes, &c. he has seldom been surpassed. He was also respectable as an engraver, and died in 1647.—*Moreri. D'Argenville Vies de Peint.*

LANG (CHARLES NICHOLAS) a Swiss naturalist, who was born in 1670. After studying in Germany and Italy, he went to Rome, and obtained the degree of MD. He afterwards went to France, and in 1713 he was chosen a corresponding member of the Academy of Sciences at Paris. He settled at Lucerne, his native place, as town physician, in 1709, and died in 1741 aged seventy. Among his works are, "Idea Historiæ naturalis Lapidum figuratorum Helvetiæ;" "De Miro quodam Achate qui Coloribus suis Imaginem Christi in cruce Morientis representat," a tract which shows that the author directed his researches rather to objects of curiosity than to the more solid and useful departments of the science which he cultivated. Many of his writings are preserved unpublished in the libraries of Lucerne and St Urban.—*Biog. Univ.*

LANGALLERIE (PHILIP DE GENTILS marquis de) was born of a noble family in Saintonge. He much distinguished himself in the military service of his country, in which he obtained the rank of lieutenant-general in 1704. His great talents as an officer were however much obscured by the fickleness and eccentricity of his conduct, and having embroiled himself with the French ministry, without waiting for the result of the good offices of his friends, he entered the service of the emperor, and was made general of cavalry. He soon disgusted the court of Vienna, and after having quarrelled with prince Eugene, he was employed by the king of Poland. He soon after suddenly turned religious, and formally renouncing the Roman Catholics, wrote a book on the occasion, which he defied the Sorbonne to answer. He finally repaired to the Hague, and, joined with another French adventurer, who passed himself off for a German prince in a negotiation with the Turkish ambassador, to raise Christian troops for the Porte. The emperor being apprised of these negotiations, caused him to be arrested in 1716, and he died at Vienna the following year. A book of memoirs is extant bearing his name, but no credit is attached to them.—*Nouv. Dict. Hist.*

LANGBAINÉ (GERARD) an English di-

vine and classical scholar of the seventeenth century. He was a native of Westmoreland, and was educated at Queen's college, Oxford, where he regularly graduated as DD. in 1646. He first distinguished himself by an edition of Longinus on the Sublime, in Greek and Latin, with notes; after which he produced several works on history, theology, and criticism. He corresponded with Selden, Usher, and other learned men; and bishop Nicolson describes him as a person well acquainted with the laws and antiquities of England. He was made keeper of the archives to the university in 1644, and provost of his college in the following year. Though he obtained these places while Oxford was held by the royalists, he contrived to retain them under the government of the opposite party. He died in 1658.—GERARD LANGBAIN, his son, was a commouer of University college, and esquire beadle of law, who published a list of Oxford graduates, and a catalogue of English plays, the latter of which formed the basis of a work, entitled "Lives and Characters of the English Dramatic Poets, and an exact account of all the Plays that were ever yet printed in the English Tongue," published about 1698, 8vo. Langbaine died in 1692.—*Wood's Athen. Oxon. Edit.*

LANGDALE (sir MARMADUKE) an English gentleman, who distinguished himself as a royalist officer in the civil war between Charles I and the parliament. At the commencement of hostilities he raised a body of troops, with which he defeated the Scots at Corbridge in Northumberland. He subsequently repulsed general Fairfax, and obliged him to raise the siege of Pontefract castle. When the king had surrendered himself to the Scottish army, sir Marmaduke Langdale made himself master of Berwick and Carlisle; but on the ruin of the royal cause, he withdrew to Flanders. Charles II, in 1658, created him a baron in reward of his services. He died in 1661.—*Clarendon. Collins's Peerage.*

LANG, or LANG (JOHN MICHAEL) a learned Protestant divine and Oriental scholar, born in Germany in 1664. He studied under Wagenseil at Altorf, and after having proceeded MA. in 1687 he removed to Jena, where he devoted himself to medicine and botany, and in 1690 became adjunct professor of philosophy. In 1692 he was appointed pastor of the church of Vohrenstrauss, but not finding his situation convenient for study, he went to Altorf, and having taken the degree of DD. in 1697, he obtained the theological chair, with the rectory of the principal church. Having experienced some persecution on account of the supposed heterodoxy of his opinions, he resigned his offices, and went to Prenzlow in Brandenburg, where he was appointed inspector in 1710. He died in 1731. Lange was particularly skilful as a linguist, and was especially acquainted with the Greek and Arabic languages. A list of his works, relating to Biblical and Mahometan literature, may be found in Joecher's German Biographical Dictionary.—*Biog Univ.*

LANG (LAWRENCE) a traveller of the eighteenth century, who was a native of Stockholm. He became a lieutenant of engineers in the service of Russia, and was employed by Peter the Great in 1715, to superintend the erection of the palace of Peterhof, when Kang-hi, emperor of China, requested, through the governor of Siberia, to have a physician sent him from Russia. An English physician at Moscow having offered to go to Pekin, Lange accompanied him by order of the czar, to bring back curiosities from China. He returned to St Petersburg in 1717; and having executed his commission much to the satisfaction of his master, he was three times subsequently employed on embassies to China, for commercial purposes. On his return from his last mission, in 1737, he was made governor of Irkutsk in Siberia. He wrote a journal of his first expedition to China, published in the second volume of the "New Memoirs of Russia;" and accounts of his subsequent journeys are also extant, all which afford some curious information relative to the countries he visited.—*New Mem. of Lit. vol. v. Biog. Univ.*

LANGEBECK (JAMES) a learned and industrious Danish writer, born in 1710. He studied theology under his father, who was a Lutheran minister, and also made great proficiency in other branches of literature, displaying a particular taste for the northern languages. For some time he was employed as a schoolmaster, till Gram, the royal librarian, procured him the means of indulging his inclination for study. He published a Danish magazine of history and archæology, and afterwards a Latin history of the Royal Society of Denmark. Frederic V employed him to travel in Sweden and the neighbouring countries, to make collections illustrative of Danish history and antiquities. During his journey he was chosen a member of the Royal Academy of Sweden, and on his return, a member of the Academy of Sciences of Copenhagen, and of that of Gottingen. He was also made keeper of the archives of the realm, councillor of justice, and lastly, councillor of state. He died in 1774. The most important of Langebeck's literary undertakings, is the historical collection, entitled "Scriptores Rerum Danicarum mediæ ævi, partim hactenus inediti, partim emendatius editi," of which the first three volumes only were published before his death.—*Biog. Univ.*

LANGFORD (ABRAHAM) a celebrated auctioneer, who succeeded the equally famous Mr Cock, whom Foote, in one of his farces describes as one, who "had as much to say upon a ribbon as a Raphael." Langford however was not content with the fame which attended his professional labours, as he exercised his pen in dramatic composition, and produced an entertainment called "The Judgment of Paris," 1730; and "The Lover his own Rival," a ballad opera, acted at Goodman's-fields in 1736. His success as writer for the stage was by no means flattering. He died September 18, 1774.—*Thesp. Dict. Reus.*

LANGHANS (**CHARLES GÜTHARD**) an architect of great eminence, born in 1733, at Landshut in Silesia. He travelled for improvement through various parts of Europe, and after having given proofs of his professional talents at Breslau and other places, he was called to Berlin to fill the office of principal director of public buildings. He adorned the Prussian capital with many new structures, among which may be particularized the Brandenburg gate and the *Salle de Spectacle*. Langhans, who was a member of the academy of fine arts at Berlin, of that of arts and sciences at Bologna, and of the patriotic society of Silesia, also distinguished himself as the author of several memoirs on architecture. He died in 1808, while on a journey in Silesia.—*Biog. Nouv. des Contemp.*

LANGHORNE (**DANIEL**) an English historian and antiquary of the seventeenth century. He was a native of London, and was educated at Trinity college, Cambridge, where he proceeded M.A. in 1657. He obtained a fellowship in the college of Corpus Christi not long after the Restoration, and in 1664 he took the degree of B.D. In 1670 he was presented to the living of Layston in Hertfordshire, which he held till his death in 1681. Langhorne published a treatise, entitled "*Elenchus Antiquitatum Albionensium*," relating to the remote history of Britain; which was followed by his "*Chronicon Regum Anglorum*," a sequel to the former.—*Chalmers's Biog. Dict.*

LANGHORNE (**JOHN**) an English divine, poet, and critic of the last century. He was born in 1735 at Kirkby Stephen in Westmoreland, and was the son of a clergyman who held a living in Lincolnshire. His father dying while he was young, his early education devolved upon his mother; and he completed his studies at a grammar school at Appleby, not having had the benefit of collegiate instruction. At the age of eighteen, he became domestic tutor in a family residing near Ripon in Yorkshire, and while there, he wrote a poem to celebrate the beauties of Audley park, in that neighbourhood. He next was assistant at a free-school at Wakefield, and having taken orders in the established church, he acquired some popularity as a preacher. In 1759 he engaged himself as tutor to the sons of Robert Cracroft, esq. of Hackthorne in Lincolnshire. He then published a volume of poems; and in 1760 he entered his name at Clare-hall, Cambridge, with a view to the degree of B.D. He left Hackthorne, in consequence of being disappointed in an attachment to the daughter of his patron, to whom however he was subsequently married. In 1761 he officiated as a curate at Dagenham in Essex, and he now began to be known in the literary world by the publication of an Eastern tale called "*Solyman and Almena*," and other productions; and about this time he became a writer in the *Monthly Review*. In 1763 he published his most popular work, "*Letters supposed to have passed between Theodosius and Constantia*," founded on a story related in

the *Spectator*. The next year he removed to London, and obtained the curacy and lectureship of St John's, Clerkenwell; and he was soon after made assistant preacher at Lincoln's inn by Dr Hurd. He also employed his pen in defence of the ministry of lord Bute, and published a poem, entitled "*Genius and Valour*," designed to vindicate the Scots against the satirical abuse of Churchill and other party writers. For this piece of service the university of Edinburgh bestowed on him the diploma of D.D. in 1766. He married Miss Cracroft the following year, and went to reside at Blagdon in Somersetshire, where the rectory had been procured for him by her relations. She dying in childbed soon after, he went to pass some time at Folkestone in Kent, with his brother, who was a clergyman at that place, in conjunction with whom he executed a new translation of "*Plutarch's Lives*," which made its appearance in 1770. In 1771 he published "*Fables of Flora*," and another poetical work entitled "*The Origin of the Veil*." Having taken a second wife, he returned to his living of Blagdon, where he added to his clerical duties those of a magistrate. This office suggested the subject of a poem called "*The Country Justice*," the first part of which was published in 1774, and two more were subsequently added. He was made a prebend of Wells in 1777, and died at Blagdon in April 1779. Besides the works noticed, he published "*Sermons*," "*Letters*," &c. His poetical pieces, which are more distinguished by ease and elegance of style, than by wit or genius, were edited by his son in 1804; and they have been admitted into Dr Anderson's and Chalmers's collections of British poets.—*Aikin's G. Biog.*

LANGIUS (**CHARLES**) a learned scholar and critic of the sixteenth century. He was a native of Ghent, and after his education was finished, he adopted the profession of jurisprudence. Political disturbances induced him to remove to Liege, where he obtained a canonry in the church, and died there in 1573. Langius was intimately acquainted with the Latin and Greek languages, eminent as a poet, and was one of the most judicious critics of his age. Scioppius bestows high praise on his commentary on "*The Offices*" of Cicero, and on his critical remarks on Plautus. He left an excellent library and many MSS. which were dispersed after his death. To his literary pursuits he added a taste for the culture of curious plants, of which he had a collection procured from the East Indies and from America; and he may be considered as one of the earliest practical botanists of modern times.—*Teissier Eloges des Savans.*

LANGIUS (**JOHN**) a learned physician, who was a native of Loewenberg in Silesia, born in 1485. He studied in Germany, and afterwards at Bologna and Pisa, where he became M.D. He then settled at Heidelberg, and was physician to four of the electors palatine, one of whom he accompanied in his travels through various parts of Europe. He wrote several works on professional subjects,

of which the most valuable is his "Miscellanea Epistolarum Medicinalium," containing many curious observations on natural history as well as medicine, and displaying to advantage the profound erudition of the author.—*Teissier Eloges des H.S. Eloy Dict. H. de la Med.*

LANGIUS (RODOLPHUS) canon of Munster in Germany, in the beginning of the sixteenth century. He was carefully educated by his uncle, Herman Langius, who was dean of the same church of Munster. Having travelled in Italy at the period of the revival of Greek and Latin literature, he contributed much, on his return, to excite a taste for study in Germany. He wrote a poem on the taking of Jerusalem, which he dedicated to his uncle, and others on sacred subjects. He died in 1519, aged eighty-one.—*Melchior Adam. Moreri.*

LANGLES (LEWIS MATTHEW) a celebrated Oriental scholar, born at Peronne, in the department of the Somme in France, in 1763. His father, who was a knight of the order of St Lewis, destined him for his own profession, that of arms; but being partial to literature, he requested permission to study the Eastern languages, that he might be qualified for service in India. His education was commenced at Montdidier, and finished at Paris, whither he was brought by his parents. After having studied Arabic and Persian under M. Silvestre de Sacy, and attended the lectures of MM. Ruffin and Caussin de Perceval, he, by the advice of the ministers Bertin and de Breteuil, engaged in the study of Mantchou, and published an alphabet of that language in 1787, with a dedication to the Academy of Inscriptions. This work was followed in 1788 by a "Dictionnaire Mantchou-Français," after which he printed various pieces translated from the Arabic and Persian. He had formed a design to go to the French transmarine settlements, but the political commotions at home induced him rather to remain at Paris, and devote himself to the cultivation of the living Oriental languages. In 1790 he presented to the Constituent assembly an address, developing the numerous advantages which would result from the protection and encouragement of the species of literature which he cultivated. The same year he published *Indian Fables and Tales*, newly translated, with a preliminary discourse and notes on the religion, manners, and literature of the Hindoos; and also the second volume of his *Mantchou Dictionary*. He was in 1792 nominated keeper of the Oriental MSS. in the royal library; and in 1793 he belonged to a temporary commission of arts, attached to the committee of public instruction. After the Revolution in July 1794, he became keeper of the literary dépôt, established in the old convent of the Capuchins, Rue St Honoré. To his zeal and influence was owing the creation and organization of a particular school for the Oriental living languages, in which he was professor of Persian. He wrote notes for a new edition of the *Travels of Pallas*, translated by Lapeyronie, which

he published in 1795, 8 vols. 8vo, with an atlas. He was also the author of valuable additions to the *Travels of Thunberg*, Norden, &c. After the executive directory had suppressed the temporary commission of arts, and dispersed, in various establishments, the objects which had been collected at the Capuchin convent, M. Langles devoted himself entirely to the duties of his professorship, and to those which devolved on him as conservator of the Oriental MSS. in the national library. On the formation of the Institute he became a member, and belonged to the commission of literature, to which he presented many memoirs and notices of manuscripts. He also assisted in many periodical works. In 1796, in conjunction with MM. Daunou and Baudin des Ardennes, he made an abortive attempt to re-establish the "Journal des Savans," and the "Magazin Encyclopedique" contains a great number of notices and dissertations from the pen of M. Langles. His death took place in January 1824. He had formed a most noble collection of books, manuscripts, engravings, &c.; and his house was the general resort of travellers, cognoscenti, and students, to whom he dispensed information from the stores of learning and intelligence which he had accumulated.—*Biog. Nouv. des Contemp. Lit. Gaz. No. 368.*

LANGLEY (BATTY) an English architect, or rather builder, who wrote some useful books on the mechanical departments of his art, and on the expenses of masonry, &c. But Langley is principally known at present as the author of an absurd attempt to re-model the Gothic style of architecture; and in imitation of the Doric, Ionic, and Corinthian orders of Grecian architecture, he invented different orders of the Gothic, on principles wholly incompatible with that species of construction. He died in 1751.—*Lempriere. Univ. Biog.*

LANGTOFT (PETER) so named from his birth place in the county of York, an Augustin friar of the time of the first Edward, who held a canonry belonging to his order in the priory of Bridlington. He is known as the author of a *Chronicle of England* in verse, and as the translator of Boscam's life of St Thomas of Canterbury, from the Latin original. Thomas Hearne, the antiquary, published an edition of his works in two octavo volumes in 1725. The death of this historian took place soon after the commencement of the fourteenth century.—*Preface to Works by T. Hearne.*

LANGTON (STEPHEN) a cardinal of the Romish church, and archbishop of Canterbury, in the reign of John, whose disputes with the papal see originated in his steady rejection of this prelate's appointment. By birth Langton was an Englishman, being born in Lincolnshire, or as some aver, in Devonshire, but he received his education in the French metropolis. In the university belonging to that city he had risen gradually through various subordinate offices to the chancellorship, when on going to Rome, the learning and abilities which had hitherto facilitated his advancement, raised him so high in the favour of Innocent III, that

the pontiff, in 1207, not only elevated him to the purple, but presented him to the vacant primacy of England, respecting the disposal of which the king was then at variance with the monks of Canterbury. John refused to confirm the nomination, seized on the temporalities of the see, and ordered the monks to depart the kingdom. A sentence of excommunication, not only upon himself, but upon his whole realm, was the consequence; nor was it removed till the weak monarch, alarmed by the warlike preparations of France, and the general disaffection of his subjects, gave up that, and every other point in dispute, and reconciled himself to the church. Langton now took undisputed possession of his diocese, in 1213; but he does not appear to have acted towards the Romish court with that degree of subserviency which was in all probability expected from him. On the contrary, he exhibited himself as a strenuous defender of the privileges of the English church, and much annoyed his antagonists by the ability with which he carried on the contest. His death took place in 1228. Many of his works, of which Bale and Tanner supply a list, have been printed.—*Prince's Worthies. Cave. War-ton's Hist. of Eng. Poetry.*

LANGUET, the name of two eminent French ecclesiastics, brothers. Of these, JEAN BAPTISTE JOSEPH LANGUET, the elder, and by far the more celebrated of the two, though inferior to the other in rank and dignities, was born in June 1675, at Dijon, and at the age of twenty-three was received into the Sorbonne, of which he became a doctor. De la Chetardie, vicar of St Sulpice in Paris, appointed him his curate, which subordinate situation he filled for nearly ten years, till, on the death of the incumbent, he succeeded to the benefice. The whole life of this pious and excellent divine was, from this moment, devoted entirely to deeds of benevolence and charity. Besides rebuilding his parish church, (which he effected by subscription) at an enormous expense, and on a scale of almost unexampled magnificence, he also founded an institution, which does his memory still greater honour; this was the "Maison de l'Enfant Jesus," an hospital consisting of two parts, one providing for the support of thirty-five decayed gentlewomen, the other for more than four hundred women and children of inferior degree. The success with which this establishment was carried on, procured him the marked esteem and approbation of cardinal Fleury, who offered to place all the charitable foundations in France under his superintendance, an honour which he thought it advisable to decline. In 1725 he not only disposed of all his own pecuniary resources to alleviate the distress occasioned by the general dearth, but even sold his furniture for the same purpose, and during the raging of the plague at Marseilles, sent all the money he could raise to the relief of the inhabitants. Although the highest dignities in the church were repeatedly offered to his acceptance, M. Languet refused them all, and in 1748 even resigned the em-

oluments of his benefice, although he still continued to perform his clerical duties, and to superintend his charitable institution till his death, which happened in 1750. At this period, his foundation, which had been considerably increased by benefactions, is said to have contained fourteen hundred poor persons. In his disposition and address he was lively and facetious, and though thus devoted to pious acts, had nothing about him of the ascetic. His brother, JEAN JOSEPH, also a person of great benevolence, was the author of a translation of the Psalms of David. He obtained the bishopric of Soissons, and was afterwards made archbishop of Sens, where he died in 1753.—*Nouv. Dict. Hist.*

LANGUET (HUBERT) an able diplomatist and accomplished scholar of the sixteenth century. He was born in 1518 at Viteaux in Burgundy, and received his education at Padua, where he took the degree of doctor of laws. Becoming known to Melancthon, he renounced the Roman Catholic faith, and embraced the tenets of his new friend at Wittenberg. He was afterwards for a short time in the service of the king of Sweden, which he quitted for that of Augustus, elector of Saxony. This prince held his talents as a statesman in high estimation, and despatched him on various missions to several of the petty German states, as well as to the court of France. While engaged in this latter embassy, he narrowly missed perishing in the massacre of St Bartholomew, from which catastrophe however he not only escaped himself, but was fortunate enough to preserve his friends, De Mornay and Wechelius, the learned printer, in whose house he was residing at the time. He was subsequently in 1574 sent ambassador to the emperor, but on his return, lost the favour of his prince, by the part he took in the controversy respecting the Eucharist, then carried on in Saxony between the Lutherans and the disciples of Zuingle. On this occasion, he was strongly suspected of assisting Gaspar Peucer in the publication of his "Explication, &c." and his retirement from the court followed. After a short time spent in the service of the count palatine, he went to Antwerp, where he was well received by the prince of Orange, in whose service he died in 1581. He was the friend of the two Camerarii, father and son, and of sir Philip Sidney; his correspondence with the latter in Latin appeared at Frankfurt in 1639, as did also that with the two former, in the same language, in 1646, and was reprinted, with a panegyric preface in honour of the author, in 1685. Besides the writings already alluded to, he was the author of "An Account of the Siege of Gotha;" "Letters to the Elector of Saxony," Halle, 4to, 1699; "Descriptio Susceptæ a Cæsarea Majestate Executionis Augusto Saxonæ Duce contra Sancti Romani Imperii Rebelles." The celebrated "Vindiciæ contra Tyrannos" is also generally ascribed to his pen. De Mornay, in speaking of his good qualities, says, that "He was what most men wished to appear, and lived as good men would desire to die." His

remains were honoured with a public funeral at Antwerp, the prince of Orange attending it in person.—*Nouv. Dict. Hist.*

LANIER, or LANIERE (NICHOLAS) the name of an Italian artist, born about the year 1568. He came to England at an early age, and was much noticed for his talents by Charles I, who employed him in collecting pictures for the royal gallery. In the execution of this commission he was in the habit of affixing a peculiar mark to the paintings he procured, which still distinguish them to the eye of the connoisseur. Lanier was also a good musician, as well as a painter, and composed two masques, one of which was performed at the lord Hay's, the other at the marriage of the earl of Somerset. The time of his decease is unknown, but a portrait of him painted by his own hand is yet in existence in the music school at Oxford.—*Rees's Cyclop.*

LANJUINAIS (JOSEPH de) a native of Brittany, who entered into the order of St Benedict, and became professor of theology. Some disputes in his convent, arising from his connexion with D'Alembert and Diderot, and his supposed attachment to their philosophy, induced him to relinquish his profession, and leave his native country. He went to Lausanne in Switzerland, where he embraced the reformed religion, and became principal of the college of Moudon. He published several works which attracted much attention, among which are, "Le Monarque accompli," 1774, 3 vols. 8vo, prosecuted in France as a seditious publication; "Supplement à l'Espion Anglais, ou Lettres intéressantes sur la Re traite de M. Necker," &c. 1781, 8vo; and "Esprit du Pape Clement XIV." He died about 1808.—*Biog. Univ.*

LANNES (JOHN) duke of Montebello, marshal under the French empire, grand-cordon of the legion of honour, &c. was born at Lectoure, in the department of Gers, in 1769. He studied at the college of his native place, but the misfortunes of his father having interrupted his education, he was apprenticed to a dyer. In 1792 he entered into the army, and served first as a serjeant-major. His zeal, intelligence, and bravery soon gained him promotion; and in 1795 he had obtained the rank of chief of brigade. Having been displaced, with other officers, on the charge of incapacity, by the conventional agent Aubry, Lannes attached himself to the army of Italy, as a volunteer. For his behaviour at the battle of Millesimo, in April 1796, he was made colonel of the 25th regiment, immediately after the engagement. He distinguished himself at the passage of the Po, at the bridge of Lodi, and especially at the battle of Bassano. After the assault of Pavia he was promoted to be a general of brigade, and the continued successes of the French having obliged the Pope to make peace, Lannes was sent to Rome to arrange and sign the conditions. He returned to Paris after the treaty of Campo Formio, in October 1797; and he subsequently accompanied Buonaparte to Egypt, where he greatly distinguished himself on several occasions.

Returning to France with his commander he rendered important services to him in the course of the events which raised him to sovereign power. He served again in Italy, and was rewarded with a sabre of honour for his conduct at the battle of Marengo. In 1801 he was sent plenipotentiary to Lisbon, but he was soon after recalled. In May 1804 he was made a marshal of the empire, and subsequently duke of Montebello. He maintained his reputation in the campaign against the Austrians in 1805, and contributed much to the victory of Austerlitz, on which occasion he commanded the right wing of the army. In the Prussian campaign in 1807 he was again in the field, and signalized himself particularly at the battles of Jena, Eylau, and Friedland. He then served in Spain, and was at the battle of Tudela, and the siege of Saragossa. He at length lost his life in consequence of a wound which he received at the battle of Essling, dying March 31, 1809, nine days after that engagement took place. The eldest son of the marshal was created a peer of France, August 17, 1815, under the title of duke of Montebello.—*Biog. Nouv. des Contemp.*

LANSBERGHE, or LANSBERGIUS (PHILIP) a mathematician and astronomer of the seventeenth century, who was a native of Ghent in Flanders. He was for some time a Protestant minister at Antwerp, and on the taking of that city by the Spaniards in August 1585, he sought an asylum in the United Provinces. He became minister of Ter-Goes in Zealand, and towards the close of his life removed to Middleburg, where he died in 1632, aged 71. He published a work on sacred chronology, and several astronomical treatises, among which are his "Commentationes in Motum Diurnum et Annum Terræ," designed as a vindication of the Copernican system of the world. Libertus Fromondus of Louvain having published a book against Lansberghe, intitled "Anti-Aristarchus, sive Orbis Terræ immobilis," JAMES LANSBERGHE, son of the author, wrote a vindication of his father's opinions.—*Mereri. Martin's Biog. Philos. Nouv. Dict. Hist.*

LANZI (LOUIS) an able Italian antiquary, was born in 1732 at Monte del Celmo, near Macerata, and was educated in the schools of the jesuits, into which order he himself entered. He taught rhetoric at several of the Italian universities with great success, and when the jesuits were suppressed he was appointed sub-director of the gallery of Florence, which noble collection was much improved by his care. His first work was "A Guide" to this gallery, which is very superior to the usual performances of the kind. He followed with an "Essay on the Tuscan Language," 1789, 3 vols. 8vo, a work that extended his reputation throughout Europe. His other works are, a "History of Painting in Italy," the best edition of which is that of Bassano, 1809, 6 vols. 8vo; "Dissertations on the Vases commonly called Etruscan," and a much-esteemed translation of Hesiod. He died at Florence in 1810.—*Nouv. Dict. Hist.*

LAO-TSEE, one of the most famous philosophers of the eastern parts of Asia, born about 600 years BC. in the province of Houkouang in China. The contemporary of Pythagoras, his history bears some resemblance to that of the Grecian sage. He taught the doctrine of metempsychosis, and professed to recollect the different bodies through which his soul had migrated. He was the founder, or rather the reformer, of the sect of Tao-tsee, who divide with the Buddhists or followers of Fo, the spiritual dominion of China; and the ministers of these two religious sects are by Europeans called Bonzes. Lao-tsee must have lived to a great age, as he was visited by Confucius in 517 BC. But little is known concerning his personal history; and of the books attributed to him by the Chinese, only a few fragments had appeared in Europe, till the publication of one of them, in a French translation, by M. Abel Remusat, under the title of "Livres des recompenses et des peines," Paris, 1816, 8vo.—*Biog. Univ.*

LAPO (JAMES or JACOPO) a famous Italian architect, who in 1218 built the church of the Virgin Mary at Assissi, which brother Helias, a disciple of St Francis, had founded during the life of that ascetic. This undertaking procured for Lapo great reputation, especially at Florence, where he passed the greater part of his life, and died about 1262.—**ARNOLFO LAPO**, his son, became the most celebrated architect and sculptor of his time. He was one of the great restorers of a taste for a correct style of architecture in Italy, and his works display genius and skill in his profession. He died in 1300, after having finished the church of St Maria della Fiore at Florence, and other public buildings.—*Felicien Vies des Architect.*

LARCHER (PETER HENRY) an eminent French scholar and translator, was born at Dijon, October 12, 1726. His family was related to that of Bossuet, and it was the intention of his father, who was a counsellor of finance, to bring him up to the magistracy. He was, however, decidedly attached to the belles lettres, and having finished his studies, with an income of only five hundred livres a year, he became an intense student of Greek literature, and an assiduous collector of early editions. His first translation was the "Electra of Euripides," which attracted little attention; but he became a contributor to several literary journals, and translated from the English the "Martinus Scriblerus," from Pope's Miscellanies, and sir John Pringle's "Observations on the Diseases of the Army;" he also wrote notes to the French version of Hudibras. He followed with a translation of the Greek romance of "Chereas and Callirhoe," which was reprinted in the *Bibliothèque des Romains*. In 1767 a difference took place between him and Voltaire, on whose "Philosophy of History" he published remarks, under the title of a "Supplement;" to which the latter replied in his well known "Defense de mon Oncle." Larcher rejoined in a "Reponse à la Defense de mon Oncle," with which

the controversy ceased on his part, but not so the merciless wit of his opponent. He soon after undertook a translation of Herodotus; and in 1774 published his learned "Memoire sur Venus," to which the Academy of Inscriptions awarded their prize. He followed with a translation of Xenophon, which works led to his being elected into the aforesaid academy. His Herodotus was published in 1786, of which a new and very improved edition appeared in 1802. During the revolutionary crisis he lived in privacy, and was only slightly molested, by being called once before the revolutionary committee. He was subsequently decreed a sum of three thousand livres, and received into the Institute. He was finally appointed professor of Greek in the imperial university, but was too aged for active services. He died December 22, 1812, and was regretted as an accomplished scholar and amiable man. His fine library was sold by auction in 1814.—*Life prefixed to Catalogue of Library.*

LARDNER (NATHANIEL) a learned non-conformist divine of the eighteenth century. He was a native of Hawkhurst in Kent, and became a student at a dissenting academy in London, whence in 1699, at the age of sixteen, he removed to the university of Utrecht, and afterwards to that of Leyden. He returned to England in 1703, and probably spent some years in study at home, previously to entering on the ministry, as he commenced a preacher about the age of twenty-five. In 1713 he went to reside in the family of lady Treby, the widow of lord chief-justice Treby, as domestic chaplain and tutor to her son, whom he afterwards accompanied on a tour through part of France and the Netherlands. His connexion with the Treby family appears to have continued till the death of his pupil in 1723, an event which deeply affected his mind. About this time he was engaged, in conjunction with other ministers, in carrying on a course of lectures at a chapel in the Old Jewry, London. Here he delivered three sermons on the credibility of the gospel history, which formed the basis of his great work on the evidences of Christianity, the principal occupation of his life. The commencement of his literary undertaking was in 1727, when he published, in 2 vols. 8vo, the first part of "The Credibility of the Gospel History; or, the Facts occasionally mentioned in the New Testament, confirmed by passages of ancient Authors, who were contemporary with our Saviour or his Apostles, or lived near their time." The work was continued at intervals till the appearance of the twelfth and last part in 1755, which however was followed by three supplementary volumes, comprising a history of the Apostles and Evangelists, with observations on the books of the New Testament. In 1729 he was chosen assistant preacher to Dr W. Harris, minister of Crutched Friars, London, which office he held till 1751, when he resigned it. The university of Aberdeen, in 1745, conferred on him the degree of DD. In the latter part of his life he retired to Hawkhurst his native place, where he had a small

estate, and there he died July 24, 1768, at the age of eighty-four. Besides his principal work, he was the author of "A large collection of Jewish and Heathen Testimonies to the Truth of the Christian Religion," 1764-67, 4 vols. 4to; "The History of the Heretics of the two first Centuries after Christ," 4to, published posthumously in 1780; "A Vindication of three of our Saviour's Miracles," against Woolston; "A Letter written in the year 1730, concerning the Question, whether the Logos supplied the place of a Human Soul in the person of Jesus Christ;" together with sermons and various other theological compositions. A collective edition of his works, with his life by Dr Kippis, was published in 1788.—*Aikin's G. Biog.*

LARIVEY (PETER DE) an old French dramatic poet of considerable merit. He was a native of Troyes in Champagne, and is supposed to have died about 1612. He has the credit of having been the first among his countrymen who considered comedy as a representation of the manners of real life, and the correction of vice and folly by ridicule as its legitimate object. Larivey was acquainted with the Greek, Latin, and Italian dramatists, whose works he freely imitated; and his own scenes have in turn been copied by Moliere and others. His plays were printed at Paris in 1579, and at Troyes in 1611, 2 vols. 12mo. The second volume of the latter edition is extremely rare, containing pieces not included in any other impression. Larivey also translated from the Italian the Tales of Straparola, and other works.—*Biog. Univ.*

LA ROMANA (MARQUIS DE) a Spanish general, born of an illustrious family in the island of Majorca. He received a good education, and was acquainted with several languages. Under his uncle, general Ventura-Caro, he made a campaign against the French in 1793; and in 1795 he assisted in the defence of Catalonia. On the occurrence of peace, he visited France, and afterwards other parts of Europe. In 1807 the emperor Napoleon having obtained from the king of Spain a body of 15,000 men, to second his ambitious projects in the north of Europe, the marquis La Romana commanded them, and they acted with great bravery on different occasions. The marquis was stationed with his forces in the island of Fionia, when he learnt what had taken place at Madrid in June 1808, and the designs of Napoleon against the liberties of Spain became sufficiently manifest. The Spanish commander resolved to return to his own country, and join the standard of independence. He entered into a secret treaty with the English, who then had a fleet in the Baltic, through the means of which, the Spanish army was conveyed home. La Romana displayed his talents and courage against the French invaders on many occasions, particularly during the retreat of the English under Sir John Moore, previously to the battle of Corunna, and in the defence of the lines of Torres Vedras against Massena. The marquis La Romana died January 18, 1811.—*Biog. New. des Contemp.*

LARREY (ISAAC) a minor French historian, was born in 1638, of noble Protestant parents, at Montvilliers. After practising sometime as an attorney in his native country, he went to Holland, where he was appointed historiographer to the states-general. He settled afterwards at Berlin, where he received a pension from the elector of Brandenburg. He died in 1719, aged eighty. His principal works are a "History of Augustus," 1690, 12mo; "History of Eleanor, Queen of France, and afterwards of England," 1691, 8vo; "A History of England," 1697 to 1713, 4 vols. folio, which is still much valued on account of the portraits. He was author also of the romance of the "Seven Sages," 2 vols. 8vo, and was concerned in a "History of France under Louis XIV," which is not much esteemed.—*Bibl. Germanique. Nour. Dict. Hist.*

LARRIVEE (HENRY) a distinguished French actor and opera singer, born at Lyons in 1733. He was originally a hair-dresser, but having been patronized by Rebel, director of the opera at Paris, he was introduced on the stage in 1755. Assisted by the counsels of Gluck, the musician, he acquired the art of giving to recitative all the energy and expression of tragic declamation, and speedily arrived at the highest eminence in his peculiar department of art. He retired from the metropolitan stage with a pension in 1779; but he afterwards travelled through the provinces, giving concerts, with the assistance of his wife and daughters, who possessed considerable musical talents. He died at Vincennes in 1802.—*Biog. Univ.*

LARROQUE (MATTHEW DE) an eminent French Protestant minister, was born near Agen in 1619. He lost his parents, who were persons of rank and character, in his youth, but was enabled to study for the ministry, and became one of the most eminent of the pastors of the reformed church in his native country. He died in charge of a congregation at Rouen in 1684. His principal works are, a "History of the Eucharist," and various controversial treatises, one of which, in opposition to Beveridge and Pearson, is to support the opinion that the epistles of St Ignatius are spurious; "Conformity of the Reformed Churches of France with the Ancients;" "A Dissertation on the Thundering Legion," &c.—DANIEL DE LARROQUE, son of the above, was born at Vitri; and retired in 1681, on the revocation of the edict of Nantes, to London, but returned to Paris, and was imprisoned for five years, in consequence of having written a preface to a satirical piece against Louis XIV. He was however ultimately released, and employed in the office of the secretary of state. He left several works, the principal of which are, "La Vie de l'Impositeur Mahomet," 12mo, translated from the English of Prideaux; a satirical work, entitled, "Les véritables Motifs de la Conversion de l'Abbé de la Trappe," 1685, 12mo; "Nouvelles Accusations contre Varillas," 8vo; a satirical romance, entitled "La Vie de François Eudes de Mezerai." He also assisted in

the "Nouvelles de la Republique des Lettres," and the celebrated satire, entitled "Avis aux Refugiés," has been attributed to Larroque, instead of Bayle, but with very little probability.—*New. Dict. Hist.*

LASCARIS. The name of two noble Greeks of the fifteenth century, descendants of the imperial family, and both natives of Constantinople, who, on the taking of that capital by the Turks in 1453, fled from the ruin and destruction which menaced them, in the subversion of the eastern empire, and took refuge in Italy.—**CONSTANTINE**, the elder, settled first at Milan, where he was received into the grand duke's household, in the capacity of tutor to his daughter. He afterwards visited Rome and Naples, in which latter city he opened a school of eloquence, and finally took up his abode at Messina, whither the fame of his literary attainments, especially in the cultivation of the Greek language, attracted many distinguished disciples, and among others the celebrated Pietro Bembo, afterwards known as the cardinal of that name. He was the author of a Greek grammar, and of some other tracts written in that language and in Latin, which were first printed at Milan in 1476, and again at Venice in 1495, at the Aldine press. He also published a treatise on the eminent scholars, who had formerly flourished in Sicily, and died about the close of the century, bequeathing his valuable collection of books to the senate of Messina.—**JOHN**, the younger of the two, surnamed Rhynacenus, took up his residence at Padua, under the protection of Lorenzo de' Medici, who not only distinguished him by his favour, but despatched him on a literary mission into Greece, the object of which was the purchase of valuable manuscripts. This, by the permission of the sultan, whose orders gained him access to the libraries, he accomplished much to the satisfaction of his employer, and enriched the Florentine collection with the fruits of his researches. In 1494 he quitted Italy, and entered the service of Louis XII of France, who employed him as his envoy to the Venetian senate; but on the elevation of John de' Medici to the papedom, by the title of Leo X, Lascaris, went to Rome, at the invitation of that pontiff; and on the foundation of his Greek college there, on the Mons Quirinalis, Lascaris was appointed by him its first principal, and superintendent of the Greek press. In order to promote the ends proposed by this institution, of which the ascertaining and preserving the true pronunciation of the language was one of the chief, Lascaris made a second journey into Greece, and brought back with him some youths of good families, who were at once to communicate, and to receive instruction. The remainder of his life was divided between Paris, where he assisted Francis I in forming the Royal Library, and Rome, in which latter city he at length died of the gout at the age of ninety in 1535. Notwithstanding his acknowledged abilities, the natural indolence of his disposition prevented his benefiting the world by the productions of his

pen, so much as his taste for literature induced his contemporaries to expect. He published however a translation of "Polybius," and of the "Argonautics," of Apollonius, together with a Greek Anthology, 1494, folio; Annotations on the works of Sophocles and Homer, four of the plays of Euripides, and a collection of epigrams and apophthegms in Greek and Latin, Paris, 4to, 1527.—*Hodius de Græci Illustribus. Nouv. Dict. Hist.*

LASCY (count PETER DE) a military officer, born in the county of Limerick in Ireland, in 1678. After the capture of that place by William III, he went abroad with his uncle, who was in the French service, and was with the army commanded by Catinat in Italy. The regiment of Athlone, to which he belonged, having been disbanded after the peace of Ryswick, he entered into the Austrian army, and served against the Turks. He was next employed by the king of Poland, and then by Peter the Great of Russia. In 1709 he was wounded at Pultowa; and he afterwards assisted in the taking of Riga, of which place he was made governor. For his various services he was made a lieutenant-general in 1720; Catharine I appointed him governor of Livonia; and on his estate in that province he died in 1751, having attained the rank of field-marshal. The prince de Ligne published a collection of the works, and a journal of the campaigns of Marshal Lascy.—*Biog. Univ.*

LASCY (JOSEPH FRANCIS MAURICE, count de) son of the foregoing, was born at Petersburg in 1725. Having adopted the profession of arms, in 1744 he entered into the Austrian service, and made a campaign in Italy. He gradually rose to the rank of general, after having displayed his military talents at the battles of Lowositz, Breslau, and Hochkirchen; and in 1760 he penetrated to Berlin, at the head of 15,000 men, for which bold exploit he was made a commander of the order of Maria Theresa, and in 1762 he received the baton of marshal. Under Joseph II he was a member of the council of war at Vienna, and was the author of the military regulations adopted by that prince. He was employed against the Turks in 1788, and again after the death of Laudohn. His death took place at Vienna, November 30, 1801.—*Biog. Univ. Biog. Nouv. des Contemp.*

LASERNA - SANTANDER (CHARLES ANTHONY) a native of Biscay, distinguished in the last century as a bibliographer. He studied among the jesuits at Villagarcia, and afterwards entered into the order, on the suppression of which, he went to Valladolid to study philosophy. He was about to settle in that city, when he was invited to Brussels by his uncle, who resided there as secretary to the king of Spain. Going thither, he collected a noble library, which he opened to the public; and having been obliged to dispense of it, he was in 1795 appointed keeper of the library of Brussels. He died in 1813. Among his works the most important is his "Dictionnaire Bibliographique choisi du quinzisième Siècle, drécédé d'un Essai historique sur l'Origine des

l'Imprimerie," Bruxelles, 1805, 3 vols. 8vo. He also wrote "Mémoires historiques sur la Bibliothèque dite de Bourgogne," Paris, 1809, 8vo.—*Biog. Nouv. des Contemp.*

LASSALA (MANUEL) an ecclesiastic of Valentia in Spain, born in 1729. He entered into the order of jesuits, and was the author of several works of merit. The principal of these are his "Account of the Poets of Castile;" a translation of the works of Lokman, the celebrated Oriental Fabulist, into the Hebrew language; an "Essay on General History;" a poem on the Rhine, and some dramatic compositions, written in Italian. He died in 1798 at Bologna.—*Nouv. Dict. Hist.*

LASSO (— DI) the name of three eminent musicians, father and sons. ORLANDO the elder was born at Mons in Hainault, in 1520, and according to De Thou, who ranks him among the illustrious characters of the age, was forcibly taken from his parents in his childhood by Ferdinand Gonzaga, on account of the excellence of his voice, and carried by him to Milan, Naples, and Sicily. He subsequently taught music at Rome, Antwerp, &c. till he at length settled at Munich on an invitation from the Bavarian court, and remained there till his death in 1593. His reputation as a composer and performer was so considerable, that it was said of him by a contemporary, "Hic ille Orlandus Lassus qui recreat orbem," a pun upon his name, which will not bear translation.—His eldest son, RUDOLPH, born at Munich, succeeded his father as organist and composer to Maximilian of Bavaria, in whose service, FERNINANN the youngest also appears to have continued till his death. The two brothers, besides a great number of their own musical compositions, published in conjunction, the Latin works of their father, under the title "Magnum Opus Musicum Orlandi de Lasso," &c. Munich, 1604.—*Burney's Hist. of Mus. Rees's Cyclop.*

LASSUS (PETER) a celebrated surgeon, professor of pathology at the school of medicine and surgery at Paris, and member of the French Institute. He was born at Paris in 1741, and studied under his father, who was a medical practitioner of eminence. He was admitted a master of surgery in 1765; and in 1771 he obtained the office of surgeon in ordinary to the daughters of Lewis XV. He went to Italy with those princesses when they fled from France at the commencement of the Revolution. On his return to Paris he obtained the erasure of his name from the list of emigrants; and on the re-organization of the academical institutions, he became successively professor of the history of medicine and of external pathology, which offices he held till his death in 1807. Among a number of valuable professional works published by M. Lassus, may be mentioned, "Essai ou Discours historique et critique sur les découvertes faites en anatomie par les anciens et les modernes," Paris, 1783, 8vo; "Traité élémentaire de médecine opératoire," 1795, 8vo; "Pathologie chirurgicale," 1805, 1806, 2 vols. 8vo.—*Notice of the Life and Works of Lassus,*

by Cuvier, in the *Memoirs of the Institute. Biog. Univ.*

LATILLA (GAETANO) an eminent Neapolitan composer, the friend of Pergolesi and uncle of Piccini, born in 1710. His first opera, the "Orazio," which he wrote almost immediately on quitting the conservatory, was a serious one; but it was the great success of his second, a comic opera, brought out by him in conjunction with Galuppi, that stamped his reputation as a first-rate composer in that style. This piece was entitled "Madama Ciana," to which succeeded nine others, the last and best of which is his "Buona Figliuola." The time of his decease is uncertain.—*Burney's Hist. of Mus.*

LATIMER (HUGH) an eminent English prelate and reformer in the sixteenth century. He was the son of a respectable yeoman at Thurcaston in Leicestershire, where he was born about the year 1470. He received his early education at a country school, whence he was removed to Cambridge in his fourteenth year. He was brought up a zealous romanist, but becoming acquainted with Thomas Bilney at Cambridge, he gradually changed his opinions, and being of an ardent and sincere temper, became equally zealous in promulgating the doctrines of the reformation. He first became openly obnoxious to the enemies of innovation, by a series of discourses, in which he dwelt upon the uncertainty of tradition, the vanity of works of supererogation, and the pride and usurpation of the Roman hierarchy. These sermons were warmly attacked by Buckenham, prior of the Black Friars at Cambridge, whose reasoning was assailed with great humour and acuteness by Latimer, who much advanced the Protestant party at Cambridge, of which himself and Bilney became the leaders. At length the bishop of Ely interdicted his preaching within the jurisdiction of the university, which order was defeated by the good offices of Dr Barnes, prior of the Augustines, who, being friendly to the reformation, boldly licensed Latimer to preach in his chapel, which was exempt from episcopal interference. At length the progress of the new opinions was represented to cardinal Wolsey, who, at the importunity of archbishop Warham, created a court of bishops and deacons to put the laws in execution against heretics. Before this court Binley and Latimer were summoned, and the former, who was deemed the principal, being induced to recant, the whole were set at liberty; and such was the favour extended to Latimer, that he was licensed, by the bishop of London, to preach throughout England. The remorse of Bilney is well known, and the manner in which he disclaimed his abjuration and sought the stake, which martyrdom he finally endured at Norwich. The fate of his friend by no means intimidated Latimer, who had even the courage to write a letter of remonstrance to Henry VIII, on the evil of prohibiting the use of the Bible in English. Although this epistle produced no effect, Henry, who loved openness, took it in good part, and presented the

writer to the living of West Kingston in Wiltshire. The ascendancy of Ann Boleyn and rise of Thomas Cromwell, proved still more favourable to Latimer; and after encountering much annoyance from the opposing party of divines, headed by Warham, Stokesley, and others, from which he was delivered by the king himself, he was in 1535 appointed bishop of Worcester. Of the plain dealing of Latimer, the following circumstance is a proof. It was then the custom for bishops to make presents on new-year's-day to the king, and among the rest, Latimer waited at court with his gift, which, instead of a purse of gold, was a New Testament, having the leaf turned down to this passage; "Whoremongers and adulterers God will judge." Henry was not, however, offended; and when the sturdy prelate was, some time after, called before him to answer for some passages in a sermon which he had preached at court, he defended himself so honestly that he was dismissed with a smile. The fall of Anne Boleyn and Cromwell prepared the way for great reverses, and the six articles being carried in parliament, Latimer resigned his bishopric, rather than hold any office in a church which enforced such terms of communion, and retired into the country. Here he remained in privacy, until obliged to repair to London for medical advice, in consequence of a hurt received from the falling of a tree. There he was discovered by the emissaries of Gardiner, and imprisoned for the remainder of Henry's reign. On the accession of Edward, he was released, and became highly popular at court by his preaching, during the whole of that short reign; but never could be induced to resume his episcopal functions. Having got rid of all intreaty on this subject, he took up his abode with archbishop Cranmer at Lambeth, where his chief employment was to hear complaints and procure redress for the poor. Soon after Mary ascended the throne, and in pursuance of the measures taken to re-establish the opinions of the church of Rome, Latimer was cited to appear before the council, in doing which an opportunity was afforded him to quit the kingdom. He however prepared himself with alacrity to obey the citation, and as he passed through Smithfield, the courageous old man exclaimed, "This place has long groaned for me." About the same time Cranmer and bishop Ridley were also committed to the Tower, which became so crowded, that the three prelates were confined in the same room. From the Tower they were conveyed to Oxford, and confined in the common prison, with every circumstance of degradation, preparatory to a mock disputation, in which Latimer behaved with his usual intrepidity and simplicity, refusing to deliver any thing more than a free confession of his opinions. The three prelates, although fully condemned, remained in prison sixteen months, chiefly because the statutes under which they had been tried had been formally repealed. In 1555, however, new and more sanguinary laws having been enacted in support of the Romish religion, a commission was issued by

cardinal Pole, the pope's legate, to try Latimer and Ridley for heresy. Much pains were taken during this second trial to induce them to sign articles of subscription, which they steadfastly refused, and were in consequence delivered over to the secular arm, and condemned to the flames. This sentence was put in execution about a fortnight after their condemnation, on the 16th October, 1555. At the place of execution, having thrown off the old gown which was wrapped about him, Latimer appeared in a shroud prepared for the purpose, and with his fellow-sufferer was fastened to the stake with an iron chain. A faggot, ready kindled, was then placed at Ridley's feet, to whom Latimer exclaimed, "Be of good comfort master Ridley, and play the man. We shall this day light such a candle by God's grace in England, as I trust shall never be put out." He then recommended his soul to God, and with firmness and composure expired amidst the flames. The character of bishop Latimer is sufficiently obvious from the tenor of his whole life. His talents as a preacher, although adapted for popularity in his own times, in which his simplicity, familiarity, and glib drollery were highly estimated, will not bear a critical examination in the present day. "His manner of preaching," says Gilpin, "was, however, highly affecting, as he spoke immediately from the heart; and no man was less influenced by sinister motives, or durst with more freedom reprove vice, however dignified by worldly distinctions." A collection of the sermons of bishop Latimer was first printed in 1570, and they have since been frequently republished. Several of his letters appear in Fox's Acts and Monuments.—*Gilpin's Life of Latimer. Biog. Brit.*

LATIMER (WILLIAM) one of the revivers of classical learning in England, was educated at Oxford, and became fellow of All Souls college in 1489. After travelling in Italy, and studying Greek at Padua, he returned to England, and was graduated MA at Oxford in 1513. He subsequently became tutor to Reginald, afterwards cardinal Pole, by whose interest he obtained two rectories in Gloucestershire, and a prebend of Salisbury. He was also one who taught Erasmus Greek, which great man he also assisted in his second edition of the New Testament. He died at a very advanced age in 1545. Latimer, in conjunction with Lily, Colet, and Grocyn, contributed much to establish a taste for the Greek language in England, and was one of the greatest scholars of the era in which he lived. Nothing remains of his writings, except a few letters to Erasmus.—*Athen. Oxon. Jortin's Life of Erasmus.*

LATINI (BRUNETTO) an eminent grammarian of Florence in the thirteenth century. He was of a noble family in that city, and of the party of the Guelphs, which obliged him to retreat into France, when it was overpowered by that of the Ghibelines. He ultimately, however, returned, and was appointed to some honourable offices. His greatest

bonour was being tutor to Dante, but he also obtained celebrity by a work, written in the French language, entitled "Tresor," which is a kind of abridgment of the Bible, of Pliny the naturalist, Solinus, and other writers, and may be deemed an encyclopedia of the time. On his return to Florence, he likewise published a collection of moral precepts in verse, under the title of "Tesoretto," which proves him to have been very little of a poet. He died in 1294.—*Tiraboschi. Crescimbeni.*

LATINUS (LATINIUS) a learned critic of the sixteenth century, was born at Viterbo about 1513. He was chosen, in conjunction with other learned men, to correct "Gratian's Decretal;" he also left notes on Tertullian, and was author of a very learned book, entitled "Bibliotheca Sacra et Profana, sive Observationes, Correctiones, Conjecturae et variae Lectiones," 1667, folio. He died in 1593.—*Nouv. Dict. Hist.*

LAUD (WILLIAM) archbishop of Canterbury in the reign of Charles I. He was the son of a clothier at Reading in Berkshire, where he was born in the year 1573. He received his early education at the free-school of his native town, whence he was removed to St John's college, Oxford, of which he became a fellow in 1593. He graduated M.A. in 1598, and took priest's orders in 1601, and the following year preached a divinity lecture, in which he maintained the perpetual visibility of the church of Rome until the reformation, which doctrine being disapproved by Dr Abbot, at that time master of University college, the foundation of that animosity was laid which ever after subsisted between them. He obtained the vicarage of Stanford in Northamptonshire, his first preferment, in 1607, and in 1608 obtained the advowson of North Kilworth in Leicestershire. The same year he commenced D.D. and was made chaplain to Neile, bishop of Rochester, who gave him the rectory of Cuckstone in Kent, and he soon after preached his first sermon before James I. In 1611 he became president of his college, and one of the king's chaplains, in which situation, owing to the influence of archbishop Abbot, he attracted so little attention, that he was about to retire from court, until persuaded to remain a year longer by bishop Neile, who, to keep up his spirits, gave him a prebend in the church of Lincoln and the archdeaconry of Huntingdon. His patience was at length rewarded, the king presenting him in 1616 to the deanery of Gloucester, in the cathedral of which, he signalled himself by his scrupulous attention to the strictest letter of the ceremonial. In 1617 he accompanied James I to Scotland, to aid him in his abortive attempt to bring the church of Scotland to a uniformity with that of England. In 1620 he was installed a prebend of Westminster, and the next year nominated to the see of St Davids, chiefly through the friendly offices of Buckingham and the lord-keeper Williams. About this time James took upon himself to interdict the introduction in the pulpit of the doctrines of predestination, election, the irresistibility

of free grace, or of any matter relative to the powers, prerogatives, and sovereignty of foreign princes. These measures being attributed to the councils of bishop Laud, the Calvinistic or puritanic party were much incensed at his conduct. He had now become closely connected with Buckingham, who, on his foolish journey to Madrid with prince Charles, left him as his agent at court. On the accession of Charles I, his influence, by the countenance of Buckingham, became very great; and it is recorded, that he was ordered to furnish the king with a list of all the divines in his kingdom, against whose names he marked O or P, to signify orthodox or puritan. In 1626 he was translated to the see of Bath and Wells, and in 1628 to that of London. On the sequestration of archbishop Abbot, in consequence of having accidentally shot a game-keeper, Laud was appointed one of the commissioners for exercising the archiepiscopal jurisdiction; and being a zealous supporter of the hated administration of Buckingham, he became in the highest degree unpopular. On the assassination of that presumptuous favourite by Felton, bishop Laud suspecting that some members of parliament might be privy to the deed, prevailed on the king to send to the judges for their opinion, "whether by law Felton might not be racked?" to which inhuman query the crown lawyers returned their opinion, "That, according to the laws of England, Felton could not be racked." Bishop Laud was also the most active member of the high commission court, the arbitrary and severe proceedings of which were so justly odious to the nation. The treatment of Alexander Leighton, (see article, LEIGHTON,) a Scottish divine, for the publication of a pamphlet, entitled "Zion's Plea against Prelacy," in particular, created great disgust. On the delivery of the merciless sentence against that enthusiast, bishop Laud pulled off his cap and gave God thanks for it; an action which is recorded in all the histories of the time, and which was very punctually remembered upon his own downfall. In 1630 he was elected chancellor of the university of Oxford, to which he was a great benefactor, and which he enriched with an invaluable collection of MSS. in a great number of languages, ancient, modern, and oriental. In 1631 he displayed great zeal and activity in repairing and beautifying St Paul's cathedral, the expense of which however, it is said, was supported by many oppressive and unjustifiable methods of raising money, by exorbitant fines in the courts of high commission and star-chamber. In 1633 he attended Charles into Scotland, who went there to be crowned; and on his return he was promoted to the see of Canterbury, become vacant by the death of archbishop Abbot. On the same day an agent from the court of Rome came to him privately and offered him a cardinal's hat, a fact which shows how strongly he was suspected of a predilection for the church of Rome. He however declined the proposal, feeling, as he expresses himself in his diary, "That some-

thing dwelt within him which would not suffer that, till Rome were other than it is." In 1634 he commenced a metropolitan visitation, in which the rigour of his proceedings, to produce an impossible conformity, was exceedingly unpopular and impolitic. In 1635 he was appointed one of the commissioners of the treasury, in which situation he remained a year, and then procured the treasurer's staff for bishop Juxon, (see article, JUXON,) a step much censured by Clarendon. The well-known prosecution of Prynne, Burton, and Bastwick, for libel, took place in 1632, the odium of which, and the severe sentences that followed, rested principally upon him; and, being like that of Leighton, cruel, illegal, and tyrannical, the feelings excited against him were proportionably embittered. He also proved an active prosecutor of his former friend, Williams, bishop of Lincoln, for a charge, very insufficiently supported, of tampering with the king's witnesses, for which the latter was fined 11,000*l.* and imprisoned in the Tower. Nor was this all; on that bishop's library being seized to pay the fine, two or three letters, written to him by Osbaldiston, master of Westminster school, simply for containing some obscure expression, which the archbishop interpreted against himself, were made the foundation of a new bill, by which the unfortunate bishop was condemned to a fine of 8000*l.* more, and on nonpayment, kept a close prisoner in the Tower. In his remarks on these proceedings, bishop Warburton strongly observes, that "This prosecution must needs give every one a bad idea of Laud's heart and temper." A statesman of the temperament of this prelate could scarcely be a friend to the liberty of the press; and in 1637 he procured a decree of the star-chamber, limiting the number of printers, and forbidding the printing of any book not licensed by the bishop of London or archbishop of Canterbury, for the time being, or by the chancellor and vice-chancellor of the universities. Catalogues of all books from abroad were also to be furnished to the same authorities; and so arbitrary was the conduct of Charles's ministers at this period, that numbers, both of clergy and laity, anxiously sought to quit the country. A proclamation to restrain them, unless certificated to be conformable to the order and discipline of the church, carried this policy as far as it would go, and exceeded even the tyranny of the revocation of the edict of Nantes. The measures advised and supported by archbishop Laud, in respect to Scotland, were equally arbitrary, the result of which belongs rather to the province of history than of biography. When at length, the bad consequences of these proceedings rendered a parliament necessary, after a lapse of twelve years, one was convened in April 1640. The indignant resentment of the nation having again found an organ, the Commons commenced by appointing committees of religion and grievances, on which it was once more suddenly dissolved, after sitting only three weeks. "All sorts of means," says lord Clarendon, "some ridiculous, and others scan-

dalous," were then put in force to raise supplies, by loan, benevolence, ship money, coat and conduct money, &c. Those who refused payment being fined and imprisoned by the star-chamber or council-table, where archbishop Laud acted so influentially, that a tempest of popular indignation was again excited, and a body of five hundred people even attacked his palace. On the strength of a single precedent, a clerical convocation was also authorised by the king, to sit, independant of the parliament. This body, besides granting subsidies, prepared a collection of constitutions and canons ecclesiastical, which being approved by the privy council, was made public, and gave such general disgust to the moderate of all parties, and produced so great a number of petitions to the privy council, that Charles was obliged to suspend them. On the calling of the celebrated long parliament, the new canons were very summarily disposed of, as subversive both of the rights of parliament, and of the liberties and property of the subject, and the long gathering storm immediately burst over the head of the archbishop. The very next day, articles, presented against him by the Scottish commissioners were read in the house of Lords, which, when referred to the Commons, a motion was put and carried, that he had been guilty of high treason. The celebrated Denzil Holles was immediately sent to the house of Lords, to impeach him in the name of all the Commons of England, and he was forthwith delivered into the custody of the black-rod. On the 26th of February 1641, fourteen articles of impeachment were brought up from the Commons, and he was committed to the Tower. Soon after his commitment, the house of Commons ordered him, jointly with those who had passed sentence against Prynne, Bastwick, and Burton, to make them satisfaction for the damages which they had sustained by their sentence and imprisonment. He was also fined 20,000*l.* for his proceedings in the imposition of the canons, and was otherwise treated with extreme and undignified severity, especially in the seizure of his goods and books at Lambeth, which were sold for less than a third of their value, a proceeding which must have not very pleasantly reminded him of the late treatment of bishop Williams. He remained in prison three years before he was brought to trial, which at length, on the production of ten additional articles, took place on the 12th March, 1643-4, and lasted twenty days. Many of the charges against him were insignificant and poorly supported; but it sufficiently appeared that he had unconstitutionally endeavoured to extend the prerogative, and was guilty of many arbitrary, illegal, and cruel actions. His own defence of himself was exceedingly acute and able; and his argument, that he could not be justly made responsible for the actions of the whole council, if not absolutely a legal, was a strong moral defence. The lords were still more staggered by his counsel showing, that if even guilty of these acts, they amounted not to high treason. A case was made for the judges, who very much

questioned if they were so, and the peers deferred giving judgment. On this delay the house of Commons passed a bill of attainder, on the 4th January, 1644-5, in a very thin house, in which the archbishop was declared guilty of high-treason, and condemned to suffer death;—as unjustifiable a step in a constitutional point of view, as any of which he was accused. To stop this attainder, he produced the king's pardon, under the great seal, but it was overruled by both houses, and all he could obtain by petitioning was, to have his sentence altered from hanging to beheading. He accordingly met his death with great firmness on the 10th January, 1644-5, on a scaffold erected on Tower-hill, being then in the seventy-second year of his age. The policy and proceedings of archbishop Laud, both as a prelate and statesman, are given up by writers of all parties, unless we except a few zealous of the passive obedient school, whose theoretical notions of uniformity were like his own. His warmest admirers, including his biographer, Heylin, admit his extreme rashness, and little is left which can be fairly pleaded for his severity and violence, except the probability that he acted on principles which he deemed correct. This virtue, unfortunately, too often renders a short-sighted and narrow-minded man additionally dangerous; more especially, if, like archbishop Laud, he is warm, vindictive, and passionate. What judgment indeed can be formed of the understanding of a politician, who formed the airy project of uniting three kingdoms in a uniformity of religion, whose history was that of England, Ireland, and Scotland? Much praise has been bestowed upon his piety, but his diary shows it to have been mingled with much puerility and superstition; his dreams being regularly recorded, as well as the hopes and fears which they excited. Speaking of his learning and morals, Hume observes, "that he was virtuous, if severity of manners alone, and abstinence from pleasure could deserve that name. He was learned, if polemical knowledge could entitle him to that praise." His munificence to the university of Oxford has already been recorded, and it must be added, that he founded therein an Arabic professorship, and it likewise owed to his influence a charter enlarging its privileges. He also founded a hospital in Reading, with a revenue of 200*l.* per annum. He was doubtless learned, and an encourager of scholastic learning, but he was occupied too much in active life to display much of it in his productions, which are "Seven Sermons, preached and printed on several Occasions;" "Short Annotations upon the Life and Death of King James;" "Answer to the Remonstrance made by the House of Commons;" his "Diary," edited by Wharton; "The second Volume of the Remains of Archbishop Laud, written by Himself;" "Officium Quotidianum, or a Manual of Private Devotion;" and a "Summary of Devotion." Several of his letters are to be found in the *Vossii Epistolæ*, in Usher's life by Dr Parr, and in Dr Twells's life of Po-

cock.—*Wharton's Troubles and Trials of Lord Prynne's and Heylin's Lives. Hume's Hist. of England.*

LAUDER (WILLIAM) a literary impostor who ruined his reputation by an attempt to prove Milton a plagiarist. He was a native of Scotland, and received his education at the university of Edinburgh, where he afterwards acted as a private tutor. Being disappointed in his expectations of obtaining a professorship, he removed to London, and commenced author. In 1747 he published in the *Gentleman's Magazine*, an "Essay on Milton's Use and Imitation of the Moderns," the object of which was to prove, that the great epic bard had made free with the works of certain Latin poets of modern date, in the composition of his *Paradise Lost*. Answers appeared in the magazine, but they failed in vindicating the originality of Milton; whose calumniator, flushed with success, proceeded to republish his Essay, with additions, in a separate form. At length Mr Douglas, afterwards bishop of Salisbury, produced ample proofs of the duplicity of Lauder, in a published letter to the earl of Bath, entitled "Milton vindicated from the Charge of Plagiarism, brought against him by Mr Lauder." In this pamphlet the learned critic showed that the passages which had been cited by Lauder, professedly from Massenius, Staphorstius, Taubmannus, and others, had been interpolated by Lauder himself, who had foisted into his quotations entire lines from Alexander Hog's Latin translation of the *Paradise Lost*. This detection proved so injurious to the reputation of Lauder, that his booksellers insisted on his confessing the fraud, unless he could, as he asserted, fairly exculpate himself by producing the individual editions of the works from which he had taken his garbled quotations. The latter alternative was impossible, and he was therefore forced to submit to the former. He consequently signed a letter acknowledging his fault, assigning the motives which prompted it, and expressing his contrition, which was laid before the public; and Lauder soon after quitted England for the West Indies, where he died in 1771.—*Nichols's Lit. Anecd. Month. Mag* vol. xxiii

LAUDOHN or LAUDON (GIDEON ERNEST) a military officer of distinction in the Austrian service. He was descended from a Scottish family, and was born at Totzen in Livonia, in 1716. After having received a good education, he entered into the Russian army, as a cadet, at the age of fifteen. He served against the Poles, and afterwards against the Turks; but not meeting with the promotion he expected, he went to Vienna, and was employed under baron Trenck, in the war between Austria and Prussia in 1744. A quarrel which he had with Trenck, induced him to give up his commission, and he resided subsequently for some years in retirement, on the frontiers of Croatia, where he had a military command. At the commencement of the seven years' war in 1756, he again entered on active service, during which he sig-

nalized himself on many occasions. He greatly contributed to the victory of Hochkirchen, for which he was made a baron of the empire, and received the grand cross of the order of Maria Theresa. In 1759 he beat the Prussians at Kunnersdorff, in 1760 he took the fortress of Glatz, and afterwards made himself master of Schweidnitz. On peace being concluded in 1763, baron Laudohn retired to his estates in Bohemia. In 1766 he was made a member of the aulic council of war; and on the occurrence of the succession war of Bavaria in 1778, he was raised to the rank of field-marshal. He was again employed against the Turks in 1783; and in the following year he took Belgrade. After the death of Joseph II he was confirmed in all his appointments by the succeeding emperor Leopold. He died at Neu Titschein, in June 1790, leaving the reputation of having been one of the most skilful generals of modern times.—*Aikin's G. Biog. Biog. Univ.*

LAUNOY (JOHN DE) a learned and voluminous French writer, was born at Valdesie in Normandy, in 1603. He studied with great diligence at the university of Paris, and being ordained a priest, was admitted a doctor of divinity at the college of Navarre. He particularly distinguished himself in defending the rights of the Gallican church against the pretensions of the court of Rome, and in exposing legendary fables and pretended canonizations. The mission of St Dionysius the Areopagite into France; the travels of St Lazarus and Mary Magdalen into Provence; and similar stories, were all duly exposed by him, and it was humourously observed, that he materially thinned the ranks of sainthood by his merciless investigation. "He suspected the whole martyrology," says a lively French writer, "and examined all the saints as they do the nobility of France." Voltaire also quotes a curate of St Eustathius as saying, "I always make a bow to M. Launoy, lest he should deprive me of my Eustathius." This learned man, who was peculiarly benevolent, disinterested, and kind-hearted, died in 1678, aged seventy-four. His works, the principal of which are, "De Varia Aristotelis fortuna," and "Histoire du College de Navarre," were published in 1731, in 10 vols. folio.—*Niceron. Sævi Onom.*

LAURENT (PETER JOSEPH) an able Flemish mechanic, born in 1713. His ingenuity began to display itself at a very early age, and he is said to have even constructed the model of an apparatus for raising water, when only in his ninth year. In 1736 his reputation was already matured, and several public works in the Pays Bas were committed to his management. Many of the canals, especially those by Valenciennes, Liège, &c. owe either their origin or improvement to his genius, but his great work was the junction of the rivers Scheldt and Somme, by means of a tunnel about nine miles in extent. The king of France conferred on him the cross of St Michael for his services. His death took place in 1775.—*Nouv. Dict. Hist.*

LAURI (FILIPPO) the son of Balthazar Lauri, a Flemish artist, born himself at Rome in 1623. He was instructed in the rudiments of painting by his father, who encouraged a passion for the art, which developed itself in his son at a very early age. He afterwards studied under Angelo Carosello, who was connected with his family by marriage, and soon made so considerable a progress as to excel his master, as well in taste and colouring, as in composition and the general execution of his pictures. Several grand altarpieces of his painting are much esteemed, but his smaller historical pieces, with beautiful and highly-finished landscapes introduced into the back ground, are considered his best performances, and fetch a great price. His death took place in 1694.—*D'Argenville Vies des Pein.*

LAURIERE (EUSEBIUS JACQUES de) a French advocate, eminent for his thorough acquaintance with the civil law of his country, born in 1659 at Paris. He was the author of a great variety of professional writings, the principal of which are, a treatise on "Royal Ordonnances;" a commentary on "Loisel's Instituts Coutumiers," 2 vols; "De l'Origine du Droit d'Amortissement;" "Texte des Coutumes de la Prevoté et Vicomté de Paris;" "Bibliothèque des Coutumes;" and "Le Glossaire du Droit François." He died in 1728.—*Nouv. Dict. Hist.*

LAVALLÉE (JOHN, marquis de) a French dramatist, and miscellaneous writer, born near Dieppe in 1747. He became a member of several literary societies, and ancient chief of a division of the grand chancery of the legion of honour. He assisted in conducting various journals and periodical works, and wrote many comic pieces, and three tragedies. Among his miscellaneous works may be noticed, "La Negre comme il y a peu des Blancs," 1789; and "Lettres d'un Mameluc," 1803, both which have been translated into English. He died a short time after the restoration of the royal family.—*Biog. Nouv. des Contemp.*

LAVATER (JOHN CASPAR) the celebrated physiognomist, was born at Zurich, Nov. 15, 1741. He exhibited something of a singular, but gentle and amiable character at school; and having gone through the usual studies, was admitted into orders in May 1761. In 1763 he accompanied Henry Fuseli, afterwards the painter, and two brothers of the name of Hess, into Prussia, and after staying there some time, returned, and became a much admired preacher at Zurich, and minister of the church of St Peter. Here he remained intent on the duties of his profession and his medical studies, until the storming of Zurich in 1797, on which occasion he was wounded in the head by a Swiss soldier, from the effects of which wound he never recovered, although he lived in the full possession of his faculties until January 2, 1801, when he died in his sixtieth year. Lavater was the author of several works, but his enthusiastic treatise on physiognomy has procured him the most attention. He published the first part of his studies on

this subject in 1776, in a quarto volume, entitled, "Fragments," in which work he took a wide range of inquiry, and carried his ideas of physiognomy beyond the observation of those parts of the countenance which exhibit the impressions of mental qualities and affections to the common eye, and maintained as a leading position "that the powers and faculties of the mind have representative signs in the solid parts of the countenance." Two more volumes appeared in succession, which exhibited a curious mixture of shrewd observation, refined feeling, pious sentiment, and mystic extravagance. The whole is illustrated with a variety of engravings, some of which possess great merit. His other works are, "Swiss Lays;" three collections of "Spiritual Hymns;" and two of "Odes," in blank verse. "Jesus Messial," a poetical history of Jesus Christ, 4 vols; "A Look into Eternity;" and "The Secret History of a Self-Observer," a very singular production. Lavater was so enthusiastic as to believe in the continuance of miracles, and the power of casting out spirits, which opinions he maintains with his characteristic sincerity and enthusiasm.—*Rees's Cyclop. Savii Onom.*

LAVICOMTERIE DE ST SAMPSON (LEWIS) a French political writer, and violent partizan of the Revolution. He published in 1791 a work entitled, "Crimes des Rois de France," which from the circumstances of the times occasioned an extraordinary sensation. In 1792 he produced another called "Republique sans Impots." He became a member of the Convention in September 1792, where he voted for the death of the king; and in September 1793 he entered into the Committee of Public Safety. In January 1794 he was ordered by the Jacobin club to draw up the "Act of Accusation against Kings." The fall of the terrorists put an end to his influence, and he was prosecuted for being concerned in the insurrection of May 1793; but he escaped punishment, and afterwards obtained some trifling office. He died in 1809. Besides the pieces already mentioned, he was the author of "Les Crimes des Empereurs;" and "Les Crimes des Papes."—*Dict. des H. M. du 18me S. Biog. Nouv. des Contemp.*

LAVINGHAM (RICHARD) prior of a Carmelite convent at Bristol towards the close of the fourteenth century. He produced numerous works relating to divinity and philosophy, which procured him much reputation among his contemporaries. His abridgment of Bede's Ecclesiastical History was particularly celebrated. Among his philosophical productions are several which indicate a taste for speculative inquiry, comprising the abstruse subjects of personal identity, and the infinite divisibility of matter. Trithemius says that he flourished in the university of Oxford, and that he wrote against the Lollards.—*Trithem. de Script. Eccles. Bale. Evans's Hist. of Bristol.*

LAVINGTON (GEORGE) bishop of Exeter, a prelate of great piety and learning. His birth has been stated to have taken place at the village of Heavitree in Devonshire; but another and more probable opinion is, that

the place of his nativity was Mildenhall, Wilts, a parish of which his grandfather was the incumbent. Both accounts agree in fixing the time of this event in the year 1683. From Winchester school he removed on a scholarship to New college, Oxford, where he graduated in civil law in 1713. Four years afterwards he obtained the living of Hayford Warren, Oxfordshire, and subsequently a stall at Worcester, which in 1732 he resigned for a residentiaryship at St Paul's. Soon after he was presented by the chapter of that cathedral to the livings of St Michael Bassishaw and St Mary Aldernanbury, but vacated all his benefices in 1747, on being advanced to the see of Exeter. Over this diocese he continued to preside till his death in 1762. Bishop Lavington was the author of an able and well-known treatise, entitled, "The Enthusiasm of the Methodists and Papists compared," in two volumes, besides a tract against the Moravians, and a variety of miscellaneous sermons.—*Polchele's Devonshire.*

LAVOISIER (ANTHONY LAWRENCE) a celebrated French chemist, whose name has been connected with the antiphlogistic theory of chemistry, to the reception of which, he contributed by his writings and discoveries. He was born at Paris, August 13, 1743, and was the son of opulent parents, who gave him a good education. He acquired an intimate knowledge of the physical sciences, and first distinguished himself by a prize memoir on the best method of lighting the streets, for which he received a gold medal from the academy of Sciences. Two years after, in 1768, he was chosen a member of the academy. About this time he published several tracts in periodical works, on the analysis of gypsum, the crystallization of salt, the congelation of water, on thunder, the aurora borealis, &c. Journeys which he made to different parts of France with M. Guettard, furnished him with materials for a lithological and mineralogical chart of the kingdom, intended as the basis of a work on the revolutions of the globe, and the formation of the strata of the earth, outlines of which appeared in the memoirs of the academy for 1772 and 1787. The discoveries of Black, Cavendish, Macbride, and Priestley, relative to the nature of elastic fluids or gases, attracted the particular notice of Lavoisier, who struck with the importance of their researches, entered on the same field of inquiry, with all his characteristic ardour in the cause of science; and possessing the advantage of a considerable fortune, he conducted his experiments on a large scale, and obtained highly interesting results. In 1774 appeared his "Opuscules Chymiques," comprising a general view of what was then known relative to gaseous bodies, with several new experiments, remarkable for their ingenuity and accuracy. Dr Priestley's discovery of what he called dephlogisticated air, afterwards generally termed oxygen gas, furnished Lavoisier with a fresh subject of research; and in 1778 he published an essay on this substance, and its influence in the production of acids, develop-

ing the grand principle of a new chemical theory. This was farther illustrated by his experiments of the composition of water by burning together the oxygen and hydrogen gases, and by its analysis affording the same principles; and the system was completed by his theories of combustion and oxidation, the decomposition of atmospheric air, his doctrine of caloric, and its influence in causing the solid, liquid, and gaseous states of bodies; and the whole theory was laid before the public in his "Elements of Chemistry," which appeared in 1789, and was speedily translated into English and other languages. M. Lavoisier rendered many services to the arts and sciences, both in a public and private capacity. He was appointed treasurer to the academy of Sciences, and was a member of the board of consultation. When the new system of weights and measures was brought forward, he contributed to its improvement by some novel experiments on the expansion of metals. He was consulted by the National Convention as to the best method of manufacturing assignats and securing them from being forged. Agriculture engaged much of his attention, and he devoted a part of his estate in the Vendosmois to the purpose of experimental farming. In 1791 the committee of the Constituent assembly applied to him for information preparatory to the adoption of an improved system of taxation, in consequence of which he drew up a work which was published under the title of "Richesses territoriales de la France," and which may be considered as one of the most valuable memoirs relating to the products and consumption of the country. About this time he was appointed one of the commissioners of the national treasury, an office which afforded him an opportunity of exercising that spirit of systematic arrangement which was conspicuous in all his undertakings. A great part of his fortune was expended in the advancement of science, and the improvement of chemistry in particular. His house became a vast laboratory; the most skilful artists were employed to construct the necessary instruments and apparatus for his philosophical researches. He had conversazioni at his house twice a week, frequented by the most ardent votaries of science and literature in France, as well as by illustrious foreigners; and at these meetings were discussed the theories, opinions, and discoveries of learned contemporaries; new experiments were proposed, and nothing was omitted that might tend to augment the stores of philosophical information. His services in the cause of science and of his country, valuable as they were, could not protect him against the destructive tyranny which desolated France, under the government of Robespierre and his co-adjutors. Lavoisier had expected to be stripped of his wealth, and he consoled himself with the idea that he could support himself by the practice of pharmacy; but a more rigorous fate than he had anticipated awaited him. In common with other farmers-general, he was condemned to death

by the revolutionary tribunal of Paris, on the charge of being a conspirator, and of having adulterated the tobacco with water and with ingredients obnoxious to the health of the citizens; and on this ridiculously frivolous pretext was this illustrious individual beheaded by the guillotine, May 8, 1794. It is said that when he found his fate was inevitable, he petitioned for a few day's respite, in order that he might make some peculiarly interesting and important experiments which he had in view; but this favour was denied him. M. Lavoisier married in 1771 the daughter of a farmer-general, a lady of agreeable manners and considerable talents; who not only participated in her husband's philosophical researches, but also cultivated the arts with great success, and engraved with her own hand the plates for one of his publications. She subsequently became the wife of count Rumford.—*Aikin's G. Biog. Dict. des H. M. du 18me. S. Hutchinson's Biog. Med. Biog. Univ.*

LAW (EDMUND) a learned English prelate of the last century. He was born in 1703 at Cartmel in Lancashire, where his father was a clergyman of the established church. He studied at St John's college, Cambridge, where he was admitted B.A. in 1723; and he was afterwards elected a fellow of Christ's college, in the same university. He took the degree of M.A. in 1727, and in 1732 he made himself known by an English translation of archbishop King's "Essay upon the Origin of Evil," with notes and observations. During the controversy occasioned by Dr Samuel Clarke's "Demonstration of the Being and Attributes of God," Law published a very ingenious "Enquiry into the Ideas of Space, Time, &c." in which he combats the opinions of Dr Clarke. While at college he also assisted in editing Stephens's "Thesaurus Linguae Latinae," 1735, 4 vols. folio. In 1737 he was presented to the living of Graystock in Cumberland. In 1743 he obtained the archdeaconry of Carlisle, with the annexed rectory of Salkeld, where he took up his residence in 1746. There he wrote his "Considerations on the Theory of Religion," with "Reflections on the Life and Character of Christ," which may be considered as the most valuable productions of his pen, and have been frequently reprinted. In 1749 he proceeded D.D., and in his inaugural thesis he defended the doctrine of the natural mortality of the soul. In 1754 he was elected master of Peterhouse college, Cambridge, when he resigned his archdeaconry, and about 1760 he was appointed librarian to the university, and in 1764 casuistical professor. He held several other benefices previously to his elevation to the bishopric of Carlisle, which took place in 1769, through the influence of the duke of Grafton, chancellor of the university. In 1774 he published a tract, entitled "Considerations on the propriety of requiring Subscription to Articles of Faith;" and he afterwards edited the works of Locke, with a preface and life of the author, 4 vols. 4to. He died at the

episcopal seat of Rose Castle in Cumberland, August 14, 1787. Besides the works mentioned already, he was the author of sermons, controversial tracts relating to metaphysics and divinity, and "Observations occasioned by the Contest about Literary Property," 1776, 8vo.—*Aikin's G. Biog.*

LAW (EDWARD) lord Ellenborough, fourth son of the subject of the preceding article. He was born at Great Salkeld in Cumberland, in 1749, and was educated at the university of Cambridge. He obtained a prize medal, given by the chancellor in 1771; and after taking his first degree, became a student of the law at Lincoln's-inn. Having been called to the bar, he travelled the northern circuit; but he established his reputation as a barrister at the trial of Mr Hastings, for whom he was leading counsel. He was raised to the office of attorney-general in 1801; and the following year he succeeded to the station of chief-justice, on the death of lord Kenyon, when he was made a baron. In 1806 he became, not without much constitutional objection, a member of the short-lived cabinet of Mr Fox and lord Grenville. He held his post of chief-justice till 1818, when he resigned it, and died shortly after, December 13th that year, leaving a high character for legal abilities somewhat blemished by warmth of temper.—*Ann. Biog.*

LAW (JOHN) a celebrated financial projector, was the son of a goldsmith of Edinburgh; in which city he was born in 1681. He was bred to no particular profession, but became versed in accounts, and was employed in those of the revenue, which were in great disorder before the union of the two kingdoms. For the purpose of remedying the deficiency of a circulating medium, he projected the establishment of a bank, with paper issues, to the amount of the value of all the lands in the kingdom. This bold scheme was wisely rejected; but it seems to have formed the base of all his after projects. On the death of his father, he succeeded to a small estate, and commenced gamester and fine gentleman. In consequence of a duel, in which he killed his antagonist, he fled from his country, and as it is said, with another person's wife. He visited Venice and Genoa, from both which cities he was banished, as a designing adventurer. At Turin he proposed his financial scheme to the duke of Savoy, who was too wise to attend to it, but at length he secured the patronage of the regent duke of Orleans, and established his bank in 1716 by royal authority. It was at first composed of 1200 shares of 3000 livres each, which soon bore a premium. This bank became the office for all public receipts, and there was annexed to it a Mississippi company, which had grants of land in Louisiana, and was expected to realise immense sums by planting and commerce. In 1718 it was declared a royal bank, and such was the extent of its business and funds that the shares rose to twenty times their original value. All France was seized with a gaudy, and happy were the

acquire this imaginary wealth by entirely stripping themselves of all their real property. In 1720 Law, who underwent the force of conversion to the Romish religion, was made comptroller-general of the finances; and regarded as the Plutus of France, saw clients of all ranks at his levee, which rendered him proud and insolent in proportion. At length the baseless fabric of this prosperity began to give way, and the shares sunk in value as rapidly as they had risen. Law therefore, was obliged to resign his post, after he had held it only five months, and to retire first to a seat in the country, and then, for personal safety, to quit the kingdom. He carried with him a small portion only of the vast fortune he at one time possessed, and lived afterwards in great obscurity. After visiting England, Holland, Germany, and other countries, he finally settled at Venice, where he died in 1729, still occupied in vast schemes, and fully convinced of the solidity of his system, the failure of which, he attributed entirely to enmity and panic. Various opinions have been entertained of the merit of his project; and by some it has been thought to have possessed feasibility, had it been carried more moderately into practice. His small family estate of Lauriston is still in possession of his descendants, one of whom, general Lauriston, is known as the bearer of the ratification of the preliminaries of the short-lived peace between Great Britain and France in 1802.—*Life of Law. Duclos Mem. du Regence. Nouv. Dict. Hist.*

LAW (WILLIAM) a learned divine of the church of England, was born at Kingcliffe in Northamptonshire, in 1686. He received his academical education at Emanuel college, Cambridge, where he took the degree of MA. in 1712, having previously entered into orders and been elected a fellow. On the accession of George I, refusing to take the oaths, he vacated his fellowship, and left the university. It appears that he for some time officiated as a curate in London, but afterwards as tutor to Edward Gibbon, esq. of Putney, father to the historian. He subsequently became the spiritual director to Mrs Hester Gibbon, aunt to the same eminent individual, and to Mrs Elizabeth Hutchinson, which ladies formed a joint establishment, of which he became a member, at his native village of Kingcliffe, and where, after a secluded residence of twenty years, in the society of the same pious and charitable ladies, he died on the 9th April 1761. The writings of Mr Law, although in many respects excellent, partake of a gloominess and severity, which is seldom to be found in this age, not untinged with a portion of mysticism and enthusiasm, that a close study of the writings of Jacob Behmen (for which purpose he learned the German language,) did not fail to increase. Some of his later productions are so injured by this tendency, as to resemble effusions of a disordered intellect; but these sallies of frenzy, as Mr Gibbon observed, must not extinguish the praise which is due to Mr Law as a wit and a

scholar, his pretensions in which characters were of a very high order. He distinguished himself in the Bangorian controversy against Dr Hoadley, with great skill and acumen, in support of high church principles; and on the appearance of "The Fable of the Bees," drew his pen against that dangerous production with equal ability and spirit. "The Serious Call to a Devout and Holy Life," is deemed, both by Dr Johnson and Mr Gibbon, to be one of the most powerful works of devotion in the English language, as is also his "Practical Treatise on Christianity," which production abounds with satire, spirit, and a striking knowledge of life. Besides these works, he wrote, "The Unlawfulness of Stage Entertainments;" "The Case of Reason;" "Answer to Dr Trapp, on being righteous over-much;" "On Regeneration;" "Answer to Hoadley on the Sacrament;" "The Spirit of Prayer;" "The Spirit of Love." He also published some translations of his favourite Behmen.—*Life by Tighe. Gibbon's Memoirs.*

LAWES. The name of two brothers, natives of Salisbury, both musicians, in the service of Charles I, and both pupils of Coperario. Of these WILLIAM, the elder, was educated at the expense of the earl of Hereford, and was brought up in the choir of Chichester cathedral till 1602, when he obtained a situation in the chapel royal. On the breaking out of the Rebellion, he took up arms in the royal cause, and was killed at the siege of Chester in 1645. The king is said to have been much affected by his death, and even to have worn mourning for him.—His brother, HENRY, born in 1600, was made a gentleman of the king's chapel in his twenty-sixth year, and afterwards obtained the appointments of clerk of the cheque and private musician. He is said to have been the first who introduced the Italian style of music into England, on the authority of a composition entitled, "The Complaint of Ariadne," published among his "Ayres and Dialogues for one, two, and three Voices," London, 1653. He also set tunes to Sandys's "Paraphrase on the Psalms," 1638 and 1676, for a single voice with a bass; and composed the original music to Milton's "Comus," in the first representation of which Masque, at Ludlow castle in 1634, Lawes was himself the representative of one of the attendant spirits. This composition has never been printed. Nearly all the songs of Waller, to be found in the "Treasury of Music," 1669, were also set by him, and the poet has acknowledged the obligation in some lines addressed to him. He does not appear to have taken any active part in the troubles, but to have continued practising his profession of a singing master, till his death in 1662.—*Hawkins's and Burney's Histories of Music.*

LAWRENCE, LL.D. (FRENCH) a learned civilian, born at Bristol, in the grammar-school of which he received the early part of his education. He was thence removed to Winchester, and ultimately to Corpus Christi college, Oxford, where he obtained a fellowship.

In 1781 he graduated M.A. and in 1787 LL.D. and soon rose to eminence as a civilian. In 1797 he was appointed regius professor of civil law in the university of Oxford, and through the friendship of Mr Burke, and patronage of earl Fitzwilliam, he became a member of the house of Commons. He was also one of the executors of Mr Burke, and joint-editor of his works. He had a concern in the probationary odes for the laureateship, and wrote a volume of "Remarks on the Apocalypse." He was also concerned in the Annual Register. He died of a decline in 1807.—*Gent. Mag.*

LAWRENCE (STRINGER) a military officer, distinguished for his services in the East Indies. He was employed during a period of twenty years as commander of the forces of the East India company on the coast of Coromandel, and he was one of those who contributed to the extension of the British empire in that part of the world. He died at an advanced age in 1775. His statue has been placed in an apartment at the India house; and a fine monument is erected for him in Westminster abbey.—*Orig.*

LAWRENCE (THOMAS) an eminent physician, who was a native of Westminster, and studied at Trinity college, Oxford, where he took the degree of MD. in 1740, and was appointed lecturer on anatomy in the university. He subsequently removed to the metropolis, and in 1744 became a fellow of the royal college of Physicians; of which he was chosen president in 1767, and held that office during the ensuing seven years. At length he retired to Canterbury, where he died June 6, 1783, aged seventy-two. He wrote a life of Harvey, for an edition of his works, published by the college; which, as well as his dissertation, "De Hydrope," and other productions, (all in Latin), are deservedly admired for the elegance of style which they exhibit; but like those of his master, Dr Frank Nichols, they are too much tinged with the obsolete medical philosophy of Stahl. Dr Lawrence was an intimate friend of the celebrated Dr Johnson, who entertained a high respect for his talents and character.—*Gent. Mag. Lond. Med. Journ.*

LAYARD (CHARLES PETER) an eminent English divine, who was a native of Greenwich, where his father was a physician. He was educated at Westminster school and St John's college, Cambridge, where he gained poetical prizes in 1773 and 1776. Having taken orders in the church of England, he became minister of Oxendon chapel in London, and keeper of archbishop Tenison's library, in the parish of St Martin in the Fields. In 1800 he obtained the deanery of Bristol, which he held till his death in 1803. He was the author of a poem on duelling, and another, entitled "Charity, a poetical Essay;" and a volume of sermons. He was a fellow of the Royal and Antiquarian Societies.—DANIEL PETER LAYARD, MD. FRS. of London and Göttingen, father of the preceding, published in 1763, "An Essay on the Bite of a Mad Dog," 8vo, which went through three edi-

tions; "Directions to prevent the Contagion of the Jail Distemper," 1772, 8vo; *ides* other tracts, and papers in the Philosophical Transactions.—*Biog. Nouv. des Contemdl. Ed.*

LAZIUS, or WOLFGANG a German writer on history and antiquities in the sixteenth century. He was a native of Vienna, where his father was a physician. He adopted the same profession, and obtained the medical chair in the university of the Austrian metropolis. The emperor Ferdinand I appointed him an aulic counsellor, and conferred on him the order of knighthood. He died in 1565. The principal works of Lazius are, "Commentaries on the Grecian and Roman Histories;" a treatise "De Gentium Migrationibus;" "Chorographia Pannoniæ;" "Alvearium Antiquitatis;" and "Commentaria in Genealogium Austriacum." A collection of his letters was published at Frankfort, 2 vols. folio, 1698.—*Teissier. Moreri.*

LEAKE (STEPHEN MARTIN) a writer on heraldry and numismatics, who was the nephew of sir John Leake, a distinguished naval officer. He was appointed one of the esquires of the deputy earl-marshal, at the revival of the order of the Bath. In 1727 he was made Lancaster herald, and successively Norroy, Clarencieux, and at length in 1754 garter king-at-arms. In 1750 he printed a life of his uncle, admiral sir John Leake, 8vo, but the work was never published, and the impression having been restricted to fifty copies, the book is rarely to be procured. His other productions are, "Reasons for granting Commissions to the provincial Kings-at-Arms to visit their Provinces;" "A Historical Account of English Money;" and "The Statutes of the Order of the Garter." He died in 1773.—*Noble's Hist. of the Coll. of Arms.*

LEAKE (JOHN) a physician and obstetrical practitioner of eminence in London, in the latter part of the last century. He was born in the parish of Ainstable, in Cumberland, of which his father was the curate. After being educated at a grammar school at Bishop's Auckland, he went to London, with a view to a commission in the army. Being disappointed in his expectations, he turned his attention to medicine, became a student at the hospitals, and having visited Portugal, Italy, and other parts of the south of Europe, he returned home, and settled as a surgeon and accoucheur in the metropolis. He now published "A Dissertation on the Properties and Efficacy of the Lisbon Diet Drink," which he administered with success in scrofula, scurvy, &c. Becoming a licentiate of the college of physicians, he removed to the neighbourhood of the Strand, and commenced a series of lectures on midwifery, and published his introductory discourse, which passed through several editions. In 1765 he purchased a piece of ground for the Westminster lying-in hospital, which he presented to the governors of that institution. He died August 8, 1792. He wrote observations on child-bed fever; on the diseases of women; and on complaints of the viscera. His works are characterized

by good sense and practical utility; but they display no novelties of theory, nor any extraordinary depth of research.—*Hutchinson's Biog. Med.*

LEAPOR (MARY) the name of an ingenious poetess in humble life, the daughter of a gardener in the employ of judge Blencowe, at Marston, Northants, where she was born in 1722. Her diffidence prevented her talent from being known, till, upon her death-bed, she is said to have presented her poems to her father. These, consisting of "The Unhappy Father," a tragedy; "The Temple of Love;" and other miscellaneous pieces, were afterwards printed by subscription in two octavo volumes. The measles proved fatal to her at Brackley in the November of 1746, a few days after the decease of her mother.—*Chalmers's Biog. Dict.*

LE BEUF (JEAN) the name of a French antiquary and historian, who flourished in the last century. He was a native of Auxerre, born 1687, and became a member of the academy of Inscriptions. He published histories of the city of Paris, and of his native place, the first in fifteen volumes 12mo, the second in two volumes 4to. He was also the author of a "Dissertation on the Civil and Ecclesiastical History of Paris," 3 vols. 12mo; "Traité historique et pratique sur le Chant ecclésiastique;" and "Recueil de divers Ecrits servant à l'Eclaircissement de l'Histoire de France," 2 vols. 12mo. His death took place in 1760.—*Nouv. Dict. Hist.*

LE BLANC (JOHN BERNARD) an able man of letters, was born at Dijon in 1707, of poor parents. He went early to Paris, where his abilities procured him notice, and subsequently visited London, where he met with the same attention. He died in 1781. The work by which he is best known, consists of a collection of "Letters on the English Nation," 1753, 3 vols. 12mo, the merit of which is by no means very conspicuous. He also wrote a tragedy, called, "Abensaide," which was well received.—*Nouv. Dict. Hist.*

LEBLOND (abbé GASPARD MICHEL, surnamed) a learned antiquary, born at Caen in 1738. After completing his studies, he adopted the ecclesiastical profession, and devoted his leisure to the study of antiquities and numismatics. He became librarian to the college of Mazarin, and in 1772 a member of the academy of inscriptions. The Revolution having subverted the old literary institutions, Leblond was nominated a member of the commission of arts, and specially charged with the collection of what was valuable from the archives and libraries of religious houses. By his exertions, the Mazarin library was enriched with more than fifty thousand volumes; and in 1791 he was appointed librarian. He was afterwards made a member of the national institute. On the establishment of the imperial government, some unknown motive induced him to quit Paris, and he retired to Laigle, where he died June 17, 1809. In the delirium of a fever, a few days before his decease, he threw into the

fire all his MSS. many of which are supposed to have been very valuable. Among his published works are, "Observations sur quelques medailles de M. Pellerin," 1774, 4to; "Description des principales pierres gravés du cab. de M. le Duc d'Orleans," 1780-84, 2 vols. folio; and "Observations présentées au comité des Monnaies," 1790, 8vo. He also assisted in other publications.—*Biog. Univ.*

LEBRUN (PONCE DENIS ECOUCARD) a celebrated poet, who during his life received the appellation of the French Pindar. He was born in 1729, and while studying at college he manifested a talent for poetry. He became secretary to the prince of Conti, (the grand-prior,) and preserved that place till the death of his protector. At the age of twenty-six he had taken his place in the first rank of lyric poets; and an ode which he addressed to Voltaire, was the means of interesting him in the support of the niece of Corneille, whom Voltaire adopted and portioned out of the profits of his edition of the works of the great dramatist. At the Revolution he became the poet of liberty, and celebrated the birth of freedom in odes and epigrams; but as the prospect darkened, he changed his note, and in 1793 he deplored, in harmonious verses, the fate of his country, oppressed by tyrants and anarchists. On the restoration of order, when the academical establishments were reorganized, Lebrun became a member of the Institute. He received from Buonaparte, when consul, a pension of six thousand francs, which, with other sources of revenue which he had acquired, placed him in comparative affluence. He died September 2, 1807.—*Biog. Univ. Biog. Nouv. des Contemp.*

LECCHI (GIOVANNI ANTONIO) an Italian jesuit, born in 1702, at Milan, where he was afterwards professor of mathematics, having previously taught that science at Pavia. In 1759 he went to Vienna, where he experienced a very favourable reception from the emperor, who employed him in the mensuration of the bed of the Rhine, a work in which he displayed great talent, as appears from the account he afterwards published of the operations used in the process. He was also the author of a variety of treatises on conic sections, navigable canals, geometry, trigonometry, hydrostatics, &c. An illustration of sir Isaac Newton's Universal Arithmetic; "The Theory of Light;" and a memoir, entitled "Relazione della visita alle Terre dannegiate delle acque di Bologna, Ferrara e Ravenna," in 4to. His death took place in 1776.—*Nouv. Dict. Hist.*

LE CLERC (NICHOLAS GABRIEL) a physician and man of letters, who was born in Franche Comté in 1726. Having adopted the medical profession, he was in 1757 appointed first physician to the forces of the emperor of Germany. In 1759 he was invited to Russia by the empress Elizabeth; and returning to France in 1762, he became physician to the duke of Orleans. He went again to Russia in 1769, with the title of first physician to the grand duke, and director of the schools of the

imperial corps of cadets; and he was also made director of a hospital, founded by the grand duke at Moscow. He remained in Russia till 1777; and during his residence there he collected charts, medals, documents, and other materials of various kinds for a work which he subsequently published, under the title of "Histoire physique, morale, civile, et politique de la Russie," 6 vols. 4to. He had been employed by the French government in this undertaking, and was disappointed at his remuneration, though he obtained the cordon of the order of St Michael, a patent of nobility, and a pension of six thousand livres. At this time he assumed the name of Le Clerc. A commission being appointed to inspect the royal and military hospitals, he was placed at the head of it. The Revolution deprived him of his pension, and he died in retirement in 1798. His History of Russia, in preparing which for the press he was assisted by his son, gave great offence to the empress Catherine II, who ordered one of her officers, general Bottin, to write animadversions on it. Le Clerc published many other works, medical and historical, among which was an "Atlas du Commerce," Paris, 1786, 4to.—*Biog. Univ.*

LECOMTE (FELIX) an eminent French sculptor, who was a native of Paris, and became the pupil of Falconet and Vassé. He obtained a prize for his bas-relief of the massacre of the Innocents, and was then sent to Rome as a pensionary of the French school of arts. On his return home, he presented to the academy of painting and sculpture, a model for a statue of Phorbas preserving Œdipus, which he afterwards executed in marble, and which procured him admission into the academy in 1771. In 1789 and 1791 he made, by order of the government, statues of Rollin and Fenelon, the latter of which, ornamenting the hall of the National Institute, is considered as his chef-d'œuvre. During the Revolution he lived in retirement; but in 1810 he was appointed by the emperor a member of the fourth class of the Institute; and on the reform of that body, under the regal government, Lecomte was nominated professor in the academy of sculpture. He died in 1817, at the age of eighty.—*Biog. Nouv. des Contemp.*

LEDERLIN (JOHN HENRY) a learned critic of the last century. He was a native of Strasburgh, at the university of which place he became professor of the Greek and Hebrew languages. He assisted Hemsterhuys in his edition of the Onomasticon of Julius Pollux; and published editions of Homer, Virgil, Ælian's various History, &c. Lederlin died in 1737, aged sixty-four.—*Hartes de Vit. Philolog. Zopf Hist. Univ.*

LEDUAN (HENRY FRANCIS) a French surgeon, particularly eminent as a lithotomist. He was the son of Henry Leduan, a skilful surgical operator, who had improved his knowledge of his art, by service as a surgeon in the army. The son became also distinguished for his manual dexterity as an operator. He was surgeon-major and anatomical demonstrator at

the hospital of La Charité at Paris, member of the Royal Academy of Surgery, and consulting surgeon of the royal army. He died at Paris, October 17th, 1770, aged eighty-five. His works, which were very popular, relate to the extraction of the stone from the bladder, to surgical operations in general, to anatomy, &c.—*Biog. Univ.*

LEDWICH, LL.D. F.S.A. &c. (EDWARD) a learned antiquary and topographer, a native of Ireland, born in 1739, and educated at Trinity college, Dublin, of which society he became a fellow, and taking orders, obtained the vicarage of Aghaboe in Queen's county. The study of antiquities, and more especially of those of his native country, was his favourite pursuit, in which he maintained the Scandinavian origin of the Irish, in opposition to their national prejudices in favour of Partholanus and Milesius, and called in question the legendary history of St Patrick, which he pronounced a comparatively modern fiction. This latter assertion drew upon him some severe attacks from several antiquaries of the Roman Catholic church. Dr Ledwich officiated for many years as secretary to the committee of antiquaries of the Royal Irish Academy, and was also a member of a small society, the object of which was the investigation of Irish antiquities, and which had the right hon. W. B. Conyngham, teller of the Irish exchequer, for its president. His death took place in York-street, Dublin, in his eighty-fourth year, towards the close of the autumn of 1823. His works are, a luminous essay "On the Government of Ireland, from the earliest Times, to the latest Revolution in it," inserted in Gough's edition of Camden's Britannia, 1789. A valuable volume on the "Antiquities of Ireland," published in numbers the next year, which he followed up by two quarto volumes, under the same title, in 1794 and 1796, in continuation of his friend captain Grose's work, illustrative of the antiquities of England, Scotland, and Wales. He also wrote a statistical account of the parish of Aghaboe, 1796, and contributed various papers to the *Archæologia*.—*Ann. Biog.*

LEDYARD (JOHN) the name of an adventurous and persevering traveller of the last century, born at Groton in the United States. He came to England, having previously acquired the rudiments of a useful education at Dartmouth, in the province of New Hampshire, and embarked as a private marine with Cook, in the second expedition of that enterprising navigator. On the return of the discovery ships to Europe, Ledyard set out with the view of reaching the polar regions alone and on foot, and arduous as the undertaking may be deemed, succeeded in traversing great part of Russia, and penetrated into Siberia. The jealousy of the government, however, interfered with his project; he was seized at Yakutz, and conducted to the frontiers of Poland, with a threat of being consigned to the hands of the executioner, should he again be found in the Russian territories. On reaching England, he soon after entered into an engagement with

the African Society, and set out, under their auspices, on a mission which has since proved so fatal to many others, having for its object the discovery of the source of the river Niger. His attempt, however, to penetrate into the interior of Africa failed almost in the outset, as he got no farther than Grand Cairo, where he was carried off by a short but severe illness, in the summer of 1788.—*Proceedings of the African Society.*

LEE (CHARLES) a military officer, distinguished during the American war. He was a native of Cheshire, and entering into the army, he served in America, and afterwards in Portugal. Having offended the English ministry by his writings, and prevented his preferment at home, he engaged in the service of the insurgent English colonies in North America, and was the first who suggested the idea of a declaration of independence. He aspired to the post of commander-in-chief, and finding himself superseded by Washington, he conceived a jealousy of that officer, which he manifested by his conduct at the battle of Monmouth, and on other occasions. He was tried by a court-martial, and suspended for a year from all his functions in 1778. He then retired from the service, and died at Philadelphia, October 2, 1782, having directed in his will that his body should not be interred in any church, church-yard, or near any place of worship. He wrote "Essays, political and military," which, with his letters, were published at the end of *Memoirs of his Life*, by Edward Langworthy, London, 1792, 8vo.—*Biog. Univ.*

LEE (NATHANIEL) a dramatic poet, was the son of Dr Lee, rector of Hatfield, Hertfordshire. He was educated at Westminster school under Dr Busby, whence he was removed to Trinity college, Cambridge, in 1668, and took the degree of B.A. the same year; but not succeeding to a fellowship, he quitted the university, and came to London, misled it is said by the promises of Villiers, duke of Buckingham. In the metropolis, neglected by his patron, he turned his attention to the drama, and in 1675 produced his tragedy of "Nero," and from that time to 1681, produced a tragedy yearly. He also tried his abilities as an actor, but although a most pathetic and impressive reader of his own compositions, he failed in the other requisites of a performer, and gave up the attempt. The warmth of his feelings, added, probably, to an hereditary taint of insanity, fostered by dissipated and irregular habits, produced in 1684 a crisis of that malady, which rendered his confinement necessary, and he was taken into Bethlehem hospital. He remained in that receptacle of misery until 1688, when he was discharged, sufficiently cured to write two more tragedies, the "Princess of Cleves," and the "Massacre of Paris," which appeared in 1689 and 1690. He was still, however, liable to fits of frenzy, and was so reduced in circumstances, as to depend for subsistence on a weekly allowance of ten shillings from the theatre. He died in 168

or 1692, in consequence of some injury received in a drunken night frolic, and was buried at St Clement Danes. He is the author of eleven plays, all of which were acted with applause, and dedicated to the leading noble patrons of the day. Addison regards the genius of Lee as peculiarly adapted for tragedy, but his natural fire and pathos was buried in a torrent of words, and clouded by a tendency to turgid and bombastic eloquence. He nevertheless possessed a high vein of poetry, and is thought to have represented the passion of love with peculiar force and tenderness. Two of his pieces, "Theodosius, or the Force of Love," and the "Rival Queens," have kept possession of the stage. Besides his own eleven tragedies, he wrote *Œdipus and the Duke of Guise*, in conjunction with Dryden—*Biog. Dram. Spence's Anec.*

LEE (SAMUEL) a nonconformist divine and learned antiquary of the seventeenth century. He was the only son of a London tradesman, but is supposed by Wood to have been a descendant of the ancient Cheshire family of Lee or Legh. Having entered as a commoner of Magdalen hall, Oxford, in 1647, in expectation of a fellowship, from the favour of the parliamentary visitors, then about to sit at Oxford, he was created MA. in April 1648, and though disappointed as to his immediate object, he was appointed fellow of Wadham college, and proctor of the university in 1651. Under the protectorate he became successively minister of St Botolph's, Bishopsgate-street, and lecturer of Great St Helen's, London; and after the Restoration he retired to an estate of his own near Bicester, where, says Wood, he sometimes kept conventicles. He removed to Newington-green in 1678; and thence to New England, 1686. After remaining there about five years, he was invited to return to his native country; but in his passage thither, with his family and property, he was captured by a French privateer, in November 1691, and conveyed to St Maloes, where he died shortly after. He was the author of numerous works on divinity, and some historical ones, including a treatise on the antiquity of Oxford university; besides which he wrote the "Chronicon Cestrense," published in King's Vale Royal in 1656.—*Athen. Oxon. Ormerod's Hist. of Cheshire*, vol. iii.

LEE (SOPHIA). This able and ingenious lady was born in the metropolis in the year 1750. Her father, originally bred to the law, was an actor of merit, whose conduct gained him admission into the best circles, and who gave his children an excellent education. At an early age the subject of this article exercised her pen in composition, and in 1780 produced the diverting comedy, entitled "The Chapter of Accidents," which met with considerable success. With the profits of this play, on the death of her father, which took place the following year, she was enabled to open a school at Bath, which, aided by her sisters, she conducted for several years with great reputation. Her next performance, published in 1784, was the well-known novel, entitled "The Recess,

or a Tale of other Times," the story of which is founded on the fate of two supposed daughters of Mary queen of Scots, by a secret marriage with the duke of Norfolk. It is ingeniously and pathetically wrought up, but some severe casuists have condemned the unfair liberty which it takes with historical characters. This romance, which became very popular, was followed in 1787 by a ballad, called "A Hermit's Tale, found in his Cell." In 1796 Miss Lee produced a tragedy, called "Almeyda, Queen of Grenada;" but although aided by the great talents of Mrs Siddons, it did not realize the expectations which her power of moving the passions in "The Recess" had created. In the succeeding year, Miss Harriet Lee published the first five volumes of her *Canterbury Tales*, three stories in which were from the pen of her sister, and one of these three, called *Krutznor*, was selected for the subject of a tragedy by lord Byron. In 1803, having secured a handsome competence, she retired from teaching, soon after which appeared her "Life of a Lover," a novel, written in early life. In 1807, a comedy by Miss Lee, termed "The Assignment," was unsuccessfully produced at Drury-lane, which drama terminated her literary career. She died at Clifton near Bristol, March 13, 1824.—*Ann. Biog.*

LEE LEWES (CHARLES) an eminent comic actor, who was the son of a hosier in Bond-street, and was employed as a letter-carrier by the post-office. He at length joined a company of strolling players, and after the usual vicissitudes of an itinerant life, he obtained an engagement at Covent-garden. He first appeared as a harlequin, but afterwards attempted higher characters; and on the death of Woodward in 1776, he became one of the principal comedians of the company. In 1783 he left Covent-garden for Drury-lane, where, however, his stay was of short duration. He then travelled, and delivered G. A. Stevens's lecture on heads, after which he went to the East Indies, and on his return visited Scotland, and in 1792 and 1793 was at Dublin, where he was a favourite performer. The latter part of his life was spent in embarrassed circumstances, and it was terminated on the 24th of June, 1803, on the morning of which day he was found dead in his bed. He was buried at Pentonville, near London. In 1805 was published an amusing miscellany, entitled "Memoirs of C. Lee Lewes," 4 vols. 12mo, written by himself.—*Thesp. Dict. Biog. Univ.*

LEECHMAN (WILLIAM) a learned Scotch divine, peculiarly celebrated for his lectures on theology. He was born at Dolphinston in Lanarkshire, in 1706, and received his academical education at the university of Edinburgh. He was licensed as a preacher in 1731, and was ordained minister of Beith in 1736. In 1746 he was elected moderator of the synod of Glasgow, which he opened with a sermon, "On the temper, character, and duty of a Minister of the Gospel;" and in 1743 a much larger one, "On the nature, reasonableness,

and advantages of prayer," both which became very popular. He was soon after elected professor of theology at the university of Glasgow, but not without considerable opposition, owing to a suspicion of his orthodoxy, founded on his sermon on Prayer, in which he was thought to lay but little stress on the Atonement. A prosecution for heresy was the consequence, which terminated entirely in his favour, and he obtained the degree of DD, and held his professorship for seventeen years, during which time he signalized himself by his able exertions against the reasonings of Hume, Bolingbroke, and Voltaire. In 1761 he was raised to the office of principal of the university of Glasgow, by a presentation from the king. He died in 1785, having committed nothing to the press himself, except nine sermons, which were republished after his death, in two octavo volumes, with an account of the author, by Dr Wodrow.—*Life as above.*

LEEM or LEEMS (CANUTE) a native of Norway, born in 1697. He studied at the university of Copenhagen, and returning home in 1715, became a schoolmaster, and afterwards a missionary. He was then pastor in the diocese of Christiansand; and in 1752 was placed at the head of an institution of the Danish government at Drontbeim, for the cultivation of the Lapponic language. He died in 1774. Leem was the author of a description of the Laplanders of Finmark, their manners, and their ancient idolatry; a Lapponic Grammar, Dictionary, &c.—*Biog. Univ.*

LEFEBVRE (FRANCIS JOSEPH) duke of Dantzic, was born at Rufack, in the department of the Upper Rhine, October 25, 1755. When young he entered into the French guards, and was first sergeant at the beginning of the Revolution. From being a captain he passed to the rank of adjutant-general in September, 1793; and in the beginning of 1794 he was made general of a division. He then served under Jourdan, and established his military reputation at the battle of Fleurus, in June 1794. He subsequently distinguished himself at Friedberg, and on other occasions; and after the death of Hoche, he had the provisional command of the army of the Sambre and Meuse. He was badly wounded at the battle of Stockach in 1799, and was obliged for a while to retire to Paris. The directory gave him a military command, which enabled him to afford important assistance to Buonaparte in his contest for power. The latter, when first consul, procured Lefebvre admission into the Conservative Senate, and he was afterwards made pretor of that body, which office he held till the end of the imperial government. In 1804 he was created a marshal of the empire. At the battle of Jena he commanded the imperial guard; but his greatest exploit was the taking of Dantzic, May 24th, 1807, in recompense for which he was raised to the dignity of a duke. He subsequently commanded in Spain, and in Germany, and he contributed greatly to the victories of the French at Eckmuhl and Wagram. After the restoration of royalty, he was made a peer of

France, and confirmed in his office of marshal. He died at Paris, September 14th 1820.—*Biog. Nouv. des Contemp.*

LEIBNITZ (GODFREY WILLIAM de) an eminent German mathematician and philosopher, was born at Leipsic in the year 1646. In his sixth year he lost his father, who was secretary to the university of that city, but he was educated by his mother with great care and assiduity. At fifteen he became a student in the university of Leipsic, and distinguished himself as much by his classical acquirements, and taste for Latin poetry, as by his attention to history, law, and mathematics. In 1663, on his return to Leipsic, after visiting the university of Jena, he graduated MA, and began to pay particular attention to the writings of Plato and Aristotle. He however principally devoted himself to the study of law, in which faculty he became a bachelor in 1665. Being refused the degree of doctor, on the plea of youth, although his disregard of Aristotle seems to have been the real reason, he took offence, and proceeding to Altdorf, maintained a "Thesis de Casibus perplexis," in a public disputation, with so much ability, that the degree of doctor was instantly granted him. In the same year he published a work on universal arithmetic, entitled, "Ars Combinatoria," which he accompanied with "A Mathematical Demonstration of the Existence of God." He soon after removed to Frankfort, and in 1668 published his "Nova Methodus docendæ discendæque Jurisprudentiæ;" and by the interest of baron de Boinbourg, obtained the office of counsellor of the chamber of review in the chancery of Mentz. Finding the vanity of all his attempts to reconcile the themes of different philosophers, he resolved to frame an hypothesis of his own, and in 1671 produced a work, entitled "Theoria Motus Concreti," which he dedicated to the royal society of London, and he farther explained his doctrine in a treatise, called "Theoria Motus Abstracti," addressed to the French academy of Sciences. In 1672 he visited Paris, and was offered a pension, and a seat in that academy, if he would become a Catholic, which he firmly declined. In 1673 he visited England, where he became acquainted with Mr Collins, a distinguished member of the Royal Society, from whom he received some hints of the method of fluxions, which led him to the invention of the "Calculus differentialis," being the same method of analysis under another name, as that which had been invented in 1664 by Newton, under the name of fluxions. The claim of these two great men to the priority of discovery, has, after much disputation, been settled in favour of Newton, although it is still presumed that Leibnitz was no plagiarist. While in England, the latter lost his patron, the elector of Mentz, and was invited into the service of the duke of Brunswick Lunenberg. He soon after made many discoveries in mechanics and chemistry, most of which are recorded in the "Acta Eruditorum" of Leipsic, a work in which he had himself a considerable share. Having undertaken to write a history of the house of

Brunswick, he travelled over Germany and Italy to collect materials, and on his return to Hanover, pursued with extraordinary energy, several studies of a different kind, among the fruits of which was his treatise "De ipsa Natura, sive vi insita," written with a view of improving the philosophical notion of substance. He moreover conceived the idea of a new science of forces, which he called Dynamics, and inserted a specimen of it in the "Acta Eruditorum." In the year 1695 he broached his celebrated theory of a "pre-established harmony" between the body and soul of man; and about the same time wrote his "Thoughts on Locke's Essay on the Human Understanding," in which he controverts that philosopher's opinion on innate ideas, substance, and vacuum, and other subjects. In 1700 he was admitted a member of the French academy of Sciences, and under the auspices of the elector of Brandenburg, completed the establishment of the academy of Sciences at Berlin, of which institution he was appointed perpetual president. In the year 1707 he published the first volume of his collections for a history of the house of Brunswick, of which a second and third volume followed in 1710 and 1711. His occupation by this work did not prevent him from publishing in the former year his "Theodicea; or a Dissertation on the Goodness of God, the Liberty of Man, and the Origin of Evil," 2 vols. 8vo; in which the principles of his new system were now fully unfolded. The diversified writings of Leibnitz had by this time rendered him famous in every part of Europe, and he had honours and rewards bestowed on him by various other princes, besides of the electors of Hanover and Brandenburg. In 1711 he was made aulic counsellor to the emperor, and invited to establish an academy of sciences at Vienna, which was prevented, it is said, by the breaking out of the plague. He was however rewarded with a pension, and invited to settle at Vienna; but in the meantime the elector of Hanover having become king of Great Britain, invited Leibnitz to England, where he frequently appeared at court; and at the instance of the princess of Wales, afterwards queen Caroline, engaged in a friendly controversy with the celebrated Dr Samuel Clarke, on various metaphysical and philosophical topics. This controversy was continued after his return to Hanover, where he died in November 1716, of a violent attack of the gout. The historian Gibbon has drawn the character of Leibnitz in a masterly manner, as a man whose genius and powers of mind have ranked his name with those of the first philosophers of his age and country. He doubts, however, if his reputation would not have been more pure and permanent, had he not ambitiously grasped the whole circle of science. "Such an example," he shrewdly adds, "may display the extent and powers of the human understanding; but even the powers of Leibnitz were dissipated by the multiplicity of his pursuits. He attempted more than he could finish, and designed more than he could execute; and he

may be compared to those heroes whose empire has been lost in the ambition of universal conquest." The theological philosophy of Leibnitz is principally distinguished by his doctrine of optimism, deeming the world the best that could possibly have been made, a notion very pungently ridiculed by Voltaire; and by his theory of pre-established harmony, which carries the power of mechanism as far as it could be carried, since it presumes that the soul does not act upon the body, nor the body on the soul; but that both move, by a pre-established system of machinery, independently on each other. His various deductions from these and other assumptions, it is impossible to detail in a work of this nature; nor can we find room for a complete list of his numerous productions in history, jurisprudence, physical science, and philosophy, all which however are enumerated in the first of our authorities. Of his collected works, the best edition is that of Geneva, 6 vols. 4to, 1768. This eminent man died unmarried, and amassed property rather by economy, than by interested accumulation, as the chief of his fortune was found in his apartments at his death. So universal was his genius, that he even left behind him poems, epigrams, and love-letters. Leibnitz lived and died a Lutheran; "and successively contended," says Gibbon, "with the sceptics who believed too little, with the papists who believed too much, and with the heretics who believe otherwise than is inculcated by the confession of Augsburg." He however advocated toleration, and happily acted in the spirit of his profession.—*Gen. Dict. Eloge de Fontenelle. Gibbon's Miscellaneous Works. Brucker. Saxii Onom.*

LEICESTER or **LEYCESTER** (sir **PETER**) a learned antiquary and provincial topographer, descended from the ancient family of Leycester, of Tabley in Cheshire, and born March 3d, 1613. He was educated at Brazenose college, Oxford; and in 1647 he succeeded to his paternal estate. Being a royalist, he was committed to prison by the agents of the protectoral government in 1655, and ultimately forced to pay a considerable sum, as a composition for his landed property. Excluded by his principles from obtaining any civil employment, he devoted his time to the investigation of the history, antiquities, and baronial genealogy of his native county. He was thus occupied till the Restoration, shortly after which he was raised to a baronetcy. His literary pursuits were somewhat interrupted about this period; and were resumed in 1664, and about ten years after he published his "Historical Antiquities," the second part of which contains a variety of particulars relating to the early history of Cheshire, and the last part, the parochial topography of the hundred of Bucklow. An opinion expressed in this work relative to the illegitimacy of an ancestor of sir Thomas Mainwaring, occasioned a long controversy between sir Peter Leycester and that gentleman, and the publication of a number of tracts by both parties. Sir P. Leycester died October 11th, 1678. His cha-

acter is that of a most industrious and accurate investigator of our provincial history and antiquities.—*Ormerod's Hist. of Cheshire.*

LEICH (JOHN HENRY) a learned and industrious philological writer, born at Leipzig in 1720. He devoted himself with ardour to literary researches, and passed a great part of his time in the public library, collating ancient manuscripts, and collecting their various readings. In 1748 he was appointed professor extraordinary of philosophy and he was destined for the chair of Greek literature, at the time of his death in 1750. He carried on an extensive correspondence with the literati of Italy and Germany; and he had formed a valuable collection of paintings and engraved gems. Among his works are, "Lib. sing. de Origine et incrementis Typographiæ Lipsiensis," 1740, 4to; and "Diatriba de Dyplichis Veterum," 1743, 4to; and he edited the *Thesaurus* of Basil Faber.—*Biog. Univ.*

LEIGH (CHARLES) a physician and writer on natural history in the seventeenth century. He was a native of Grange in Lancashire, and studied at Brazenose college, Oxford, where he took his first degree, and then removed to Cambridge. He subsequently practised as a physician in London, and in 1685 he was chosen a fellow of the Royal Society. He is principally distinguished as the author of "The Natural History of Lancashire, Cheshire, and the Peak in Derbyshire; with an Account of British, Phœnician, Armenian, Greek, and Roman Antiquities in those parts," Oxford, 1700, folio. How long Dr Leigh lived after the publication of this work is uncertain. His other works relate to medical subjects, and are of little importance.—*Gough's Brit. Topog. Aikin's G. Biog.*

LEIGH (sir EDWARD) a learned writer on history and divinity in the seventeenth century. He was born at Shawell in Leicestershire, in 1603, and became a commoner of Magdalen hall, Oxford, in 1616; and after proceeding to the degree of MA. he removed to the Middle Temple as a student of law. On the occurrence of the plague in London in 1625 he went to France; whence returning after a short stay, he devoted several years to professional and literary researches. Soon after the commencement of the civil war, he was chosen MP for the borough of Stafford; and he was one of the commons who were delegates to the assembly of divines at Westminster. He was also colonel of a regiment in the service of parliament; but in 1648 he was, with other presbyterian members, expelled from the house of Commons, and for some time after he was kept in confinement. After the Restoration he occupied himself chiefly in literary pursuits, publishing various works, which display profound erudition and an intimate knowledge of the learned languages. He died at his seat, called Rushall-hall, in Staffordshire, in 1671. Most of his works relate to biblical literature, and of these the most important is entitled "Critica Sacra," consisting of critical and philological observa-

tions on the words of the Old and New Testaments, arranged alphabetically.—*Wood. Aikin's G. Biog.*

LEIGHTON (ALEXANDER) a Scotch divine, was born at Edinburgh in 1568, and educated in the university of that city. In 1603 he took the degree of MA. and was appointed professor of moral philosophy in his own college. This appointment he enjoyed until 1613, when he came to London, and obtained a lectureship, which he held until 1629, when he wrote two books, the one entitled "Zion's Plea," and the other "The Looking Glass, or History of the Holy War." In the former of these, he scattered much indecent invective against bishops, whom he called "men of blood," and styled the queen (Henrietta Maria) a daughter of hell. This brought upon him the vengeance of the star-chamber, and a more cruel sentence was probably never either pronounced or executed. Historians have recorded the manner of this shocking punishment, on the delivery of which bishop Laud openly exulted (see article LAUD) in the following words:—"He was severely whipped before he was put in the pillory; being set in the pillory, he had one of his ears cut off, and one side of his nose slit. He was then branded on the cheek with a red hot iron SS, as a sower of sedition. On that day week the sores on his back, ears, nose, and face, not being cured, he was whipped again at the pillory in Cheapside, and had the remainder of his sentence executed, by cutting off his other ear, slitting the other side of his nose, and branding his other cheek!!!" This happened in 1630. Perpetual imprisonment was to follow all this endurance, and he accordingly remained in the Fleet prison eleven years, until released by the parliament in 1640, when he was appointed keeper of Lambeth palace, then used as a state prison. There he remained until 1644, when he became rather insane of mind, from the effect of past sufferings, in which state he died in 1644.—*Granger. Rushton and Nelson's Collections. Hume's Hist. of England.*

LEIGHTON (ROBERT) a pious and much beloved Scotch prelate, was son to the subject of the preceding article. He was born in London in 1613, and educated at the university of Edinburgh. He was subsequently sent to France, and on his return obtained presbyterian ordination, and was settled at Newbottle, near Edinburgh. Disapproved of by his presbyterian brethren, as not sufficiently polemical in his discourses, he resigned his living, and was soon after chosen principal of the university of Edinburgh. When Charles II resolved to re-establish episcopacy in Scotland, Dr Leighton was induced to accept a bishopric, but chose the humblest of the whole, Dumblain, and would not join in the pompous entry of his brethren into Edinburgh. He nevertheless became archbishop of Glasgow, chiefly impelled, it is believed, by a hope of furthering a scheme of reconciliation between the presbyterians and episcopalians. Disappointed in this hope, as also in his wishes to moderate the acrimonious feelings of both parties, he

went to London, and requested leave to resign his see, but his resignation was not accepted. He never however returned to Scotland, and died in London, February, 1634, in the seventy-first year of his age. Archbishop Leighton was celebrated for his gentleness, moderation, and disinterestedness; for although his bishopric produced only 200*l.* and his archbishopric barely 400*l.* per annum, he founded exhibitions both in the colleges of Edinburgh and Glasgow. As a preacher, he was admired beyond all his contemporaries, and his works have not yet lost their popularity, a complete edition of them being published in 1808, 6 vols. 8vo, with a life of the author, from which this account is taken.—*Life as above. Burnet's Own Times.*

LELAND (JOHN) a noted English antiquary, born in London about the end of the reign of Henry VII. He was educated at St Paul's school, and Christ's college, Cambridge, whence he removed to Oxford, and then to Paris for farther improvement. Returning home he took holy orders, and obtained a rectory in the marches of Calais. Henry VIII made him his chaplain and librarian, and gave him the singular title of royal antiquary. In 1533 he was empowered, by a commission under the great seal, to search for objects of antiquity in the archives and libraries of all cathedrals, abbeys, priories, &c.; in consequence of which, he spent six years in traveling over the kingdom, visiting the remains of ancient buildings and monuments, and collecting materials for the illustration of the history and archæology of England and Wales. At the dissolution of monasteries, he endeavoured to prevent the destruction of MSS. by proposing their being conveyed to the king's library; but his recommendation was neglected. Several benefices were conferred on him, among which were a canonry at King's college, now Christ-church, Oxford; and a prebend at Salisbury. He retired to his house in London, to arrange and methodize the stores of intelligence which he had collected; but the fatigue arising from intense study, or some other cause, rendered him insane, and he died about two years after in 1552. Leland published several elegant Latin poems, and some archæological tracts; and he composed a work, entitled "Commentarii de Scriptoribus Britannicis," published at Oxford, in 2 vols. 8vo. in 1709; but the great bulk of his collections, after passing through various hands, was placed in the Bodleian library, in an indigested state. Camden, Burton, Dugdale, and other antiquaries availed themselves of his labours, and at length Hearne printed a considerable part of his papers, forming "The Itinerary of John Leland," 9 vols. 8vo; and "Lelandi Antiquarii de Rebus Britannicis Commentaria," 6 vols. 8vo.—*Biog. Brit. Berkenhout. Aikin.*

LELAND (JOHN) a learned English dissenting divine, was born at Wigan in Lancashire, in 1691. When very young his family removed to Dublin, where he was privately educated for the ministry, and in 1716 he became joint pastor of a dissenting congregation

in that capital, with Mr Weld. In 1733 he first commenced author, by publishing an answer to "Christianity as old as the Creation;" and he engaged in a controversy with Dr Morgan, against whom he wrote "The Divine Authority of the Old and New Testament asserted." To this work he subsequently added a second volume. These publications produced him much attention, both from the friends of the establishment and the dissenters, and in 1739 he was favoured with the degree of DD. by the university of Aberdeen. In 1742 he published a reply to the celebrated pamphlet, entitled "Christianity not founded on Argument," and in 1753 appeared his "Reflections on the late Lord Bolingbroke's Letters on the Study and Use of History." He next engaged in a summary review of the most noted books which had been published against revealed religion, which in 1754 he committed to the press, under the title of "A View of the principal Deistical Writers that have appeared in England in the last and present Century," 8vo. To this work he also added a second volume, in which a more particular attention is paid to the works of Hume and Bolingbroke; and as his reflections on lord Bolingbroke's letters bore a close affinity to his labours in his "View," he was induced to include it with other matter in a third volume, in a new edition of the whole. He next completed in two volumes, 4to, a work, entitled "The Advantage and Necessity of the Christian Revelation," which has since been reprinted in two volumes, 8vo. Dr Leland died in his seventy-fifth year, on the 16th January, 1766, highly respected for his learning and abilities. After his death his sermons were published in 4 vols. 8vo. Dr Leland's "View of the Deistical Writers," was republished in 1798 by Dr W. L. Brown, of the Marischal college, Aberdeen, who added thereto, "A View of the present Times, in relation to Religion and Morals, and other important Subjects."—*Weld's Preface to Funeral Sermon. British Biog., vol. x.*

LELAND (THOMAS) a learned divine and historian, was the son of a citizen of Dublin, in which metropolis he was born in 1722. He received his early education from the celebrated Dr Sheridan, and in 1737 became a pensioner in Trinity college, of which he became a fellow in 1746. In 1748 he entered into orders, and was soon after, in conjunction with Dr Stokes, induced to undertake an edition of the "Orations of Demosthenes," with a Latin version and notes, which appeared in 1754, in 2 vols. 12mo. in 1756 he published the first volume of his English translation of "Demosthenes," 4to, with notes, critical and historical; the second volume of which appeared in 1761, and the third in 1770. His reputation being much extended by this publication, he was induced to write the life of Philip of Macedon, which appeared in 1758, in 2 vols. 4to. He followed with a translation of Æschines, and is supposed, although he never avowed it, to have written the historical romance of "Longsword, Earl

of Salisbury." In 1763 he was appointed professor of oratory at Trinity college, and the following year combated some arguments of bishop Warburton, in his "Doctrine of Grace," relative to the language of the inspired writers, in a publication, entitled "A Dissertation on the Principles of Human Eloquence, with particular regard to the Style and Composition of the New Testament," 4to. This work produced a rejoinder by Dr Hurd, without his name, composed in the usual petulant style of the Warburtonian school. Dr Leland noticed these strictures with the calmness and dignity befitting literary disputation, and the victory, both in temper and argument, was decidedly his own. In 1768 he was appointed chaplain to the lord lieutenant, lord Townshend, but never obtained any other preferment than the prebend of Rathmichael, in the cathedral of St Patrick's, and the vicarage of Bray, both of small value. In 1773 he gave to the press his "History of Ireland, from the Invasion by Henry II," which is little more than an able sketch; but very serviceable to the general reader. He died in 1785, and after his death there appeared a collection of his sermons in 3 vols. The fame of Dr Leland rests principally upon his "Life of Philip of Macedon;" his "Demosthenes;" and his "Dissertation upon Eloquence;" and the "Defence" of it, which exhibit great solidity of judgment, accuracy of learning, and perspicuity of style.—*Life prefixed to Sermons. Nichols's Lit. Anec. Boswell's Life of Johnson.*

LELLI (HERCULES) an Italian painter and modeller in wax. He was born at Bologna about 1700, and studied drawing under Zanotti. He executed a great number of works in plaster, wax, stucco, wood, marble, &c.; but he chiefly distinguished himself by the anatomical figures in wax which he made for the institute of Bologna. For the instruction of his pupils Lelli wrote a small treatise, entitled, "Compendio Anatomico per uso de' Pittori e Scultori," published after his death, which happened in 1766.—*Elmes's Dict. of the Fine Arts. Biog. Univ.*

LELY (sir PETER) a celebrated portrait painter, was born at Soest in Westphalia, in 1617. His father, whose family name was Vander Vaas, a native of Holland, was a captain in the garrison of that town, but having acquired the nick-name of captain le Lys or Lely, his son obtained it as a proper name. He was first instructed by Peter Greber at Haerlem, and having attained considerable skill, attracted by the encouragement afforded to the arts by Charles I, he came over to England in 1641, and commenced portrait painter. He finished portraits both of that monarch and of Cromwell; but it was not until the Restoration that he rose to the height of his fame and prosperity. He fell in with the voluptuous taste of the new court, in his representation of the beauties who adorned it, and by the delicacy and grace of his pencil, became the favourite lady's painter. He has transmitted the features of most of the beauties of the court of Charles II, and is

particularly admired for the grace and air of his heads, and the elegant disposal of his fancy draperies; but fell short of his model, Vandyke, in taste and expression. He was in great favour with Charles II, who made him his principal painter, and honoured him with knighthood. He married an English lady of beauty and family, and acquired considerable wealth, part of which he expended in collecting a gallery of pictures, which sold at his death for 26,000*l.* He was seized in 1680 with an apoplectic fit, while painting the dutchess of Somerset, and died at the age of sixty-three. The "Beauties" at Windsor castle, by the pencil of Lely, are much admired.—*Walpole's Anec. Biog. Brit. Bryan's Dict. of Paint. and Eng.*

LEMAIRE (JAMES) a Dutch navigator, noted on account of the discovery of the straits which bear his name. He was the son of a merchant of Egmont, who formed an association for the discovery of a new passage to the South Sea, in consequence of the states general having interdicted the transit through the straits of Magellan to any vessels but those of the Dutch East India company. James Lemaire embarked on an expedition with Cornelius Schouten, in June 1615, as director general of the association. The straits, which were the object of research, were discovered in January 1616, and passing through them, the adventurers arrived at Batavia, where their vessel was seized, and they returned to Holland on board a Dutch fleet, commanded by admiral Spillberg. Lemaire did not long survive his return, dying December 31, 1616.—*Biog. Univ.*

LEMERY (NICHOLAS) an eminent French chemist, who was a native of the city of Rouen. He was instructed in the profession of pharmacy at home, and in 1666 went to Paris for improvement. After studying under Glaser, he spent some time at Montpellier, and in 1672 returned to the metropolis, where he commenced giving chemical lectures at the hotel of the prince of Condé. In 1675 he published his "Cours de Chymie," a practical manual of the art, which acquired an almost unprecedented degree of popularity. Being a protestant, Lemery was restricted in 1681 from continuing his lectures, in consequence of the weak and illiberal line of policy then pursued by the French government. In 1683 he went to England, and was patronized by Charles II; but he soon returned to Paris, having procured the diploma of MD. from the university of Caen. His academical honours did not however afford him the protection he anticipated, and after the revocation of the edict of Nantes, he thought proper to become a professor of the Catholic faith. He then readily obtained permission to continue his lectures, and on the re-establishment of the academy of Sciences in 1699, he was appointed associate chemist, and soon after a pensioner. He died in 1715. Besides his chemistry, he published a pharmacopœia, a dictionary of drugs, and a treatise on antimony.—LEMERY (LOUIS) son of Nicholas, was one of the phy-

sicians to the Hotel Dieu, and gave lectures on chemistry at the Jardin du Roi. He was admitted an associate of the academy of Sciences in 1712, and became a pensioner on the death of his father. He obtained by purchase the post of physician to the king, and in 1731 he succeeded the elder Geoffroy, as professor of chemistry. He died in 1745. Among his works are a treatise on aliments; a dissertation on the nourishment of the bones; and various academical memoirs.—*Eloy Dict. Hist. de la Med. Aikin's G. Biog. Hutchinson.*

LEMIERRE (ANTOINE MARIN) a French dramatist, born in 1733 at Paris, where his father was a clerk in a government office. He received a good education, but being deprived of his parent while young, he became assistant sacristan to the church of St Paul. At his leisure he composed sermons for sale in manuscript, a circumstance which made him known to the abbé d'Olivet, who employed him to correct the proofs of his edition of Cicero. He then was made an under master of rhetoric at the college of Harcourt, in which situation he wrote a tragedy, rejected at the theatre. He afterwards gained six poetical prizes, offered by provincial academies. His tragedy of "Hypermnestra" was acted with success in 1758. He subsequently obtained a place in the office of a farmer-general, who, perceiving that he was better qualified to make plays, than to keep financial accounts, generously bestowed on him a pension, that he might be enabled to devote himself to literature. In 1781 he was chosen a member of the French academy, and he died in 1792. He produced several tragedies, among which the best and most successful was his "Widow of Malabar;" and he published "Les Fastes, ou les Usages de l'Année," a poem in sixteen cantos; and a collection, entitled "Pieces Fugitives," 1782, 8vo.—*Biog. Univ. Biog. Nouv. des Contemp.*

LEMONNIER (PETER CHARLES) a celebrated astronomer, born at Paris November 23, 1715. His father, PETER LEMONNIER, was professor of philosophy at the college of Harcourt, a member of the academy of Sciences, and the author of some estimable works. He died in 1757. The son displayed an early taste for the study of astronomy, and having been admitted a member of the academy of Sciences, he was sent by that learned body in 1736, together with Clairaut and Maupertuis, towards the north pole, to measure a degree of the meridian. On his return to France he employed himself in making solar tables, and tables of the positions of the fixed stars. In 1748 he visited England, and went thence to Scotland, to observe a remarkable eclipse of the sun, on the 25th of July that year. He was for a long period professor of natural philosophy at the college of France, and he had for a pupil the celebrated Lalande. His life was entirely dedicated to the cultivation of science, till his labours were interrupted by an attack of palsy in November 1791. He died in consequence of a second seizure, April 2, 1799. He was the author of "Histoire Celeste, ou Recueil de toutes les Observations

Astronomiques faites par Ordre du Roi,' 1741, 4to, and other valuable works relating to mixed mathematics.—*Biog. Univ.*

LEMONNIER (LEWIS WILLIAM) younger brother of the preceding, became a student of medicine, and having obtained the degree of doctor, was in 1738 attached to the infirmary of St Germain en Laye. On the death of De Jussieu the elder, he succeeded to the professorship of botany at the Jardin du Roi, and afterwards became physician in chief to the army during the Hanoverian war, and at length first physician to the king. After having narrowly escaped destruction during the Revolution, he retired to Montreuil, near Paris, where he died September 7, 1799. Lemonnier was the author of "Observations d'Histoire Naturelle," 1744, 4to; "Lettre sur la Culture du Café," 1773, 12mo; besides several memoirs in the collection of the academy of Sciences, and articles in the Encyclopedie.—*Biog. Nouv. des Contemp. Dict. des H. M. du 18me S.*

LEMOYNE (JEAN BAPTISTE) a French musician, born at Eymet in 1751. He was sent to Berlin in his youth, for education in the science for which he early displayed a taste, and studied there under Graun and Kimberger. The prince royal of Prussia being much pleased with a chorus of his composition, placed him at the head of the musical department in his private theatre, in which situation he continued for a considerable period, giving lessons occasionally to Frederic the Great. He afterwards returned to Paris, and was the only French composer of his time whose works could at all make head against the two rivals, between whom the musical world was then divided, Gluck and Piccini. He produced eleven successful operas, and was the first composer ever summoned on to the stage by a French audience, to receive their plaudits at the conclusion of his piece. This circumstance, which has since grown into a custom, took place at the first representation of his "Nephté," an opera in three acts, 1789. His death took place at Paris in 1796.—*Biog. Dict. of Mus.*

LEMPRIERE, DD. (JOHN) a native of Jersey, educated at Winchester grammar-school, whence he removed to Pembroke college, Oxford, and graduated in that university as AM. in 1792, BD. 1801, DD. 1803. His reputation for scholastic and general learning procured him in 1792 the head-mastership of Abingdon grammar-school, which he conducted several years with great credit. On the death of the rev. Robert Bartholomew, he was chosen to succeed that gentleman as master of the free grammar-school at Exeter, where he remained, till in consequence of some disputes with the trustees of the school, Dr Lempriere, after petitioning parliament on the subject, was in the end obliged to resign. In the year 1811 he was presented by the rev. L. Cunlifford, to the rectory of Meeth, Devonshire, which living, together with that of Newton Petrock in the same county, he held till his death. Dr L. was an excellent classical scholar, and his "Bibliotheca Classica,"

originally published in octavo, 1788, and afterwards enlarged to a quarto, is one of the most useful assistants in the study of the heathen mythology now extant. It is written on the same plan as the great work, the "Siecles Payens" of the abbé Sabatier de Castres, and is fraught with a great knowledge of his subject, illustrated by much sound and judicious criticism. The year following he published a sermon, preached on the 12th of August in that summer, at the parish church of St Helier, in his native island, the great object of which seems to be his own vindication from the aspersions thrown upon him by his antagonists. His other writings are, the first volume of a translation of Herodotus, with notes, which appeared in 1792, and was intended to have been followed by two others; but an entire and elegant translation of that historian being given to the world in the mean time by Mr Beloe, Dr L. desisted from prosecuting his design. A compilation of "Universal Biography," first printed in quarto, with an abridgement of the same in octavo, both in 1803, was his last work. He died of apoplexy in Southampton-street, Strand, February 1, 1824.—*Ann. Biog.*

L'ENCLOS (ANNE or NINON de) rendered remarkable at once by her beauty, wit, and accomplishments, and by the pleasurable system which she openly adopted, was born at Paris in 1616. Her father, the sieur L'Enclos, was a gentleman of Touraine, who served in the army, and was esteemed a man of wit; her mother was a devotee. She lost both her parents at the age of fifteen, and being left mistress of a good fortune, with no one to control her, she determined to adopt a mode of life which should strictly accord with her own inclinations. Nature had given her beauty, and being amorous by inclination, she sought to render the first more attractive by accomplishments and the graces, and gave a free indulgence to her amatory passions, without suffering herself to be shackled by any serious engagement. She was not mercenary, but seems to have been prompted partly by personal attractions, and partly by vanity; as her fugitive attachments chiefly included men signalized either for rank, gallantry, or striking qualities. Such was the ascendancy she acquired, that she was complimented and consulted by some of the most eminent writers of that day; and what was still more remarkable, her friendship was sought by some of the most respectable of her own sex. It is even said, that Madame Maintenon, whom she had visited when the wife and widow of Scarron, wished to engage Ninon to reform, and live with her at court, with a view of dispelling the dreadful ennui which formed the price of her elevation. The latter, however, consistently enough, preferred her liberty to the splendid prison of Versailles, and resisted all the efforts of devotees and directors to bring her to reflection. As her charms continued to a late period, she assisted to form more than one generation of young Parisian men of fashion. The power of her natural beauty

was indeed tragically illustrated by the often told adventure of one of her own sons, who, being brought up in ignorance of his birth, fell desperately in love with his mother, and when informed of the fact, committed suicide—an adventure introduced by Le Sage in his celebrated Gil Blas. Ninon died at the age of eighty; and it is instructive to remark, that she was herself so conscious of having mistaken the road to genuine satisfaction, that she thus expresses herself in a letter to St Evremond: "Every one tells me that I have less reason to complain of time than any one. However that be, if such a life were again proposed to me, I would rather hang myself." Some letters have been published in her name, addressed to Madame Sevigné, which are forgeries. Her own to St Evremond are much superior to these inventions.—*Moreri. Nouv. Dict. Hist.*

LENFANT (JAMES) a French ecclesiastic of the reformed church, born in 1661 at Bazoches. Having distinguished himself by the progress he made in his studies, both classical and theological, at Saumur and Geneva, he was ordained in 1684 at Heidelberg, where he superintended the spiritual concerns of a protestant congregation of his countrymen, and was made chaplain to the dowager electress palatine. In 1688 the invasion of the country by the French forced him to take refuge at Berlin, where the elector, afterwards king of Prussia, gave him an honourable asylum, which he enjoyed nearly forty years, as chaplain to the queen, Charlotte Sophia, and after her decease, to the court. From 1707 to 1715 his time was much occupied in travelling through great part of Europe, for the purpose of collecting manuscripts and rare publications; and while in England, preaching before queen Anne, that sovereign offered to make him one of her chaplains, if he would be persuaded to take up his abode in London. This however he declined, and after visiting Helmstadt, Leipsic, Breslau, &c. returned to Berlin, where he died of a paralytic attack in the autumn of 1728. The "Bibliothèque Germanique" was compiled by a literary society who used to assemble at his house, and the original plan of the work has been attributed to him. This elaborate publication was first commenced in 1720. His other works consist of a "Life of Poggio;" a "History of Pope Joan;" a "History of the Council of Pisa," 2 vols. 4to; another "Of the Council of Basil," 2 vols. 4to; and a third "Of the Council of Constance," 2 vols. 4to. He also, in conjunction with Beausobre, translated the New Testament into the French language, with annotations, in two quarto volumes. His last production was a "History of the Wars with the Hussites."—*Bibl. Germanique. Nicéron, vols. ix and x.*

LENGLET DU FRESNOY (NICHOLAS) a French ecclesiastic and man of letters, born at Beauvais in 1674. He studied theology at Paris; but the freedom of his opinions having attracted the censure of the Sorbonne, he relinquished divinity for politics. In 1705 he was sent to the court of the elector of Cologne

at Lille, with the title of Latin secretary to the French embassy. After the peace of Utrecht, he returned to Paris, and employed himself in various literary undertakings. For some services, in developing an intrigue of cardinal Alberoni, he was afterwards rewarded by his government with a pension for life. In 1721 he went to Vienna, and became librarian to prince Eugene; but he did not long retain that situation, having neglected the duties of his post. He passed the remainder of his days in a state of literary independence, and exercised a degree of freedom in his writings, closely bordering on licentiousness; in consequence of which he was ten or twelve times committed to the Bastille, and other places of confinement. His end was very unfortunate, as he was burnt to death, in consequence of falling asleep near the fire as he was reading. This accident happened in 1755. A list of his numerous publications may be seen in the first work referred to below. They include "Méthode pour étudier l'Histoire, avec une Catalogue des Historiens;" "Méthode pour étudier la Géographie;" "Traité historique et dogmatique du Secret inviolable de la Confession;" and "Histoire de la Philosophie Hermétique."—*Biog. Univ. Aikin's G. Biog.*

LENGNICH (GODFREY) a learned Prussian writer on history and diplomacy. He was a native of Dantzic, and applied himself when young to the study of jurisprudence, which he prosecuted at some of the German universities. He was at length nominated professor of history in the gymnasium of Dantzic, and ultimately arrived at the dignity of syndic of that city. He died at an advanced age in 1774. Among the works of Lengnich, are a History of Polish Prussia, from 1526 to the reign of Augustus II; the History of Poland, from the origin of the monarchy; "Jus publicum Regni Poloniæ;" besides editions of Kadlubko, and other historians.—*Biog. Univ.*

LENGNICH (CHARLES BENJAMIN) an antiquary and writer on numismatics, of the same family with the foregoing, born in 1742. After finishing his studies, he entered the church and obtained an archdeaconry. He was one of the conductors of the Literary Gazette of Jena, after its establishment in 1785, and he inserted in it a great number of excellent articles. He died November 5, 1799. He was the author of several esteemed works on numismatics; anecdotes of the astronomer Hevelius; and an account of his own life.—*Id.*

LENNEP (JOHN DANIEL VAN) an erudite critic and classical scholar, who was a native of Leenwarden in Friesland. In 1747 he commenced his literary career, by an edition of the Greek poem of Coluthus, on the Rape of Helen. He became professor of Greek and Latin literature at Groningen about 1752; and in 1768 he succeeded Gisbert Koen as professor at Franeker. He died February 6, 1771, at Aix-la-Chapelle, whither he had gone on account of ill-health. He was the author of two treatises, "De Analogia Linguae Græcæ;" and "Etymologicon Linguae Græcæ," republished with the Notes of Scheidius, at

Leyden. 1805, 1808, 2 vols. 8vo.—*Biog. Univ.*

LENNOX (CHARLOTTE) a lady distinguished by a considerable portion of literary ingenuity, who was highly respected by Dr Johnson and Samuel Richardson. She was born in 1720, at New York, of which her father, colonel James Ramsay, was governor, who sent her over to England to an opulent aunt for education. Her father died soon after, leaving scarcely any provision for his family; and little is known of the subsequent history of the subject of this article, except that she married a Mr Lennox, and supported herself with her pen. She published in 1751 the "Memoirs of Harriet Stuart;" and in 1752 "The Female Quixote," a well-known and very ingenious production; to which a dedication was written by Dr Johnson. In the following year appeared two volumes of her "Shakespeare Illustrated," to which she afterwards added a third. In 1756 she published the "Countess de Berri," from the French, and translated Sully's Memoirs with no small ability. Her next productions were "Philander, a dramatic pastoral," and the pleasant novel of "Henrietta," in two vols. In 1760, with the assistance of the earl of Cork and Dr Johnson, she translated father Brumoy's Greek theatre, and the next year started a kind of magazine, under the title of "The Ladies' Museum." Her remaining works are, "Sophia," a novel, 2 vols.; "The Sisters," a comedy, which failed in representation; "Old City Manners," which met with partial success, and "Euphemia," a novel of merit in four vols. published so late as 1790. It is to be lamented, that with so much literary aptitude, united to great private worth and respectability, she should be doomed to penury and sickness in her declining years. She was however relieved very effectually by the Literary Fund Society, towards the close of her life, which terminated at a very advanced age, on the 4th June, 1804.—*Nichols's Lit. Anecd. Boswell's Life of Johnson.*

LENOTRE (ANDREW) a French architect and ornamental gardener. He was born at Paris in 1613, and was the son of the superintendent of the gardens of the Tuilleries, who wishing to make him an artist, placed him as a pupil with Vouet, the painter. He shewed a strong taste for design, particularly in laying out gardens and arranging their scenery. He first displayed his talents at the chateau de Vaux; but his plans for the decoration of the park of Versailles contributed principally to establish his reputation. He afterwards embellished the gardens of Clagny, Chantilly, St Cloud, Sceaux, the Tuilleries, &c. Lewis XIV richly rewarded the labours of Lenotre, and in 1675 bestowed on him letters of nobility, and the cross of the order of St Michael. He took a journey to Italy in 1678; and at Rome he was honourably received by pope Innocent XI. He died at Paris in 1700. De-lille has celebrated the talents of Lenotre, whose style of ornamental planting was fashionable, not only in France but in England, till it

was superseded by the designs of Kent, Capability Brown, and the modern landscape gardeners.—*Biog. Univ.*

LENTHAL (WILLIAM) an English statesman of the seventeenth century. He was born in 1591 at Henley on Thames in Oxfordshire, and received his education at Alban-hall, in the university of Oxford. He became a student of law at Lincoln's-inn, and having been called to the bar, he obtained distinction as an advocate. In 1639 he was elected MP. for the borough of Woodstock, and the following year made speaker of the house of Commons, in preference to the recorder of London, who was supported by the court party. Clarendon represents Lenthal as unequal to the station which he filled at the important period of the disputes between the king and his parliament; but he certainly displayed both firmness and moderation as a popular partizan, not only in his memorable answer to Charles I, when that misguided prince made his visit to the house of Commons, to arrest certain members who had fallen under his displeasure, but also on other occasions. He was unable, however, to resist the ascendancy of Cromwell, who turned him out of his office in 1653. He was subsequently re-chosen, and continued speaker of the long parliament. At the Restoration he was excepted out of the bill of indemnity; but he at length obtained a pardon from the king. He died in 1663. Some of his letters and parliamentary speeches have been published.—*Clarendon. Lempiere.*

LEO, the first pope of that name, by some surnamed the "Great," and after his decease canonized as St Leo. He was a native of Tuscany, and succeeded Sixtus III in the papal chair in 440. Disputes occurring concerning the respective privileges of the bishops of Rome and Constantinople, a synod was assembled at Chalcedon, for the purpose of arranging them, when the votes going in favour of an equality between the two sees, Leo refused to confirm the proceedings. He took a very decided part against the Manichæan heresy, as well as against other schismatics, and condemned Eutyches in full synod; but his most material achievement was the stop which his personal interference put to the ravages of Attila in Italy, whom he persuaded to withdraw his forces from the very gates of Rome. With Genseric he was afterwards in 455 scarcely less successful, as although he could not prevent that barbarian from taking and plundering Rome, he yet so far prevailed as to divert him from his design of burning it. St Leo died in 461. He left ninety-six sermons, and one hundred and forty one epistles. The best edition of his works is that of Père Quesnel, which appeared in 1700, in one volume, folio. There are also two editions in three vols. folio. Maimbourgh has written a history of the pontificate of Leo.—*Cave. Milner's Ch. Hist.*

LEO X (POPE) was born at Florence in December 1475. His Christian name was Giovanni, and he was the second son of the celebrated Lorenzo de' Medici. Originally de-

signed for the church, he received the tonsure at the age of seven years; and so great was the interest of his family, backed by that of Louis XI, king of France, that the preferences heaped upon him at an early age amounted to twenty-nine; and he was nominated to the cardinalate when he had scarcely completed his thirteenth year. He was not, however, formally invested with the purple until 1492, three years afterwards, which interval he spent in study at the university of Pisa. The death of Lorenzo followed soon after; and owing to the opposition of the young cardinal, to the election of the infamous Alexander VI, it became expedient for him to quit Rome, and take up his abode at Florence. About 1500 he again took up his residence at Rome, where he resided during the remainder of the pontificate of Alexander, and the early part of that of Julius II, employing himself in the cultivation of polite literature, and indulging his passion for elegant society, music, and the chase. It was not until 1505 that he acted in public affairs, at which time he was made governor of Perugia by Julius, whose unlimited confidence he acquired, and he was entrusted with the supreme command of the papal army, in the league against the French in 1511. He was made prisoner at the battle of Ravenna in 1512, and conveyed to Milan, but he effected his escape, and contributed much to the re-establishment of his family at Florence, by the overthrow of the popular constitution. In 1513, on the death of Julius, he was elected pope, being then in the thirty-eighth year of his age. He assumed the name of Leo X, and acquired the tiara with higher manifestations of good-will, both from Italians and foreigners, than most of his predecessors. He began his papacy with great clemency towards the opponents of his family in Florence, and displayed his love of literature, by appointing Bembo and Sadoleti, two of the most elegant scholars of the age, to the office of papal secretaries. He pursued the system of his predecessor in foreign politics, by attempting to free Italy from foreign powers, and received the submission of Louis XII, who had incurred ecclesiastical censure, and applied for absolution. Having secured external tranquillity, he applied himself with great zeal to the encouragement of learning. He restored the Roman university to its former splendour, and paid particular attention to the revival of Greek literature, a Greek college being founded at Rome, under the direction of Lascaris, and a Greek press established in that capital. Public notices were circulated throughout Europe, that all persons possessing ancient MSS. would be liberally rewarded, on bringing or sending them to the pope, who also founded the first Italian professorship of the Syriac and Chaldaic languages at the university of Bologna. When Francis I ascended the throne of France. Leo found himself obliged to join the emperor and other sovereigns, against France and the republic of Venice; but on the rapid successes of the French, he abandoned his allies, and

formed a union with the king of France; and at an interview between these two sovereigns in 1515, the pragmatic sanction was abolished, and a concordat established in its stead. The policy of Leo was truly Italian in many respects, and especially in his practices against the duke of Urbino, whom he despoiled of his dutchy, without a shadow of justice, in order to aggrandize his own family, by investing therewith his nephew Lorenzo. His violation of a safe conduct, in order to seize the person of the duke's secretary, with a view to extort his master's secrets by torture, inflicts an indelible stain upon the memory of Leo. In 1517 his life was endangered by a conspiracy, at the head of which was cardinal Petrucci. The plan failed, and the cardinal having been decoyed to Rome, was put to death, and his agents executed with horrid tortures. To secure himself for the future, Leo, by a great stretch of authority, created thirty-one new cardinals in one day, many of whom had no claim, but that of being his relations and friends; while others, from their talents and virtues, did honour to his selection. During the pontificate of Leo X, the Reformation, under Luther, took its rise, the immediate cause of which was the shameful sale of indulgences, rendered necessary by his profusion. The energetic protest and opposition of the spirited reformer, soon produced extraordinary effects; but there is reason to believe that Leo, who probably regarded theological quarrels with contempt, was very little affected in the first instance, and was certainly inclined to lenient measures. In 1518 however, he was induced to issue a bull, claiming his authority to grant indulgences, which would avail both in this life and in purgatory; on which Luther appealed to a general council, and thus the war was formally declared, which ended in consequences so extraordinary. The warlike disposition of the Turkish sultan Selim, at this time, excited great alarm throughout Europe, and Leo in vain sought to unite the Christian princes in a crusade against that prince. On the contest for the empire between Francis I and Charles V, he sided with neither, but fruitlessly endeavoured to move the German princes to support a third candidate. About the same time the death of his nephew Lorenzo (who left an only daughter, the celebrated, but iniquitous Catherine de Medicis) led to the annexation of the dutchy of Urbino to the papacy. The issue of the contest with Luther will be read to more advantage in the life of the latter; but it may not be amiss to observe, that Leo conferred the title of defender of the faith on Henry VIII, for his book against that reformer. The tranquil state of Italy at this time, induced the pope to indulge himself in his taste for magnificence and enjoyment, but not so exclusively as to prevent his attending to the aggrandisement of his family and see. Having set his heart on the possession of Ferrara, he had recourse to treachery, and is thought even to have meditated the assassination of the duke, but the plot being discovered, the plan failed. Another and more defensible object

was the expulsion of the French from Italy, in which he had made some progress, when he was seized with an illness, which terminated his life in a few days, on the 1st of December, 1521, in the forty-sixth year of his age. The moral and political character of this celebrated pontiff, may be gathered even from a brief sketch like the present. Upon this point, indeed, modern and unprejudiced writers do not very greatly differ. It is as to his merit as a promoter of literature and the fine arts, that opinions chiefly vary. The popular denomination of "the age of Leo X," decides too much in his favour, as it includes many years, both prior and subsequent to his pontificate; and a great number of the brilliant points which distinguish that age, must be sought for beyond the limits of his protection and influence. He was himself but moderately furnished with solid erudition, and if he gave liberal encouragement to reputable studies, he also patronized persons and productions of a very opposite character. The merit of a sovereign, in promoting the ornamental arts, is chiefly to be estimated by the good taste which he displays in his encouragement, and in this faculty Leo was certainly not wanting. He was however rather the inheritor, than the creator of great talents in the arts, as Michael Angelo and Bramante had both risen to celebrity under his predecessor Julius, who had planned the stupendous edifice of St Peter. The Vatican palace had also previously received some of its noblest ornaments. His attachment to Raphael speaks the most strongly for him as the patron of art, yet he cared nothing for his celebrated cartoons, after they had formed patterns for his tapestry. Leo X must not, however, be deprived of the merit which belongs to him. He certainly drew together the learned men of his time, formed eminent schools, and effectually promoted the valuable art of printing. On these accounts, therefore, and for his share in promoting the Reformation, his short pontificate of eight years and eight months forms one of the most interesting periods in papal history.—*Roscoe's Life of Leo X. Duppa's Life of Michael Angelo.*

LEO VI, emperor of the East, surnamed the philosopher, was son of Basil I, whom he succeeded in 886. He reigned weakly, and the ill success of his generals against the Bulgarians, obliged him to submit to such terms of peace as those barbarians pleased to propose. A total defeat of his fleet by the Saracens also took place a short time before his death, which happened in 911, after a reign of twenty-five years. He was educated under the learned Photius, and gave his name to several works, the principal of which are, a "Treatise on Tactics;" "Novellæ Constitutiones;" "Opus Basilicon," and a collection of laws begun by his father. He also addressed a letter to the caliph Omar, on the truth of Christianity.—*Moreri. Gibbon.*

LEO of Modena, so called from the place of his birth, an Italian rabbi, whose Jewish name was Jehudah Arie. He flourished during the first half of the seventeenth century at

Venice, where he published in 1612 a Hebrew dictionary: this work was reprinted at Padua in 1640. He was also the author of a curious treatise on the rites and ceremonies of the Mosaic law, 1638, a French translation of which is in existence. His death took place in 1654, when he had nearly attained the age of eighty.—*Moreri*.

LEO (JOHN) surnamed Africanus, a traveller and geographer of the sixteenth century. He was born of Moorish parents at Grenada in Spain; and when that city was taken by the Spaniards in 1492, he retired to Africa. He studied at Fez, and afterwards travelled through various parts of the north of Africa. Having been captured by pirates, he was taken to Italy, and presented to pope Leo X, who persuaded him to embrace Christianity, and gave him his own names on his being baptized. At Rome he acquired a knowledge of the Italian language, into which he translated his "Description of Africa," originally written in Arabic. This is a very curious and interesting work, comprising accounts of several countries rarely visited by Europeans. Leo also composed a treatise on the lives of the Arabian philosophers. He is supposed to have died soon after 1526.—*Moreri. Biog. Univ.*

LEO (LEONARDO) one of the most laborious and brilliant composers that Italy ever produced, born in 1694 at Naples, and educated under Alessandro Scarlatti, the instructor of the no less celebrated Durante. He became the founder of a school of singing in the capital of which he was a native, and was the inventor of that species of music called by his countrymen "Aria d'ostinazione," or obligato airs. He relieved the dignity of the church music of Durante, but without injuring its effect, by the flexibility which was the distinguishing characteristic of his own. Besides two oratorios, his compositions on sacred subjects are numerous and valuable. He was also the author of nineteen operas, some of which are now scarce; of these latter his "Ciòè," an opera buffa, is the most celebrated. He died at Naples in 1745.—*Burney's Hist. of Mus.*

LEONE Y GAMA (ANTONIO de) a transatlantic antiquary, who died in 1802 at Mexico, where he was attached to the secretary of state's office. He had formed a most ample collection of Mexican monuments of every description; as statues, idols, talismans, manuscripts on deer-skin, &c. He was remarkable for his intimate acquaintance with the calendar, the chronology, the numismatics, and gnomonics of the Mexicans, who appear to have made great advances in the knowledge of the arts and sciences. A Latin translation of the documents and memoirs collected by Gama was announced for publication in Italy, not long after his death.—*Month. Mag.* vol. xv.

LEONCENUS (NICHOLAS) an Italian physician and philosopher of the fifteenth century. He was born in 1428, and while young acquired an acquaintance with Greek and Roman literature. He then studied medicine at Padua, after which, according to some, he travelled to England. In 1464 he settled at

Ferrara, where he was professor of mathematics, and subsequently of moral philosophy, for a long period. His death took place in 1524, and notwithstanding his great age, he is said to have enjoyed his health and faculties to the last. He translated into Latin the aphorisms of Hippocrates, and some of the works of Galen, and composed a treatise, "De Plinii et plurium aliorum auctorum in Medicina Erroribus." But he did not confine himself to professional studies, as he made Italian versions of the History of Dion Cassius and the Dialogues of Lucian.—*Tiraboschi. Hutchinson's Biog. Med.*

LEONICENUS (OMNIBONUS) one of the most celebrated grammarians of the fifteenth century. He was born about 1428 at Lonigo, of a family named Ognibene. He frequented the school of Victorinus of Feltre, one of the revivers of letters in Italy, and he afterwards studied under Emanuel Chrysoloras at Venice. He is said to have subsequently taught the belles lettres in that city; and Laire conjectures that he became director of the press to Nicholas Jenson, the famous Venetian printer, and that he died at the beginning of the sixteenth century. He was the author of Commentaries on Lucan, Valerius Maximus, some of the works of Cicero and Sallust; and published editions of Quintilian, Cicero's Rhetoric, &c. &c.—*Biog. Univ.*

LEONIDAS I, king of Sparta, celebrated in the records of Grecian heroism. He was the son of king Anaxandrides, and succeeded his half brother Cleomenes, B.C. 491. When Xerxes, king of Persia, invaded Greece, the Athenians and Lacedemonians, and their allies alone of the greater states, resolved to oppose him, and the latter gave the chief command of their forces to Leonidas, who marched with 4,000 men to take possession of the straits of Thermopylæ. He posted his small army so skilfully, that on arriving at the straits, Xerxes found that it would be a difficult matter to force a passage, and sought to gain over Leonidas, by a promise of making him master of Greece. When this proposal was rejected with disdain, the despot sent a herald, to order the Grecians to deliver up their arms, "Let him come and take them," was the laconic reply. The Persians were then repulsed with great slaughter, but in the mean time a treacherous Greek, named Epialtes, had led a chosen body of ten thousand Persians by a secret passage over the hills, who thus gained the rear of Leonidas. The hero, seeing that all was lost, found that nothing remained but to afford a memorable example of what Greeks could do when called upon to die for their country. In order to prevent unnecessary loss, he retained only three hundred Spartans, seven hundred Thespians, and four hundred Thebans, the latter being rather kept as hostages, than as well-affected to the cause of Greece. The Thespians, on the other hand, would not forsake their allies the Spartans, and nobly devoted themselves to the same certain destruction. Xerxes, advised of the success of Epialtes, marched his whole army to

the entrance of the straits, where Leonidas advanced to meet them. The effects of valour heightened by despair were terrible, and the Spartan king fell amidst a heap of slaughtered enemies. His friends defended his body as long as possible, until the approach of the foe in the rear induced the survivors to collect into one small band, facing every way, which at length, after causing dreadful devastation, were nearly all slain. Xerxes, enraged at his loss, placed the body of Leonidas on a cross, but the memory of his valour and patriotism has rendered his name immortal. The gratitude of Greece raised a splendid monument to those who fell at Thermopylæ, on the site of their glory, and a funeral oration was long annually pronounced, amidst the celebration of martial games, over their tombs.—*Herod. Diad. Sic. Justin.*

LEPAUTE (JOHN ANDREW) an eminent horologist, born in 1709. He went to Paris when young, and soon distinguished himself as an ingenious artist. In 1753 he made for the Luxembourg palace the first horizontal clock, which had been seen at Paris; and the same year he presented to the Academy of Sciences a pendulum of a single wheel, invented by himself. After a life dedicated to the improvement of his art, he died at St Cloud, April 11, 1789. He published "Traité d'Horlogerie," 1755, 4to; Supplement, 1760; and "Description de plusieurs Ouvrages d'Horlogerie," 1764, 12mo.—LEPAUTE (MADAME) wife of the preceding, distinguished herself by her attention to astronomy and mathematics, relative to which, she published several works of research. She died December 6, 1788, at the age of sixty-five.—*Biog. Univ.*

LEPAUTRE or LEPOTRE (ANTHONY) a native of Paris, who became first architect to the king. He erected the chateau of St Cloud; and in 1671 he became a member of the Academy of Sculpture, then established. Lepautre's chief talent lay in the decoration of edifices, but his works exhibit too great a fondness for excessive ornament. The church of Port Royal, in the Faubourg of St Jacques at Paris, is the only one of his buildings now existing. He died in 1691, owing to chagrin, at Mansard's having been preferred before him as the architect of the chateau of Clugny. A collection of the designs of Lepautre was published in 1751.—JOHN LEPAUTRE, his brother, distinguished himself as an engraver. He died in 1682.—PETER LEPAUTRE, the son of Anthony, was eminent as a sculptor, and became royal statuary and director of the academy of St Luke. He died in 1744, aged ninety-four.—*Biog. Univ.*

LE PAYS (RENE) sieur du Plessis Ville-neuve, a French wit and poet of the seventeenth century. Though of a good family, he was but little favoured by fortune, and going to Paris when young, he obtained a financial appointment, and afterwards served in the army in Spain. He then travelled in England,landers, and Holland; and at length returning to France, he became comptroller of the im-

posts in Dauphiny and Provence; where he passed a great part of his life, and composed most of his works. He was admitted a member of the academy of Arles in 1668; and in 1670 the duke of Savoy conferred on him the order of St Maurice. He died April 30, 1690. He published "Amitiés, Amours, et Amourettes," Grenoble, 1664, 12mo; "Zelotide histoire galante," Paris, 1665, 12mo; "Nouvelles Œuvres," 1672, 2 vols. 12mo; and "Le Démêlé de l'Esprit et du Cœur," 1688, 12mo. Most of his works have been repeatedly printed, and some of them translated into English. Boileau says the prose of Le Pays is better than his poetry.—*Biog. Univ.*

LERMA (FRANCIS DE ROXAS DE SANDOVAL, duke de) first minister of Philip III of Spain, one of the most striking examples of the inconstancy of fortune and the vanity of greatness. He was only marquis of Denia, when he was appointed equerry to the infant don Philip, over whom he acquired such an influence, that, when the prince ascended the throne in 1598, he made him his favourite and prime minister. He concluded peace with England and Holland, and endeavoured to relieve the embarrassed state of the finances, by encouraging agriculture. But his measures were ill-contrived, and his weakness and imprudence procured him a great many powerful enemies. After the death of his wife, he took the ecclesiastical habit, and obtained a cardinal's hat, which he conceived would protect him in the possession of his power. But he was deceived; for his own son, the duke d'Uzeda, contrived to supplant him in the king's favour, and succeeded to his post on his being dismissed in 1618. He was accused, without any probability, of having employed his secretary, Roderic Calderon, to poison the queen. For this imaginary crime, Calderon was executed in the next reign. The duke of Lerma died in retirement in 1625.—*Nouv. Dict. Hist. Biog. Univ.*

LE SAGE (ALAIN RENE) a celebrated French novelist and dramatic writer. He was born May 3, 1668, at Sarzeau, a small town in Brittany, and was the son of a lawyer, who held an office in the royal court of Rhuys. His father dying in 1682, he was placed under the guardianship of an uncle, who dissipated the fortune of his ward. He studied at the college of the jesuits at Vannes, after which he appears to have been employed in his native province for five or six years. In 1692 he went to Paris to study philosophy, and also to solicit some new employment. His talents and manners procured him admission into the best society, where his wit and taste for elegant literature rendered his company very acceptable. In 1694 he married the daughter of a Parisian tradesman. His first literary undertaking was a translation from the Greek of the letters of Aristenæus, published in 1695, 12mo. Established as a resident in the capital, he was admitted an advocate of parliament; and some time after the abbé de Lyonne gave him a pension of six hundred livres. He studied the Spanish language, and produced a

multitude of translations or imitations of Castilian dramas and romances. Two of his comedies were published in 1700, and a third was acted in 1702; but it was not till 1707, when his "Crispin, Rival de son Maître" appeared, that he established his reputation as a theatrical writer. His success as a novelist has most contributed to make him known to foreigners. "Le Diable Boiteux," the title of which has been oddly translated, "The Devil upon two Sticks," became extremely popular; and "Gil Blas de Santillane," which followed a few years after, has furnished a model for numberless imitations in various countries and languages. Le Sage projected a translation of the Orlando of Ariosto, and published in 1717—21, "Roland l'Amoureux," from Boiardo, as an introduction to the former, which was never executed. He returned to romance-writing, in which he succeeded better than in poetry. In 1732 he published "Les Aventures de Gusman d'Alfarache," 2 vols. 12mo; and the following year "Les Aventures de Robert, dit le Chevalier de Beauchesne," 2 vols. 12mo, containing the real history of a freebooter, from papers furnished by his widow. In 1734 appeared "L'Histoire d'Estevanille Gonzales," 2 vols. 12mo; and in 1735 an amusing dialogue, entitled "Une Journée des Parques," 12mo. The last of his novels was, "Le Bachelier de Salamanque," which La Harpe considers as inferior to all the preceding. The author however did not cease writing, as in 1740 he produced a collection of satirical letters, under the title of "La Valise trouvée;" and in 1743 a volume of anecdotes. In the year last mentioned he retired to Boulogne, where he died November 17, 1747. Le Sage produced a great number of comic pieces for the theatre, seven of which he published in his "Theatre François," 1739, 2 vols. 12mo, including "Crispin Rival de son Maître," and "Turcaret," intended as a satire on the farmers-general, who in vain endeavoured to prevent the author from getting it acted. Notwithstanding his talents, and the success of his numerous compositions, the author of Gil Blas was by no means rich; owing to a carelessness and liberality of disposition, which prevented him soliciting the great for employments, or from steadily accumulating the products of his literary industry. Le Sage had by his wife three sons and a daughter. His eldest son, RENE ANDREW LE SAGE DE MONTMÉNIL, was bred to the bar; but to his father's great displeasure, he preferred the stage. Having however acquired much reputation as a comedian, he was reconciled to his father, who was greatly distressed by his death, which took place in 1743.—FRANCIS ANTHONY LE SAGE, DE PITTENEC, the third son of the novelist, adopted the same profession as his brother, and produced some pieces for the theatre, acted at Paris in 1734.—*Biog. Univ.*

LE SAGE (GEORGE LEWIS) a Genevese philosopher, born of a French family in 1724. He received his early education under his father, who was a teacher of mathematics

and natural philosophy. He afterwards studied under Calendrini and Gabriel Cramer, and became acquainted with J. A. De Luc. He then went to Basil as a medical student, and thence to Paris; but this was done in compliance with the wishes of his father. Mathematics in the mean time chiefly engaged his attention; and on his return to Geneva he abandoned all thought of medical practice, not chusing to comply with the requisite forms. He composed for an academical prize his "Essai sur l'Origine des Forces mortes;" and in 1750 he adopted the occupation of a teacher of mathematics. In 1756 he published in the *Mercure de France*, a letter to an academician of Dijon, containing objections against the common method of explaining the phenomena of gravitation; and in 1758 he obtained a prize from the academy of Rouen, for a piece entitled, "Essai de Chimie mécanique." His attention to study seriously affected his health, and in 1762 he became almost blind. He continued however to prosecute his researches till near the time of his death, which took place in 1803. This very ingenious philosopher wrote a great deal, but published little. Among his writings, which have been printed, are, "Fragmens sur les Causes finales;" "Extraits de la Correspondance de Le Sage;" and "Traité de Phisique mécanique," the latter of which was edited by M. Prevost.—*Edinburgh Review. Biog. Univ.*

LESLEY (JOHN) the celebrated bishop of Ross in Scotland, so called, descended of the ancient family of that name, was born in 1527, and educated at Aberdeen. He was a prominent actor in the reign of the unfortunate Mary Stuart, whom he accompanied from Paris to her native country in 1561, after the decease of her husband Francis II. Three years after, he was appointed abbot of Lindores, but soon vacated his preferment, on being elevated to the see of Ross. In this situation, he took an active part in the dissensions to which the progress of the reformed doctrines in Scotland gave rise, and was concerned with fifteen colleagues in making the digest of the laws of the realm, familiarly known as the "Black Acts," from the type in which they were printed at Edinburgh in 1566. When Mary abandoned her kingdom to throw herself on the protection of Elizabeth, bishop Lesley's zeal in his sovereign's behalf carried him into England, when he publicly defended her cause both at York and in London; but being detected by Elizabeth in an intrigue, the object of which was the union of Mary with the powerful duke of Norfolk, he was, notwithstanding his rank in the church, and his character of an ambassador, committed a close prisoner to the Tower, whence he was in 1573 deported to the Low Countries. On the recovery of his liberty he renewed his exertions in his mistress's behalf, endeavouring to enlist several continental powers in her cause, and soliciting the active interference of the Vatican itself. While engaged in these proceedings he was himself appointed vicar general to the see of Rouen; but during a visitation to his

diocese, he narrowly escaped being delivered up to his enemy the queen of England, by some Huguenots, who seized his person, and only released him on the payment of a large sum of money. Under Henry III he was again imprisoned, but at length obtained his liberty by similar means, and in 1593 was advanced to the bishopric of Constance. The wealth and power which his elevation gave him, he employed in the foundation of three colleges for the instruction of his countrymen at Rome, Paris, and Douai; but at length growing in years, he resigned his mitre, and expired in 1596, a simple monk in the monastery of Guirtenberg in the Netherlands. His defence of queen Mary, and an exposition of her title to the English crown, have been published; as have also his "Description of Scotland and the Scottish Isles;" a treatise "On the Origin, Manners, and Exploits of the Scotch;" "Parænesis ad Nobilitatem Populæ Scotiorum;" and "Afflicti Animi Consolationes, et tranquilli Animi Conservatio."—*Dodd's Ch. Hist.* *Robertson's Hist. of Scotland.*

LESLIE (JOHN) whose life exceeded a hundred years, flourished in the sixteenth and seventeenth centuries. He was a native of Balquhaine in Scotland, and received his education in the universities of Aberdeen and Oxford. He afterwards visited most parts of the continent of Europe, was present at the siege of Rochelle, and at the isle of Rhé. Availing himself however, of the opportunities afforded him by mixing with the people of the countries he travelled through, he acquired an extraordinary familiarity with their languages and literature. On his return to England, after an absence of more than twenty-two years, Charles I made him bishop of the Orkney islands, whence he was afterwards successively translated to the Irish sees of Raphoe and Clogher. While at Raphoe he defended his palace against Cromwell's troops, and was the last who held out against the Parliamentarians in Ireland. He died in 1671, having been a prelate for more than half a century.—*Athen. Oxon. Biog. Brit.*

LESLIE (CHARLES) second son of the preceding, was born in Ireland, but the date of his birth is unknown. He was educated at Trinity college, Dublin, where he graduated MA. He afterwards became a student in the Temple, but relinquished the law for divinity, and entered into orders in 1680. In 1687 he was made chancellor of Connor, and displayed great firmness in resisting the measures of the Popish party, by disputation and otherwise, and in particular withstood the admission of a sheriff of that religion, although nominated by James II himself. Notwithstanding this resistance to what he deemed an illegal mandate, he held not with the principles of the Revolution, and declined taking the oaths to king William, which necessarily deprived him of all his preferments, and he withdrew with his family into England. Here he employed himself in supporting the cause to which he had adhered, and wrote many pieces in defence of it. Being an able disputant, he was

highly esteemed by the nonjurors, but his writings, and frequent excursions to St Germain's, necessarily rendering him an object of suspicion, he was obliged to quit the kingdom. He then openly repaired to the pretender, whom he sought in vain to convert to the protestant religion. He was also very active in the production of schemes for the admission of that prince to the crown under certain guarantees in favour of the establishment. On the termination of the rebellion of 1715, he accompanied the pretender into Italy, where he experienced the usual neglect and ingratitude with which that unfortunate family has almost uniformly treated its worthiest adherents. Soliciting on this account to return to his native country, government, on the application of his friends, allowed him to do so without molestation, and he died at his own house at Glasgow, in the county of Monaghan, April 13 1732. His theological works, of which the most considerable are, treatises against the deists and socinians, have been printed in two volumes folio; one of these, entitled "The Snake in the Grass," written in exposure of the fanaticism and absurdities of Antoinette Bourignon, is very highly spoken of by Bayle. He has been accused of borrowing his "Short and Easy Method with the Deists" from the abbé St Real, but Dr Gleig thinks this coincidence of the two works accidental. He wrote, during the reign of Anne, a weekly paper called "The Rehearsal," which has been collected in four volumes octavo. A list of his political pieces, which are very numerous, may be found in the first of our authorities. They are of course strongly jacobitical; and the most celebrated of them were written in opposition to Burnet, Locke, and Hoadley, on the principles of civil government and the Revolution.—*Biog. Brit. Encyc. Brit.*

LESSER (FREDERICK CHRISTIAN) a German divine and naturalist, born at Nordhausen in 1692. He studied at the university of Halle, after which he went to Leipsic, and thence to Berlin. In 1716 he became assistant preacher at Frauenberg. He formed a fine collection of objects of natural history, and a curious library of early-printed books. After having held various ecclesiastical benefices, he died September 17, 1754. The writings of Lesser relate chiefly to natural history, among which are "Lithology, or the Theology of Stones," 1735; "The Theology of Insects," which has been translated into English [see LYONET]; "Testaceo-Theology;" and "Miscellanies on Natural History and Physico-Theology."—*Biog. Univ.*

LESSING (GOTTHOLD EPHRAIM) an eminent German writer, was born in 1729, at Kamenz in Pomerania, of which place his father was protestant minister. He received his early education at the free school of Meissen, where he acquired a great proficiency in the Latin and Greek languages, and was then removed to the university of Leipsic. Here he distinguished himself by a tendency to scepticism; by great originality of sentiment and conduct; and, above all, by an enthusiastic at-

achment to the drama. Having completed three sessions at the university, he was urged by his father either to enter into orders, or seek a medical degree; but he declined both, and took to writing for the stage. His literary connexion with the theatre in the first instance by no means improved either his morals or circumstances; but although he endured much privation and distress, he was too much attached to the drama to seek any other employment. At Berlin, where he sometimes resided, he was introduced to Voltaire, and subsequently to the distinguished Jewish philosopher Mendelsohn, and to Nicolai, Ramler, Sulzer, and other literary men, by whom he was held in great estimation. It was about this time that he wrote his domestic tragedy of "Miss Sarah Samson," soon after which he accompanied Mr Winkler, a man of fortune, to Amsterdam. On his return, Lessing resumed his literary labours with great assiduity: he made several translations from the English, and also composed a volume of elegant original fables, and wrote ingenious essays on fable and epigram. In conjunction with Mendelsohn and Nicolai, he also undertook a periodical work, entitled, the "Library of Belles Lettres." In 1768 he was elected a member of the academy of Berlin, and was soon after appointed secretary to general Tauenzien, whom he accompanied to Breslau. On the return of peace, he was introduced to the king of Prussia, and resumed his literary occupation at Berlin, where he produced in 1766 his "Laocoon," a dissertation on the limits of poetry and painting. An invitation from the lovers of the drama at Hamburg induced him to visit that city, in order to establish a theatre, in addition to which he assumed the critical office in a weekly paper, entitled the "Hamburg Dramaturgy." In 1769 he met very opportunely with a generous patron in Leopold, heir-apparent to the duke of Brunswick, by whose means, when his circumstances were declining, he was made librarian at Wolfenbuttel. One of the fruits of this appointment was a periodical publication, entitled, "Contributions to Literary History." In 1771 he gave a new edition of his literary works, and the next year his popular tragedy of "Emilia Galotti," appeared on the stage. In 1775 he married a widow lady at Vienna, and soon after accompanied his patron, prince Leopold of Brunswick, in a tour through Italy. He had now become a very distinguished character among the German literati, and several of the princes of that country made him offers of protection, but nothing would induce him to quit the prince of Brunswick, who, by his accession to the sovereignty in 1780, was enabled to augment his favours towards him. His publication of "Nathan the Wise," displayed his final sentiments upon the difference of religious opinions, and it is by some deemed his masterpiece; but it is more adapted for the closet than the stage, although frequently acted, as curtailed by Schiller. A second part of this drama, entitled, "The Monk of Lebanon," and a "Dissertation on the Education

of the Human Race," were the chief productions of the last years of his life, in which his health was rapidly declining. Lethargic symptoms announced his approaching end, which took place at Hamburg in 1781, in his fifty-second year.—*Life in Monthly Mag. Nov. Diet. Hist.*

LESSIUS (LEONARD) a learned jesuit, born at Brechtan in the Low Countries, in 1554, afterwards professor of philosophy in the college of Douai. The theological chair at Louvain becoming vacant, he resigned his professorship in order to fill it, which he did with great ability for a while, till becoming suspected of favouring the Semipelagian heresy, in some of his propositions, the doctors of the university sat in judgment upon them, and condemned thirty-four as heterodox. Lessius appealed from this decision. The colleges at Treves, Ingolstadt, and Mayence affirmed the orthodoxy of his tenets, and the pope himself ultimately decided in his favour. Of his writings, which are numerous, two only have been translated into English, an essay "On the Existence of a God," and another "On the Immortality of the Soul." His other works are "Hlygiasticon, seu vera ratio valetudinis bonæ vitæ;" "De Justitia et Jure," folio; and "De Potestate summi Pontificis." His death took place in 1623.—*Moreri.*

L'ESTRANGE (sir ROGER) better known than esteemed as a political partizan and controversialist, was the youngest son of sir Hammond L'Estrange, knight, of Hunstanton-hall, Norfolk, where he was born in 1616. His father being a zealous royalist, brought up his son, whose education was probably completed at Cambridge, in the same principles. At the age of twenty-two he attended Charles I in his expedition into Scotland, and laid a plan for surprising Lynn, but being betrayed by his associates, and detected with the king's commission in his pocket, he was tried by a court martial as a spy, and condemned to die. He was, however, respited from time to time, until he had lain in prison four years, when, by the connivance of his gaoler, he made his escape to the continent. On the dissolution of the long parliament, he ventured to return home, and was released by Cromwell on giving bail. On the Restoration he did not undervalue his sufferings and merits, and was, after a while, made licenser of the press, a profitable post, which was, however, the only recompense he ever received, except being put in the commission of the peace, at that time a very unworthy source of emolument in London. In 1663 he set up the "Public Intelligencer," which he discontinued on the design then concerted of publishing a London Gazette, the first number of which appeared on the 4th February 1665. In 1679 he set up a paper, called the "Observer," in defence of the measures of the court; and in 1681 distinguished himself by his zeal in the exposure of the popish plot, as also of the fanatical one the following year. In 1687 he was obliged to give up the "Observer," because he could not agree with James, who had knighted

him, in the doctrine of toleration, although he had written in favour of the dispensing power, which complaisance subjected him to the imputation of having become a member of the church of Rome, but he refuted the charge on oath. After the Revolution, he was left out of the commission of the peace, and met with some annoyance on account of his presumed disaffection. He died in 1704 at the advanced age of eighty-eight, his faculties having become impaired some years before he died. He was the author of a great number of ephemeral political tracts, distinguished by occasional force and perspicuity; but still more by their coarse and virulent abuse, and by a style so rude and vulgar, that he was regarded by Granger as one of the great corruptors of the English language. He is also held to be the first who regularly received newspaper pay for defending all sorts of measures, good and bad; being a staunch, intrepid, and unblushing controversialist. L'Éstrange translated "Josephus," his best work; "Cicero's Offices;" "Seneca's Morals;" "Erasmus's Colloquies;" "Æsop's Fables;" "Quevedo's Visions," &c.—He had a brother, HAMDON L'ÉSTRANGE, who wrote a work, entitled "The Alliance of the Divine Offices," and a "Life of Charles I."—*Biog. Brit. Nichols's Lit. Anec. Granger.*

LETHÉULIÉ (SMART) an ingenious antiquary, and collector of ancient relics and natural curiosities. He was descended from an ancient family of French protestants, settled in England after the revocation of the edict of Nantes. In the prosecution of his favourite researches he visited various parts of England; and the itineraries which he composed, and the discoveries he made relative to the antiquities of the country, together with the drawings which he collected, afford ample evidence of his zeal and ability as a man of science. In these journeys he made a large collection of fossils, of which he formed a classical arrangement, and had drawings made of the most curious, to which he added his own observations. He visited Italy, where he collected ancient marbles, and procured drawings of others, to which he subjoined his own remarks on the natural history and archæology of Italy. He also formed a cabinet of medals, and an assemblage of curious engravings. Mr Lethéulier died at Aldersbroke, near Ilford in Essex, August 27, 1760; and in consequence of a testamentary bequest, his antiquities and other treasures were deposited in the British Museum. He was a fellow of the Society of Antiquaries, and a contributor to the *Archæologia*.—*Ann. Reg.*

LETTI (GREGORIO) a copious writer of history, was born in 1630 at Milan, of a family originally of some distinction at Bologna. He was educated at the jesuits' college, and was intended for the church; but was induced to make open profession of the protestant religion at Lausanne in 1657. His conversion so pleased Guerin, a celebrated physician at Geneva, that he gave him his daughter in marriage, and such was his credit, that he gra-

tuitously obtained the right of citizenship in 1674. His quarrelsome and satirical humour, however, involved him in so many disputes, that in 1680 he deemed it advisable to visit England, where he was favourably received by Charles II, who gave him a pension. He was also promised the situation of royal historiographer; but in his work, "Teatro Britannico," having exercised his pen with a freedom which displeased the court, he was commanded to quit the kingdom. He then repaired to Amsterdam, and obtained the title of historiographer to that city, where he died in 1701. He was a most indefatigable writer, the catalogue of his productions amounting to nearly one hundred volumes on forty different subjects, principally historical and biographical. Among the best known of his productions, are his lives of Pope Sixtus V, of the emperor Charles V, of queen Elizabeth of England, of Philip II, of Oliver Cromwell, and of the duke of Ossuna. Some of his severest attacks on the church of Rome, are his "Nepotismo di Roma;" "Cardinalismo de Santa Chiesa;" and "Itinerario della Corte de Roma." All his works are written in Italian, in a lively diffuse style, but cannot be quoted as authority, his inaccuracy and even disposition to employ fiction in order to amuse, being notorious. He has succeeded on his own plan, particularly in his life of Sixtus V, the most popular of all his productions.—*Moreri. Nicéron. Granger.*

LETOURNEUR (ANTOINE FRANÇOIS LOUIS HONORE) born at Granville in Normandy, in 1751. After having studied mathematics, he entered into the artillery service, became a captain, and obtained the cross of St Louis. He adopted with ardour the principles of the Revolution, and in September 1791 he was chosen a member of the legislative assembly, and in 1792 of the Convention. On the king's trial he voted with the majority. Being a member of the military committee, he was much occupied with preparing reports on the organization of the army. In January 1795, he was president of the Convention; and he was afterwards commissary on board the Mediterranean fleet. On his return to Paris he became a member of the committee of public safety, and then of the executive directory. He held the latter office only till May 1797, when he became inspector-general of artillery. He was subsequently employed at Lille to treat of peace with the English government. Under the consulate he was prefect of a department, and in 1804 he was made a counsellor of the court of accounts. He was deprived of this place in 1814, and being restored to it by Buonaparte, he was again deprived, and was obliged to quit France. He died near Brussels in 1817.—*Biog. Nouv. des Contemp.*

LETTSON (JOHN COAKLEY) an ingenious physician and medical writer, born in the island of Little Vandyke, near Tortola, in the West Indies. His relations were of the society of friends; and at an early age he was sent to England, and placed under the tuition of a Mr

Thompson, near Warrington, where Dr Fothergill, who had a summer residence in the neighbourhood, superintended his studies. He was then apprenticed to an apothecary at Settle in Yorkshire, after which he attended for two years at St Thomas's hospital. His father having died while he was young, and having also lost his elder brother, he returned to the West Indies, to take possession of some property which had devolved to him. It consisted in part of negro slaves, whom he liberated; after which, he settled as a medical practitioner at Tortola. Ere long he re-crossed the Atlantic, visited the great medical schools of Paris, Leyden, and Edinburgh, and at Leyden he took the degree of MD. He then settled in London as a physician, and having married a lady of considerable fortune, he obtained a very lucrative share of medical practice. In 1769 he was admitted a member of the college of Physicians, the next year elected FSA., and the year succeeding FRS. His writings are numerous. Besides papers in the Philosophical Transactions, and the collections of medical societies, he published "The Natural History of the Tea-tree," 1772, 4to; "The Naturalist's and Traveller's Companion," 1774, 8vo, 3rd edition, 1800; "Medical Memoirs of the General Dispensary," 1774, 8vo.; "Hints on Beneficence, Temperance, and Medical Science," 1801, 3 vols. 8vo. "Memoirs of Dr Fothergill;" and several smaller pieces. He died at his house in Sambreok-court, London, November 1, 1815, aged seventy-one. A collection of his works was published, with his Life by Mr Pettigrew.—*Univ. Mag. Annals of Medicine.*

LEUCIPPUS, a philosopher of considerable eminence in the fifth century, BC. The ancients are not agreed upon the place of his birth, but according to Diogenes Laertius, it took place at Elea. All accounts, however, concur in attributing to him the first idea of the system of Atoms, which was improved by his disciple Democritus, and adopted by Epicurus. He wrote a treatise concerning Nature, now lost; and dissatisfied with the metaphysical subtleties of the Eleatic school, resolved to examine the real constitution of the material world, and inquire into the mechanical properties of bodies. His great object was to restore the alliance between reason and the senses, for which purpose he suggested the doctrine of indivisible atoms, having within themselves a principle of motion. By the help of this principle, a feeble and fanciful effort was made to account for the production of all natural bodies from physical causes, without the intervention of Deity, although it is not certain, that either he or his disciples intended to discard the notion of a divine nature from the universe. From the atomic system Descartes borrowed his hypothesis of the "Vortices," and possibly some hints of his grand mechanical principle, "that bodies in a circular motion remove from the centre as much as possible." Kepler was also much indebted to the theory of Leucippus.—*Di-*

genes Laert. Enfield's Hist. of Philos. Stan-ley's Hist. of Philos. Boyle.

LEUNCLAVIUS (JOHN) a native of Westphalia, born at Amelbrun in that country, in 1533. After visiting various countries of the east, as well as great part of Europe, he finally returned to Germany, and settled at Vienna, where, from the materials which he had collected during his travels, he composed a "History of the Ottoman Empire," in folio, and "The Annals of the Sultans." He also published Latin translations of the works of Zosimus and Xenophon, and abridged the "Basilica" into two folio volumes. A work, entitled "Commentatio de Moscorum, &c." has been ascribed to him. His death took place in 1593.—*Moreri. Nicéron.*

LEUSDEN (JOHN) a celebrated biblical critic and theologian, born in 1624 at Utrecht, where he afterwards obtained the professorship of Hebrew, with the reputation of being one of the most erudite scholars and able divines of the age. He published a new edition of the Books of the Old Testament in the original Hebrew, in 2 vols. 8vo, and of those of the New Gr. and Lat., in one thick 12mo; a Hebrew and Latin Lexicon; an edition of Poole's Synopsis, 5 vols. folio, "Versio Septuaginta Interpretata;" "Clavis Græca Novi Testamenti;" "Onomasticon Sacrum;" "Philologus Hebraus;" "Philologus Hebræomixtus;" "Clavis Hebraica et Philologica Vet. Test.;" a Hebrew Psalter; and Commentaries on the Books of the Prophets Joel, Hosea, and Jonah. Leusden died at his native city about the close of the seventeenth century.—*Chauffp. Sauri Onon.*

LEUWENHOECK (ANTHONY VAN) a celebrated natural philosopher, born at Delft in Holland, in 1632. His skill in grinding optical glasses led the way to the making microscopical observations, which procured him no small degree of fame. He began publishing an account of his discoveries in the Philosophical Transactions, in 1673, and they are continued from No. xciv. to No. cclxxx. of that collection. In 1680 he was chosen a fellow of the Royal Society; and in 1693 he had the honour to entertain the czar Peter the Great, then at Delft, with an exhibition of his experiments. He appears to have passed the whole of his life at his native place, devoting his time to microscopical researches chiefly relating to anatomy. He died in 1723. He published "Arcana Naturæ ope Microscopiorum detecta," 4to; Letters, &c. A selection from his works was published in English, 1800, 4to.—*Aikin's G. Biog. Hutton*

LEVEQUE (PETER) an eminent French mathematician, born at Nantes in 1746. He was educated at the jesuits' college, at his native place; and at the age of eighteen he went to sea in a low capacity, for the purpose of gaining a practical acquaintance with navigation. Returning in about two years, he taught mathematics at Mortagne, at Breteuil, and afterwards at Nantes, where he became professor royal of hydrography in 1779; and in 1786 naval examiner. After escaping from

the storms of the Revolution, he was in 1797 appointed a member of the council of the ancients. His situation exposed him to proscription; but at length he was freed from peril, and was made examiner of the polytechnic school. In 1801 he was admitted a member of the Institute, and of the legion of honour. He died at Havre in 1814. He published "Tables générales de la hauteur et de la longitude du Nonagésime," Avignon, 1776, 2 vols. 8vo; "Guide du Navigateur," Nantes, 1779, 8vo; and several other valuable works relating to nautical affairs and mathematics.—*Biog. Univ. Biog. Nouv. des Contemp.*

LEVER (sir ASHTON) an English gentleman, memorable as the collector of a museum of natural and artificial curiosities. He was the son of a Lancashire baronet, and was educated at Corpus Christi college, Oxford. He resided at Alkington, near Manchester, where he formed an aviary, and afterwards a miscellaneous museum. Having injured his fortune by the indulgence of his taste as a virtuoso, he obtained an act of parliament authorising him to dispose of his collection by way of lottery, in 1785. By this means it became the property of Mr James Parkinson, who, after making an exhibition of the Leverian museum for some years, sold the whole, piece-meal, by auction. Sir A. Lever died at Manchester in 1788.—*Gent. Mag.*

LEVERIDGE (RICHARD) an actor and singer at the old theatre in Lincoln's-in-fields, during the early part of the last century. He was celebrated for his convivial qualities, and in 1726 published a collection of his songs in 2 vols. 12mo. The music to the second act in Macbeth has been attributed to him, but on insufficient grounds. Leveridge kept a coffee-house in Tavistock-street, Covent-garden, and is said to have challenged all England to sing a bass song with him for one hundred guineas. He died in 1753.—*Biog. Dict. of Mus.*

LEVESQUE (PETER CHARLES) a French writer on history and general literature. He was born at Paris in 1736, and when young, apprenticed to an engraver. Displaying a strong inclination for learning, he was removed to the college of Mazarin, where he studied with great success. His family having retired into the country, he for some time supported himself at Paris by working as an engraver. In 1773 he went to St Petersburg, with a recommendation from Diderot to the empress of Russia, who appointed him professor of belles lettres at the school of noble cadets. Here he formed the design of writing the history of Russia, and having completed the work, in 1780 he returned to Paris to publish it. He was admitted into the academy of Inscriptions, and some years after was appointed professor at the Royal college. He was subsequently made a member of the National Institute; and in 1812 he closed a long life devoted to literary pursuits. Besides his Russian history, he produced a translation of Thucydides; Histories of France, under the five first kings of the house of Valois; of the Roman Republic; of Greece; and various other works.—His

daughter, Mademoiselle ROSE LEVESQUE, married to M. Peligny de St Romain, has distinguished herself as a poetess. At the age of fifteen she composed a number of pieces, published at Paris in 1786, under the title of "Idylles et Contes champêtres," 12mo, which were warmly praised by Florian and Gessner. *Biog. Univ. Biog. Nouv. des Contemp.*

LEVESQUE DE LA RAVALIÈRE (PETER ALEXANDER) a learned writer, born at Troyes in France in 1697. He studied law at Orleans, with a view to an official situation at home; but preferring the cultivation of letters, he settled at Paris about 1726, and published an essay on dramatic poetry, which attracted little notice. He then devoted himself to the study of history; and in 1743 he became a member of the academy of Inscriptions. He died in 1762. Most of his productions relate to the history, antiquities, and literature of France, including "Précis des Révolutions de Langue Française," which involved him in a controversy with the Benedictine authors of *Histoire littéraire de France*. He also published an excellent edition of the poems of Thibault, count of Champagne, king of Navarre, Paris, 1742, 2 vols. 12mo; and he left in manuscript, a history of the counts of Champagne.—*Memoires de l'Acad. des Insc. Biog. Univ.*

LEVI (DAVID) an English mechanic of the Jewish persuasion, born in the metropolis in 1740. Though of an humble rank in life, he became possessed of considerable information and some learning, especially with regard to the antiquities of his nation. In 1787 he entered into a polemical controversy with Dr Priestley, whose "Letters to the Jews," he answered in two series of essays, written in the same epistolary form. He also published a Hebrew and English Lexicon, in 3 vols.; a translation of the Pentateuch, and another of the Hebrew Liturgy, in 6 vols.; and was the author of dissertations "On the Mosaic Rites and Ceremonies;" "On the Prophecies," &c. His death took place in 1799.—*Gent. Mag.* 1801.

LEVIZAC (JOHN PONS VICTOR LACOUTZ de) a French writer, descended of a noble family, and born at Alby in Languedoc. He became an ecclesiastic when young, and obtained a canonry at Vabres. He consecrated all his leisure to poetry, and in 1776 he commenced his literary career, by an idyl called, "Le Bienfait rendu," which gained the prize at the Floral games of Toulouse. At the Revolution he quitted France for Holland, and afterwards settled in England as a French teacher. He died in London in 1815. The abbé de Levizac is known advantageously as the author of "Bibliothèque portative des écrivains Français, ou Choix des meilleurs morceaux Extraits de leurs Ouvrages;" "Dictionnaire des Synonymes;" and other works designed to facilitate an acquaintance with the language and literature of France.—*Biog. Univ.*

LEWENHAUPT (ADAM LEWIS, count) a Swedish officer, who distinguished himself in the wars of Charles XII. He was born in

1659, of a good family, and was educated at Upsal and in some of the universities of Germany. He then entered into the Austrian army, and served against the Turks; and he afterwards belonged to a corps of Swedish troops employed by William III in Holland. On the accession of Charles XII, he was made a general, and after serving against the Russians in Courland, he was in 1706 appointed governor of Riga. In the war with Peter the Great, he commanded a Swedish army, with which he beat the Russians at Liesna in September 1708. He then joined the king of Sweden, and was present at the disastrous battle of Pultowa, soon after which he was obliged to surrender with the remains of his forces to the Russians. He was sent into the interior of Russia, where he died about ten years after, in 1719. Count Lewenhaupt employed the period of his captivity in writing memoirs, which were published at Stockholm in 1757, and are said to contain much curious information.—*Biog. Univ.*

LEWIS (JOHN) a learned antiquary and historian, born in 1675 at Bristol, and educated at the grammar-school of Poole in the county of Dorset. From this seminary he proceeded to Exeter college, Oxford, where he took his bachelor's degree in arts, and was soon after admitted into the church. About the close of the century, he was presented to the small living of Acrise, Kent, to which the archbishop of Canterbury added that of Hlawkinge near Folkestone, both which pieces of preferment he resigned for the perpetual curacy of Margate, and the vicarage of Munster in the Isle of Thanet, 1708. Having graduated as AM. at Cambridge, he obtained in 1717 the mastership of Eastbridge hospital in Canterbury, a sinecure, with which he continued to hold his other benefices. Mr Lewis devoted much of his leisure time to the study of the antiquities of Kent, more especially of that portion of the eastern part of the county where he resided, and which, from its historical associations both with the Roman and Saxon empire in Britain, affords a wide and interesting field for the researches of the curious scholar. His "History of the Isle of Thanet," a second edition of which appeared in one 4to vol. 1756, has long been considered a standard work, both for the learning and the industry which it displays; this book is now become scarce. His other productions are, "The History and Antiquities of Feversham Abbey," 4to; "A Dissertation on the use of Seals in England." The lives of Wycliffe, of Caxton the printer, and of bishop Pecock, each in one volume, 8vo; an "Exposition of the Catechism of the Church of England;" an edition of Wycliffe's Translation of the New Testament, with an account of the various translations of the Scriptures into English (also printed separately) prefixed, one volume, folio; and "Specimens of Errors in Collier's Ecclesiastical History." Mr Lewis died at Margate in 1746.—*Chalmer's Biog. Dict.*

LEWIS (MATTHEW GREGORY) an English writer, whose attempts both in the depart-

ments of the drama and of romance, obtained at one period a very considerable share of popularity in this country, though but too frequently disfigured by bad taste, and degraded by licentiousness. He was the son of a gentleman of good property, consisting principally of estates in the island of Jamaica, and who possessed sufficient influence with government to obtain for himself the lucrative and responsible post of under secretary at war. His son, the subject of this article, was born in the metropolis in 1773, and was educated at Westminster school, on quitting which foundation he travelled for improvement, especially into Germany, the literature of which country produced a strong impression upon him, and gave that peculiar turn to his compositions which placed him in the foremost rank among the delineators of the marvellous and terrific, and has since loaded the shelves of circulating libraries with hosts of imitators, most of whom, however, exhibit all the extravagances, without the genius of their model. Of his writings, the first and most celebrated was "The Monk," a romance in 3 vols. 12mo, which, although much decried for its licentiousness, ran through a great number of editions; "Feudal Tyrants," ditto, 4 vols.; "Romantic Tales," 4 vols.; "Tales of Wonder," in verse, one vol., 8vo; "Tales of Terror," one vol. 8vo; "The Castle Spectre," a romantic drama; "Adelmorn, the Outlaw," ditto; "Venoni," a tragedy; a volume of miscellaneous poetry, and "The Bravo of Venice," a translation from the German, one vol. 8vo. Mr Lewis had a seat in Parliament, but seldom took part in the business of the house. His death took place in 1818 at sea, while on his voyage home from a visit to his West Indian possessions. An idle story has been circulated that it was occasioned by poison, administered to him by a negro, whom he had incautiously acquainted that he had ordered the emancipation of all his slaves at his decease.—*Ann. Biog.*

LEWIS (WILLIAM) an ingenious physician and writer on chemistry and pharmacy. He had obtained the degree of bachelor of medicine, was a fellow of the Royal Society of London, and a member of the Royal Academy of Stockholm; and he was engaged in professional practice at Kingston in Surrey, where he died, after a lingering illness, Jan. 21, 1781. His reputation as a practical and theoretical chemist occasioned his being engaged to read a course of lectures on chemistry to his late majesty, when prince of Wales, at Kew, a manuscript copy of which, together with a course of lectures read before the duke and duchess of Gloucester at Kingston, was sold after the decease of Dr Lewis, when his whole library, comprising several valuable manuscripts, was disposed of by auction in London. He was the author of "An Experimental History of the Materia Medica," or of the natural and artificial substances made use of in medicine, of which an improved edition was published by Dr Aikin, 1784, 4to. His other works are, "Commercium philosophico-technicum; or

the Philosophical Commerce of the Arts," 4to, 1763; "A Course of Practical Chemistry," 8vo; and an abridgment of the medical writings of Frederic Hoffman.—*Orig.*

LEY (JAMES) earl of Marlborough, an English judge, who flourished during the early part of the seventeenth century. He was the sixth son of Henry Ley, esq. of Telford in Wiltshire, born in 1552. From Brasenose college, Oxford, he removed to the metropolis, and entered himself of Lincoln's-inn, by which society he was in due course called to the bar. In 1604 he was promoted to the office of chief-justice of the King's Bench in Ireland, which he held for sixteen years, and was then transferred to the corresponding post on the English bench, with a baronetcy. In 1625 James I, with whom he was a great favourite, placed him at the head of the council board, conferring on him the high office of lord-treasurer and the earldom of Marlborough. He was a good antiquarian as well as a sound lawyer, as is evinced by a few disquisitions of his, which Thomas Hearne, a kindred spirit, has rescued from oblivion. Of his professional writings the principal are, his "Reports," folio, 1659, and a dissertation "On Wards and the Law of Guardianship," 12mo. His death took place in 1628.—*Lloyd's State Worthies.*

LEYDECKER (MELCHIOR) a native of Middleburg, born 1652, eminent as a sound scholar and able theologian. He became divinity professor in the university of Utrecht, where he published a continuation of the "Ecclesiastical History" of Hornius; "A History of the rise and progress of Jansenism;" another of "The Church of Africa;" "Synopsis Controversiarum de fœdere;" an "Analysis of Scripture;" and a very curious work in two folio volumes, "On the Republic of the Hebrews." He died at Utrecht in 1721.—*Nouv. Dict. Hist.*

LEYSER or LEYSERUS (POLYCARP) a Lutheran divine, born in Wurtemberg in 1552. He was educated at Tubingen, and in 1573 became minister at Golleinsdorf. In 1576 he took the degree of DD. at Wittemberg, where he obtained the theological chair, and afterwards was superintendant of the university. In 1579 he was employed in drawing up the "Formula Concordiæ," between the Lutherans and Calvinists, of which he became the most zealous defender. After holding various offices, he was appointed first preacher to the court of Dresden in 1594, and preceptor to the young princes of Saxony. He died at Wittemberg in 1601. The works of Leyser on divinity and ecclesiastical history are numerous. Lists of them may be found in the dictionaries of Moreri and Jocher.—JOHN LEYSER, grandson of the preceding, a German divine, wrote in favour of polygamy. His works attracted a great deal of notice in the latter part of the seventeenth century, and subjected him to persecution. The most important of his pieces is his "Discursus politicus de Polygamia," published under the name of Theophilus Alethæus, 1676, 8vo, and reprinted at Lund in 1682, with an ample com-

mentary, entitled, "Polygamia triumphatrix."—POLYCARP LEYSER, a descendant of the first-mentioned, was a doctor of medicine and professor of history of Helmstadt, where he died in 1728. He was the author of several works relating to the history of literature.—*Bayle. Biog. Univ.*

LEZAY-MARNESIA (CLAUDE FRANCIS ADRIAN, marquis de) born at Metz in 1735. He entered young into the French army, which he soon quitted, in consequence of his dissatisfaction at some new regulations. He then retired to his estate of St Julian near Lons le-Saunier, and employed himself in literary studies. At the Revolution he was one of the noblesse who declared in favour of an equality of taxation and the abolition of feudal impositions. He was chosen a deputy from the states-general, and sat in the constituent assembly; but alarmed at the prospect of affairs in France, he emigrated to North America in 1790, taking with him artists, labourers, &c. to form a colony, on a large tract of land which he had purchased of the Scioto company. But this scheme was frustrated, and he returned to France in 1792. He settled again at St Julian, and during the reign of terror, he was arrested and confined in prison at Besançon. The fall of Robespierre set him at liberty, and he returned home to his usual pursuits; but in 1797 he thought it prudent again to leave France, and he remained for some time in the Pays de Vaud and at Lausanne. At length he settled at Besançon, where he died November 9, 1800. He was the author of "Essai sur la Mineralogie du Bailliage d'Orgelet, en Franche-Comté," 1778, 8vo; "Le Bonheur dans les Campagnes," 1778, 8vo; "Les Paysages, ou Essais sur la Nature," a poem; "Lettres écrites des Rives de l'Ohio," 1792, 8vo; and other works.—LEZAY-MARNESIA (ADRIAN, count de) son of the preceding, distinguished himself as a diplomatist and man of letters. After finishing his education, he was for a short time in the army. He then studied diplomacy at the school of Brunswick, the only institution of the kind in Europe. At the Revolution he travelled in Germany and England, and then returning to France, became a contributor to the Journal de Paris. Having proclaimed the approaching destruction of the directorial government, he was forced to leave France. He returned under the consulate, and was employed on diplomatic missions. In 1806 he was made prefect of the department of the Rhine and Moselle, and in 1810 of that of the Lower Rhine, in which office he was continued on the restoration of royalty. He died at Strasburgh in 1814, owing to a fall from his carriage. He translated into French, Schiller's tragedy, "Don Carlos," and wrote several political tracts, which excited much attention.—*Biog. Univ.*

L'HOMOND (CHARLES FRANCIS) emeritus professor at the university of Paris, born in 1727. He studied at the college of Luneville as a bursar, and afterwards became principal of that institution. He devoted himself to the instruction of youth, and composed for the use

of his scholars a number of valuable elementary works. In August 1792 he was arrested, and committed to prison; but was liberated in a few days, through the good offices of Tallien, who had been his pupil. He died in 1794. Among his publications are, a treatise "De Viris illustribus Urbis Romæ;" "Epitome Historiæ Sacræ;" and grammars of the French and Latin languages.—*Biog. Univ.*

LHUYD (EDWARD) an eminent antiquary and naturalist, who was a native of Wales. He was born about 1670, and at the age of seventeen he became a student of Jesus college, Oxford, where he took the degree of M.A. On the resignation of Dr Plot, he succeeded him as keeper of the Ashmolean museum. He directed his researches to the illustration of the languages, religion, customs, and manners of the early inhabitants of the British islands, and made a large collection of extracts from documents in public and private libraries, in the course of various journies which he made into Cornwall, Ireland, Scotland, and the French province of Brittany. The result of his studies was the publication of his "Archæologia Britannica," vol. i. Oxford, 1707, folio, comprising grammars, and a vocabulary of the ancient British, Irish, and Armorican dialects. He gained a high reputation by this work, for the continuation of which, he had accumulated ample materials, but was prevented from using them by his death, which took place in 1709. He was the author of a methodical catalogue of the figured fossils in the Ashmolean museum, entitled, "Lythophylacii Britannici Ichnographia, 1699, 8vo; and several papers relating to natural history in the Philosophical Transactions.—*Aikin's G. Biog.*

LHWYD (HUMPHREY) a learned Cambrian antiquary and historian, who was a native of Denbigh. In 1547 he was a commoner of Brazenose college, Oxford, where he proceeded M.A. in 1551, and studied medicine. He was highly esteemed by Camden, and he corresponded with the geographer Ortelius, to whom he addressed a tract, entitled, "Commentarioli Britannicæ Descriptionis Fragmentum;" and a letter, "De Monâ Druidum Insulâ antiquitatî suæ Restitutâ," which last, with another piece of Lhwyd's, "De Armentario Romano," was published with sir John Price's *Historiæ Britannicæ Defensio*. Lhwyd also translated from the Welsh, "The History of Cambria," of Caradoc of Lancarvan, edited by Dr David Powel, 1584, 4to. He likewise translated some medical tracts. According to some he practised physic at Denbigh, where he died about 1570.—*Wood's Athen. Oxon. Biog. Brit.*

LIBANIUS, a celebrated Greek sophist or rhetorician, was born of an ancient family at Antioch in the year 314. From his youth he devoted himself to literature, and pursued his studies at Athens. After he had finished his education, he collected disciples, and made himself known by various rhetorical compositions. His reputation was high, both at Constantinople and Nicomedia, in which latter city he attracted the attention of Julian, who be-

came acquainted with his writings, and imitated his style and manner. The jealousy of his rivals pursued him from place to place, until he finally returned to Antioch, when, about the year 360, he became preceptor to Basil and John Chrysostom, afterwards so celebrated in the Christian church. On the accession of Julian, he was invited by that emperor to a station near his person, which with true philosophic dignity he declined, but necessarily became warmly attached to a prince who paid him so much attention. Julian admitted him to the equality of a literary friend, and is thought to have had his assistance in some of his own compositions. The death of that emperor was, therefore, a severe stroke upon Libanius, who had flattered himself with the restoration of the heathen worship and philosophy from his exertions. He survived to an advanced age, endangered by supposed disaffection to the succeeding emperor, and annoyed by the jealousy of rivals. The exact time of his death is not known, but he mentions 390 as his seventy-sixth year. The writings of Libanius are numerous, and many of them have reached posterity. They are characterized by Gibbon "as for the most part the vain and idle compositions of an orator, who cultivated the science of words; the productions of a recluse student, whose mind, regardless of his contemporaries, was incessantly fixed on the Trojan war and the Athenian commonwealth." Of the works of Libanius, two volumes folio, Gr. and Lat. were published at Paris, 1606—1627. These contain his declamations, orations, and dissertations, with his life, a vain and prolix narrative, written by himself. The best collection of his epistles is that of Wolf, Amsterdam, folio, 1738.—*Morevi. Gibbon.*

LIBAVIUS (ANDREW) a physician and chemist of the seventeenth century, who was a native of Halle in Saxony. He was professor of history and poetry at Jena in 1588, whence he removed to Rothenburg; and in 1605 he was nominated rector of the gymnasium of Coburg in Franconia, where he died in 1616. Libavius was the author of a number of works on chemistry, which have been rendered obsolete by the progress of science. There is a chemical compound, formerly denominated, from him, "the fuming liquor of Libavius," which is an oxy muriate, or rather chloride of tin. In a treatise entitled, "Examens Philosophiæ Novæ," this writer recommends the transfusion of blood from one animal to another.—*Eloy Dict. H. de la Med. Biog. Univ.*

LICETUS (FORTUNIUS) a physician and natural philosopher of the seventeenth century. He was a native of Rapallo in the territory of Genoa, and having studied at Bologna, he became professor of philosophy at Pisa. In 1609 he removed to Padua, and in 1636 to Bologna, having held professorships in both those cities. He returned to Padua in 1645, and occupied the medical chair in that university till his death in 1657. Licetus was a voluminous writer on medicine, philosophy, history, and

antiquities. He is best known as the author of a treatise, "De Monstrorum Causis, Natura, et Differentiis," of which there is an edition by Blasius, Amsterdam, 1665, 4to. In a treatise, "De Lucernis Antiquarum reconditis," he treats of the supposed everlasting lamps, said to have been found in ancient sepulchres, and relates many presumed instances of their having been discovered.—*Moreri. Tiraboschi. Hutchinson's Biog. Med.*

LICHTENBERG (GEORGE CHRISTOPHER) an eminent philosopher and moralist, born near Darmstadt in 1742. He studied at Göttingen, where in 1770 he was appointed professor extraordinary of the physical sciences. From 1772 to 1775 he was employed, by order of the king of England, in determining the latitudes of the principal places in Hanover. In 1777 he succeeded Erxleben in the chair of experimental philosophy, which station he held till his death, February 24, 1799. The works of M. Lichtenberg were published at Göttingen, 1800—1806, 9 vols. 8vo. They comprise an account of M. Deluc's ideas concerning the formation of rain; an autobiographical journal; and various pieces, which had been published in the almanacks, and the magazine of Göttingen. He wrote a satire on Lavater, entitled "The Physiognomy of Tails;" and an explanation of the plates of Hogarth.—*Biog. Univ.*

LICHTENSTEIN (JOSEPH WENCESLAUS, prince of) was born at Vienna in 1696, and having finished his studies at the age of eighteen, he entered into the Austrian army. In 1723 he was made colonel of a regiment of dragoons; and for his services in the campaign of 1733 and 1734 he was raised to the rank of lieutenant-general. In 1738 he was sent ambassador to France, where he remained till 1741. He had the chief command of the Austrian army in Italy, with the title of field-marshal, in 1746, when he gained the victory of Placentia. From that time he was employed in diplomatic affairs, and the duties of his office, as director-general of the artillery, to the improvement of which he greatly contributed. He died at Vienna in 1772. The prince of Lichtenstein was an enlightened patron of the arts and artists, and was the founder of a fine gallery of paintings at Vienna, which bears his name.—*Nouv. Dict. Hist. Biog. Univ.*

LICHTWER (MAGNUS GODFREY) a German poet, born at Wurzen, in Brandenburg, in 1719. He studied at Leipsic, and in 1744 took the degree of doctor of law at Wittemberg, where he became professor of logic, moral philosophy, and civil law. The weak state of his health induced him to remove to Quedlinburg, and afterwards to Halberstadt, at which place he obtained a canonicate, and the office of counsellor to the regency. He died in 1783. Lichtwer was the author of fables, which, in the opinion of the German critics, entitle him to rank with Gelert and Lessing; and he also produced a poem on the "Law of Nature," Leipsic, 1758, 4to.—*Biog. Univ.*

LIDDEL (DUNCAN) a Scottish physician,

born in 1561 at Aberdeen, in which city he received his education. In 1579 he quitted his native country for Germany, where he applied himself with much diligence to the study of mathematics, taking pupils in the same science, both at Frankfort and Rostock, to which latter city he was driven by a pestilence, which was raging at the former. In 1591 he again removed to Helmstadt, where he graduated in medicine in 1596, and obtained the professorships of that faculty, and of mathematics. This situation was equally beneficial to him in a pecuniary point of view, as in reputation, and after some time spent in a tour through Italy, he at length returned in 1607 to his native country, where he evinced his gratitude to the university in which he had been born and nourished, by founding and endowing six scholarships and a professorship of mathematics. The remainder of his life was passed on a private estate which he possessed in the neighbourhood. Of his professional writings, there are extant, "Disputationes Medicinales," 4to, Helmstadt, 1603; "Ars Medica perspicue Explicata," 8vo, Hamburg, 1607; and "Universæ Medicinæ Compendium," Helmstadt, 1720. His death took place in 1613.—*Biog. Brit.*

LIDEN (JOHN HENRY) a Swedish writer of the last century. Possessing a considerable fortune, he was enabled to indulge himself in travelling through Germany, France, England, and Italy. He had returned to Sweden, when in the prime of life he was seized with a palsy, which reduced him to a state of continual suffering. He nevertheless employed himself in collecting books, and dictated several works, the result of researches which he superintended. Among these are a history of the Swedish poets, and of the writers of Latin poetry born in Sweden; several historical and literary memoirs; and an edition of the Journal of the Diet of 1682, with an introduction. He died at Nordkoping, the place of his birth, in 1793, and left his library to the university of Upsal.—*Biog. Univ.*

LIEBE (CHRISTIAN SIGISMUND) a learned writer on numismatics, born in Misdia in 1687. He studied at Freyberg, and afterwards at Leipsic, and having taken his degrees in theology in 1717, he became preacher at the church of St Paul, and adjunct-librarian to the academy. In 1722 he was employed by the duke of Saxe Gotha to travel in the Netherlands, England, and France, to purchase rare books and medals; and on his return he was appointed keeper of the cabinet of antiquities. He died in 1736, leaving several works, the most important of which is his "Gotha nummaria sistens Thesauri Fredericiani numismata antiqua," &c. Amsterdam, 1730, folio. Liebe was for thirty years one of the conductors of the Acta Eruditorum Lipsiensia.—*Biog. Univ.*

LIEBERKUH (JOHN NATHANIEL) an eminent German anatomist, who was a native of Berlin. He took the degree of MD. at Leyden, and settling at Berlin, became a member of the college of physicians in that city. He principally distinguished himself by his

anatomical researches and microscopical observations, of which he published an account in two dissertations, "De Valvula coli et usus Processus vermicularis," 1739, 4to; and "De Fabrica et actione Villarum Intestinorum tenuium," 1745, 4to; and in memoirs communicated to the academy of sciences at Berlin, and other learned societies to which he belonged. He died in 1756.—*Eloy. Dict. Hist. de la Med. Biog. Univ.*

LIESGANIG (JOSEPH) an astronomer, who was a native of Gratz in Styria. Having finished his studies, he entered among the jesuits, and was employed to teach mathematics in different colleges. On the suppression of his order, his talents procured him employment from the court of Austria. He was nominated director of building and navigation in the province of Galicia; and he died at Lemberg in 1799, aged eighty. He published a good map of eastern Galicia, and a work, containing an account of the measurement of a degree of the meridian on the frontiers of Hungary and Austria, besides astronomical observations in the Journal of Baron von Zach.—*Biog. Univ.*

LIEUTAUD (JOSEPH) an eminent French physician, who distinguished himself by his writings on morbid anatomy. He was born at Aix in Provence, June 21, 1703. He was educated under M. Garidel, his maternal uncle, who was professor of medicine at Aix, and after taking his doctor's degree, he spent some years at Montpellier. Returning to his native city, he became physician to a hospital, and gave lectures on anatomy. At this period he communicated to the Academy of Sciences many anatomical observations, which extended his reputation as a medical philosopher. In 1794 he was invited to Versailles, to become physician to the royal infirmary; in 1752 he was admitted into the Academy of Sciences; and in 1755 he was appointed physician to the royal family. He was subsequently made physician to the princes of France, and in 1774 first physician to the king, Louis XVI, a post, the emoluments of which amounted to more than 3000*l.* a year. He died at Versailles in 1780. His principal works are, "Essais Anatomiques, contenant l'Histoire exacte de toutes les Parties qui composent le Corps Humain," 1742, 8vo; "Elementa Physiologiae," 1749, 8vo; and "Historia Anatomico-medica, sistens numerosissima Cadaverum humanorum extispicia," 1767, 2 vols. 4to.—*Lond. Med. Journ. Aikin's G. Biog.*

LIEVENS (JOHN) a Flemish artist of the seventeenth century, born at Leyden in 1607. Charles I invited him to London, where he resided about three years, and painted the portraits of several of the principal nobility about the court. Portrait painting was indeed the branch of the art, in which he principally excelled, though some fine specimens still in existence, attest his skill as an historical designer. Of these latter productions his Scipio, Lazarus, &c. are the chief. His decease took place at Antwerp, but in what year is uncertain.—*Bryan's Dict. of Paint. and Eng.*

LIGHTFOOT (JOHN) a learned English divine, was born in March 1602 at Stoke-upon-Trent in Staffordshire, his father being vicar of Uttoxeter in the same county. He received his early education at a private school in Cheshire, whence he was removed to Christchurch, Cambridge, where he made extraordinary advances in the Greek and Latin languages. On receiving the degree of B.A. he became assistant to his former tutor, who then kept a school at Ripton in Derbyshire, and on entering into orders, he was appointed curate of Norton-under-Hales in Shropshire. This village being in the neighbourhood of sir Rowland Cotton, that gentleman made Mr Lightfoot his chaplain, and took him into his house; where, following the taste of his patron, an excellent Hebrew scholar, he applied himself to the study of the same language with singular assiduity and success. In 1628 he was appointed minister of Stone in Staffordshire, which place he soon left to reside near London, where in 1629 he printed his first work, entitled "Erubhim, or Miscellanies, Christian and Judaical," which he dedicated to sir Rowland Cotton, who presented him to the vicarage of Ashley in Staffordshire. Here he resided, until his appointment as one of the parliamentary assembly of divines, rendered it necessary for him to remove to London, when he resigned his rectory to a younger brother, and became minister of St Bartholomew, behind the Royal Exchange. In 1643 he was made master of Catherine hall, Cambridge, with which preferment he held the living of Much-Munden in Hertfordshire. In the mean time, he took his turn with the other favourite divines of the parliament, and warmly pressed the speedy settlement of the church in the presbyterian form. In 1655 he entered upon the office of vice-chancellor of Cambridge, and distinguished himself as a zealous promoter of the polyglot Bible. At the Restoration, he offered to resign the mastership of Catherine-hall, but archbishop Sheldon, who admired his temper and talents, procured him a confirmation, both of his place and living. He was soon after appointed one of the assistants at the Savoy conference, where he however attended but once or twice, giving all his attention to the completion of his "Harmony." He died December 6, 1675. The works of Dr Lightfoot, who, for rabbinical learning, has had few equals, were printed in 1684, in 2 vols. folio, and again, with additions, at Amsterdam in 1686; and by Leusden, at Utrecht, 1699, in 3 vols. An octavo volume of his remains was also published by Strype, which contains some curious particulars of his private life.—*Strype's Preface to Remains. Biog. Brit.*

LIGHTFOOT (JOHN) a distinguished botanist, was born at Newent, Gloucestershire, December 9, 1735, being the son of a respectable gentleman farmer. He was educated at Crypt school at Gloucester, whence he became exhibitioner at Pembroke college, Cambridge, where he took his master's degree in 1766. On taking orders, he was first appointed curate at Colnbrook, and afterwards of

Uxbridge. He was subsequently presented by lord chancellor Northington, to the rectory of Sheldon in Hampshire, which he resigned on taking possession of that of Gotham in Nottinghamshire. He was also much patronized by the dutchess of Portland, and drew up the catalogue of her museum. His abilities as a botanist induced Mr Pennant to make him the companion of his second tour to Scotland, and by the advice of that gentleman, he undertook his "Flora Scotica," published in 2 vols. 8vo. Mr Lightfoot was a member of the Royal and Linnaean Societies. He died at Uxbridge in 1788. The excellent "Herbarium," which he had collected in his botanical researches, was sold by his executors to George III, for one hundred guineas.—*Life by Pennant. Gent. Mag.*

LIGNE (CHARLES JOSEPH, prince de) born at Brussels, of an ancient Flemish family in 1735. He entered the army in 1752, and made his first campaign in 1757, when he had obtained the rank of captain. For his gallantry at Hochkirchen he was made a colonel; and he had reached the post of major-general at the accession of Joseph II. In 1771 he became a lieutenant-general and proprietor of a regiment of infantry. In the war relating to the succession of Bavaria in 1778, when he commanded the advanced guard of Laudohn, he added to his military reputation. In 1762 he was sent on a mission to Russia, where he became a great favourite with Catherine II, who nominated him field marshal, and gave him an estate in the Crimea, where he was present at the interview between that princess and Joseph II. The latter in 1788 made the prince de Ligne general of artillery, and sent him to assist prince Potemkin at the siege of Okzakow; and he subsequently divided with Laudohn the glory of taking Belgrade. The death of Joseph II, terminated his military career, as he was entirely neglected by the succeeding emperor. Francis II in 1808 made him a field-marshal, and he was consulted on public affairs, though no longer engaged in active service. He died in 1814. Much of his time was devoted to literature. He published a collection of his writings, forming thirty volumes, 12mo, in 1807; and subsequently, "Vie du Prince Eugène de Savoie, écrite par lui-même;" and "Lettres et Pensées du Maréchal Pr. de Ligne," both which were translated into English. The posthumous works of the prince de Ligne were published in 1817, 6 vols. 8vo.—*Biog. Nouv. des Contemp.*

LIGORIO (PIETRO) a noble Neapolitan, distinguished as a painter, architect, and antiquary in the sixteenth century. He was employed by the popes Paul IV, and Pius IV, and was the rival and enemy of Buonarroti, whom he succeeded as architect of St Peter's; but on his proposing to deviate from the plan of his predecessor, he was removed from his office. He then went into the service of Alphonso II, duke of Ferrara, who gave him the title of his antiquary, with an ample salary; and employed him as an engineer. He made very extensive antiquarian collections, a part

of which only was published, relating to the circuses, theatres, and amphitheatres of the Romans, and to ancient vehicles. He died in 1583.—*Orlandi. Tiraboschi.*

LILBURNE (JOHN) a remarkable character in the republican party, during the time of Charles I, and Cromwell, was born in 1613, being the younger son of a branch of an ancient family in the county of Durham. Having little patrimony, he was placed at an early age, and after receiving little education, with an eminent wholesale clothier in London. Of a bold, unquiet, and forward temper, one of his first exploits was to summon his master before the city chamberlain for ill usage. Having carried this point, he employed his increased leisure in studying the religion, systems, and controversies of the time; and the Book of Martyrs in particular inspired him with an enthusiastic passion for encountering all sorts of danger in the cause of what he deemed truth. In 1636 he was introduced to the famous Dr Bastwick, then under star chamber prosecution, who employed him to get anti-episcopal strictures printed in Holland. On his return, he employed himself in similar occupations, but being betrayed by an associate, he was tried before the star-chamber, where his deportment was so sturdily, refusing to answer interrogations, and standing up so firmly for his privileges as an Englishman, that he acquired the appellation of "free-born John." He was doomed to receive five hundred lashes, and stand in the pillory, which sentence was executed in April 1638, with great severity. So little, however, was his spirit subdued by it, that he uttered invectives from the pillory, and threw pamphlets from his pockets among the crowd, for which contumacy, he was remanded to prison, and kept doubly ironed; yet even in this situation, he contrived to get another libel printed and published. On the meeting of the long parliament, a vote passed the house of Commons, pronouncing the sentence against Mr Lilburne barbarous and illegal, and that reparation should be made to him for his sufferings and losses. When an army was raised by parliament, Lilburne entered as a volunteer, and acted as a captain in infantry at the battle of Edge Hill. He was taken prisoner by the king's party, in the affair at Brentford, where he fought with great bravery. He served also with great gallantry at the battle of Marston Moor, in the capacity of lieutenant-colonel to the earl of Manchester. His dislike to the measures of Fairfax and Cromwell, induced him soon after to lay down his sword; but it was only to take up the pen, which he employed very fiercely against all whose political conduct offended him. Being committed to Newgate for contempt, when brought before the house of Lords for a libel on the earl of Manchester, he contrived, while thus immured, to publish pamphlets in rapid succession, in which he virulently assailed his enemies, and even made a charge of high treason against Cromwell and Ireton. For this last piece of daring, he was ordered to be tried for seditious and scandalous practices; but so

active and numerous were his friends among the people, that in 1648 the house of Commons thought fit to discharge him, and make an order for reparation for his sufferings. At the time of the king's death, he busied himself in drawing up a new constitution, and boldly maintained the rights of the people against the army. So dangerous did he appear to Cromwell and his council, that he was again committed for high treason, but being tried before a special committee, the jury boldly acquitted him. A new offence which he gave the parliament, induced that body to pass a heavy fine on him, with an order to quit the country, on which he retired to Holland, until it was dissolved, when he used all his interest to gain a passport, but not succeeding he ventured home without one. Being apprehended, he was again committed to Newgate, and once more tried at the Old Bailey, where he defended himself so ably that he was once more acquitted. He was, however, ordered to leave the country, but giving security for his future good behaviour, he was finally suffered to remain. He then settled at Eltham in Kent, and in a singular spirit of opposition to his past contentious spirit, but with all his pristine enthusiasm, became a quaker, and preached at the meetings of that body at Woolwich, until his death in 1657, at the early age of thirty-nine. Lilburne had a wife, with a spirit as undaunted as his own, who was his faithful helpmate in all his sufferings. This intrepid demagogue, with more composure and self-government, would have been a far higher character than he is now esteemed. What he deemed the public good, he supported against all parties indiscriminately, and that with invincible spirit, and through a life of prosecution. As a writer he was very vulgar and violent, although occasionally acute and forcible. His productions, such as they are, are too numerous for enumeration; but a list of them will be found in our authority.—*Biog. Brit.*

LILLO (GEORGE) an English tragic poet of the last century, born February 1693, in the metropolis. He was by trade a jeweller, and of much respectability as a tradesman; but notwithstanding his attention to business, he contrived to dedicate no inconsiderable portion of his time to the cultivation of the drama. Fielding, the author of *Tom Jones*, himself a dramatist, and the contemporary and personal friend of Lillo, bears strong testimony to the integrity of his heart, as well as to the excellence of his social qualities. In figure, Lillo was short and ungainly, while his countenance was disfigured by the loss of an eye; but the strong moral lessons afforded in his writings, evince that his mind was better constituted than his person. An edition of his plays was published in 1775 by Davies, in 2 vols. 12mo. The principal are, "*George Barnwell, or the London Prentice*," a tragedy, founded on an incident in domestic life, which tradition affirms to have taken place at Camberwell. This play, till within these few years, it was always customary to represent on lord mayor's day; "*Fatal Curiosity*," also said to be founded

in fact; "*Arden of Feversham*," which was certainly so; and "*Elmeric*." Pathos, rather than sublimity, and the exhibition of better feelings vainly struggling against the force of temptation in private life, constitute the field in which the genius of Lillo loved to luxuriate. Lillo, who was a dissenter, died in the autumn of 1739, aged forty-seven.—*Life prefixed to Works. Biog. Dram.*

LILLY (JOHN) a dramatic writer, was born in the wealds of Kent, according to Anthony Wood, about 1553. He became a student at Magdalen college, Oxford, in 1563, where he took the degree of MA, in 1575. On some disgust, he removed to Cambridge, whence he proceeded to court, where he was noticed by queen Elizabeth, and sought to obtain the post of master of the revels, in which he never succeeded; but after many years of fruitless court attendance, was obliged to address the queen for support in his old age. In what year he died is unknown, but, according to Wood, he was alive in 1597. He was the author of nine dramatic pieces, none of which are now esteemed. Besides the drama, he was celebrated for his attempt to reform and purify the English language, in a couple of fantastic productions, entitled "*Euphues and his England*," 1580, and "*Euphues and his Anatomy of Wit*," 1581, which works met with a strange degree of success, considering the ridiculous affectation which they inculcated, a specimen of which may be seen in the character of sir Piercie Shafton, in the "*Monastery*" of sir Walter Scott. Lilly was also the author of a famous pamphlet against Martin Marprelate and his party, entitled "*Pappe with a Hatchet*," published about 1589, and improperly attributed to Nashe.—*Athen. Oeon. Warton's Hist. of Eng. Poet. Ellis's Specimens.*

LILLY (WILLIAM) a famous English astrologer, not to say impostor, was born at Diseworth in Leicestershire, in 1602. He was put to school at Ashby-de-la-Zouch in the same county, but learned little beyond writing and arithmetic. He came early to London, where his necessities obliged him to article himself as servant to a mantua-maker in St Clement Danes. In 1624 he became book-keeper to a tradesman who could not write, on whose death he married his widow, a woman much older than himself, with a fortune of 1000*l.* In 1632 he turned his attention to astrology, and, to use the cant of that pretended science, was soon able "to cast a figure;" and he ventured to give the public a specimen of his skill, by an assurance in 1633 that the king had chosen an unlucky horoscope for his coronation in Scotland. In the following year he buried his wife, and married a second, with 500*l.*; but with all his foresight did not anticipate that she would prove a termagant, and keep him needy by her extravagance. About this time he procured a MS. copy of a book by Cornelius Agrippa, entitled "*Ars Notoria*," from which he eagerly imbibed the doctrine of the magic circle, and invocation of demons. In the same year, 1634, he was allowed by the dean of Westminster to

assist David Ramsay, the king's clock-maker, in search of a hidden treasure in Westminster abbey, another associate being found in one John Scot, who pretended to understand the mystery of miner's divining rods. These three worthies accordingly made the experiment on the night appointed; and after digging up a coffin to no purpose, they were frightened from the place by a violent storm, which Lilly, in the sequel, attributed to demons, whom he had found means to dismiss. In 1637 he retired to Horsham in Surrey, where he resided until 1641, when, perceiving a prospect of advantage from the growing confusion of the times, he removed to London, and in 1644 published his "Merlinus Anglicus," which he continued annually until his death, and several other astrological works. Having acquired the friendship of Bulstrode Whitlock, he soon after devoted himself entirely to the interests of the parliament, although he occasionally varied his predictions, in order the more easily to impose on the credulity of the age. In 1647 recourse was had to this wily adventurer for advice and assistance on the part of the king. One Mrs Warewood, as Lilly himself relates, waited upon him by the king's consent, to know where, if he escaped from Hampton, he could most effectually conceal himself. He cast a figure, and answered, in Essex; but before his advice could reach the unhappy monarch, he had escaped, and placed himself in the custody of colonel Hammond, in the Isle of Wight. The same lady applied again to Lilly, who says, that he supplied her with the saw and aqua fortis, by which the king might have escaped if he had pleased. He also attributes to himself another piece of advice in a third application, by which the king would have been saved had he pursued it. In the year 1648 Lilly and Booker, another astrologer, were sent to the camp at Colchester, to encourage the soldiers by their predictions; and such was his reputation, that he was rewarded for his various services, (one of which was obtaining secret intelligence from France,) with a pension of 100*l.* per annum. About this time he read public lectures on astrology, and succeeded so well, that he was enabled to lay out 2000*l.* in fee-farm rents at Horsham. Having in the year 1650 predicted that the parliament should not continue, but a new government arise, he was summoned to attend the committee of plundered ministers, but saved himself by pretending that the objectionable books were spurious copies of his own work. In the same year he made a scurrilous attack upon the learned Gataker, who pointed out the absurdity of his pretended science. In 1659, such was the spirit of the age, he received the present of a golden chain from the king of Sweden, whom he had mentioned with great respect in his almanack. On the Restoration, Lilly was taken into custody by order of parliament, as one of the repositories of the secrets of the republicans, and examined concerning the persons who beheaded the king; when he declared that he had been informed that lieutenant-colonel Joyce was the execu-

tioner. He soon after sued out his pardon under the great seal, and retired to Horsham. In 1666, some of the members, suspecting from the hieroglyphic to his almanack, that he might know something of the causes of the great fire which followed its publication, had him sent for to a committee of inquiry, when he cunningly asserted that he had certainly foreseen the event, but could say nothing as to the cause. He was civilly dismissed, and from this time little is known of him, except that he adopted one Henry Coley for his successor; under the name of Merlin junior, an obligation which did not prevent the latter from exposing some of his various modes of imposture after his death. This extraordinary man was author of many works, one of which, his "Observations on the Life and Death of Charles, King of England," overlooking the astrological nonsense mixed up in it, is able and impartial. His own life, recently included in a new series of autobiography, now under publication, is also a very entertaining production, steering as he does between truth and falsehood, and seldom indulging in more of the latter than was necessary to support his character as an astrologer. The other works of this singular impostor being all astrological trash, need not be enumerated here; but the curious in such matters may see a complete list of them in the *Biographia Britannica*. — *Life by Himself. Biog. Brit.*

LILY or LILYE (WILLIAM) a learned grammarian, born at Odiham in Hampshire in 1468. He became a student of Magdalen college, Oxford, in 1486, and having taken the degree of BA, he quitted the university, and made a pilgrimage to Jerusalem. He went thence to Rhodes, where he remained five years, studying the Greek language; and after visiting Rome he returned to his native country, and settled as a private schoolmaster in London, being the first person who taught Greek in the metropolis. On the foundation of St Paul's school in Loudon, by dean Colet, in 1510, Lily was appointed the master; and he presided over that institution till 1523, in which year he died of the plague. Erasmus, and others among his learned contemporaries, have bestowed on Lily high encomiums as a classical tutor. He was the author of Latin poems and tracts, but he is chiefly memorable on account of the Latin grammar which bears his name, the first edition of which appeared in 1515, under the title of "Brevissima Institutio, seu Ratio Grammaticæ cognoscendæ." — *Biog. Brit. Berkenhout's Biog. Lit.*

LIMBORCH (PHILIP) a celebrated Dutch professor of divinity, was born of respectable parents, at Amsterdam, in 1633. After attending the inferior schools of his native city, he commenced his academical studies under the care of several eminent instructors, and subsequently attended the lectures of Voetius and other divines at Utrecht. In 1654 he entered the ministry, and soon after became pastor of a reformed congregation at Gouda. In 1660, having found among the papers of Episcopius who was his maternal uncle, œ.

veral letters relating to ecclesiastical affairs, he arranged a collection with Hartsoeker, entitled, "Epistolæ præstantium et eruditorum Virorum," 8vo, of which a new and enlarged edition appeared in 1684, and a third in 1704, folio. In 1661 he wrote an able treatise in favour of toleration, and having acquired a high reputation among the followers of Arminius, was in 1668 chosen professor of divinity by that body at Amsterdam. He had previously published his system of the principles of the remonstrants, under the title of "Theologia Christiana, ac Praxim Pietatis, ac Promotionem Pacis Christianæ unice directa," 4to, 1686, which quickly ran through five editions, the last being that of 1713. In the same year he published the substance of his controversy with the learned Jew Orobio, in a treatise, which bore the title of "Collatio Amica de Veritate Religionis Christianæ, cum erudito Judæo," 4to. His celebrated "History of the Inquisition" followed, which was translated into English by Dr Chandler, in 1731. The last publication of this able divine was his "Commentary on the Acts of the Apostles and Epistles to the Romans and Hebrews," folio, 1711. He died in possession of a high character for piety, moderation, ability, and candour, in April 1712, in the seventy-ninth year of his age.—*Chandler's Preface to the History of the Inquisition.*

LINACRE (THOMAS) an eminent physician and philologist, was born at Canterbury about 1460. He received his school education in that city, and thence removed to All Souls' college, Oxford, of which he became a fellow in 1484. With a view to farther improvement, he accompanied his tutor, William de Sellery, on a mission to the court of Rome. He subsequently visited Bologna and Florence, where he was courteously received by Lorenzo de' Medici, who permitted him to attend the preceptors of his own sons, and he had the advantage of learning the Greek language from Demetrius Chalcondylas. On his return to England he took the degree of MD. at Oxford, and read lectures on physic, and also on Greek, in that university. His reputation at length induced Henry VII to call him to court, and make him his own physician. He exercised his influence with cardinal Wolsey, to obtain letters patent in 1518 for the royal college of Physicians, of which he became the first president. He also founded lectureships in physic at the two universities, and farther benefited his profession, by translating several of the most valuable pieces of Galen, his Latin style in which versions is peculiarly pure and elegant. One of his earliest writings was a translation of "Proclus on the Sphere," dedicated to prince Arthur; and he also drew up "Rudiments of the Latin Grammar," in English, for the use of the princess Mary, which production was preparatory to a larger work of the grammatical kind, entitled, "De Eminentia structura Latini Sermonis, libri sex;" which publication appears to have been the labour of several years of his life. He considers the subject in its full extent, but too logi-

cally and metaphysically for general use. It was not printed until after his death, and went through several editions. Towards the latter end of his life he entered into orders. He died of the stone in 1524, at the age of sixty-four, and was buried in St Paul's cathedral. The character of Linacre seems to have been very amiable, and he enjoyed the friendship and esteem of Erasmus, Melancthon, and most of the eminent persons of the time.—*Big. Brit. Aikin's Biog. Mem. of Medicine.*

LIND (JAMES) an ingenious English physician, who distinguished himself by several professional works, which have been translated into foreign languages. The most important of these are, a treatise on the scurvy, 1749, 8vo; an essay on the means of preserving the health of seamen, 1757, 8vo; an essay on the diseases incidental to Europeans in hot climates, 1768, 8vo; besides which, he published several medical papers in periodical works. He died at Gosport in Hampshire, July 18, 1794.—*Biog. Univ.*

LINDANUS (WILLIAM) a native of Dordt in Flanders, who, about the middle of the sixteenth century, officiated under the Spanish government as a member of the Dutch inquisition. He displayed so much bigotry and implacability in the execution of this office, that he grew into high favour with Philip II, and in 1562 was advanced by that monarch to the see of Ruremonde. After presiding over this diocese for six-and-twenty years, he quitted it for Ghent. Lindanus was the author of several theological tracts, in which his zeal is manifested at the expense of his charity. Of these (all written in the Latin language) the principal are, "The Gospel Panoply," in folio; "A Catalogue of the various Heresies of the Age;" "On the best Method of interpreting Scripture," 8vo: an edition of the mass, said to have been composed by St Peter, which appeared in one volume octavo the year after his decease; and another of the Psalms of David. His death took place at Ghent in 1588.—*Moreri.*

LINDBLOM (AXEL) a native of the province of Ostrogothia in Sweden, who studied at Upsal, and afterwards became a private tutor in Livouia. Returning home, he was appointed professor of belles lettres and politics at Upsal, where he published a Latin and Swedish dictionary. In 1789 he took orders in the church, and was made bishop of Linköping, and subsequently archbishop of Upsal. In 1810 he was sent by the king, Charles XIII, to Elsinour, to receive the Lutheran profession of faith of Bernadotte, on his becoming prince royal of Sweden; and Lindblom performed the coronation of the prince in 1818. He died at the commencement of the year following. While he resided at Linköping, he published a theological journal, distinguished for liberality of sentiment.—*Biog. Univ.*

LINDSAY, or LYNDSEY (sir DAVID) an ancient Scottish poet, descended from a noble family, was born at Garmlyton in Haddingtonshire, in 1490. He was sent to the university

of St Andrew's in 1505, and in 1509 became page of honour to James V, then an infant. In 1528 he produced his "Dreme;" and in the following year presented his "Complaynt" to the king. In 1530 he was inaugurated Lyon king-at-arms, and knighted; and in 1531 sent on a mission to Charles V, on his return from which he married. He soon after occupied himself on a drama of a singular kind, entitled "A Satyre of the Three Estates," which was followed in 1536 by his "Answer to the King's Flying," and his "Complaynt of Bascha." On the death of Magdalen of France, two months after her marriage with James V, Lindsay's muse produced his "Deploration of the Death of Quene Magdalene." During the succeeding regency, he espoused the cause of the reformers, and in 1548 was sent in his capacity of Lyon herald, on a mission to Christiern, king of Denmark. On his return, he published the most pleasing of all his poems, entitled, "The History and Testament of Squire Meldrum." His last and greatest work, "The Monarchie," was finished in 1553. The date of his death is unknown, but the latest authority seems inclined to place it in 1557. Lindsay entered with great zeal into religious disputes, and his satires powerfully assisted to expose the vices of the clergy. As a poet, he is inferior to Dunbar and Gawin Douglas. His "Dreme" is deemed his most poetical composition. An accurate edition of the works of Lindsay was published by Mr George Chalmers in 1806.—*Life by Chalmers. Ellis's Specimens.*

LINDSAY (JOHN) a learned divine of St Mary-hall, Oxford, who officiated for many years as minister of a nonjuring society at Trinity chapel, Aldersgate-street. He was born in 1686, and finished a long and laborious life in 1763, part of which time he was corrector of the press to Mr Bowyer. He was author of a "Short History of the Royal Succession;" "Remarks on Whiston's Scripture Politics," 1720, 3vo; and of a translation of Mason's "Vindication of the Church of England," 1726—1728, the preface to which work contains a series of the successions of the bishops, from the Reformation. In 1747 he published two sermons preached at court by Francis Mason in 1620.—*Nichols's Lit. Anec.*

LINDSEY (THEOPHILUS) a celebrated divine of the Unitarian persuasion, was born at Middlewich in Cheshire, June 20, 1723. His father was an eminent salt proprietor, and Theophilus, the second of his three children, took that name from his godfather, Theophilus, earl of Huntingdon. He received his grammar education at Middlewich and Leeds, and at the age of eighteen was admitted a scholar at St John's college, Cambridge. Having taken orders, by the recommendation of the earl of Huntingdon, he was appointed domestic chaplain to the duke of Somerset, and in 1754 accompanied earl Percy to the continent. On his return he became acquainted with, and married the daughter of Mr archdeacon Blackburne, and was presented to a living in Dorsetshire which he exchanged in 1764 for the

vicarage of Catterick in Yorkshire. In 1771 he zealously co-operated with archdeacon Blackburne, Dr John Jebb, Mr Wyvil, and others, to obtain relief in matters of subscription to the thirty-nine articles. Having long entertained a doubt of the doctrine of the Trinity, in 1773 he honourably resigned his livings, and came to London, where in April 1774 he performed divine service in a room in Essex-street, Strand, which was conducted according to the plan of a liturgy, altered from that of the establishment by the celebrated Dr Samuel Clarke. About the same time he published his "Apology," of which several editions were called for in a few years. This was followed by a larger volume, entitled, "A Sequel to the Apology," in which he replies to the various answers given to his first work. In 1778 he was enabled, by the assistance of friends, to build a regular chapel in Essex-street, the service of which he conducted in conjunction with Dr Disney until 1793, when he resigned the pulpit, but continued as active as ever with the pen. In 1802 he published his last work, entitled, "Considerations on the Divine Government." He died Nov. 3, 1805, in his eightieth year. Besides the works already mentioned, he wrote, "On the Preface to St John's Gospel;" "On praying to Christ;" "An historical View of the State of the Unitarian Doctrine and Worship, from the Reformation;" and several other pieces. Two volumes of his sermons have also been published since his death.—*Athenaeum*, vol. v. *Rees's Cyclop.*

LINGUET (SIMON NICHOLAS HENRY) an advocate of the parliament of Paris, born at Rheims in 1736. He was for a time in the army, and served as aide-de-camp to the prince de Beauvau in Portugal. He then became a lawyer, and in 1762 was admitted an advocate; but in consequence of disputes with his brethren, his name was struck from the list of counsellors. Thus prevented from practising, he turned political writer, and having offended the count de Maurepas, he was sent to the Bastille. On obtaining his liberty, he published an account of his imprisonment, a work which produced a strong sensation, and is said to have prepared the way for subsequent events. Having retired to Brussels in 1787, Linguet there published his "Annales Politiques," in which he praised the policy of the emperor Joseph II, and advocated his scheme for opening the navigation of the Scheldt. His zeal was rewarded with a present of a thousand ducats, notwithstanding which, he changed sides, and wrote in favour of Vander Noot and the Anti-Austrian party. Among other pieces he published a pamphlet, entitled "Observations d'un Republicain en reponse au Mémoire de Leopold." At the Revolution he returned to Paris, and on the 31st of March and the 5th of April, 1791, he appeared at the bar of the National Assembly, and read a justificatory memoir in favour of the colonial assembly of St Marc, for undertaking the defence of which he had been well paid, and which afforded him an opportunity of pleading the cause of

the negroes, and declaiming against the tyranny of the whites. In June 1794 he was arrested, and being tried before the revolutionary tribunal of Paris, he was condemned to death, and suffered by the guillotine the twenty-seventh of that month. Besides the works mentioned, he wrote several relative to history, law, and politics, in which he displays more eloquence than learning, and a partiality for paradox inconsistent with truth and reason.—*Dict. des H. M. du 18me. S. Biog. Univ.*

LINIERE (FRANCIS PAVOT de) a French poet, equally noted for his talents, his irreligion, and his dissipated character. He was born at Paris in 1628, of a family connected with the bar, but he entered into the army when young. On his return to Paris he became generally known, and alternately admired and hated for his wit, profligacy, and satirical spirit. He resided at a country house near Senlis, whence he has been termed the "Atheist of Senlis." His irregularities reduced him to want in the latter part of his life, which was terminated in 1704. The songs and epigrams of Liniere are dispersed in the fugitive publications of his time. The title of one of his productions is, "Poesies Diverses, ou Dialogues en forme de Satire, du Docteur Metaphraste et du Seigneur Albert, sur le fait du Mariage," 12mo.—*Biog. Univ.*

LINIERS BREMONT (don SANTIAGO) a Spanish naval officer, born at Niort about 1760. He was at first in the Maltese service, and then in that of Spain, in which he became captain of a ship previously to the French Revolution. His first service of importance was against the English under Whitelocke, in South America, from whom he took Buenos Ayres, the capture of which he had not been able to prevent. He remained master of the place, and was appointed captain-general of Rio de la Plata. On the invasion of Spain by Buonaparte, he endeavoured to engage Liniers in his interests, but in vain. His temporizing policy, however, excited suspicions against him, both in America and in Spain, and don Cisneros was sent out, with the title of viceroy, by the central junta, to supersede him. Liniers resigned his authority, and retired to Cordova, one hundred and sixty leagues from the capital. The inhabitants of Buenos Ayres being disposed to expel the viceroy, Liniers formed a body of troops, and declared for the royal authority; but his soldiers dispersed on the approach of the independents, and he was taken prisoner, condemned to death, and shot August 26 1809.—*Biog. Univ. Biog. Nouv. des Contemp.*

LINLEY (THOMAS). There were two distinguished English musicians of this name, father and son. The elder Linley received his musical education under Chillcott, the organist of the abbey church at Bath, and completed it under signor Paradies, an eminent composer of Venice. In the city already mentioned he continued to reside for many years, conducting the oratorios and concerts performed there; and to his taste and exertions, while acting in that situation, may be mainly attri-

buted the renewed popularity of the works of Handel. As his family grew up around him, several of its members displayed great musical talent, especially his two eldest daughters, one of whom became the object of a most romantic attachment to, and subsequently married, the celebrated Richard Brinsley Sheridan, whose duels with captain Mathews respecting her, excited so great a sensation in their day. The second, Mary, was afterwards Mrs Tickell. On Sheridan's completing the purchase of Drury-lane theatre, his father-in-law became joint-patentee with him, and coming to London, took an active part in the management of the concern, the musical department of which he conducted for many years. During this period, he composed the airs to numerous operas and minor musical pieces, having previously, in conjunction with his son, Thomas, arranged those of the "Duenna" for Covent-garden. The untimely death of this son, the eldest of his boys, who, after displaying extraordinary powers as a musician during the whole of his short, but brilliant career, was unfortunately drowned at the age of twenty-two, was a severe blow to his father. The melancholy circumstance alluded to, took place on the 7th of August 1778, while on a visit with his sisters at Grimsthorpe in Lincolnshire, the seat of the duke of Ancaster. In company with three other young men of his own age, he had embarked on board a pleasure-boat in the canal, which being, through some mismanagement, overset, Linley, though an excellent swimmer, sank in his endeavours to reach the shore, while the others saved themselves by clinging to the keel. A brain-fever seized his father on the communication of the intelligence, from which, though he slowly recovered to a certain extent, yet he never again attained his former health. He survived the defeat of his fondest hopes, however, till the year 1795, when he died in South-ampton-street, Covent-garden. His remains were conveyed to Wells cathedral for interment, where they were deposited in the same vault with his daughters, Mrs Sheridan and Mrs Tickell, both of whom had also preceded him to the grave. There are few compositions in English music which surpass those of Linley in simplicity of construction, combined with pathos, spirit, and originality. His celebrated madrigal to Cowley's words—

"Let me careless and unthoughtful lying," still annually performed at the ancient concerts, is especially considered a fine specimen of that species of composition. A handsome monument has been erected near the place of their burial, to the memory of himself and daughters, by a surviving member of the family.—*Biog. Dict of Mus.*

LINN (JOHN BLAIR) a North American poet, born at Slippensburg in Pennsylvania, in 1777. He was educated at the college of New York, and afterwards at Colombia; and he then engaged in the study of law. But polite literature chiefly attracted his attention, and he composed a play which was acted with success. He then quitted his legal pursuits

for theology, and having obtained a license, he became a preacher among the presbyterians at Philadelphia, and in 1799 assistant to Dr Ewing. He wrote with great warmth against Dr Priestley's Comparison between Jesus Christ and Socrates, which produced a controversy between them. His death took place in 1804; and in the following year was published a fragment of a poem, entitled "Valerian," relating to the early persecution of the Christians, to which was prefixed an account of his life. He was also the author of a poem on the death of Washington; and another, entitled "The Powers of Genius," which has been reprinted in England.—*Biog. Nouv. des Contemp.*

LINNE (CHARLES VON) more generally designated by his Latinized name Linnæus, the most celebrated naturalist of his age, and the founder of modern botany, was a native of Sweden. He was the son of a clergyman, and was born May 13, O. S. 1707, at Rashult, in the province of Smaland. His father was fond of gardening, and his little domain was stocked with plants not commonly cultivated, a circumstance to which the prevailing taste of the son may be fairly attributed. He was sent to the grammar-school, and afterwards to the gymnasium of Wexio, to be educated for the ministry; but as he displayed a much stronger predilection for the study of nature, than for divinity or the classics, his destination was changed to the medical profession. In 1727 he entered at the university of Lund in Scania, whence he removed the following year to Upsal. During his early residence there, the narrowness of his father's circumstances exposed him to great difficulties, from which he was relieved by the patronage of Celsius, the theological professor, an eminent naturalist, through whose recommendation Linné obtained some private pupils. He also formed a friendship with Arteni, a medical student like himself, devoted to the cultivation of natural history. He now conceived the idea of a new arrangement of plants, or sexual system of botany, relative to which he wrote a memoir, which was shown to Rudbeck, the botanical professor, who was so struck with its ingenuity, that he received the author into his house, as tutor to his sons, and made him his assistant in the office of delivering lectures. In 1732 he was sent by the Academy of Sciences at Upsal to make a tour through Lapland, from which he returned towards the close of the year. In 1733 he visited the mining district around Fahlun, and he gave lectures on mineralogy, having formed a system of that science, afterwards published in his "Systema Naturæ." While he was thus adding to his reputation at Upsal, he became involved in a violent quarrel with the medical professor, Nicholas Rosen, who seems to have acted with a great deal of illiberality, and found means to prevent Linné from continuing his private lectures. He therefore engaged in a scientific tour through the province of Dalecarlia, and remained for
e time at Fahlun, lecturing and practising

medicine with considerable success. In 1735 he went to the university of Harderwyck in Holland, and took the degree of MD. He then visited Leyden, where the first sketch of his "Systema Naturæ" was printed in the form of tables, filling twelve folio pages. He became acquainted with John Frederic Gronovius, Boerhaave, and John Burman of Amsterdam; and he then published a work, entitled "Fundamenta Botanica," exhibiting the basis of his botanical system. Mr Clifford, an opulent merchant of Amsterdam, made him superintendent of his garden at Hartecamp, near Haerlem, rich in curious exotics, of which Linné drew up a systematic catalogue. In 1736 he made a visit to England, and formed an acquaintance with Dillenius at Oxford, with Dr Shaw the traveller, Martyn, Philip Miller, and Peter Collinson. He returned to Holland with many new plants for Mr Clifford's garden, his description of which, entitled "Hortus Cliffortianus," was now published in a most splendid form. He also published the first edition of his "Genera Plantarum." In 1738 he made an excursion to Paris; and towards the end of that year returned to his native country, and settled as a physician at Stockholm. At first he experienced neglect, but through the influence of count Tessin he was appointed physician to the navy, and had a salary for giving public lectures on botany in the summer, and on mineralogy in the winter. The establishment of the Royal Academy of Stockholm, of which he was one of the first members, contributed to the advancement of his reputation, by the opportunities which it afforded for the display of his abilities. In 1741 he succeeded Roberg in the professorship of medicine at Upsal, to which was added the superintendance of the botanic garden, to the new arrangement and augmentation of which he devoted much of his time and attention. In 1745 appeared his "Flora Suecica;" and the next year his catalogue of Swedish animals, entitled "Fauna Suecica." He was elected to the post of secretary of the academy of Sciences at Upsal; in 1746 an honorary medal of him was struck at the expense of some noblemen; and in 1747 he was nominated royal archiater. Through his influence many young naturalists were sent to explore various countries; and to his zeal in the cause of science we owe the discoveries in natural history made by Kalm, Osbeck, Hasselquist, and Loeffling. He was employed by the queen of Sweden to describe her museum at Drottningholm, when he made a new scientific arrangement of the shells contained in it. About 1751 he published his "Philosophia Botanica;" and in 1753 his "Species Plantarum," containing a description of every known plant, arranged according to the sexual system. This work of Linné, which Haller terms his "Maximum Opus et Æternum," appeared originally in 2 vols. 8vo; but the edition published by Willdenow at Berlin, 1799-1810, is extended to ten volumes. In 1753 this great naturalist was created a knight of the polar star, an honour never before bestowed on a li-

erary man. In 1761 he was elevated to the rank of nobility, by the king's sign manual, and from that time he wrote his name in the aristocratic form, C. von Linné. Literary honours were also conferred on him by scientific societies in foreign countries. He belonged to the royal societies of Berlin and London, the imperial academy of Petersburg, and the Academy of Sciences at Paris, and other learned associations. In 1768 he completed the plan of his "Systema Naturæ," which, through successive editions, had been enlarged to three octavo volumes. Notwithstanding his celebrity, Linné acquired but a moderate degree of opulence; yet it was sufficient to enable him to purchase an estate and mansion at Hammarby, near Upsal, where he chiefly resided during the last fifteen years of his life. There he had a museum of natural history, on which he gave lectures, and to which he was constantly making additions, from the contributions of travellers and men of science in various parts of the world. His health, during a great part of his life, was such as enabled him to pursue his researches with vigour and activity; but in May 1774, he had an apoplectic attack, which obliged him to relinquish the most laborious part of his professorial duties, and close his literary labours. A second seizure occurred in 1776, and he afterwards experienced a third; but his death did not take place till January 11, 1778. Besides his works on natural history, he published a classified "Materia Medica," and a systematic treatise on nosology, entitled "Genera Morborum." It is, however, as a botanist, and the founder of a system of botanical science, that Linnæus takes his station among the great men who are entitled to the praise of original genius. By his wife, the daughter of a physician at Fahlun, he had a son and four daughters.—The former, CHARLES VON LINNÉ, jun. was joint-professor of botany, and afterwards professor of medicine at Upsal. He was well acquainted with science, but distinguished himself by no discoveries of importance. On his death, without issue, in 1783, the family became extinct.—ELIZABETH CHRISTINA VON LINNÉ, one of the daughters of the great naturalist, studied botany, and became known by her discovery of the luminous property of the flower of the tropæolum, of which an account was communicated to the academy of Stockholm.—*Life of Linnæus, by Dr Pulteney. Hutchinson's Biog. Med Aikin's G. Biog.*

LINQUITI (GIOVANNI MARIA) director of the royal asylum for the Insane, at Aversa, in the kingdom of Naples. He was born in 1774, and when young was distinguished for his application to literature. He studied with a view to the profession of jurisprudence, but instead of engaging in practice, he entered into the religious order of the Servites. Political changes having obliged him to quit his convent, he found an asylum in the house of the marquis of Salsa, whose library afforded him the means of extending his knowledge, particularly in relation to the physical and moral

constitution of the human race. His investigations enabled him to project some important improvements in the management of the insane, the principles of which are developed in a work which he published, under the title of "Ricerca sull' Alienazione Mentale." He was at length appointed manager of the receptacle for lunatics at Aversa, which he conducted with great success. His health became debilitated in 1815; and he continued in a declining state till his death, which took place September 17, 1825.—*Milan Gazette.*

LINSCHOTEN (JOHN HUGH VAN) a Dutch voyager, born in 1553. He went in 1579 to Seville in Spain, to visit his two brothers, who were there settled; and afterwards proceeding to Lisbon, he entered into the service of the archbishop of Goa, with whom he sailed to that Portuguese settlement in the East Indies, where he remained some years, and had many opportunities for making observations on the country and its inhabitants. He returned to Europe in 1589, and published a curious account of his voyages. He was afterwards engaged in the attempts of the Dutch to find a passage through the North sea to Japan and China, of which he also wrote a narrative. He died at Enkhuisen in 1633. The East Indian voyages of Linschoten have been translated into Latin, French, and English. He also wrote a description of the coasts of Guinea, Congo, and Angola; besides other works.—*Biog. Univ.*

LINUS. The name of a celebrated musician of antiquity, to whom Diodorus Siculus, quoting Dionysius of Mitylene, attributes the introduction of verse and music into Greece. He was a native of Chalcis, and to him are ascribed a poem on the exploits of Bacchus in India; a treatise on mythology; the addition of a string to the lyre then in use; and the invention of melody and rhythm. Suidas also joins in giving him credit for the last-mentioned improvements, and calls him the first lyric poet. A few fragments of poetry, under his name, are to be found in Stobæus.—*Burney's Hist. of Mus.*

LIOYARD (PETER) a French botanist, distinguished for his practical knowledge of the plants of Dauphiny. He was born in 1729, of a peasant's family, a few leagues from Grenoble. Having enlisted as a common soldier, he was wounded at the taking of Port Mahon in Minorca, in 1756, and again in Corsica in 1764, on which he was discharged with a pension. He then resided with an uncle, who was a herbalist at Grenoble, when he acquired such a taste for botanical researches, that notwithstanding his want of education, he was enabled to read the works of Linnæus, and became the correspondent of Rousseau. In 1783 a botanic garden was established at Grenoble, of which Liotard was appointed superintendent. He was killed by accident in April 1796. He discovered many new plants in Dauphiny and the Alps, with which he enriched the garden under his care; and in the winter his time was occupied in preparing and describing them.—*Biog. Univ.*

LIPENIUS (MARTIN) a learned German bibliographer, who was a native of Brandenburg. In 1651 he went to Wittenberg to study theology; and having taken his degrees, he became corrector of the gymnasium of Halle. He afterwards was rector and professor at the Caroline college at Stettin, and ultimately rector of the academy of Lubeck, where he died in 1692, aged sixty-two. He was the author of a catalogue of works on various sciences, entitled "Bibliotheca realis," 6 vols. folio; of a curious dissertation on new year's gifts; and another on the navigation of Solomon's ships to Ophir.—*Moreri. Biog. Univ.*

LIPPERT (PHILIP DANIEL) an ingenious artist, born of poor parents, at Dresden, in 1703. He was originally a glass-blower; but having studied drawing, and made himself acquainted with the Latin and Greek languages, he was appointed drawing-master to the pages of the elector of Saxony. His situation made him known to many persons of distinction, and afforded him facilities for augmenting a collection of antiquities, which he had employed himself in forming. He contrived a method of taking impressions in glass of ancient engraved gems, a number of which he offered for sale, and of which he published a catalogue in 1753, with the following title: "Gemmarum anaglyphicarum et diaglyphicarum, ex præcipuis Europæ Musæis selectarum ectypa M. ex vitro obsidiano et massa quodam, studio P. D. Lippert fusa et afficta," Dresd. 4to. He published an account of a second collection in 1756, and of a third in 1763; besides other works. He died in 1785.—*Biog. Univ.*

LIPPI. There were three Florentine artists of this name. Of these, the eldest, FRANCISCO FILIPPO, born in 1421, and surnamed "The Old," had taken the vows as a Carmelite monk, but afterwards abandoned the church; which step, from the debauchery manifested in his life and manners, it may be concluded, other motives, beside a love of the fine arts, were instrumental in producing. Lippi underwent many vicissitudes of fortune after leaving his convent, and was, on one occasion, unfortunate enough to fall into the hands of a Barbary corsair, who carried him into Africa, and sold him to slavery. On this occasion his pencil stood him in the stead of a ransom, and the successful exertion of his talents, upon the portrait of his purchaser, was rewarded by his restoration to liberty. On his return to Italy, he was received into the service of the grand duke of Florence, who much admired his style of painting, which bore a strong resemblance to that of his old master Massaccio. His death took place in 1488; and, although he had at that period attained the age of sixty-seven, it is said to have been the result of an intrigue, carried on with a female of a respectable family, to the vengeance of whose relatives he fell a victim, poison being employed for his destruction.—He left one son, FILIPPO; also a painter of considerable talent and reputation, born in 1460; many of his works are

yet to be found in the city of which he was a native. He died in 1505.—LORENZO, the third of the name, descended of the same family, united to considerable skill as an historical and portrait painter, the arts of poetry and music. He was born in 1506, and is advantageously known as the author of a burlesque poem, entitled, "Malmantile Racquistato." Of this work there have been three editions; two printed at Florence, in 1688 and 1731, the other in 1768 at Paris. His modesty prevented his giving this production to the world under his own name, and it consequently appeared originally under the fictitious one of Zipoli. His death took place in 1664.—*D'Argenville Vies de Peint.*

LIPSIUS (JUSTUS) an acute critic, and erudite scholar of the sixteenth century, born at Isch, in Brabant, a village situate between Brussels and Louvaine, in October, 1547. He was of a family in which talent may be said to have been hereditary; Martinus Lipsius, the intimate friend of Erasmus, being his uncle. His genius developed itself at a very early period of life, the strength of his memory being considered wonderful; and, before he had completed his ninth year, he was already the author of some miscellaneous poetry, much above mediocrity. In the rudiments of education he was instructed at Brussels, and subsequently followed up his literary pursuits in the colleges of Aeth, Cologne, and Louvaine. From the jesuits' college, where he continued his studies, he removed to Rome, in his twentieth year, and having been fortunate enough to secure the patronage of cardinal Granville, by dedicating to him his treatise, "Variarum Lectionum," was received into his eminence's household, in the nominal capacity of secretary. With this distinguished prelate he remained till 1569, availing himself sedulously of the opportunities offered him to consult the treasures contained in the vatican, and other principal libraries; especially employing himself in the collation of rare and ancient manuscripts. On his return to the Netherlands, after a short time spent at Louvaine, he visited the capital of the German empire, whence declining to reside in his native country, on account of its unsettled state, he retired to Jena, and accepted a professorship in that university. Here it was that the fickleness of his disposition, and the vacillating state of his opinions respecting religious matters, which eventually fixed the imputation of imbecility on a character, in other respects estimable, first became apparent. He renounced the Romish church, and became a Lutheran; but quitting Jena, at length, with an avowed intention of spending the remainder of his life in retirement in his native country, he repaired to Isch, and soon after recanted his supposed errors, and became reconciled to the see of Rome. In 1577, however, he again removed to Leyden, when he embraced the doctrines of Calvin; and, during the thirteen years which he spent in that university, gave to the world the most esteemed of his works.

In 1590, he returned, finally, to Louvaine; and, as if the change of climate produced a corresponding alteration in his theological sentiments, once more became a Catholic; and that, as is not uncommonly the case with persons as versatile, of the most bigotted description. In his determination of ending his days in the neighbourhood in which they had begun, he was, however, more constant; and, although many tempting and honourable offers were made him by various potentates, anxious to engage so celebrated a scholar in their service, he refused them all; and, at length, died at Louvaine, in the spring of 1606. Extremes, it is well known, are apt to beget the contrary extremes; and to this circumstance, as well as to the operation of disease in his latter days, upon a mind whose principles appear to have been never very firmly established, may be attributed the puerile superstition, which, a short time before his death, led him to dedicate a silver pen, and his fur gown, to the service of the virgin Mary. As a scholar and a critic, the name of Lipsius will be remembered with different feelings, from those produced by his conduct as a private individual; although, even in his writings, traces are but too plainly to be discovered of an intolerance, little becoming one who had himself so often, and so freely exercised the liberty of conscience. His principal works, which, altogether, occupy six folio volumes, are the "Varie Lectiones" above-mentioned; an excellent Commentary on the Works of Tacitus; treatises, "De Constantia;" "De Militia Romana;" "De Amphitheatris;" "De Pronuntiatione recta Linguae Latinae;" "De Cruce;" "De una Religione;" "De Bibliothecis;" "Satira Menippæa;" "Saturnalia;" and, "An Oration on the Death of the Duke of Saxony." The best edition of them is that printed at Antwerp, in 1637.—*Moreri. Nouv. Dict. Hist.*

LISLE (DE) the name of a French family, many of the members of which distinguished themselves in succession, from the middle of the seventeenth to that of the eighteenth century, by their proficiency in geography, astronomy, and the cognate sciences.—Of these, the first was CLAUDE DE LISLE, born in 1644, at Vaucouleurs, in Lorraine; he was originally intended for the French bar, but quitted the profession of the law, in order to devote himself to studies more congenial to his taste. He was a good geographer, and taught that science in Paris with great reputation. His lectures were afterwards printed in two duodecimo volumes, under the title of "An Introduction to Geography, with a Treatise on the Sphere." His other works are, a "History of the Kingdom of Siam," 12mo; "A Genealogical and Historical Atlas;" and an "Abridgment of Universal History." The celebrated regent duke of Orleans was the most illustrious of his pupils. He died at Paris, in 1720, leaving three sons, all of whom afterwards attained to eminence.—WILLIAM, the eldest, born in the French capital, in 1675, early rose to celebrity by his

progress in the sciences. A map of the world executed by him, in his twenty-fourth year, raised him at once into notice, and caused his name to be enrolled among the members of the French Academy, in whose transactions several of his productions are to be found. Louis XV took lessons of him, and appointed him geographer royal, in which capacity he furnished maps to a great variety of the publications of the day. In 1726 he was engaged in executing a map of Malta, to accompany the history of that island, by Vertot, but died suddenly, before the completion of his task, in the course of the same year.—To LOUIS, the second son, who eagerly devoted himself to the prosecution of the same course of study, his countrymen are indebted for the accurate determination of the longitude and latitude of a variety of places in the countries lying nearest to the north pole. In order to effect this object, he travelled into Siberia and Kamtschatka. His death took place in 1741.—JOSEPH NICHOLAS, the youngest and most celebrated of the three, was born, like his brothers, in Paris, in 1688. To the hereditary talent of his family he joined habits of even deeper research, and closer application. He accepted an invitation from the court of Russia, to take charge of the Royal Observatory at St Petersburg; and in discharging the duties of this situation, during a period of more than twenty years, contributed much to the advancement of geographical, as well as astronomical knowledge in that country. In 1747 he resigned his office, and returned to Paris, where he obtained a mathematical professorship in the university, which he held till his death, in 1768.—*Hutton's Math. Dict. Nouv. Dict. Hist.*

LISLE (SIR GEORGE) a gallant but unfortunate royalist officer, during the English civil wars of the seventeenth century. He was born in London, where his father was a bookseller, but embracing a military life, served several campaigns in the low countries, after which he returned to England, and distinguished himself so much by his courage, at the battle of Newbury, under the very eye of Charles I, that the latter dubbed him a knight banneret on the field. In 1648 he held Colchester for the king, and defended it bravely; but being at length compelled to yield the town, was shot by the parliamentary leaders on the 23th of August, in that year. He exhibited, at his execution, the same constancy of mind which had throughout distinguished his short but brilliant career.—*Hume's Hist of Eng. Clarendon.*

LISLE (JOHN BAPTIST ISOARD DE) also known under the name of Delisle de Sales, one of the most fertile authors of the eighteenth century. He was born in 1743, at Lyons, and entered young into the congregation of the oratory; but left that society after a few years, and went to Paris, where he devoted himself to the cultivation of literature. He was but little noticed, till he published a work entitled, "La Philosophie de la Nature," which having been denounced as immoral and

irreligious, he was prosecuted and imprisoned, which circumstance procured him great temporary celebrity. Having appealed against the sentence, he obtained his freedom, and employed himself, during the remainder of his life, in writing Platonic dreams, romances, histories, and dramas; to which he in vain endeavoured to attract attention, by adopting odd titles, and advertising them as the compositions of the author of "Philosophie de la Nature." He was imprisoned during the government of Robespierre; and subsequently became a member of the institute. He married, at the age of seventy-two, a second wife, the daughter of Badia, or Ali Bey, the Spanish traveller. His death took place at Paris, in 1816.—*Biog. Univ.*

LISTER (MARTIN) a physician and naturalist, was born about 1638, of a Yorkshire family, settled in the county of Buckingham. He was educated at St John's college, Cambridge, of which he became a fellow in 1660. Having embraced the medical profession, he travelled to the continent, and in 1670 settled in York as a practitioner. To his professional employment, he added the diligent pursuit of natural history and antiquities, and communicated many papers to the Royal Society, of which he was elected a fellow. In 1683 he removed to the metropolis, and in the same year was created a doctor of physic by diploma, at Oxford, and was also elected a fellow of the royal college of physicians. In 1698 he attended the earl of Portland in his embassy to France; and on his return, published an account of his journey, which, in consequence of his minute observations as a naturalist, was ridiculed by Dr William King in a parody, entitled "A Journey to London." In 1709 Dr Lister was made physician in ordinary to queen Anne, which post he occupied only two years, his death taking place in February 1712. The medical writings of this physician are marked by too great an attachment to hypothesis, but are not without merit. The principal are, "De Fontibus Medicalibus Angliæ," 1682, 1684; "Octo Exercitationes Medicinales;" "Dissertatio de Humoribus." As a naturalist, besides his numerous papers in the Philosophical Transactions, he published the following works:—"Historia Animalium," 1678, 4to; "Exercitatio Anatomica, de Cochleis maxime, Terrestribus et Lunaribus," 1694, 8vo; "Exercitatio Anatomica altera, de Buccinis Fluviatilibus et Marinis," 1695, 8vo; "Exercitatio Anatomica tertia Conchiliorum Bivalvium," 1696, 4to. In all these works he exhibits great accuracy of research into the minutest parts of the animal economy. His "Journey to Paris" was also well received, and was much esteemed, notwithstanding the satire which a few peculiarities elicited.—*Biog. Brit. Aikin's G. Biog. Haller's Bib. Anatom. et Med.*

LITHGOW (WILLIAM) a Scottish traveller, who in the early part of the seventeenth century proceeded on foot through various countries in Europe, Asia, and America, over a distance, according to his own asseverations,

of more than thirty-six thousand miles. In the course of these pedestrian excursions he met with many strange adventures, and underwent many hardships, the most serious of which was his falling, during his journey through Spain, into the hands of the inquisition at Malaga. On this occasion he underwent the torture, both ordinary and extraordinary; and though he afterwards succeeded in reaching England, he was so much crippled by the injuries he had received, as to be forced to be carried to court in a litter, when he went there for the purpose of presenting his book to James I. A squabble with the ambassador Gondemar afterwards caused him nearly a year's confinement in the marshalsea prison. Lithgow died in 1640. The original account of his wanderings is now difficult to be met with, as is also his account of the siege of Breda; but the leading incidents of the former are to be found in the *Phoenix Britannicus*.—*Granger.*

LITTLETON (ADAM) an erudite scholar, and lexicographer, of the seventeenth century, born November 8, 1627, at Hales Owen, Salop. He received his education at Westminster grammar school, of which the celebrated Busby was then head master. Thence he was elected off, in due course, to a studentship of Christ-church, Oxford, in 1647, but scarcely retained his situation a twelvemonth, being deprived by the parliamentary visitors. On this occasion he returned to Westminster, and obtained the situation of usher to the foundation in which he had been brought up. In 1658 he succeeded to the second mastership, and two years after graduated as DD, having been previously made a king's chaplain. In 1674 he obtained a stall at Westminster, together with the rectory of Chelsea, where he opened a school. The king had further designed to place him at the head of Westminster school, but the appointment did not take place, although he afterwards succeeded to the sub-deanery of the abbey. Dr Littleton was an acute critic, and an excellent grammarian. Besides upwards of sixty sermons, he was the author of a Latin treatise, entitled "Elementa Religionis;" and a translation of the "Jani Anglorum Facies altera," of Selden. He also compiled a valuable Latin dictionary, by which he is now principally known. His death took place at Chelsea, in June, 1694.—*Biog. Brit.*

LITTLETON, LL.D. (EDWARD) an English poet of the last century. Having passed with much credit through Eton college, he was elected off to a fellowship at king's college, Cambridge, where the reputation he had already acquired, by the precocity of his talents at school, was increased by the result of his maturer studies. In 1720 he returned to Eton, in the capacity of a junior master, and in 1728 became a fellow of the college, on which occasion he graduated as a doctor of laws. Dr Littleton afterwards obtained a king's chaplaincy, and the vicarage of Maple Durban, in Oxfordshire, but enjoyed his benefice little more than five years. Most of his poetical works are to

be found in Dodsley's collection, especially "The Spider;" and two volumes of his sermons appeared after his decease, which took place in 1734.—*Biog. Brit.*

LITTLETON or **LYTTLETON** (**THOMAS**) a celebrated English judge and law authority. He was the eldest son of Thomas Westcote, of the county of Devon, esq. by Elizabeth, daughter and sole heir of Thomas Littleton of Frankley in Worcestershire, in compliance with whose will the eldest son of the marriage took the surname and arms of Littleton. He was born at the beginning of the fifteenth century at Frankley, and having been educated at one of the universities, he was removed to the Inner Temple, where he studied the law, and became very eminent in his profession. He first distinguished himself by his learned lectures on the statute of Westminster "De donis conditionalibus," and was afterwards made, by Henry VI, judge of the Marshalsea court, and king's serjeant. In 1455 he went the Northern circuit as judge of assize, and was continued in the same post by Edward IV, who also, in 1466, appointed him one of the judges of the common pleas. In 1475 he was created, among others, a knight of the bath, and continued to enjoy the esteem of his sovereign and the nation until his death, at an advanced age, in 1481. The memory of judge Littleton is preserved by his work on "Tenures," which has passed through a very great number of editions; those from 1539 to 1639 alone amounting to twenty-four. This work is esteemed the principal authority for the law of real property in this kingdom, while the "Commentary" of sir E. Coke is deemed the repository of all his learning on the subjects therein treated. Of this work a republication took place in 1788, enriched with the annotations of sir M. Hale and lord chancellor Nottingham, and greatly improved by the learning and industry of Mr Hargrave and Mr Butler.—*Biog. Brit. Reeves's Hist. of English Law.*

LITTLETON (**GEORGE**) see **LYTTLETON**.

LIVINGSTON (**JOHN**) a Scottish presbyterian divine, who was educated at Glasgow, where he took the degree of MA. in 1621. He was a zealous covenanter, and having opposed the episcopal government of the church after the Restoration, he was twice suspended from his pastoral office, and in 1663 he was banished the kingdom. He retired to Holland, and officiated as minister of the Scots' chapel at Rotterdam, till his death in 1672. He wrote farewell letters to his parishioners at Ancram, 1663, and other works; but he deserves notice chiefly as the author of a Latin translation of the Old Testament, which has never been published.—*Lempriere. Dict. Hist.*

LIVINGSTON (**WILLIAM**) an American statesman and author, born at New York, in 1723. During the contest between Great Britain and her colonies, he declared himself warmly in favour of independence, and employed his pen in defending his opinions. After having filled several important situations

at New York, he became one of the members of the congress for New Jersey; and after the establishment of the constitution, he was made governor of the state. He died in 1790, at his estate at Elizabeth-town, after having held the government twelve years. He was the author of a poem, entitled, "Philosophical Solitude;" "A Review of the Military Operations in North America, from 1753 to 1758;" besides several other works, which have been praised as advantageous specimens of transatlantic literature.—*Biog. Nouv. des Contemp.*

LIVIUS (**TIRUS**) a very eminent Roman historian, was a native either of the city or territory of Patavium or Padua, and sprang from a family which had given several consuls to the Roman republic. He came to Rome in the reign of Augustus, and appears to have shared in the society of several persons of rank, including the emperor himself. He first made himself known by some literary dialogues; but his reputation is principally built upon his history of Rome, from the foundation of the city, to the death of Drusus, in one hundred and forty-two books. It was received with extreme applause, and so great was the fame of the author, during his life time, that Pliny the younger mentions the journey of a Spaniard from Cadiz to Rome, in order to see Livy, and who, having gratified his curiosity, immediately departed. On the death of Augustus, he returned to Padua, where he was received with every testimony of honour and respect, and where he died in the fourth year of the reign of Tiberius, at the age of seventy-six. Of Livy's history, unfortunately, only thirty-five books are extant, consisting of the first, third, fourth, and half of the fifth decades; but an epitome of the whole, with the exception of two books, is preserved, which, however, gives no more than the heads of the matter. The history of Livy is highly praised by all the posterior Roman writers, and especially by Seneca, Pliny the elder, and Quintilian. His descriptions are singularly lively and picturesque; and there are few specimens of oratory superior to the speeches with which, in conformity with ancient practice, he interlard his narration. He possesses not the philosophic spirit of Tacitus, and has been charged with credulity in recording the vulgar prodigies of every year, which, however, there is reason to believe, was merely in compliment to a prevailing custom. His style has been censured by Asinius Pollio, as not entirely free from patavinity, by which phrase it is presumed was meant the provincialism of his native country; and some industrious modern critics have laboured in vain to detect the vestiges of this defect. The deep regret of men of letters, for the loss of so great a portion of his history, has instigated to much imposture in the way of pretended discovery, all of which has been ultimately detected. The best editions of his remains are that of Gronovius, cum notis variorum, 3 vols. 8vo, Lugd. Bat. 1679; of Leclerc, Amst. 10 vols. 12mo, 1709; of Drakenborch, Amst. 1738, 7 vols. 4to; of Ruddiman, Edinb. 1751, 4 vols. 12mo; of Homer, London, 1794,

8 vols. 8vo; of Oxford, 1800, 6 vols. 12mo; and of Ernesti, Lips. 1801-4, 5 vols. 8vo.; Livy has been repeatedly translated into the various modern languages; the best English version being that of Baker.—*Vossii Hist. Lat. Senecæ Epist. Quintilian Inst. Dibdin's edition of Harwood's Classics.*

LLORENTE (DON JUAN ANTONIO) a modern Spanish historian, chancellor of the university of Toledo, and a member of the inquisition; a "Complete History" of which court, "from the period of its establishment by Ferdinand V, to the present time," was published by him, and translated into English in 1817. Having accepted a situation under the government of Joseph Buonaparte, he was driven into exile on the return of Ferdinand, and fled to France, whence, being again expelled by the influence of the court of Rome, he returned secretly to Spain, but died shortly after his arrival at Madrid, in the spring of 1823.—*Biog. Univ.*

LLOYD (DAVID) an English historian and biographer, of the seventeenth century. He was a student of Oriel college, Oxford, where he took his degrees; and afterwards, having entered the church, he obtained a rectory in the country. This he resigned for the office of reader, at the charter-house, in London. He subsequently became a prebend of St Asaph, and held other preferments in North Wales, where he died in 1691. The best known of his works is his memoirs of the statesmen and favourites in England, since the Reformation, reprinted, with an account of the author, by sir Charles Whitworth, in 1766. He also published the lives of persons who suffered for their loyalty; a life of general Monk; and a history of plots and conspiracies.—*Chalmers's Biog. Dict.*

LLOYD (HENRY) a military officer, and eminent writer on tactics. He was born in Wales, in 1729, and was the son of a clergyman, who instructed him in the mathematics, and classical literature. At the age of seventeen he went abroad, and he was present at the battle of Fontenoy. He afterwards travelled in Germany; and having resided some years in Austria, he was appointed aide-de-camp to marshal Lascy. He was gradually promoted, till in 1760 he was intrusted with the command of a large detachment of cavalry and infantry, destined to observe the movements of the Prussians. Lloyd executed this service with great success; but soon after resigned his commission in disgust. He was then employed by the king of Prussia; and, during two campaigns, he acted as aide-de-camp to prince Ferdinand of Brunswick. After the peace of Hubertsburg he travelled; till the occurrence of hostilities between Russia and Turkey, when he offered his services to Catherine II, who made him a major-general. He distinguished himself in 1774, at the siege of Silistria; and subsequently, he had the command of thirty thousand men, in the war with Sweden. At length he left Russia, and travelled in Italy, Spain, and Portugal. He visited general Eliot, at Gibraltar, whence he

proceeded to England. Having made a survey of the coasts of the country, he drew up a memoir, on the invasion and defence of Great Britain, which was published in 1798. He retired, at length, to Huy, in the Netherlands, where he died, June 19, 1783. Besides the memoir, he was the author of an introduction to the history of the war in Germany, between the king of Prussia, and the empress-queen, London, 1781, 2 vols. 4to; and a treatise on the composition of different armies, ancient, and modern.—*Biog. Univ.*

LLOYD (NICHOLAS) an episcopal divine, and philological writer, who was a native of Flintshire. He was educated at Winchester school, and Wadhams college, Oxford, where he obtained a fellowship. The bishop of Worcester, to whom he was chaplain, gave him the living of Newington Butts, near London, which he held till his death, in 1680, at the age of forty-six. He published an historical and geographical dictionary, in Latin, which was founded on that of Charles Stephens, and has served as the basis of many subsequent compilations.—*Wood's Athen. Oxon.*

LLOYD (ROBERT) an ingenious English poet, was the son of the rev Dr Lloyd, second master of Westminster school, and was born in 1733. After finishing his juvenile studies, under the tuition of his father, he went to the university, and having taken his degrees in arts, he returned to Westminster, to become an usher in the school. Well qualified by his classical attainments for that situation, he appears to have been dissatisfied with the restraints which it imposed on him; and having formed an acquaintance with Churchill, Bonnel Thornton, and other dissipated men of letters, he relinquished his ushership, and commenced author. His first production, which attracted notice, was a poem, entitled "The Actor," which gave rise to the famous *Rosciad* of his friend Churchill. He afterwards wrote several smaller poems, some of which possess much merit; and he was employed in writing for the St James's magazine, and other periodical publications. Extravagance and inattention involved him in embarrassments, which occasioned his being arrested and confined in the Fleet prison, where he died in 1764. He wrote a comic opera, called "The Shepherd's Wedding," and other dramatic pieces, long since forgotten; but his poems have been repeatedly published.—*Chalmers's Biog. Dict.*

LLOYD (WILLIAM) a learned English prelate, born in 1627, at Tilehurst, in Berkshire, where his father was rector of the parish. At the age of twelve he became a student of Oriel college, Oxford, whence he removed to a scholarship in Jesus college, in 1640. He took the degree of BA. in 1642, was afterwards chosen a fellow of his college, and in 1646 commenced MA. He was ordained deacon in 1648, and took priest's orders in 1656. After having resided at the university for several years, he obtained a prebend in the collegiate church of Ripon, soon after the Restoration, and in 1666 he was appointed chaplain to the king. The following year he was

collated to a prebend at Salisbury; and he also took the degree of DD. After holding various other ecclesiastical preferments, among which was the deanery of Bangor, he, in 1676 was instituted to the vicarage of St Martin's-in-the-Fields, Westminster; and, in 1680, he was raised to the bishopric of St Asaph. While he held this benefice, he joined archbishop Sancroft, and other prelates, in presenting a petition to king James II, deprecating his assumed power of suspending the laws against popery. The prosecution and acquittal of the petitioners is a well-known, and important fact in English history. On the Revolution taking place, bishop Loyd was made almoner to king William III; and, in 1692, he was translated to the see of Lichfield. Thence he was promoted to that of Worcester, where he sat till his death, in 1717. The writings of this prelate display much learning and acuteness. They relate to history and divinity, including "A Chronological Account of the Life of Pythagoras, and of other famous Men, his Contemporaries;" "The History of the Government of the Church, as it was in Great Britain and Ireland, when they first received the Christian Religion;" "A Dissertation upon Daniel's Prophecy of the Seventy Weeks;" and a number of sermons on various occasions.—*Biog. Brit. Aikin's G. Biog.*

LLYWARCH AP LLYWELYN, a Welsh bard, who flourished between the years 1160 and 1220. Some of his poetical effusions have been published in the Welsh Archaeology, where they are accompanied by learned annotations.—LLYWARCH-HEN was one of the earlier Cambrian poets or bards, whose compositions are preserved, and whose personal history is not a little romantic. He lived in the early part of the seventh century, when the Saxons were contesting with the Britons the possession of the North of England. Llywarch is said to have lost twenty sons in battle against the invaders; and to have afterwards retired to a cell at Llanvor, near Bala, in Merionethshire, where he lived to the age of a hundred and fifty. His martial elegies and other poems have been collected and published by Mr William Owen.—*Lempriere. Dict. Hist.*

LLYWELYN AP JORWERTH, a king of North Wales in the beginning of the thirteenth century, called by Matthew Paris, Leo the Great. His uncle David having usurped the government in 1194, Llywelyn raised an army, and recovered his hereditary dominions, which he defended against an attempt of David to dispossess him, in 1204. He married the daughter of John, king of England, with whom however he was repeatedly engaged in hostilities, as he was subsequently with Henry III. In his old age he concluded a treaty of alliance with the latter, and died, after a prosperous reign in 1240.—*Warrington's Hist. of Wales.*

LLYWELYN AP GRYFYDD, the last sovereign prince of Wales, and the grandson of the foregoing. He reigned at first over North Wales only, leaving South Wales to his brother Owen, who making war upon him,

was taken prisoner, and deprived of his territories. Thus possessed of the whole country, he thought to secure his power, by fomenting disturbances in England. This conduct involved him in war with Henry III, and afterwards with Edward I. He at length fell beneath the power of the latter, and being killed in battle in 1282, the independence of Wales perished with him.—*Id.*

LOBEIRA (VASCO) author of the celebrated romance of Amadis de Gaul, was born at Porta, in Portugal, in the fourteenth century. In 1386 he was knighted on the field of battle, at Aljubarrota, by king Joam I, and he died at Elvas, where he possessed an estate, in 1403. The original of his celebrated romance was preserved in the library of the duke of Aveiro, who suffered for the conspiracy against Joseph I; but whether still in existence or not, is doubtful. The oldest version known to be extant, is that of Garciondonnez de Montalvo, which was published at Salamanca, in 1510. This romance has been claimed for France, it having been asserted that Lobeira was only a translator; but Dr Southey has succeeded in refuting that pretension; and nothing seems to reasonably impeach the claim of Portugal to the production of this best work of its kind, which also enjoys the merit of giving rise to the imimitable Don Quixote, in which its superiority is adequately appreciated. Amadis may be considered as the genuine model of a knight in legendary history; and in an age when credulity and a lofty spirit of adventure still prevailed, this romantic pattern was not absolutely lost upon the warm imaginations of the youth of Europe. "Truly," says sir Philip Sidney, "I have known men, that even with reading Amadis de Gaul, have found their hearts moved to the exercise of courtesy, liberality, and especially, courage."—*Art. Lobeira, by Dr Southey, in Aikin's G. Biog.*

LOBELIUS or de LOBEL (MATTHIAS) a Flemish physician and botanical writer of the sixteenth century. He studied at Montpellier, and having travelled over the South of France, Switzerland, Italy, and Germany, he returned to his native country, and settled at Antwerp, whence he removed to Delft, and was made physician to the prince of Orange and to the states of Holland. The latter part of his life was spent in England, whither he was invited by James I, who gave him the title of royal botanist. He was also patronized by William lord Zouche, whose garden at Hackney he superintended. He died in 1616, aged seventy-eight. Lobel published a work entitled, "Nova Stirpium Adversaria," which exhibits one of the earliest attempts at a systematic arrangement of plants; also, "Observationes, sive Stirpium Historia;" and other treatises. The term *Lobelia* has been applied to a genus of plants in commemoration of this botanist.—*Pulteney's Sketches of Botany. Aikin's G. Biog.*

LOBINEAU (GUY ALEXIS) a French historical writer, born at Rennes in 1666. In his seventeenth year he entered into the Benedic-

tine congregation of St Maur, in the abbey of St Melayne at Rennes. His life was devoted to study, and the fruits of his researches were, "L'Histoire de Bretagne," 1707, 2 vols. folio, which he defended against the criticisms of the abbé Vertot, and others; "L'Histoire des Saints de Bretagne," 1724, folio; the conclusion of "L'Histoire du Paris," 1725, 5 vols. folio, begun by Michael Felibien; besides some translations from the Spanish and Greek. The history of Brittany is still valuable as a work of reference. Lobineau died at an abbey near St Maloes in 1727.—*Le Cerf Bibl. des Aut. de la Cong. de St Maur. Moreri. Dict. Hist.*

LOBO. There were two Portuguese authors of this name. **JEROME**, born in 1593 at Lisbon, became a member of the college of jesuits, and was despatched by his order on a mission into the interior of Africa. On his return to Portugal he published an interesting account of his travels, especially through Abyssinia. Le Grand translated this work into French, from which Dr Johnson published an English abridgment, (his first production,) and drew much of the information as to the customs and manners of the Ethiopians, which he afterwards made use of in his *Rasselas*. Father Jerome Lobo died in 1678, rector of the college of Coimbra.—**RODRIGUEZ FRANCISCO LOBO**, born in the province of Estremadura, was the author of a variety of miscellaneous poems, and also of a comedy still popular among his countrymen, entitled "Euphrosyne." His works were collected in 1721, and printed together in one folio volume.—*Nouv. Dict. Hist.*

LOCHER (JAMES) surnamed Philomusus, a learned writer, born in Swabia in 1470. He studied in Italy, and taught poetry and rhetoric at Fribourg, at Basil, and at Ingolstadt. From the latter place he was expelled, on account of some opinions which he had advanced; but he was afterwards restored to his professorial chair. The emperor Maximilian I made him his poet laureate. He died at Ingolstadt in 1528. He translated into Latin Sebastian Brandt's "Ship of Fools," and published many other works, poetical, dramatic, and critical.—*Biog. Univ.*

LOCK (MATTHEW) an eminent English musician, composer in ordinary to Charles II, for whose public entry into London at the Restoration he furnished the music. He is known as the first who ever published rules on the subject of thorough-bass in this kingdom, a collection of which is to be found in a work, entitled "Melothesia." Lock, whose principal forte was the composition of airs for dramatic performances, has acquired considerable reputation by the beautiful music to Shakspeare's tragedy of Macbeth; an attempt, however, has recently been made, but on insufficient grounds, to deprive him of the credit due in this case, and to transfer it to his contemporary, John Eccles. He was also author of the music to Davenant's alteration of the "Tempest;" and, in conjunction with Draghi, set Shadwell's opera of "Psyche." In 1672 an

attack, made by him on Thomas Salmon's "Essay towards the advancement of Music, by casting away the perplexity of Cliffs, &c. &c." involved him in a controversy with that writer, in which both parties displayed at least as much acrimony as argument. The time of his decease is uncertain.—*Burney's Hist. of Mus.*

LOCKE (JOHN) one of the most eminent philosophers, and valuable writers of his age and country, was born at Wrington, in Somersetshire, on the 29th August, 1632. His father, who had been bred to the law, acted in the capacity of steward, or court-keeper to colonel Alexander Popham, by whose interest, on the breaking out of the civil war, he became a captain in the service of parliament. The subject of this article was sent, at a proper age, to Westminster school, whence he was elected in 1651 to Christ-church college, Oxford. Here he much distinguished himself for his application and proficiency; and having taken the degree of B.A. in 1655, and of M.A. in 1658, he applied himself to the study of physic. In the year 1664, he accepted of an offer to go abroad, in the capacity of secretary to sir William Swan, appointed envoy from Charles II to the elector of Brandenburg, and other German princes; but he returned in the course of a year, and resumed his studies with renewed ardour. In 1666 he was introduced to Lord Ashley, afterwards the celebrated political earl of Shaftesbury, to whom he became essentially serviceable in his medical capacity; and who was led to form so high an opinion of his general powers, that he prevailed upon him to take up his residence in his house, and urged him to apply his studies to politics and philosophy. By his acquaintance with this nobleman, Mr Locke was introduced to the duke of Buckingham, the earl of Halifax, and others of the most eminent persons of their day. In 1668, at the request of the earl and countess of Northumberland, he accompanied them in a tour to France; and on his return, was employed by lord Ashley, then chancellor of the exchequer, in drawing up the fundamental constitutions of the American state of Carolina. He also inspected the education of that nobleman's son, and was much consulted on the marriage of the latter, the eldest son, by which was the celebrated author of the *Characteristics*. In 1670 he began to form the plan of his essay on the human understanding; and about the same time was made a fellow of the royal society. In 1672 lord Ashley, having been created earl of Shaftesbury, and raised to the dignity of chancellor, he appointed Mr Locke to the office of secretary of presentations, which, however, he lost the following year, when the earl was obliged to resign the seals. Being still president of the board of trade, that nobleman then made Mr Locke secretary to the same; but the commission being dissolved in 1674, he lost that appointment also. In the following year he graduated as a bachelor of physic, and being apprehensive of a consumption, travelled into France,

and resided some time at Montpelier. In 1679 he returned to England, at the request of the earl of Shaftesbury, then again restored to power; and in 1682, when that nobleman was obliged to retire to Holland, he accompanied him in his exile. On the death of his patron in that country, aware how much he was disliked by the predominant arbitrary faction at home, he chose to remain abroad; and was in consequence accused of being the author of certain tracts against the English government; and although these were afterwards discovered to be the work of another person, he was arbitrarily ejected from his studentship of Christ church, by the king's command. Thus assailed, he continued abroad, nobly refusing to accept a pardon, which the celebrated William Penn undertook to procure for him, expressing himself like the chancellor L'Hospital, in similar circumstances, ignorant of the crimes of which he had been declared guilty. In 1685, when Monmouth undertook his ill-concerted enterprise, the English envoy at the Hague demanded the person of Mr Locke, and several others, which demand obliged him to conceal himself for nearly a year; but in 1686 he again appeared in public, and formed a literary society at Amsterdam, in conjunction with Limborch, Le Clerc and others. During the time of his concealment, he also wrote his first "Letter concerning Toleration," which was printed at Gouda, in 1689, under the title of "Epistola de Tolerantia," and was rapidly translated into Dutch, French, and English. At the Revolution, this eminent person returned to England in the fleet which conveyed the princess of Orange, and being deemed a sufferer for the principles on which it was established, he was made a commissioner of appeals, and was soon after gratified by the establishment of toleration by law. In 1690 he published his celebrated "Essay concerning Human Understanding," which was instantly attacked by various writers among the oracles of learning, most of whose names are now forgotten. It was even proposed, at a meeting of the heads of houses of the university of Oxford, to formally censure and discourage it; but nothing was finally resolved upon, but that each master should endeavour to prevent its being read in his college. Neither this, however, nor any other opposition availed; the reputation, both of the work and of the author, increased throughout Europe; and besides being translated into French and Latin, it had reached a fourth English edition, in 1700. In 1690 Mr Locke published his second letter on Toleration; and in the same year appeared his two "Treatises on Government," in opposition to the principles of sir Robert Filmer, and of the whole passive obedient school. He next wrote a pamphlet, entitled, "Some Considerations of the Consequences of lowering the Interest and Value of Money," 1691, 8vo, which was followed by other smaller pieces on the same subject. In 1692 he published a third "Letter on Toleration;" and the following year his "Thoughts concerning

Education." In 1695 he was made a commissioner of trade and plantations, and in the same year published his "Reasonableness of Christianity, as delivered in the Scriptures;" which being warmly attacked by Dr Edwards, in his "Socinianism Unmasked," Mr Locke followed with a first and second "Vindication," in which he defended himself with great mastery. The use made by Toland, and other latitudinarian writers, of the premises laid down in the "Essay on the Human Understanding," at length produced an opponent in the celebrated bishop Stillingfleet, who, in his "Defence of the Doctrine of the Trinity," censured some passages in Mr Locke's essay; and a controversy arose, in which the great reading and proficiency in ecclesiastical antiquities of the prelate, necessarily yielded in an argumentative contest to the reasoning powers of the philosopher. With his publications in this controversy, which were distinguished by peculiar mildness and urbanity, Mr Locke retired from the press, and his asthmatic complaint increasing, with the rectitude which distinguished the whole of his conduct, he resigned his post of commissioner of trade and plantations, although king William was very unwilling to receive it, observing, that he could not in conscience hold a situation to which a considerable salary was attached, without performing the duties of it. From this time he lived wholly in retirement, where he applied himself to the study of scripture; while the sufferings incidental to his disorders were matterially alleviated by the kind attentions and agreeable conversation of lady Masham, who was the daughter of the learned Dr Cudworth, and for many years his intimate friend. Mr Locke existed nearly two years in a very declining state, and at length expired in a manner correspondent with his great piety, equanimity, and rectitude, on the 28th of October, 1704. He was buried at Oates, where there is a neat monument erected to his memory, with a modest Latin inscription indited by himself. The moral, social, and political character of this eminent and valuable man, is sufficiently illustrated by the foregoing brief account of his life and labours, and the effect of his writings upon the opinions, and even fortunes of mankind, will form the most forcible eulogium on his mental superiority. Of his "Essay on the Human Understanding" it may be said, that no book of the metaphysical class has ever been more generally read; or, looking to its overthrow of the doctrine of innate ideas, none has produced greater consequences. In the opinion of Dr Reed he gave the first example in the English language of writing on abstract subjects with simplicity and perspicuity. No author has more successfully pointed out the danger of ambiguous words, and of having distinct notions on subjects of judgment and reasoning; while his observations on the various powers of the human understanding, on the use and abuse of words, and on the extent and limits of human knowledge, are drawn from an attentive reflection on the operations of his own mind, the only

source of genuine knowledge on those subjects. Several topics, no doubt, are introduced into this celebrated production, which do not strictly belong to it, and some of its opinions have been justly controverted. In some instances, too, its author is verbose, and wanting in his characteristic perspicuity; but with all these exceptions, and even amidst the improvements in metaphysical studies, to which this work itself has mainly conduced, it will ever prove a valuable guide in the acquirement of the science of the human mind. His next great work, his "Two Treatises on Government," although necessarily opposed by the theorists of divine right and passive obedience, and by writers of jacobitical tendencies, essentially espouses the principles which, by placing the house of Brunswick on the throne of Great Britain, may be deemed the constitutional doctrine of the country, and as such it has been ably and unanswerably defended. Besides the works already mentioned, Mr Locke left several MSS. behind him, from which his executors, sir Peter King and Mr Anthony Collins, published in 1706, his paraphrase and notes upon St Paul's Epistles to the Galatians, Corinthians, Romans, and Ephesians, with an essay prefixed for the understanding of St Paul's Epistles, by a reference to St Paul himself. In 1706 the same parties published, "Posthumous Works of Mr Locke," 8vo, comprising a treatise "On the Conduct of the Understanding;" "An Examination of Malebranche's Opinion of seeing all Things in God," &c; but all his works have been collected together, and frequently printed in three volumes folio and four volumes quarto.—*Biog. Brit. Life prefixed to Works. Towers's Vindication. Enfield's Hist. of Philos. Aikin's G. Biog.*

LOCKMAN (JOHN) a dramatic and miscellaneous author of the last century, born about the year 1698. His principal works are, a musical drama, entitled "Rosalinda," 1740, (to which he has prefixed an ingenious treatise on the origin and progress of operatic performances,) and "The Lamentations of David," an oratorio. He also assisted in compiling the "General Historical Dictionary;" "Blainville's Travels;" and produced a few miscellaneous poems of no great merit. He acted for some time in the capacity of secretary to the British herring fishery, and died February 2, 1771.—*Biog. Dram.*

LODGE (THOMAS) an ingenious physician and dramatic writer, who flourished during the close of the sixteenth, and the commencement of the following century. Wood assigns Trinity college, Oxford, as the place where he received his education; but it is certain that he took his degree in physic at Avignon, owing, perhaps, to his religious tenets, which were those of the Romish church. On his return to England, however, he was admitted to an *ad eundem* degree at Cambridge, and afterwards enjoyed an extensive practice in the metropolis. In 1594 appeared his first tragedy, "The Wounds of Civil War," printed in 4to, which was followed four years afterwards by a

tragi-comedy, entitled "A Looking-glass for London and for England." Greene, of Norwich, the author of "A Groat'sworth of Wit, &c." is said to have mainly contributed both to these and to some other of his performances. His other works are, "Euphues' Golden Legacy;" "A Translation of Josephus's Jewish Antiquities;" "The Countess of Lincoln's Nursery;" "A Defence of the Drama;" "Trebonius and Pristeria;" "A Translation of Seneca's Morals;" and "An Alarm against Usurers." His death took place in 1625.—*Biog. Dram.*

LOEFLING (PETER) a Swedish botanist, one of the pupils of Linnæus. In 1749 he sustained a thesis "De Gemmis Arborum," at the university of Upsal. In 1751 he went to Spain, where he was made botanist to the king, and during two years he continued making observations on the plants of that country. In 1754 he embarked on a scientific expedition to South America. He explored the districts around Cumana, New Barcelona, and St Thomé de Guyana, and was preparing to make farther discoveries, when he was attacked by fever, and died in 1756, aged twenty-seven. Some communications from Loefling appeared in the transactions of the academies of Upsal and Stockholm, and his treatise, entitled "Iter Hispanicum," has been published in Swedish, German, and English.—*Biog. Univ.*

LOFFT (CAPEL) was the son of Christopher Lofft, esq. a barrister-at-law, who, in 1751 resided in Boswell-court, Carey-street, where Capel, his second son, was born, in the November of that year. The delicacy of his health rendering him backward in his education, it was not till 1759 that his father ventured to place him at Eton; having, in consequence of his own appointment to the recordership of Windsor, removed his residence to the latter town. He distinguished himself at school, by the liveliness of his parts, and the elegance of his compositions, and quitted it in 1769, for Peterhouse, Cambridge. At the university, he maintained the reputation of a sound classical scholar; although his comparative deficiency in mathematical knowledge lost him the Craven scholarship, for which he was a candidate. A Latin poem of his, in hexameters, published as a *tripos*, March 1, 1770, also did him much credit; and his way of handling his subject, which was the praise of Shakspeare, raised him so great an interest with Garrick, that to the exertions of that great actor, in consequence, may mainly be attributed the healing of some family differences, which eventually secured his succession to the estate of his uncle, Mr Edward Capel, of Suffolk. In 1770, quitting college, without taking a degree, he entered himself of Lincoln's-inn; and, under the superintendance of his father, proceeded to qualify himself for the English bar, to which he was called, in Michaelmas term, 1775; having, in the meantime, occasionally relieved his severer studies by the composition of an irregular poem, entitled, the "Praises of Poetry;" and "Timoleon," a tragedy; both of which appeared in 1775. About the same

period too, he commenced the study of the Hebrew and Saxon languages, in both of which he made considerable progress. In 1776, he published a collection of "Cases, chiefly in the King's Bench, from 1772 to 1774," with a Latin list of law maxims included in the volume. The maxims, he afterwards, in 1779, printed in an enlarged shape, in two volumes, under the title of "Principia cum Juris Universalis tum præcipue Anglicani;" with a partial translation, called "Elements of Universal Law;" about the same period too, he composed several political tracts on the subject of the American war, and several books of an epic, in blank verse, entitled "Davideis." Succeeding in 1781 to the Capel estates, he changed his residence to Troston, in Suffolk; and, two years after, took out his *dedimus* as a magistrate for the county, in which capacity he evinced considerable activity till the year 1800; when, having exerted himself, with the under sheriff, to delay the execution of a young woman who had received sentence of death, under circumstances of an extraordinary nature, in order that time might be granted for an application to government, the petition sent in was not only unsuccessful, but Mr Loft himself removed from the commission. Dismissed from his magisterial duties, he resumed his practice as a barrister; and, in 1810, became deputy recorder of Aldborough. Conceiving, at length, that greater facilities were afforded for the education of his family on the continent, than in England, he in 1816, proceeded to Brussels, and thence, successively, to Lausanne, Turin, and Montcallier; at which latter place he died, May 26, 1824, of a protracted illness, arising from a cold caught the preceding winter. Besides a great variety of political pamphlets, on different occasions, Mr Loft was the author of "Eudasia," a poem, in blank verse, 1780; a "Translation of the two first Georgics of Virgil," 1784; an "Essay on the Law of Libel," 1785; an edition of "Gilbert's Law of Evidence, with considerable additions," 2 vols. 8vo, 1792; "Laura, or an Anthology of Sonnets," in 5 vols. 1814; and a volume of "Aphorisms," from Shakspeare. He was, besides, a very considerable contributor to most of the magazines, and periodical publications of his day; nor is it his least merit, that to his zealous and distinguishing patronage, the public is, in a great measure, indebted for the publication of the "Farmer's Boy," by Robert Bloomfield. To this work he wrote a preface, with an account of the author; and to his unwearied efforts in bringing it before the public, no small portion of the attention excited by this justly popular poem, was unquestionably attributable. Mr Loft was twice married, and left a son and daughter by his first wife.—*Ann. Biog.*

LOFTUS (DUDLEY) the younger son of an Irish baronet, born at Rathfarnham, in the neighbourhood of Dublin, in 1618. He was educated for the Irish bar, at Trinity college, Dublin, whence he removed to Oxford; and there distinguished himself, not only in the

common track of classical literature, but by his great proficiency in the eastern languages. The fruits of his learned labours, afterwards appeared in Latin translations of the Armenian psalter, and the Coptic versions of the New Testament, which latter work is to be found in Walton's Polyglott. He also compiled a history of Christ, from Syriac, and other Oriental authorities; and published an account of the early history of "The Eastern and Western Churches." These compositions were, however, only the amusement of hours, stolen from the laborious duties of his profession, in which he rose through family interest, and his own abilities, to be vicar-general, and eventually chief judge of the prerogative court. His death took place in 1695.—*Chalmers's Biog. Diet.*

LOGAN (JOHN) an ingenious poet and miscellaneous writer of the last century. He was born at Fala, in the south of Scotland, in 1748, and was educated for the church in the university of Edinburgh. Having been ordained, he became minister of South Leith, in 1773; previously to which he had published a collection of poems, including some of his own compositions, and those of his deceased friend, Michael Bruce. He offered himself as a candidate for the professorship of history at Edinburgh; but the office was bestowed on Mr Tytler, afterwards lord Woodhouselee. Logan published, in 1781, a treatise on the philosophy of history, on which subject he had delivered a course of lectures, displaying considerable learning and ability. He subsequently wrote a tragedy, entitled "Runnemed," the representation of which was at first prohibited; though it was afterwards acted at Edinburgh, and was also published. In 1786 he removed to London, and became a writer in the English Review. He died in 1788. Besides the works mentioned, he was the author of a volume of poems; of a pamphlet in defence of Mr Hastings, for which the publisher was prosecuted; a "Dissertation on the Manners and Spirit of Asia;" and sermons. His poems are included in Dr Anderson's collection; and they were published separately, with an account of his life, in 1805, 12mo.—*Campbell's Specimens of British Poets.*

LOGAU (FREDERIC BARON VON) a German poet, born in Silesia, in 1604. He passed the latter part of his life in the service of a duke of Lignitz, and died in that city, in 1655. He published, at Breslau, in 1638, a collection of epigrams, under the name of Soloman of Golau, and a more ample collection in 1654. Lessing and Ramler published a select number of these compositions in 1759, 12mo, with a life of the author, by the former, in which his poems are compared with those of Martial and Catullus.—*Biog. Univ.*

LOHENSTEIN (DANIEL GASPAR VON) a German author, born in 1635. He studied at Breslau, Leipsic, and Tubingen, and afterwards travelled in Germany and other parts of Europe. In 1666 he was nominated imperial counsellor, and first syndic of the city of Breslau, which station he occupied till his

death, in 1683. Lohenstein was one of the earliest dramatic writers in Germany, and was the author of several tragedies. He also wrote poems, and a romance, entitled "Arminius and Thususfeld," published at Leipsic, 1689, 1690, 2 vols. 4to.—*Stoll. Int. in Hist. Lit. Biog. Univ.*

LOKMAN, surnamed Al-Hakim, or the Wise, a philosopher of high repute among the Eastern nations, to whom is attributed a collection of maxims and fables, which convey no inelegant specimens of the moral doctrine of the ancient Arabians. Mahomet gave his name to the thirty-first chapter of the Koran, in which he introduces God as thus speaking: "I have given wisdom to Lokman." According to some writers, he was the nephew of Job, to others, a grand-nephew of Abraham; while certain Mahometan doctors make him contemporary with David and Solomon. The latter all agree that he was a native of Ethiopia or Nubia, and of a servile condition, being either a tailor, carpenter, or shepherd. His wisdom they describe as the gift of Divine inspiration, in the same manner as that of Solomon. A vast number of anecdotes and records, of the wisdom and sayings of Lokman, are scattered in the writings of the Orientals, an entertaining selection from which will be found in D'Herbelot. Some writers assert, that he embraced the Jewish religion, and entered into the service of king David, and that he died at an advanced age in Judea. The relics of his fables were published by Erpenius, in Arabic and Latin, with his Arabic grammar, at Leyden, 1636 and 1656, 4to. Galland translated them into French, together with those of Pilpay. Marcel, who gave a new edition in 1803, observes, that the remains of these ancient fabulists may be regarded as the only original pieces of composition of this species, and that the fables of Æsop, most of those of Phædrus, and even many of La Fontaine, are only translations and copies. Some critics are of opinion that Lokman and Æsop were the same person, but the Oriental writers place Lokman five hundred years before the period assigned by Plutarch, Suidas, and Pausanias, to Æsop.—*D'Herbelot Bibl. Orient. Brucker.*

LOMBARD (PETER) a celebrated bishop of Paris in the twelfth century, known among the schoolmen by the title of the "master of the sentences." He was born at Novara in Lombardy, whence he took his name, and was educated at Bologna and Rheims under St Bernard. He afterwards removed to Paris in 1160, of which he became bishop, through the friendship of Philip, son of king Louis le Gros, to whom he had been tutor. His long celebrity in the schools, and the title by which he was therein distinguished, are derived from a work entitled, "Sententiarum, lib. IV." in which, after the method of Augustine, he has endeavoured to illustrate the doctrines of the church, by a collection of passages and sentences from the fathers, whose manifold contradictions he endeavours to reconcile. It may be considered as a complete body of divinity

in the scholastic spirit, and was so congenial with the taste of the age, that, according to the abbé Fleury, the number of commentators on it amounted to two hundred and forty-four. This work was first printed at Venice in 1477. Peter Lombard was also author of "Glossa, seu Commentarius in Psalmis Davidis," Paris, 1551, folio; and "Collectanea in omnes Divi Pauli Epistolas," &c. Paris, 1535, folio, in which works he has adopted the same method as in his book of sentences. He died in 1164.—*Cave. Mosheim. Dupin.*

LOMEIER (JOHN) a learned protestant divine of the seventeenth century. He was minister of the church of Dotkum, in the province of Zutphen, in Holland; and he is known as the author of a curious work, containing historical and critical notices of the most famous ancient and modern libraries. It first appeared in 1669, under the title of "Liber singularis de Bibliothecis," Zutphen, 8vo; and it was republished, with additions, at Utrecht, in 1685. Lomeier also wrote some tracts on archæology. He died in 1699.—*Canusat Hist. Crit. des Journ. Biog. Univ.*

LOMMIUS (JODOCUS) or Van Lom, an eminent Dutch physician and writer on medicine. He was a native of Buren, in Guelderland, and studied chiefly at Paris; but it is not known where he took his doctor's degree. In 1557 he became stipendiary physician to the city of Tournay; and in 1560 he removed to Brussels, where he was living, at an advanced age, in 1562. His works, which are held in estimation, consist of commentaries on the first book of Celsus de Medicina; medical observations; and a treatise on continued fevers. There are several editions of these pieces, and they were published collectively at Amsterdam in 1745.—*Eloy Dict. H. de la Med. Aikin.*

LOMONOSOF (MICHAEL WASILOWITZ) a Russian poet, historian, and miscellaneous writer of the last century. He was the son of a dealer in fish at Kolmogori, where he was born in 1711. His attachment to learning induced him to enter into a monastery at Moscow, where he studied Greek and Latin. His proficiency attracted notice, and he was sent, at the expense of the academy of St Petersburg, to finish his studies at the university of Marburg; and he afterwards went to Freyberg to obtain a knowledge of chemistry. Returning to Russia, he became a member of the academy, and professor of chemistry. In 1764 he was made a counsellor of state, and died in the course of the same year. Lomonosof was chiefly distinguished as a lyric and dramatic poet; but he also wrote idyls, epistles, and other compositions in verse; and in prose he produced a treatise on the history of Russia, and other works, original and translated.—*Aikin's G. B. Bowring's Russ. Anthol.*

LONG (JACQUES le) a French priest of the oratory, eminent as a classical and mathematical scholar, was born in the capital in 1665, and filled more than one professorship in the university, together with the office of librarian of St. Honoré. He was the author of an eru-

dite "Historical Essay on the Polyglot Versions of the Scriptures," printed in one volume octavo; "Méthode Hébraïque;" "Bibliothèque Historique de la France," folio, 5 vols.; and "Bibliotheca Sacra," folio, 2 vols. published two years after the author's decease, which took place in 1721.—*Moreri. Nouv. Diet. Hist.*

LONG (ROGER) an English divine, eminent as a mathematician and astronomer. He was born about 1679, in the county of Norfolk, and was educated at Cambridge. He took the degree of DD. in 1728; in 1733 he was made master of Pembroke-hall, and in 1749 he was chosen Lowndes's professor of astronomy and geometry in the university of Cambridge. Confined to his college, his life was distinguished by no incidents of importance. He possessed a talent for humour, and in the early part of his academical career he displayed his wit as a tripos-orator at the expense of his superiors. Dr Long was a fellow of the Royal Society; and he held an ecclesiastical benefice in Huntingdonshire, and another in Essex. His death took place December 16, 1770. He is known as the author of a valuable treatise on "Astronomy," in two quarto volumes, the first of which he published in 1742; a part of the second appeared in 1764, and the work being left imperfect at the decease of the author, was completed by Mr Wales, and the last part printed in 1784. Dr Long constructed, at Pembroke-hall, a hollow sphere, eighteen feet in diameter, on the interior surface of which were represented the stars and constellations, with the zodiac, meridians, &c., and it had an axis parallel to that of the world, on which it easily moved by means of machinery.—*Aikin's Gen. Biog. Month. Rev.* vol. lxxv.

LONG (EDWARD) author of an esteemed history of Jamaica, was born at St Blaize in Cornwall, in 1734, being the son of a gentleman who possessed estates both in that county and in Jamaica. He was brought up to the law, and on the death of his father in 1757, proceeded to Jamaica, where he became secretary to his brother-in-law, sir Henry Moore, then lieutenant-governor of that island, and was afterwards appointed judge of the Vice Admiralty court. In 1769 he was obliged to return to England for the restoration of his health, where he devoted the remainder of his life to literary pursuits, and particularly to the completion of his "History of Jamaica," which was published in 1774, in three volumes quarto. In 1797 he resigned his office, and died March 13, 1813, at the house of his son-in-law, Henry Howard Molyneux, esq. of Arundel-park, Sussex. Besides the "History of Jamaica, Mr Long wrote a collection of essays, entitled "The Prater;" a novel, called "The Antigallican;" "Letters on the Colonies;" and various minor miscellaneous pieces, both grave and humorous.—*Gent. Mag.* vol. lxxxiii.

LONG (THOMAS) an English nonjuring divine, was born at Exeter in 1621. He was educated at Exeter college, Oxford, and hav-

ing taken orders, obtained the living of St Laurence, in his native city. After the Restoration he was made prebendary of Exeter, which preferment he lost at the Revolution, in consequence of refusing to take the oath to the new government. He was very active in the theological controversies of his day, and is author of various works, the principal of which are, "Calvinus redivivus;" "History of the Donatists;" "Vindication of the primitive Christians in point of Obedience;" "History of Popish and Fanatical Plots;" "A Vindication of King Charles's Claim to the 'Eikon Basilike.'"—*Wood.*

LONGCHAMPS (PETER de) a French writer on polite literature in the last century. He was a member of the academy of Rochelle, and probably a native of that city. He adopted the ecclesiastical profession, and during the scenes of the Revolution, he took no part in public affairs. His death took place at Paris, in 1812. His principal production is a prose version of the Elegies of Propertius, reckoned the best in the French language. He also translated in the same manner the Elegies of Tibullus; and he published an abridgment of the "Histoire littéraire de la France;" a tragedy, and other works.—*Biog. Univ.*

LONGINUS (DIONYSIUS) a celebrated Greek critic and philosopher of the third century, is supposed by some to have been an Athenian, and by others a Syrian. The name of his father is unknown, but by his mother Frontaris he was allied to Plutarch. In his youth he travelled for improvement to Rome, Athens, Alexandria, and other cities distinguished for literature, and attended all the eminent masters in eloquence and philosophy. He chiefly followed the system of Ammonius Saccas, and was likewise a great admirer of Plato, whose memory he honoured with an annual festival. He appears to have taught philosophy at Athens, where Porphyry became one of his disciples; and where he also published his celebrated "Treatise on the Sublime," which raised him at once to the summit of reputation. Such was the extent of his erudition, that he was called "the living library;" and his fame having reached the ears of the celebrated Zenobia, queen of Palmyra, she invited him to her court, entrusted him with the education of her sons, and even made use of his counsels on political occasions. This distinction proved fatal to him; for when Zenobia was defeated, and made captive by the emperor Aurelian, she attempted to avert the resentment of the latter, by imputing her resistance to the advice of her ministers and counsellors, among whom Longinus, being deemed the author of her spirited answer to the Roman summons, was ordered for instant execution. His philosophy nobly supported him in the hour of trial, and he calmly submitted to his fate, with expressions of pity for his mistress, and of consolation for his afflicted friends. "The world is but a prison," he exclaimed, with his expiring breath, "happy therefore is he who gets soonest out of it, and gains his liberty." His death took place in 273.

Among the numerous writings of Longinus, some are on philosophical, but the greater part on critical subjects; of which his "Treatise on the Sublime" is the only one remaining, and that in a mutilated state. It has always been greatly admired for its elevation of language and of sentiment; and Pope characterizes its author as being "himself the great sublime he draws." More modern judges, on the contrary, regard him as rather exhibiting sensibility to literary beauties, than accuracy of investigation into their nature and causes. Longinus was one of the few ancients who appear to have been acquainted with the Jewish scriptures, quoting as an example of the sublime, the passage from Genesis; "And God said, Let there be light, and there was light." The best editions of Longinus are, those of Tollius, Utrecht, 1694, 4to; Hudson, Oxon, 1730, 8vo; Pearce, London, 1724, 4to; and Toup, Oxon, 1770, 4to, and 1778, 8vo.—*Mæveri. Brucker. Gibbon. Harwood's Classics.*

LONGLAND (JOHN) an English divine, born at Henley on Thames in 1476. He was educated at Oxford, where he became a fellow of Magdalen-college. In 1514 he was made dean of Salisbury; and he became confessor to Henry VIII, whom he prompted to divorce his wife, Catharine of Arragon. In 1521 he was raised to the see of Lincoln, and in 1532 elected chancellor of the university of Oxford, which office he held till his death in 1547. He published several volumes of sermons; and augmented by his donations some of the college libraries at Oxford.—*Berkenhout's Biog. Lit.*

LONGLAND, or LANGLANDE (ROBERT) a secular priest, and fellow of Oriel college, Oxford, in the fourteenth century, who is supposed to have been the author of the curious poetical compositions, entitled, "The Vision of Pierce Plowman," and "Pierce Plowman's Crede." He is said to have been a disciple of Wycliffe; and his poems are satires on the vice and luxury of the monastic orders and Romish clergy in general. He has hazarded prophecies of an impending reformation in the church, so extraordinary, that Warton declares he should have supposed them to have been foisted into the copies since the suppression of monasteries in England, if he had not seen them in MSS. as old as the beginning of the fifteenth century. Editions of these works were published a few years since by Dr T. D. Whitaker.—*Warton's Hist. of Eng. Poetry.*

LONGOMONTANUS (CHRISTIAN) a celebrated astronomer, the son of a labourer in Jutland, born in 1562. Having lost his father, he left his native village, where he had been ill-treated by his brothers, and went to Wybourg in 1577. He remained there eleven years, working for his support during a part of the night, and attending academical lectures in the day. He then went to Copenhagen, where he was recommended by the professors of the university to Tycho Brahe, with whom he remained eight years, assisting that philosopher in his astronomical researches. At

length he returned to Denmark, and was in 1603 appointed rector of the gymnasium of Wybourg; and two years after professor of mathematics at Copenhagen, where he died in 1647. Longomontanus published many works, which evince his intimate acquaintance with mathematics and astronomy; among which the most important is his "Astronomia Danica," containing an account of the great discoveries of Regiomontanus, Purbach, and Tycho Brahe, and proposing some alterations in the system of the latter. One of his tracts relates to the quadrature of the circle, which he imagined he had discovered.—*Aikin's Gen. Biog. Biog. Univ.*

LONGUERUE (LEWIS DUFOUR de) a native of Charleville in France, one of those comparatively rare instances in which precocity of talent bears fruit in proportion to its early promise. He was born in 1652, and before he had attained his fifth year, his proficiency was considered so extraordinary, that he had the honour of a presentation to Louis XIV, while on a royal progress, and was distinguished by his personal notice. As he grew in years, his application and perseverance in literary pursuits were conspicuous; and entering the church, in process of time he obtained two abbeys. In Eastern literature, especially, he was considered one of the most profound scholars of the age, and in his annals of the race of the Arsacides, printed in 1732 in 4to, displayed great antiquarian, as well as classical research. His other works are, "A Dissertation on Tatian," 8vo, 1700, written in the Latin language; "A Treatise on the Eucharist;" "Remarks on the Life of Cardinal Wolsey;" and an "Historical Description of the Kingdom of France," folio, 1719. He died in 1732.—*Nouv. Dict. Hist.*

LONGUEVAL (JACQUES) a French jesuit, born in 1680 at Santerre, or as others say, at Peronne. He is principally known as the author of an elaborate history of the French church, in eight folio volumes. His other works are, two dissertations "On Miracles," and "On the Sin of Separation from the Church." His death took place in 1735, at Paris.—*Nouv. Dict. Hist.*

LONGUS, the author of a pastoral tale in the Greek language, which is probably the earliest specimen extant of a prose romance or novel. It is entitled "Poinmenica," *i. e.* Pastorals, and relates to the loves of a young shepherd and shepherdess, Daphnis and Chloe. It is exceedingly curious, for the picture it affords of rural manners in ancient Greece, and it exhibits many interesting scenes, described in elegant language; but the taint of licentiousness which runs through it, detracts greatly from its merit. The history of Longus is a blank, since he is mentioned by no ancient writer. From the purity of his style it may be concluded that he did not live later than the first century of the Christian æra; though some writers place him as low as the age of Theodosius the Great. Numerous editions of the work have been published, among which is one by Villoison, with a bulky com-

mentary, Paris, 1778, 2 vols. 8vo. There are also French and English translations.—*Orig.*

LONICERUS (ADAM) a physician and naturalist of the sixteenth century. He was a native of Marburg in Germany, and in 1547 he became professor of the belles-lettres at Freyberg. He afterwards studied medicine at Mayence, and returned to Marburg, to occupy the mathematical chair. Thence he removed to Frankfort, where he held the office of stipendiary physician to the seuate, during thirty-two years, and died there in 1586. He was the author of "Methodus Rei herbariæ," 1550, 4to; "Naturalis Historiæ opus novum," 1551-55, 2 vols. folio, and other works. The name of this botanist has been preserved in the Linnæan appellation of the *Lonicera*, a beautiful genus of plants.—*Biog. Univ.*

LOOS (CORNELIUS) a Dutch divine of the sixteenth century. He studied at Louvain and Mayence, and afterwards obtained a canonry at Gouda. Having removed to Treves, in consequence of the religious commotions in Holland, he wrote a treatise, "De vera et falsa Magia," against the then prevailing notions of witchcraft. His temerity subjected him to prosecution, and he was obliged to make a recantation of his supposed error. Loos then obtained a benefice at Brussels, where he incurred fresh dangers of the same kind, and was about to be imprisoned for the third time, when he died in 1595. He was the author of "Catalogus illustrium Germaniæ utriusque Scriptorum," 1581, 8vo; and other learned works.—*Biog. Univ.*

LOOSJES (ADRIAN) a Dutch novelist, poet, and dramatic writer, born at Haerlem, about 1761. He was a bookseller at his native place, where he died in 1818. When the French emperor determined to change the Dutch government to a monarchy, Loosjes addressed to the legislation of Holland, a petition which he had drawn up, and procured to be signed by the principal inhabitants of Haerlem, to excite the public authorities to resistance against foreign despotism. Unsuccessful in this attempt, he interfered no farther in politics. In one of his novels, the history of Susan Bronkhorst, he imitated, with some success, the writings of Richardson.—*Biog. Nouv. des Contemp.*

LOPES (FERNAM) the oldest of the Portuguese chroniclers, the most valuable of whose writings is his chronicle of Joam, which is the history of the great struggle between Portugal and Castile, towards the close of the fourteenth century. It was first published in 1644, shortly after the Braganzan revolution, and was well calculated to rouse the Portuguese into a resistance of the same national enemies whom their ancestors had formerly subdued. Dr Southey regards this chronicle as exhibiting all the manners, painting, and dramatic reality of Froissart.—*Art. Lopes, by Dr Southey, in Aikin's G. Biog.*

LOPEZ DE RUEDA, a native of Seville, who may be denominated the Spanish Thespis. He was born about 1500, and exercised the occupation of a gold-beater. Before the time

of Lopez, the Spaniards had no national theatre; and their only dramatic exhibitions were the Autos Sacramentales, or mysteries, acted in churches; and the scenic entertainments, in the palaces of the king and the grandees. This dramatist, having a taste for poetry, composed pastoral eclogues and humorous dialogues, and collecting a few companions, travelled through the cities and towns, to exhibit his rude scenes to his countrymen. He died at Cordova in 1564.—*Biog. Univ.*

LORENTZ (JOSEPH ADAM) an eminent French physician, who was a native of Alsace. He studied at Montpellier, and afterwards at Paris, and in 1757 he became a surgeon in the army, and served during the seven years' war in Westphalia. After a retreat of several years, the hostilities consequent to the French Revolution, occasioned his being appointed principal physician to the armies of the Rhine. His attention to the duties of this station occasioned his death, which took place at Salzburg in 1801. He was the author of some valuable works on dysentery, fever, and other diseases incident to military men.—*Biog. Univ. Biog. Nouv. des Contemp.*

LORENZ (JOHN MICHAEL) a writer on history and philology, born at Strasburg in 1723. He became professor of history, at his native place; and in 1763 he obtained a canonry in the Lutheran chapter of St Thomas, and the following year was made librarian of the university. In 1784 he was appointed to the chair of rhetoric, which he filled with high reputation till his death in 1801. He was the author of a great number of theses, historical dissertations, and works composed for the use of his pupils, including "Elementa Historiæ Universæ," 1773, 8vo; "Elementa Historiæ Germanicæ," 1776, 8vo; "Summa Historiæ Gallo-Francicæ, civilis et sacre," 1793, 4 vols. 8vo.—*Dict. Hist. Biog. Univ.*

LORENZINI. There were two ingenious Italians of this name, LORENZO, born at Florence in 1652, studied mathematics under Viviani, and became distinguished for his knowledge of the sciences. He was for a while in the service of Ferdinand, son of Cosmo III, but falling into disgrace, was ordered into confinement at Volterra, where he solaced the hours of a wearisome imprisonment of nearly twenty years' duration, by writing a work on conic sections. His death took place in 1721.—FRANCESCO MARIA LORENZINI, whose surname is also sometimes written Laurentini, was a native of Rome, born in that capital in 1680. Cardinal Borghese, pleased with his literary talents, settled a pension on him, and gave him apartments in his palace, where he composed most of his works. These consist principally of dramas on sacred subjects, written in the Latin language, and some miscellaneous poetry. At the time of his death, which took place in 1743, he filled the post of president of the academy of the Arcadi.—*Tiraboschi.*

LORGNA (ANTONIA MARIE) an eminent mathematician, born of a noble family at Verona, about 1730. He applied himself while he was young to the study of the exact sciences; and

having entered into the corps of engineers, he obtained the rank of colonel, and afterwards the mathematical chair in the military school of Verona. He died in June 1796, leaving the reputation of having been one of the best geometers of modern Italy. His works, relating to mathematical and physical science, are numerous and valuable.—*Biog. Univ.*

LORRIOT (ANTHONY JOSEPH) an ingenious French artist, born in 1716. After having been employed in attempting some mechanical improvements in the country, he settled at Paris, where he continued his researches. In 1753 he presented to the Academy of Sciences a machine, by means of which a child might raise a weight of several thousand pounds. He was afterwards sent to Brittany, where he constructed machines for the naval service, and for working the mines of Pompeau. Among his various inventions, that which attracted most attention was the discovery of a kind of cement to be used in building, called Mortier Loriot; but his claim as a discoverer was contested by D'Etienne; and Morand, an architect of Lyons, disputed with him the invention of a hydraulic machine for raising water. He died at Paris in 1782.—*Biog. Univ.*

LORIT (HENRY) see GLAREANUS.

LORME (PHILBERT de) a distinguished French architect, who was a native of Lyons. He went to Italy at the age of fourteen, to study the remains of ancient art; and returning to France in 1536, he contributed much to the introduction of a taste for classical architecture. He was employed by Henry II, after whose death Catherine de Medicis made him intendant of her buildings. His services were rewarded with two abbeys, and he was appointed counsellor and almoner to the king. He died in 1577. De Lorme published "Dix livres d'Architecture," 1567, folio; and "Nouvelles Inventions pour bien bair et à petits Frais," 1576, folio.—*D'Argenville Biog. Univ.*

LORRAINE (ROBERT le) a celebrated French sculptor, president of the academy of that art at Paris. He was born in the French metropolis in November 1665. After studying for some time under Girardon, whom he assisted in the completion of that eminent artist's chef-d'œuvre, the mausoleum of cardinal Richelieu, he went to Italy, in order to improve himself by a familiarity with the works of the best artists, ancient and modern. On his return, he produced in 1701 the most beautiful of his works, the "Galatea," which at once procured his admission into the society, of which he became eventually the president. Lorraine, beside his merit as an artist, possessed considerable literary, as well as general information, and was acquainted with most of the French wits of his time. Various specimens from his chisel are to be found in the royal gardens at Versailles. His death took place at Paris, June 1, 1743.—*Nouv. Dict. Hist. Biog. Univ.*

LORRIS (WILLIAM de) an early French poet, who was a native of Lorris near Mon-

targis. He was the first author of the "Roman de la Rose," a composition famous in the history of letters during the middle ages, and which for two centuries had a great influence on the literature of France and England. Little is known of this poet, who died young about 1240, and leaving his work imperfect, it was continued by John de Meung. The romance of the Rose is in part an imitation of Ovid's Art of Love, illustrated by allegorical personification. The best edition is that of M. Meon, Paris, 1814, 4 vols. 8vo.—*Biog. Univ.*

LORRY (PAUL CHARLES) a counsellor of the parliament of Paris, and professor of law in the university of that city, died in 1766, at the age of forty-seven. He published a Latin commentary on the institutes of Justinian, from his father's MSS. 1757, 4to; an essay on the marriage contract, and other professional works.—LORRY (ANNE CHARLES) brother of the preceding, was distinguished as a physician. He was born in 1726, and was instructed in classical literature, under the celebrated Rollin. Having embraced the profession of medicine, he became one of the most eminent practitioners of the French metropolis, and he attended Louis XV during his last illness. He died in 1783. He was the author of a treatise on ailments; "Tractatus de Morbis cutaneis;" "De Melancholia et Morbis melancholicis;" and he edited the Aphorisms of Hippocrates.—*Biog. Univ.*

LOSSIUS (LUCAS) a German ecclesiastic, born at Bacha in Hesse, in 1508. He became rector of Luneburg, which situation he filled for more than half a century, till his death in 1582. Lossius collected a complete protestant Psalmody, by far the most classical work of its kind, to which he prefixed Melancthon's encomium on music, as adapted to the service of religion. Of his works, the principal are the one already alluded to, entitled "Psalmodia, hoc est Cantica sacra veteris ecclesie selecta," folio, Nuremberg, 1553, reprinted at Wittemberg, in 4 vols. 1569; and "Erotemata Musicae practicae, &c." Nuremberg, 1563-1570-1579, and 1590.—*Burney's Hist. of Mus. Biog. Dict. of Mus.*

LOTICHIUS SECUNDUS (PETER) a distinguished Latin poet of the sixteenth century. He was a native of the county of Hanau in Germany; and he studied at Frankfort, Marburg, and Wittemberg. At the last-mentioned university he became intimate with Melancthon; and in the war in Saxony he served in the Protestant army. He afterwards visited France and Italy; and having taken his degrees in medicine at Padua, he became professor in that faculty at Heidelberg in 1557. His death took place in 1560. The poems of Lotichius were first published in 1561; and they were reprinted at Amsterdam in 1754, 2 vols. 4to. In this edition are included the Latin poems of CHRISTIAN LOTICHIUS, the brother; and those of JOHN PETER LOFFICHIUS, the grand-nephew of the subject of this article.—*Teissier. Aikin's G. Biog.*

LOUBERE (SIMON de la) a native of Thoulouse, born 1642, principally known as

the author of a " Voyage to the Kingdom of Siam," whither he was despatched on a diplomatic mission by the French court in 1687. There is an English translation of this work, which contains many curious and interesting particulars. Loubere appears to have possessed some fancy, as well as solid acquirements. He was a good mathematician, and wrote a treatise on equations, together with some miscellaneous poetry. On one occasion, being arrested by the government at Madrid, on suspicion of being a spy, he continued for some time confined in the state prisons of that capital; but at length procuring his liberty, returned to Thoulouse, and died there in 1729. —*Nouv. Dict. Hist.*

LOUIS IX, king of France, canonized into St. Louis by the church of Rome, was the son of Louis VIII and Blanche of Castile. He was born in 1215, and succeeded his father in 1226, when being only in his twelfth year, he was placed under the guardianship of his mother, who was made regent of the kingdom. It was her great object to keep his morals untainted, and to inculcate in him a strong attachment to religion; with which view she married him early to a daughter of the count of Provence, and surrounded him with ecclesiastics. It was to the honour of Louis, that although exceedingly devout, he knew the limits between secular and ecclesiastical jurisdiction, and was very jealous of usurpation in the latter. He also rejected the invitation of pope Gregory IX to unite in a crusade against the emperor Frederick II; and showed his talent for government, by making a number of useful and salutary regulations for the improvement of the internal administration of France. Being attacked with a dangerous disease, he made a vow, in the event of recovering, to march an army against the infidels, and no remonstrances from his council and nobles, on the dangerous impolicy of such an expedition, could prevent him from undertaking it. After a preparation of three years, he accordingly embarked in 1248 at Aigues-Mortes, accompanied by his queen, his brothers, and almost all the chivalry of France, his force amounting to 50,000 men. The particulars of his eventful campaign in Egypt, until the surrender of himself and the remains of his army, is a subject rather for history than biography. It is sufficient to observe here, that with so much mistaken gallantry and superstition, history affords no example of a greater union of fortitude, punctilious honour, and humanity in a royal personage, than was displayed by Louis IX, during this unfortunate expedition. The surrender of Damietta, still in possession of the French, was at length made the price of the monarch's freedom, a vast ransom being also claimed for his followers. These terms, and a ten years' truce being agreed upon, Louis, who punctually fulfilled all the conditions of the treaty, embarked with about 6000 men, the sole remains of his army, for Acre, and spent four years more in fortifying the strong places in Palestine. On his return to France he displayed a seriousness approaching to me-

lancholy, but applied to the government of his kingdom with exemplary diligence; and by his impartial administration of justice and wholesome regulations, much advanced the happiness of his people. His devout attachment to the mendicant orders, however, rendered him too favourable to their usurpations, and it was with great difficulty that he could be prevented from becoming a Jacobin himself. His delicacy in matters of conscience was extreme, in so much, that he yielded to all demands from his feudatories and neighbours, which he deemed correctly founded, even to the great injury of the French crown; and by this scrupulous equity so raised his character among foreigners, that he was generally chosen arbiter of their differences. The donation of Naples to his brother, Charles of Anjou, was rather acquiesced in than favoured by him; and he continued to reign with great respectability until once more excited, by the papal legate, to engage in a new crusade. This fanatical resolution was again encouraged by most of the leading nobility; although many who recollected the disasters of the previous expedition, were wise enough to deprecate it. The preparations for this new enterprise were long and expensive, the conquest both of Egypt and Palestine being contemplated. Its first object, however, proved to be Tunis, the siege of which was undertaken by Louis, who disembarked, with a powerful army, on the African coast, in August 1270. He had lain but a few days before Tunis, when the heat of the climate, and bad provisions, produced a pestilence in his camp; and after seeing one of his sons perish, he was himself carried off on the 25th of the same month, being then in the fifty-sixth year of his age, and forty-fourth of his reign. The written instructions which the king left to his successor, are equally honourable to his head and heart, and he deservedly ranks among the greatest and best of his race. A too superstitious feeling of devotion was his leading foible, both as a man and a king; but it did not prevent his showing considerable abilities, both as a warrior and ruler, while the purity of his morals, and the equity and benevolence of his nature, were in the highest degree estimable. The Catholic church held his memory in great estimation, and he was canonized by pope Boniface VIII, in 1297, for precisely his greatest defects. His descendant, Louis XIII, also procured the day dedicated to his honour, to be declared a general feast of the church.—*Millot. Nouv. Dict. Hist.*

LOUIS XIV, king of France, son of Louis XIII, by Anne of Austria, was born 5th September, 1638. He succeeded to the crown under the regency of his mother, in 1643, who unfortunately allowed his education to be much neglected. The chief lesson inculcated, was a high sense of his own importance, which, however, being corrected by strong natural good sense, he was led by it to adopt a dignified propriety of demeanour, which always inspired respect, even in the midst of weaknesses and vices. Its operation

in a more important point of view was, however, unequivocally injurious; and led to those selfish sacrifices of the good of his subjects to the gratification of his own desires or glory, which characterized the whole of his splendid, rather than fortunate reign. In 1659, the peace of the Pyrenees having concluded the long quarrel with Spain, the marriage of the young king with the infanta, Maria Theresa, followed in 1660, and the death of Mazarin taking place the ensuing year, Louis resolved in future to govern by himself. Fortunately for this resolution, able men in all departments had been formed under the preceding administration; and among the rest Colbert, to whose genius he was indebted for the revival of commerce and the marine, as well as for the splendid establishments of arts and manufactures, which adorned the early period of his reign. The same excellent statesman, although not learned himself, also suggested to his sovereign the plan of pensioning the most eminent men of letters throughout Europe, a scheme which, at a very small expense, procured him learned panegyrists in every quarter. The leading object of Louis was his own personal grandeur; and a quarrel between the French and Spanish ambassadors in London, gave him an opportunity so proudly to assert the superiority of his crown, that it was never afterwards contested. A similar haughty resentment of a correction given to the insolence of the retainers of the French embassy at Rome was displayed, and when the pope's nephew, a cardinal, was obliged to come to Paris to apologize, the loftiness of his pretensions began to inspire a much higher notion of his power than of his moderation. War being renewed with Spain in 1667, the king took the field in person, under the guidance of the great Turenne, and almost all Flanders was reduced in a single campaign. A triple alliance between England, Holland, and Sweden, formed with a view to check the alarming progress of the French arms, produced, in 1668, the peace of Aix-la-Chapelle, by which Franche Comté, which had been occupied, was restored, and the conquests in Flanders retained. Magnificent plans of domestic improvement, and a few years of peace followed, until the riches of Holland tempted Louis, who had engaged on his side the venal and unprincipled Charles II of England, to attempt its entire subjugation. Accordingly, in 1672, with a vast army, thoroughly disciplined, he burst into the almost defenceless provinces, and Amsterdam was only saved by laying the surrounding country under water. At this juncture William, prince of Orange, being raised to the stadtholdership, revived the drooping spirits of his countrymen; and while the principal potentates of Europe, alarmed at the designs of France, were induced to league against her, Charles II was obliged by his parliament to desert her alliance. By these means, Holland was evacuated as rapidly as it had been overrun; but Franche Comté was inseparably annexed to the French crown. The war, which continued some years longer, and chiefly to the advantage of France, being

terminated in 1678 by the treaty of Nimeguen. During this war Lewis, attended by nobles, ladies, and all the pomp and luxury of a court, undertook several sieges in person. As he was never allowed to appear but when success was tolerably certain, and was accompanied by historiographers to record his exploits, nothing that the art of flattery could devise was omitted to exalt him in his own estimation and that of Europe; and it was at this time that he received from his subjects the surname of *Great*, the application of which he may be said to have outlived, both at home and abroad. The treaty of Nimeguen did not long terminate his plans of aggrandisement; but the bombardment of Algiers, Tunis, and Tripoly, which first followed, was a very honourable application of the renewed maritime strength of France. His treatment of Genoa, the doge of which was obliged to repair in person, and ask his pardon, was a less excusable display of haughtiness. He was more foiled in his differences with pope Innocent XI, a man of a proud and inflexible character; who, although he could not absolutely control the insolence of the retainers of the French embassy at Rome, so annoyed it with ecclesiastical censures, and otherwise acted with so much determination, that Louis, during the whole of his reign, gained little by his unreasonable arrogance in this quarter, which at the same time thwarted all his schemes in favour of the Stuarts. But if he was a refractory son of the church in points of personal punctilio, he acquired the title of "Most Christian," by his endeavours to root out Calvinism from France, which had now for some years existed in peaceful separation from the national church. The privileges of the Protestants were gradually infringed; missionaries, supported by dragoons, were employed for their conversion; and severities were practised which excited horror throughout Protestant Europe. The stern and unfeeling Louvois declared in his letters to the officers—"It was his Majesty's will, that the extreme of rigour should be employed against those who refused to become of *his* religion." In 1685 this barbarous impolicy was consummated in the revocation of the edict of Nantes; which act deprived the Protestants of all exercise of their religion, and even tore from them their children, to be educated Catholics. Prohibitions were at the same time issued against emigration, which did not prevent the escape of vast numbers of moral and conscientious people, who carried their arts and industry to hostile nations. The religious zeal of Louis in this direction was not found incompatible with great self indulgence, in regard to sexual intercourse; and the histories of his amours and attachments are recorded by pens of all descriptions. With one mistress, a married woman, madame de Montespan, he long lived in the most open manner, bringing up his children by her with even royal expectations, and indulging her haughty and capricious humour, to the extreme annoyance of every one, except himself. This

influence at length gave way to a singular attachment for the widow Scarron, afterwards the celebrated madame Maintenon, (see art. MAINTENON,) whom, in 1686, at the age of fifty, having been some years a widower, he privately married, but never acknowledged as queen. The league of Augsburg against France was formed in the same year, the soul of which was the prince of Orange, whose acquirement of the crown of England, at the Revolution in 1688, added that kingdom to the continental confederacy. The forces of France being yet entire, marshal Luxembourg, and other eminent generals, renewed the successes of the former wars, and the king in person took Namur. The naval defeat at La Hogue, however, proved a fatal blow to the renovated French marine; and the finances being exhausted by the numerous armies kept on foot, Louis was obliged, in 1697, to sign the general peace of Ryswick, which nearly restored Europe to its state before the war. Charles II, king of Spain, having been persuaded on his death-bed, in 1700, to make a will, in which he declared Philip, duke of Anjou, second grandson to Louis, his sole heir, the bequest was accepted, with a view of uniting the two monarchies. This family accession soon produced another league against France, the jealousy of England and Holland being converted into open hostility by the imprudence of Louis, in declaring the son of James II king of England, on the demise of his father in 1701. The new confederacy against France was between the emperor and the maritime powers; and the death of William, during the preparations for war, did not prevent its being waged under his successor, queen Anne. Two great generals, prince Eugene of Savoy, and the duke of Marlborough, in the hostilities which followed, obtained victory after victory. The battle of Blenheim, in 1704, proved more fatal to the French arms than any event for a century before; and being followed by that of Ramillies, France began to tremble for her own safety. The great ministers, who had guided the destinies of that country during the early and splendid part of the reign of Louis, were now no more, and being succeeded by the mere personal favourites of the monarch and madame Maintenon, the usual results followed. Louis, however, amidst all these misfortunes, preserved a degree of fortitude and equanimity which merited and obtained the respect of his subjects, however they might suffer from the consequences of his ambition. While propositions of peace were made, even including the recognition of the archduke Charles, as king of Spain, to the exclusion of his grandson, new levies were made, and this concession, in the pride of success, being unattended to, the war was renewed in Spain, under the able generalship of Vendome, who gained some decided advantages. The overthrow of the whig administration in England, which deprived Marlborough of his influence, and introduced pacific counsels, was a still more important event for Louis; and a suspension of arms with Great Britain quickly

followed. Some advantages gained by Villars, over the remaining confederates in the Low Countries following, the treaty of Utrecht was concluded in 1713. The result of these protracted and bloody hostilities left the crown of Spain in the possession of Philip, who renounced his succession to that of France; Louis agreed to the demolition of Dunkirk, and abandoned several of his former conquests in the Netherlands; while England kept Minorca, Gibraltar, and some barren tracts in North America; and Holland retained some frontier towns. Thus France suffered little in point of territory, although prodigiously in reputation and internal prosperity. The latter part of the reign of Louis was also marked by much domestic calamity. The dauphin, his eldest son, the duke of Burgundy, his grandson, with his dutchess, and one of their infant offspring, all died within a short period; domestic losses, however, appear to have very slightly affected Louis, who was a cold and distant parent, and little moved by the sympathies of relationship. His latter years were farther disquieted by religious quarrels; and the spirit of superstitious devotion, which so frequently marks the eve of life of a declining sensualist, threw him into the power of his confessors, who were usually seconded by the bigotted zeal of madame Maintenon. One of these priests, Le Tellier, a jesuit of a fiery and intolerant character, urged Louis to violent measures against the Jansenists, and incited him to procure from Rome, a formal condemnation of their doctrine, by the famous bull Unigenitus; the reception of which decree was forced upon the Gallican church, but not without opposition from many of its most respectable members. In the midst of these disputes, the king's health rapidly declined, but he surveyed the approach of death with calmness and resolution. He gave some excellent advice to the dauphin, his great grandson, in which he freely confessed the principal faults of his past reign, intolerance excepted; and expired on the 1st September, 1715, in the seventy-fifth year of his age, and seventy-second of his reign. He had the misfortune to outlive his popularity, and some very natural, if not very decorous joy, was manifested by the people at his funeral. The age of Louis XIV will always be a memorable period in history; and it cannot be denied that his personal character gave it some of its predominant features. However selfish the mere love of personal glory in a monarch, in many ways it may tend to advance that of the nation which he governs. Such proved to be the case with France, under the more prosperous portion of the reign of Louis XIV; who, while he possessed few of the qualities which create a nation or an era, by his natural sensateness, good sense, and even good taste, would have been respectable in any situation. In alleviation of his faults, too, it must be admitted, that no man was ever more exposed to moral perversion, by a bad education and extravagant flattery. He was perpetually told that he was the greatest man upon earth,

that his subjects, and all which they possessed, were his property; and that his will ought to be universal law. That under such a course of stimulus, he should become ambitious, selfish, and insensible, was scarcely avoidable; and had there not been something good in his disposition, he must have merged into an unfeeling tyrant, which, setting religious prejudices aside, he was not. For the rest; if the age of Louis XIV was that in which the reputation of France for arms, arts, and literature stood highest, it was also that of her wretchedness and humiliation; and certainly the reign of this perverted monarch vastly increased the national grievances, which another half century rendered unendurable. One of the most able panegyrist of Louis has summed up his character by saying, that if he was not a great king, he was at least an able actor of royalty. Of late some great efforts have been made to revive French respect for this monarch; but probably the preceding sentence will remain the most favourable one that will ever be pronounced by impartial posterity.—*Siecle de Louis XIV. Mem. de St Simon. Millot Elemens.*

LOUIS XV, king of France, great-grandson and successor of the foregoing, being the son of the duke of Burgundy and of Mary Adelaide of Savoy. He was born in 1710, and succeeded to the crown in 1715, soon after which the sole regency was claimed by Philip duke of Orleans, as first prince of the blood, whose right was acknowledged by the parliament, in opposition to the testament of the late king. The young prince was placed under the tutelage of Fleury, bishop of Frejus (afterwards cardinal), under whom he discovered an understanding of the common order, with moderate good sense, and nothing brilliant; while a propensity to indolence and sensuality too plainly indicated the self-abandonment and debauchery which subsequently ensued. He was crowned in 1722, and declared major the following year; but the regent retained the chief power as prime-minister until his death, which, however, took place in a few months afterwards. His successor, in the ministry, was the duke of Bourbon, who negotiated a marriage between the king and Maria Leczinski, daughter of Stanislaus, king of Poland, which marriage took place in 1725. Not long after, Fleury became prime-minister, which post, notwithstanding his great age, he held until his death in 1743. The spirit of the government of this prelate was happily peaceful; a war with the emperor in 1733, which annexed the dutchies of Lorraine and Bar to the crown of France, being the principal foreign occurrence of it. For a few years Louis lived with his queen, by whom he had one son and several daughters, with some regard to appearances; but after a while, he was captivated by the studied allurements of the court ladies, and entertained three sisters successively, one of whom was installed his mistress, with all the distinction attending that office in the former court of France. From this time he indulged his propensities in this direc-

tion, without moderation or delicacy, and his whole court assumed the immoral hue of its master. The death of the emperor Charles VI, in 1740, brought on a new continental war, when France joined with Prussia and Poland in an attempt to raise the elector of Bavaria to the empire, in opposition to the house of Austria, whose interests were espoused by England, Holland, and Sardinia. In 1744 Louis took the field in person, and was present at the reduction of several places. At Metz he was attacked by a dangerous illness, which spread consternation through all France, and obtained for him the name of "well-beloved;" and not to discredit human nature, he himself showed some sensibility, on being informed of his people's affection. In the next year he viewed (at a safe distance) the victory obtained by marshal Saxe over the English at Fontenoy; and the French took most of the strong towns in the Austrian and Dutch Netherlands, but were unsuccessful in Italy, and their marine was once more totally ruined by the English. The treaty of Aix-la-Chapelle in 1748 again restored peace to Europe, and the French ministry turned its attention to domestic improvements, and the most splendid establishment of this reign, the royal military school of Paris, was established in 1751. Disputes between the clergy and the magistracy at this time produced considerable agitation throughout France; and in consequence of the ferment occasioned by these quarrels, a fanatic, named Damiens, was induced in 1757 to attempt to kill the king in the midst of his guards. He received a stab, which was not dangerous, and although the assassin was evidently insane, and without accomplices, to the disgrace both of the government and the nation, he was put to death with the most diabolical tortures. Before this time the unsettled state of affairs in America and the East Indies had occasioned a renewal of the war between France and England, attended with continental hostilities, in which France became allied with her old rival, the house of Austria, and England with Prussia. Although the events were at first favourable to the French arms, the final result was most glorious to the English; and the interference of Spain, by virtue of the family compact, only added to the triumph and acquisitions of Great Britain. The weakness of Louis, whose ministers and favourites were chiefly selected by his favourite mistress, Pompadour, was greatly instrumental in producing those disasters which terminated in the treaty of Paris in 1763, by which France endured a considerable loss of territory. The death of madame Pompadour did not free Louis from female influence of the most degrading nature. He immediately gave her a successor in the more dissolute madame du Barry, and moreover indulged himself in debaucheries which were altogether unpardonable. At the same time his government became more severe and arbitrary. The tyrannical conduct of the duke d'Aiguillon having involved him with the parliament of Brittany, he was accused in that of Paris; but was

snatched from punishment by royal interposition. All the parliaments then made a common cause, which ended by the king, in 1771, overthrowing the whole existing system of juridical administration in France, and establishing a new one in its place. The exhausted state of the finances at the same time, led to new and burthensome imposts, which augmented public discontents, in the midst of which Louis, being attacked by the small-pox, died unlamented, on the 10th of May, 1774, in the sixty-fifth year of his age, and sixtieth of his reign. During this reign the arts and sciences made a great progress in France, and the voyages of the French mathematicians to the equatorial and polar regions, in order to measure a degree of the meridian, were equally honourable to the government and persons employed. Louis himself possessed much more information than his predecessor, being well versed in history and geography. He was also polite, affable, and naturally humane; but want of strength of character, and sensual indulgences, which destroy both physical and moral sensibility, degraded him equally as a monarch and a man; nor would he have claimed a place in this volume, to the exclusion of better monarchs of France, had not it been deemed of moment to show the personal character of the sovereigns who almost immediately preceded the French Revolution. So satisfied was Louis XV himself of some coming storm, that he selfishly congratulated himself, that, had as things were, they would last his time, which barely proved the case, while the consequence of so much miserable profligacy and misrule burst with double force over the head of his devoted successor.—*Nouv. Dict. Hist. Millot. Vie privée de Louis XV.*

LOUIS XVI, king of France, grandson of the preceding, and son of the dauphin Louis, and Maria Josepha of Saxony, was born in August 1754. His father, a prince of much strictness of character, carefully superintended the education of his three sons, the youngest of whom is now king of France, and placed them under preceptors, who paid a guarded attention to their morals. Their care in this respect perfectly succeeded with Louis the eldest, who, without displaying any brilliancy of parts, was humane, averse to flattery, simple in his tastes, and fond of retirement. He was married in 1770 to Maria Antoinette of Austria, daughter of the empress Maria Theresa, and sister to the emperor Joseph II, and ascended the throne in May 1774, being then in his twentieth year. His first prime minister was M. de Maurepas, who had occupied the same station in the late reign, but who had been exiled. By the influence of this statesman the ancient parliaments were restored, which was a popular measure, but too late and insufficient to materially ingratiate the public. It was the lot of Louis XVI, like Charles I, to come to the crown when great changes were taking place in the minds of men; and while the despotism and extravagance of the last two reigns had operated to open the eyes of

the people to the evil of arbitrary sway, a set of able and eloquent writers rose up, who, by the united powers of argument and ridicule, exposed all the weaknesses of ancient institutions, and endeavoured to re-model the whole fabric of public opinion. The finances were also in a state of great derangement; and although Louis himself was very moderate in his expenses, his economical plans were all thwarted by the profusion of his consort and the princes of the blood. A suspicion of bias on the part of the queen, in favour of her own family, was also prevalent, while the mixture of haughtiness and levity in her character, and her imprudences of conduct, deprived her of the esteem and affection of all but the few courtiers who profited by her failings. The situation of France in the quarrel between Great Britain and her revolted colonies, unfortunately for Louis, also afforded a temptation for interference, too accordant with the standard policy of France, to be neglected by his then minister, the count de Vergennes, who, supported by the queen's party, prevailed against the king's opinion not to show any partiality to the colonies. The complaints of England at this conduct being disregarded, open war took place in 1778; and although France and her allies succeeded in detaching America from the British crown, that event, and the manner in which it was brought about, evidently hastened the revolution. Previously to affairs reaching this crisis, various ministries were employed, some of which had enlarged views, although little in accordance with the anomalous state of the country, until at length the finances were entrusted to the famous Necker, whose dismissal in 1781, in consequence of the enmity which his economical plans excited in the courtiers and the queen, made room for the appointment of M. de Calonne. By some specious operations, this last minister restored an apparent prosperity for a short time, and gave free vent to the profusion of the court; but the result, at no distant period, was a derangement of the finances to so alarming an extent, that it was necessary to lay the state of affairs before a national assembly. An inferior kind of body to the States General, termed the Notables, selected by the king's nomination, from the different orders of the state, was collected for this purpose, to whom the enormous deficit, which had hitherto been kept secret, was disclosed. Extensive taxation was proposed to make good the deficiency, which the parliament of Paris refusing to register, it was banished, together with the duke of Orleans, who, under the mask of patriotism, was endeavouring to work the ruin of the king. After various abortive expedients, Necker was recalled, and the dreaded alternative of an assembly of the States General resorted to, which crucial measure took place in May 1789. As it is simply intended in this article to touch upon a few points of this eventful crisis, which exhibit the course of events which led to the destruction of the king, it is not necessary to dwell upon the proceedings, which terminated

in the Commons declaring themselves, "the National Assembly." During these violent contests, the king fluctuated between opposite counsels, until at length perceiving the obvious tendency of the measures pursued to the subversion of monarchical power, and being urged by the queen and the princes of the blood, he was induced to give orders for assembling the troops round the capital, and for the dismissal and exile of Necker. Paris burst into a flame on this event, commotions took place, in which the soldiers refused to act against the citizens; the Bastille was attacked and taken, and resistance being in vain, the king recalled Necker. Schemes for a new constitution, and new measures of finance, were then discussed with tolerable composure, until a scarcity of provisions following, the people were roused into fury, and a dreadful insurrection took place, in which a numerous armed mob marched to Versailles, broke into the palace, massacred some of the guards, and compelled the king, queen, and family to accompany them to Paris. A great emigration of the most zealous friends of royalty now took place, and the endeavours of these partizans to produce hostile interference from without, only served to hasten the destruction of the king and his queen. The National Assembly, in the mean time, formed a new constitution on the basis of limited monarchy, which the king solemnly swore to observe, but the increasing emigration of the clergy, nobles, and members of the royal family, while troops were collected, and openly formed into an army on the frontiers, naturally awakened public suspicion, and popular ferments took place both in the capital and the provinces. These suspicions Louis endeavoured to allay, by formally announcing to foreign courts his acceptance of the constitution; but his character for sincerity received an indelible stain by his attempt to escape in June 1791. This step, when the royal party were stopped on the frontiers, and brought back prisoners to Paris, he endeavoured to defend, on the ground of the danger and insults to which himself, and still more the queen, was exposed, from the Parisian mob; but as his flight was at the same time evidently connected with the plans of the emperor Leopold and the emigrants, the confidence of the people could never be restored. In the mean time the National Assembly proceeded to complete their labours, and in September 1791 presented to the king the constitutional act, which he solemnly accepted, and swore to maintain inviolable. They soon after dissolved themselves, and were succeeded by a legislative assembly, appointed by internal election. The schemes of interposition and conquest becoming still more and more obvious, in the following April war was declared against the emperor, and a decree passed the Convention, for forming a camp of twenty thousand men round Paris. This last measure the king, who regarded it as intended to overawe the moderate party, and strengthen the jacobins, refused to sanction, as he likewise did a severe decree against the refractory clergy. He also

dismissed some of the popular ministers, who had been forced upon him; and by all these proceedings excited so much discontent, that a furious populace made their way into the Tuilleries, and treated the king with gross personal insults. The approach of the duke of Brunswick, preceded by an impolitic and threatening manifesto, in which the acceptance of the constitution by Louis, was treated as an involuntary compliance, completed the exasperation of the people, and at length Pethion, the mayor of Paris, appeared at the head of the sections at the bar of the National Convention, and demanded the deposition of the king. The determination of this point was fixed for the 10th of August, on which fatal day a numerous body of insurgents attacked the Tuilleries, in the defence of which nearly the whole of the Swiss guards were massacred. The king and family had previously taken shelter in the hall of the National Convention, which immediately proceeded to declare the suspension of the royal authority, in the person of Louis XVI, and to decree the convocation of a National Assembly for the ensuing month. The king and his family were then imprisoned in the Temple, while various massacres and enormities succeeded of the most appalling description. All of these were, however, surpassed by the horrid murder of upwards of one thousand state prisoners, on the 2d and 3d September; among whom was the beautiful princess of Lamballe, whose bleeding head, stuck upon a pike, to the eternal infamy of the perpetrators, was shown to the queen, whose intimate and favourite she had been. Under the influence of a spirit so baneful, the result of many generations of misgovernment, the final fate of the most unhappy victim of it, could not be distant. After royalty had been abolished in the new convention by acclamation, an intention was soon avowed of bringing the king to trial, in breach of the constitution, which declared his person inviolable. On the 11th December, 1792, he was accordingly brought to the bar, to answer to the heads of accusation drawn up against him, for the crimes of tyranny and treason towards the nation. He defended himself with judgment and presence of mind, and received the assistance of three eminent advocates, who generously took upon themselves the hazard of so unpopular an act. He was found guilty by a small majority, and the punishment of death was decreed against him. He employed the short interval allowed him, in the preparations for death enjoined by his religion, to which he was sincerely devoted; and on the 21st January, 1793, was led to the scaffold, where his behaviour partook of the calm fortitude which had distinguished him through all the scenes of suffering, to which he had been so mercilessly exposed. He declared his innocence to the surrounding crowd, but was rudely interrupted by the noise of drums and the hands of the executioner. His body was thrown into a pit, filled with lime, and no vestige left of the place of his interment. Such was the tragical end of Louis XVI.

a victim to the thoughtlessness and misrule of his ancestors, himself being possibly one of the most moral and best-intentioned sovereigns of France. In vigour of mind and firmness of resolution, he was certainly deficient, but perhaps few princes, more possessed of these characters, would have been able to extricate themselves with honour from the perils which surrounded him. His subservience to the queen, and the weak and profuse party who availed themselves of her influence, proved undoubtedly his most fatal political failing. In point of acquirement, Louis XVI was by no means deficient; he wrote well, and excelled in clearness of expression, and methodical arrangement. Of the possession of these talents, and no small extent of information, the instructions to the navigator Prouse, drawn up by his own hand, form an unequivocal proof. This unhappy monarch left a son and a daughter, the latter of whom married her cousin, the present dauphin of France, and still survives. The unhappy son, regarded by the mockery of etiquette as Louis XVII, died miserably in 1795, at the early age of eight, in the brutal custody to which, after the death of his father, he was committed.—*Hist. of the French Rev. Memoirs by Bertrand de Moleville. Memoirs by Soulaire.*

LOUIS XVIII (STANISLAUS XAVIER de France) second son of the dauphin, the son of Louis XV, and brother of Louis XVI, born at Versailles, Nov. 17, 1755. As a boy he is said to have manifested a disposition tinged with much timidity and reserve, but to have exhibited a far more decided turn for literary pursuits than either his elder or his younger brother, (now Charles X,) with whom he was educated; and he early acquired the character of a good classical scholar. His debut in public life was made soon after the accession of his elder brother to the throne, when he presented the new monarch with a pamphlet of his own writing, entitled "Mes Pensées;" which, however, appears to have given but little satisfaction to the unfortunate prince to whom it was addressed, and who is reported, at a subsequent interview, to have requested the royal author to "keep henceforward his thoughts to himself." On the breaking out of the Revolution, the count de Provence, as he was then styled, fled from Paris to Coblenz, on the 20th June 1791, and then took a principal share in the organization of the system of emigration. The progress of the republican arms afterwards compelled him to abandon this asylum for Turin, where he was received by his father-in-law, the king of Sardinia; but subsequently again removed to Verona, under the name of the count de Lille, a title which he retained till his accession to the French throne. In 1796 he joined the army of the prince de Condé, then at Reigel, and two years afterwards was formally acknowledged king of France by the emperor Paul of Russia, at whose invitation he took up his residence for awhile, in the ducal castle of Mittau in Courland. The versatility of his new ally, however, soon put

an end to his continuance in this abode. He received peremptory orders to quit the Russian territories in a week, and took refuge at Warsaw, whence the king of Prussia, on his refusing to renounce his throne in favour of Buonaparte, compelled him to retire, as a last resource, to England. Here he was hospitably received; and Hartwell, a seat belonging to the marquis of Buckingham, assigned for his residence, where he remained, till the fall of Napoleon in 1814, drew him from his retreat to ascend the throne of his ancestors. From this he was again driven by the return of Buonaparte from Elba, and he retired into the Netherlands, till the battle of Waterloo, by completely breaking the power of his opponent, restored him to his crown. He survived this second elevation nine years, dying in his sixty-ninth year, on the 16th of September, 1824. For a considerable time previously to his decease, a dry erysipelas in his legs had deprived him of the power of walking, while his attachment to the pleasures of the table, assisted a natural tendency to corpulency, and aided materially to produce the oedematous state, which, terminating in a paralysis of the lower extremities, was the more immediate cause of his dissolution. As the restored monarch of France, Louis XVIII acted with great temper and policy; at least on his second return to his capital, after the battle of Waterloo, when it required no mean degree of skill to render the intrusion of the foreign armies, which made him king of France, palatable to the people over whom he was called to reign. He soon also adopted the ancient maxims of his family, in regard to neighbours, as was evinced by the manner in which the invasion of Spain was prepared for, under the pretext of a sanitary cordon. Besides the pamphlet already mentioned, Louis XVIII was the author of "Le Mariage Secret," a comedy in three acts, in which he is reported to have been assisted by his secretary Ducis, the imitator of Shakspeare. This piece, which is not devoid of merit, was brought out under the name of Desfaucheraire. Two operas also were the offspring of his pen, "Panurge," and the "Caravane du Caire," to which Gretry composed the music. His other writings are, an account of his journey, or rather flight to Coblenz, which M. de Talleyrand is said to have characterized as the "Journey of Harlequin, who is always afraid and always hungry;" and a few political articles, exhibiting no great force or talent, in the Journal de Paris, during the year 1814.—*Ann. Biog.*

LOUIS (ANTHONY) an eminent French surgeon, born in 1723 at Metz, where his father was a surgeon-major in the military hospital. After finishing his studies at home he went to Paris, where he became surgeon to the Salpetriere. He afterwards served professionally some years in the wars in Germany; and in 1764 he succeeded Morand as secretary to the Parisian academy of Surgery. He died in 1792, leaving, besides several surgical and anatomical publications, a tract, entitled "Observations sur l'Electricité, et ses effets

sur "Economie animale," 1727, 12mo.—*Dict. Hist. Biog. Univ.*

LOUREIRO (JOHN de) a Portuguese botanist, born at Lisbon about 1715. Having entered into the ecclesiastical state, his zeal led him to go as a missionary to Cochinchina. To his religious duties he joined the practice of medicine, which was the means of his obtaining permission to remain in the country. Not being sufficiently provided with European remedies, he was induced to collect and examine the plants of Cochinchina, by means of which he gained a practical knowledge of botany. He afterwards visited China, Bengal, Malabar, and the island of Mozambique, whence he procured a large and valuable store of dried plants. Having returned to Portugal, after thirty-six years' absence, he arranged the materials he had obtained, and published them, under the title of "Flora Cochinchinensis," Lisbon, 1790, 2 vols. 4to, of which a second edition, with notes, by professor Willdenow, appeared at Berlin, 1798, 2 vols. 8vo. Loureiro died at Lisbon in 1796.—*Biog. Univ.*

LOUTHERBOURG, or LUTHERBURG (PHILIP JAMES) a landscape painter of eminence, born at Strasburg, in 1740. He studied under Tischbein, and afterwards under Casanova, and displayed great talents in the delineation of battles, hunting-pieces, &c. After having been admitted a member of the academy of Painting at Paris, where he was first settled, he removed in 1771 to London, where he was employed in the decorations of the opera-house, and also at Drury-lane theatre. He subsequently contrived an exhibition, called the Eidophusikon, somewhat on the plan of the Diorama, which however did not prove a very profitable speculation. In 1782 he was nominated a royal academician; and as a landscape painter he possessed deserved celebrity. His character was in several respects eccentric, and he was so far infatuated with the reveries of animal magnetism, as to have accompanied the impostor Cagliostro to Switzerland, where he intended to remain. He however returned to England, and died at Hammersmith, near London, in 1812.—*Biog. Univ. Elmes's Dict. of the Fine Arts.*

LOUVERTURE (TOUSSAINT) a famous negro chief, who by his courage, intelligence, and activity, obtained an almost unbounded influence over his comrades during the commotions which preceded the independence of Hayti or St Domingo. In 1796, general Rochambeau confided to Toussaint the command of a division of the French army destined to oppose the English, and his services were rewarded by the directory. From the period of his first taking arms, he appears to have conceived the project of becoming an independent sovereign. He expelled from the island the French commissary Santhonax, and with the utmost artifice proceeded towards the execution of his designs. In 1799 the colony became the prey of intestine divisions, and a civil war took place between Toussaint and the mulatto general Rigaud, in which the for-

mer proved triumphant, and remained without a rival at home. On the accession of Buonaparte to power, the negro chief, by alternate offers of submission and measures of defence, endeavoured to secure his authority. At length, the arrival of general Leclerc, with a French fleet and army, in February 1801, put an end to his temporising policy, and after a short but brave resistance, he was compelled to submission. After a time he was transported to France, and confined, first in the temple at Paris, and then in the fortress of Joux, where he died in 1803. *Biog. Nouv. des Contemp.*

LOUVET DE COUVRAY (JOHN BAPTIST) a French advocate and man of letters, distinguished as an actor in the troubled scenes of the Revolution. At the commencement of political commotions, he joined the popular party, and displayed a decided aversion to royalty and nobility. He published a romance or novel, entitled "Emilie de Varmont, ou le Divorce necessaire," 1791, in support of the then prevalent opinions relative to marriage; and on the 25th of December, 1791, he spoke at the bar of the National Assembly in favour of a decree of accusation against the emigrant princes. In September 1792, he was chosen a deputy to the Convention, when he attached himself to the party of the Girondists; and he voted for the trial of Louis XVI, and also for the death of that prince, with a proviso that execution should be delayed till after the acceptance of the constitution by the people. He attacked with great energy Robespierre and the Jacobins, and connected himself intimately with Roland, and other persons of similar principles. In consequence of this conduct he was denounced by the Terrorists, and included in an order of arrest issued on the 2d of June, 1794. He does not appear to have taken any part in the spirited efforts made by Lanjuinais, Vergniaud, and Guadet, in the Convention, to resist their prosecutors. Having escaped from the capital, he retired to Caen, with several of his colleagues, and employed himself in writing against the Jacobins. He was declared an outlaw, on which he fled to Brittany, and thence to the department of the Garonne. At length he separated from his companions, and returned to Paris, where he kept himself concealed till after the fall of Robespierre. He subsequently published an account of his adventures during the time of his proscription, entitled "Notices sur l'Histoire et le Récit de mes Perils," a work written in a romantic style, which has been translated into English and other languages. Louvet recovered his seat in the Convention in March 1795, and he occupied the presidency in June following. He was afterwards a member of the Council of Five Hundred, which he quitted in May 1797, and died at Paris, the 25th of August, that year. After having, for a short time in 1792, edited the "Journal des Debats," he published another, called "La Sentinelle;" but he is chiefly known in literature, as the author of a licentious novel, "La Vie de Chevalier Fanblas."—*Dict. des H. M. du 18me. S. Dict. Hist.*

LOVE (CHRISTOPHER) an eminent presbyterian divine, was born at Cardiff in 1618. He was at first apprenticed in London, but he subsequently prevailed upon his father to allow him to go to the university, and he became a servitor of New Inn, Oxford, in 1635. After graduating as B.A. he entered into orders, and soon after obtained his master's degree; but refusing to subscribe to the canons, enjoined by archbishop Laud, he was expelled the congregation of masters, and repaired to London. When the presbyterian government was established, he was ordained to preach at St Mary's, Aldermanbury. He was one of the commissioners appointed by parliament at the treaty of Uxbridge, where he behaved so intemperately, as to draw upon himself the censure even of his own party. He was appointed one of the assembly of divines, and was also one of the London ministers who signed a declaration against the king's death. He subsequently engaged in a plot to assist the Scots, before whom Charles II had taken the covenant, to advance that prince to the throne of England, which conspiracy being detected by the vigilance of Cromwell, Mr Love and Mr Gibbons were tried and executed by beheading, on Tower Hill, August 22, 1651. Mr Love was accompanied, at his death, by three eminent conformist divines, Ashe, Calamy, and Manton, and the whole of the presbyterian party deemed him a martyr to their cause. His works consist of sermons and pious tracts on various subjects, in 3 vols. 8vo.—*Neale's Puritans. Ayscough's Catalogue Brit. Min.*

LOVE (JAMES) a dramatic writer and performer, whose family name was Dance, having been the son of the city architect who built the Mansion-house. The subject of this article was educated at Westminster school and Cambridge university. His first literary production was a defence of sir Robert Walpole. A severe poetical satire against that minister having appeared, entitled, "Are these Things so?" Mr Dance wrote a reply, called, "Yes they are, what then?" which procured him a handsome present from the premier, and rendered him for a while a dangler at levees, in hopes of political preferment. Disappointed in his expectations, and involved in difficulties, he went on the stage, under the assumed name of Love. His first essays were made in a strolling company, after which he performed at Dublin and then at Edinburgh, where he was manager for some years. In 1762 he removed to Drury-lane theatre, and continued there till his death, in the beginning of the year 1774. As an actor he excelled in the character of Falstaff. The dramatic productions of his pen are, "Pamela," a comedy, acted at Goodman's-fields in 1742; "The Village Wedding," a pastoral entertainment, 1767; and "The Lady's Frolic," a comic opera, acted at Drury-lane in 1770.—*Thesp. Dict.*

LOVELACE (RICHARD) an elegant poet of the seventeenth century, was the eldest son of sir William Lovelace, of Woolwich, Kent, where he was born about 1618. He received his grammatical education at the Charter-

house, and in 1634 became a gentleman commoner of Gloucester-hall, Oxford, where he graduated M.A. in 1636. On leaving Oxford, he repaired to court, and being taken into favour by lord Goring, he entered the army, and became a captain. On the pacification at Berwick, he took possession of his estate, and was deputed by the county to deliver the Kentish petition to the house of Commons, which giving offence, he was imprisoned in the Gate-house, from which he was released, on giving security not to quit the country without permission. He expended the whole of his estate in the support of the royal cause; and after entering into the French service in 1648, returned to England, and was again imprisoned until the king's death, when he was once more set at liberty. His condition was at this time very destitute, and strongly contrasted with Anthony Wood's gay description of his handsome person and splendid appearance in the outset of life. He died in great poverty, in an obscure alley near Shoe-lane, in 1658. His poems, which are light and elegant, but occasionally involved and fantastic, are published under the title of "Lucasta," under which name he complimented Miss Lucy Sacheverell, a young lady of beauty and fortune, who, on a false report of his death, married another person. Colonel Lovelace, who, for spirit and gallantry, has been compared to sir Philip Sidney, also wrote two plays, "The Scholar," a comedy, and "The Soldier," a tragedy.—*Biog. Dram. Ellis's Specimens.*

LOVIBOND (EDWARD) a modern minor poet, was the son of a mercantile gentleman, who became a director of the East India Company, and who died in 1737, and left him an independent fortune. The date of his birth is unknown, but he died at his house at Hampton, on the 27th of September, 1775. He wrote several papers in the World, and his poems, consisting of 2 vols. 12mo, published after his death, display some originality of manner, with considerable sprightliness and ingenuity.—*Chalmers's Poets.*

LOW (GEORGE) the name of a Scottish clergyman of the last century, born in 1746, at Edza!, in Forfarshire. He studied both at Aberdeen and Edinburgh, and distinguished himself by his proficiency in the various branches of natural history. In 1813, nearly twenty years after the decease of the author, a treatise of his, entitled "Fauna Orkadensis," appeared in one vol. 4to. He is said to have left behind him other works in manuscript, containing a translation of Torfaeus, with many interesting particulars respecting the Orkney islands, in one of which he enjoyed a small benefice till his death in 1795.—*Ann. Biog.*

LOWENDAHN (ULRIC FREDERIC WOLDEMAR, count von) a celebrated military officer and engineer, born at Hamburg in 1700. His father was grand-marshal and minister of the king of Poland. The son entered young into the army, and after having served in Hungary, Naples, Sicily, and else

where, he returned to Poland in 1721, and was made colonel of infantry and commander of the royal horse guards. He then studied gunnery and fortification; and in 1728 he was appointed field-marshal and inspector-general of the Saxon infantry. In 1734 and 1735 he was in the Austrian service; and he subsequently entered into that of Russia. He accepted the commission of lieutenant-general in the French army in 1743, and distinguished himself at the sieges of several towns in Flanders, and at the battle of Fontenoy. In 1747 he increased his reputation by the taking of Bergen-op-Zoom, and other places, in consequence of which he was created a marshal of France. His death took place, after some years of retirement, in 1755.—*Moreri. Biog. Univ.*

LOWER (RICHARD) a physician and anatomist of considerable eminence in the latter part of the seventeenth century. He was a native of Cornwall, and was educated at Westminster school and Christchurch college, Oxford, where he took the degree of MA. in 1655. He assisted Dr Willis, in his anatomical researches, and in his professional practice; and in 1665 he published a work, entitled "Diatribæ Thomæ Willisii, MD. et Prof. Oxon. de Febribus Vindicatio adversus E. de Meara, MD." 8vo. About the same time he engaged in experiments on the transfusion of blood from one animal to another, of which an account was published in the Philosophical Transactions. He now took his doctor's degree, and having removed to London, he was chosen FRS. in 1667, and he also became a fellow of the college of physicians. In 1669 he published his "Tractatus de Corde, item de motu et colore Sanguinis, et Chyli in eum Transitu," a valuable production, to which he owes his reputation as a man of science. He died in January 1690-91, and was buried at St Tudy, near Bodmin in Cornwall.—*Biog. Brit.*

LOWMAN (MOSES) a learned dissenting divine, was born at London in 1680. He studied at Utrecht and Leyden, and being admitted a minister, was in 1710 chosen preacher to a dissenting congregation at Clapham, where he remained during the rest of his life. He particularly distinguished himself in metaphysics and divinity, and was extremely conversant in Jewish literature and antiquities, the result of which appeared in a learned "Dissertation on the Civil Government of the Hebrews," in answer to Morgan's "Moral Philosopher." He had also a share in a periodical work, called "Occasional Papers;" and was author of "An Argument from Prophecy, to prove that Jesus is the Messiah;" "An Argument to prove, à priori, the Unity and Perfections of God;" "A Paraphrase and Notes upon the Revelations;" and three tracts on the Shecinah, the Logos, &c.—*Chandler's Funeral Sermon for Lowman.*

LOWRY, FRAS. (WILSON) a modern engraver, of great skill and eminence in his profession, and celebrated for his intimate acquaintance with many of the sciences, in particular with those of anatomy and geology.

He was the son of Mr Strickland Lowry, a portrait painter of Whitehaven, where he was born January 24, 1762. He is said to have reached the age of fifteen before he displayed any decided partiality for the profession, in which he afterwards so prominently distinguished himself; at which period of his life the accidental inspection of a portfolio, containing a selection of Woollett's best prints, produced so strong an impression on him as to decide the nature of his future pursuits, although circumstances prevented his immediately acting upon the determination he then formed. A youthful freak induced him to quit his paternal roof, and in company with a friend, whose years and experience did not exceed his own, to wander up to London, supporting themselves on the road by acting occasionally in the humble capacity of house-painters. A return to his friends, however, soon took place, and he re-established himself with them in the neighbourhood of Worcester, in which city an acquaintance commenced between him and Mr Ross, an engraver of some ingenuity, from whom he received his first instructions in the art. In his eighteenth year he again visited the metropolis, when he was fortunate enough to obtain patronage and encouragement from the late alderman Boydell, by whom he was not only employed, but introduced to several valuable acquaintances, especially to Mr (afterwards sir William) Blizard. This eminent surgeon, finding in his young friend a strong predilection for medical studies, procured him gratuitous access to the best anatomical lectures, with a view of assisting him in making surgery his profession; but after several years attendance at the hospitals, &c. Mr Lowry, imbibing, from some unknown cause, a sudden distaste for this line of life, returned with renewed ardour to engraving; in which pursuit, however, the knowledge he had now acquired of anatomy was of considerable advantage to him. Having obtained a ticket as a student in the Royal Academy, he soon distinguished himself for his skill in drawing the human figure, and made a rapid progress in his art, to the improvement of which he afterwards contributed by a variety of useful inventions. Among these may be reckoned a new ruling machine, possessing the property of ruling successive lines, either equidistant or in just gradation, from the greatest required width, to the nearest possible approximation. Upon this instrument, originally invented in 1790, he some years after made a considerable improvement, and constructed a new one, capable of drawing lines to a point, and of forming concentric circles. In 1798 he first introduced the use of diamond points for etching, an invention highly important, on account of the equality of tone produced by them, as well as of their durability. Many other useful improvements in engraving were also discovered by him, and he was the first person who succeeded in what is technically termed "biting steel in" well, the secret of which was eventually purchased from him by Mr Heath. Mr Lowry, having

now attained to the highest rank of the peculiar walk of art which he had adopted, was employed on a great variety of first-rate productions, among which our limits will only allow us to particularize Messrs Longman's edition of Dr Rees's Cyclopædia, commenced in 1800, which for nearly twenty years occupied a considerable portion of his time and attention; Wilkins's "Vitruvius," and "Magna Græcia;" Nicholson's "Architectural Dictionary," and lastly "The Encyclopædia Metropolitana," on which he was employed till his last illness deprived the world of art of one of its brightest ornaments, June 23, 1824. His chef-d'œuvre is considered to be an engraving "From the Doric Portico at Athens," in Nicholson's Architecture. Of his engravings of machinery, one of Ramsden's Sextant, never exposed to sale, but given gratuitously with the instrument, is decidedly his masterpiece. Mr Lowry, who was elected a fellow of the Royal Society in 1812, was a favourer of the Berkley system, and published an ingenious letter on the Mosaic account of the Deluge in the Imperial Magazine, January 1820.—*Ann. Biog.*

LOWTH (WILLIAM) a distinguished divine, was the son of William Lowth, an apothecary and citizen of London, where he was born in 1661. He was educated at the Merchant Tailors' school, whence he was elected in 1675 into St John's college, Oxford, where in 1683 he graduated M.A. and proceeded bachelor of divinity in 1688. Being recommended by his worth and learning to Dr Mew, bishop of Winchester, that prelate made him his chaplain, and gave him a prebend in the cathedral of Winchester, and in 1699 presented him to the rectory of Buriton. His studies were strictly confined within his own province; but having been in the habit of making marginal notes relating to criticism and philology, he communicated them freely. He furnished Dr Potter with notes to his edition of Clemens Alexandrinus, and Dr Hudson with remarks for his edition of Josephus; and similar assistance was received by several other distinguished editors. The professional works of this learned divine, whose private character was exceedingly excellent, are, "A Vindication of the Divine Authority of the Old and New Testament;" "Directions for the profitable reading of the Holy Scriptures;" "A Commentary on the Prophetical Books of the Old Testament;" and several sermons and tracts.—*Biog. Brit.*

LOWTH (ROBERT) second son of the preceding, and a distinguished English prelate, was born at Buriton, 27th November 1710. He received his education at Winchester school, whence he was elected in 1730 to New college, Oxford, of which he was chosen a fellow in 1734. In 1737 he graduated M.A., and in 1741 was elected professor of poetry in the university of Oxford. The first preferment which he obtained in the church, was the rectory of Ovington in Hampshire, in 1744, and in 1748 he accompanied Mr Legge, afterwards chancellor of the Exchequer, to Berlin, and the following years attended the

sions of the duke of Devonshire as tutor, during their travels on the continent. On his return he was appointed archdeacon of Winchester, by bishop Hoadly, and three years afterwards presented with the rectory of East Woodhay. In 1752 he married Mary, the daughter of Lawrence Jackson, esq., and the next year gave the public his "De sacra Poesi Hebræorum, Prælectiones Academicæ," 4to. Of this work, to which the duties of the author's professorship gave occasion, all the best critics speak in unqualified praise. In 1754 he received the degree of DD. from the university of Oxford by diploma, and in 1755 went to Ireland, as chaplain to the marquis of Hartington, appointed lord lieutenant, who nominated him bishop of Limerick, which preferment he exchanged for a prebend of Durham, and the rectory of Sedgfield. In the year 1758, at the visitation of the bishop, he preached a sermon in favour of free inquiry in matters of religion, which has been often reprinted, and is much admired; and the same year published his "Life of William of Wykeham," 8vo, which work, in 1762, was followed by "A short Introduction to the English Grammar." The latter production has gone through a great number of editions, and may be deemed the precursor of that attention to grammatical accuracy and precision, which has since distinguished the best writers of English prose. In 1756 a misunderstanding took place between Doctors Lowth and Warburton, the latter of whom took offence at certain passages in the "Prælectiones," concerning the book of Job, which he believed to be aimed at the theory of his "Divine Legation of Moses." A private correspondence took place, and the difference seemed to be amicably composed, until renewed by Warburton, in an "Appendix concerning the Book of Job," added to the second edition of his Divine Legation. In this production he indulged freely in the acrimony and affected contempt, by which his controversy was so unfavourably distinguished, and thereby produced a reply from Dr Lowth, in "A Letter to the Right Rev the Author of the Divine Legation of Moses," which has become memorable, at once for the ability and severity of its criticism. The dispute was carried on for some time by assistant pens on both sides, but the ultimate silence of the Warburtonians gave the victory to their antagonists. In 1766 Dr Lowth was appointed bishop of St David's, whence, in a few months afterwards, he was translated to the see of Oxford. In 1777 he succeeded Dr Terrick in the diocese of London, and the next year published the last of his literary labours, "Isaiah: a New Translation," with a preliminary dissertation and notes, which version is very highly esteemed. On the death of archbishop Cornwallis, the primacy was offered to Dr Lowth, but he declined that dignity, in consequence of his advanced age and family afflictions. In 1768 he lost his eldest daughter, and in 1783 his second daughter suddenly expired, while presiding at the tea table; his

eldest son was also suddenly cut off in the prime of life. He died on the 3rd November 1787, at his palace of Fulham, in the seventy-seventh year of his age. Besides the works already mentioned, this highly respectable prelate printed some sermons and poems, particularly an "Ode to the People of Great Britain;" and "The Judgment of Hercules." *Dodsley's Ann. Reg. for 1788. Brit. Plutarch.*

LOYOLA (IGNATIUS) founder of the order of the jesuits, was descended from a noble family, and born in the year 1491, at the castle of Loyola, in the Spanish province of Guipuscoa. At an early age he was sent to court, where he became page to king Ferdinand; but imbibing a love for arms, he subsequently embraced the military profession. He was an able and active officer, and particularly distinguished himself against the French at the siege of Pampeluna, where he received a severe wound in his left leg, and had his right thigh broken by a cannon shot. During the progress of a lingering cure, he occupied himself chiefly in perusing the lives of the saints, which religious romance operated upon his heated mind as much as reading of a kindred class did upon that of Don Quixote. Emulous of rivalling the fame of the saintly founders Francis and Dominic, he made a vow to go on a pilgrimage to Jerusalem; and on his recovery, hung up his arms in the church of Montserrat, and dedicated himself to the blessed Virgin. He then proceeded to Manresa, where he lived chiefly among the poor of the hospital, begging his bread from door to door, and enduring the most extreme humiliation. He left Manresa in 1523, and repaired to Rome, where he received the benediction of Adrian VI, and then found his way to Venice, from which city he obtained a passage to Joppa, and soon after reached Jerusalem. Some wild schemes for converting the natives, induced the representatives of papal authority in Palestine, who feared the consequences, to send him speedily back again to Europe. Conscious of his deficiency in learning, on reaching Spain, he entered himself, in 1526, a student of the university of Alcalá, where he learned to read Latin; and in the course of two years' study, was admitted to the lectures of philosophy. He however profited little by these, and acquired nothing, by attempting every thing and all at the same time. At length, having gained four proselytes as companions, he assumed a particular habit, and took to preaching. A report of these proceedings reaching the Inquisition, he was prohibited from preaching until he had studied divinity for four years; and being thus repeatedly silenced, he determined to visit Paris, where he arrived in 1528. He resumed his studies in the university of that capital, and in 1532 was at length admitted MA. Although warmly opposed, he also contrived to make a number of converts in his college, whom he induced to take the vows which he dictated in the church of Montmartre, on the 15th August, 1534. The number of these associates was seven, and afterwards ten, all of whom

engaged to meet at Venice, and proceed to Jerusalem, when Loyola could return from a visit to his native country. After preaching warmly against the licentiousness of the priests and monks in Spain, he joined his companions at Venice, where they first assumed to themselves the name of "The company of Jesus." In 1537, Loyola again visited Rome, where he summoned his companions, and laid the plan of the Order, which became afterwards so celebrated, both for good and evil; the leading distinction of which, besides the two vows of poverty and chastity, was a third, of implicit obedience to its chief. This scheme being submitted to pope Paul III, in the first instance he demurred to sanction it; but the proffer of a fourth vow of submission to Paul himself, removed his scruples, and he issued a bull in 1540 for its establishment, under the name of "The Society of Jesus." Loyola was soon after created general of the order, and fixing his head-quarters at Rome, he sent out his companions on missions to every part of the world. He retained the generalship until his death, which took place in 1556, which interval he employed in strenuously seeking the conversion of sinners, and more especially of Jews and prostitutes; but he wisely declined assuming the spiritual directorship of an order of women, on a similar plan to his own. Before his death, this extraordinary man witnessed the diffusion of his order over the greatest part of the old and new worlds; and in the short space of sixteen years, it included twelve large provinces, possessed of a hundred colleges. Loyola was in person of a middle stature, of an olive complexion, with a bald head, eyes full of fire, a large forehead, and an aquiline nose. His fanaticism and enthusiasm were certainly dignified by sincerity, and he doubtless believed as he taught, that the Society of Jesus was the result of an immediate inspiration from Heaven. The gross fictions, and pretended miracles, which have been fabricated concerning him, may be seen in his life by Bouhours. They are of course unworthy of notice, otherwise than as proofs of pious fraud in those who invented, and of credulity in such as credited them. He was canonized in 1622, by pope Gregory XV; and in the year 1710, the number of jesuits amounted to 19,998, of which formidable body the curious reader may obtain an excellent general notion, from Robertson's History of Charles V. The first great shock which this formidable society endured in general opinion, was owing to the admirable "Provincial Letters" of Pascal, from the consequences of which exposure it never wholly recovered, until the attempted assassination of the king of Portugal, which was attributed to its intrigues, and the powerful enmity of the house of Bourbon, produced its extinction by pope Clement XIV, in a bull dated 21st July, 1773.—*Life by Bouhours. Dupin. Mosheim. Robertson's Life of Charles V.*

LUBIENETSKI (STANISLAUS) a celebrated unitarian minister, descended of a noble family at Cracow in Poland, in which kingdom he

was born in 1623. On his return from a tour through France and Holland, he acquired the favour of the king of Sweden, then a visitor in his native country, and made use of his interest with him, though in vain, to procure toleration for the sect of which he was a member. Failing in his endeavours, he went into Denmark, where he met at first with a favourable reception; but the influence of the Lutherans being exerted against him, he was compelled to remove to Hamburg in 1662. A second attempt which he made to settle at Copenhagen, met with no better success, and he again retired to his former asylum, where, in 1675, the whole of his family had nearly fallen victims to the malice of a vindictive domestic, who, on some slight occasion, mixed poison with their food. His two daughters expired from its effects on the 16th of May, he himself followed on the 18th, and the life of his wife, who had also partaken largely of the deleterious compound, was with great difficulty saved. At the time of his decease, he was engaged in writing an account of the Rise and Progress of the Reformation in Poland, which this event prevented him from completing. He was also the author of the "Theatrum Cometicum," folio, Amsterdam, 1667, and of several other treatises still in manuscript.—There were also two brothers of this name, THEODORE and CHRISTOPHER, natives of the same place. Of these, the former excelled both as a portrait and an historical painter. He was born in 1643, and died about the year 1716. The latter was also a painter of some reputation.—*Moreri. Nouv. Dict. Hist.*

LUBIN (AUGUSTIN) a native of Paris, born about the commencement of the year 1624. He entered the church as an Augustine monk, and rose to be general of his order, in his native country. Directing his attention to the study of ancient as well as modern geography, the reputation which his proficiency in that science gained him, caused his being appointed geographer royal. The fruits of his studies in this branch of learning, now extant, are, "Geographical Tables to Plutarch;" "The Geographical Mercury;" a "Description of Lapland;" "Orbis Augustinianus;" and "The Geography of the Bible." His other works consist of an "Ecclesiastical History of the Religious Houses of France and Italy," and some annotations on the Lives of the early Christian Martyrs. Father Lubin, during the latter part of his life, resided for some time at Rome, but died at Paris in the spring of 1695.—*Nouv. Dict. Hist.*

LUBIN (EILHARD) a German professor, poet, mathematician, and divine, born in the spring of 1556 at Westersted, in the duchy of Oldenburgh. The earlier part of his life was spent in the prosecution of liberal studies at Cologne, Leipsic, and other German universities, till, in his fortieth year, he accepted the professorship of poetry at Rostock. In 1605 he obtained, in addition, that of theology. The work by which he was principally known was a curious treatise, entitled, "Phosphorus de prima causa et natura Mali, tractatus hyper-

metaphysicus," printed at Rostock the year after he had obtained his first appointment there. In it he maintains the singular hypothesis, of the existence of two coeternal principles, which he calls "Deus" and "Nihilum;" the former the good principle, the latter the bad, or *Origo Mali*, which he defines to be *Nothing*. These opinions drew upon him a host of assailants; with Grauer, the chief of whom, he carried on for some time an animated controversy on the subject. He also published a translation of the Greek Anthology; a "Key to the Greek Language;" Commentaries on the Writings of St Paul, Juvenal, Persius, and Anacreon; "Monotessarion, sive *Historia Evangelica*," being a compression of the four gospels into one continuous narrative; "Antiquarius, sive priscorum et minus usitatorum vocabulorum brevis et dilucida interpretatio;" and a volume of miscellaneous Latin poetry. His death took place in 1621.—*Nouv. Dict. Hist.*

LUCAN (MARCUS ANNEUS LUCANUS) a celebrated Roman poet, was born at Corduba, in Spain, in the year 37. His father, Annæus Mela, a Roman knight, was the youngest brother of the philosopher Seneca, and his mother Acilia, the daughter of Lucanus, an eminent orator, from whom he took his name. He was taken to Rome in his infancy, and was early committed to the ablest masters. He was introduced into public life by his uncle Seneca, then tutor to Nero; and he obtained the office of questor before he was of the legal age to exercise it. He was also admitted into the college of Augurs, and was deemed in the full career of honour and opulence. He gave proof of his poetical talents at a very early age, and thereby excited the jealousy of Nero, whose passion it was to be regarded as the first poet and musician of the age. On one occasion, Lucan was so imprudent as to recite one of his compositious in competition with Nero, at a public assembly, and the judges very honestly awarded to him the prize. The angry emperor immediately forbade him to recite any more verses in public, and otherwise treated him with so much indignity, that he took part in the conspiracy of Piso, and other persons, against that execrable tyrant. On the discovery of the plot, he was arrested, with the other conspirators, and, according to Tacitus, was so base as, on a promise of pardon, to accuse his accomplices, and among others, his own mother. This last charge, however, as she was passed over without either absolution or punishment, is thought to have originated in the calumny and malice of Nero. Be this as it may, his confessions were of no avail; he was condemned to die, and being allowed to make choice of the manner of his death, he chose that which terminated the life of his uncle Seneca. His veins were accordingly opened in a hot bath; and when he found himself growing faint and cold with the loss of blood, he repeated some of his own verses, describing a wounded soldier, sinking in a similar manner. He died in the year 65, being then only of the age of twenty-

seven. Of the various poems of Lucan, the "Pharsalia" alone has reached modern times. This is an unfinished piece, relating the causes and events of the civil war between Pompey and Cæsar. Its title to be reckoned an epic has been disputed by some critics, who deem a supernatural agency essential to that species of composition. Be it what it may, and notwithstanding its occasional faults of harshness, perplexity of style, extravagant description, and turgid sentiment and expression, it will ever rank among the leading productions of the Latin muse, by its moral sublimity, noble spirit of freedom, and frequent instances of genuine poetry. The best editions of Lucan are, the "Variorum," Leyden, 1658, 8vo; that of Oudendorp, Leyden, 1728, 4to; and that by Didot, Paris, 1795. The most popular English version of Lucan is that of Rowe. — *Warton's Essay. Crusius's Lives of the Poets. Harwood's Classics.*

LUCAS (CHARLES) a famous Irish patriot, who was a physician at Dublin. He was born in 1713, and died November 4, 1771. Dr Lucas was a member of the Irish house of Commons, and a distinguished opponent of the court party in the corporation of the metropolis, as well as in the senate. His popularity in the sister island was equal at one time to that of Wilkes in England; and his funeral was honoured by the attendance of the corporation of Dublin, many members of both houses of parliament, besides a vast assemblage of other persons. He was the author of a few medical tracts, and some political pamphlets. — *Jones's Biog. Dict.*

LUCAS (FRANCIS) surnamed "of Bruges," from his having been born in that city in 1552. He studied at Louvaine, where he graduated, and acquired a great reputation for his familiar acquaintance with Biblical and Oriental literature. He published Commentaries on the Old and New Testaments, the former in 3 vols. 4to, the latter in 3 vols. folio; and also a Concordance. Some time previously to his decease, he obtained the deanery of St Omers, where he died in 1619. — *Nouv. Dict. Hist.*

LUCAS (PAUL) a French traveller of considerable note in the early part of the eighteenth century. He was born in 1664 at Rouen in Normandy. In 1699 and 1704 he visited the Levant, Greece, Asia Minor, and Africa; and having brought home medals and other curiosities for the king's cabinet, he was made one of the royal antiquaries. He travelled in the East again in 1714 and 1723; and at length having made a journey to Spain, he died at Madrid in 1737. His travels, which form 7 vols. 12mo, are entertaining, but romantic and improbable. (For a curious account of his adventure with a cabalistical derive while travelling, see article FLAMEL.) — *Moreri. Biog. Univ.*

LUCAS BURGENSIS PACIOLUS, or LUCA DI BORGIO, a Minorite friar, who has been regarded as the author of a great improvement in mathematical science, by his invention or introduction of the mode of notation, by means of algebraic symbols, to mark

known or unknown quantities. He is said to have taught his system of algebra at Venice about 1494; and whencesoever he may have derived it, he appears to have been the first European mathematician by whom it was used. — *Priestley. Ed.*

LUCAS, DD. (RICHARD) a native of Presteign, Radnorshire, born 1648, and educated at Jesus college, Oxford, where he graduated. He was for a short time head-master of Abergavenny school, but resigned his situation, and coming to the metropolis, obtained, in 1683, the lectureship of St Olave's, Southwark, and the vicarage of St Stephen's, Coleman-street, to both which preferments he was elected by the parishioners. Dr Lucas subsequently obtained a stall at Westminster, and held it nineteen years, several of which were passed by him in blindness, a weakness which, from his youth, had affected his eyes, terminating at length in total deprivation of sight. He was a good classical scholar, as well as a pious divine. His principal writings consist of five octavo volumes of Sermons; "An Enquiry after Happiness," 2 vols. 8vo; "The Morality of the Gospel;" "Christian Thoughts;" "Practical Christianity," 8vo; and a Latin translation of the "Whole Duty of Man." His death took place in 1715. — *Biog. Brit.*

LUCIAN, a distinguished Greek writer, was a native of Samosata, the capital of Comagene, on the banks of the Euphrates. He was born in the reign of Trajan, or as some think, early in that of Adrian. His birth was lowly, and his father not being able to educate him, placed him under his brother-in-law, to be brought up a sculptor. Having contracted a disgust for this employment, he withdrew from his master, and went to Antioch, where he engaged in literary studies, and embraced the profession of a pleader. Wearied, however, with the contention of the bar, he threw off the gown, and confined himself to the profession of rhetoric. In this character he settled first at Antioch, but subsequently visited Greece, Italy, Spain, and Gaul. At an advanced age he was appointed procurator of Egypt, by the emperor Marcus Antoninus, and he is supposed to have died in the reign of Commodus, at the age of eighty or ninety. The works of Lucian, of which a large number have reached modern times, consist of a great variety of writings, narrative, rhetorical, and satirical, partly in the historical and dialectical form, but chiefly in that of dialogue. Of these the most popular, and those which chiefly distinguish him as a writer, are such as are distinguished by a rich vein of humour, insomuch that he may be deemed the Swift or Voltaire of the ancients. He turns much of his railery on the absurdities of the pagan mythology, and the follies of the various sects of philosophers; more especially scourging the various quacks and itinerants of the latter class, who preceded the mendicant orders of Christianity, in their gross experiments upon human credulity. As the Epicureans concurred with him in this respect, he treats them with more favour than the rest; and fre-

quently assumes the condensed sense and acuteness of the Socratics. He did not altogether spare the Christian religion, but seems to have witnessed it only under the garb of mystery or fanaticism. Like most satirists, he occasionally exaggerates the absurdities he would decry, and sometimes indulges a little licentiously, although a supporter of morality, upon the whole. The best editions of Lucian are those of Bourdelot, Paris, 1615, folio; of Grævis, Amst. 2 vols. 4to; of Hemsterhusius, Amst. 1743, 4 vols. 4to. Lucian has found several English translators, Spence, Mayne, Hickes, Carr, and Franklin.—*Vossius. Brucker. Saxii Onom.*

LUCIFER, bishop of Cagliari in Sardinia, lived in the fourth century, and is known in ecclesiastical history as the author of a schism; choosing rather to separate from his brethren, than allow the decree of the council of Alexandria, for receiving the apostate Arian bishops. Being honoured by the church of Rome as a saint, it is supposed that he subsequently reconciled himself to the orthodox communion, which his friend Rufinus, however, denies. He died in 370. His works, which consist of treatises on the controversial topics, in which he was so deeply interested, were collected together, and published at Paris in 1563, and with additions, at Venice in 1780. *Mosheim. Lardner.*

LUCILIUS (CAIUS) a Roman satirist, the friend of Scipio and Lælius, who flourished in the second century before the Christian æra. He was a native of Suessa in Italy, born of an equestrian family, and served with some reputation in the Numantian war. Of his works, which originally occupied thirty books, and were remarkable for their causticity, but few specimens, and those merely fragments, have reached posterity; such of them as are extant, were, however, collected and published at Leyden in 1599, with a commentary by Dousa. Lucilius has by some been considered the inventor of satiric poetry; but the probability rather is, that he only refined upon a style which Ennius and Pacuvius had practised before him. His death took place A. C. 103, at Naples. *Vossii Poet. Lat. Bayle.*

LUCKNER (NICHOLAS) a baron of the German empire, born at Campen in Bavaria, who became a general in the French army. In the seven years' war he held that rank in the Prussian service, and having displayed considerable talents as a commander of light troops, he was, on the occurrence of peace, invited to enter into the service of France, in which he obtained the rank of lieutenant-general. In 1789 he sided with the revolutionary party, and from the beginning of 1791 he held various military employments. His age, experience, and reputation, occasioned his being placed in situations to which his abilities were unequal. In December 1791 he received the bâton of marshal; and a few months after he was appointed generalissimo of the French armies. After having made his appearance at Paris, where, with La Fayette, he enjoyed a short-lived popularity, and

showed a disposition to support the king's constitutional authority, he went to take the command of his army at Strasburg. He was supplanted by Dumouriez, who, on his suspension from the command, succeeded him. He went to Paris to justify himself before the National Convention, in January 1793, and was ordered to retire wherever he thought proper. Having some time after demanded payment of a pension due to him, he was arrested and put to death.—*Dict. des H. M. du 13me. S.*

LUCRETIA, a Roman lady of distinguished virtue, whose ill-treatment by Sextus Tarquin, led to the destruction of the kingdom, and the formation of the republic of Rome. She was the wife of Collatinus, a near relation of Tarquin, king of Rome. Sextus Tarquinius, who contrived to become a guest in the absence of her husband, whose kinsman he was, found means to reach her chamber in the middle of the night, but was rebuffed in a manner worthy of her character. Finding her resolute, he threatened to stab her, kill a slave, and place him by her side, and then swear that he had slain them both in the act of adultery. The fear of infamy succeeded, and he triumphantly quitted her; on which she summoned her husband, father, and kindred, and after acquainting them with the whole transaction, in spite of their soothing remonstrances, drew a dagger and stabbed herself to the heart. Such is the story as related by Livy; and although some of the circumstances are narrated differently, all agree in the catastrophe, which was the immediate cause of the conspiracy against the Tarquins, headed by Junius Brutus, which produced a change to republican government in Rome B. C. 509.—*Livy. Dionysius Halicarnassus.*

LUCRETIUS CARUS (TITUS) an eminent Latin poet and philosopher, was a Roman, but whether of the ancient Lucretian family is uncertain. He was born about B. C. 96, and being sent early to Athens, studied under Zeno, a noted Epicurean. His celebrated poem, "De rerum Natura," was written during the intervals of reason, which alleviated an insanity to which he was subjected, by the administration of an amatory philtre by his wife. It forms the first account of the Epicurean philosophy in the Latin language, and affords a striking example of the great freedom with which opinions contradictory to the established religion were at that time maintained, as no writer has more pointedly controverted the popular notions of heathenism, or even the fundamental points of all other religion, such as the existence of a creator, a providence, and an immortal state. His language and versification partake of the rudeness of an early period of literature; but when the subject admits of elevated sentiment, or descriptive beauty, no Latin poet has taken loftier flights, or exhibited greater sublimity. His morality is also generally pure, although he is sometimes descriptively licentious. The inconsistency of his system being now no longer injurious, the gravest characters in modern times have not scrupled to become his editors

and commentators. He is said to have died by his own hand, at the age of forty-four. The best editions of his poem, are those of Creech, Oxon, 1695, 8vo; Havercamp, Leyden, 1725, 4to; Gilbert Wakefield, London, 3 vols. 4to. It has been translated into English, by Creech, Good, and Busby, the second of which translations is accompanied by the text of Wakefield, and very elaborate annotations.—*Vossii Poet. Lat. Brucker. Good's Translation.*

LUDEWIG (JOHN PETER VON) chancellor of the university of Halle, in Saxony, and counsellor to the king of Prussia, eminent for his acquaintance with international jurisprudence. He published several collections of the historical writers of the middle ages; a commentary on the golden bull, an imperial decree, forming a fundamental law of the German empire; and other works of research. He died in 1743.—*Dict. Hist.*

LUDLOW (EDMUND) a distinguished leader of the republican party, in the civil wars of Charles I. He was the eldest son of sir Henry Ludlow, knight, and born about 1602, at Maiden Bradley, in the county of Wilts. He received his academical education at Trinity college, Oxford, whence he removed to the Temple, in order to study the law. Sir Henry Ludlow, who was chosen knight of the shire for Wiltshire, in the long parliament, having joined the opposing party, his son, who warmly adopted the same principles, entered into a military association, formed among the students of the law, with most of whom he subsequently entered the army in the life-guards of the earl of Essex. He served at Edge-hill, raised a troop of horse, and being made governor of Wardour castle, held it for ten months against the king's party, until battered to ruins, when he was made prisoner, but soon afterwards exchanged. He was also present at the second battle of Newbury, and many other warm actions. When the famous self-denying ordinance took place, he remained out of any ostensible situation, until chosen member for Wiltshire, in the place of his father. At this time the machinations of Cromwell becoming visible, he was opposed by Ludlow with firmness and openness. With a view of establishing a republic, his favourite form of government, he however joined the army against the parliament, when the latter voted the king's concessions a basis for treaty, and was also one of the unhappy Charles's judges. With a view of removing him, Cromwell caused him to be nominated general of horse in Ireland, where he joined the army under Ireton, and acted with great vigour and ability. When Cromwell was declared protector, Ludlow used all his influence with the army against him, on which account he was recalled, and was put under arrest at Beaumaris. Although he refused to enter into any engagement not to act against the government, he was at length allowed to come to London, where, in a conversation with Cromwell himself, he openly avowed the republican principles upon which he acted, and refusing all security of engagement for submission, he retired into

Essex, where he remained until the death of the Protector. When Richard Cromwell succeeded, he joined the army party at Wallingford-house, and was instrumental in the restoration of the long parliament, in which he took his seat. Too honest for the views of the army faction, they contrived to send him again to Ireland, as commander-in-chief, where his efforts in favour of the parliament were thwarted by the council of officers at Dublin, who at length accused him of high treason, and he was compelled to return to London. The Restoration was now rapidly approaching, and finding the republicans unable to resist it, he quitted the country, and proceeded to Geneva, whence he afterwards, with many more fugitives of the party, took refuge at Lausanne, where Lisle was assassinated by some English royalists. Similar attempts were made on the lives of Ludlow and others; but his caution, and the vigilance of the magistracy of Berne, protected him, and he passed the remainder of his life at Vevay, with the exception of a brief visit to England after the Revolution, from which he was driven by a motion in parliament for his apprehension, by sir Edward Seymour, the leader of the Tory party. He closed his life in exile in 1693, being then in his seventy-third year. A monument is erected to his memory by his widow, who was a faithful and courageous partaker of all his vicissitudes, in the principal church of Vevay. Ludlow was one of the purest and most honourable characters on the republican side, and doubtless acted upon principle, being generally equitable, humane, and disinterested. He was also morally strict, without any display of the odious fanaticism and hypocrisy which disgraced the conduct of so many of his associates. He left posterity a valuable legacy in his "Memoirs," which contain not only the acts of his own life, but many particulars in relation to the general history of the times; they are written in a manly unaffected style, and although not entirely free from party prejudice, are replete with curious and authentic matter.—*Ludlow's Mem. Biog. Brit.*

LUDOLF (GEORGE MELCHIOR) a German jurist of the eighteenth century. He was a native of Erfurt, and became assessor of the imperial chamber of Wetzlar. Among the works which he published are, "Introductio Juris Primogenituræ;" "De Jure Fœminarum illustrium;" and "Corpus juris cameralis." He died in 1740.—*Dict. Hist. Zoopf.*

LUDOLF or LUTHOLF (JOB) a learned Oriental scholar, born at Erfurt in Germany, in 1624. He studied jurisprudence at the university of his native place, and afterwards travelled as a tutor in several parts of Europe. Returning to Erfurt, he practised as a counsellor in the Saxon courts, and exercised other public functions. In the journeys which he made to Paris, in the service of the elector palatine, and during a previous visit to Rome, he acquired from written documents and oral communication, a fund of knowledge relative to the history and literature of the na-

tions of Asia and Africa. He spent the latter part of his life at Frankfort, in the prosecution of his literary researches, and died there in 1704. His productions are, "Historia Æthiopia," with a commentary and appendix from the writings of father Tellez, a Portuguese jesuit, and the intelligence supplied by an Abyssinian priest; "Grammatica Amharica," folio; "Lexicon Amharico-Latinum," folio; "Lexicon Æthiopico-Latinum," 2 vols. folio; "Grammatica Linguae Æthiopicæ;" "Fasti Ecclesiae Alexandrinæ," folio, &c.—*Moreri. Biog. Univ.*

LUDOLF (HENRY WILLIAM) nephew of the preceding, was born in 1655. He was educated by his uncle, and became secretary to the Danish envoy at the court of St James's, and afterwards to prince George of Denmark. He resigned the latter situation on account of ill health; and having travelled to Moscow, he made himself acquainted with the Russian language, and on his returning to England he published a Russian grammar, at Oxford, in 1696. He afterwards went to the Levant, and thence to the Holy Land and Egypt. He died in London in 1710, having published an edition of the New Testament in modern Greek, and other works, chiefly of a religious nature.—*Aikin's Gen. Biog.*

LUDWIG (CHRISTIAN GOTTLIEB) a German physician and naturalist, born in Silesia in 1709. He travelled in Africa, and on his return to Germany became medical professor at Leipsic, where he died in 1773. He was the author of "Institutiones Physiologiæ," 1752, 8vo; "Institutiones Pathologiæ," 1767, 8vo; and "Institutiones Therapiæ generalis," 1771, 8vo; and he invented a system of lotion, in opposition to the sexual system of Linnæus.—CHRISTIAN FREDERIC LUDWIG, MD, son of the former, obtained a medical professorship at Leipsic in 1782, and died February 3rd, 1784, at the age of thirty. He published an inaugural dissertation, "De Suffusionis per acum curatione," Lips. 1783, 4to.—*Rees's Cyclop. Lond. Med. Journ.*

LUGO. There were two Spanish jesuits of this name, brothers, natives of Madrid. FRANCISCO, the elder, born 1580, was educated in the university of Salamanca, and entered into the order in his twentieth year. He was soon after despatched on a mission into the Spanish dominions in the New World, and became professor of divinity at Mexico and Santa Fé. He was the author of some annotations on the works of Thomas Aquinas, printed in two folio volumes; a treatise on the sacraments of the Romish church, with other theological tracts, and died in 1652.—JUAN DE LUGO, his brother, born in November 1583, after prosecuting his studies with great success at Salamanca and Seville, obtained the divinity professorship at Valladolid, which he held five years, and then resigned for a similar appointment at Rome, which he filled upwards of twenty years with great reputation. Although a learned and even a laborious scholar, such was the native modesty and lack of ambition implanted in his disposition,

that it was only at the positive command of the reigning pope, Urban VIII, that he was induced to publish the works he had composed. These, consisting entirely of controversial treatises, fill seven folio volumes, and are dedicated to the pontiff, at whose command they saw the light. Urban, gratified by his compliance, took the first opportunity to raise him to the purple; but he declined the dignity, and only yielded as before to the absolute commands of his spiritual superior. As a scholar, his knowledge was by no means confined to classical or theological literature; he was also a good natural philosopher, and to his exertions was owing the first introduction into France of Quinquina, called from him at the time, "De Lugo's powder," and "Jesuit's bark." This invaluable medicine, though at that period (1650) sold from its rarity at its own weight in gold, he freely dispensed to all afflicted with agues. Cardinal de Lugo died at Rome in August 1660, bequeathing all his property to his order, and being buried at his own request at the feet of Ignatius Loyola its founder.—*Moreri. Nouv. Dict. Hist.*

LUITPRANDUS, an ecclesiastic of Lombardy, who flourished as a statesman and historian about the middle of the tenth century. He was born at Pavia, and became secretary to Berengarius the second, king of Italy, who despatched him on a diplomatic mission to Constantine Porphyrogenitus, in 948. In acquitting himself of this commission, he had the misfortune to displease his employer, and was compelled to throw himself on the emperor Otho for protection against his anger. The interference of this potentate in his favour was most effectual, ending in the dethronement of his royal persecutor, and his own elevation in 963 to the see of Cremona. Otho now took him into his own service, and sent him out as his ambassador to Nicephorus Phocas; but on this occasion, in avoiding the Scylla on which he had before been wrecked, he ran into the opposite whirlpool. His strict adherence to his new master's instructions, gave deep offence to the other party, who, incensed at his refusing to acknowledge their title to undivided empire, threw him into prison. Luitprandus at length obtained his freedom, and on his return to Italy employed the latter part of his life in composing the "History of his own Times," a work coarsely written, but valuable, as throwing considerable light on the transactions and manners of the middle ages. It consists of six books, and was published first at Autwerp, in one folio volume, 1640. L. A. Muratori republished it afterwards in his "Rerum Italicarum Scriptores," 25 vols. folio. The time of this author's death is uncertain.—There was also a king of Lombardy of this name, who succeeded to the throne in the early part of the eighth century. He was a wise, as well as a victorious prince, and compiled a legislative code for the use of his subjects. His death took place in 744.—*Moreri. Nouv. Dict. Hist.*

LULLY (JEAN BAPTISTE) a native of Florence, was born of obscure parentage

in 1734. As a child he exhibited a passionate fondness for music, which induced a cordelier, who was acquainted with his parents, to give him some lessons on the guitar. Soon after the chevalier Guise, who had been commissioned by Mlle. de Montpensier to send her an Italian page, struck with his talent, engaged him, and despatched him to Paris in his tenth year. The lady, however, was so little pleased by his appearance, that she sent him into her kitchen, where he remained some time in the humble capacity of an under-scellion. His musical talent becoming accidentally known to a gentleman about the court, his representations procured him to be taken from the scene of his degradation, and to be placed under a master, through whose instructions he rose rapidly, till he obtained the appointment of musician to the court. What one accident gained for him, another lost; he was dismissed, but still contrived to get admitted into the royal band, where his performance soon attracted the notice of the king himself. By the monarch's direction, a new band, called "Les Petits Violons," was formed, and Lully placed at the head of it, in 1660; about which period he composed the music to the then favourite amusements of the court, called ballets, consisting of dancing, intermixed with singing and recitative. In 1670 Lully was made joint-director of the French opera, established the preceding year on the plan of that at Venice, which situation he filled till his decease in 1687. His death was caused by mortification, arising from a blow on the foot which he gave himself with a cane while in the act of beating time in the orchestra to his own *Te Deum*, written on the occasion of the king's recovery from a severe illness. A curious story is told of a conversation held by him with his confessor, a short time before his death. The priest refused to graut him absolution, unless he would destroy any of his profane musical compositions, which he had not yet made public. Lully complied; and a rough draught of his "*Achille et Polixene*," a new opera, was thrown into the fire. Soon after, he grew apparently better, and on being blamed by a friend for what he had done, "It is of no great consequence," he replied, "for I have another copy." A relapse taking place, his fears returned, and he was, by his own directions, placed upon a bed of ashes, with a cord round his neck, in which position he expired. Lully contributed much to the improvement of French music, and is said to have been the inventor of the overture.—*Biog. Dict. of Mus.*

LULLY (RAYMOND) a famous philosopher of the thirteenth century. He was a native of Majorca, and in his youth a soldier; but on experiencing a disappointment in love, which disgusted him with the world, he devoted himself to a life of alternate study and mortification, as a religious ascetic and missionary. He travelled into Africa and the East, for the purpose of converting the Mahometans to Christianity, became a friar of the order of St Francis, and after having endeavoured

to excite the Christian princes to a crusade against the infidels, he made a second visit to Africa, in hopes to obtain the crown of martyrdom. He suffered tortures and imprisonment; but having been released through the influence of some Genoese merchants, he died at sea, as they were conveying him home, in 1315. He wrote on divinity, medicine, chemistry, metaphysics, &c. One of his treatises is entitled, "*Ars magna generalis et ultima, quarumcunque aetium et scientiarum assecutrix et clavigera.*" It contains the plan of a machine for manufacturing scientific propositions mechanically, which, limited to proper objects, might be found not destitute of utility. Boerhaave speaks highly of Lully's writings on chemistry; and Naudé has bestowed some labour in justifying him from the charge of being a magician.—*Trithemius de Script. Eccles. Naudé Apol. pour les Gr. H. Soupç. de Magic. Brucker. Aikin.*

LUNIG (JOHN CHRISTIAN) a learned German diplomatist, born in 1662. After studying at Helmstadt and Jena, he travelled in various parts of Europe as a tutor to some young noblemen. He afterwards made a campaign against the French, in the service of Austria, and at length became secretary to the city of Leipsic, where he died in 1740. Lunig was the author of "*Codex Germania diplomaticus*," 2 vols. folio; "*Codex Italiae diplomaticus*," 4 vols. folio; and several other collections of importance relating to European history and diplomacy.—*Biog. Univ.*

LUPTON. There were two English authors of this name: DANIEL, who wrote about the middle of the seventeenth century, and of whom little more is known than that he published in 1637 some memoirs, entitled, "*Modern Protestant Divines, the Glory of their Times*," 4to, 1640; "*London and the Country carbonadoed*," 1632; "*Objectionum Reductio*," 1634; "*England's Command of the Seas*;" and "*Emblems of Rarities*," 1653.—The other, Dr WILLIAM LUPTON, was fellow of Lincoln college, Oxford, and afterwards rose to a golden prebend in the cathedral of Durham, having previously officiated as lecturer of St Dunstan's, Fleetstreet, in the city of London, and preacher to the society of Lincoln's inn. There is extant a volume of his sermons, among which is one combating the opinions of Tillotson, with respect to the punishments in a future state. These did not appear till after his decease, which took place in 1726.—*Biog. Brit.*

LUSSAN (MARGARET de) a French authoress of considerable genius, whose father was one of cardinal Fleury's coachmen. She was born in 1682, and having the good fortune early in life to attract the notice of bishop Huet, by the accidental display of her literary talent, the encouragement afforded her by that prelate induced her to commence authoress by profession. She exercised her pen principally in the departments of history and romance; in the former her most esteemed productions are, memoirs of the courts of Philip Augustus, of Francis I, and of Charles VI, the for-

mer in six, the second in three, and the last in nine volumes 12mo; a life of Crillon, &c. Among her works of fancy are, "Les Veillées de la Thessalie," 4 vols; "La Comtesse de Gondz," 2 vols. &c. In all these productions she was assisted by De la Serre, who shared in the profits. She died in 1758.—*Nouv. Dict. Hist.*

LUTHER (MARTIN) the famous ecclesiastical reformer, was the son of a German miner, and was born at Eisleben in Saxony, November 10, 1484. He was educated at the university of Erfurt, and was intended for the legal profession, when a melancholy accident, which he witnessed, gave him a distaste for the world, and induced him to enter into a convent of Augustine friars. Here he was at first distinguished by his zeal for the established faith; and he is said to have declared that he would have brought the first faggot to burn Erasmus, who had written against the mass, ecclesiastical celibacy, and the invocation of saints. But Luther was destined to become a much more obstinate oppugner of the doctrines in question, and a far more daring innovator, than the man whom he viewed as a heretic worthy of the flames. A journey which he made to Rome, as a delegate from the friars of his order, in 1510, is stated to have impressed his mind with a strong sense of the prevailing corruptions in the church; and this appears to have been increased by perusing the works of John Huss. In 1512 he was made professor of divinity in the then newly established university of Wittemberg. Thus armed with the authority of a public teacher, he began to propagate the opinions he had conceived, whence resulted one of the greatest revolutions which ever took place in the religious sentiments and practices of mankind. Though numerous independent circumstances concurred to the production of that great event, termed the Reformation, yet the personal character of Luther had no slight influence. He was of a bold and impetuous temper, possessed an ardent imagination, natural eloquence, a command of language, an unwearied pen; and, to crown all, an obstinacy of disposition, which completely set opposition at defiance. Thus qualified for a polemic, accident soon called him forth to the field of controversy. Leo X, finding the papal treasury exhausted by the magnificent projects of his predecessors and his own profusion, found it necessary to raise money by the sale of indulgences; and Albert, archbishop of Mentz and Magdebourg, farmed the produce of this ecclesiastical tax in Saxony. The Augustine friars had usually been employed in the office of publishing and distributing these licenses and exemptions from spiritual censures and inflictions, and they derived both honour and profit from the trust; but Albert now gave the commission to the Dominicans, who appear to have executed it with extreme indiscretion, and by their scandalous lives and practices exposed the indulgences to contempt. Luther, as an Augustine friar, resented the affront put upon his order; and availing him-

self of the imprudence of his rivals, began to preach against their abuses in the sale of the indulgences, whence he proceeded to declaim against the practice of granting them, and to dispute the authority whence they originated. These sentiments he supported in a thesis which he published at Wittemberg; and this production was publicly burnt at Frankfort, by John Tetzel, a Dominican friar, who was the principal agent of archbishop Albert. Luther at first treated the pope himself with respect, and while he maintained his opinions, he affected submission to the authority of the church. Leo summoned the contumacious friar to answer for his conduct at Rome, but he wisely refused to put himself so much in the power of his adversaries, and insisted on having his cause tried in Germany, where he was strongly protected by the elector of Saxony and other princes. The pope at length sent cardinal Cajetan to settle the controversy, before whom Luther made his appearance to defend himself at Augsburg. Finding that he could obtain no terms but on entire submission to the authority of his judge, he withdrew from the place, under apprehension of danger, and a decree being issued against him, he appealed from the pope to a general council. In the mean time repeated conferences took place between the partizans of papacy, and Luther and his disciples, which served to exasperate both parties, and which necessarily proved advantageous to the advocates for innovation. The tenets of the reformer became widely diffused, and he proceeded to greater lengths in his opposition to the Romish church. In 1519 occurred a memorable dispute at Leipsic, between Luther and Eckius a learned Catholic divine; after which the former took the decisive step of abolishing an established usage of the papists, by no longer withholding the sacramental cup from the laity. The pope then issued a bull of excommunication against Luther, as a confirmed heretic; and he displayed his contempt for the holy see, by burning the instrument of denunciation, in the presence of the assembled students and professors of Wittemberg. At the beginning of 1521 Luther showed his courage by making his appearance at the diet of Worms, whither he had been summoned to attend, under the protection of the imperial safe conduct, the violation of which his friends apprehended, and dissuaded him from trusting to it. He was, however, allowed to depart in safety; but as he was returning home, he was surrounded by a body of horsemen, and conveyed to the castle of Wartenberg. This was a friendly stratagem of the elector of Saxony, adopted as a precaution against the threatened vengeance of the hierarchy. Luther remained in his retreat nine months, employing his pen in the defence of his principles, and in strengthening the faith of his followers. Here it was that he wrote an answer to the treatise which our Henry VIII had published against him, in which he treated the king with as little ceremony as any of his other antagonists. In 1524 Luther cast aside his mo-

nastic habit, and the next year he added Catharine Bora or De Bohren, a nun, who had escaped from her convent, and relinquished her vows. In 1529 the emperor Charles V assembled a diet at Spire, to concert measures against the advocates for the new opinions, and some severe resolutions being passed against them, a protest was signed by many of the persons present at the assembly, whence they acquired the distinctive appellation of Protestants. The schism in the church was now become incurable; and from this period Luther could contemplate with satisfaction the important and apparently durable effect of his extraordinary exertions, of the efficacy of which he could originally have entertained but a faint conception. The remainder of his life was chiefly spent in exhorting universities, and princes, and states, to uphold the reformation of religion, and in publishing from time to time such writings as might aid and encourage them in the arduous undertaking. He died at Eisleben, Feb. 18, 1546, and was interred in the cathedral of Wittemberg, with a more extraordinary degree of pomp and magnificence than was ever displayed at the obsequies of any other private individual. Luther was a man who in no situation would have sunk into insignificance. In another age, and under different circumstances, he might have become the powerful champion of ecclesiastical usages consecrated by time, and rendered venerable by prescriptive authority; and that courage, skill, and learning, with which he assailed the tenets and practices of his ancestors, might have been exhibited with equal splendour in their defence: he might have emulated St Athanasius or St Dunstan, as a defender of the faith and practice of the church; but in no age or nation would he have been numbered among the *Feruges consumere Nati*, a class of beings who have peopled the monasteries of Christendom ever since their first establishment. The writings of Luther fill seven folio volumes. Among them may be noticed his translation of the Bible into German, and his Table Talk, "Tisch-Reden," Eisleben, 1565, 8vo, which has been translated into Latin and English.—*Robertson's Hist. of Charles V. Aikin's G. Biog.*

LUTTI (BENEDETTO) a Florentine artist of considerable eminence, born in 1606. He was the pupil of Domenico Gabiani, whose style of painting he imitated, and whose execution he is considered to have fully equalled. Several of his most esteemed pictures are still to be found at the place of his residence, Rome, especially in the Albani palace. There is also an admirable Magdalen by him at Naples. Lutti had many illustrious patrons among the fosterers of the fine arts, in particular the emperor of Germany and the elector of Mentz, the former of whom raised him to the rank of knighthood, while the latter presented him with a brilliant cross of considerable value. He was a man of an irritable disposition, and his death, which took place in 1724, is said to have been partly accelerated by a dispute re-

specting one of his portraits. In his profession he was singularly laborious, and bestowed unwearied pains and industry in the finishing of his pictures, which are principally easel pieces.—*D'Argenville Vies de Peint.*

LUXEMBOURG (FRANCIS HENRY DE MONTMORENCI, duke of) marshal of France, was born in 1628. He was the posthumous son of the count de Bouteville, who was beheaded in the reign of Louis XIII, for fighting a duel. He served when young under the prince of Condé; and in 1662 he was made a duke and peer of France; and in 1667 a lieutenant-general. In 1672 he commanded during the invasion of Holland; and having gained the battle of Senef in 1674, he was created a marshal of France. He subsequently distinguished himself at the battles of Fleurus, Leuze, and Steinkirk, and on other occasions. Marshal Luxembourg died in 1695.—*Perrault. Moreri.*

LYCOPHRON, a Greek poet of the age of Ptolemy Philadelphus. He was a native of Chalcis in Eubœa; and lived at Alexandria in Egypt, having been one of the seven poets termed the Pleiades, at the court of the Greek kings of Egypt. He wrote tragedies, the titles of twenty of which have been preserved by Suidas; but the only work of Lycophron extant is, "Alexandra," relating to the predictions of Cassandra, the daughter of Priam, king of Troy. This poem is noted chiefly for its obscurity. The best edition is that of archbishop Potter, Oxon. 1702, folio; and one of the latest is that of Reichard, Lips. 1783, 8vo. Some light is cast on this production in "Remarks on the Cassandra," by the rev. H. Meen.—*Aikin's G. Biog. Elton's Specimens of the Classic Poets.*

LYCURGUS, the celebrated legislator of Sparta, is reckoned by the best chronologists to have been born about B.C. 898. Plutarch seems to think that he was the tenth in descent from Hercules. He was the son of Eunomus, king of Sparta, who was succeeded by Polydetes, his eldest son. When the sceptre descended to Lycurgus on the death of his brother, finding that his widow was pregnant, he forbore assuming the office of king, and publicly declared that he would resign it to the forthcoming child, should it prove a son. In due time his sister-in-law was delivered of a boy, which was brought to him while he was sitting with the magistrates, to whom he immediately presented it as their king. He continued to conduct the administration as guardian to his nephew, until induced to travel, by the machinations of a party, headed by the queen-mother, whose hand he had refused. He made the study of legislation his principal object, and more especially attended to the celebrated laws of Crete, instituted by Minos and Rhadamanthus. From Crete he passed over to Asia, and visited the Ionian cities, where he collected and transcribed the poems of Homer, and was the first who made them fully known to Greece. In the mean time, Sparta became a prey to civil dissensions, and he was invited home, to resume the reins

of government; which call he obeyed, and induced the Spartans to adopt that extraordinary system, which rendered them so distinguished in the history of Greece and of human nature. Having engaged the king, senate, and people, by a solemn oath not to alter any thing until his return, he left Sparta with the avowed object of visiting the oracle of Delphos, whose approbation he received, and conveyed to Sparta, but resolutely forbore to return home, in order to keep his countrymen true to their oath. Different accounts are given of the manner of his death. Plutarch affirms that he put himself voluntarily to death by abstinence, while Lucian asserts, that he died naturally, at the age of eighty-five. The general spirit of the ordinances of Lycurgus, was to form a people in whom public principle should predominate over all private interests and affections; who should be hardy in body, unconquerable in mind, and devoted to the defence of their country to their last breath. In pursuit of this, he scrupled not to sacrifice equally the freedom of savage, and the decencies of civilized life. With riches he excluded the fine arts, and all the studies which tend to soften and humanize mankind. He destroyed the modesty of the female sex, and violated the parental and conjugal relations. But what he aimed at he attained: Sparta, under his laws, became a nursery of invincible warriors, who for a series of ages bore the greatest sway in the affairs of Greece, and proved the bulwark of their friends and the dread of their foes. The memory of Lycurgus was honoured by his countrymen with an anniversary, at which his praises were recited, and which lasted to a very late period.—There was also an Athenian orator of the name of Lycurgus, who was one of the thirty whom his countrymen would not deliver up to Alexander. Some of his orations are preserved, which are printed in the collections of the Greek orators.—*Plutarch. Moreri. Univ. Hist.*

LYDGATE (JOHN) a Benedictine monk of Bury St Edmunds, in the fifteenth century. He was the scholar and professed imitator of Chaucer, and though far inferior to the great father of English poetry in original genius and inventive fancy, he exceeds him in smoothness of language and harmony of versification. He was educated at Oxford, travelled in France and Italy, and having made himself acquainted with all the learning of his age, he, on his return home, opened a school for the tuition of the young nobility. He died after 1446. Of the numerous works of Lydgate, catalogues may be found in bishop Tanner's *Bibliotheca Britannico-Hibernica*, and Ritson's *Bibliotheca Poetica*.—*Berkenhout. Aikin's G. Biog.*

LYDIAT (THOMAS) a learned English divine, mathematician, and chronologer of the seventeenth century. He was a native of Oxfordshire, and received his education at New college, Oxford, where he graduated as M.A. in 1598, previously to which he had obtained a fellowship. This he resigned in 1603, and

retired to a small patrimonial estate near Banbury, where he devoted himself to literary studies, and at length published his "Emendatio Temporum ab initio Muudi huc usque Compendio facta, contra Scaligerum et alios," 8vo. He afterwards went to Ireland with archbishop Usher, who procured him a situation in the university of Dublin. Returning to England, he became rector of Okerton, Oxfordshire, and entered with zeal and assiduity on the duties of his station as a parish priest. He also composed several learned works, some of which he was prevented from publishing by his pecuniary embarrassments, occasioned by his having become security for another person's debts. His imprudence in this respect subjected him to imprisonment; and he afterwards suffered greatly for his attachment to the royal cause in the civil wars. This industrious and unfortunate scholar died in obscurity and indigence, in 1646. Besides his printed works, he left behind him a great many MSS. *Wood's Athen. Oxon. Aikin's Gen. Biog.*

LYE (EDWARD) a learned English antiquary of the last century, a native of Totness, Devon, born 1704. He received his education at Hart-hall, Oxford, where he graduated, and applied himself with great success to the study of the language and history of our Anglo-Saxon ancestors. While engaged in this pursuit, he published from a manuscript in the Bodleian library, the work of F. Junius, entitled, "Etymologicon Anglicanum," with notes, and a grammar of the Anglo-Saxon tongue. His next work was a grammar of the Gothic, with a translation of the four gospels into that language. But the production by which he is most advantageously known is an "Anglo-Saxon and Gothic Dictionary," in two folio volumes. This erudite and most laborious compilation, which had occupied many years of his life, he did not survive to see printed. In 1772, however, five years after his death, it appeared, with a grammar of both tongues prefixed, by Owen Manning, and with some account of the author. Mr Lye was in the church, and held in succession the livings of Houghton-Parva, Northants, and Yardley, Hastings; for the latter of which he was indebted to the earl of Northampton.—*Memoirs by Manning.*

LYNCKER (NICHOLAS CHRISTOPHER de) an eminent German lawyer, born in 1643. He became professor extraordinary of jurisprudence at Giessen in 1670, and first professor at Jena in 1680, which office he resigned in 1695. He was next created a baron of the empire, and in 1702 made president of the secret council of Weimar. He died in 1726 at Vienna, where he held the post of aulic counsellor to the emperor. A list of his very numerous publications may be found in the annexed authorities.—*Joecher's Gesch. Ler. Biog. Univ.*

LYNDWODE or LINDWOOD (WILLIAM) an eminent ecclesiastical lawyer of the fifteenth century. He was a native of Lincolnshire, and was probably educated at Oxford, where he proceeded LL.D. though he was

long a member of Gonvil-hall, Cambridge. He was chancellor to the archbishop of Canterbury, keeper of the privy seal in the reign of Henry VI, and was sent repeatedly on embassies to Spain and Portugal. He formed a collection of the Provincial Constitutions of the archbishops of Canterbury, from the reign of king John, of which work there are several editions. His labours were rewarded with the bishopric of St David's, where he died in 1446.—*Fuller's Worthies. Gough's Sepaich. Mon. vol. ii.*

LYONNET (PETER) a celebrated naturalist, born in 1707 at Maestricht, of a family originally from Lorraine. He was destined for the church among the French Protestants, but he preferred the practice of law, in which he graduated at Utrecht, and was for some time a counsellor at the Hague. He afterwards became secretary, and Latin and French interpreter to the States of Holland. This situation occupying but little of his time, he employed himself in researches into the natural history of insects and other animals, particularly such as were to be found in the vicinity of his residence. He formed a valuable collection of shells; and obtained admission into many of the principal scientific societies in Europe. His death took place January 10, 1789. He published Lesser's Insecto-Theology, with notes, and additional plates from his own designs; but his most important production is entitled, "Traité anatomique de la Chenille qui ronge le bois de Saule," 1760, 4to, a work no less remarkable for originality of design than for splendour of execution. Lyonnet was distinguished for his skill as a painter and engraver, and he displayed much ingenuity in improving microscopes, and other instruments used in making his observations.—*Biog. Univ.*

LYONS (ISRAEL) the son of a Polish Jew of the same name, who was a Hebrew teacher at Cambridge, and the author of some grammatical and critical works. The son was born in 1739, and when young he discovered a particular predilection for the study of mathematics. In 1758 he published a "Treatise on Fluxions;" and he was for some years employed as one of the calculators of the "Nautical Almanac." In 1773 he accompanied commodore Phipps, afterwards lord Mulgrave, in his voyage towards the North Pole, in the capacity of astronomer. He had engaged in preparing for the press an edition of the works of Dr Halley, when his death put a period to the undertaking in 1775. He was the author of other works relating to mathematical science; and he also wrote on botany, on which subject he delivered a course of lectures at Oxford.—*Hutton's Mat. Dict. Aikin's Gen. Biog.*

LYRA (NICHOLAS de) so called from the place of his birth, Lyre, in Normandy. He was a converted Jew of the fourteenth century, whose overstrained and wrong-headed zeal in defence of the communion he had embraced, as many of the Catholic writers do not hesitate to assert, contributed not a

little to the progress of the Reformation. "If this Lyre had not played," say they, "Luther would never have danced." Of his works, which consist principally of annotations on the Old and New Testament, there are two editions extant; that of Rome, five volumes folio, and that of Antwerp in six volumes. De Lyra, on renouncing Judaism, assumed the tonsure, and died in 1340, at Paris, where he had for some time lectured on theology.—*Moreri. Nouv. Dict. Hist.*

LYSIAS. An ancient Greek orator. He was born at Syracuse, about the year BC. 459. He was educated at Athens, where he became a teacher of rhetoric, but of his orations, amounting to three or four hundred, only thirty-four remain. He died in the eighty-first year of his age. The oratory of Lysias was of the pure, elegant, and subtle kind, in which, according to Cicero, he nearly attained perfection. His orations have been several times edited; the best modern editions are those of Taylor, London, 1739, 4to; of Reiske, Leipsic, 1772, 8vo; and of Auger, Paris, 1782.—*Ciceronis Brutus. Moreri. Blair's Lectures.*

LYSIPPUS, a celebrated statuary among the ancients, was a native of Sicyon, and flourished in the time of Alexander the Great. He worked with extraordinary diligence and fertility, so that he is said to have left behind him fifteen hundred pieces, any one of which might have given celebrity to the artist who formed it. He received from Alexander the singular privilege of exclusively making his effigy in cast metal; and he accordingly executed a series of figures of that prince, from childhood to maturity, all which were brought to Rome by Metellus, after the conquest of Macedonia. Lysippus improved the art of statuary by a nicer study of symmetry, and of the appearance of the human figure to the eye in preference to its exact proportions. A chariot of the sun, at Rhodes, was one of his greatest works, which however was surpassed by a colossus at Tarentum, forty cubits high. This celebrated artist also practised encaustic painting.—*Plinii Nat. Hist. lib. iii. cap. viii.*

LYSONS (SAMUEL) an eminent writer on British topography and antiquities. He was born in 1763, at Rodmorton in Gloucestershire, of which parish his father was minister. After finishing his early studies, he became a student of the Middle Temple, and in due course was called to the bar. In 1804 he succeeded Mr Astle, as keeper of the records in the Tower of London, which office he held till his death in 1819. The works of Mr Lysons relate principally to the Roman antiquities of Britain, including "Figures and Descriptions of Mosaic Pavements discovered at Horkstow in Lincolnshire," 1801, folio; "Remains of two Temples and other Roman Antiquities discovered at Bath," 1802, folio; "Roman Remains discovered at Woodchester in Gloucestershire," folio. He also published a volume of miscellaneous antiquities of Gloucestershire; and in conjunction with his brother, the rev. Daniel Lysons, the earlier volumes of

the "Magna Britannia." All these productions are embellished with plates, designed, and many of them etched, by the subject of this article.—*Ann. Biog. Ed.*

LYTE (HENRY) an English botanist and natural philosopher of the sixteenth century, a native of the county of Somerset, born 1529. Having received a liberal education at Oxford, he travelled in order to extend his knowledge of his favourite study; and on his return to England, brought with him many rare plants, which he cultivated in a botanical garden, constructed on his own plan with great skill and arrangement. He is known as the translator of "Dodoen's Herbal," printed at Antwerp in 4to, 1578, of which a reprint, without the plates, has since appeared in this country. His death took place in 1607.—*Pulteney's Sketches.*

LYTTELTON (GEORGE, lord) an elegant writer and historian, was the eldest son of sir Thomas Lyttelton, baronet, of Hagley in Worcestershire, where he was born in January 1709. He received his classical education at Eton, whence he was removed to Christchurch college, Oxon. At both places he was distinguished for his proficiency; and several of his poems were the fruit of his earliest studies. In his nineteenth year he set out upon a tour to the continent, and on his return, in 1730, was chosen member of parliament for Okehampton. Although his father was then a lord of the admiralty, under the administration of sir Robert Walpole, in every important debate his own name appeared in the minority, and he zealously concurred in the measures of the opposition, led by Pitt and Pulteney. In 1735 he published his "Persian Letters," in imitation of those of Montesquieu, which work he afterwards properly deemed unworthy of him, and wished to eject from any collection of his works. When Frederick, prince of Wales, formed a separate court in 1737, he was appointed his secretary, and is supposed to have stimulated the prince to the patronage of Mallet, Thomson, and other men of letters. In 1741 he married Lucy, the daughter of Hugh Fortescue; the lady on whose death, in child-bed, after living some years in great harmony, he wrote a monody, which was much admired. On the expulsion of Walpole, he was appointed one of the lords of the treasury; but although he spoke with elegance and fluency, his oratory wanted force, and he never attained the rank of a political leader. In early life he had imbibed sceptical opinions; but being subsequently led into a conviction of the divine origin of Christianity, he composed his well-known "Dissertation on the Conversion of St Paul," first printed in 1747. About this time he lost his first wife, and in 1749 married a lady of family, from whom, in consequence of do-

mestic strife, after a few years' residence together, he separated by mutual consent. In 1751 he succeeded his father in his title and ample estate, and by his elegance and taste rendered Hagley one of the most delightful residences in the kingdom. He successively enjoyed the posts of cofferer of the household and chancellor of the exchequer, which latter office, requiring talents of a very different kind, he resigned in less than a year to Mr Legge. At the dissolution of this ministry he went out of employment, but was raised to the peerage by the title of baron Lyttelton, of Frankley, in the county of Worcester. From this time he lived chiefly in literary retirement, and being easily imposed upon by the appearance of religious zeal, unfortunately became the dupe of Bower, the author of the lives of the popes, and other impostors. In 1760 he published his "Dialogues of the Dead," which, although deficient in vivacity and discrimination, were very well received. The latter years of his life were chiefly occupied in his "History of Henry II," which is an able and perspicuous work, and the result of very assiduous research, but its prolixity has materially impeded its popularity. This amiable nobleman died in August 1773, in the sixty-fourth year of his age, leaving one son and a daughter, the former of whom succeeded him in his titles, and unfortunately, with great talents, became conspicuous for a conduct the exact reverse of that of his father. The poems of lord Lyttelton maintain a place among the collection of British poets, for their correct versification, and delicacy of sentiment, rather than for higher qualities. His miscellanies, in prose, also display good taste, and a cultivated mind. His works were first collected and printed in 1774, 4to, and since in 8vo.—*Johnson's Lives of the Poets. Anderson's Brit. Poets.*

LYTTELTON (CHARLES) third son of sir Thomas Lyttelton, and brother of the preceding, was born in 1714, and educated at Eton, whence he was removed to University college, Oxford. He subsequently studied at the Inner Temple, and was admitted a barrister; but afterwards entered into orders, and was collated by bishop Hough to the rectory of Alvechurch, in Worcestershire. In 1745 he took the degree of LL.D, and was appointed king's chaplain; in 1747 dean of Exeter; and in 1748 bishop of Carlisle. In 1765 he was chosen president of the society of Antiquaries, in which station he contributed some excellent papers to the collection, entitled "Archæologia." He is also author of a memoir on the authenticity of a copy of magna charta, in his own possession, which treatise was answered by judge Blackstone. Both the memoir and reply are to be found in Gutches's "Collectanea Curiosa."—*Nichols's Lit. Anec.*

MABILLON (JOHN) a learned French Benedictine of the congregation of St Maur, noted as a writer on ecclesiastical antiquities and diplomatics. He was born in 1632, in Champagne, and studied at the college of Rheims. He took the monastic vows in 1654, and in 1660 he was ordained a priest. After having assisted father D'Acheri, in his "Spicilegium," he finished an edition of the works of St Bernard; and in 1668 published the first volume of the "Acta Sanctorum Ordinis S. Benedicti," of which the ninth and last volume appeared in 1702. One of his most important productions is his treatise "De Re Diplomatica, lib. vi," 1681, folio. This procured him the patronage of the minister Colbert, who employed him in some genealogical and antiquarian researches. He was next sent into Italy, with a commission from the king to make a literary collection; and returning to France with a store of books and MSS. for the royal library, he published an account of his journey, &c. under the title of "Musæum Italicum," 1687, 2 vols. 4to. In 1701 he was chosen a member of the academy of Inscriptions, and that year he began publishing his "Annales Ordinis S. Benedicti," four volumes of which appeared previously to his death, which happened in 1707. Father Mabillon was the author of many other works of research, distinguished for liberality of sentiment and freedom of opinion, as well as for profound learning.—*Le Cerf Bib. Hist. et Crit. des Aut. de la Cong. de St. Maur. Moreri.*

MABLY (GABRIEL BONNOT abbé de) a celebrated French political and miscellaneous writer, and brother to the abbé Condillac, was born at Grenoble, in March 1709. He never rose higher than sub-deacon, although he was related to cardinal Tencin, and was admitted to the parties of madame Tencin, so celebrated for her intrigues and talents. He was much employed by the cardinal, and drew up the treaty with Prussia, which Voltaire took privately to Berlin. He subsequently broke with this patron, on account of the illiberality of the latter in regard to Protestant marriages, and from that time led the life of an independant man of letters. All the writings of this author display deep thinking, and a regard for the good of mankind; but he was too great an admirer of the ancients, and prone to apply their political maxims to the very different circumstances of modern states. He also offended by a dictatorial manner, and an unqualified censure of modern historians. His last work, on the American constitution, displays many sentiments adverse to civil liberty and religious toleration, which appear inconsistent with his previously delivered opinions. His rules for writing history are better calculated for an epic poem; information being sacrificed to effect. His death took place in 1785. The principal works of the abbé Mably, are "Parallele des Romains et des François;" "Le Droit public de l'Europe;" "Observa-

tions sur les Grecs;" "Observations sur les Romains;" "Des principes des Negotiations;" "Entretiens de Phocion;" "Observations sur l'Histoire de la France;" "Entretiens sur l'Histoire;" and "Sur les Constitutions des Etats unis de l'Amerique;" all of which productions are collected in 15 vols. 8vo, 1794.—*Nouv. Dict. Hist.*

MABUSE or **MAUBEUZE** (JOHN de) an able artist, was born at Maubeuze, a village of Hainault, in 1492. Having previously obtained considerable reputation, he visited England, and resided some time at the court of Henry VIII, who employed him to paint the portraits of some of his children. Several excellent works of his are at Middleburgh, the best of which is an altar-piece, representing the descent from the cross. He is censured by all writers for his love of drinking; and having received a piece of rich brocade, in order to appear before the emperor Charles V, he sold it at a tavern, and painted a paper suit so exceedingly like it, that the emperor could not be convinced of the deception until he examined it with his own hands. He died in 1562.—*Pilkington. Walpole's Anec.*

MACABER, an early German poet, only known as the author of a work, entitled "The Dance of Death," or "The Dance of Macabber," consisting of a series of dialogues between Death and a number of personages belonging to various ranks of society. An English translation of these mortuary dialogues was published by Dugdale and Dods-worth, in the third volume of the Monasticon Anglicanum; and French and Latin versions have been repeatedly printed. "The Dance of the Dead," painted by Holbein, in the cloister of the Augustin convent at Basil, has contributed much to the fame of Macaber.—*Biog. Univ.*

MACARIUS (Sr) the elder, a celebrated hermit of the fourth century, said to be a disciple of St Antony, was born of poor parents in 301. He passed sixty years in a monastery on mount Sceta, and died about the year 391. His homilies were printed at Paris in 1526, folio, and at Leipsic, 1698.—He is to be distinguished from Sr MACARIUS the younger, a monk of Alexandria, who was persecuted by the Arians, and banished into an island, the inhabitants of which he converted to Christianity. He died in the year 394 or 395. "The Rules of the Monks," in thirty chapters, are attributed to him, as also a "Discourse on the Death of the Just."—*Cave. Saxii Onom.*

MACARTHY (sir CHARLES) an active but unfortunate Irish officer. He entered early into the military service, and in 1796 became an officer in the Irish brigades; and in 1821 a lieutenant-colonel in the royal African corps. He went the same year to Cape Coast, and whilst making preparations to repel the Ashantees, the king sent his compliments to him, and said he hoped to have his head as an ornament to his great war drum. This

message made a considerable impression on the mind of the person to whom it was sent, and he frequently noticed it in conversation. At length, in 1823, hostilities commenced, and sir Charles marched against the Ashantees with a mixed force of Europeans and blacks, the latter of whom ran away, and the whites, being defeated, their commander was captured by the victor, who ferociously realized his menace, January 21, 1824. It is gratifying to add, that in a subsequent battle, in which the Ashantees were entirely defeated, this barbarous trophy was recovered, and conveyed to his relations.—*Gent. Mag. Public Journals.*

MACARTNEY (GEORGE) earl Macartney, was the son of a gentleman of Scottish descent, but was born in Ireland in 1737. He was educated at Trinity college, Dublin, after which he became a student of the Temple, and then travelled on the continent. In 1764 he was appointed envoy extraordinary to Russia, through the recommendation of lord Holland; and he afterwards became secretary to the lord-lieutenant of Ireland. He relinquished that post in 1772, about which time he was created KB.; and in 1775 he was nominated captain-general and governor of the Caribbee islands, Grenada, the Grenadines, and Tobago. Grenada was invaded and taken by the French, and the governor was sent a prisoner to France. On his return to England, he was appointed to the presidency of Madras, having previously obtained an Irish peerage. But the most memorable of his employments was his embassy to China in 1792, on which occasion he conducted himself with great address, and succeeded in the chief object of his mission. His only subsequent public situation was that of governor of the Cape of Good Hope, whence he returned on account of ill health in 1797. He died March 31, 1806. His English earldom was bestowed on him for his services in China. Lord Macartney was the author of a "Journal" of his Chinese embassy, and other publications.—*Life of Lord M. by Barrow.*

MACAULEY (CATHERINE) or **GRAHAM**, the name of her second husband, was born at Ollantigh in Kent, the seat of her father, John Sawbridge, esq. She was educated more strongly than is usual with her sex, and became early attached to the perusal of history. In 1760 she married Dr George Macauley, a physician, and soon after she commenced her career in literature; and in 1763 published the first volume 4to of her "History of England, from the Accession of James I to that of the Brunswick Line." This was continued in successive volumes to the eighth, which completed the work in 1783. The spirit of this history is almost purely republican, which, while in conjunction with an ardent disposition, it elicits a noble zeal for civil liberty, and the general rights of mankind, has almost unavoidably warped the representation of persons and events. The style is nervous and animated, although sometimes loose and inaccurate, and the reflections of the au-

thor are often acute and sagacious; but although much read at the time, its party aspect has impeded its advancement to a standard work. While Mrs Macauley was in the height of her fame, Dr Wilson, rector of St Stephens, Walbrook, conferred upon her the unprecedented honour of erecting a statue to her while living in the chancel of his church, which his successor deemed it proper to remove. The other works of Mrs Macauley are, "Remarks on Hobbes's Rudiments of Government and Society," 1767, enlarged in 1769 to "Loose Remarks on some of Mr Hobbes's Positions;" "Observations on a Pamphlet, entitled, 'Thoughts on the Causes of the present Discontents,'" being a protest against some of the aristocratic notions of Mr Burke; "An Address to the People of England on the present Important Crisis," 1775; "A Treatise on the Immutability of Moral Truth," afterwards republished with much additional matter, under the title of "Letters on Education," 1790. Her last publication was a "Letter to Earl Stanhope," in opposition to the opinions of Mr Burke on the French Revolution, 1791. In 1785 Mrs Macauley, having been left a widow, entered into a matrimonial connexion with Mr Graham, which owing to the disparity of their ages, subjected her to some ridicule. She retired with her second husband to a small house in Leicestershire, where (in the mean time having paid a visit to general Washington, in America, in 1785,) she died in 1791.—*Gent. Mag.* vol. xl. *Boswell's Life of Johnson.* *Wilkes's Life and Letters.*

MACBRIDE (DAVID) a distinguished physician, was born at Ballymony in the county of Antrim, in 1727. He served as a surgeon in the navy until 1759, when he settled in Dublin, and published his "Experimental Essays" in 1764, which work immediately attracted the attention of the faculty, and procured the author a doctor's degree from the university of Glasgow. He subsequently delivered lectures at his own house, which were published in 1772, in one volume, 4to, under the title of "An Introduction to the Theory and Practice of Medicine." This work, which was highly appreciated by Dr Cullen, was translated into Latin, and published at Utrecht, in 2 vols. 4to, in 1774. Dr Macbride, who ultimately obtained considerable celebrity and practice, died in December 1778, in the fifty-third year of his age.—*Rees's Cyclop.*

MACDIARMID (JOHN) an ingenious writer, was born in 1779 at Ween in Perthshire, of which parish his father was minister. He studied at the universities of Edinburgh and St Andrews, and was designed for the Scottish church, but relinquished that view to try his fortune in London, where he became editor of the St James's Chronicle. In 1803 he published "An Inquiry into the System of Military Defence of Great Britain;" in which he asserts the superiority of a regular army to militia and volunteers. He followed this work with a kindred one, entitled "An Inquiry into the nature of Civil and Military Subordination."

His last production was "Lives of British Statesmen," 4to, which was received very favourably; but the author was destined to enjoy the approbation which it elicited but a very short time, falling a victim to paralysis, April 7, 1807.—*Athenæum. D'Israeli's Calamities of Authors.*

MACE (FRANCIS) a learned French priest, was born at Paris about 1640, and became canon and rector of the church of St Opportune in that capital. He was a diligent student in both sacred and profane literature, and a very popular preacher. He died in 1721. His principal works are, "A Chronological, Historical, and Moral Abridgment of the Old and New Testament," 2 vols. 4to; "Scriptural Knowledge reduced to four Tables;" a French Translation of the Apocryphal "Testaments of the Twelve Patriarchs;" and the "History of the four Ciceros," in which he attempts to prove that the sons of Cicero were as illustrious as their father.—*Moreri. Nouv. Dict. Hist.*

MACE (THOMAS) a practitioner on the lute in the seventeenth century, distinguished among lovers of music, by a work entitled, "Music's Monument, or a Remembrancer of the best Practical Music, both Divine and Civil, that has ever been known to have been in the World," 1676, folio. This work, which discovers extreme simplicity and entertaining egotism, proves him to have been an excellent judge of the instrument which he practised, and also contains excellent instructions for its management. It appears, from the engraving prefixed to his book, that he was aged sixty-three in 1676, but when he died is not known.—*Burney's Hist. of Music.*

MACEDO (FRANCISCO) a singular member of the Franciscan order, was born at Coimbra in Portugal, in 1596. He espoused the patriotic side in the Braganza revolution, and became professor of ecclesiastical history in the college de Propaganda Fide at Rome. He obtains a place here chiefly as an extraordinary instance of elaborate literary fecundity, being the author of 137 formal works, 53 panegyrics, 60 Latin orations, 32 funeral poems, 48 epic poems (short pieces so called by himself), 123 elegies, 115 epitaphs, 212 dedicatory epistles, 700 familiar epistles, 2600 heroic poems, 110 odes, 3000 epigrams, four Latin comedies, and one Spanish satire. He himself estimated the number of his verses at a million and a half, of which vast mass no one reads a single line.—*Art. by Southey in Aikin's G. Biog.*

MACEDONIUS, a prelate of Constantinople, whom the Arians made bishop of that see in the year 342, in opposition to Paul, the choice of their orthodox opponents. After a fierce contest, the emperor Constantius gave his decision in favour of Macedonius; but owing to his turbulence and partiality to the semi-Arians, he was afterwards deposed. He then maintained a new notion concerning the Holy Ghost, which he regarded as a divine energy diffused throughout the universe, and not a person. This doctrine being agreeable

to the large party of semi-Arians, was widely embraced, although severely persecuted by the orthodox on one side, and the Arians on the other, until finally crushed by Theodosius in 381. The ultimate fate of Macedonius himself is unknown.—*Mosheim. Socrat. Hist. Eccles.*

MACFARLANE (ROBERT) a political and miscellaneous writer, was born in Scotland in 1734, and educated at Edinburgh. He came to London at an early period of life, and kept a school of considerable reputation at Walthamstow. He wrote a "History of George III," the first volume of which appeared in 1770, and the second and third in 1782 and 1784, the two latter of which he subsequently disclaimed. He was also author of an "Essay on the Authenticity of Ossian," the affirmative of which question he warmly espoused; "An Address to the People of the British Empire;" a translation of Buchanan's "Dissertation on the Right of the Crown of Scotland;" with two dissertations, one on the Getæ and Scythians, the Goths and Scots, and the other vindicating the character of Buchanan as a historian. He fell under a carriage in the tumult of a Brentford election, on the 8th of August, 1804, and survived only half an hour.—*Gent. Mag. vol. lxxiv.*

MACHAM, or MACHIN (ROBERT) an English gentleman, who lived in the fourteenth century, and who appears to have first discovered the island of Madeira. He had conceived a passion for a lady of a rank superior to his own, and her friends opposing their union, he eloped with her, and embarked for France. The vessel was driven by contrary winds to Madeira, where Macham lost his mistress by death in a few days, and dying shortly after, was buried with her by his crew, who escaped to the coast of Africa. The sailors were made slaves by the people of Morocco; and having related their adventures to a Spanish pilot, who had experienced the same misfortune, he, on his return to Spain, made public the discovery, in consequence of which an expedition was sent out, and in 1421 the island was rediscovered, and the grave of the unfortunate lovers visited. The catastrophe of Macham and his mistress has been made the subject of a poetical composition by the rev. W. L. Bowles.—*Hæckluyt. Biog. Univ.*

MACHAULT (JAMES de) a French jesuit, was born at Paris in 1599. He taught ethics and philosophy, and was afterwards rector at Orleans, Alençon, and Caen. He died at Paris in 1680. Besides some practical and devotional tracts, he was author of "An Account in Latin of the Missions to Paraguay, and other Parts of South America," 1636, 8vo; "A Relation of the State of Affairs in Japan," 1646, 8vo; "Account of the Provinces of Goa, Malabar, &c." 1651; "Account of the Kingdom of Cochin-China," 1652, 8vo; "A Relation of the Travels of Twenty-five Members of the Society on the Indian Missions," &c.—*Moreri.*

MACHAULT (JOHN de) a jesuit, born

at Paris in 1651, who became rector of the college de Clermont. He published, under the name of Gallus or Le Coq, "Io. Galli Juris-consulti. Notationes in Historiam Thuani," 1614, a work which is scarce, because suppressed as seditious and libellous.—There was another jesuit, named JOHN BAPTIST DE MACHAULT, who died May 22, 1640, aged twenty-nine. He was author of "Gesta à Soc. Jes. in regno Sinensi, Ethiopico et Sibatano," and other historical works of little reputation.—*Moreri*.

MACHIAVEL (NICHOLAS) a celebrated political writer and historian, was born of a patrician family at Florence in 1469. He was suspected of being engaged in the conspiracy of the Soderini family, against the Medici; and being put to the question, had the fortitude to endure the torture without confession. He afterwards became secretary to the Florentine republic, and was employed in embassies to the king of France, the emperor, and the pope, and other Italian princes. Notwithstanding the emoluments presumed to be attendant on these important employments, he died in great poverty in June 1527, leaving a large family in indigent circumstances; which fact is a great presumption in favour of his disinterestedness and integrity. The freedom of his opinions caused him to be represented as irreligious by his contemporaries; but as this imputation was then usually employed in bar of all freedom of opinion, it merits little attention. He was an author, both in prose and verse, but it is chiefly upon his historical and political works that his reputation is founded. His "Discourses upon the first Decade of Livy," exhibit him as a warm friend of liberality, and are replete with just and profound reflections on the principles of popular government. It was succeeded by the famous treatise, "Del Principe," the prince; the hero of which, Casar Borgia, is the model of the perfect prince which he describes. This extraordinary production has been generally regarded as the tyrant's manual, all its maxims and counsels being directed to the maintenance of power, however acquired. Formed as it was upon the actual practice of Italian politicians, both before and after it was written, being dedicated to a nephew of Leo X, and long current without producing a reply, it is difficult to regard it merely as an ingenious method of exposing the detestable maxims which it ostensibly inculcates, although an opinion of that kind has been very widely embraced. On the other hand, it seems next to impossible, that Machiavel himself, the secretary of a republic, who wrote with so much spirit on the history of Livy, and in conversation always spoke with admiration of Brutus and Cassius, should have compiled a book of such odious maxims with a view of propagating them. Whatever the truth, his "Prince" has eternally stained his name, the appellation of Machiavellism being adopted as significant of all that is crooked and perfidious in politics. The other works of Machiavel are, his "History of Florence," from 1205 to 1494, which is deemed a valu-

able performance, and the earliest of the good Italian histories; a "Life of Castruccio Castracani of Lucca," regarded as bordering on romance; "A Treatise on the Art Military," able but theoretical; two comedies of inferior pretensions, entitled "Mandragola," and "Clitia;" "The Golden Ass," in imitation of Lucian; "A Treatise on the Emigration of the Northern Nations," and many verses. The whole of the works of Machiavel have been ably translated by Farnsworth.—*Moreri*. *Tiraboschi*. *Roscoe's Leo X*.

MACK (CHARLES baron von) an Austrian general, born in Franconia in 1752. Though destitute of fortune, he was well educated; but on leaving college his inclination led him to enlist as a private in a regiment of dragoons, and his good conduct soon obtained him the rank of a petty officer. In the war with Turkey he was noticed by marshal Lascy, who gave him a captain's commission. The spirit of enterprize which he subsequently displayed, procured him the favour of Laudohn, who made him his aide-de-camp, and strongly recommended him to the emperor. On the occurrence of war with France, Mack was appointed quarter-master-general of the army of the prince of Coburg, and in that station he directed the operations of the campaign of 1793. He was afterwards employed in negotiating with Dumouriez; and in 1794 he was sent on a military embassy to England. He again served under the prince of Coburg in the Netherlands; and in 1797 he succeeded the archduke Charles in the command of the army of the Rhine. The following year he was sent to Naples, then invaded by the French under generals Macdonald and Championnet. Mack boasted that he would soon drive the enemy out of Italy; but being beaten in the field, and suspected of treason by the Neapolitans, he fled to the French camp, and was sent as a prisoner to Dijon. Under the consulship of Buonaparte, he was removed to Paris on parole, and in April, 1800, he made his escape to Vienna. He found means to justify his conduct in the opinion of the emperor, who in 1804 constituted general Mack commander-in-chief in the Tyrol, Dalmatia, and Italy; and the year following a member of the general council of war. In 1805 he was opposed to Buonaparte, who forced him to retreat beyond the Danube, and to submit to the famous capitulation of Ulm, by which 28,000 of the Austrians became prisoners. Mack was permitted to go to Vienna, where he was tried before a military tribunal, and received the sentence of death as a traitor to his country. His doom, however, was commuted by the emperor for imprisonment; and he was, after a time, released, and died in obscurity. The failures of the subject of this article, excited great surprise at the period when they occurred; but at present nothing appears so extraordinary as that a man, with so moderate a portion of ability, should have been thus trusted and employed.—*Biog. Nouv. des Contemp.*

MACKENZIE (sir GEORGE) an eminent

Scottish lawyer and miscellaneous writer, was a branch of the noble family of Seaforth, and born at Dundee in 1636. He studied at the universities of Aberdeen and St Andrew's, whence he was removed to Bourges, where he passed three years in the study of the civil law. On his return to Scotland he was admitted to the bar, and soon became a distinguished pleader. In 1661 he was advocate for the marquis of Argyle, impeached of high-treason, and was not long after raised to a seat on the bench of the criminal court. He employed his leisure in literary composition, and in 1660 appeared his "Aretino," a serious romance; "Religio Stoici;" a "Moral Essay on Solitude;" "Moral Gallantry;" and a play and poems, which productions gave him the reputation of being an elegant writer and sound moralist. In 1674 he was knighted, and made king's advocate for Scotland. The contest then existing between fanaticism on the one side, and oppression and tyranny on the other, rendered this post an arduous one; but having embraced the court doctrine of passive obedience, he was well inclined to put the laws enforcing submission, into strict execution, and thereby obtained from the covenanters the title of "The blood-thirsty Advocate." He however introduced several alterations into the form of criminal trials, favourable to the accused; and although he is thought to have stretched the law of treason in the cases of Baillie of Jerviswood, and the earl of Argyle, his vindication of himself, by a large party at least, has been deemed satisfactory. Even during the press of business he found time to compose several able professional works upon the laws and customs of Scotland. He also wrote "Jus Regium," London, 1684, in defence of monarchy; and farther served the royal party by a "Vindication of the Government of Scotland during the Reign of Charles II." As an antiquary he composed, "Observations on the Laws and Customs of Nations as to Precedency;" a "Defence of the Royal Line and Antiquities of Scotland," which work involved him in a controversy with Lloyd and Stirlingfleet; "Reflections upon the Advantages and Disadvantages of a Union between England and Scotland;" and several moral and miscellaneous treatises, which demonstrated great fertility, if little of accuracy or profundity. It is to the honour of sir George Mackenzie, that he withdrew from his post when the measures of James II disagreed with his conscience; although he subsequently resumed it, and held it until the Revolution, when he warmly opposed the declared vacancy of the throne, and the election of William, and resigning his employments, retired to Oxford, where he was admitted a student in June 1690. He died in London in May 1691, and his body being taken to Scotland, was buried with great funeral honours in the church-yard of the Greyfriars in Edinburgh. The political opinions of this eminent lawyer will be judged of differently by opposite parties, but his integrity and private worth seem unquestionable. He was founder of the

Advocates' Library in Edinburgh.—*Biog. Brit. Lord Woodhouslie's Life of Lord Kames.*

MACKENZIE (GEORGE) viscount Tarbat and first earl of Cromarty, a member of the same family as the preceding, was born in 1624. Having adhered to the fortunes of the Stuarts, in their adversity, he was, at the Restoration, made a senator of the college of justice, clerk of the privy council, and justice-general. James II also made him a baron and viscount, and queen Anne secretary of state and earl of Cromarty. He died in 1714, at the age of eighty-eight. This nobleman, who possessed much learning and varied accomplishments, was author of a "Vindication of Robert III, King of Scotland, from the Charge of Bastardy;" "Synopsis Apocalyptic," an explication of the Revelations; "A Historical Account of the Conspiracies by the earl of Gowrie and Robert Logan, against James VI;" "A Vindication of the Reform of the Church of Scotland;" and several papers in the Philosophical Transactions.—*Lord Orford's Royal and Noble Authors.*

MACKLIN (CHARLES) an actor and dramatist of some celebrity for talent, and more for longevity, was born in the county of Westmeath in Ireland, May 11, 1690. His real name was McLaughlin, which, on his coming to London, he changed to Macklin. He was employed at Trinity college, Dublin, as a badgeman, until his twenty-first year, when he came to England, and joined a company of strolling comedians, but was induced to return to his situation at Trinity college. In 1716 he again repaired to England, and appeared as an actor in the theatre Lincoln's-inn-fields. It was not, however, until 1741 that he established his fame as an actor, by his admirable performance of Shylock, that being indeed the only character in which he stood pre-eminent. He continued on the stage until 1739, which long interval was marked by the usual vicissitudes of theatrical life, rendered still greater by the spirit and strong temper of the individual. By his firmness and resolution in supporting the rights of his theatrical brethren, they were long relieved from a species of capricious oppression, to which the profession of an actor is peculiarly open, from party opposition or private enmity. During the last years of his life, his understanding became impaired, and in this state he died July 11, 1797, at the great age of a hundred and seven. Macklin appears to much advantage in his "Man of the World," a comedy, which discovers a keen and pervading knowledge of life and manners, and exposes meanness, sycophancy, and political servility with considerable skill. His "Love a-la-mode" also possesses kindred, but more farcical merit. While his memory remained Macklin was a most entertaining companion, although dictatorial, and very irascible. He is however said to have been, in his best days, a tender husband, a good father, and a steady friend.—*Biog. Dram.*

MACKNIGHT (JAMES) a learned Scottish divine, was born at Irvine in Argyleshire

in 1721. He was educated at Glasgow, after which he went to Leyden, and on his return was ordained minister of Maybole, where he remained sixteen years. Here he composed his two celebrated works, "The Harmony of the Gospels," and his "New Translation of the Epistles," both of which much advanced his theological reputation. In 1763 he published another esteemed work, entitled, "The Truth of the Gospel History." On account of these publications, the university of Edinburgh conferred upon him the degree of DD. In 1679 he was promoted to the living of Jedburgh, and three years afterwards became one of the ministers of Edinburgh, where he employed nearly thirty years of his life in the execution of his last and greatest work, on the apostolical epistles, which appeared in 1795, in four large quarto volumes, under the title of "A new literal Translation from the Greek of all the Apostolical Epistles, with Commentaries and Notes, Philological, Critical, Explanatory, and Practical." Dr Macknight survived the completion of this laborious proof of extensive reading, genuine learning, and critical skill, about four years, dying, much lamented, in the month of January 1800.—*Life by his Son.*

MACLAINE (ARCHIBALD) a learned divine, was born at Monaghan in Ireland, in 1722. He was educated at Glasgow, and about the time of the rebellion in 1745, succeeded his uncle, Dr Milling, as English pastor at the Hague, in which situation he remained fifty years, when he was obliged to quit it, owing to the French invasion of Holland in 1794. On his arrival at England he fixed his residence at Bath, where he died November 25, 1804, aged eighty-two. Dr MacLaine is principally known by an excellent translation of MacLaine's Ecclesiastical History; and by his popular letters to Soame Jenyns, in opposition to his "View of the Internal Evidence of the Christian Religion." He also published a volume of sermons.—*Chalmers's Biog. Dict.*

MACLAURIN (COLIN) a celebrated mathematician and philosopher, born near Inverary in Scotland, in 1698. He studied at Glasgow, where he took the degree of MA. at the age of fifteen, and defended a thesis "On the Power of Gravitation." In 1717 he obtained the mathematical chair in the Marischal college at Aberdeen; and two years after, on making a visit to London, he was chosen a fellow of the Royal Society. He subsequently travelled on the continent as tutor to the hon. Mr Hume, the son of lord Polwarth; and after residing for some time in Lorraine, his pupil died at Montpellier, and he returned to Scotland. In 1725 he was elected professor of mathematics at Edinburgh, where his lectures contributed much to raise the character of that university as a school of science. A controversy, in which he engaged with bishop Berkeley, led to the publication of MacLaurin's great work, his "Treatise on Fluxions," printed at Edinburgh 1742, 2 vols. 4to. On the invasion of Scotland in 1745, Mr

MacLaurin was very active in promoting the fortification of Edinburgh against the adherents of the house of Stuart; and on their taking possession of the city, he fled to York, where he was hospitably received and entertained by archbishop Herring. On the march of the invaders to England, he returned home, and died soon after, June 14, 1746. He was the author of a "Treatise on Algebra;" an "Account of Sir Isaac Newton's Philosophical Discoveries;" papers in the Transactions of the Royal Society; and other works.—MACLAURIN (JOHN) son of the preceding, was bred to the bar, and after practising as an advocate at Edinburgh, was, in 1787, made a judge, when he took the title of lord Dreg-horn. In 1774 he published "Arguments and Decisions in remarkable Cases before the High Court of Justiciary, and other supreme Courts in Scotland," 4to; and he was also the author of various tracts on legal and miscellaneous literature. His death took place in 1796, at the age of sixty-two.—*Martin's Biog. Philos. Hutton's Mat. Dict. Chalmers's Biog. Dict.*

MACPHERSON (JAMES) a Scottish writer, distinguished in literary history for his translations or imitations of Gaelic poems, said to have been composed in the third century. He was born in the county of Inverness, in 1733, and studied at Aberdeen and Edinburgh. In 1758 he published an original poem, entitled "The Highlander;" and this was followed two years after by "Fragments of Ancient Poetry, collected in the Highlands of Scotland, and translated from the Gaelic or Erse Language." The curiosity of the public was excited by these pieces, and a subscription was raised to enable Macpherson to visit the Highlands, and collect additional specimens of national poetry. He produced, as the fruit of his researches, "Fingal, an ancient Epic Poem, translated from the Gaelic," 1762, 4to; "Temora," and other poems, 1763, 4to; and some smaller compositions, all professedly translated from originals by Ossian, the son of Fingal, a Gaelic prince of the third century, and his contemporaries. It would be impossible, within the limits of this article, to give even an outline of the warm and angry controversy concerning the authenticity of these productions, which long agitated the republic of letters, and has hardly yet subsided. From the evidence of the contending parties it may be concluded, that Macpherson's prose epics were founded on traditional narratives current among the Highlanders; but the date of the oldest of their lays is comparatively modern; and it is now difficult, if not impossible, to ascertain the precise extent of his obligations to the Gaelic bards of former ages. Mr Macpherson went to Florida in 1764, as secretary to governor Johnstone; and he subsequently obtained, at home, the lucrative appointment of agent to the Nabob of Arcot, in consequence of which he had a seat in the house of Commons from 1780 to 1790. He died near Inverness, in February 1796, and was interred in West-

minster abbey. Besides the works noticed before, he published a prose translation of the *Iliad* of Homer; "An Introduction to the History of Great Britain and Ireland;" "The History of Great Britain, from the Restoration to the Accession of the House of Hanover;" historical collections; and political pamphlets.

—*Aikin's G. Biog.*

MACQUER (PETER JOSEPH) an eminent French chemist, born at Paris in 1718. He adopted the medical profession, and devoted himself to the study of the physical sciences. In 1745 he was chosen an adjunct of the academy of Sciences, in 1766 an associate, and in 1772 a pensionary of that society. He wrote in the *Journal des Savans*, from 1768 to 1776, the articles relating to natural philosophy, medicine, surgery, pharmacy, chemistry, anatomy, and natural history; and he published "Elemens de Chymie theorique et pratique;" and a chemical dictionary, besides other works. His death took place in 1784. Macquer did not live to witness the splendid improvements made in chemistry in the latter part of the last century, and which have contributed to render his writings partially obsolete; though they comprise some important facts and discoveries, which entitle the author to a place among the first chemists of his time.—His brother, PHILIP MACQUER, a counsellor of the parliament of Paris, was the author of "Abrégé Chronologique de l'Histoire Ecclesiastique," 2 vols. 8vo; and other useful historical compilations. He died in 1770.—*Biog. Univ.*

MACQUIN (ABBE ANGE-DENIS) of Scotch ancestry, born in 1756 at Meaux-en-Brie, in the college of which town he was afterwards professor of rhetoric. Driven from his country by the Revolution, his taste as an antiquary and his skill as a draughtsman procured him an ample subsistence by the exercise of both in the Herald's college. While thus employed, it fell to his lot to design the car, &c. which bore the remains of Nelson to St Paul's cathedral, in which he displayed much taste. Although a foreigner, so complete was his acquaintance with the English tongue, that he edited several works in that language, besides publishing occasionally original essays, &c. His Latin poem, "Tabella Cibaria," or "The Bill of Fare," has been much admired for the classic elegance of its Latinity, and the learning and ingenuity it exhibits. After the conclusion of the war in 1814, he revisited France for a short time, but his habits and affections having now become exclusively English, he soon returned, and died in Southwark in 1823.—*Ann. Biog.*

MACROBIUS (AURELIUS AMBROSIIUS THEODOSIUS) a Latin author in the reign of the emperor Theodosius, to whom he officiated as an officer of the wardrobe, and enjoyed a considerable share of the imperial favour. The country which gave him birth, as well as the religion which he professed, are both uncertain; the former, however, is generally supposed to have been Greece. He was the author of a miscellaneous work, entitled "Sa-

turnalia," curious for its criticisms, and the light it throws upon the manners and customs of antiquity; a commentary on Cicero's "Somnium Scipionis," in two books, valuable for the exposition it affords of the doctrines of Pythagoras, with respect to the harmony of the spheres; and a treatise "De Differentiis et Societatibus Græci Latinique Verbi." There are several editions of this author's writings, the best of which are those of 1694, 8vo, and 1777, Leipsic. The time of his decease is supposed to be about the year 420.—*Moreri.*

MADAN. There were two English divines of this name, brothers; of these SPENCER died bishop of Peterborough in 1813.—MARTIN, originally educated with a view to his practising at the English bar, was induced, by the influence of some leading members of the Calvinistic persuasion, to quit that profession, and enter into the ministry in their connexion. In 1761, having for some time previously officiated as chaplain to the Lock hospital, he succeeded in procuring the erection of a chapel attached to that institution, where his reputation as a popular preacher attracted numerous hearers. The fame which he acquired by his eloquence was, however, somewhat diminished, by the part he took in dissuading a clerical friend from giving up a benefice which he had accepted under a solemn promise of eventual resignation. This circumstance took place in 1767; and in 1781 a work from his pen, in defence of a plurality of wives, entitled, "Thelyphthora," drew upon him still farther obloquy. The professed object of this singular treatise, which fills three octavo volumes, is the prevention of seduction, by constituting it a virtual marriage. His other works are, an edition of the satires of Juvenal and Persius, with a literal English translation and notes, in two octavo volumes; "A Commentary on the Articles of the Church of England;" "Thoughts on Executive Justice;" "Letters to Dr Priestley;" and a few sermons. His death took place during the spring of 1790, in his sixty-fifth year.—*Chalmers's Biog. Dict.*

MADDEN, DD. (SAMUEL) an Irish clergyman, descended from a French family, born in 1687. He received his education at Trinity college, Dublin, and afterwards became a liberal benefactor to that society, by instituting, in 1731, prizes for such of the students as more especially distinguished themselves in the college examinations. The year following he published the first volume of a work calculated to excite considerable attention, under the title of "Memoirs of the Twentieth Century; or Original Letters of State under George the Sixth." This singular book was originally intended to occupy six octavo volumes, and extraordinary despatch was used in striking off a thousand copies of it; but the rapidity with which it was bought up by the author, equalled the diligence used in bringing it out. Nearly nine hundred of the impressions being recalled and destroyed within a week after its first issuing from the press. His other productions are, "Boulter's

Monument," a poem of considerable length, printed in 1744; and a tragedy founded on the history of Themistocles. Dr Madden, of whom the English lexicographer, Johnson, speaks in terms of the highest commendation, was farther beneficial to his country, and to the cause of science in general, by first establishing, in 1740, a society at Dublin for the encouragement of the arts; the plan of which has since been followed up and enlarged upon with great success in the British metropolis. For the furtherance of this praiseworthy object, he himself liberally contributed a hundred pounds a-year from his own private resources, which were large, independently of the rectory of Drummully, and other valuable church preferment. His death took place on the last day of the year 1765.—*Nichols's Lit. Anec.*

MADDOX (ISAAC) bishop of Worcester, an active and learned prelate, born of humble parentage at London in July 1697. Becoming an orphan at an early age, his friends placed him with a pastry-cook, that he might learn the business; but his fondness for perusing every book that came in his way, rendered his continuance in this situation equally irksome to himself and his employer. His dismissal was the consequence, on which he was sent to Scotland by some of his relations, who, observing his passion for literature, placed him at Aberdeen, with a view to his obtaining a cheap but solid education, and eventually becoming a minister among the dissenters. The tenets and discipline of presbyterianism, however, not coinciding with his opinions, he, after having continued his studies at this university for some time, with great credit to himself, returned to England, and became, through the assistance of Gibson, bishop of London, a member of Queen's college, Cambridge. He now took orders in the established church, and became soon after domestic chaplain and nephew, by marriage, to Bradford, bishop of Chichester, through whose patronage he rose speedily to considerable preferment. His first benefice was the living of St Vedast, Foster-lane, in the city of London, when, having obtained the degree of DD. from the archbishop of Canterbury, he was in 1729 appointed a king's chaplain, and clerk of the closet to queen Caroline. Four years after he obtained the deanery of Wells, whence in 1736 he was raised to the see of St Asaph, and subsequently translated to that of Worcester in 1743. Bishop Maddox is known as the warm advocate and liberal benefactor of many public charitable institutions, especially of the small-pox hospital in the metropolis, for which in 1752 he preached a sermon, afterwards printed, remarkable for its eloquence, and the unstudied beauty of the composition. The infirmary at Worcester also is mainly indebted to his exertions for its existence. As an author he is principally known by his "Defence of the Doctrine and Discipline of the Church of England," written in reply to Neale's "History of the Puritans." There are also fourteen of his miscellaneous sermons extant. His death took place at Wor-

cester, September 27. 1759.—*Nichols's Lit. Anec.*

MADDOX (THOMAS) a learned and laborious antiquarian, author of several valuable works connected with the earlier periods of English history. The first of these, his "Anglicanum Formulare," being a complete collection of ancient charters and legal instruments from the Norman conquest down to the reign of Henry VIII inclusive, taken from the original records, appeared under the auspices of lord-chancellor Somers in 1702, and is considered highly valuable. Nine years afterwards he printed his "History of the Exchequer," embracing a period from the conquest to the close of Edward II's reign, in folio, with a dedication to the queen. A quarto edition of this work likewise appeared afterwards in 1769. He also published subsequently an historical account of all the cities and borough towns of England, under the title of "Firma Burgi," and was employed on several other works of a similar description, the completion of which was prevented by his decease. A collection of his manuscripts, occupying more than ninety volumes of various sizes, is to be found in the British Museum, to which they were presented after his death by his widow—*Nichols's Lit. Anec.*

MÆCENAS (CAIUS CILNIUS) the friend and minister of the emperor Augustus, and a distinguished patron of letters, was a Roman knight, who traced his origin to the ancient kings of Etruria. Of his early life nothing is recorded previously to his appearing as counsellor to Octavius, after the death of Julius Caesar. He fought at the battle of Philippi, but chiefly acted in a civil capacity. During a long period he held the important post of præfect of Rome, to which his political talents were peculiarly adapted; and in his ministerial capacity he was not chargeable with any acts of oppression, but exercised his great influence with prudence and moderation. No statesman seems to have been more the personal friend of his sovereign than Mæcenas; but he was partly indebted for the emperor's favour, to the charms of his wife Terentia, at which attachment, like an obsequious courtier, he silently connived. He is described by Velleius Paterculus as vigilant and active in business, but luxurious and effeminate in his hours of relaxation. He was at the same time learned, and a lover of learning, and his name is rendered immortal by Virgil and Horace, as their munificent friend and intimate associate. Horace, in particular, lived with him upon terms of the utmost freedom and familiarity; and Virgil dedicated to him his "Georgics," which admirable productions appear to have been written at his request. He introduced both these great poets to Augustus, and so signal were his good offices towards literary genius, that the name of Mæcenas has been ever since applied to liberal patrons. Of his own writings several pieces existed in the time of Seneca, of which a few verses only are now extant. He is also said to have invented a species of short-hand. He died B.C. 8, leav-

ing Augustus his general heir and executor.—*Life by Schomburg. Saxii Onom. Crevier.*

MÆSTLINUS (MICHAEL) a celebrated German astronomer, was born about 1542, in the duchy of Wirtemberg, and spent his youth in Italy, where he made a public oration in favour of Copernicus, which converted Galileo from the opinions of Aristotle and Ptolemy. On his return to Germany, he became professor of mathematics at Tübingen, where he had the great Kepler among his pupils, who has praised several of his master's inventions in his "Astronomia Optica." He died in 1590, after having published many works in mathematics and astronomy, among which were his treatises "De Stella Nova Cassiopeia;" "Ephemerides," according to the Prutenic tables; "Thesis de Eclipsibus;" an epitome of astronomy, &c.—*Martin's Biog. Philos. Nouv. Dict. Hist.*

MAFFEI. There were several learned and ingenious Italians of this name.—**BERNARDINE MAFFEI**, born 1514, was a dignified ecclesiastic, well versed in the belles lettres, as well as distinguished for his antiquarian research. He rose to the purple, and is known as the author of a valuable treatise on ancient coins, medals, and inscriptions, and some annotations on the letters of Cicero. His death took place in 1558 at Rome.—**MAFFEI VEGIO**, a native of Lodi, born 1407, was professor of law at Pavia, and afterwards chancellor to pope Martin V. He is however more advantageously known as a poet than a lawyer, several of his compositions, consisting of epigrams, and other miscellaneous productions in verse, evincing much genius. There is an English translation of his additional book to the Æneid of Virgil, by Ellis. His prose writings consist of essays on education, on happiness and misery, on religious constancy, &c. The time of his decease is fixed in the year 1459.—**JOHN PETER MAFFEI**, known by his Latin denomination Maffæus, was an eminent scholar of Bergamo, born 1536, who, from being rhetorical professor at Genoa, became a jesuit in 1565, and wrote the life of Ignatius Loyola, the founder of the order. He was held in high estimation for his learning and talents by several successive occupiers of the papal chair, one of whom is said to have granted him a dispensation for reading his breviary in the Greek language, that his Latin, of the purity of which he was remarkably tenacious, might not become deteriorated. Besides a translation of various letters connected with the proceedings of the jesuit missionaries in India, he wrote a history of that country, entitled, "Historia Indicarum," &c. at the instance of the Portuguese Government, whose conquests in those regions the work is more particularly designed to commemorate and describe. The best edition of this book is that of 1747, 4to, 2 vols. Maffæus was afterwards employed in the Vatican library, and died at Tivoli in 1603.—**FRANCESCO SCIPIO, MARQUIS MAFFEI**, a nobleman of Verona, was equally celebrated as a soldier and a poet. He was born

in 1675, and his first attempt in literature carried off the prize for an essay on the subject of love. Entering the army, he acquired considerable reputation by the gallantry which he exhibited at the battle of Donawert, in 1704; but on the termination of the campaign he quitted the service, and devoted himself wholly to the cultivation of elegant literature. In 1732 he set out on a tour over great part of Europe, and in the course of his progress received every where those marked attentions which his reputation as a scholar merited. Of his works, the principal are, "On Duelling," an essay; "Merope," a tragedy; "Ceremonia," a comedy; "A History of the Art of Diplomacy;" "Verona Illustrata," folio; "Musæum Veronense," folio, &c. He also translated a part of the works of Homer into his own language, and published three octavo volumes of tragedies, selected from the best Italian dramatists. On the decease of their accomplished townsman in 1755, the citizens of Verona honoured his remains by a public funeral in the cathedral of that city, when an oration was pronounced to his memory.—*Moreri. Nouv. Dict. Hist.*

MAGALHAENS or **MAGELLAN** (**FERDINAND** de) a famous Portuguese navigator, who discovered the straits at the extremity of South America, and conducted the first expedition round the world. He served under Albuquerque in the East Indies, and distinguished himself especially at the taking of Malacca in 1510. He afterwards entered into the service of Spain, and was entrusted by Charles V with the command of a fleet destined to explore a passage to the Molucca islands, by sailing westward. The voyage was commenced September 20, 1519; about the end of October he entered the straits, since called after his name; and on the 27th of November discovered the Pacific ocean. Continuing his course, he arrived at the Ladrone Islands, and subsequently at the Philippines, on one of which he lost his life in a skirmish with the natives, in 1521. (See *CANO, J. S. del.*)—*Aikin's G. Biog.*

MAGALHAENS (**JOHN HYACINTH** de) an ingenious natural philosopher of the last century. He was born in 1723, at Lisbon, and is said to have been descended from the subject of the last article. He entered into the order of the Augustine friars; but becoming a convert to the Protestant faith, he fled from his convent, and took refuge in England, where he passed the remainder of his life. He distinguished himself by his experiments and researches in chemistry and mechanics, and particularly by his invention of a mode of impregnating water with fixed air, relatively to which he published a small tract. A translation of Cronstedt's Mineralogy, and other works also proceeded from his pen. He was a fellow of the Royal Society, and of several foreign academies, and was much esteemed among men of science. His death took place in February 1790.—*Rees's Cyclop.*

MAGALOTTI (**LORENZO**) a noble Italian, born in 1637 at Rome, or, according to others,

at Florence. He received his education at Pisa, where he distinguished himself by his proficiency in the mathematics and natural philosophy. Count Magalotti afterwards settled at Florence, where he continued to cultivate poetry and the belles lettres till his death in 1712. He was a member of the Della Cruscan academy, and officiated as secretary to that of Cimento; and besides several tracts connected with the sciences, composed some lyric pieces of great merit, published in one 8vo. vol. under the title of "Canzonette Anacreontiche." To this latter work, however, he did not affix his name, but substituted the fictitious one of Elateo. He was also the author of some devotional pieces.—*Fabroni*.

MAGGI. There were three distinguished Italians of this name. JEROME, more commonly known by the name of Magius, affixed to his works, was a native of Anghiari, in the Florentine dominions, and flourished in the sixteenth century. He applied himself early in life with great assiduity to the study of the sciences, and by his proficiency in mathematics became an able engineer. A work of his on fortification added greatly to his reputation; and, together with his general character for talent and integrity, obtained for him from the Venetian government, to which he was recommended, the appointment of admiralty judge in their island of Cyprus. The siege of the capital of that country, by the Turkish forces in 1571, gave him an opportunity of reducing his theoretical studies, in the art of defence, to practice. Certain mines and other destructive contrivances, and engines of obsidionary warfare, constructed by him, repeatedly baffled the attacks of the Ottoman forces, and laid their works in ruins. Forced at length to surrender, the conquerors visited on his head the protraction of their success. The bashaw Mahomet threw him into prison, and loaded him with chains. In this distressing situation he remained more than a twelvemonth, soothing his captivity by calling into action his mental resources, which enabled him, deprived as he was of all books of reference, to compile from memory a "History of Bells," and a treatise on "The Wooden Horse," both abounding in classical and other quotations. These productions were the fruits of his leisure hours by night—his days being wholly spent in manual labour as a slave—and when completed, were secretly transmitted by him to the Imperial and French ambassadors, with dedicatory epistles, and a supplication for their interference in his behalf. His appeal to their compassion was but too successful; for, on their making a united and urgent application for his release, the Turkish commander, as the shortest way of ridding himself of their importunity, without putting himself to the trouble of a refusal, strangled the object of their solicitation in his prison, about the beginning of the year 1573. Besides the writings already mentioned, he was the author of a treatise "On the final Destruction of the Globe by Fire," in five books, folio, 1562; "Commentaries on the Civil Institutes," 8vo;

"The Lives of Illustrious Men, with Annotations, &c." and some other miscellaneous works.—His brother, BARTHOLOMEW MAGGI, was a physician of Bologna, where he died in 1552, and is known as the author of a useful treatise on the management and cure of gun-shot wounds.—CARLO MARIA MAGGI, a poet of some reputation, was born in the Milanese in 1630, and, according to his biographer, Muratori, may fairly be considered one of the restorers of a pure and elegant taste in literature among his countrymen. The last mentioned author published an excellent edition of his works, in 4 vols. 12mo, 1700, at Milan, where Maggi died the year preceding, filling at that time the situation of secretary to the senate. There is an English translation of his sonnets, which have been much admired.—*Fabroni. Nicéron*.

MAGINI or MAGINUS (JOHN ANTHONY) professor of mathematics in the university of Bologna, was born at Padua in 1536. He became so celebrated for his astrological skill, that, in conformity with the notions of the age, he was regarded with favour by most of the princes of his time. He is said to have accurately predicted his own death, which took place in 1618. His mathematical and astronomical writings, which are honourable to his memory, consist of "Ephemeris," in 3 vols; "Tables of Secondary Motions;" "Astronomical, Gnomical, and Geographical Problems;" "Theory of Planets;" a "Confutation of Scaliger's Dissertation on the recession of the Equinoxes;" "Primum Mobile," in 12 books; "Treatise on Plane and Spherical Geometry." He also wrote "A Commentary on Ptolemy's Geography," and a Chorographical description of the Regions and Cities of Italy.—*Nicéron. Hutton's Math. Dict.*

MAGLIABECCHI (ANTONIO) a learned critic, who was librarian to the duke of Tuscany, celebrated alike for the variety of his knowledge and the strength of his memory. He was born at Florence in 1633, and in the early part of his life was engaged in a mechanical employment, which he relinquished to devote himself to literary pursuits. He was assisted in his studies by Michael Ermini, librarian to cardinal Leopold de' Medici, and other literati residing at Florence; but it was chiefly through his own unremitting application that he acquired a multifarious stock of erudition, which made him the wonder of his age. Duke Cosmo III made Magliabecchi keeper of the library which he had collected, and gave him free access to the Laurentian library, and of the Oriental MSS.; in the latter collection he published a catalogue. His habits were in the highest degree eccentric. His attention was wholly absorbed by his books; among which he took his rest and his meals, dividing his time between the ducal library and his private collection, interrupted only by the visits of persons of rank or learning, attracted towards him by the report of his extraordinary endowments. The acquisition of knowledge seems to have been his sole de-

light, for he left no literary work deserving of particular notice; and he freely afforded information to those authors who sought his assistance in their own undertakings. Notwithstanding his sedentary mode of life, he was far advanced in years at the time of his death, which took place in July 1714.—*Tiraboschi Stor. della Lett. Ital. Spence's Parallel between R. Hill and Magliabecchi.*

MAGNOL. There were two French physicians of this name, father and son, both natives of Montpellier, where they resided and enjoyed considerable practice. **PIERRE**, the elder, born 1633, was a member of the French academy, and distinguished himself especially by his love of botany. He was the author of a catalogue of all the plants in the South of France, under the title of "Botanicum Monspelienſe." His other works are, "Hortus Regius Monspelienſis;" "Prodromus Historiæ Generalis Plantarum;" and "Novus Character Plantarum," which latter treatise was published after his death, with additions by his son, **ANTOINE MAGNOL.**—*Rees's Cyclop.*

MAGNON (JEAN) a French dramatist of no great reputation, born at Lyons, and the friend of Moliere. Magnon was bred a member of the French bar, but the study of the law not being congenial to his disposition, he forsook it, and commenced author by profession. In this capacity he produced several tragedies, few or none of which met with any success, except one, entitled "Artaxerxes." In 1662, while returning to his lodgings, in one of the bye streets of the French metropolis, he was set upon by robbers, from whom he received a mortal wound, and soon after expired. This event precluded his finishing a dictionary in rhyme, a whimsical work which he had projected, and made some progress in; that part of it, however, which he had completed, appeared in 1663, in one volume, folio.—*Moreri.*

MAGNUS. There were two Romish prelates of this name, in the sixteenth century, brothers, and in succession archbishops of Upsal in Sweden, both born at Lincoping in that kingdom. **JOHN**, the elder of the two, is known as the author of a "History of the Archbishops of Upsal;" and another "Of the Kingdom of Sweden;" both printed in folio. The progress of the Reformation, to which he was strongly opposed, drove him from his native country to Rome, where he died in 1544, in his fifty-sixth year.—**OLAUS**, who succeeded him in the diocess, was not more successful in struggling against the influence of the rising church, and at length followed the example of expatriation set him by his brother, whom he survived sixteen years. Olaus Magnus assisted at the council of Trent, and wrote a curious account of "The Manners, Customs, and Wars, of the People of the North," folio, 1555. His death, also, took place at Rome.—*Niceron.*

MAHOMET or **MOHAMMED**, one of those leading characters who give some of its strangest features to the history of the world, and the founder of a system of religion which

has diffused itself over a considerable portion of the globe. He was born at Mecca in Arabia, in 569, and was of the tribe of Koreish, and family of Hashem, illustrious among their countrymen, as guardians of the famous temple of the Caaba. Being left an orphan in his second year, he was chiefly brought up by his uncle, Abu Taleb; and, in his twenty-fifth year, being recommended to Cadigha, a rich widow, as her factor, conducted himself so much to her satisfaction, that she made him her husband. He continued to act for some time as a merchant; but a disposition to religious contemplation seems to have attended him from his early youth, which it is suspected was turned to practical views by his communications with the Nestorian monks in his journeys to Syria, added to a contemplation of the progress of Christianity. Be this as it may, he was inspired with the notion of forming a new religion, and began to put on the appearance of sanctity, by retiring, every morning, to a cave called Hira, where he continued in meditation all the day. It was in 609, and in the fortieth year of his age, that he opened the pretended mission; and his first convert was his wife, to whom he communicated an interview with the angel Gabriel, declaring him the prophet of God. His proselytes, in the first instance, were few, but they included his faithful servant Seid, the ardent and courageous Ali, and the respectable Abubeker. All these were privately instructed in the tenets of Islamism, the fundamental doctrine of which was, "There is but one God, and Mahomet is his Prophet." Its precepts were pretended to be successive communications of the Divine will, by the means of Gabriel; and of these, collected and written by his disciples, were composed the celebrated "Koran," or "Book." In the fourth year of his mission, assembling his kindred of the race of Hashem, at a banquet, he openly announced to them his prophetic errand, and asked who would be his vizier. No answer was returned, until the young Ali, with all the fire of enthusiasm, accepted the office. He made, however, but little farther progress in the first instance, and was even protected with some difficulty against his enemies by the influence of his uncle. In the tenth year of his mission, he lost both Abu Taleb, and his faithful wife Cadigha, which so exposed him to the enmity of the Koreishites, that he found it necessary to make a temporary retreat, and seek the protection of another uncle at Tayif. The contagious nature of enthusiasm was strikingly exemplified, by his success in gaining proselytes among the numerous pilgrims to the Caaba. About this time, his pretended journey to Heaven, on his beast Al-borak, under the protection of the angel Gabriel, is dated. This excursion, although but obscurely hinted at in the Koran, is admitted by all orthodox believers, who, however, are not quite agreed as to whether it was corporeal, or merely spiritual. The twelfth year of his mission was signalled by the conversion of the inhabitants of Medina, which so exasperated his

enemies at Mecca, that his assassination was determined upon. Aware of his danger, he fled, and with some difficulty reached Medina, an event which, under the name of the *Hegira*, or Flight, has been rendered memorable as the era whence the Mahometans commenced the reckoning of their lunar year; it corresponds with the 16th of June, 622. He was received with all possible respect at Medina, and soon after married Ayesha, the daughter of Abubeker, the first and most favoured of his several wives, after the death of Cadigha. His followers now rapidly increased, and feeling his strength, he openly declared his resolution to destroy idolatry, and propagate his religion by the sword. He employed the love of plunder, and the promise of a voluptuous paradise, as incentives to adventurers, and, together, they became irresistibly attractive. Several contests with the Koreishites followed, in one of which Mahomet was wounded; but in the end he baffled all the attempts against him, and having defeated a tribe of Jews, (a people whom he much detested,) who had joined his enemies, he treated them with merciless cruelty. Instances of the private assassination of powerful enemies by enthusiastic devotees also became prevalent, while the strict mask of sanctity being no longer so absolutely necessary, the triumphant impostor indulged his ardent passion for women without scruple or decorum. His views began now to extend, and in the seventh year of the *Hegira*, he summoned the surrounding sovereigns, including Heraclius, the Grecian emperor, to embrace the new revelation. The same year was signalized by an agreement, with some circumstances of humiliation on his own part, with the people of Mecca, which led to a solemn personal pilgrimage there, the fruits of which was the conversion of the subsequently noted Moslem leaders, Caled, Amru, and Othman. An imprudent breach of the truce by the Koreish soon after led to the absolute conquest of Mecca, and the idols of the Caaba were destroyed; but the sacred black stone being politically retained, having been rendered a renewed object of veneration by the prophet's holy touch. The conquest of the other independent and idolatrous tribes of Arabia followed; and in the confidence of power, Mahomet, now at the head of a numerous and enthusiastic host, determined to anticipate the hostile designs of the emperor Heraclius. He accordingly declared war against that sovereign; but after leading a large army to the Syrian frontier, finding nothing meditated by the Greeks, he retired, and contented himself with the mastery of all Arabia, in which he would not tolerate idolatry, but suffered his Christian subjects to exercise their worship on the payment of tribute. In the tenth year of the *Hegira*, he performed a valedictory pilgrimage to Mecca, on which occasion he was accompanied with ninety thousand fellow-pilgrims, and the ceremonial which he observed at the sacred city as served as a model to the pilgrimages of succeeding ages. Mahomet did not long survive

his return to Medina; his health had been gradually declining, in consequence of poison administered to him by a Jewess, in his favourite dish, a shoulder of mutton, with a view of trying his prophetic character; but a fever proved the immediate cause of his death. He expired in the arms of his favourite Ayesha, in the eleventh year of the *Hegira*, (June 632,) at the age of sixty-three; and at the trying moment seemed to display a real faith in his mission, and to be comforted by the consciousness of great benefits conferred on mankind. Of all his wives, the first alone bore him children, and of these his daughter Fatima, married to Ali, alone survived him. Mahomet was a man of good stature and comely aspect; he also possessed a piercing and sagacious wit, and was extremely well versed in the arts which at once lead and command mankind. He seems indebted to Judaism and Christianity for most that was systematic in his religion; but his civil polity was rude and barbarous; and being rendered immutable by its alliance with his creed and doctrines, it has proved a complete bar to progressive improvement in all the countries which have received his law. His moral character may be estimated by the preceding sketch, brief as it necessarily is, and from the fact, that the assassination of a rival prophet in Yemen, was one of his last actions. As the promulgator of a new faith, gross imposture was possibly mingled with some strong conviction of the unity and spiritual nature of the Deity; and as to the sensual indulgences permitted by the Mahometan law, they were rather restrictions than encouragements to the idolaters of Arabia. His obligations of prayer, purification, and alms, were also strict and burthensome; and the absolute prohibition of wine may be deemed a more severe test of obedience, than almost any other legislator has ventured upon. To conclude, while the characters of usurper and impostor are abundantly evident, it is not quite impossible that a wish to exalt and improve his countrymen, may not have been partially mingled up with the policy and ambition by which this extraordinary founder of the faith of succeeding myriads, was so memorably distinguished.—*Prideaux's Life of Mahomet. Gibbon. Mod. Univ. Hist.*

MAHOMET II, the eleventh sultan of the Turks, called the great and victorious, was born at Adrianople, the 24th March, 1450. He was the son of Amurath II, and received an education superior to that of Ottoman princes in general. On the death of his father in 1451, his first professions were entirely pacific, and he renewed a treaty of amity with the Greek emperor Constantine. The possession of Constantinople was, however, his great object, and after a successful expedition into Asia, he soon found a pretext for war, and the siege of that capital commenced in the spring of 1453. The details of this memorable event will not be required here, where it will be sufficient to remark, that the general assault took place on the 29th May, on which

day Constantinople was carried; the last Greek emperor, after a gallant resistance, with a few devoted followers, losing his life in the struggle. Mahomet first appeared to regard the vanquished with sentiments of humanity; but, as asserted by some authors, on the discovery of a conspiracy against him, he gave way to his natural ferocity, and executed a number of men of the first rank among the Greeks. At length, on the payment of tribute, he allowed the latter the free exercise of their religion, although he transformed the great church of Sancta Sophia, and other Christian edifices, into Mahometan mosques. After firmly fixing the capital of his increasing empire at Constantinople, he unremittingly proceeded with his martial projects, which proving upon the whole successful, he became the pride of the Mahometan, and the terror of the Christian world. His contests with Hunniades and Scanderbeg; his conquest of Albania, Servia, the Morea, and Negropont, and his attempt upon Rhodes, and capture of Otranto, form a series of facts which belong to history. This able and ambitious sultan, was at length carried off by a fit of the gout in May 1481, in his fifty-first year, whilst preparing for a campaign against Persia. The moral qualities of Mahomet II, have been painted in the darkest colours by Christian writers; and while the terror which he inspired may have led to exaggeration, enough remains to show, that with vigour of mind and body, and great loftiness of enterprize, he was exceedingly perfidious, brutally licentious, and inexorably cruel. The news of his death was received at Rome with extreme joy, and not without reason, looking to his epitaph, which may be thus translated, "I proposed to myself the conquest of Rhodes and proud Italy." Mahomet II is said to have been the first sultan who loved the arts, and it is even recorded that he perused with pleasure the lives of the great men in Greek and Roman history.—*Mod. Univ. Hist. Gibbon.*

MAIGNAN (EMANUEL) a French ecclesiastic of the seventeenth century, highly distinguished as one of the greatest mathematicians and philosophers of the age in which he lived. He was born of a noble family, at Thoulouse in 1601, and received his education at the jesuits' college, after which, while only in his eighteenth year, he became a member of the order of Friars Minor. His fame, as an enlightened scholar, travelling to Rome, he received an invitation to that capital, which he accepted in 1636, and filled a professor's chair there upwards of thirteen years. During this period the patronage and liberality of cardinal Spada enabled him to publish his treatise, "De Perspectiva Horaria," which first appeared in 1648; two years after this he returned to France, and obtained the provincialship of his order in his native city. Cardinal Mazarin, who had a high opinion of his talents, would gladly have raised him still higher in the scale of promotion, but the ambition of Maignan was limited to literature and science; and though the king himself, pleased

with some ingenious trifles of his construction, joined in the wish to draw him from obscurity, he modestly, and perhaps wisely, resisted all the attempts made to lure him from his retreat. So deeply indeed was his mind involved in the study of his favourite science, that he is said to have declared, that he not unfrequently solved a problem in his sleep. In 1652 appeared his "Course of Philosophy," in four octavo volumes, reprinted in 1673, in folio, to which latter edition are added, an attack on the Cartesian theory, and a treatise on the Stentorophonic Tube, or Speaking Trumpet, then newly invented by sir Samuel Morland, an Englishman. This able scholar and excellent man died in his cloister at Thoulouse in 1676. A biographical memoir of him, with a detailed account of his writings, was published by Saguene, twenty years after his decease.—*Nouv. Dict. Hist.*

MAILLA (JOSEPH ANNA MARIA DE MOYRIAC DE) a native of Bugey in Savoy, born 1670. He was brought up in the jesuits' college, and having acquired a considerable familiarity with Oriental languages, was despatched by his order in 1703, on a mission into the interior of China. In this country he remained forty-five years, during which period, having ingratiated himself with the reigning emperor, that potentate employed him to construct a map of his dominions. A copy of this laborious undertaking, together with a voluminous history of the celestial empire, he contrived to transmit to Europe. The former, including a complete survey of Chinese Tartary, was engraved in 1772 at Paris. The latter, entitled "Histoire générale de la Chine, ou Annales de cet Empire, traduites du Tong-Kien-Kang-Mou," was published by the abbé Grosier, five years afterwards, in thirteen quarto volumes. It is a curious work, and contains, among other matter, an interesting account of the state of music in China, and the musical instruments in use there. Father de Mailla died in 1748 at Pekin.—*Biog. Univ. Nouv. Dict. Hist.*

MAILLARD (OLIVER) an eccentric French cordelier, of the fifteenth century. He was a native of Paris, and a doctor of theology, who was employed in various honourable missions by pope Innocent VIII, Charles VIII, king of France, and Ferdinand the Catholic; for which last prince he is thought to have betrayed the interests of his own sovereign. He died in 1502. Maillard, who was celebrated as a preacher, left many sermons behind him, which are distinguished by their gross and ridiculous buffoonery, as he never scrupled to send his auditors in plain terms to the devil, when it suited his inclinations. Having glanced in his sermons at some traits in the conduct of Louis XI, that king, who had just established the post in France, sent him word that he would have him thrown into the Seine. "The king is master;" he replied, "but tell him that I shall get to Heaven by water sooner than he will by his post-horses." This repartee was allowed to pass. His sermons were printed in 1511. One of them

contains the marks of *hem, hem*, in the margin, signifying, according to the then usage, when the preacher was to cough.—*Nouv. Dict. Hist.*

MAILLET (BENEDICT de) a fanciful, but ingenious author, a native of Lorraine. He was born in 1659, and bred to commerce, residing sixteen years in the capacity of French consul in Egypt. He afterwards obtained a similar appointment at Leghorn, and held it till 1716, when, retiring from public life, he devoted a considerable portion of the remainder of his time to the arrangement of his papers, and the enjoyment of literary leisure. Five years after his decease, which took place in 1738 at Marseilles, some of these were published. They consist of a curious dialogue on Cosmogony, in one octavo volume, printed under the name of Telliamed (the anagram of his own), and a "Description of Egypt," in 1 vol. 4to, reprinted in 2 vols. 12mo.—*Nouv. Dict. Hist.*

MAIMBOURG (LEWIS) a celebrated French ecclesiastical historian, was descended of a noble and wealthy family, and born at Nancy in the year 1610. He entered into the society of jesuits at sixteen years of age, and when he had finished the usual course of study, became classical teacher for six years. He was subsequently appointed a preacher, and signaled himself by strange descriptions and burlesque sallies of humour in the pulpit. The sermons which he published are of the controversial kind, and attack the Jansenists and Protestants. In the year 1682, having written a treatise in defence of the rights of the Gallican church against the pretensions of the see of Rome, he was expelled from the society of Jesus, by order of pope Innocent XI; for which disgrace, however, he was amply compensated by a pension from Louis XI^v, on the acquirement of which he retired to the abbey of St Victor, where he died in 1686, at the age of seventy-six. By the Protestants he is justly accused of great errors and partiality in his histories of Lutheranism and Calvinism; but the judgment of Bayle is favourable to his historical talent in other respects. His productions of this class are, "The History of the Crusades," 4 vols; "The History of the League," 2 vols; "The History of the Decline of the Empire after Charlemagne," 2 vols; "The History of the Pontificates of St Gregory and St Leo," 4 vols; "The History of the Schism of the Greeks," 2 vols; "The History of the Grand Schism in the East," 2 vols; "The History of Arianism," 3 vols; "The History of the Heresy of the Iconoclasts," 2 vols; "The History of Lutheranism," and "The History of Calvinism," all in 12mo.—*Bayle. Moreri. Nouv. Dict. Hist.*

MAIMONIDES, or BEN MAIMON (MOSES) a Jewish rabbi, born at Cordova in Spain in 1131. He was of illustrious descent, several of his immediate ancestors having been national judges; but he derived much more celebrity from his own genius and acquirements. He was not only profoundly skilled

in Hebrew and Arabic, but was also acquainted with the Greek and most of the Oriental languages; and he was skilful in theology, philosophy, mathematics, and jurisprudence; to which he added such a knowledge of the healing art as qualified him to practise as a physician. He quitted Spain at the age of thirty, and went to Egypt, where he became chief physician to the sultan Saladin, who held him in high estimation. He died in 1204, or 1205. His works are, a commentary on the Mischna; an abridgment of the Talmud; an exposition of the Mosaic law; and his "More Nevochim," designed as an explanation of the obscure words and passages of the Jewish Scriptures; besides other productions of less importance.—*Aikin's Gen. Biog. Hutchinson's Biog. Med.*

MAINTENON (FRANCES D'AUBIGNE, marchioness de) a lady celebrated for her accomplishments and singularity of fortune, was born in 1635 in a prison at Niort, in which her father, Constantine D'Aubigné (son of Theodore Agrippa D'Aubigné, gentleman of the bedchamber to Henry IV) was confined on a political account. On his release, he went to Martinique with his wife and daughter, where she received from her mother a solid and excellent education. On the death of her father, she returned with the widow to France, and was protected by her Protestant relation, Madame de Villette, who brought her up in that persuasion; from which, owing to the interference of her mother, a strict Catholic, she was afterwards converted. Subsequently left in very narrow circumstances, she was induced, for protection, to marry the comic poet and novelist, Scarron, although in a state of decrepitude and disease. Here she encountered much well-informed, if not very moral society; among whom may be included the celebrated Ninon de L'Enclos, but her own reputation was never thereby injured. In 1660, the death of Scarron left her once more in a state of indigence; but having, by her wit and address, secured the favour of madame de Montespan, then the reigning mistress of Louis XIV, the latter obtained for her a pension, which she had been long soliciting, and placed her infant children by the king, under her care. For some time she was very inadequately rewarded, and had also the mortification of being personally offensive to Louis, who was led, by his own narrow education, to rather dislike those who possessed a reputation for mental superiority. As she became better known to him, this prejudice abated, and her success in opening the mind of his son, the young duke of Maine, was rewarded with a large increase of pension and a pecuniary gift, which enabled her to purchase the lands of Maintenon, from which she afterwards took her name. Her serene and equal temper also began to gain upon the king, who was becoming weary of the caprice and imperious disposition of madame de Montespan, whom she gradually superseded; and it is for casuists to determine in what degree, ambition, or a desire to wean the king from a

licentious connexion, might share in a conduct, which Voltaire and others have called ungrateful to her benefactress. Her situation was for some years equivocal. "A strange connexion," says Voltaire, "of tenderness and scruple on the part of the king, and of ambition and devotion on that of the new mistress, seems to have lasted from 1681 to 1686, which was the epoch of their marriage." This extraordinary union, which is in favour of the previous innocence of the parties, was never openly acknowledged, and madame Maintenon preserved that name, whilst regarded and honoured as a queen. The tedious life imposed on her by this honour is most emphatically depicted in some of her own letters, and "the punishment of being obliged to amuse a man who was no longer amusable," dwelt upon with singular feeling. She was, however, by no means insensible to the pleasure of ruling; and in the choice of ministers and measures often excited a very injurious influence. Though without spirit to incur hazards for her friends, she favoured many whom she had known in early life, and expended much of her income in charity. Her establishment at St Cyr, for the gratuitous education of three hundred young ladies of quality and small fortune, for which she drew up rules which did great honour to her good sense, was her most splendid work; and her happiest hours seem to have been spent at this retreat, to which, on the death of the king, she finally retired, and died there in 1719, at the age of eighty-four. She was generally regarded with much respect, and was certainly a superior woman, although her prudence approached to selfishness, and her religion to bigotry, the severe measures against the Protestants being rather promoted than otherwise by her opinions and influence. In 1756 a collection of "Letters of madame de Maintenon," appeared in 9 vols. 12mo, which are well written, and contain many things worthy of notice.—*Siecle de Louis XIV. Mém. de St. Simon.*

MAIRAN (JEAN JACQUES D'ORTOUS DE) a philosopher and man of letters, a native of Beziers, born in 1678. He became a member of the Academy of Sciences at Paris, and was the author of several ingenious papers to be found among the transactions of that learned body, especially two written in 1737, "Sur la Propagation du Son dans les différens Tons qui le modifient." On the retirement of Fontenelle from the secretaryship of the society in 1741, Mairan was elected his successor in the office, which he continued to discharge with great ability till his death in 1771. Besides the treatises already mentioned, he published several others, "On the Variations of the Barometer;" "On the Aurora Borealis;" "On the Cause of Phosphoric Light;" "On Ice," and other philosophical subjects, as well as a series of "Letters on the Chinese Empire," "Memoirs," "Panegyrics," &c. &c.—*Nouv. Dict. Hist.*

MAIRET (JOHN) a French poet, was born at Besançon in 1604, and was gentleman in waiting to the duke of Montmorency, from

whom he received a pension. He was also favoured by cardinal Richelieu, and was employed in the conduct of a negotiation for a suspension of arms for Franche Comté. He died in 1686 at the age of eighty-two. He was the author of twelve tragedies, and a poem of some merit, entitled, "Le Courtisan Solitaire." He disgraced himself by some illiberal attacks on Corneille, possibly encouraged by the preference given to his own tragedy of Sophonisba, before that of the great man in question. The tragedies of Mairet contain some fine passages, but are upon the whole faulty and inelegant.—*Niceron. Nouv. Dict. Hist.*

MAISTRE (LE). There were two brothers of this name, natives of Paris, and both members of the Port Royal Society.—ANTOINE the elder, born 1608, was bred an advocate, and published a volume of pleadings before he relinquished the profession. His theological works are, a life of St Bernard; a translation of St Chrysostom's work, "De Sacerdotio;" and a "Life of Barthelemi of the Martyrs." His death took place in 1658.—His brother, LOUIS ISAAC LE MAISTRE, better known by the anagram of his Christian name, Saci, which he assumed, was born in 1613. He suffered an imprisonment of two years' duration, on the suppression of the society to which he belonged; but at length obtained his liberation, and died in 1684 at Pampluna. He completed a new translation of the Scriptures, during his confinement, in 32 vols. 8vo, and was the author of several miscellaneous works, the principal of which are, "Heures de Port Royal;" "Letters of Piety," 2 vols. 8vo; an attack on the Jesuits, entitled "Les Enluminures de l'Almanach des Jesuites;" and translations of the treatise "De Imitatione" of a-Kempis, of Chrysostom's homilies on St Matthew's gospel, of the fables of Phædrus, and of part of the works of Terence.—*Nouv. Dict. Hist.*

MAITLAND (sir RICHARD) an early Scottish poet, distinguished also as a lawyer and a statesman. He held the office of a lord of the session, and in that capacity he took the title of lord Lethington, from his estate. He was appointed keeper of the privy seal in the reign of queen Mary, which office he resigned in 1567, and he afterwards retired from the judicial bench. He died at a very advanced age in 1586. Some of his poetical productions were published by Allan Ramsay.—WILLIAM MAITLAND, of Lethington, the eldest son of sir Richard, was secretary of state to Mary queen of Scots, and his name frequently appears in the history of that unfortunate princess.—His brother, JOHN MAITLAND, succeeded his father in the office of lord privy seal, and lost it through his attachment to the interests of the queen. He was afterwards secretary to James VI, and at length chancellor of Scotland. In 1590 he was raised to the peerage, with the title of lord Thirlestane. He died in 1595. He published Latin epigrams; a satire against slander; and an admonition to the regent, the earl of Mar.—JOHN MAITLAND, son of the second lord Thirlestane, cre-

ated earl of Lauderdale, was a favourite minister of Charles II, who contributed to form the famous cabal. See BENNET (HENRY). He for a long time held the post of secretary of state, and was also appointed high commissioner for Scotland. He was created marquis of March, and duke of Lauderdale, which titles became extinct on his dying without male issue in 1679. The earldom descended to his brother CHARLES, whose eldest son, RICHARD, earl of Lauderdale, maintained the literary reputation of his family, by his translation of the *Æneis* of Virgil. This work, while it remained in manuscript, was read and praised by Dryden in his preface to his own version. It was published in 1737, in 2 vols. 12mo.—*Nisbet's Heraldry. Mackenzie's Lives of Scots Writers. Edit.*

MAITLAND (WILLIAM) a writer of history, topography, and antiquities, born at Brechin in Scotland, about 1693. He was, probably, of low extraction, as his original occupation was that of a hair-merchant, in the pursuit of which he travelled in Sweden, Denmark, and Germany, and at length settled in London. Prompted by inclination or accident, he turned his attention to literature, and produced several compilations, which were well received by the public, and proved profitable to the compiler. He is said to have gained a handsome fortune, with which he retired to Montrose, in his native country, where he died in 1757. The best known of his works is the "History of London," 1739, folio, enlarged to two volumes in a subsequent edition. Maitland was a fellow of the Royal and Antiquarian societies.—*Gent. Mag. Nichol's Lit. Ane.*

MAITTAIRE (MICHAEL) a learned critic and bibliographer, who was a native of London, though apparently of French extraction. He was born in 1668, and was educated at Westminster school and Christchurch college, Oxford, where he took the degree of MA. in 1696. The preceding year he had been made second master of Westminster school, which office he relinquished in 1699; and from that period devoted his time to private tuition and the study of literature. He was patronized by the first earl of Oxford and his son; and he had among his pupils Mr Stanhope, the natural son of lord Chesterfield. His publications are extremely numerous. He is chiefly known as a classical editor, and his editions of various Greek and Latin authors are esteemed for their accuracy; but his most important literary production is his "Annales Typographici ab artis inventione," Hag. Com. et Lond. 1719-1741, 5 vols. 4to, since augmented by Denis and Panzer.—*Aikin's G. Biog. Dibdin's Bibl. Decan.*

MAIUS or MAY (JOHN HENRY) a learned ecclesiastic of the reformed church, born in 1653 at Pfortzheim, in Baden Dourlach. He devoted his attention principally to the cultivation of Oriental literature, and was an honorary member of several universities, as well as other literary societies, and died in 1719, at Giessen, of which place he was minister.

Among his works are, a "History of the Animals mentioned in Holy Writ;" "A History of the Reformation under Martin Luther," 4to; "A Life of John Reuchlin, surnamed Capnio;" "Synopsis Judaica;" "Synopsis Theologiae Symbolicae;" "Examen Historiae Criticae Ricardi Simonis;" "Dissertationes Philologicae et Exegeticae," 1to, 2 vols; "Economia temporum Veteris et Novi Testamenti;" "An Introduction to the Study of Philology;" and a commentary on the Hebrew lexicon of Coceius.—*Nouv. Dict. Hist.*

MAJO (FRANCESCO, or CICCIO DI) an Italian composer of great eminence, born in the Neapolitan territories about the year 1740. He studied under Padre Martini at Bologna, but first attracted notice by his opera of "Demofonte," at Rome, whither he had preceded upon invitation from the managers of the opera there. His "Montezuma" confirmed the favourable impression which his previous work had produced, and is said to have constantly drawn tears from the spectators. Majo afterwards went to Naples, where he composed his "Ipermestra," in 1762; the "Artaserse" of Metastasio, and six other operas. death took place in 1773.—*Biog. Dict. of Mus.*

MAJOR (JOHN) a Scottish historian, born at Gleghorn near North Berwick, in 1469. He studied at the universities of Oxford, Cambridge, Paris, and St Andrew's, of which latter, after filling for some years the chair of theological professor, he at length became provost. The divided state of the society to which he belonged, proved, however, so great a source of mortification to him, that he went back for a while to France; but the circumstances which caused his disgust being at length removed, he returned to Scotland, where he died in 1550. He was the author of a commentary on the physics of Aristotle, an exposition of St Matthew's Gospel, and a history of the Scotch, from the earliest periods of antiquity, all written in very rude Latin.—*Mackenzie's Scottish Writers.*

MAJOR (JOHN DANIEL) a native of Breslau, born 1634. He was celebrated as a botanist, and founded a garden for the cultivation of his favourite science at Kiel, where he practised with great reputation as a physician, and filled the chair of medical professor. He was the author of a treatise on fossil plants and animals, entitled, "Lithologia Curiosa," in 4to; another "On Petrified Crabs and Serpents," 4to; and a "History of Anatomy," in folio. Professor Major afterwards travelled into Sweden, in the capital of which country he died in 1693.—*Moreri.*

MAJORAGIO (MARCO ANTONIO) an Italian author, so named from the place of his birth, a village in the Milanese. He was born in 1514, and was a professor of the belles-lettres in the capital of his native country, whither his reputation attracted many pupils from all parts of Italy. Majoragio published some valuable observations on the rhetoric of Aristotle and of Cicero, and on the poetry of Virgil, in one volume folio. His

other works are, "On the proper Names of the Ancient Romans;" "On the Roman Senate," 4to, &c. His death took place about the year 1555.—*Moreri. Tiraboschi.*

MALAGRIDA (**GABRIEL**) an Italian ecclesiastic, notorious for his intriguing and enthusiastic disposition about the middle of the last century. He was born in 1686, and having become a member of the jesuit's college, was despatched by that fraternity as their missionary to Lisbon. Here he acquired considerable popularity, especially among the lower orders, by his eloquence, and his pretensions to extraordinary sanctity, till becoming involved in the designs which the duke d'Aveiro entertained upon the crown of Portugal, he was thrown into prison by the government. The extravagance of his language and conduct soon after became a subject of cognizance to the Inquisition, before whom he was charged with having pretended to work miracles; and with having given himself out as one acted upon by the immediate inspiration of the Holy Spirit. For these offences, coupled with a prophecy which he had ventured to deliver respecting the death of the reigning monarch, he was sentenced to the stake, and executed September 21, 1761. He published some works which savoured strongly of insanity, under which affliction he most likely laboured.—*Nouv. Dict. Hist.*

MALCOLM (**JAMES PELLER**) an artist and antiquary, was a native of the United States, when he repaired in his youth to London, to study painting. Failing with the pencil, he took to the graver, and executed a number of topographical plates, chiefly for the works of Gough and Nichols, and also became a member of the Society of Antiquaries. He published "Londinum Redivivum, or an Ancient and Modern Description of London," 4 vols. 4to; "Letters between the Rev James Granger and many eminent Men," 8vo; "First Impressions, or Sketches from Art and Nature," 8vo; "Anecdotes of the Manners and Customs of London," 4to; "Miscellaneous Anecdotes," 8vo; "An Historical Sketch of the Art of Caricaturing," 4to. He died in 1815.—*Gent. Mag.*

MALDONAT (**JOHN**) a learned Spaniard, born in 1534 at Fuente del Maestro, in the province of Estremadura. He received his education in the universities of Salamanca, Rome, and Paris; in which latter he was afterwards professor of philosophy. Becoming a member of the society of jesuits, pope Gregory XIII called him from the college belonging to that order at Bruges to Rome, where he employed him in the publication of the Septuagint version of the Bible. De Thou speaks in the highest terms of his learning, piety, and strict morality. His reputation for these qualities, however, did not prevent him from being accused, though falsely, at one period of his life both of heresy and forgery. The works of father Maldonat are, "A Commentary on the Gospels;" another on "the Books of Jeremiah, Daniel, Baruch, and Ezekiel," together with several treatises on grace, original

sin, and other theological subjects, many of which are considered valuable by divines, and display great erudition, as well as extensive biblical research. His death took place at Rome in 1583.—*Nouv. Dict. His.*

MALEBRANCHE (**NICHOLAS**) a French priest of the congregation of the oratory, and a celebrated philosopher, was born at Paris in 1638. His health being delicate, he was classically instructed by a domestic tutor, but afterwards went through courses of philosophy and divinity at the colleges of la Marche, and of the Sorbonne. At the age of twenty-two he determined to embrace the monastic life, and was admitted into the congregation of the oratory. He applied himself first to ecclesiastical history, and afterwards to Oriental learning and biblical criticism; but having accidentally met with Descartes's treatise "On Man," he determined to make himself master of that author's system of philosophy. The result of this study was his famous treatise "On the Search after Truth," first printed in 1673, but of which the best edition is that published by himself in 1712, in 2 vols. 4to, and 4 vols. 12mo. The doctrines of this celebrated work, which is now only read for its fine thoughts and uncommon reflections, rendered still more striking by his elegant manner of conveying them, is raised upon Cartesian principles, and is in some particulars Platonic. It is principally distinguished by the maintenance of a mysterious union between God and the soul of man, and the assertion that the human mind immediately perceives God, "and sees all things in him." The next publication which he sent into the world appeared in 1676, and was entitled "Christian Conversations." This work was followed in 1680, by a "Treatise on Nature and Grace," which originated in a conversation between the author and the celebrated Arnauld, that led to several controversial pieces from both writers. Father Malebranche also wrote "A Treatise on Physical Premotion," and "Reflections on Light and Colours," and "On the Nature of Fire," and composed several papers for the Academy of Sciences, of which he was admitted an honorary member in 1699. Notwithstanding the delicacy of his constitution, he was enabled, by care and temperance, to reach the age of seventy-seven, his death taking place in 1715. Malebranche was highly venerated for his elevated genius, being visited by all persons of eminence who came to Paris, and nothing could be more amiable and simple than his conversation and manners. As a philosopher, although he agreed with the whole tribe who preceded him, in conceiving ideas to be the immediate objects of perception, he distinguished more than any previous metaphysician, the object from the sensation which it creates, and thereby led the way to a right understanding, both of our external senses and other powers of mind.—*Nicéron. Brucker. Enfield.*

MALESHERBES (**CHRISTIAN WILLIAM DE LAMOIGNON de**) an eminent French statesman, descended from a family of distinguished

worth and talents. He was the son of William de Lamoignon, chancellor of France, and was born at Paris in 1721. After studying at the jesuits' college, he qualified himself for the legal profession, and became a counsellor of the parliament of Paris. In 1750 he succeeded his father as president of the court of aids, and was also made superintendant of the press, in both which offices he displayed a liberal and enlightened policy, highly honourable to his talents and character. On the banishment of the parliaments, and the suppression of the court of aids in 1771, Malsherbes was exiled to his country seat, where he devoted his leisure to the study of statistics and agriculture, and the improvement of his estate and of the country around it. After the accession of Louis XVI, he resumed his presidentship over the revived tribunal, and in 1775 he was appointed minister of state. Finding his plans for the benefit of the nation counteracted by the influence of others, he resigned his post in May 1776, and went to reside in Switzerland. He was recalled to the king's councils in 1786, when he drew up two memoirs, "On the calamities of France, and the means of repairing them;" but his advice was rejected, and he therefore took a final leave of the court. Returning to the country, he continued his patriotic labours, and in 1790 published "An Essay on the Means of accelerating the Progress of Rural Economy in France." He took no part in the proceedings which led to the overthrow of the monarchical government; but on the decree of the National Convention for the trial of the king, he emerged from his retreat to become the voluntary advocate of his unfortunate sovereign. His generous attachment to his fallen master, excited the jealousy of the French rulers, and caused his destruction. Shortly after his return home, his daughter, madame Lepellatier Rosambo, and her husband, were arrested and conducted to Paris; and his own arrest, with that of his grand-children, soon followed. Almost his whole family were extirpated by the merciless proscription of his persecutors. Malsherbes was beheaded April 22d, 1794, and he bore his sufferings with a spirit worthy of the best ages of the Roman republic. On the reaction of public opinion, his bust was ordered to be placed with those of other great men, who have reflected honour upon their country. Besides his various tracts on political economy and rural affairs, he was the author of "Observations sur l'Histoire Naturelle de Buffon," 2 vols. 8vo, published after his death.—*Aikin's G. Biog. Biog. Univ.*

MALET (sir CHARLES WARRE) the son of Alexander Malet, MA. prebendary of Gloucester and Wells. He was born in 1752, and at the age of eighteen he obtained a writership in the East India Company's service at Bombay. Having served with reputation in several situations of trust and respectability, he was, in 1785, appointed president plenipotentiary at the court of the peishwa, a Mahratta prince. Before he proceeded to that station,

he visited the great mogul Shah Aulum, who created him an ameer of the mogul empire. In 1791 he was made a baronet. During his ministry at the peishwa's court, he was offered by the Indian directors a seat in the council of Bombay, which he declined. But on his return to Europe, arriving at the presidency, he was induced to fill the chair of government for the space of nine months, till the arrival of governor Duncan in January 1798. Soon after he embarked for England; and having purchased the estate of Wilbury, in the south of Wiltshire, he made it his residence till his death, which took place January 23, 1815. Sir C. W. Malet published, in the sixth volume of the Asiatic Researches, an account of the famous excavated temples of Elora near Aurungabad, in the East Indies, which he visited and explored in 1794.—*Sir R. C. Hoare's Hist. of Mod. Wiltsh.*

MALHERBE (FRANCIS de) a celebrated French poet, was born in 1556 at Caen, of an ancient but decayed family. His father was a Calvinist, but having adopted as a principle, that a "gentleman should be of the religion of his prince," he himself adhered to the church of Rome. He entered into the service of Henry d'Angouleme, natural son of Henry II, and married the widow of a counsellor, by whom he had several children. He did not visit court until his fiftieth year, when Henry IV received him into his service, and gave him a liberal pension, chiefly in consequence of the recommendation of cardinal du Perron, who mentioned him as one who surpassed all the French poets who had preceded him. He died at Paris in 1628. Although the recorded incidents of his life be few, numerous testimonies abound of his caustic wit, mean greediness of presents, and litigious temper; being generally at war with some or other of his relations. He was also lax and licentious in respect both to morals and religion. Such was his zeal for the purity of the French language, that when near expiring, he reproved his nurse for using a word not duly authorized. With all these defects of character, he may be deemed the father of cultivated French poetry, being not only an excellent versifier, but possessed of many of the qualities of a real poet; not indeed of the highest class, but he was ingenious, elegant, and sometimes even elevated. His poetry consists of odes, stanzas, sonnets, epigrams, and other short pieces, with a few of a devotional cast. He also published translations of Seneca "De Beneficiis," and of a portion of Livy, with some letters. The best editions of his works are those of Paris, 1722, 3 vols. 12mo, and 1757, 8vo.—*Moreri. Nouv. Dict. Hist.*

MALINGRE (CLAUDE) sieur of St. Lazare, a little esteemed French historian, who died in 1655. His best work is said to be "Histoires des Dignités honoraires de France," 8vo. Of his other works, "The Annals and Antiquities of Paris," 2 vols. folio, although much exceeded by that of father du Breuil, is still consulted as a testimony of the state of Paris in the time of the author.—*Nouv. Dict. Hist.*

MALLET (DAVID) a poet and miscellaneous writer, was born at Crief in the county of Perth, about 1700. Little is known of his parentage and education, but in 1720 he acted in the situation of tutor in the family of Mr Home of Edinburgh. In 1723 he gladly accepted the offer of accompanying the two younger sons of the duke of Montrose to Winchester school; and in the same year his admired ballad of "William and Margaret," appeared in the Plain Dealer of Aaron Hill. He subsequently made the tour of Europe with his pupils, and on his return settled in London, and dropped the name of Malloch, which was that of his parents, for Mallet. In 1728 he published a poem, entitled "The Excursion;" and in 1731 a tragedy, called Eurydice, which met with temporary success. A poem on "Verbal Criticism" followed in 1733, and he was soon after made under-secretary to Frederick, prince of Wales. In 1734 he accompanied the prince of Orange to Oxford, and in recompence for some verses written on the occasion, was honoured with the degree of MA. His tragedy of "Mustapha" was produced with success in 1739, and the following year his principal prose performance, a well written, but inadequate life of lord Bacon, appeared prefixed to a new edition of the works of that great man. He was about the same time associated with Thomson in the composition of the Masque of Alfred, and in 1747 he published his largest poem, entitled "Amyntor and Theodora." On the death of Pope, Mallet lent himself to the resentment of lord Bolingbroke against the deceased poet, for having clandestinely printed his "Idea of a Patriot King." In an advertisement to a publication of that and some other tracts of the same noble man, he stigmatised the conduct of Pope with so much severity, as to draw forth an apologetical tract from Warburton, to which Mallet rejoined, by "A Letter to the most impudent man living." For this service he was rewarded by Bolingbroke with a bequest of his works, the publication of which produced a prosecution, instead of the gain which he expected. The dutchess of Marlborough having left 1000*l.* between him and Glover, to write the life of her husband, the latter declined the task, and it was undertaken by Mallet alone, who received more or less of the recompence, without leaving on his death, a line towards the work. On the prosecution of admiral Byng, he was employed by the ministry to assist in making that unfortunate officer their scape-goat, which conduct has loaded his memory with great and justifiable odium; while his immediate reward was a considerable pension. On the accession of lord Bute to the helm, he wrote his "Truth in Rhyme," and tragedy of "Elvira," to which a political tendency was given to serve the politics of that nobleman, and obtained a placé in the customs for his recompence. This venal writer, after having amassed a handsome income, still more enlarged by a second marriage, died of a decline in 1765. The religious scepticism, which he

openly avowed, may have assisted to darken the portraits usually given of Mallet; but it is quite obvious that no partiality could have rendered it amiable.—*Johnson's and Anderson's Lives of the Poets.*

MALLET (EDMUND) a writer of some valuable articles in the French Encyclopædia, was born at Melun in 1713, and was educated at the college of the Barnabites at Montargis. He became tutor to the family of a farmer-general in 1742; and being admitted to orders, he received a cure near Melun, where he remained until 1751, when he was invited to be professor of divinity in the college of Navarre. He was the subject of many charges of Jansenism, from which, however, he gradually cleared himself, and Boyer, then bishop of Mirepoix, presented him to a canonry of Verdun. He died at Paris in 1755. He was the author of a translation of Davila's history of the civil wars of France, under the reigns of Francis II, Charles IX, &c. 3 vols. 4to; and of several works on the principles of poetry and eloquence. His style is easy and unaffected; and his precepts, illustrated by the most appropriate passages from the best writers.—*Moreri. Nouv. Dict. Hist.*

MALLET (PAUL HENRY) a learned historian and antiquary, was born at Geneva in 1730. He was professor of history in his native city, and became afterwards professor royal of the belles-lettres at Copenhagen, a member of the academies of Upsal, Lyons, Cassel, and of the Celtic academy at Paris. Being deprived of his fortune, during the troubles of Geneva in the first revolutionary war, for some time he received pensions from the landgrave of Hesse and the duke of Brunswick, of which he was deprived by the late war. The French government was about to make him a recompence, but this was prevented by his death in 1807. Mallet's merit as an antiquary is displayed in the late Dr Percy's translation, entitled "Northern Antiquities," with a translation of the Edda, or system of Runic mythology, translated from M. Mallet's "Introduction à l'Histoire de Danemarck." His other works are, "Histoire de Hesse" to the seventeenth century, 3 vols. 8vo; "Histoire de Danemarck;" "Translation of the Acts and Forms of the Swedish Government;" "A Translation of Coxe's Travels," with remarks and additions, and a relation of his own travels in Sweden, 2 vols. 4to; "Histoire de la Maison de Brunswick," to its accession to the throne of Great Britain, 3 vols. 8vo; "Histoire des Suisses," 4 vols. 8vo; "Histoire de la Ligue Anseatique," from its origin to its decline, 2 vols. 8vo. He had discovered at Rome the chronological series of Icelandic bishops, which had been lost in Denmark; it is published in the third volume of Langebeck's collection of Danish writers. *Nouv. Dict. Hist. Athénæum*, vol. ii.

MALLET DU PAN (JACQUES) a writer on politics and general literature, who was the son of a clergyman of Geneva, where he was born in 1749. After having completed

his education at college, he entered on the study of law, which he deserted for the belles-lettres. In 1772 he was invited to fill the chair of history and French literature at Cassel. He left that situation and went into Switzerland, where he published a political and literary journal, and other works, which procured him so much reputation, that he was engaged to conduct the political department of the *Mercure de France*. His residence and occupation at Paris contributed to correct his taste and improve his style, and he continued during the years 1789, 1790, and 1791, to animadvert with freedom on the state of public affairs. His sentiments relative to the Revolution having offended the popular party, he found it necessary to quit Paris in May 1792. He retired to Geneva, and afterwards to Berne, where he published several tracts on the French Revolution, which added much to his reputation. His apprehensions from the displeasure of the Directory induced him to take refuge in England, where, under the patronage of the government, he published a journal, entitled, *Mercure Britannique*, from 1796 till the 15th of March, 1800. He died the 10th of May, the same year, at Richmond in Surrey.—*Dict. Hist. Dict. Biog. des H. M. du 18me. S.*

MALLINKROTT (BERNARD) dean of the cathedral of Munster, a turbulent ambitious man, who ruined himself in his endeavours to become bishop of that see. He was appointed by the emperor Ferdinand I to the bishopric of Ratzebourg, and a few days after he was elected to that of Minden; but this not satisfying his ambition, in 1650 he intrigued and raised seditions against the bishop of Munster, which ended in his being degraded from his dignity of dean, and finally in his being arrested and confined in the castle of Ottingheim, where he died suddenly, March 7, 1664. He was a learned man, and the author of the following works in Latin, “*De ortu et Progressu artis Typographicae*,” Cologne, 1639, 4to, sometimes reprinted in Wolf’s collection of “*Monumenta Typographica* ;” “*De Natura et usu Literarum*,” Munster, 1638, 4to ; “*De Archicancellariis S. R. imperii*,” Munster, 1640 ; “*Paralipomenon de Historicis Græcis*,” Cologne, 1656, 4to.—*Niceron. Life by Struvius, prefixed to his edition of the De Archicancellariis.*

MALMESBURY (WILLIAM OF) an ancient English historian of the twelfth century, was born in Somersetshire, on which account he was sometimes called Somersetanus. He relates, that when he was a child he had a great inclination for learning, which was encouraged by his parents, and it is supposed that he was educated at Oxford. He became a monk of Malmesbury, and was elected librarian of the monastery. He studied all the sciences of his time, but attached himself particularly to history, and finding that a satisfactory account of his own country was wanting, he determined to write one; “not,” as he himself says, “to display his learning, which is no great matter, but to bring to light things that are covered with the rubbish of antiquity.”

He accordingly produced his “*De regibus Anglorum* ;” a general history of England, in five books, from the arrival of the Saxons in the year 449, to the twenty-sixth Henry I in 1126 ; a modern history, in two books, from that year to the escape of the empress Maud out of Oxford in 1143, with a church history of England, in four books, published in sir H. Savile’s collection, 1596. He aspired rather to the character of an industrious, than of an eloquent historian, and discovers great diligence and good sense, with uncommon modesty. His “*Antiquities of Glastonbury*,” was printed by Gale, and his “*Life of St Aldhelm*,” by Wharton. He was also the author of several pieces of Latin poetry. William of Malmesbury died in that abbey in 1148. *Bale and Pits. Wharton’s Anglia Sacra. Henry’s Hist. of Great Britain. Leland.*

MALMESBURY (JAMES HARRIS, earl of) privy counsellor, and KB. was the son of the author of “*Hermes*,” and other philosophical works. He was born at Salisbury in 1746, and was educated at Merton college, Oxford, where he was created doctor of civil law. In 1768 he was sent as secretary of embassy to Madrid ; he was afterwards minister at Brussels ; and in 1772 went as envoy extraordinary to Berlin. He was appointed to the same post at St Petersburg in 1776 ; and in 1784 was sent as ambassador to the Hague. In the quality of plenipotentiary he signed the treaty with Prussia and Holland in 1794 ; and he was next employed to negotiate the marriage of his present majesty with the late queen Caroline. In October 1796, he was nominated minister plenipotentiary to the French republic ; but his mission in that character to Paris, and his subsequent negotiation at Lisle, were equally fruitless. He was created earl of Malmesbury in 1800, and appointed governor of the Isle of Wight, and lord-lieutenant of Hampshire in 1807. His death took place in 1820. He was the author of “*An Introduction to the History of the Dutch republic* ;” and a memoir of the life of his father, accompanying an edition of his works in 2 vols. 4to.—*Gent. Mag. Dict. des H. M. du 18me. S.*

MALONE (EDMUND) a dramatic critic and commentator, known in literature as one of the editors of Shakspeare. He was the son of an Irish judge, and was born at Dublin in 1741. After completing his studies at Trinity college, he entered at the Inner Temple, London, and was called to the bar in 1767. Possessing a competent fortune, he gave up his profession, and employed himself in literary pursuits. After having been the coadjutor of Steevens, in his edition of Shakspeare’s plays, Mr Malone quarrelled with that gentleman, and published an edition of his own, in 11 vols. 8vo, 1790. Besides this undertaking, he published an “*Inquiry into certain Papers, &c. attributed to Shakspeare* ;” (see IRELAND, S.) biographical memoirs of sir Joshua Reynolds, Dryden, W. Gerard Hamilton, &c. and various minor productions. He died May 25th, 1812.—*Chalmers’s Reg. Dict. Thesp. Dict.*

MALOUIN (PAUL JAMES) a distinguished French physician and chemist, was born at Caen in 1701. He practised physic in Paris, where he became professor of medicine in the Royal college, physician to the queen, and member both of the Royal Society of London, and the French Academy of Sciences. As a physician, he was an enthusiast for his art, which he affirmed was honoured by "all great men." Moliere being mentioned as an exception; "See how he died," was the reply. On another occasion, delighted with the exactness with which a celebrated man of letters followed his directions, "You are worthy of being sick," he exclaimed, warmly saluting him. He was frugal, yet disinterested, and after a lucrative practice, went to a small employment at Versailles, which he called "retiring to court." He died of an apoplexy in 1778. He possessed a great fund of chemical knowledge, and published "*Traité de Chimie*," 1734, 12mo; "*Pharmacopée Chimique*," 1750 and 1755, 2 vols. 12mo; and several papers in the memoirs of the Academy of Sciences. He also left by his will, a legacy to the faculty of medicine in Paris, on condition that it should annually hold a public assembly, and give an account of its discoveries.

Nouv. Dict. Hist.

MALPIGHI (MARCELLO) an eminent Italian physician and anatomist of the seventeenth century. He was born in 1628, near Bologna, and studied in the university of that city. He was admitted MD. in 1653, and three years after was appointed to the medical chair. The grand duke of Tuscany invited him to become professor of medicine at Pisa, where he staid three years, and in 1660 returned to occupy his former office at Bologna. He was tempted by a high stipend to accept the professorship of medicine at Messina, in Sicily; but the jealousy of his colleagues rendered him uneasy, and he again settled at Bologna in 1666. He was elected a fellow of the Royal Society of London in 1669, and he communicated to that association various anatomical discoveries relative to the minute structure of animal bodies, the results of microscopical observations. Pope Innocent XII in 1691 called him to Rome, and appointed him his physician, chamberlain, and domestic prelate, which posts he held till his death in 1694. His works, relating to anatomy, physiology, and vegetable anatomy, comprise much curious and important information, and have been repeatedly published.—*Hutchinson's Biog. Med. Fabroni Vit. Italor.*

MALTON (THOMAS) an ingenious artist and mathematician, born in 1726, and died at Dublin, February 18, 1801. He delivered lectures on perspective, and on theoretical and practical geometry; and he published "A Royal Road to Geometry; or an easy and familiar introduction to the Mathematics" 1757, 8vo; "A complete treatise on Perspective, in theory and practice, on the true principles of Dr. Brook Taylor," 1776, folio; and a collection of aquatinta engravings, with descriptions, entitled "A Picturesque Tour

through London and Westminster," 1792, folio.—*Reuss's Jones's Biog. Dict. Edit.*

MALUS (STEPHEN LOUIS) a mathematician and military engineer in the French service, was born at Paris in 1775. At seven teen years of age he produced a tragedy, entitled, "The Death of Cato," but devoted himself chiefly to the mathematics, and was admitted into the school of engineers, which he was about to quit with a commission, when some political objection intervened, and he joined the army as a private soldier. His abilities being observed by his commanding officer, he was recalled, and sent to the Polytechnic school, of which he became a professor, and subsequently accompanied the expedition of Buonaparte to Egypt, where he much distinguished himself as an officer of engineers. Malus was the author of a work which gained him great reputation on the optical questions relating to geometry, in which he calculated all the phenomena of reflection and refraction. This called the attention of the Institute of France to the phenomenon of double refraction, and they made it the subject of a prize, which Malus gained; and by his experiments he discovered previously unknown property of light, namely, the resemblance between the loadstone and a particle of light, the latter of which he found acquired polarity and a determined direction. This discovery, the greatest since that of the achromatic telescope, gained him admission into the Institute. He also wrote a memoir on a discovery he made of a branch of the Nile, which forms part of the first volume of "*La Decade Egyptienne*." Malus died in 1812, overwhelmed with honours.—*Notice Historique par M. le Chevalier Delambre.*

MALVEZZI (VIRGILIO) a nobleman of Bologna, in Italy, who distinguished himself in the seventeenth century as a general scholar. He was also engaged in the military service of Spain, and employed as a diplomatist by the king, Philip IV. He died at his native place in 1654, leaving behind him several learned works, the most important of which is his "*Discorsi sopra Cornelio Tacito*," 1635, 4to.—*Moreri. Nouv. Dict. Hist.*

MAMBRUN (PETER) a learned French jesuit and Latin poet, was born in the diocese of Clermont in 1581. He was an imitator of Virgil, and was the author of "*Eclogues*;" "*Georgics, or Four Books upon the Culture of the Soul and the Understanding*;" and of an heroic poem, in twelve books, entitled "*Constantine, or Idolatry overthrown*." Ménage has called him "a great poet, as well as a great critic," and not without reason; he had undoubted talents for poetry, but it would have been as well had he not so openly professed himself an imitator of Virgil, whose genius and judgment he could not copy, though he might imitate his style. Besides the above, he was the author of a Latin peripatetic dissertation upon an epic poem, which proves Ménage's opinion of his critical talent well founded. He died in 1661.—*Moreri. Nouv. Dict. Hist.*

MANCINELLI (ANTONIO) an Italian

grammarians, poet, and orator, was born in 1452. Little of his life is known, except that he taught in several parts of Italy with success; the story related, by Flaccius Illyricus, of his having his hands cut off and his tongue cut out, for an insolent speech made to pope Alexander VI, seems without foundation. He was the author of a poem, entitled "*Silva vitæ suæ*," or an account of his own life, reprinted by Meuschenius in 1735, in his collection of "*Vite summorum dignitate et eruditione virorum*;" "*De Floribus, de Figuris, de Poetica virtute*;" "*Epigrams*," published at Venice in 1501, 4to; and "*Notes upon some of the Classic Authors*." The time of his death is uncertain; but it must have been some time after 1506.—*Morevi. Gen. Dict. Nicéron.*

MANCINI (FRANCESCO) an eminent musical composer of Naples, in which capital he was born in 1691. Mancini, who was more remarkable for the excellence, than the number of his compositions, was a pupil of Leonardo da Vinci (not the painter of that name), and is reckoned by Ilasse among the first masters of his art. He met with equal success, both in the serious and comic opera; being as grand, pathetic, and sublime in the one, as he is light, brilliant, and gay in the other. Among the best of his works, are "*Il Cavaliere Breton*," and "*Maurizio*." The time of his decease is uncertain.—*Biog. Dict. of Mus.*

MANCO CAPAC legislator and first inca of the Peruvians, was the twelfth in ascent from the inca who reigned at the time of the Spanish invasion in 1532, an interval computed by the natives at about four hundred years. Their tradition was, that this person, with Mama Oella his wife, and sister, appeared suddenly in an island of the lake Titiaca, and declared themselves to be children of the sun, sent down to civilize and instruct them. Manco accordingly taught the men agriculture, and other useful arts, whilst his wife instructed the women to spin and weave. Stripped of the supernatural, it may be presumed that some stranger, from a civilized land, appeared in Peru, and employed the association of religion to procure an ascendancy which enabled him to form a regular government. Manco Capac died after a long and prosperous reign; and, as far as tradition may be relied upon, seems justly to have been entitled to rank among the benefactors of mankind by the benevolence of his institutions.—*Robertson's Hist. of America.*

MANDEVILLE (BERNARD) a writer and physician of considerable temporary celebrity, was born in Holland about 1670. He was probably of English extraction, as he fixed his residence in England, and wrote his works in the English language. His first publication was "*The Virgin Unmasked, or a Dialogue on Love and Marriage*," 1709, which can scarcely be praised for its moral tendency. This work was followed, in 1711, by "*A Treatise on the Hypochondriac and Hysterical Passions*," a work of considerable shrewdness. In 1714 he published a poem, entitled "*The Grumbling*

Hive, or Knaves turned honest," which formed the ground of his celebrated production, "*The Fable of the Bees, or Private Vices made Public Benefits*," first printed in 1723. The reasoning in this piece, is founded on the sophism, that the luxury and superfluity which marks the advanced stages of society, and the vices which they engender, are often the causes of national prosperity, and hence the necessary prevalence of vicious principles in human nature. Consistently with this doctrine, his general views of mankind are of the most diparaging tendency; and he declares against all attempts to exalt the humble classes by education. This work was deemed so immoral, that it was presented by the grand jury of Middlesex, an absurd practice of the day, which only tended to increase the publicity of the writings thus censured. Many answerers also appeared, among whom was bishop Berkeley, to whom he replied in 1723, in his "*Letter to Dion*." Besides the foregoing works, Dr Mandeville was author of a tract, entitled "*Free Thoughts on Religion*," 1720, which, without sufficient reason, was deemed Deistical; and of "*An Inquiry into the Origin of Honour, and Usefulness of Christianity in War*." He died in 1733.—*Mandeville's Works.*

MANDEVILLE (sir JOHN) a celebrated English traveller of the fourteenth century, was born at St Albans. He was of a respectable family, and bred a physician; but a desire to visit foreign countries, induced him in 1332, to set out upon a course of travels, in which he is said to have spent thirty-four years. During this period, he visited the greater part of Asia, Egypt, and Libya, making himself acquainted with many languages, and collecting a great mass of information, true and false, which he committed to writing in Latin, French, and English. He died at Liege in 1372, where a monument is erected to his memory, the inscription on which denominates him, "*John de Mandeville, alias de Barba, lord of Campoli*." The only genuine edition of his travels, entitled "*The Voiage and Travaile of Sir John Mandevile, Knight*," was printed from an original MS. in the Cotton library, 1727, 8vo. The extreme credulity of this early traveller, in the collection of absurd and fabulous stories, has much impeached his character for veracity; but more attention is due to what he himself observed; and he makes many remarks which show talents and scientific information.—*Tanner. Mod. Univ. Hist.*

MANES or MANICHÆUS. The founder of a famous Christian sect, called after him Manichæans. He was born about the year 239, in Persia, Babylon, or Chaldea, and is said to have been adopted by a rich widow, who made him her heir. According to the Eastern writers, he subsequently became a painter, and is also said to have been skilled in the healing art. Having become a convert to Christianity, he sought to connect it with the doctrine of the magi, in which he had been educated, and first appeared as a public

teacher in 267. He obtained the notice of Sapor, king of Persia, who was at first inclined to favour him, but subsequently determined to put him to death; on which he privately withdrew to Turkestan, and composed his "Gospel," of which nothing but a few fragments remain. On the death of Sapor, he returned to Persia, relying with reason on the protection of his successor, Hormisdas. The death of the last-mentioned monarch again exposed him to danger, and his son, Varanes II, instigated by the magi, put him to a cruel death; some authors asserting that he was crucified, and others that he was flayed alive. His death is supposed to have taken place about 277. Besides his "Gospel," he was the author of "The Mysterious Chapters;" "The Treasures of Life;" "The Gigantic Book;" "On Astrology;" and "Letters;" all which are particularised by Lardner, as well as the authors in which extracts from them may be found. The principal feature of the doctrines of Manes is the magian one, of two original independent principles; the one immaterial and good, the other material and evil; and his followers admitted or rejected parts of the Old and New Testament, as best agreed with this fundamental distinction. This sect, of which St. Augustine was once a member, spread rapidly in Persia, and the different provinces of the Roman empire; and, notwithstanding the merciless persecutions which it endured, it existed in considerable numbers even at the close of the fifteenth century.—*Eusebius Hist. Eccles. Mosheim. Lardner.*

MANETHO, an ancient Egyptian historian, who was high priest of Heliopolis, in the reign of Ptolemy Philadelphus, about B.C. 304. He wrote in Greek a history of Egypt, from the earliest times to the last years of Nectanebis, and pretended that he had taken it from the sacred pillars of the first Hermes Trismegistus; the inscriptions on which, after the flood, were translated into Greek, but written in the sacred characters, and deposited in the sacred recesses of Egypt. The manifest absurdity of this pretension induces several writers to think, that some mistake or corruption has taken place in the passage of Eusebius which relates it. The work of Manetho, which is lost, consisted of three parts, the first of which contained the history of the gods or heroes, and the second and third that of twenty dynasties of kings, which, having been epitomized by Julius Africanus, are recorded by Eusebius. Several fragments of Manetho are preserved by Josephus, in his work against Apion.—*Vossii Hist. Græc. Univ. Hist.*

MANETTI (GIANNOZZO or SANATIUS) a learned scholar, was born at Florence in 1396, of an illustrious family that had fallen into decay. After a course of study, he became the pupil of Camaldoli, in the Greek language, and then lectured on philosophy at Florence. He was afterwards employed by the state in several negotiations, and became successively governor of Pescia, Pistoria, and Scarperia; and

commissary of the army, in conjunction with Bernardetto de Medicis. The favour which he enjoyed with the princes, at whose courts he had been employed as ambassador, having excited the envy of some families of Florence, he repaired to Rome, where pope Nicholas V made him one of his secretaries, with a handsome salary; and on the accession of Pius II, he was made librarian of the Vatican. He subsequently left Rome to reside with Alphonso, king of Naples, who allowed him an annuity of nine hundred golden crowns. He was the author of several works, most of which remain in MS. in the Laurentian library. Those published are, "De dignitate et excellentia hominis;" "Vita Petrarchæ;" inserted in Tommasini's "Petraarcha redivivus;" "Oratio ad regem Alphonsum in nuptiis filii sui." Other works have been attributed to him, as a "History of Pistoria," and the lives of Dante, Boccaccio, and Nicholas V; but there is no particular account of them.—*Chaufepie. Nicéron. Tiraboschi.*

MANFREDI (EUSTACHIO) an eminent mathematician and astronomer, born in 1674 at Bologna in Italy, where his father was a notary. After studying jurisprudence, and obtaining the degree of LL.D. he applied himself to the cultivation of mathematical science with such success, that in 1698 he was appointed professor of mathematics in the university of Bologna. In conjunction with Victor Stancari, he commenced a series of astronomical observations, of which he afterwards published an account in his "Schedæ Mathematicæ." In 1703 appeared his treatise on the solar maculæ; and the following year he was chosen regent of the college of Montalto, and also surveyor-general of the rivers and waters of the Bolognese territories. In 1705 he published a work on the reformation of the calendar; and he afterwards began the composition of his "Ephemerides motuum cælestium," which he carried on from 1713 to 1725. The whole work, in four volumes quarto, comprises observations on the heavens, extending to the year 1750. On the foundation of the institute of Bologna in 1712, Manfredi was appointed astronomer to that establishment, on which he resigned the regency of the college of Montalto. In 1726 he was admitted an associate of the Royal Academy of Sciences at Paris, and in 1729 a foreign member of our Royal Society. He died in 1739. Besides the works already noticed, he was the author of a treatise on the transit of Mercury over the Sun, and another on the aberration of the fixed stars, and other mathematical and astronomical productions; and, after his death, appeared a volume of his compositions in Italian verse.—*GABRIEL MANFREDI*, his brother, was professor of mathematics, and chancellor of the university of Bologna, where he died in 1761.—*Moreri. Fabroni Vit. Ital. Aikin's Gen. Biog.*

MANGERT (THOMAS) a learned Benedictine, who became librarian and counsellor of prince Charles of Lorraine. He published "Sermons," and a "Treatise on Pur-

gatory," in his life-time, and at his death, which took place in 1763, he had nearly prepared for the press a valuable work, edited and published the same year, by the abbé Jaquin, entitled, "Introduction a la Science des Medailles," folio, which serves as a supplement to the "Antiquité expliquée" of Montfaucon.—*Nour. Dict. Hist.*

MANGET (JOHN JAMES) a learned physician, was born at Geneva in 1652, where his father was an eminent merchant. In 1678 he took his doctor's degree at Valence, with the famous Hartman, and was appointed first physician to the elector of Brandenburg, and dean of the faculty of Geneva. He died in 1742. His works were very numerous; they are, "Messis Medico-spagyrica, &c." 1683, folio; "Bibliotheca Anatomica," 2 vols. fol. in conjunction with Daniel Le Clerc; "Bibliotheca Medico Practica," 4 vols. folio; "Bibliotheca Chemica Curiosa," 2 vols. folio; "Bibliotheca Pharmaceutico-Medica," 2 vols. folio; "Theatrum Anatomicum cum Eustachii Tabulis Anatomicis," 2 vols. folio; "Traité de la Peste recueilli des meilleurs Auteurs," 2 vols. 12mo; "Nouvelles Reflexions sur l'Origine, la Cause, la Propagation, les Pré-servatifs, et la Cure de la Peste," 12mo; "Observations sur la Maladie qui a commencé depuis quelques Années a attaquer le Gros Bétail." His great work, "Bibliotheca Scriptorum Medicorum veterum et recentiorum," was the most important of his productions, being a useful collection of catalogues of medical writings. He also edited the "Compendium Medicinæ Practicum, of J. And. Schmit;" "Pauli Barbetti Opera omnia Medica et Chirurgica;" the "Pharmacopœia Schrodero-Hoffmanniana;" the "Tractatus de Febribus," of Franc. Pieus;" and the "Sepulchretum" of Bonetus; to which he added several histories and remarks.—*Life by himself, in his Bibl. Script. Med. Eloy Dict. de la Med. Moreri.*

MANGEY (THOMAS) an English divine, was born at Leeds in 1684, and educated at St John's college, Cambridge, where he went through all his degrees. After receiving various preferments, he was advanced to the first stall of Durham, in 1722, and appointed treasurer of the chapter. He died in 1755. His works are, "Practical Discourses upon the Lord's Prayer, preached before the honourable Society of Lincoln's Inn," published by the special order of the bench, 1716, 8vo; "Remarks upon Nazareus, wherein the falsity of Mr Toland's Mahometan Gospel, and his misrepresentations of Mahometan Sentiments in respect of Christianity are set forth, the History of the old Nazareans cleared up, and the whole conduct of the first Christians, in respect to the Jewish Laws, explained and described;" besides a great number of sermons, published under various titles. He was one of the seven doctors in divinity created July 6, 1725, when Dr Bentley delivered the famous oration prefixed to his Terence. In 1726 Dr Mangey circulated proposals for an edition of "Philo Judæus,"

which he completed in 1742, with the title of "Philonis Judæi Opera Omnia quæ reperi potuerunt," 2 vols. folio.—*Nichols's Lit. Anec. Manning's Surrey. Hutchinsson's Durham.*

MANILIUS (MARCUS) a Latin poet and astronomer, supposed to have lived in the first century of the Christian æra. Nothing is known, with certainty, of his family or country, but it is probable that he was a native of Rome. He wrote a poem, entitled "Astronomicum," of which five books are extant, treating of the fixed stars; and there appears to have been a sixth, relating to the planets. Among the best editions of this work are that of Joseph Scaliger, Leyden, 1600, 4to; of Bentley, London, 1739, 4to; and that of Pingre, Paris, 1786, 2 vols. 8vo. There is an English translation of Manilius, by Creech.—*Vossius de Poet. Lat.*

MANLEY (DE LA RIVIERE) a female writer of some celebrity in her day, was the daughter of sir Roger Manley, governor of Guernsey, a gentleman who suffered much for his adherence to Charles I, and who wrote Latin commentaries on the civil war, and published a "History of the late Wars in Denmark." His daughter, the subject of this article, received an education suitable to her birth; but her parents dying early, she was left in the care of a male cousin, who basely seduced her, by means of a fictitious marriage, and subsequently deserted her. She afterwards acquired the temporary, and no-way respectable protection of the duchess of Cleveland; and when that resource was withdrawn, wrote a tragedy, entitled, "The Royal Mistress." The success of this production brought around her the men of wit and pleasure of the day, and she commenced the unhappy life of a woman of intrigue. At her leisure hours she composed her four volumes of "The New Atalantis;" in which, under feigned names, and with much warmth and freedom, she relates the amours and adventures, real and supposed, of many distinguished persons of the day, and more especially among the connexions of the favourers of the Revolution of 1688. A warrant being granted by the secretary of state to seize the printer and publisher of this work, which was deemed a libel, she honourably stepped forward, and acknowledged herself the authoress. She was, in the first instance, committed to the custody of a messenger, but was afterwards admitted to bail. At length, after repeated appearances in court, she was discharged, and a Tory administration succeeding, she lived in high reputation and gaiety. About this time she wrote another tragedy, entitled, "Lucius," which she dedicated to sir Richard Steele; and a comedy called "The Lost Lover, or the Jealous Husband," which was acted in 1696. She was also employed in writing for queen Anne's ministry, and when Swift relinquished "The Examiner," she continued it for a considerable time with great spirit, assisted by hints which that great writer afforded her. At this season she formed a connexion with alderman Barber, at whose house she died,

July 11, 1724. Besides the works already mentioned, Mrs Manley wrote "Letters from a suppos'd Nun in Portugal," 1696, 8vo; "Memoirs of Europe towards the close of the Eighteenth Century," 1710, 2 vols. 8vo; "Court Intrigues," 1711, 8vo; "Adventures of Rivelle," 1714, 8vo; "The Power of Love," 1720, 8vo, &c.—*Cibber's Lives. Notes to Tatler and Guardian.*

MANNI (DOMINIC MARIA) an eminent Italian writer, was born at Florence in 1690. He was early distinguished for capacity, and great strength of memory, and was regularly instituted into every class of literature; his particular bias, however, was history, and in 1722 he accordingly produced his "Series of Florentine Senators," 2 vols. folio, a work abounding with curious and authentic information. In 1731 he gave the world a work of still greater interest, "De Florentinis Inventis Commentarium," in which he gave an instructive account of the manufactures which were either invented or improved at Florence. His "History of Spectacles" followed in 1738, the invention of which he attributed to Salvino Armati. In 1742 he published "Historical Illustrations of the Decameron of Boccaccio," 4to, in which work he proves that most of the stories in that production were founded on real events. A more elaborate work succeeded, entitled, "Observations on the Seals of the Lower Age," 30 vols, 4to, which work is esteemed a highly valuable compilation of records and notices of the persons who acted a great part in the history of Florence, and other leading cities in Italy. His other principal works are, "Method of Studying the History of Florence;" "Historical Notices concerning the Amphitheatre at Florence;" "Inquiries into the ancient Thermæ of Florence;" "History of the Jubilees," a very curious and interesting performance; "Agreeable Evenings," being the lives of the most jocose and eccentric Tuscans; "Life of the well-deserving Prelate, Nicholas Steno, of Denmark;" "Lectures on Italian Eloquence," &c. This able and meritorious writer, the catalogue of whose productions extended to 104, died at Florence, November 30, 1788, in his ninety-eighth year.—*Athenæum. Nouv. Dict. Hist.*

MANNING (OWEN) an English antiquary and topographer, who was a native of Northamptonshire, and educated at Queen's college, Cambridge, where he obtained a fellowship. He took the degree of B.D. in 1753; and having entered into orders, he became a prebendary of Lincoln. He afterwards was vicar of Godalming, and rector of Pepperharrow, in the county of Surrey; and he was also a fellow of the Royal society. His death took place in 1801, at the age of eighty. His principal literary labours are, "Dictionarium Saxonico et Gothico-Latinum, auctore Edwardo Lye, edidit et auxit O. M." 1772, 2 vols. folio; and the History and antiquities of Surrey, published posthumously, by Mr Bray, in 3 vols. folio.—*Chalmers's Biog. Dict.*

MANSARD (FRANCIS) a celebrated French architect, was born in 1598, and died in 1660.

He was the author of several magnificent buildings at Paris, the principal of which are the gate of the church of the Feuillans, in the rue St Honoré, the church of the filles St Marie, in the rue St Antoine, the gate of the Minims in the place Royale, the hotels de Bouillon, Toulouse, and Jars; besides several buildings in the provinces, for which he formed designs. On his presenting his plans for the façade of the Louvre to Colbert, the minister was so pleased with them, that he endeavoured to make him promise not to alter them in any way; but Mansard refused to undertake the work on that condition, being determined, as he said, to preserve the right of doing better than he had undertaken to do.—His nephew, JULES HARDOUIN MANSARD, was first architect and conductor of the royal buildings, and designer of many celebrated edifices.—*D'Argenville. Perrault les Hommes Illustres. Nouv. Dict. Hist.*

MANSI (JOHN DOMINIC) a voluminous editor and prelate, was born at Lucca in 1692. He was many years professor of theology at Naples. His first situation in the church was that of a clerk regular, in the congregation of the Mother of God; and in 1765 he was promoted, by pope Clement XIII, to the archbishopric of Lucca. He died in 1769. His first publication was entitled, "Tractatus de casibus, et excommunicationibus episcopis reservatis, confectus ad normam tabellæ Lucanæ." He then published a Latin translation of "Calmet's Dictionary of the Bible," with additions; an edition of Thomasini "De Veteri et nova ecclesiæ Disciplina," 3 vols. fol.; a Latin translation of Calmet's "Commentaries on the Bible," 1731, 17 vols.; an edition of Barouius's Annals, in 30 vols., with additions; a new edition of the "Councils," 30 vols. folio; a new edition of "Æneas Sylvius," (pope Pius II); "Orations," with many hitherto unpublished, 1755, 2 vols. 4to, &c. &c. But the work by which he is best known here is his excellent edition of Fabricius's "Bibliotheca Latina mediæ et infimæ ætatis," 1754, and this alone is sufficient to stamp his character as a first-rate antiquary.—*Fab. Vite Ital.*

MANSTEIN (CHRISTOPHER HERMAN de) a celebrated Russian officer and writer, was born at Petersburg in 1711, and was first a lieutenant in the Prussian service, and then a captain of grenadiers in the Russian regiment of Petersburg. On the death of the czarina Anne, he took the part of the young prince, Iwan III, and was employed to arrest the tyrannic Biron; and for this, and other services, he received the rank of colonel, and some estates in Ingria; but these he lost when the throne was seized by the empress Elizabeth. He again entered the Prussian service, and in 1754 he was appointed major-general of infantry. He died in the the war of 1756. He was the author of "Memoirs of Russia," which are much esteemed, and are at the same time historical, military, and political: they commence in 1727, with the reign of Peter II, and finish with the first year of the empress Elizabeth.—*Nouv. Dict. Hist.*

MANTEGNA (**ANDREA**) an eminent painter, was born in 1431, at Padua, or in its district. He was the pupil of Squarcione. He distinguished himself highly in the art of perspective; and Lomazzo affirms, "that Mantegna was the first who opened the eyes of artists in that branch." His chief abode, and school, were at Mantua; and he worked a great deal at Rome, where he painted a chapel in the vatican for Innocent VIII, which existed at the accession of Pius VI. His masterpiece, the picture della Vittoria, afterwards in the oratorio de Padre de S. Filippo, is now at Paris. It is a votive picture, dedicated, for a victory obtained, to the Madonna, seated on her throne, with the infant standing in her lap. Mantegna was too much occupied by large works to be a cabinet painter; and pieces are too often attributed to him in which he had no hand. He was, also, the first engraver of his time, and one of the earliest engravers on metal. Mantegna had great influence on the style of his age, and was much imitated. He began some fine frescos in the castle of Mantua, which were finished by Francesco, and another of his sons, who added a beautiful ceiling, which shewed great proficiency in foreshortening, and what the Italians call, "Del sotto in su." Andrea Mantegna died in 1505.—*Strutt. Fuseli in Pilkington.*

MANTON (**THOMAS**) an eminent nonconformist, was born at Laurence Lydiard, in Somersetshire, in 1620, and received his university education at Wadham college, Oxford. He was admitted to deacon's orders by Dr Hall, and adopting the principles of the nonconformists, with these he was content, not thinking those of the priest necessary. In 1643 he was presented to the living of Stoke Newington, by colonel Popham, and here preached those lectures on the epistles of St James and St Jude which he afterwards published. In 1650 he was removed to the living of St Paul's, Covent-garden; and although he had made no secret of his opinions in two of his sermons, one on the murder of the king, and the other at the funeral of Mr Love, Cromwell sent for him, when he assumed the protectorate, and desiring him to pray at his installation, made him one of his chaplains. He was also nominated by parliament one of a committee of divines to draw up a scheme of fundamental doctrines, and also member of the committee for the trial and approbation of ministers. However, in 1660, Mr Manton co-operated openly in the restoration of Charles; was one of the ministers appointed to wait upon the king at Breda, who made him one of his chaplains. In the same year he was, by mandamus, created DD. at Oxford. Being satisfied with the king's declaration, Dr Manton remained in his living, and subscribing to the doctrinal articles of the church of England. he received episcopal institution from Dr Sheldon, bishop of London, and allowed the Common Prayer to be read in his church. He was then offered the deanery of Rochester, which he refused. In 1661, he was one of the commissioners at the Savoy

conference, and continued preaching until St Bartholomew's day, 1662, when he was obliged to resign his living. On the prohibition of the preaching of the nonconformists, he was imprisoned; and after experiencing numerous vicissitudes, his constitution gave way, and he died in 1677. His "Works" were published in five large volumes, 1681-1691, folio.—*Calamy. Neal's Puritans. Ath. Ox. Mem. of Dr Manton, by Harris.*

MANTUAN (**BAPTIST**) an Italian poet, was born at Mantua, whence he took his name, in 1448, and was the natural son of Peter Spagnolo. He applied himself early to literature, and to the study of Latin poetry, in which language he always wrote. He entered among the Carmelites, of which order he became general; but upon some disgust, he withdrew himself in 1515, and died the year after. He was very much admired in his time, and his countrymen even went so far as to place him in rank next to Virgil; but few now will be of this opinion. There are several editions of his works, but the most complete was published at Antwerp, 1576, 4 vols. 8vo, under the title of "J. Baptistæ Mantuani Carmelita, theologi, philosophi, poetæ, et oratoris clarissimi, opera omnia pluribus libris aucta et restituta." They consist of eclogues, seven pieces in honour of the Virgins, inscribed on the kalendar, beginning with the virgin Mary; these he calls Parthenissa I, Parthenissa II, &c.; four books of "Silvæ," or poems on different subjects, elegies, epistles, &c.—*Niceron. Ginguene Hist. Lit. d'Italie. Roscoe's Leo X.*

MANUEL (**PIERRE**) a native of Montargis in France, who made himself conspicuous during the progress of the Revolution. Though born in low life, he was tolerably well educated, and going to Paris when young, he commenced his career as an author, by publishing "Essai historique et politique sur la Vie de St Louis." He then became tutor to the son of a banker, from which office he retired with a small pension; and resuming his pen, he produced several pamphlets, among which was one called "La Police dévoilée," for which he was put into the Bastille. He was soon released; and, on the occurrence of political commotions, he became a partizan of revolutionary principles. In 1789 he had an office under the municipality of Paris; and in November 1791, he obtained the place of attorney of the commune of Paris. He joined the jacobins, and was for a time one of the most active and dangerous enemies of royalty, to the overthrow of which he contributed. He appears to have been deeply implicated in the massacres which took place in the prisons of Paris, in the beginning of September 1792. Immediately after he was nominated a deputy from the department of Paris, to the national convention, when he detached himself from the party with which he had acted; and on the trial of the king, he voted for his imprisonment during the continuance of war, and banishment afterwards. Some other unpopular measures which he advocated, obliged him to resign his seat in January 1793. He

retired to Montargis, where he narrowly escaped being assassinated; and a few months after he was arrested, and sent to the scaffold by his former associates. His execution took place November 14, 1793.—*Dict. des H. M. du 18me. S.*

MANUZIO (ALDO) or **ALDUS MANUTIUS**, an Italian printer of the fifteenth and sixteenth centuries, celebrated as an artist and a man of letters. He was born at Bassano, in the Roman territory, about 1447, and was educated at Rome and at Ferrara, where he learned Greek under Baptista Guarino. He became tutor to Alberto Pio, prince of Carpi; and in 1482 he quitted Ferrara, to reside with John Pico, prince of Mirandola. In 1488, he established himself as a printer at Venice, but the first work which he finished was not published till 1494. In the course of the ensuing twenty years, he printed the works of most of the ancient Latin and Greek authors extant, as well as many productions of his contemporaries, and some treatises of his own composition. Among the latter are, a Latin Grammar; a tract on the Metres of Horace; and a Greek Dictionary. He was the inventor of the italic, or cursive character, hence called Aldine, for the exclusive use of which, for a term of years, he obtained a patent from the pope and the senate of Venice. He established a kind of academy at his own house, and delivered lectures on classical literature, to the general study and improvement of which he greatly contributed. He died in April 1515, leaving four children by his wife, who was the daughter of Andrea d'Asola, a Venetian, in partnership with whom he carried on his typographical labours.—**MANUZIO (PAOLO)** son of the foregoing, was distinguished as a classic scholar, no less than as a printer. He was born at Venice in 1512, and was brought up under the care of his maternal grandfather. He received a learned education, and in 1533 he re-opened the printing-office, which had for some time been closed; but he did not carry on the establishment entirely on his own account till 1540. He opened an academy for the instruction of young persons in polite literature; and he afterwards made a tour through the cities of Italy, for the purpose of examining the various libraries. After refusing several offers of professorships at Bologna and elsewhere, he was appointed to superintend the printing-office attached to a newly-founded academy at Venice, where he continued till 1561, when he settled at Rome, on the invitation of pope Pius IV. He was employed to conduct a press for printing the works of the fathers, and other ecclesiastical authors; and at the same time he kept up his establishment at Venice, whither he returned in 1570. Pope Gregory XIII induced him, by means of a pension, to take up his abode again at Rome, where he died in April 1574. He was the author of commentaries on the writings of Cicero; a treatise, "De Curia Romana;" "Proverbs;" "Letters;" &c.—**MANUZIO (ALDO)** the younger, the son of the preceding, was also a printer. He was born

in 1547, and was educated by his father, under whom he made an extraordinary progress in literature. In his eleventh year he produced a "Collection of elegant Phrases in the Tuscan and Latin Languages;" and other juvenile publications attest his classical acquirements. On his father's removal to Rome, he carried on the printing establishment at Venice, where, in 1577, he was appointed professor of belles lettres at the school of the Venetian chancery. In 1585 he succeeded Sigonius, in the chair of rhetoric, at Bologna, whence he removed to Pisa, to become professor of polite literature, in 1587; and during his stay there, he received the diploma of doctor of laws, and was admitted a member of the Florentine academy. In 1588 he went to Rome, and accepted a professorship which had been held by Muretus. He was much favoured by pope Sixtus V; and Clement VIII bestowed on him the office of superintendant of the Vatican press. He died in October 1597, and with him expired the glory of the Aldine press; and the valuable library collected by himself and his predecessors, was sold piecemeal to liquidate his debts. He was the author of many works, including commentaries on Cicero, and "Familiar Letters."—*Renouard Annales de l'Imprimerie des Aldes. Tiraboschi. Biog. Univ.*

MANWOOD (JOHN) an eminent law writer in the reigns of Elizabeth and James I. He printed a small tract, entitled "A briefe Collection of the Laws of the Forest," afterwards enlarged and published, under the title of "A Treatise and Discourse of the Laws of the Forest, &c.;" 1598, 4to: still farther augmented in the editions of 1615 and 1665. He was also the author of a "Project for Improving the Land Revenue, by inclosing Wastes for Sir Julius Cæsar, 27 April, 1609." Fuller ascribes the book on the Forest Laws to sir ROGER MANWOOD, who was justice of the Common Pleas, and chief baron of the Exchequer, under queen Elizabeth. He was also much employed in political affairs, and sat as a commissioner on the trial of Mary queen of Scots. Sir R. Manwood was a native of Sandwich in Kent, where he founded a free-school; and his death took place in 1593. He was probably the father of John Mauwood.—*Bridgman's Legal Bibliog. Boys's Hist. of Sandwich. Fuller's Worthies.*

MANZOLLINI (GIOVANNI) a native of Bologna in Italy, celebrated as an artist in ceroplastics or wax-work. He studied under Hercules Lelli, whom he assisted in the preparation of models of anatomical subjects in wax and wood. He afterwards was employed in wax-work compositions for the king of Sardinia, and others; and some of his productions were sent to London. He died in 1755, at the age of fifty-five.—His wife, ANNA MANZOLLINI, received instructions in the same art from her husband and from Lelli, and her talents were much improved by study. She executed many anatomical preparations in wax, for the Institute of Bologna; and several of her works were sent to Turin and St Peters-

burgh. She survived her husband, and continued to cultivate the art in which he excelled.—*Elmes's Dict. of the Fine Arts.*

MAPES (WALTER) chaplain to Henry II of England, about the year 1190, and a poet of some celebrity for his time. He was also canon of Salisbury, precentor of Lincoln, and archdeacon of Oxford. He wrote in Latin, and some of his verses, which are in the light and satirical style, are still extant. There is also a work of his in the Bodleian library, under the assumed name of Valerius, entitled, "Valerius ad Ruffium, de non ducenda Uxore." Mapes, who was a man of facetious manners, and very free in conversation, also wrote a "Compendium Topographiæ," and "Epitome Cambriæ."—*Warton's Hist. of Poetry.*

MAPLETOFT, MD. (JOHN) a skilful physician, elegant scholar, and exemplary divine of the seventeenth century, born of an ancient Huntingdonshire family, at Margaret Inge in that county, in 1631. From Westminster school he proceeded, on the foundation, to Trinity college, Cambridge, where he became fellow, and was selected by the earl of Northumberland to travel in the capacity of tutor to his eldest son. On his return to England, he graduated as MD, and commenced the practice of physic in the metropolis, where, in 1675, he was elected professor and lecturer at Gresham college; and three of his lectures, on the rise and progress of the art of medicine, written in elegant Latin, are to be found in the appendix to the "Lives of the Gresham Professors," by Ward. The year following, he went to France, in the suit of the British ambassador; and about this time translated the "Observationes Medicæ circa morborum acutorum Historiam et curationem" of his friend Dr Sydeuham, who had dedicated them to him, into the Latin language. On his marriage in 1679, he was induced to quit the medical profession for the church, which he entered after three years close application to the study of divinity; and obtained, in succession the rectory of Braybrook, Northants, and the vicarage of St Lawrence, Old Jewry, in the city of London. In 1689, on the occasion of the king's visit to Cambridge, he farther graduated as DD, and in 1707 became, in his turn, as a city incumbent, president of Sion college, to the library of which institution he was a liberal benefactor. Dr Mapletoft continued to officiate in the performance of his clerical duties, till after he had passed his eightieth year; and on his retirement, in 1710, from active life, sent round to every house in his parish, a copy of a work which he at that period produced, entitled "The Principles and Duties of the Christian Religion," in 8vo. He survived this event nearly eleven years, dying at the advanced age of ninety-one, in 1721.—There was also a Dr ROBERT MAPLETOFT, a native of Lincolnshire, his contemporary, who died in 1677, master of Pembroke college, Cambridge, and dean of Ely. *Bing. Brit.*

MARACCI (LEWIS) a learned Orientalist

of the seventeenth century. He was a native of Lucca in Italy, and became a member of the congregation of regular clerks of the Holy Virgin. He devoted himself to the study of the Eastern languages, and particularly the Arabic, on which account he was appointed professor of that tongue in the college of Wisdom, at Rome. Pope Innocent XI, to whom he was confessor, would have made him a cardinal; but his humility induced him to decline the promotion. He died in 1700, aged eighty-eight. Maracci is chiefly known as the publisher of the Koran of Mahomet, in Arabic, with a Latin translation and notes, Padua, 1698, 2 vols. folio. He also assisted in the Roman edition of the Arabic Bible, 1671, 3 vols. folio; and he was the author of many other works.—*Niceron. Biog. Univ.*

MARALDI (JAMES PHILIP) a mathematician of Perinaldo near Nice, the nephew of Cassini, with whom he was afterwards associated in continuing the meridian through France. He was born in 1665, and died in 1729. While at Rome, he constructed the meridian of the Carthusian church there, and assisted in the reformation of the calendar. There are several curious and interesting papers from the pen of Maraldi, especially a list of the fixed stars, and other tracts, connected with various branches of science and natural philosophy, to be found in the transactions of the Academy of Sciences at Paris, of which society he was an active and distinguished member.—*Hutton's Math. Dict.*

MARANA (JOHN PAUL) a Genoese writer of the seventeenth century, born about the year 1642. He became implicated in the plot for giving up his native city into the hands of the duke of Savoy, and was thrown into prison in consequence. Of this conspiracy he has left an account, written after his liberation; but the work by which he is principally known, is his "Turkish Spy," a production once considered as a genuine detail, and highly popular. This curious book first appeared at Paris in six duodecimo volumes. It has since gone through several editions, and has been translated into most of the European languages. A seventh volume was added in 1742. Marana died at Genoa in 1693.—*Moreri.*

MARAT (JOHN PAUL) a demagogue, whose conduct during the progress of the French Revolution has exposed his memory to general execration. He was born in 1744, of Calvinist parents, at Beaudry, in the country of Neuchâtel. Having studied medicine, he settled at Paris, where his practice is said to have been distinguished by a spirit of quackery, though he manifested both taste and talents for scientific research. This appears from several works which he published, including a treatise, "De l'Homme, ou des Principes et des lois de l'Influence de l'Âme sur le Corps," 2 vols. 12mo; "Découvertes sur le Feu, l'Électricité et la Lumière," 8vo; "Recherches physiques sur le Feu," 8vo; "Découvertes sur la Lumière," 8vo; "Recherches Physiques sur l'Électricité," 8vo; "Notions élémentaires d'Optique," &c. H.

obtained the post of physician to the body guards of the count d'Artois; but at the commencement of revolutionary commotions, he deserted his professional pursuits for politics; and in a journal which he conducted, entitled "L'Ami du Peuple," he insulted the nobility, the king and the government; and prompted and eulogized the utmost excesses of popular fury. He was an actor in the riots of the 10th of August 1792, and becoming a member of the municipality of Paris, and president of the terrible committee of the Commune, he greatly contributed to the excitement of party rage, which caused the massacres in the prisons, in the beginning of September. Having escaped the consequences of two decrees of accusation, he was appointed deputy from Paris to the National Convention. In that assembly his conduct and behaviour corresponded with his previous character, exhibiting a strange mixture of absurdity, violence, and cruelty. On the 21st of March 1793, he denounced all the generals as traitors, and all the French armies as incapable of resisting the enemy; when Lecointre Puiravaux demanded that Marat should be declared in a state of insanity. In fact, it appears probable that, like Masaniello, and other persons suddenly exalted to uncontrolled power, he had actually experienced an access of frenzy, to which the exaggeration of his manners, principles, and actions may in a great degree be attributed. Accused by the party of the Girondists, he was tried and acquitted, when he triumphantly resumed his place in the Convention; and soon after he assisted in the destruction of his antagonists, though he did not live to witness the success of his machinations against them. On the 14th of July 1793 he was stabbed in his own house by Charlotte Corday, and instantly expired; enthusiasm of disposition, excited by a deep sense of the miseries of her native country, having prompted a young female thus to deliver the world from one of the most sanguinary monsters that ever persecuted the human race.—*Dict. des H. M. du 18me. S. Biog. Univ.*

MARATTI (CARLO) an admired painter of the Italian school, was born at Camerino, in the march of Ancona in 1625. His extraordinary talent for painting induced his parents to send him, at the age of eleven, to Rome, where he became the pupil of Andrea Sacchi. He excelled in painting Madonnas and female saints; for which reason he was satirically named by Salvator Rosa, "Carluccio della Madonna;" and he was so far from being ashamed of the title, that in the inscription which he himself placed upon his monument (nine years before his death) he calls it, "Gloriosum cognomen." Pope Clement XI gave him a pension, and the title of Cavaliero di Cristo, and he was appointed painter in ordinary to Louis XIV. He died at Rome in 1715. His pictures are in the style of his master, but more elaborate, and with less freedom and grandeur. His masterpiece is the Bathsheba viewed by David, a work which precludes all hope of success in any other pic-

ture on the same subject. Maratti had a daughter, MARIA, whom he instructed in his art; her portrait, painted by herself, is in the gallery Corsiui at Rome.—*Argenville. Pilkington by Fuseli.*

MARBECK (JOHN) a musician of the sixteenth century, supposed to have been the first composer of the cathedral service of the church of England; since it is certain, notwithstanding the vulgar opinion to the contrary, that he preceded Tallis in that species of composition. His history is somewhat remarkable, as, according to Fox, he, together with three other persons, all residents of Windsor (where Marbeck was organist at St George's chapel) had formed themselves into a society which, attracting the suspicions of the bishop of Winchester, caused themselves and their papers to be seized. Among their papers were found a collection of notes on the Bible, and an English concordance, in Marbeck's handwriting. On his examination by the commissioners, under the statute of the six articles, he accounted for the possession of these papers, by declaring, that he was in the habit of noting down any explanation he might meet with of difficult passages, with the name of the author annexed; while, with regard to the concordance, being too poor to purchase a copy of the English translation of the Scriptures, then recently published by Matthew, he had commenced transcribing one, and had actually proceeded as far as the Book of Joshua, when, at the suggestion of a friend, he also undertook the task of making an English concordance, and by the assistance of a Latin book of the same description, had proceeded as far as the letter L. The commissioners, doubting his story, he, in order to convince them, actually filled, in a single day, three sheets of paper, with a continuation of his work in the letter M, and by his ingenuity and industry, at length succeeded in converting his examiners from enemies to friends. A charge of having copied an epistle of Calvin still remained against him, and on this he was tried, together with his associates. All were found guilty, and condemned to the stake, which sentence was carried into execution, as far as regarded the other three, on the following day; but Marbeck was respited, and at length, through the intercession of sir Humphrey Foster, obtained his pardon. After the decease of Henry VIII, he openly avowed his attachment to the reformed doctrines, and soon after completed and published his Concordance. His other writings are, "The Lives of the Holy Saints, Prophets, Patriarchs, and others," printed in 1574; "A Book of Notes and Common Places, &c.;" and a tract, entitled "The Ripping up of the Pope's Fardels." His musical service, written on the model of the ritual of the church of Rome, first appeared in quarto, in 1550, and is entitled, "A Boke of Common Praier, Noted." In this work, the Lord's Prayer, Creed, &c. are adapted to a kind of recitative, while some other parts of the service are set to melodies much resembling the old Gregorian chaunt.—*Biog. Brit.*

MARCA (PETER de) a French prelate of the seventeenth century, more justly celebrated for his learning and abilities, than for the firmness of his principles, or the consistency of his political conduct. He was a native of Bearn, being born of a good family at Gant, in that province, in 1594, and following the law, rose to be president of the local parliament. In 1639 he quitted the country for the metropolis, and was made a councillor of state. The following year he published his "History of Bearn," in one volume, folio. This work raising his reputation with the court, both as a sound politician, and an able and elegant writer, he was shortly after engaged, at the express command of the sovereign, in replying to an attack on the liberties of the Gallican church, continued in a work, entitled "Gallus Optatus." By this treatise, which he gave to the world in 1641, under the name of "De Concordia Sacerdotii et imperii, sive de libertatibus Gallicæ ecclesiæ," he caused as much offence at the Vatican, as satisfaction to the ecclesiastical polity of France. The latter rewarded him with the bishopric of Conserans; but the pope refused his confirmation of the appointment, until he had recanted, by a preatise, entitled "De Singulari Primatu Petri," and he exhibits considerable ingenuity in explaining away and reconciling his former opinions with those which he afterwards thought it proper or convenient to adopt. All opposition being thus removed, he was installed at Conserans in 1648, and presided over that diocese till 1652, when he was translated to the archiepiscopal see of Thoulouse. De Marca continued to take a prominent part in the transactions, as well civil as ecclesiastical, which at that period occupied the attention of the Christian world, and especially distinguished himself by the energy with which he combated against Jansenism and its adherents; while his abilities as a diplomatist, were afforded more ample scope for their display, by his promotion in 1658, to the office of a minister of state. The favour of the court was commensurate with his exertions, and in 1662 the metropolitan see of Paris becoming vacant, he was elected to fill the primacy; but scarcely survived the arrival of the confirmatory bull from Rome, dying in the June of the same year, on the very day, it is said, that the documents in question reached Paris. Besides the treatises already alluded to, he was the author of a work in one volume, folio, entitled "Marca Hispanica," and of some other writings; a collection of which was published after his decease, with a preface and notes, critical and explanatory, from the pen of M. de Baluze.—*Dupin. Perrault.*

MARCELLO (BENEDETTO) a noble Venetian, youngest son of the senator Agostino Marcello. He was born in 1686; and while a youth, became a great proficient in the science of music, in consequence, it is said, of a reflection thrown upon his deficiency in that respect, at a concert given by his brother Alessandro, which hurt his pride, and stimulated him to exertion. He afterwards studied under

Gasparini, and receiving a liberal education, distinguished himself as a poet, as well as a musician. In 1716, a serenata of his composition was performed at the celebration of the birth of the first son of the emperor Charles VI, and excited great applause. Eight years after appeared the first four volumes of his adaptation to music of Giustinianis's "Paraphrase of the Psalms," which he afterwards completed in eight more, the whole being published in 1726. Garth, of Durham, has adapted suitable words from our own translation of the Psalms to Marcello's music, with a view to their being performed as anthems in our cathedrals, with great success. This elaborate work was printed by subscription, and occupies eight folio volumes. Marcello rose to several offices of dignity in the Venetian state, being successively appointed a member of the council of Forty, proveditor of Pola, and eventually chamberlain of Brescia, in which city he died in 1739, and was buried in the church of St Joseph.—*Biog. Dict. of Mus.*

MARCHAND (PROSPER) a French writer on bibliography and the history of literature. He was a native of Picardy, and settled as a bookseller at Paris, where he exercised that profession some years. Being a Protestant, he was induced, partly by religious motives, to remove to Holland, and after a while he relinquished his trade, and gave his attention entirely to literary researches. He died at the Hague in 1756, far advanced in years. Marchand published "L'Histoire de l'Imprimerie," 1740, 4to, to which Mercier, abbé de St Léger, published a supplement; an edition of Bayle's Dictionary, and Letters; and left "Dictionnaire Historique, ou Mémoires critiques et littéraires," which appeared after his death, in 2 vols. folio.—*Dict. Hist. Biog. Univ.*

MARCHE (OLIVER de la) a Flemish historian of the fifteenth century. He was brought up at the court of Philip the Good, duke of Burgundy, and was master of the household, and captain of the guards to his successor, Charles the Bold, who knighted De la Marche at the battle of Montlheri in 1465. He was also present at the fatal battle of Nancy, in 1477, where he was taken prisoner. He afterwards became master of the household to Maximilian of Austria, and his son the archduke Philip, by whom he was sent on an embassy to the French court. He died at Brussels in 1501. His works comprise memoirs of the two last dukes of Burgundy, and a treatise on duels.—*Moreri. Biog. Univ.*

MARCHETTI (ALEXANDER) an Italian poet and mathematician, was born in 1630, at Pontormo, in the territory of Florence. He studied chiefly at Pisa, where, after taking the degree of doctor, he was, in 1659, appointed professor of logic, and teacher of the mathematics under Borelli. In 1669 he published a mathematical work, by which he obtained much reputation, entitled, "De Resistentiæ Solidorum." Some time after he finished his

very elegant translation of the poem "De Reorum Naturæ" of Lucretius, which he intended to dedicate to Cosimo III, grand duke of Tuscany; but the piety of that prince was so shocked at its Epicurean philosophy, that he not only refused the dedication, but interdicted its publication; and it did not appear in print until an edition was produced in 1717 in London. Marchetti also translated part of the *Aeneid*, and the whole of *Anacreon*, his version of the latter not appearing till 1736. An edition of his poems was published in 1755, 4to, to which his life is prefixed. Marchetti, who died in 1714, is to be distinguished from PETER DE MARCHETTI, professor of anatomy, who died in 1673; and his sons DOMINIC and ANTHONY, also professors of the same university, all of whom wrote some esteemed works of surgery.—*Fabroni Vite Italorum.*

MARCILIUS (THEODORE) a native of Arnheim in Germany, born in 1548. He was an elegant, as well as an erudite scholar, and a learned grammarian. After having taught with great reputation at Thoulouse, and other principal cities in the south of France, he at length took up his abode at Paris, on being appointed professor royal of Latin and the belles lettres. Marcilius was the author of "Historia Strenarum, &c." and a commentary on the Golden Verses of Pythagoras, which latter work appeared in 1602. His death took place in 1617 at Paris.—*Moreri.*

MARCION, a heretic, who lived in the second century of the church, was a native of Sinope, a city of Paphlagonia, of which his father was bishop. He is called by Tertulian, Ponticus Naucerus. In his youth he embraced an ascetic life; but forgetting himself so far as to seduce a young female, his father excommunicated him, nor could he be induced to readmit him into the church. Marcion then went to Rome, but admittance being also refused him there, he became so irritated, that he embraced the opinions of the heretic Cerdo, and began to propagate them publicly about the year 130. His doctrines were much the same as those afterwards professed by Manes; that of two co-eternal and independent principles, one the author of all good, the other of all evil; also that the God of the Old Testament was the evil principle; and that having unjustly forbidden Adam's eating of the best tree in Paradise, the serpent was the nobler being, for encouraging him to eat the fruit, on which account the Marcionites are said to have worshipped a brazen serpent. He rejected the Old Testament, and all the Gospels, except that of St Luke, out of which and some of St Paul's Epistles, he composed two books, entitled "Evangelium" and "Apostolicon," which he persuaded his followers were of Divine origin. He repented of his errors, and begged to be readmitted into the church, which was granted, on condition that he would bring back all who had been seduced from it; but before he could effect this he died; the time of his death is unknown. His first apology for the Christians was presented to Antoninus Pius about the year 140; and

Justin Martyr tells us that "Marcion was then living, and taught his disciples at Rome."—*Cave. Mosheim. Milner's Ch. Hist. Lardner.*

MARCULPHUS, a monk, known in the history of the feudal law for his work, entitled the "Formulary," consisting of a collection of formularia, or forms of forensic proceedings and legal instruments, including charters, &c. of the kings of France. He lived about the middle of the seventh century. Jerome Bignon published the Formulary of Marculphus, with learned annotations, in 1613, reprinted in 1666; but the most complete edition is that of Baluze, in the second volume of his Capitularies, 1677.—*Moreri.*

MARE (NICOLAS de la) a principal magistrate of the Châtelet under Louis XIV, who reposed great confidence in him, and gave him several pensions. He was employed during the scarcity of corn in 1693, 1700, 1709, and 1710, and received a free gift of three hundred thousand livres, arising from the ninth part of the increased prices of admission to the public amusement exhibited at the Hotel Dieu. He however employed his fortune in the expenses attendant on the gratuitous functions of his office. He wrote an elaborate treatise on the police, in three volumes folio, to which M. le Clerc du Brillet has added a fourth. De la Mare died in 1723.—Another, PHILIBERT DE LA MARE, was counsellor in the parliament of Dijon, and considered equal to the president De Thou in the elegance of his Latin writings. He died in 1687. He was the author of several works, the principal of which is his "Commentaria de Bello Burgundico," forming a part of his "Historicorum Burgundie conspectus," 4to, 1689; and his "Huberti Langueti Vita."—*Moreri. Dict. Hist.*

MARECHAL (PETER SYLVANUS) a miscellaneous writer, was born at Paris in 1750, and was brought up to the bar, which he quitted for the pursuit of literature. He was librarian to the Mazarin college, but towards the close of his life he retired into the country, and died at Montrouge in 1805. His principal works are, "Livre echappé au Deluge," a collection of psalms, of which the moral is pure, but which served as a pretence for his dismissal from his office of librarian to the Mazarin college; "Prophetie d'Arlemeck;" "Fragmens d'un Poeme Morale sur Dieu, ou la nouvelle Lucrece;" "Tombeau de J. J. Rousseau;" "De Bergeries;" "Le Temple de Hymen;" "Bibliothèque des Amans;" "Le Livre de tous les Ages;" "L'Age d'Or;" "Paris, et la Province ou Choix des plus beaux Monumens d'Architecture en France;" "Le Pantheon, ou les Figures de la Fable avec leurs Histoires;" "Almanac des honnêtes Gens," a publication containing some impieties, for which he was imprisoned; "Dictionnaire d'Amour;" "Tableau de la Fable;" "Costumes civils actuels de tous les Peuples;" "Recueil des Poetes moralistes Français;" "Catechisme du Curé Meslier;" "Dictionnaire des Athées;" "Voyage de

Pythagore ;" " *Decades du Cultivateur ;* " &c. — *Dict. Hist.*

MARESCHAL (GEORGE) an eminent French surgeon, born at Calais in 1658. He studied at Paris, became surgeon to the hospital of La Charité, and was admitted a master of surgery in 1688. He greatly distinguished himself by his skill as an operator, particularly in cases of stone in the bladder. In 1696 he was consulted on account of a disease under which the king at that time laboured ; and on the death of M. Felix in 1703, he succeeded him as chief surgeon to his majesty, who in 1707 bestowed on him a patent of nobility. He retained his office under Louis XV, and closed a long and useful life, at his castle of Bievre, in 1736. Mareschal was a member of the academy of Surgery at Paris, to which he presented several surgical memoirs ; and many of his observations have been given to the world in the works of other authors.—*Hutchinson's Biog. Med.*

MARETS (SAMUEL des) surnamed " The Little Preacher," from his diminutive stature, an eminent controversialist of the reformed church, who, by his erudition and ability, made a distinguished figure among the polemics of the seventeenth century. He was a native of Oisemond, in the province of Picardy, where he was born in 1599, and received a sound classical, as well as theological, education, at the universities of Paris, Saumur, and Geneva. In his twenty-first year he entered on the ministry at Laon, from which place he was induced to retire to Falaise, in consequence of his life being endangered by a wound received from an enthusiast, who resented his remonstrating with a female about to reconcile herself to the church of Rome. From Falaise he removed, in 1624, to Sedan, where he continued to officiate as pastor till 1642, when he accepted the divinity professorship in the university of Groningen. Here he read his theological lectures for upwards of twenty years with great reputation. He died in May 1663. Besides an able exposition of the fallacy of judicial astrology, contained in his disputations with Serrarius, and other writers of the same class, he was the author of an animated attack on the opinions of Hugo Grotius, respecting the appearance of Antichrist ; as well as of a great variety of other productions, all evincing deep erudition, and great powers of argument. A chronological list of these is to be found attached to his " *System of Divinity*," an excellent work, the method observed in the arrangement of which caused it to be almost universally adopted as a class book in the Dutch academies.—*Moreri.*

MARGARET of VALOIS, queen of Navarre, sister to Frances I, was born at Angoulême in 1492. She was brought up at the court of Louis XII, and married the duke of Alençon in 1509, of whom she became widow in 1525 ; and in 1527 was espoused to Henry d'Albret, king of Navarre. She joined with her husband in every effort to make their

small kingdom flourish, by encouraging agriculture and the useful arts, and by improving knowledge and civilization. She was herself fond of reading, and had been led by literary curiosity to make herself acquainted with the principles of the Reformers, to which she became partially a convert, and not only afforded protection to several reformed divines, but used her influence with her brother Francis to the same purpose. She also read the Bible in the French translation, and herself formed mysteries for representation from the New Testament, which she caused to be performed at court. She even wrote a work on divinity, entitled, " *Le Miroir de l'Âme Pecheresse*," printed in 1533, which incurred the censure of the Sorbonne. She underwent some ill treatment from her husband on this account, and might have suffered more, but for the interposition of her brother, Francis I, who, was much attached to her, and in compliance to whom she, externally at least, became more strict in her attention to the ceremonial of the ancient religion. It will appear extraordinary in the present day, that a princess so contemplative and pious as Margaret of Valois, should be author of a book of tales as free in their tendency as those of Boccaccio. Such, however, is " *L'Heptameron, ou sept Journées de la Reyne de Navarre*," which work was written during the gaiety of youth, but not printed until after her death. It does not, however, appear that she wished to suppress it, or was unwilling to be deemed its author. Of these tales, which have been often printed, both separately and in different collections, the style is lively, and the stories arch and well invented. She died in 1549, leaving one child, Joan d'Albret, mother of Henry IV. In 1547, a collection of her poems, and other pieces, was printed under the title of " *Marguerites de la Marguerite des Princesses*."—*Nour. Dict. Hist. Bayle.*

MARGON (WILLIAM PLANTAVIT DE LA PAUSE de) a French author and journalist, was a native of Lauguedoc. He appeared at Paris about 1715, and espoused the cause of the jesuits against the Jansenists with so much bitterness, that the court banished him, and he subsequently retired into a monastery of Bernardines, where he died in 1768. He was concerned in several works, including " *The Memoirs of Marshal Villars*," 3 vols. 12mo ; " *The Memoirs of the Duke of Berwick*," 2 vols. 12mo ; " *Memoirs of Tourville*," 3 vols. 12mo ; " *Letters of Fitzmoritz*," and some minor poetry.—*Nour. Dict. Hist.*

MARGRAF or MARGGRAAF (ANDREW SIGISMUND) a distinguished German chemist of the last century. He was born in 1709, at Berlin, where his father was apothecary to the court, and assessor of the college of medicine. After studying under his father and Caspar Neumann at Berlin, he passed some time at Strasburg, became a student at Halle in 1733, and in 1734 at Freyburg. In the year following he visited the mines of the Hartz mountains, and returning to Berlin, applied himself with industry to experimental

researches in chemistry. He was admitted into the academy of Sciences in 1738; and in 1754 he was entrusted with the care of the laboratory of that establishment. He was chosen director of the class of natural philosophy in the academy in 1760, which post he held till his death in 1782. Margraf, who was a member of the academy of Sciences at Paris, contributed greatly by his discoveries to the improvement of chemical science, though he did not live to witness the great revolution effected by his own labours, and those of contemporary philosophers. His works consist of papers, first published in the memoirs of the academy of Berlin, since collected and printed together in Germany, and also given to the world in a French translation.—*Aikin's Gen. Biog. Dict. Hist.*

MARIANA (JOHN or JUAN de) a celebrated Spanish historian, born at Talavera, in 1536. He was the natural son of an ecclesiastic, and was educated at the university of Alcalá. Having entered into the then recently founded order of the jesuits, he was, at the age of twenty-four, appointed professor of the theology in their college at Rome, and he afterwards held the same office at Paris. Having retired to Toledo, on account of ill health, he was employed by the archbishop, D. Gaspar de Quiroga, to prepare the Index Expurgatorius, published in 1584; but the greatest of his literary labours is his history of Spain, which appeared under the title of "Historiæ de Rebus Hispaniæ, lib. xx." 1592, and was afterwards extended to thirty books. Mariana himself translated the work into the Castilian language; and there is an English translation by captain Stephens, the continuator of Dugdale's Monasticon. In 1599 he published his treatise, "De Rege et Regni Institutione," condemned to be burnt by the parliament of Paris, on account of the freedom of opinion displayed by the author on the reverence due to regal authority. By a subsequent publication, Mariana gave offence to his own order, and he was prosecuted and imprisoned for a year in a convent at Madrid. He afterwards held no official situation, and died at Toledo, February 16, 1623, leaving behind him annotations on the Old and New Testament, and various other works besides those already mentioned.—*Southey's Mem. in Aikin's Gen. Biog.*

MARIE ANTOINETTE JOSEPH JEANNE DE LORRAINE archduchess of Austria and queen of France. She was born November 2, 1755, the day on which the dreadful earthquake desolated the city of Lisbon; and, at the age of fifteen, she was married to the dauphin, afterwards Louis XVI. The day of her nuptials was marked by a shocking accident, the deaths of a multitude of persons, in consequence of a fire in the Place de Louis XV, which event strongly excited the compassionate feelings of both the bride and her husband. Notwithstanding her youth and beauty, she was at first an object of indifference to Louis, whose passions appear to have been by no means of an ardent description. While

neglected by him, however, she was surrounded by a multitude of persons, some anxious to win her favour, and others regarding her with jealousy and hatred. Among the latter, was the duke of Orleans, then duke of Chartres, to whom, with apparent probability, has been ascribed a systematic scheme to destroy the repose, and ruin the reputation of his amiable relative. She became queen in 1774; and on the 19th of December, 1778, she gave birth to her first child, the present dauphiness. In the mean time France became involved in the contest between Great Britain and her revolted colonies in North America; an event, to the occurrence of which, the influence of the queen is supposed to have contributed; though this opinion is controverted in recently published memoirs of her life, by one of her attendants, madame Campan. On the same authority it is asserted, that she exercised no direct influence over state affairs till after the deaths of the ministers, De Maurepas and De Vergennes, and the retreat of M. de Calonne; and that she frequently regretted the necessity for her interference, as a misfortune which she could not avoid. In the midst of the American war, October 22, 1781, took place the birth of a dauphin, afterwards the unfortunate Louis XVII. The queen, at the head of a splendid and dissipated court, continued to be attacked by the calumnies of a party actuated by private, as well as political motives, in endeavouring to bring the royal authority into contempt, and excite disturbances in the state. That many of the charges of levity and misconduct brought against her were unfounded, is now generally acknowledged; but we live too near the period of the momentous events in which she was involved, to obtain such a just and distinct estimate of her character, as may be looked for in the pages of impartial history in future ages. The Revolution approached with rapid strides, and the queen had daily reason to lament that she had ever interfered in politics, and to perceive that her ostensible influence and management had only contributed to render her unpopular among all parties and all classes of society. After various preliminary proceedings, took place the assembly of the states-general in May 1789. The deputies of the Tiers état visited Versailles; and it may be mentioned, as a proof of the current prejudices against the queen, that a report prevailed that she had been so extravagant as to have fitted up, at her retreat of Little Trianon, a room wholly ornamented with diamonds, and with wreathed columns, studded with sapphires and rubies; and the deputies, on viewing the place, insisted on examining the smallest closets, and could hardly be persuaded that the room they sought for had no existence. When the fury of an oppressed people, suddenly liberated from bondage, burst forth into open acts of blood and violence, the queen was the particular object of the indignation of the mob. The insurrection of the 14th of July, 1789, and the subsequent events of the 4th and 5th of October, afforded ample proofs that the

characteristic loyalty and gallantry of the French nation were for the present, at least, extinguished among the lower orders. The transactions that ensued are matter of history, and it will be enough to remark, that in the various trials and dangers to which Louis XVI was exposed, previously to his dethronement in August 1792, Marie Antoinette constantly accompanied him, and deeply participated. They were, together with all the royal family remaining in France, imprisoned in the Temple the 13th of August; and the trial and execution of the king were, ere long, followed by that of his unfortunate relict. She suffered by the guillotine, October 16. 1793, having manifested on that awful occasion, as well as on her arraignment, a degree of courage and serenity of mind, which showed that she knew how to profit by the stern lessons of adversity.—*Mad. Campan's Mem. of the private Life of the Queen. Biog. Nouv. des Cont.*

MARIN (MICHAEL ANGFLO) a French monk of the order of Minims, celebrated as a writer of spiritual novels, was born at Marseilles in 1697. After acquiring great reputation as a preacher, and as an ascetic writer, he was employed by pope Clement XIII to collect and methodize in a single work, "The Acts of the Saints;" of which he had completed only two volumes, when he was carried off by a dropsy, in his seventieth year. The titles of several of his pious romances, in the composition of which he took for his model, the famous Camus, bishop of Bellay, may be seen in our authority.—*Nouv. Dict. Hist.*

MARINI (JOHN BAPTIST) an Italian poet of the seventeenth century. He was the son of a counsellor of Naples, and was expelled from the paternal roof, because he preferred literature to law; which, however, probably was not his only offence, as he was shortly after imprisoned for some irregularity of conduct. On regaining his liberty, he went to Rome, and resided some years with cardinal Peter Aldobrandini, whom he accompanied to Ravenna and Turin. At the latter city he signalized himself by his poetical performances, and by his quarrels with Murtola, a literary rival, against whom he levelled a satire, entitled the "Murtoleide." In 1615 he went to France, where he published his principal work, the "Adonis," an heroic poem. He returned to Rome in 1622, on the invitation of cardinal Ludovisi, and was chosen president of the *Accademia degli Umoristi*. He afterwards went to Naples, where he died in 1625, aged fifty-six. Besides the works mentioned, he wrote a poem on the "Murder of the Innocents," by Herod; Letters, &c.—*Moreri. Tiraboschi.*

MARIUS (CAIUS) a famous Roman demagogue and military commander, in the declining period of the republic. He was born in the district of Arpinum, of an obscure family, and passed his early youth in rustic employments. Entering into the army at the usual age, he distinguished himself at the siege of Numantia. Returning to Rome, he became a tribune of the people, and afterwards prætor. He then went to Africa, 109 B.C., as lieute-

nant to the consul Metellus. By his intrigues he superseded his commander, and obtained the consulship himself, when he triumphed over Jugurtha, king of Numidia, and terminated the war in Africa. He was next employed against the Cimbri and Teutones, who had invaded Cisalpine Gaul, and whom he repelled with great slaughter. Having delivered Rome from foreign enemies, his ambition led him to aspire to supreme authority. He had been six times consul, when he was disturbed by the rivalry of Sylla, with whom he disputed the command of an army, destined to act against Mithridates, king of Pontus. Tumults took place in the city, and Sylla marching thither with his troops, Marius sought for safety in flight, and with difficulty escaped to Africa. He was recalled by Cinna and Sertorius; and making themselves masters of Rome, a terrible proscription took place. Marius having satiated his vengeance, was chosen consul for the seventh time, 86 B.C., but he died shortly after, aged about seventy.—*Plutarch. Lucan's Pharsal.*

MARIVAUX (PETER CARLET DE CHAMBLAIN de) a celebrated French dramatist and novelist, was born at Pais in 1688. His father had an office in the mint at Riom, in Auvergne; and he not only received a good education, but inherited a handsome fortune. The drama first attracted his attention, and at the age of eighteen, he produced a one act piece, entitled "Le Père prudent." Although he subsequently attempted tragedy, a species of sentimental comedy in prose, in which he wrote no fewer than thirty pieces, forms his principal dramatic distinction, and some of them still retain the stage. It is by his novels, however, that he is chiefly known in foreign countries, of which "Le Paysan Parvenu," and "Marianne," are accounted the principal; the latter, in particular, has obtained great approbation, although the author is more distinguished for delicacy than force. Marivaux obtained admission into the French Academy in his fifty-fifth year; his private character was very amiable, being liberal and disinterested in the extreme. He died in 1763, at the age of seventy-five. Besides the works already mentioned, he wrote "Le Spectateur François;" "Le Philosophe indigent;" "Pharsamon;" and "Homere Travestie." His dramatic works are collected into 5 vols. 12mo.—*Nouv. Dict. Hist.*

MARKHAM (GERVASE) an English author, who lived in the reigns of James I, and Charles I. He was the son of Robert Markham, esq. of Gotham, in the county of Nottingham, and bore a captain's commission under Charles I, in the civil wars. He wrote a tragedy, called, "Herod and Antipater," published in 1622; and numerous poems, specimens of which may be seen in "England's Parnassus." He was also author of several treatises on husbandry, horsemanship, fowling, and the diseases of cattle, which were much esteemed in their day. Neither the exact time of the birth or death of this author is recorded.—*L. in e. Biog. Dram.*

MARKLAND (JEREMIAH) an eminent critic and cultivator of classical literature. He was the son of a clergyman of Childwall, in Lancashire, where he was born in 1693. He received his education at Christ's hospital, and Peterhouse, Cambridge; and in 1717 he obtained a fellowship in that university, which he held until his death in 1776. Having declined taking orders in the church, his time was devoted entirely to his favourite studies, uninterrupted by any avocations but those of a college and travelling tutor. The latter part of his life was spent at a farm-house near Dorking, in Surrey; and his scanty income was materially lessened by a law-suit, in which he became involved, by espousing the cause of a widow with whom he lodged. His principal works are, an edition of the "Sylvæ" of Statius; Notes on Maximus Tyrius; "Remarks on the Epistles of Cicero to Brutus, and of Brutus to Cicero; with a Dissertation upon four Orations ascribed to Cicero;" an edition of the "Supplices Mulieres" of Euripides; to which was annexed a tract, "De Græcorum quintâ declinatione imparisyllabica, et inde formatâ Latinorum tertia;" and he also contributed towards the annotations on the Greek Testament, published by Bowyer, and other philological works.—*Nichols's Lit. Anecd.*—

ABRAHAM MARKLAND, a relative of the preceding, was the author of a poem on "The Art of Shooting Flying." He was an episcopal clergyman, and held the valuable mastership of the hospital of St Cross, near Winchester, in the early part of the last century.—*Wood's Athen. Oxon.*

MARLOE or MARLOWE (CHRISTOPHER) an eminent English poet and dramatist of the Elizabethan age. He was educated at Cambridge, where he proceeded M.A. in 1587. He afterwards settled in London, and became an actor, as well as a writer for the stage. Besides six tragedies of his own composition, and one written in conjunction with Thomas Nashe, he left a translation of "The Rape of Helen," by Coluthus; some of Ovid's "Elegies;" the first book of Lucan's "Pharsalia;" and the "Hero and Leander" of Musæus, completed by George Chapman. The exact time of his death is not known; but according to Anthony Wood, it took place previously to 1593, and was owing to a wound received from the hand of a servant-man, whom he had attacked on suspicion of being rivalled by him in the favours of a mistress.—*Warton's Hist. of Eng. Poetry.* *Berkenhout's Biog. Lit.*

MARMION (SHAKERLY) a dramatic writer, was born of an ancient family at Aynhoe, in Northamptonshire, in 1602. He was educated at Wadham college, Oxford, where he graduated M.A. in 1624. He rapidly dissipated a handsome fortune, and afterwards went to serve in the Netherlands; and on his return, in 1639, was admitted into a troop raised by sir John Suckling for Charles I, but died the same year. He was the author of four comedies, called, "Holland's Leaguer;" "A Fair Companion;" "The Antiquary;" and "The Crafty Merchant;" which are

seemed among the best of the time. He was also author of a poem, entitled "Cupid and Psyche;" and several minor poems, which are to be met with in different collections.—*Biog. Dram. Athen. Oxon.*

MARMOL CARVAJAL (LEWIS de) a native of Grenada in Spain, who wrote on the history and geography of Africa in the sixteenth century. Having been taken prisoner by the Moors, and conveyed to Morocco, he turned his misfortune to account, by collecting information relative to the state of the country; and on his return to Spain, he published the result of his researches, in two volumes, folio, entitled, a "General Description of Africa," of which there is a French translation by D'Ablancourt. Marmol was also the author of a history of the rebellion of the Moors of Grenada; and he is said to have translated the revelations of St. Bridget.—*Aikin's G. Biog.*

MARMONTEL (JOHN FRANCIS) a distinguished French writer, was born in 1723, at Bort, a small town in the Limousin. He was the eldest son of a large family, the offspring of parents in a humble situation of life; but his mother being a woman of sense and attainments, much superior to her rank, she favoured his ardour for mental cultivation; and by her influence, had him sent to the jesuits' college of Mauriac. At the age of fifteen, his father placed him with a merchant at Clermont; but having expressed his dislike of this occupation, he was enabled to obtain admission into the college of Clermont, where he gradually acquired pupils; and his father soon after dying, he showed the goodness of his heart, by taking upon himself the care of the family. He subsequently engaged as a teacher of philosophy, in a seminary of Bernardines, at Toulouse, and became a distinguished candidate for the prizes at the Floral games, which acquired him the notice of Voltaire, who recommended him to try his fortune at Paris. He accordingly arrived there in 1745, and after experiencing some vicissitudes, brought out a tragedy in 1748, which at once raised him into competence and celebrity. Becoming the fashion, he distinguished himself by several of the amours so prevalent in that capital; the celebrated actress, mademoiselle Clairon, being the heroine of one of these attachments. Some years passed in this course of life, with much success as a dramatist; and having been recommended to the king's mistress, madame Pompadour, he was appointed secretary of the royal buildings, under her brother, the marquis de Marigny. The fire of the passions being now abated, he from this time conducted himself with much sense and propriety. Having distinguished himself by writing some of his well-known tales, to assist his friend Boissy, then entrusted with the *Mercur de France*, on the death of the latter it was given to himself, who then gave up his post of secretary, and took up his abode with madame Geoffrin, a literary man at that time forming an almost regular part of the establishment of a fashionable bel-esprit. He subsequently lost the Mer-

cure de France, by merely repeating in company, a joke upon the duke d'Aumont, and was even committed to the bastille, for some days, because he would not give up the real author. His literary facility, however, amply supported him, and in 1763, after much vexatious opposition, he succeeded Marivaux as a member of the French academy. His next literary production was "Belisaire," which, in consequence of its liberal sentiments in favour of toleration, was censured by the Sorbonne, and widely read in every country in Europe. In order to benefit Gretry, he worked up several little stories into comic operas, which were all acted with great success; and he was now so far restored to favour, that on the death of Duclos, without any solicitation on his own part, he was appointed to succeed him, as historiographer of France. He also took part in the celebrated musical dispute between Gluck and Piccini, as a partizan of the latter. At the age of fifty-four, he wedded a young lady of eighteen, a marriage which, however, was no way felicitous. In 1783, on the death of D'Alembert, he was elected secretary to the French academy in his place. On the breaking out of the Revolution, he was chosen by one of the sections of Paris, as member of the electoral assembly; but lost the confidence of his constituents, by the opposition which he made to a proposal for demanding the universal liberty of the press. His income being greatly diminished, he retired, when the political confusion increased, to a cottage in Normandy, where he passed his time in the education of his children, and the composition of a series of tales of a more serious cast than his former ones; together with his amusing "Memoirs of his own Life," which have been perused with general avidity. In April 1797, he was chosen representative to the National Assembly, for the department of the Eure, in which capacity he was instructed to defend the Catholic religion. His election being subsequently declared null, he again retired to his cottage, where he died of an apoplexy in December 1799, in the seventy-seventh year of his age. Marmontel holds a high place among modern French authors; warm and eloquent on elevated subjects; easy, lively, inventive, and ingenious on light ones, he addresses himself with equal success to the imagination, the judgment, and the heart. His *Contes Moraux* should rather be translated *Fashionable*, than *Moral Tales*; for although they in general inculcate useful and valuable lessons, their morality is sometimes questionable; and they often betray a tinge of the company kept by the author in his days of gaiety. Notwithstanding their temporary popularity, the dramas and poetry of Marmontel are thought much less of than his prose; some of the didactic works in which continue to be highly esteemed, and more especially his course of literature inserted in the "Encyclopedie." Since his death, besides his own memoirs, there have appeared "Memoirs of the Regency of the Duke of Orleans," printed from his MS. in 2 vols. 12mo. The works of Marmontel have been collected into

an edition of 32 vols. 8vo.—*Life by Himself. Biog. Univ.*

MARNIX (PHILIP de) seigneur du Mont Sainté Aldegonde, was born at Brussels in 1538, and was a disciple of Calvin at Geneva. He was appointed ecclesiastical counsellor to Charles Louis, elector palatine; and William I, prince of Orange, afterwards employed him in some affairs of importance. He was then consul at Antwerp, which he defended against the duke of Parma. He died at Leyden in 1598, whilst employed in a Flemish version of the Bible. Sainté Aldegonde was the author of "Controversial Theses;" "Circular Epistles to the Protestants;" "Apologies," and a "Portrait of different Religions," in which he ridicules the church of Rome. He also drew up the form of the celebrated confederacy, by which several lords of the Netherlands engaged to oppose the inquisition.—*Gen. Dict. in Art. Aldegonde. Moreri.*

MAROLLES (MICHEL de) a French translator, was the son of Claude de Marolles, an officer in the army, and was born in 1600. He obtained two abbays, by the interest of his father, and applying himself to the study of the Latin writers, he made translations of "Plautus," "Terence," "Lucretius," "Cattullus," "Virgil," "Horace," "Juvenal," "Persius," "Lucan," "Martial," (at the head of which Meuage wrote "Epigrammes contre Martial") "Statius," "Aurelius Victor," "Ammianus Marcellinus," "Athenæus," &c. These translations are neither correct nor elegant. He also composed "Memoirs of his own Life," published by the abbé Goujet in 1775, in 3 vols. 12mo. Speaking of his poetry one day to Liniere, he said, "My verses cost me very little;" meaning little trouble. "They cost you quite as much as they are worth," replied Liniere.—*Niceron. Moreri. Biog. Gallica. Nouv. Dict. Hist.*

MAROT (CLEMENT) a celebrated French poet, was the son of John Marot, valet-de-chambre to Francis I, and was born at Cahors in 1495. He was placed in the family of the dutchess of Alençon, the king's sister, afterwards queen of Navarre; and having accompanied the duke into Italy, he was wounded and taken prisoner at the battle of Pavia. After his return to Paris, he was accused of heresy, by Bouchard, a Catholic zealot, on which he thought it prudent to retire to the court of Navarre, and then to Ferrara. He obtained permission to return again to Paris, but his attachment to Calvinism exposed him to so much hazard, that he finally left France and went to Geneva, where he was received with open arms by the reformers. Marot, however, though a confessor, was not a saint, and having given offence by the levity or licentiousness of his manners, he quitted Geneva. The last place of his residence was Turin, at which city he died in 1544. He is considered as one of the great improvers of French poetry, and as superior to all preceding bards of his nation, in naïveté of language and manner, inasmuch that he was worthy to become the model of La Fontaine, who was one of his professed

imitators. He made a version of some of the Psalms, which was very popular among his contemporaries; but his lighter compositions have most contributed to his fame. His works have been often printed. In the edition of the Hague, 1731, are included the poetical productions of John Marot, the father, and Michael Marot, the son of the subject of this article.—*Bayle. Mœri.*

MARPURG (FREDERIC WILLIAM) a German musician of great eminence, born at Seehausen, in the Prussian dominions, in 1718. Of his early history little more is known than that he passed some portion of his youthful years in the French metropolis, and on his return to his native country acted in the capacity of secretary to one of the ministers at Berlin, in which capital he was afterwards placed by the government at the head of the lottery department. He was the author of many valuable works connected with the science of music, especially of a most interesting history of the organ, from the earliest antiquity; a treatise replete with information, and evincing much reading and antiquarian research, but which he unfortunately did not live entirely to complete. Among his other writings are, "The Critical Musician of the Spree," published in fifty numbers, in 1749; "The Art of Playing on the Harpsichord," 1750—1755: there was a French translation of this book, which soon ran through three editions; "A Treatise on Fugue," Berlin, 1753—4, considered by Kollman to be the most profound and masterly work of the kind, in the German language; "Historical and Critical Memoirs, to promote the Study of Musical History," a periodical work, published between 1754 and 1760, and filling five octavo volumes; "A Manual of Thorough Bass and Composition," 1755; "Elements of the Theory of Music," 1757; a translation of "D'Alembert's System of Composition, according to Rameau," 1758; "Introduction to the Art of Singing," 1759; "Introduction to the History and Principles of Ancient and Modern Music; "Critical Letters on Music," 2 vols. Berlin, 1760 and 1763; "Essay on Musical Temperament," Breslau, 1776; "Legends of several Saints in Music," Cologne, 1786; besides a vast number of single songs, odes, &c. His death took place at Berlin, from a consumption, in 1795.—*Biog. Dict. of Mus.*

MARRYAT (JOSEPH) a merchant of eminence, was the son of Dr Thomas Marryat, an eccentric physician of Bristol, in which city he was born in 1757. His father left two sons, the eldest of whom was the subject of the present article, and the second, a king's counsel, still living. Joseph was bred to the mercantile profession, and passed the early part of his life in the West Indies. In 1789 he returned to England, and became leading member of the society at Lloyd's coffee-house, a banker, and colonial agent for the islands of Grenada and Trinidad, which requiring his presence in parliament, he obtained a seat for Sandwich in Kent. He was an acute and able

speaker on commercial affairs, and also published some forcible tracts on the African slave-trade, the state of the West Indies, and the expediency of a new chartered bank. He died suddenly, on the 12th of January, 1824.—*Ann. Biog.*

MARSAIS (CESAR CHESNEAU du) an eminent French writer on various branches of the belles lettres. He was born at Marseilles in 1676, and when young, he entered into the congregation of the Oratory. This society however, he soon quitted, and went to Paris, where he married, and became an advocate. Not succeeding in his profession, he undertook the office of tutor to the son of the president Des Maisons, and was afterwards similarly employed in other families. He then opened a school, and failing in that undertaking, he gave lectures in private, and employed his pen for his support. In his declining years he was assisted by a pension from the count de Lauraguais, which he enjoyed till his death in 1756. His works are, "Exposition d'une Méthode Raisonnée pour apprendre la Langue Latine," 1722, 12mo; "Traité des Tropes," 1730; "Logique, ou Reflexions sur les Operations de l'Esprit;" and "Exposition de la Doctrine de l'Eglise Gallicane, par Rapport aux Pretentions de la Cour de Rome;" besides articles on grammar, and some other subjects, in the Encyclopedie.—*Dict. Hist. Aikin's G. Biog.*

MARSH (NARCISSE) archbishop of Armagh in Ireland, was born at Hanington, Wilts, in 1638. He received his education at Magdalen-hall, Oxford, which he quitted in the fifth year of his matriculation, on being elected to a fellowship at Exeter college in 1658. In 1673 he obtained the headship of Alban-hall, having previously graduated as doctor in divinity; but five years afterwards quitted the university altogether, on being appointed, through the influence of his patron, the duke of Ormond, provost of Trinity college, Dublin. In 1683 the same interest raised him to the Irish episcopal bench, as bishop of Leighlin and Ferns; and after filling successively the sees of Cashel and Dublin, he was at length elevated to the primacy in 1703. Archbishop Marsh is celebrated as a prelate who, to much learning and piety, added the greatest munificence and private charity. To Trinity college he was a liberal benefactor, presenting it, among other marks of his bounty, with a large and valuable library, and a provision for two librarians. He also founded and endowed an almshouse at Drogheda for clergymen's widows, and much increased the funds of several similar institutions. As a scholar, he was well read in Oriental as well as in classical literature. Besides a well-written charge to the clergy of the diocese of Dublin, he was the author of two treatises on logic, entitled, "Manuductio ad Logicam," and "Institutiones Logicæ in Usum Juventutis Academicæ," Dublin, 1681; also a small work on acoustics. He died in 1713, and lies buried in the churchyard of St Patrick's, Dublin.—*Biog. Brit.*

MARSHAL (ANDREW) an eminent physician, was born in Fifeshire in 1742. After studying at Glasgow and Edinburgh, he became a regimental surgeon, and at the conclusion of the peace obtained a doctor's degree, and considerable eminence in his profession. He died in London in 1813. After his death, appeared a treatise by him, "On the Morbid Anatomy of the Brain," with his life prefixed, which was much read by the faculty.—*Life as above*.

MARSHALL. There were two eminent English divines of this name, of whom THOMAS, the first in point of time, was a native of Barkby in Leicestershire, born about the year 1621. He received his education at Lincoln college, Oxford, of which society he eventually became the rector, but during the interval having taken arms against the parliament, he found it advisable, on the ruin of the Royal cause, to withdraw to the continent. In Holland, where he had taken refuge, he continued till the Restoration, officiating as minister to a congregation at Rotterdam; but on the news of that event having taken place, he returned to England, and was fortunate enough not only to get reinstated in his former preferment, but to rise to additional dignities. As a scholar, Dr Marshall was distinguished by his familiar acquaintance with early English history and antiquities, as well as by his knowledge of the Saxon, Gothic, and other ancient northern dialects. He was also a good Orientalist. He published a commentary on the Gothic and Anglo Saxon versions of the Gospels; an exposition of the Church Catechism; a prefatory epistle to Hyde's translation of the Gospels into the Malay tongue; and a conclusion to Parr's Life of Archbishop Usher. In 1681 he obtained the deanery of Gloucester, but did not survive his elevation more than four years.—Dr NATHANAEL MARSHALL, chaplain to king George II, rector of St Vedast, Foster-lane, London, and one of the canons of Windsor, was educated at Emanuel college, Cambridge, and is known as the author of "A Defence of the Constitution as by Law established, in Church and State," 8vo, 1717; a treatise "On the Discipline of the Primitive Church;" and of a translation of St Cyprian's works, printed in folio in 1717. After his decease, which took place in 1729, his widow published four octavo volumes of his posthumous sermons, with a dedication to the queen.—*Nichols's Lit. Ance.*

MARSHALL (STEPHEN) a presbyterian divine, of great eminence in the middle of the seventeenth century. He was a native of Godmanchester, in Huntingdonshire, and was educated at Emanuel college, Cambridge, where he took the degree of BA, and subsequently proceeded BD. He became minister of Finchfield in Essex; but on the triumph of the puritan party in the church, he settled in London. Fuller says, "In the late long lasting parliament, no man was more gracious with the principal members thereof: he was their trumpet, by whom they sounded their solemn fasts, preaching more publick sermons

on that occasion than any four of his function. In their sickness he was their confessor, in their assembly their counsellour, in their treatises their chaplain, in their disputations their champion." He died in 1655, and was buried in Westminster abbey. He was one of the authors of the famous "Smectymnuus," (see CALAMY,) and wrote a treatise on justification, &c.—*Fuller's Worthies*.

MARSHALL (WILLIAM) a distinguished modern writer on agricultural and rural economy. His first production was entitled, "Minutes of Agriculture, made on a Farm of Three Hundred Acres, of various Soils, near Croydon, Surrey," 1778, 4to, a work displaying much singularity of manner, and abundance of practical information. This was followed by "Experiments and Observations concerning Agriculture and the Weather," 1779, 4to. He then commenced a series of journeys through various parts of the kingdom, to procure intelligence concerning the modes of cultivation and management among the farmers in different districts and counties, of which an account was communicated to the public in the "Rural Economy of the County of Norfolk," 1787, 2 vols. 8vo; and similar works relating to Yorkshire, Gloucestershire, the midland counties, &c. Mr Marshall aided in the formation of the Board of Agriculture, and made an abstract or review of the "Reports," published under the sanction of that establishment. He died at Pickering in Yorkshire, in 1818, at the age of seventy-three.—*Watts's Bib. Brit. Gent. Mag.*

MARSHAM (sir JOHN) a learned writer on ancient history and chronology. He was born in 1602, in London, of which city his father was an alderman. He was educated at Westminster school, and Jesus college, Oxford, where he proceeded MA. in 1625; and after having travelled on the continent, he returned to London, and entered as a student of the law at the Middle Temple. In 1638 he was made one of the six clerks in Chancery, which place he lost; and suffered greatly in his private estate for his attachment to the cause of royalty during the civil wars. At the restoration of Charles II he recovered his office, was knighted, and became MP. for Rochester. Three years after he obtained a baronetcy. He died in 1685, at his seat at Bushy-hall, in Hertfordshire. The literary reputation of sir John Marsham depends on his "Canon Chronicus Ægyptiacus, Ebraicus, Græcus, et Disquisitiones," Lond. 1672, folio. The object of this work is to reconcile the dynasties of Egyptian kings, preserved by Eusebius and Syncellus, with the Scripture chronology and Grecian history; and he has displayed abundance of erudition, and some ingenuity in his critical investigations. He also published a work on the difficulties in the chronology of the Old Testament; and wrote the preface to the first volume of Dugdale's Monasticon.—*Biog. Brit.*

MARSIGLI (LEWIS FERDINAND, count) an ingenious Italian naturalist and philosopher of the eighteenth century. He was born of

an illustrious family at Bologna, and after having received a good education, he went to Constantinople in 1679, with the Venetian ambassador. On his return, he entered into the imperial service, and was employed as an engineer in the war with Turkey. He was taken prisoner at the passage of the Raab, and sent as a slave to Bosnia. On obtaining his liberty, he was again employed, and having been made a colonel of infantry, he was sent with his regiment to garrison the fortress of Brisac; and that place being taken by the French in 1702, he was accused of misconduct, and ignominiously dismissed from the Austrian service. Retiring to Switzerland, he published a justificatory memoir, and afterwards took up his residence at Cassis, near Marseilles, where he occupied himself with the study of marine botany, and other scientific pursuits. In 1709 pope Clement XI made him commander of his troops; but he soon relinquished this office, and retired to his native place, where in 1712 he founded the Institute of Bologna. He afterwards travelled in England and Holland; and in 1725 he published, at Amsterdam, his "Histoire Physique de la Mer," folio; and in 1726, his most valuable work, the "Danubius Pannonico-Mysicus," 6 vols. folio, containing the natural history of the Danube, in its course through Hungary and Turkey. Some disputes with his relations induced him to seek a retreat in Provence in 1728; but he soon returned to Bologna, and died there November 1, 1730, at the age of seventy-two.—*Aikin's G. Biog. Nouv. Dict. Hist. Biog. Univ.*

MARSOLLIER (JAMES) a French historian, was born at Paris in 1647. On taking the habit of a canon-regular of St Geneviève, he was sent to regulate the chapter of Usez, of which he was made provost, and soon after archdeacon. He died there in 1724. His style is easy and flowing, but sometimes debased by low familiar expressions. His works are, "A History of Henry VII, king of England," 2 vols. 12mo; "A History of Cardinal Ximenes," 2 vols. 12mo; "The History of the Inquisition and its Origin;" "Life of St Francis de Sales;" "Life of Madame de Chantal;" "Life of Dom Rance, Abbé, and Reformer of La Trappe;" "Dialogues on many Duties of Life;" "An Apology for Erasmus;" "The History of Henry de la Tour d'Auvergne, Duke of Bouillon;" "A History of Tithes, and other Temporal Goods of the Church;" the most curious and scarce of his works.—*Niceron. Moreri. Nouv. Dict Hist.*

MARSTON (JOHN) an English dramatic author, who lived in the reign of James I. He was educated at Corpus Christi college, Oxford, and was entered at the Middle Temple, of which society he became lecturer; but little more of his personal history is known, except that he was at one time upon terms of friendship with Ben Jonson. He was the author of eight plays, which were all acted at the Black Friars, with applause. Six of these were printed in one volume, in 1633, and dedicated to the viscountess Falkland. He

also wrote three books of satires, entitled "The Scourge of Villainy," 1599, reprinted in 1764. A specimen of Marston's dramatic manner may be seen in "The Malcontent a Tragedy;" reprinted in Dodsley's and Millar's collections of Old English Plays.—*Langbaine. Biog. Brit.*

MARSY (FRANCIS MARIA de) a Latin poet and miscellaneous writer, was a native of Paris. He entered the society of jesuits, but his religious opinions being too free, he was obliged to quit it; and in 1754, having published an "Analysis of Bayle," in 4 vols. 12mo, his books were proscribed by Parliament, and he was imprisoned in the Bastille. On regaining his liberty, he was proceeding with his modern history, when he died in 1763. His works are, "The History of Mary Stuart," an elegant work, in which he was assisted by Fréron; "Mémoires de Melvill," translated from the English; "Abridged Dictionary of Painting and Architecture," 2 vols. 12mo; "Le Rabelais Moderne," or the works of Rabelais made intelligible to readers in general, in which some of the obscurities are cleared, but all the indecencies left; "The Prince," translated from father Paul; "The Modern History," intended as a continuation of Rollin's "Ancient History;" as he died before this was finished, it was continued by Richer; "Pictura," a poem on painting, which, though written more elegantly, is not so instructive as that of Du Fresnoy; also another Latin poem on Tragedy; and the opinion of the French is, that his fame rests upon his Latin poems.—*Necrologie pour an 1763. Dict. Hist.*

MARTELLI (LEWIS) a Florentine poet, born about 1500, was an esteemed dramatic writer, and wrote also serious and grotesque verses, the former of which were published at Florence in 1548, and the latter in the second volume of "Poesie Bernesche." He died in 1527.—His brother, VINCENT, also a poet, was the author of some "Rime," lyric verses, which were much esteemed. He died in 1607.

MARTELLI (PETER JAMES) an eminent Italian poet, was born at Bologna in 1665, and was educated at the jesuits' school, and at the university of his native city. He became one of the secretaries to the senate of Bologna, and in 1707 he was appointed professor of the belles lettres in that university, and soon after made secretary to Aldrovandi, who was named delegate to pope Clement XI. His works are, a dialogue, "Del Vole," on flying, in which he endeavours to prove, that men and heavy bodies might be supported in the air; "Dialogues on Ancient and Modern Tragedy;" "Tragedies," in 3 vols.; and several discourses on the art of poetry. He also began a poem upon the arrival of Charlemagne in Italy, and his Accession to the Western Empire. He died in 1727, and his principal works, "Versi è Prose," were printed at Bologna in 1729, 7 vols. 8vo.—*Fabroni Vita Italorum.*

MARTENNE or MARTHENE (EDMUND) a learned French benedictine of the congrega-

tion of St Maur. He was born in 1654, and took the monastic vows at the age of eighteen. His life was dedicated to the study of ecclesiastical history, and his voluminous publications afford ample evidence of his industry and talents. In 1690 appeared his commentary on the Rule of St Benedict, which was followed by treatises on the ancient rites of the church, and other learned works. In 1708 he was sent by his superiors on a tour through the provinces of France, to collect materials for improving the Gallia Christiana of father S. Marthe; and the result of his researches was his "Thesaurus novus Anecdotorum," 1717, 5 vols. folio; and "Voyage litteraire de deux Benedictins de S. Maur," 4to. He had been accompanied in his mission by father Durand, with whom he engaged in a similar undertaking, two years after. Of the latter journey an account was published in 1724, and also the first portion of an immense mass of documents which they had collected, and which extended to nine volumes, in folio. Martenne died in 1739, leaving many other works published and unpublished.—*Morevi. Biog. Univ. Le Cerf.*

MARTIAL or MARCUS VALERIUS MARTIALIS, a Latin poet, highly distinguished as a writer of epigrams. He was probably of Roman descent, but was a native of Spain, where he was educated, and in his twenty-first year he went to Rome to study the law. He appears to have neglected his profession to cultivate his talent for poetry, which procured him the patronage of the emperors of the Flavian family, especially Domitian, on whose death he returned to Spain, after an absence of thirty-four years. He is supposed to have died there about AD. 100. His twelve books of epigrams comprise many elegant compositions, not a few which are dull and uninteresting, and some debased by coarseness and obscenity. The editions of the works of Martial are extremely numerous. Among the best are that of Schrevelius, L. Bat. 1670, 8vo; and that of Smids, Amst. 1701, 8vo.—*Vossius. Lempiere.*

MARTIAL D'AUVERGNE, a French poet, celebrated for the elegance and ease of his writings, was procurator in parliament, and notary of the châtelet at Paris, where he died in 1508. His works are "Arrêts d'Amour," Love Causes, the idea of which he took from the Troubadours of Provence, and treated it with great eloquence; "L'Amant rendu Cordelier de l'Observance d'Amour," a poem, ridiculing the extravagances produced by love; "Vigiles de la Mort du Roi," an historical poem on the death of Charles VII; and "Devotés louanges à la Vierge Marie," an historical poem on the life of the Virgin Mary; but ill written, and filled with the fables of the time.—*Niceron. Dict. Hist.*

MARTIANAY (JOUN) a learned French benedictine monk, was born at St Sever in Gascony in 1647. He entered into orders in 1668, and applied with great diligence to the study of the Greek and Hebrew languages, and to obtain a critical knowledge of the

Scriptures. He was engaged with father Poujet, in the publication of a new edition of the works of St Jerome, in 5 vols. folio, 1693 to 1706. He also wrote "The Life of St Jerome," 1706, 4to, and two learned, but not clearly written treatises, in which he defended the authority of the chronology of the Hebrew text of the Bible against that of the Septuagint. His other works are, "The Ancient Latin Version of the Gospel of St Matthew, with Notes;" "On the Manner of explaining the Sacred Scriptures;" "An Analytical Harmony of the New Testament;" "Essays on Translation, or Remarks on the French Version of the New Testament;" "The New Testament, with Notes, taken entirely from the Scriptures;" and "A Commentary on the Whole of the Sacred Scriptures," in which work he was engaged at the time of his death, which took place in 1717.—*Nouv. Dict. Hist.*

MARTIN (BENJAMIN) an ingenious English mathematician and natural philosopher in the last century. He was a native of Worplesdon in Surrey, and is said in early life to have worked as a farmer's labourer; from which situation he appears to have raised himself by his own exertions to that of a schoolmaster, at Chichester in Sussex. He then commenced lecturer on experimental philosophy, and after having travelled in that character through different parts of England, he settled in London. There he continued his lectures for many years, with great reputation, also carrying on the business of an optician and globe-maker, together with that of a publisher of works, chiefly written and compiled by himself. In the latter part of his life, having confided the management of his commercial affairs to his son, embarrassments occurred, and he was made bankrupt, though his estate was sufficient to satisfy all his creditors. This misfortune had such an effect on his mind, that he attempted to commit suicide, and though the injury he inflicted on himself did not directly prove fatal, yet it hastened his death, which happened February 9th, 1782, at the age of seventy-eight. His publications relate to almost all the branches of mathematical science and natural philosophy, and a list of the most important may be found in the annexed authority. He conducted for some years a scientific magazine, in which appeared lives of eminent persons, published also separately, under the title of "Biographia Philosophica."—*Aikin's G. Biog.*

MARTIN (CLAUDE) a native of Lyons in France, who raised himself to eminence by his talents. He went to the East-Indies as a common soldier, about the middle of the last century, and having quitted the French service for that of the English, he obtained the rank of colonel; and through the patronage of the nabob of Oude, he amassed a vast fortune. Part of his riches he expended in the advancement of science, having formed a botanical garden, a museum, and an observatory at Lucknow, where he also erected for himself a splendid residence. He died in 1799, aged sixty-seven.

MARTIN (DAVID) a French Calvinist divine, who was a native of Revel, in the diocese of Lavaur in Languedoc. After completing his studies, he became pastor of a congregation in the diocese of Castres, whence he removed to another, where he remained till the revocation of the edict of Nantes in 1685. He then took refuge in Holland, and exercised the pastoral function at Utrecht, till his death in 1721, in the eighty-second year of his age. He was the author of "Histoire de Vieux et de Nouveau Testament," published at Amsterdam, 1700, 2 vols. folio, with a multitude of engravings, termed Mortier's Bible, from the name of the printer. Among his other works, are a commentary on the Bible; sermons; and controversial dissertations.—*Moreri. Aikin's G. Biog.*

MARTIN (JAMES) a benedictine of the congregation of St Maur, who was born at Fanjaux in Upper Languedoc, in 1694. He entered into the order in 1709, and after being employed as a classical teacher in his native province, he removed to Paris in 1727. He published "Traité de la Religion des anciens Gaulois," 2 vols. 4to; which was followed by "Explication de divers monumens singuliers qui ont rapport à la Religion des plus anciens peuples, avec l'Examen de la dernière édition des ouvrages de S. Jérôme, et un Traité sur l'Astrologie judiciaire," 4to; besides other works. He died in 1751. A posthumous work, entitled "Histoire des Gaules," 2 vols. 4to, was published, with additions by Dom de Brezillac, nephew of the author, in 1754.—*Dict. Hist. Biog Univ.*

MARTIN (RAYMOND) a Spanish Dominican friar, distinguished for his attention to Oriental literature, in the thirteenth century. He was a native of Sobiras in Catalonia, and was present at a chapter of his order held at Toledo in 1250, to concert means for converting the Jews and Mahometans to Christianity. For that purpose he studied the Hebrew and Arabic languages, in which he is said to have composed several works, one of which, entitled "Pugio Fidei Christianæ," was published in the seventeenth century. Martin went as a missionary to Tunis in 1268, and was living in 1286; but the time of his death is uncertain.—*Moreri. Aikin's G. Biog.*

MARTIN (WILLIAM) a naturalist, was born in 1767, at Marsfield in Nottinghamshire. His father, a hosier, abandoned his family, and joined a company of players, under the name of Booth; and although he subsequently obtained a fortune, as the inventor of polygraphic painting, and of a new mode of manufacturing cloth, he never sought after his family, nor left them a shilling at his death. Mrs Martin, on being forsaken, likewise took to the stage, as did also, at a very early age, the subject of this article. His education had in the mean time been attended to, and by the instruction of his writing-master, James Bolton, the author of some works on natural history, he became a proficient in drawing, and acquired a taste for similar pursuits. In 1793 he published the first number of "Figures and

Descriptions of Petrifications in Derbyshire." the figures of which were all etched, drawn, and coloured by himself; and in 1796 he sent to the Linnæan society, "An Account of some Species of Fossil Anomalia found in Derbyshire," which paper led to his being elected a member of that society. Having married, he quitted the stage, and established himself as a drawing master at Burton-upon-Trent, whence he removed in succession to Buxton and to Macclesfield. In 1809 he published "Outlines of an Attempt to establish a Knowledge of Extraneous Fossils on Scientific Principles." He was subsequently chosen a member of the Literary and Philosophical Society of Manchester, and of the Geological Society of London; and soon after published "Petrificata Derbiensia, or Figures and Description of Petrifications collected in Derbyshire." He died of a gradual decline, May 31, 1810.—*Memoirs by Hale.*

MARTINI (JOHN BAPTIST) a skilful composer and musician, was born at Bologna in 1706. He entered early into the order of Friars Minim, and travelled for some time in Asia; and it was not until his return, that he entirely devoted himself to music. His progress was so rapid, that at the age of seventeen, he was appointed chapel master to a convent of his order in Bologna, which situation he filled until his death in 1784, exercising at the same time the functions of professor; and from the school of Martini issued some of the most eminent composers in Italy. He wrote a history of Venice, in 3 vols. folio, as also an "Essay on Counterpoint," and a tract, entitled "Compendio della Theoria de Numeri, per uso del Musico."—*Burney. Biog. Dict. of Mus.*

MARTINI (MARTIN) a jesuit and missionary of the seventeenth century, was a native of Trent; he was sent, by his society, to China, whence, after a long residence, he returned to Europe in 1651. He published the result of his observations in the following works, "De Bello Tartaros inter et sinenses," 1654; "Sinicæ Historiæ Decas prima à gentis origine ad Christum natum," 1658; "China Illustrata," a geographical description of the country; "A Relation of the Number and Quality of the Christians in China."—*Moreri. Nouv. Dict. Hist.*

MARTINIERE (ANTHONY-AUGUSTIN BRUZEN de la) a celebrated French author, was born at Dieppe in 1684, and studied at Paris under the instruction of his grand-uncle, Richard Simon, who resided in the college of Fortet. In 1709 he visited Mecklenburgh; but on the death of the duke, in the troubles that followed, he went to Parma, where, in 1722, by order of the duke, Philip Farnese, he published "Dissertation historique sur les Duchés de Parme et de Plaisance," 4to. The king of Sicily appointed him his secretary, with a salary of 1200 crowns; and the marquis de Beretti Landi, the Spanish minister at the Hague, advised him to dedicate his geographical dictionary to the king of Spain, and procured for him the title

of royal geographer. He died in 1749. His works are, "Dictionnaire Geographique, Historique, et Critique," 10 vols. folio; a work of great importance to geography, and the foundation of many subsequent ones; "Essais sur l'Origine et les Progrès de la Geographie," printed in Camusat's "Mémoires Historiques;" "Traité géographiques et historiques pour faciliter l'Intelligence de l'Ecriture Sainte, par divers Auteurs, célèbres M. M. Huet, et Le Grand D. Calmet, &c. &c." "Entretiens des Ombres aux Champs Elysées," taken from a German work of the same title; "Essai d'une traduction d'Horace," in verse; "Introduction générale à l'étude des Sciences et des Belles Lettres en faveur des Personnes qui ne savent que le Français;" "Nouveau Recueil des Epigrammatistes Français anciens et modernes;" "Lettres choisies de M. Simon," with a life of the author; "Nouvelles politiques et littéraires;" "Vie de Molière;" "Continuation de l'Histoire de France sous la Règne de Louis XIV, commencée par M. de Larrey." A collection, entitled "Nouveau Portefeuille historique et littéraire," was published after his death, under his name.—*Moreri. Dict. Hist. in Art. Bruzen.*

MARTINUS POLONUS, a Dominican friar of the thirteenth century, of a Polish family, named Strempi. After having distinguished himself by his learning, he went to Rome, where he held the offices of apostolical chaplain and penitentiary under popes John XXI and Nicholas III. The latter nominated him archbishop of Gnesna in Poland, in 1278; but Martin died at Bologna shortly after. He is known as the author of a history of the popes and emperors, called "Chronicon Martinianum," extending from the birth of Christ to A.D. 1271.—*Cave Hist. Lit. Moreri.*

MARTYN (HENRY) an able missionary, was born at Truro in Cornwall, in 1781. He was educated at the grammar-school of Truro, and in 1797 was removed to St John's college, Cambridge, of which society he was chosen fellow in 1802. The following year he took orders, and in 1805 went to India, as a chaplain to the East India Company. In the East he distinguished himself by his rapid acquirement of the native languages. He not only became master of Sanscrit, but translated the Common Prayer into Hindostanee, and performed divine service publicly in that language. From India he proceeded to Shiraz in Persia, and translated the Psalms and New Testament into the Persian tongue. He also held conferences with the learned Mahometans, and converted some of them to Christianity. His health failing, he died of a decline in Persia October 16, 1812.—*Gent. Mag.*

MARTYN (JOHN) a skilful botanist and learned writer, was born at London in 1699. He was intended for the mercantile profession, but quitted it in consequence of an unconquerable passion for botany and literary pursuits. In 1720 he published a translation of Tournefort's "History of Plants growing about Paris," and meditated a similar work on those pro-

duced in the vicinity of London. In 1724 he was chosen a fellow of the Royal Society, and about the same time began to give lectures in his favourite science. In 1730 he entered himself of Emanuel college, Cambridge, and, on the death of Dr. Bradley, was chosen professor of botany in that university, which place he resigned in 1761, in favour of his son. (See THOMAS MARTYN.) He died at Chelsea in 1768. Besides the works already mentioned, he is author of "Tabulæ Synopticæ," folio; "Methodus Plantarum circa Cantabrigiam Nascentium;" "Historia Plantarum variorum," folio; "The Grub Street Journal," 2 vols; an edition of "Virgil's Georgics," with translations and notes, 4to. He was also engaged in the abridgment of the Philosophical Transactions, and some translations from the French. After his death appeared "Dissertations and Remarks on the Æneid of Virgil," with a biographical memoir prefixed.—*Pulteney's Sketches of Botany.*

MARTYN BD. FRs. (THOMAS) an English divine, more especially celebrated as an antiquarian and natural philosopher, for a period of sixty-four years professor of botany in the university of Cambridge. This eminent naturalist was the eldest son of Dr John Martyn, a physician of Chelsea, who had also enjoyed the same professorship, and was the author of a Critical Dissertation on the Æneid. He was born at Chelsea in 1736, and having received the rudiments of a classical education, became a pensioner of Emanuel college, Cambridge, where he graduated as AB. in 1756. On the filling up of those fellowships belonging to Sidney Sussex college, which had been for awhile sequestered, in order to repair the dilapidations of the edifice, Mr Martyn was elected to one of them, and in 1761 succeeded, on his father's resignation, to the professor's chair already mentioned. In 1771 he was presented to the family living of Ludgershall in Bedfordshire, on which he resigned his fellowship and married; and five years afterwards succeeded to the vicarage of Little Marlow, in Buckinghamshire, on the presentation of his pupil, sir John Boilase Warren. In 1778 he accompanied another of his pupils, Mr. Hartopp Wigley, through France, Switzerland, and Italy, an account of which tour he published in 1787. On his return to England, he accepted the honorary office of secretary to the "Society for the Improvement of Naval Architecture," and continued to live in the metropolis till 1818, when, being presented to another living in Berkshire, he removed to his new rectory, where he died in the June of 1825. In addition to the tour already mentioned, he was the author of another through Italy in 1791. His philosophical writings, and those by which he is most advantageously known are, "Plantæ Cantabrigienses," a catalogue of plants arranged according to the Linnæan System; "Herbationes Cantabrigienses," 8vo; "Description and Account of the Botanical Garden, &c." 4to, all in 1763; "The English Connoisseur," 1766, 2 vols. 12mo; "Sermon for Addenbroke's Hospital,

1768; "A Complete Edition of the Works of John Martyn, MD. with a Life of the Author," 12mo, 1770; "Catalogus Horti Cantabrigiensis," 8vo, 1771, reprinted with his lectures in 1772; "The Antiquities of Herculaneum," 4to, 1773. This laborious work, of which the first volume only appeared, was however discontinued, for want of public encouragement. "Elements of Natural History," 8vo, 1775; a translation of "Rousseau's Letters on the Elements of Botany," 2 vols. 1792—4; "The Language of Botany, a Dictionary, with familiar Explanations, &c.," 1793; "A Description of Hemanthus Multiflorus," 8vo; and lastly, a new edition of "Miller's Gardener's and Botanist's Dictionary," to which he added "A Complete Enumeration and Description of all Plants hitherto known, with their generic and specific Characters, Places of Growth, &c." 4 vols. folio. In private life Mr Martyn was distinguished by the mildness of his manners and the benevolence of his disposition.—*Ann. Biog.*

MARTYN (WILLIAM) recorder of Exeter, was born in that city in 1562. He was educated at the grammar-school of his native city, whence he was sent to Pembroke college, Oxford, and afterwards to some of the inns of court of London. In 1605 he was elected recorder of Exeter, where he died in 1617. He is noticed here as the author of a chronicle, entitled "The History and Lives of the Kings of England, from William the Conqueror to King Henry VIII," London, 1616, folio. It is an amusing and not ill-written work, to which an appendix was published after the author's death, including the history of Edward VI, Mary, and Elizabeth. He also wrote a work, called "Youth's Instructions," London, 1612, folio.—*Prince's Worthies of Devon.*

MARTYR (PETER) whose family name was Vermilio, one of the earliest Protestant divines, distinguished for learning and abilities. He was born at Florence in the year 1500, and after receiving a good education, he entered at the age of sixteen into the order of the regular canons of St Augustine, at the monastery of Fiesole. In 1519 he removed to another at Padua, where he studied Greek and philosophy. In 1526 he commenced preacher, and attracted great applause in several cities of Italy. He was next chosen abbot of Spoleto, three years after principal of the college of St Peter at the altar in Naples; and at length prior of St Fridian's at Lucca, one of the richest abbeys belonging to his order. Here his religious sentiments having undergone a change, and having, in a great measure, adopted the opinions of the German reformers, which he displayed too incautiously in his public discourses, he was cited before a general assembly of his order at Genoa, to answer for his conduct. He did not think it prudent to obey the summons, but hastily retired to Pisa, and at length to Zurich in Switzerland, where he was received in a friendly manner by the Protestant clergy in 1542. Soon after he be-

came professor of divinity at Strasburgh, where he remained till 1547, when he accompanied Bucer, Fagius, and other learned reformers, who, on the invitation of archbishop Cranmer, settled in England. Martyr had previously followed the example of Luther, in marrying a nun, who had fled from her convent, and renounced her vows. He was appointed to the theological chair at Oxford in 1549, and he became a very efficient assistant to the English reformed clergy, in carrying on their plans of innovation in the church. On the accession of queen Mary he was com-manded to quit the country, and was furnished with passports for that purpose. He then returned to Strasburgh, and resumed his former situation, whence he removed in 1556 to Zurich, to occupy the office of theological professor. In 1561 he assisted at the famous conference between the Catholics and Protestants held at Poi-sy, in France; and he died at Zurich in the following year. Peter Martyr was the author of many works on divinity, including commentaries on some parts of the Old and New Testament, which exhibit a superfluity of learned illustration, and a multitude of digressions relating to points of controversy, often little connected with the subject before him. He is said to have excelled Calvin in erudition, and the knowledge of languages, and his personal character has been represented as extremely amiable.—*Moreri. Teissier Eloges des H. S.*—MARTYR AB ANGLERIA (PETER) born at the town of Anghierra, near Milan, about the middle of the fifteenth century; was an ecclesiastic, much trusted and employed in diplomatic affairs by Ferdinand, king of Castile. He was the author of a treatise on the discoveries of Columbus, entitled, "De Rebus oceanicis et Orbe novo," and other works on history and geography. He died prior of Grenada, after 1525.—*Teissier. Tiraboschi.*

MARULLUS (MICHAEL TARCHANOTES) a native of Constantinople, which he abandoned on its capture by the Turks in 1453, and retired into Italy. He was patronised by Lorenzo de' Medici, and married the celebrated Alexandra Scala of Florence, which marriage involved him in a quarrel with Politian, who was also an admirer of hers. He was drowned in 1500, while attempting to cross the river Cæcina, in Tuscany. He was the author of some Latin poems, consisting of four books of epigrams and four of hymns, with a fragment of a poem on the "Education of Princes." He was considered a happy imitator of Lucretius, but, though not devoid of elegance, his productions cannot claim a place among the best of the kind.—*Lil. Gyrard. Tiraboschi.*

MARVELL (ANDREW). This able and witty writer, and incorruptible patriot, was born at Kingston-upon-Hull in 1620, being the son of the rev. Andrew Marvell, master of the public grammar-school, and lecturer of Trinity church, in that town. He was sent to Trinity college, Cambridge, at the expense of the corporation, whence he was inveigled away by some of the jesuitical emissaries which then infested the universities, and was found by

his father in a bookseller's shop in London, and induced to return to college. On the death of his father in 1640, he succeeded to a small estate, and soon after made the tour of Europe, and distinguished himself by some humorous but carelessly written satires against Richard Flecknoe, an English priest and poetaster, then resident at Rome, which circumstance induced Dryden to give the name of Mac Flecknoe to his satire against Shadwell. Little more is recorded of him for several years, except that he acted as secretary to the English legation at Constantinople. On his return he was engaged by Oliver Cromwell to superintend the education of a Mr Dutton, and after a while appointed assistant to Milton, in his office of Latin secretary; and he seems, like many other able men of that day, to have been strongly impressed by the vigorous character of the protector, and the honour obtained by the nation under his government. In 1660 he was chosen member of parliament for his native place, which he represented to the end of his life, and was possibly one of the last who received pay from their constituents. Although his income was very slender, he was enabled, by a philosophical limitation of his wants and desires, to resist every corrupt temptation in the way, either of honour or emolument; and he obtained so high a character for diligence, ability, and integrity, that he has generally been regarded as one of the finest examples of a disinterested senator, recorded in English history. After the specimen afforded by a few of the early years of the reign of Charles II, a man of Marvell's character was necessarily thrown into the opposition, and his whole efforts, both in and out of parliament, were directed to the preservation of civil and religious liberty. Although he rarely spoke, his influence was very great; the spirited earl of Devonshire was very intimate with him, and prince Rupert often privately visited him, and followed his advice. He also obtained the character of the wittiest man of his time, and from time to time threw out a number of poetical effusions of the humorous and satirical kind, which, although careless in composition, and uceremonious in application, were very effective and popular as party pieces. In 1672, Dr Samuel Parker, afterwards rendered so conspicuous by the affair of Magdalen college, published a work of bishop Bramhall's, with a preface, asserting the most extravagant doctrine in regard to the rights of sovereigns over the consciences of their subjects. This piece Marvell attacked in the same year, by a work, which he entitled "The Rehearsal Transposed," which is one of the most witty and sarcastic exposures of the tyrannous and impracticable theory which it assails, that ever was written. Parker wrote an answer, to which Marvell rejoined, and the former did not think fit to carry the controversy any farther, the whole party having smarted under the exposure and ridicule. Marvell was the author of several other controversial productions, one of which, entitled "An Account of the Growth of Popery and Arbi-

trary Power in England," gave so much offence, that a reward was offered for the printer and publisher, which seems to have led to no consequences. Notwithstanding the earnestness with which he opposed the court and its plans, his wit made him a sort of favourite with Charles II, who deputed the lord treasurer Danby to wait upon him at his lodgings, up two pair of stairs, in a court in the Strand, on implied conditions, to make him the offer of 1000*l.* and a promise of future favour. The honest senator rejected the bribe without hesitation; and as it is said, was obliged, on the departure of the courtier, to send to a friend for the loan of a guinea. The life of Marvell was more than once threatened by his irritated enemies; and his death, which happened in August 1678, without much previous illness, has been attributed, with no support from direct evidence, to poison. He was buried at St Giles's in the Fields, at the expense of his constituents, who also voted a sum to erect a monument to his memory, with a laudatory inscription; but although devoid of party allusion, neither the one nor the other was admitted by a rector belonging to a class of zealots, who occasionally impeach the intellectual character of the church of England. Marvell is said to have been silent and reserved among strangers, but very lively and facetious with his intimates. His character as a writer in prose will be gathered from what has been already stated; his early poems display much fondness for rural nature, and are often very iugenuous and fanciful, in the manner of Cowley and his contemporaries. The most complete edition of his works is that by captain Edward Thompson, three volumes, 4to, 1776. — *Cooke's and Thompson's Lives of Marvell.*

MARY I, queen of England, daughter of Henry VIII, by Catharine of Arragon, was born in 1516. In her infancy she was betrothed, first to the cauphin of France, afterwards to the emperor Charles V, and lastly to the duke of Orleans, none of which matches took place. After her mother's death she was even declared illegitimate, but was restored to her rights, when the succession was finally settled in 1544. She was bred up by her mother, in a zealous adherence to the Roman Catholic faith; on which account, as intolerance was no less a feature of the new than of the ancient religion, she was treated with some rigour under Edward VI. This severity doubtless operated upon her own temper and practice when she herself ascended the throne in 1553, after the abortive attempt to set her aside in favour of Lady Jane Grey. One of her first measures was the reinstatement of the prelates who had been superseded in the late reign, while Cranmer was prosecuted for high treason, and several other protestant bishops imprisoned. The marriage of the queen, now of the mature age of thirty-seven, formed a subject of grave deliberation in the first instance, and the acceptance of the proposals of the archduke Philip, son of the emperor Charles V, afterwards Philip II, united as it was with a complete restoration

of the Catholic worship, produced much discontent. Insurrections broke out under Cave, in Devonshire, and Wyatt, in Kent, which, although suppressed, formed sufficient excuses for immuring the princess Elizabeth in the Tower, and dooming the youthful and unfortunate Jane Grey and her husband, Guildford Dudley, who had been hitherto spared, to immediate execution. Philip arrived in England in 1554, when the nuptials were celebrated; but the attempts of Mary to introduce him to a paramount authority in England, were by no means completely successful. She succeeded better in a formal reconciliation of the kingdom to the pope, which was effected in great form by the legate, cardinal Pole. The sanguinary laws against heretics were now revived, and the council having resolved to put them into full execution, those shocking scenes of cruelty followed, which have fixed upon this unhappily educated princess, the hateful epithet of bloody queen Mary. It ought, however, in justice to be observed, that the legate Pole disapproved of this severity; but the arguments of Gardiner and others were more congenial to the gloomy bigotry of the sovereign, and no fewer than two hundred and seventy-seven persons were committed to the flames, including prelates, private clergymen, laymen of all ranks, women, and even children. Sincerity in her opinions is the only mitigating plea for the unhappy Mary, who was even prepared to sacrifice the revenues of the crown, in restitution of the goods of the church, the deficiency of which, however, she had no scruple in replacing by arbitrary exactions from her subjects, with quite as much despotism as her father, Henry. Her union with Philip II was equally unpropitious to herself and the nation. Eleven years younger than the queen, he treated her with great neglect; and to prevent the fulfilment of his threat of desertion, England was impolitically forced into a war with France, and the assistance of English troops facilitated the Spanish victory over the French at St Quentin. This result, which was of no service to England, was quickly counterbalanced at her expense, by the loss of Calais, which was taken in 1558, by the duke of Guise, after it had been in English keeping for two hundred years. This disgrace sank deep in the heart of Mary, who was already in a declining way from a dropsical complaint, mentally preyed upon by anxieties of various kinds, aggravated by a consciousness of the hatred of her subjects, and the indifference or aversion of her husband. She terminated her short and darkfeatured reign, of little more than five years, in November 1558, in the forty-second year of her age. Mary was not wholly destitute of the characteristic vigour and ability of her family, had her natural capacity been less clouded by bigotry, and the prejudices fostered by the connexion of her mother's divorce and ill-treatment, with the separation from the see of Rome. Nor must it be concealed, that hateful as was the severity really displayed, it has not unfrequently been highly exaggerated,

and censured with too little advertence to the baleful intolerance, which in this age disfigured religious ascendancy on all sides. With Mary I ended the dominion of popery in Great Britain, and the facility with which the great body of the English people, and especially the nobility and wealthy classes, veered about with the inclinations of their rulers in these various changes, has not been unmarked by the watchful satirists of the church of Rome.—*Hume. Rapin.*

MARY II, queen of England. This princess, who was born in 1662, was the daughter of James, duke of York, afterwards James II, by his wife, Anne Hyde, daughter of lord Clarendon. She was married in 1677 to William, prince of Orange, and when the Revolution was effected, which dethroned her father, Mary was declared joint-possessor of the throne with her husband, king William, on whom all the administration of the government devolved. This arrangement cost Mary no sacrifice; her strong regard to, and profound respect for, her consort, being always conspicuous. She was also strongly attached to the Protestant religion and the Church of England, and was evidently led to deem its preservation a paramount duty, even when opposed to the conflicting claims of filial obedience. During the absence of William in Ireland, in 1690, Mary managed parties at home with extreme prudence, and acted with equal ability during his various visits to the continent. The unfriendly terms on which she lived with her sister Anne, have been alluded to as a blemish in her character; but political jealousies, and the weak attachment of the latter to overbearing favourites, may sufficiently account for it. Mary died of the small-pox at Kensington, in the year 1695, being then in her thirty-third year, to the deep affliction of her husband, and the general regret of the nation.—*Burnet. Smollett.*

MARY (STUART) queen of Scots, celebrated for her beauty, her accomplishments, her errors, and her misfortunes. She was born December 8th, 1542, and was the daughter of James V of Scotland, by his queen, Mary of Lorraine, a French princess, of the family of Guise. Her father dying when she was about eight days old, violent disputes arose among the nobility about the guardianship of the infant-sovereign, and the conduct of public affairs. The regency was at length vested in the earl of Arran, and Henry VIII of England having demanded the hand of Mary in marriage for his son Edward, the regent's rejection of the proposal occasioned a war, in which the Scots were defeated at the battle of Musselburgh. At the age of six the young queen was sent by her mother to France, where she was educated in a convent, and appears to have been instructed in every branch of learning and polite accomplishment, which was fashionable at that period. On the 20th of April, 1558, she was married to the dauphin, afterwards Francis II. He died about six months after his accession to the crown, in December 1560, and the widowed queen re-

turned to Scotland. The future incidents of her life are matter of well-known history, and remarkable as they are, a very slight notice of the most important can alone be introduced into this article. The queen having received overtures of marriage from various quarters, gratified her inclination by uniting herself with her cousin, the young and handsome Henry Stuart, lord Darnley, by whom she became the mother of James VI. Darnley proved a profligate and ungrateful husband, and a weak and worthless man. Excited by jealousy, he caused his wife's secretary, David Rizzio, to be murdered in her presence, and offered her many other indignities, which produced an open quarrel between them. An apparent reconciliation took place, when Darnley, who had continued to reside separately from the queen, was assassinated, and the house he had inhabited was blown up with gunpowder, in February 1567. This barbarous transaction was but very imperfectly investigated; and in the month of May following, the imprudent Mary wedded the earl of Bothwell, who was openly accused as the murderer of the late king. Scotland soon became a scene of confusion and civil discord. The people rebelled against the authority of the queen. Bothwell, a fugitive and an outlaw, took refuge in Denmark; and Mary was made a captive, treated with insult and contempt, and committed to custody in the castle of Loch Leven. After some months confinement, she effected her escape, and, assisted by the few friends who still remained attached to her, she made an effort for the recovery of her power. She was opposed by the earl of Murray, the natural son of James V, who had obtained the regency in the minority of her son. The battle of Langside insured the triumph of her enemies; and to avoid falling again into their power, she fled to England, and sought the protection of queen Elizabeth. That princess treated her with all the jealousy of a personal and political rival; and after keeping her a prisoner during eighteen years, she caused her unfortunate captive to be tried and executed for a conspiracy against her government. Mary received the news of her destined fate with great serenity; wrote her will, and having prepared herself for death, by practising the ceremonies enjoined by the Catholic faith, to which she was devotedly attached, she suffered decapitation on the 8th of February, 1587, in the castle of Fotheringhay, where she had been long confined; and on the 1st of August, she was interred with great pomp, in the cathedral of Peterborough. Her body was subsequently removed, by her son, to Henry VIIIth's chapel, Westminster, where a magnificent monument was erected to her memory. She wrote with elegance in the Latin and French languages, and many of her compositions have been preserved, consisting of poems, letters, and a discourse of royal advice to her son. The character and conduct of Mary, queen of Scots, have been made the subject of much angry controversy among literary men. In the list of her partizans may be

mentioned, Walter Goodal, William Tytler, and the rev. John Whitaker, who have shown abundant zeal in her defence; while the Scottish historians, Dr Robertson and Malcolm Laing have, with more apparent impartiality, exhibited the weighty evidence against her, which demonstrates, if not her guilt, at least the impossibility of a perfectly satisfactory exculpation. The treatment of this unfortunate princess by Elizabeth, is scarcely to be justified even by that class of state reasons, which accord better with expediency than with morals. Too much attention in the condemnation of it is, however, usually paid to the personal feelings of Elizabeth, as a woman, and too little to the fact, that Mary was regarded as their legitimate sovereign, by a powerful, active, and eternally conspiring party in England; while the predominant one had every thing to fear from the civil and religious changes which her survival or succession might have created.—*Ballard's Mem. of Learned Ladies. Berkenhout's Biog. Lit.*

MASACCIO or TOMMASO DA S. GIOVANNI DI VALDARNO, a painter, was born at Valdarno in 1402, and was the disciple of Massolino da Panicale, to whom he was greatly superior. He was well skilled in perspective, of which he gave some fine examples. Annibal Caro composed an epitaph for him, in which he says that Buonarroti taught all other painters, and learnt from Masaccio alone.—*Tiraboschi. Pilkington.*

MASCAGNI (PAUL) a celebrated anatomist, born in Tuscany in 1752. After having studied at the university of Sienna, he took the degree of MD. in 1771, and soon after became professor of anatomy. He filled that office with high reputation till 1800, when he removed to Pisa; and the following year he was invited to Florence, to occupy the chair of anatomy and physiology at the hospital of S. Maria Nuovo. In 1806 he was made also professor of chemistry, and he held those offices till his death, October 19th, 1815. Mascagni applied himself with great industry and success to the cultivation of the various sciences connected with natural history; but his principal object was the study of human anatomy, in which he made some important discoveries, which entitle him to rank with the first anatomists of modern times. His principal work is entitled "Historia et scenographia Vasorum Lymphaticorum corporis humani," 1787, large folio; besides which he left unfinished a general treatise on anatomy, part of which has been published by his pupil, M. Antonmarchi.—*Biog. Nouv. des Contemp.*

MASCARDI (AUGUSTIN) an Italian historian and writer on polite literature, born in 1591, in the territory of Genoa. He entered when young into the society of the jesuits, which he quitted to become chamberlain to pope Urban VIII, who in 1628 made him professor of rhetoric at the college of Wisdom at Rome. He died in 1640. He composed many works in Italian and Latin. Among the former are a treatise "Dell' Arte Historica;" and an account of the conspiracy of Fiesco

against the Genoese government.—*Tiraboschi. Fig. Univ.*

MASCARON (JULIUS) a French priest, was born at Marseilles in 1634. He entered among the priests of the oratory, and at the age of twenty-two he taught rhetoric at Mans. He afterwards preached with so much applause at Saumur and Paris, that the court engaged him for Advent 1666 and Lent 1667; and in 1671 he was appointed bishop of Tulle, whence he was translated to the see of Agen. In 1694 he returned, to preach before the king, on which occasion Louis XIV said to him, "Your eloquence alone neither wears out nor grows old." On his return to Agen, he founded an hospital, and died in 1703. A collection of his "Funeral Orations" was published, among which those of marshal Turenne, and the chancellor Seguier are most admired. A doubt arising as to the validity of the ordination of the bishop of Mans by whom Mascaron had been ordained, the question was referred to the Sorbonne, which decided in the affirmative. Mascaron, however, chose to be re-ordained.—*Niceron. Gen. Dict. Dict. Hist. de Ladvocat.*

MASCHERONI (LAURENCE) a distinguished Italian poet and mathematician. He was born at Bergamo in 1750, and at the age of eighteen he taught Latin and Greek at the college of his native place. In 1786 he became professor of mathematics at Pavia, previously to which he published "New Researches on the Equilibrium of Vaults," Bergamo, 1785, 4to; but he is principally known as the author of "The Geometry of the Compass," Milan, 1795, 8vo, a very ingenious work, which attracted the attention of Buonaparte during his campaign in Italy. Mascheroni, though an ecclesiastic, was an advocate for the political changes occasioned in Italy through the influence of the French; and in concert with Gregory Fontana, he drew up the constitution of the Cisalpine republic. Being sent by the government to Paris, on a mission connected with science, he died in that metropolis, July 14, 1800.—*Biog. Nouv. des Contemp.*

MASCLEF (FRANCIS) a French theologian, was rector in the diocese of Amiens, and being much esteemed by the bishop, he was by him placed at the head of the seminary of that district; he also created him a canon of Amiens, but when that prelate died in 1706, he was not in favour with his successor; and on some dispute on the subject of Jansenism, Masclef was removed from all his public offices. He died in 1728. He was very learned in languages, particularly the Oriental. His works are, "A Hebrew Grammar;" "Ecclesiastical Conferences of the Diocese of Amiens;" "The Catechism of Amiens." He also left in MS. a system of philosophy and of theology, which would have been published but for the seeds of Jansenism they contained.—*Moreri. Dict. Hist.*

MASCRIER (JOHN BAPTIST) a French abbé, was born at Caen in Normandy in 1697, and died at Paris in 1760. His works are

principally compilations and translations; they are, "A Translation of Cæsar's Commentaries;" "A Description of Egypt;" "Lommius's Table of Diseases;" "Christian Reflections on the great Truths of Faith;" "An Idea of the ancient and modern Government of Egypt;" "History of the Revolution in the East Indies;" "A Translation of Martial," 2 vols. He also published editions of several other works.—*Nouv. Dict. Hist.*

MASDEU (DON JUAN FRANCESCO) an historical writer, who was a native of Barcelona, and a member of the order of the jesuits. He collected copious materials for a general history of Spain; and on the suppression of the society to which he belonged, he retired to Foligno, in Italy, and composed his history in Italian. His success not answering his expectations, he re-wrote the work in his own language, and it was published at Madrid in 20 vols. 4to, 1783—1800, under the title of "Historia critica de Espana, y de la Cultura Espanola en todo genero." On the re-establishment of the jesuits by pope Pius VII. Masdeu entered into the college at Rome; but he afterwards returned to Spain, and died at Valencia in 1817.—*Biog. Nouv. des Contemp.*

MASENIUS, or MASEN (JAMES) a jesuit, and Latin writer; was born at Dalen, in the duchy of Juliers, in 1606. He was professor of eloquence and poetry at Cologne, and was the author of a long Latin poem, entitled "Sarcotis," or "Sarcothea," which Lauder brought into notice by pretending that Milton borrowed from it. He also produced two treatises, entitled "Palæstra eloquentiæ ligatæ," and "Palæstra styli Romani;" "Anima Historiæ seu vita Caroli V et Ferdinandi;" "Epitome Annalium Trevirensium;" and "Notes and Additions to the Antiquitates et Annales Trevirensium by Brower." He died in 1681.—*Nouv. Dict. Hist.*

MASERES (FRANCIS) cursitor baron of the Exchequer; a sound lawyer, and a scholar of considerable attainments; born in the year 1731. He was descended of a French refugee family, and received the earlier part of his education under Dr Wooddeson, of Kingston-upon-Thames, whence he removed to Clare-hall, Cambridge, of which society he afterwards became a fellow. In 1752 he and Dr Porteus, afterwards bishop of London, obtained the two chancellor's prize medals. Entering afterwards at the Temple, he applied himself to the study of jurisprudence; and being called to the bar, obtained the appointment of attorney-general of Quebec, from which situation he was, some years after, on his return to England, raised to the dignity of cursitor baron of the Exchequer. He was an excellent mathematician, and published, in 1759, a treatise on the negative sign, in which he argues against the doctrine of negative quantities. He also printed a collection of "Scriptores Logarithmici," a work in 6 vols. 4to; a "Treatise on Life Annuities," with several historical tracts; and by his liberality induced the reverend Mr Hellins to undertake his edition of Colson's translation of Agnesi's "Istituzioni Analytiche," which,

but for his exertions, would have been lost to the world. This valuable work appeared in 1804. Baron Maseres, who was distinguished for strong sense and liberality, died at Reigate, in May, 1824, aged 93.—*Ann. Biog.*

MASHAM (ANIGAIL) the favourite of Queen Anne, noted in English history for her political intrigues. She was the daughter of Mr Hill, a rich merchant of London, who married the sister of Mr Jennings, the father of the dutchess of Marlborough. The bankruptcy of her father obliged her to become the attendant of a baronet's lady, whence she removed into the service of her relative, then lady Churchill, who procured her the place of waiting-maid to the princess Anne. She retained her situation after her mistress ascended the throne; and by her assiduity and complaisance she acquired a great degree of influence over her. The high church principles in which she had been educated, contributed to increase her credit with the queen, who was secretly attached to the tory party, though obliged, in the beginning of her reign, to favour the whigs. The marriage of Miss Hill with Mr. Masham, in 1707, occasioned an open quarrel with lady Marlborough, who was, in consequence of it, deprived of her majesty's confidence. Harley, afterwards earl of Oxford, connected himself with the new favourite; a change of ministry took place, and in 1711 Mr. Masham was raised to the peerage. He and his wife appear to have been actively engaged in the intrigues of the tories in favour of the exiled house of Stuart. Lady Masham lived a long time in retirement after the death of the queen, and died herself at an advanced age. The title of baron, bestowed on her husband, became extinct on the death of her only son, June 14, 1776.—*Smollett's Hist. of England. Biog. Univ.*

MASIUS, or DUMAS (ANDREW) born in 1516, at Lennich, near Brussels. He was one of the most learned men of the sixteenth century, and was appointed counsellor to William, duke of Cleves. He was particularly conversant with the Oriental languages, and produced "A Collection of various Pieces, Ancient and Modern, translated from the Syriac." Antwerp, 1569; "Syrorum peculium." 1571: "Grammaticæ Linguæ Syriæ;" and "Commentaries on the Books of Joshua and Deuteronomy."—*Morevi. Saxii Onom.*

MASKELYNE (NEVIL) an eminent mathematician and astronomer, who was descended from a Wiltshire family of respectability, but was born in London, in 1732. He was educated at Westminster-school and Catherine hall, Cambridge, whence he removed to Trinity college, of which he became a fellow. He took the degree of M.A. in 1757, and that of D.D. in 1777. He was chosen a fellow of the Royal Society; and in 1761 he was deputed to proceed to the island of St. Helena, to observe the transit of Venus; and during the voyage he employed himself in making lunar observations, with a view to ascertaining the longitude. In 1763 he went to Barbadoes, to try the accuracy of Harrison's time-keeper. On the death

of Mr Bliss, he succeeded to the office of royal astronomer; and in 1767 commenced the publication of "The Nautical Almanack," for which he published a volume of accompanying tables. (See CHARLES MASON.) In 1774, Dr Maskelyne was employed in making observations on the eclipses of Jupiter's satellites at Greenwich; and the same year he went to Scotland, to ascertain the gravitative attraction of the mountain Schehallien, in Perthshire, of which he published an account in the Philosophical Transactions. His death took place, February 9, 1811. He was the author of "The British Mariner's Guide; containing complete and easy instructions for the discovery of the longitude at sea and land," 1763, 4to; and "Astronomical Observations made at the Royal Observatory at Greenwich," 1784—88, 3 vols. folio; besides many papers in the Philosophical Transactions.—*Rees's Cyclopaedia. Biog. Univ.*

MASON (CHARLES) an English astronomer, who was an assistant of Dr Bradley at the royal observatory at Greenwich. He was employed to examine the lunar tables of Mayer, and the result of his labours appeared in "Mayer's Lunar Tables, improved by C. Mason, published by order of the Commissioners of the Board of Longitude," London, 1787. Mr Mason was sent to America with a grand sector, to determine the limits of the provinces of Maryland and Pennsylvania. He was accompanied by Mr Dixon, in conjunction with whom he measured a degree of the meridian; and an account of their operations was published by Dr Maskelyne in the Philosophical Transactions for 1768. Mason died at Pennsylvania, in February 1787. He communicated to the Royal Society an account of observations on the transit of Venus, June 3, 1769, made at Cavan in Ireland, and other papers, which may be found in the Philosophical Transactions.—*Biog. Univ.*

MASON (JOHN) a dissenting minister and theological writer of the last century. His father was also a minister, and he was educated at an academy at Kibworth in Leicestershire. After being private tutor in the family of governor Feaks, he became pastor of a congregation at Dorking in 1730; and in 1746 he removed to Cheshunt in Hertfordshire, to fill a similar situation. He died in February 1763. He was the author of a treatise on Self Knowledge, and four volumes of sermons, published under the title of "Lord's Day Evening Entertainment," both which became very popular. He also produced other religious works, and some tracts relating to Elocution.—*Aikin's G. Biog.*

MASON (WILLIAM) a distinguished English poet, was the son of a clergyman in Yorkshire, in which county he was born in 1725. He became a student of St John's college, Cambridge, and subsequently a fellow of Pembroke-hall in the same university. He made his debut in the literary world by the publication of "Isis," a poem, in 1748, in which he satirized the Jacobitism and high-church principles which prevailed in the university of

Oxford. This piece provoked a reply from the pen of Thomas Warton, entitled "The Triumph of Isis." In 1752 he published his "Elfrida," a tragedy, with choral odes on the ancient Greek model. Having taken orders in the church, he obtained the living of Aston in Yorkshire, and he was appointed one of the royal chaplains. In 1756 he published four "Odes," which were parodied in a ludicrous style by Messrs. Colman and Lloyd. In 1759 appeared his "Caractacus," a drama, on a kindred plan with the former. Both these pieces were subsequently introduced on the stage, but with little success. In 1762 Mr Mason was made precentor of York, with a canonry annexed to that preferment. One of his principal works, "The English Garden," a poem, in four books, appeared in 1772, 77, 79, and 81, 4to; and a second edition, with a commentary and notes, by W. Burgh, was printed in 1785, 8vo. This work was translated into French and German. In 1775 he published the poems of his friend Gray, with memoirs of his life. His principal subsequent publications are, "Ode to the Naval Officers of Great Britain," 1779, 4to; "Ode to the Hon. William Pitt," 1782, 4to; a translation of Du Fresnoy's Art of Painting, published with Sir Joshua Reynolds's notes, 1783 4to; the Life of William Whitehead, with his poems, 1783, 3 vols. 8vo; "A Secular Ode in Commemoration of the Glorious Revolution of 1688," 4to; and an "Essay on Church Music." Besides his acknowledged works, Mason is supposed to have been the author of the "Heroic Epistle to Sir William Chambers," and other satirical pieces, which were published under the signature of M'Gregor. At the beginning of the American war, Mr Mason became so active an advocate for freedom, as to give offence at court, and he was consequently dismissed from his chaplainship, but alarmed by the French Revolution, his zeal cooled in the latter part of his life. He died April 7, 1797.—*Aikin's G. Biog. Biog. Univ.*

MASSANIELLO, see ANELIO.

MASSENA (ANDREW) prince of Essling, duke of Rivoli, and marshal of France, distinguished for his services in the wars of the French republic and of Buonaparte. He was born at Nice in 1753. When young he made two voyages with a relation, who was captain of a merchant ship; but preferring the army, he enlisted as a common soldier in 1775, in the royal Italian regiment, in which one of his uncles was a captain. Having only attained to the rank of serjeant and adjutant after fourteen years service, he returned to his own country and to a private life. The Revolution again excited him to action, and afforded a field for the display of his military talents. The soldiers then choosing their own officers, he was nominated an adjutant-major, and in August 1792 made chief of a battalion. He became successively general of a brigade, and of a division in the army of Italy. He contributed much to the success of the campaigns of 1796 and 1797, which led to the treaty of

Leoben, when his bold and determined courage procured him the appellation of "the favourite child of victory." He had the chief command in Switzerland in 1799, when he finished the campaign, by completely routing the Austro-Russian army under the archduke Charles and general Korsakow. He was less fortunate in Italy in 1800, when he was beaten at Voltri by the Austrians, under Melas, and afterwards besieged in Genoa, and obliged to capitulate. But the inferiority of his forces sufficiently accounts for these disasters, without any impeachment of his military renown. In 1805 he was again employed in Italy, when he beat the archduke Charles on the 18th of October, near Verona, subsequently gained other advantages over him, and forced him to retreat into Hungary. He then commanded the army which took possession of Naples; and again distinguished himself in the campaign in Poland in 1806, terminated by the treaty of Tilsit. He was employed in Germany in 1809; and on the 3rd of May he defeated the Austrians under the archduke John, at the battle of Ebersberg; and shortly after signalized himself in the memorable engagements of Essling and Wagram, in which his services were so conspicuous, that he was decorated by Buonaparte with the title of prince of Essling. He was afterwards opposed to lord Wellington, in Spain and Portugal, in 1810 and 1811, when he maintained his former reputation, but was prevented by the skill and prudence of his adversary from gaining any new laurels. His Spanish campaign terminated his military career; but he survived the Restoration of the Bourbon family, dying at his seat at Ruel, near Paris, April 4th, 1817.—*Biog. Nouv. des Contemp.*

MASSIEU (WILLIAM) professor of Greek in the college royal of Paris, and member of the French academy, and of the academy of inscriptions and belles lettres, was born at Caen in 1665, and died in 1722. In the latter part of his life he had the misfortune to lose the sight of both his eyes, one of which he recovered by an operation. He was the author of several dissertations in the "Memoirs of the Academy of Inscriptions;" a preface to a new edition of the works of Tourneil; "A Translation of Six Odes of Pindar, with Notes;" "Histoire de la Poesie Française," much esteemed for its elegant simplicity; and a "Poem on Coffee," inserted by the abbé d'Olivet, in his collection of the works of some modern Latin poets—*Moreri. Nouv. Dict. Hist.*

MASSILLON (JOHN BAPTIST) an eminent French preacher, was born in 1663, being the son of a notary at Hieres in Provence. At the age of eighteen he entered into the congregation of the Oratory, where his agreeable manners and address exciting the envy of some of his brethren, they hinted suspicions of a display of too much gallantry towards the females, and he was sent to one of the houses of the society at Meaux. He was afterwards appointed to teach divinity at Vienne, and produced so great an effect, by a funeral ora-

tion on the deceased archbishop, that his superiors were induced to send for him back to Paris. In that capital he quickly distinguished himself, both by the pathos and originality of his pulpit oratory, until at length the curiosity of the king was excited, and he was appointed to preach a course of Advent sermons at Versailles. His success was as conspicuous at court, as elsewhere; and Louis XIV, who knew how to pay a fine compliment, thus addressed him: "My father, I have often had my pulpits filled with celebrated orators, with whom I have been greatly pleased; but whenever I hear you, I am displeased with myself." In 1717 the regent nominated him to the vacant see of Clermont; but before his departure he was appointed to preach a course of Lent sermons before Louis XV, which collection, ten in number, is known by the name of *Le Petit Carême*, and according to D'Alembert, forms a model of true pulpit eloquence. In 1729 he was admitted a member of the French Academy, and two years afterwards was presented to the abbey of Savigny. The remainder of his life he spent almost entirely in his diocese, gaining all hearts by his mildness, amenity, and pastoral benevolence. He died in 1742, at the age of sixty-nine. The only genuine edition of the works of Masillon, is that published by his nephew, at Paris, in 1745-6, in 14 vols. 8vo. His most striking passages and beauties have been collected in a single volume, by the abbé de la Porte, which selection has been since added as a last volume to the various editions of his works.—*D'Alembert Eloge de Massillon Nouv. Dict. Hist.*

MASSINGER (PHILIP) a distinguished English dramatist, in the beginning of the seventeenth century. He was the son of a retainer of the earl of Pembroke, and was born at Salisbury in 1585. He entered as a commoner at Alban-hall, Oxford, but quitted the university without taking a degree, in consequence, perhaps, of his having become a Roman Catholic. But little is known of his personal history, yet he appears to have been intimately connected with the wits and poets of his time, in conjunction with some of whom, as Fletcher, Middleton, Rowley, and Dekker, he composed some of his dramas. He is supposed to have resided in the neighbourhood of the theatre, Bankside, Southwark, and to have died there in 1639, as he was buried in the adjacent church of St Saviour. As a dramatist, Massinger is deemed more natural in his character, and poetical in his diction, than Jonson or Cartwright, and some recent critics rank him next to Shakspeare. In tragedy, however, he is rather eloquent and forcible, than pathetic; and in richness and variety of humour, his comedy can by no means vie with that of his great master. His plays were published collectively, by Mr J. M. Mason, and Mr T. Davies, in 1779. 4 vols. 8vo; but the best edition is that of Mr W. Gifford, with notes, and a life of Massinger, 4 vols. 8vo, 1805.—*Aikin's G. Biog. Life by Gifford.*

MASSON (FRANCIS) a gardener and enthusiastic botanist; was born at Aberdeen, in

1741. He was sent in 1771 to the Cape of Good Hope, to collect plants for the royal gardens, and roamed with that object over a vast extent of country. He afterwards visited the Canaries and the West Indian islands, with the same object, and returned to the Cape in 1786, where he remained until 1795. He then undertook a voyage to North America, and thus spent a great portion of his life in solitary rambling, in furtherance of the branch of natural history to which he was so zealously attached. He thought himself repaid for all his labours by the attachment of the name Massonia to a specimen in the herbarium of Linnaeus, with whom he corresponded. He published, in 1796, a splendid folio volume on the genus staphelia.—*Rees's Cyclop.*

MASSON (JOHN) a minister of the reformed church, who was a native of France, whence he emigrated to England after the revocation of the edict of Nantes. He then settled in Holland, and assisted in a critical journal, entitled, "*Histoire Critique de la Republique des Lettres*," from 1712 to 1721. He also wrote the lives of Horace, Ovid, and Pliny the younger, in Latin; and "*Histoire de Pierre Bayle et de ses Ouvrages*," 12mo. He died in England about 1750.—SAMUEL MASSON, brother of the preceding, was pastor of the English church at Dordrecht, and was the conductor of the *Histoire Critique* just mentioned.—PHILIP MASSON, a relative of the two former, appears to have been a coadjutor in the same work. He was the author of a Critical Dissertation, designed to shew the utility of the Chinese language in explaining various passages of the Old Testament.—*Camusat Hist. Crit. des Journ. Biog. Univ.*

MASSON (JOHN PAPIRIUS) a French historical writer, born in 1544, and died in 1611. He entered into the society of the jesuits, whom he left to become a counsellor of the parliament of Paris. His principal work is entitled "*Eulogia Virorum Clarissimorum*." He also wrote *Annals of France*; an *Account of the Bishops' Sees*; a *Description of the French Rivers*, and other works.—*Dict. Hist. Biog. Univ.*

MASSUET (RENE) a learned benedictine, of the congregation of St Maur; was born at St Owen de Macelles in 1665. He published an edition of the works of St Irenæus, more full and complete than any that had hitherto appeared; and to this he prefixed three dissertations, which prove his judgment and erudition. He was engaged by his superiors on a continuation of the "*Lives of the Saints*," and the "*Annals of the Benedictine Order*;" to the fifth volume of which the life of Mabillon was prefixed in Latin. Massuet was about to commence another volume, when he was seized by a paralytic stroke, of which he died in 1716. Besides the above, he published a small piece in defence of the benedictine edition of "*The Works of St Augustine*;" and in 1703 he published a larger piece, addressed to the bishop of Bayeux, in answer to his censure of several propositions selected from the writings of the benedictine professors at Caen. Five of his

Lat'n letters to D. Bernard Pez, a German benedictine, are inserted in the thirteenth volume of Schelhorn's "Amnities Litterariæ."—*Dupin. Moreri. Nouv. Dict. Hist.*

MASTERS (THOMAS) a poet; was born at Cotes in Gloucestershire, and was educated at Winchester school, whence he removed to New College, Oxford, where he obtained a fellowship. He wrote "Mensa Lubrica," a poem, in Latin and English, describing the game of shovel-board; "A Greek Poem on the Passion of Christ," translated into English by Cowley; and three orations, "Carolus Redux," "Ad Regem Caolium," "Iter Boreale." He gave lord Herbert of Cherbury great assistance in his "Life of Henry VIII," and also had a share in the translation of his lordship's work, "De Veritate." He died in 1643. *Ath. Or.*

MASTERS (ROBERT) a divine and antiquary, was born at London in 1713, and was educated at Corpus Christi college, Cambridge, where he obtained a fellowship. In 1756 he was presented to the rectory of Landbeach in Cambridgeshire, which he afterwards resigned to one of his sons-in-law, though he continued to reside in the place, and died there in 1798. He also had the vicarage of Linton, which he exchanged for that of Waterbeach. He was the author of a most complete "History of the College of Corpus Christi;" "A Section and Ichnography of Pythagoras's School at Cambridge, with the Seal of Merton college, Oxford, to which it belongs;" "Memoirs of Thomas Baker;" "Account of the Parish of Waterbeach;" "Papers in the Archæologia;" "A Catalogue of the Pictures in the University of Cambridge."—*Nichols's Lit. Anec. Gough's Topography.*

MATHER (COTTON) a North American nonconformist divine and ecclesiastical historian. He was the son of the rev. Increase Mather, and was born at Boston, in New England, in 1663. He was educated at Harvard college, Cambridge, in the province of Massachusetts; and in 1684 he entered on the ministry at Boston. He not only distinguished himself by attention to the duties of his profession, and by his literary labours, but also by his public spirit and philanthropy, which he manifested in the establishment of several useful institutions, and particularly of a society of peacemakers, whose professed object was the settling of differences, and the preventing of lawsuits. He likewise published proposals for the establishment of an evangelical treasury, for the erection of churches, the distribution of good books, the relief of necessitous ministers, &c. His merit procured him the diploma of DD. from the university of Glasgow, and he was also chosen a fellow of the Royal society. He died in 1728. His publications amount to more than three hundred and eighty in number; many of them indeed are only single sermons and short tracts, but others are of considerable size. Among these the most important is the "Ecclesiastical History of New England, from its first Planting in 1620, to 1698," London, 1702, folio. His "Wonders of the Invisible World, being an

Account of the Trials of several Witches lately executed in New England," is a curious monument of the folly and prejudice of the age and country in which the author lived, and in which he largely participated.—His father, INCREASE MATHER, was also a native of New England, but received part of his education at the university of Dublin, and was for a time settled as a minister in Devonshire. He returned to his native country after the Restoration of Charles II, and became pastor of a church at Boston, and afterwards president of Harvard college. He died in 1723, aged eighty-seven. He was the author of a "Discourse on Comets," reprinted a few years ago, and other works.—*Biog. Brit. Life of C. Mather, by Dr Jennings.*

MATSYS (QUINTIN) a painter, who was originally a blacksmith, born at Antwerp in 1460. Different accounts are given of the occasion of his quitting the forge for the pencil, but most of his biographers agree that it was in consequence of becoming enamoured of the daughter of a painter, whose hand was to be obtained only by a master of the same profession. He chiefly painted portraits and half figures in common life, but sometimes undertook great works, of which a descent from the cross, in the cathedral of Antwerp, is a favourable specimen. His picture of the two misers at Windsor is also much admired. He died in 1529.—*Pilkington. De Piles.*

MATTHEW OF WESTMINSTER, an ancient English chronicler, was a benedictine monk of the abbey of Westminster, who lived in the fourteenth century. He compiled a chronicle, commencing from the creation, and extending to the year 1307, which he entitled, "Flores Historiarum," whence he had the name of Florilegus. This work, which chiefly relates to English history, very freely transcribed from Matthew Paris, is much esteemed for veracity and accuracy by some writers, but bishop Nicolson thinks very lightly of it. The "Flores Historiarum," was published at London, 1567; and at Frankfort, 1601; at both places in folio.—*Vossii Hist. Lat. Nicolson's Hist. Libr.*

MATTHEU (PETER) historiographer of France, was born in 1563 at Porentru. He studied among the jesuits, and became principal of the college of Verceil. He was introduced to Henry IV by the president Jeannin, and on the death of Du Haillan was made historiographer of France. He died at Toulouse in 1621. His works are, "The History of France, from Francis I to Louis XIII," 2 vols. folio; "History of Henry IV," folio, "History of St Louis;" "History of Louis XI;" "La Guisade," a tragedy; and some moral verses, entitled "Quatrains sur la Vie et la Mort."—*Moreri. Nouv. Dict. Hist.*

MATTHIOLUS or MATTHIOLI (PETER ANDREW) an eminent physician, was born at Sienna in 1501, and educated at Venice and Padua. He practised at Anania, at Rome, and at Gouzia. He was extremely amiable, and of this the following is a proof. His furniture being consumed by fire at Anania, the

people flocked to him the next day with presents of goods and money, so that he soon became richer than before. In 1554 he accepted an invitation from Ferdinand, king of the Romans, to become physician to his second son, the archduke Ferdinand. In 1562 he was created aulic counsellor to the emperor Ferdinand. Maximilian II prevailing upon his brother to part with him, made him his first physician. He died at Trent, in 1577. His works are, "A Commentary upon Dioscorides," the best edition of which was published at Venice in 1565; "Dialogus de Morbi Gallici curatione;" "Epistolæ Medicinales;" "Opuscula de Simplicium Medicamentorum Facultatibus."—*Rees's Cyclop.*

MATHEI (CHRISTIAN FREDERIC) a learned Hellenist, born at Grost, in Thuringia, in 1744. After studying under Ernesti, he was invited by the empress of Russia to occupy the chair of belles lettres in the university of Moscow. He returned to Germany in 1785, to search for ancient MSS. in the public and private libraries. In 1789 he accepted the professorship of philosophy at Wittemberg; but having finished his researches, he returned to Russia, laden with the stores of learning which he had collected. In 1805 he was nominated aulic counsellor, and professor in ordinary of classical literature at Moscow, where he died in September, 1811. He distinguished himself by the discovery of the "Hymn to Ceres," attributed to Homer; and part of the "Clytemnestra" of Sophocles, which however, has been rejected by most critics as supposititious. Besides an edition of the New Testament in Greek and Latin, 12 vols. 8vo, 1783, Matthæi published a vast number of editions of ancient authors, and other works, the most important of which are enumerated in our authority.—*Biog. Univ.*

MATTI (DON EMANUEL) a Spanish poet, was born at Oropesa in New Castile, in 1663. In 1682 he published a volume of poetical essays, which gained him the affections of a lady of high rank and beauty; but being an ecclesiastic, to avoid the temptation, he went to Rome, and Innocent XII made him dean of Alicant, at which place he died in 1737. His letters and Latin poetry were published at Madrid, in two volumes 12mo, in 1735, and prove that he possessed much imagination and facility of writing.—*Nouv. Dict. Hist.*

MATURIN (CHARLES) an ingenious, but eccentric clergyman of the established church, curate of St Peter's, Dublin, and author of several popular romances, &c. many of which, especially his "Family of Montorio," evince great powers of imagination, with a happy fecundity of language, but exhibit an almost equal degree of carelessness in the application of both. "Bertram," a tragedy, performed at Drury Lane Theatre, with Kean as the representative of the principal character, was the first production which, by its singular success, brought him into notice as an author. This effort is said to have produced him 1000*l.* In a subsequent dramatic attempt he was not so fortunate, while having, it is to be

feared, anticipated his resources, without contemplating the possibility of a failure, he contracted embarrassments, from which he was seldom entirely free till his death in the October of 1825. He published, in 1821, a poem in blank verse, entitled, "The Universe," which brought him more of profit than reputation; and in 1824 appeared six of his "Controversial Sermons," preached at St Peter's, during the Lent of that year. These exhibit him as a well read scholar, and an acute reasoner, and are perhaps the best foundation on which to rest his claims to the notice of posterity. He is said to have been remarkably felicitous in their delivery, and to have attracted by his eloquence unprecedented congregations.—*Gent. Mag.*

MATY (MATTHEW) a learned and ingenious writer of the last century. He was the son of a clergyman, and was born in Holland in 1718. Having finished his studies at Leyden, where he took the degree of MD. he came to England in 1740; and about ten years after, he commenced a review of English books published in the French language, under the title of "Journal Britannique." On the foundation of the British Museum, Dr Maty was appointed one of the librarians, and on the death of Dr Knight in 1771, he obtained the office of principal librarian. In 1758 he was chosen a fellow of the Royal society, and he succeeded Dr Birch as secretary to that institution. He died in 1776. He wrote "Memoirs of the Earl of Chesterfield," prefixed to the miscellaneous works of that nobleman, published in 1777, 2 vols. 4to.—**MATY (PAUL HENRY)** son of the preceding, was born in 1745. He received his education at Westminster school, and Trinity college, Cambridge, where he took the degree of MA. and obtained a travelling fellowship. He took orders in the church, but afterwards resigned the clerical office, and dedicated his time to literary pursuits. He was assistant librarian at the British Museum, and for a time foreign secretary to the Royal society; but he relinquished that situation in consequence of a dispute with sir Joseph Banks. In January 1782, he commenced the publication of a monthly critical journal, called, "The New Review," which he conducted with great spirit and ability, unassisted, for four years; but his unremitting application injured his health, and eventually caused his death, which took place in 1787. He translated baron Riesbeck's travels into English, and a posthumous volume of his sermons was published in 1789.—*Nichols's Lit. Anec. Hutchinson's Biog. Med. Gent. Mag.*

MAUBERT DE GOUVES (JOHN HENRY) a public writer, less known on account of his works, than for the singularity of his adventures. He was born at Rouen in 1721; and having finished his studies, he entered into the order of the capuchins. In 1745, he fled from his convent, and took refuge in Holland. He next entered into the Saxon army, and served at the battle of Dresden; and afterwards became tutor to the son of his general. Having

by his writings, offended the king of Poland, he was arrested, and confined in the castle of Koningstein till 1752. He obtained his liberation on condition of resuming the habit of a capuchin; but instead of confining himself to the cloister, he again made his escape, and after a series of varied wanderings and projects, he died at Altona in 1767. Among a number of works which he published on politics and contemporary history, may be mentioned, "Le Testament Politique du Cardinal Alberoni," 12mo; "Histoire Politique du Siècle," 2 vols. 4to; "Le Testament Politique de Walpole;" and "Ephraim Justifié."—*Biog. Univ.*

MAUCROIX (FRANCIS de) a French translator, was born at Noyon in 1619. He followed the profession of an advocate; but being disgusted with the law, he entered the church, and became canon of the cathedral of Rheims, where he died in 1708. He translated "The Philippic of Demosthenes;" "The Euthydemus and the greater Hippias of Plato;" "Some Orations of Cicero;" "The Homilies of St Chrysostom, addressed to the people of Antioch;" "Sanderus's History of the English Schism;" "The Lives of Cardinals Pole and Campeggio;" the "Rationarium Temporum" of Father Petau. In conjunction with Boileau, he published a volume of their miscellaneous works; and in 1726 were published "Les Nouvelles Œuvres de Maucroix."—*Moreri. Nouv. Dict. Hist.*

MAUDUIT (ISRAEL) a political writer of some celebrity in his day, was born in 1708, at Bermondsey, in which parish his father was a dissenting minister. He was educated for the dissenting ministry himself, but became a very prosperous merchant. He first appeared as an author in 1760, when he published a pamphlet, entitled, "Considerations on the present German War," which excited great attention. In 1765 he was appointed to the customs of Southampton, and some time after agent for the province of Massachusetts; and in consequence of the rising disputes with the Colonies, he published in 1769 his "Short View of the History of the New England Colonies." In 1774 he took up the cause of the dissenting clergy, in a pamphlet, entitled "The case of the Dissenting Ministers;" and subsequently wrote several able pamphlets in reference to the American war, in which he was particularly severe on Viscount and Sir William Howe. He died in June 1787.—*Manning and Bray's Hist. of Surrey.*

MAUPERTUIS (PETER LOUIS MOREAU de) a celebrated French mathematician and philosopher, was born at St Malo in 1698, and studied at the college of La Marche, in Paris, where he discovered a strong predilection for the mathematics. At the age of twenty he entered the army, in which he served four years. In 1723, he was received into the Academy of Sciences; and soon after visited England and Switzerland, where he became a pupil and admirer of Newton, and formed a lasting friendship with the celebrated John Bernoulli and his family. On his return to Paris, he applied himself to his favourite stu-

dies, with greater ardour than ever; and the memoirs of the academy contain the most honourable testimonies of his zeal and proficiency. In 1740, he formed one of the eminent scientific party appointed to measure a degree of the meridian at the polar circle; and so distinguished himself on the occasion, that he was admitted a member of almost every academy in Europe. In 1740, he received an invitation from the king of Prussia to settle at Berlin; where he did not remain long in the first instance, and on his return to Paris was, in 1742, chosen director of the Academy of Sciences; and the following year received into the French Academy. He returned to Berlin in 1744, and contracted an alliance with a young lady who was nearly related to M. Borck, at that time minister of state. In 1746, he was declared, by the king of Prussia, president of the Academy of Sciences at Berlin; and the same monarch, soon after, bestowed upon him the order of Merit. Fortunate, however, as he was deemed by others, an unhappy restlessness of temper, and a dark, atrabilious humour, proved a source of continued disquiet; and a controversy with Kœnig, which also subjected him to the ludicrous and overwhelming satire of Voltaire, completed his uneasiness. At this time his health, injured, it is said, both by his northern expedition and incessant application, began to give way, and he sought relief by repeated visits to his native country. His disorder, however, seems to have uniformly revived with his return to Berlin; and he at length died, on his return from one of these excursions, at the house of his friend Bernoulli, at Basil, in 1759, in the sixty-first year of his age. Maupertuis was a man of probity and of very considerable abilities as a mathematician and man of science; but his acquaintance with general literature was far from extensive, and his vanity and gloomy temperament materially interfered with his pretensions as a philosopher. His works, which are collected in four 8vo volumes, published at Lyons in 1756, and reprinted in 1768, consist of "Essay on Cosmology;" "Discourse on the different Figures of the Stars;" "Philosophical Reflections on the Origin of Languages;" "Animal Physics;" "Essay on Moral Philosophy;" "System of Nature;" "Letters on various Subjects;" "On the Progress of the Sciences;" "Elements of Geography;" "Expedition to the Polar Circle;" "Journey to Lapland, in search of an ancient Monument;" "On the Comet of 1742;" "Dissertation upon Languages;" "Academical Discourses;" "Upon the Laws of Motion;" "Upon the Laws of Rest;" "Agreement of the Laws of Nature which have appeared incompatible;" "Operations for determining the Figure of the Earth," &c. Besides these works, he was the author of a great number of interesting papers in the memoirs of the academies of Paris and Berlin.—*Hutton's Math. Dict.*

MAURICE (THOMAS) a learned Oriental scholar and historian, descended of a respectable Welch family. On the death of his father, who had for twenty-six years held the

situation of head-master in the Hertford department of Christ's hospital, Thomas, the eldest of six children, was admitted upon the foundation of that establishment; but the air of London not agreeing with the delicacy of his constitution, he was soon after removed, and went through a course of education at various private seminaries, the last of which was that of the celebrated Dr Parr, then recently established at Stanmore-hill. At the age of nineteen he entered at St John's, Oxford, but quitted that college in about a year after for University college, where he was under the immediate tuition of the present lord Stowell. About this period he commenced his career as an author, by the publication of a translation of the "Œdipus Tyrannus" of Sophocles (which gained him great credit); "The School Boy," "The Oxonian," "Netherby," and "Hagley," poems; "A Monody to the Memory of the Dutchess of Northumberland," and a satire, entitled "Warley," which last appeared in 1778. On taking his degree of AB. he was ordained to the curacy of Woodford, Essex; but about two years after, obtaining an unexpected bequest of 600*l.* he laid it out in the purchase of the chaplaincy of the 97th regiment; the half-pay of which he continued to receive till the day of his decease. In 1783 he began the arduous undertaking of writing a history of India, from the era of Alexander's invasion down to that period at which Mr Orme's work commences. After seven years' labour, he was, however, induced to defer his original intention, and to prepare for the press a separate work, introductory to his grand design, the first volumes of which he printed in 1791, under the title of "Indian Antiquities." This treatise contains, among other learned enquiries, a learned dissertation on the Indian theology, in which he endeavours to strengthen the doctrine of the trinity from that of the Divine triads, as acknowledged by the Asiatics. In 1795 he brought out the first volume of his "History of Hindostan." The second followed in 1798, and the third, and final part, in 1799. At this period earl Spencer presented him to the vicarage of Wormleighton, Warwickshire, and the appointment of assistant librarian to the British museum, was also conferred upon him. In 1802 appeared his "Modern History of Hindostan," incorporating the accounts given by Arabian, Venetian, Portuguese, and British writers, to the close of the eighteenth century. The concluding volume of this work was not published till 1804, in which year the author was presented by the lord chancellor with the living of Cudham in Kent. He died at his rooms in the British museum, March 30, 1824. Mr Maurice was intimately acquainted with most of the distinguished scholars of his time; and, in addition to the labours already recorded, published during his life-time, a great variety of miscellaneous works, the principal of which are, "Ierne Rediviva," an ode, 1782; "Westminster Abbey," an elegiac poem, 1784, republished in 1813, in a more splendid form, with other occasional poems;

"Panthea, or the Captive Bride," a tragedy and an "Elegy on the Duke of Northumberland," 1789; "Elegiac Poem on the Death of Sir W. Jones;" "Sanskrit Fragments," and the "Crisis," a poem, 1798; "Grove Hill," a poem, and an "Ode to Mithra," 1799; Extracts from his "Indian Antiquities," printed in a separate form, under the title of "A Dissertation on the Oriental Triunities," 8vo, 1800; "The Fall of the Mogul," a tragedy, 1806; "Richmond Hill," a poem, 1807; "Supplement to the History of India," 4to, 1810; "Brahminical Fraud detected, in a series of Letters to the Episcopal Bench," 1812. In this work he examines the attempts of the Indian priesthood to invest their deity, Crishna, with the attributes of the Christian Messiah, known to them through the Evangelium Infantie. "Observations connected with Astronomy and Ancient History on the Ruins of Babylon, as recently visited and described by Claudius James Rich, Esq." 4to; and lastly, an appendix to the latter treatise, entitled "Observations on the Remains of Ancient Egyptian Grandeur and Superstition, as connected with those of Assyria."—*Ann. Biog.*

MAUROLICO or MAUROLICUS (FRANCIS) a celebrated Italian mathematician, was born at Messina in 1494. He was abbot of Santa Maria del Porto in Sicily, and for a long time professor of mathematics in his native city. He made many important discoveries in geometry and optics, on which he wrote the following works, "The Spherics of Theodorus;" "Emendatio et Restitutio Conicorum Apollonii Pergæi;" "Archimedis Monumenta omnia;" "Euclidis Phænomena;" "Martyrologium;" "Sicanicarum Rerum Compendium;" "Rime;" "Arithmeti corum Libriduo;" "Photismus de Lumine et Umbra;" "Opuscula Mathematica;" "Cosmographia;" "De Lineis horariis;" and "Problemata mechanica ad Magnetem et ad Pyxidem nauticum pertinentia." Maurolico also restored the fifth book of Apollonius, which had been lost.—*Niceon. Nouv. Dict. Hist. Moveri.*

MAURY (JOHN SIFFREIN) a modern French statesman and ecclesiastic. He was born at Valeras in 1746, of a respectable family, and having studied at Lyons, he entered into holy orders. He settled in the metropolis, where he became distinguished as an eloquent preacher, and his talents were rewarded with church preferment, and a place in the French academy. Previously to the Revolution he was also preacher to the king, and on the occurrence of that event he was elected a deputy from the clerical order to the States-general. He displayed his gratitude to his benefactors, and consecrated his eloquence to the defence of the monarchy. He opposed the re-union of the three orders, and that measure being effected, he absented himself for some time from Versailles, and was arrested at Péronne; but afterwards set at liberty by command of the legislative body. In the National Assembly he strongly advocated the rights and privileges of the king and of the clergy, and endeavoured to prevent the pro-

perty of the latter from being declared national property. On the dissolution of the Assembly he went to Rome, when the pope bestowed on him the title of bishop, and sent him, in 1792, as apostolic nuncio to Frankfort, to assist at the coronation of the emperor of Germany. Some time after he was made archbishop of Nicæa, and in 1794 he received a cardinal's hat. When Buonaparte had established himself on the imperial throne of France, the abbé Maury tendered submission to his authority, and the archbishopric of Paris was bestowed on this eloquent churchman, as the reward of his obedience. On the Restoration of the royal family, he removed from his native country, and died at Rome in 1817. He obtained distinction by his writings, as well as by his public discourses; and among several works which he published, his "Essai sur l'Eloquence" may be mentioned as highly creditable to his talents.—*Dict. des H. M. du 18me. S. Biog. Nouv. des Contemp.*

MAXIMUS TYRIUS, a celebrated philosopher of the second century, was a native of Tyre in Phœnicia, whence he took his name. It is generally supposed that he flourished under Antoninus. He appears to have adopted the principles of the Platonic school, with an inclination to scepticism. He left forty-one "Dissertations" on various philosophical topics, still extant, and written with extreme eloquence. They were published in Greek, by Stephens, in 1557, and in Greek and Latin, by Heinsius, in 1607.

MAY (THOMAS) a poet and historian, was the eldest son of sir Thomas May, knt. of Mayfield in Sussex, where he was born about 1595. He entered a fellow-commoner at Sidney Sussex college, Cambridge, and was afterwards admitted a member of Gray's Inn; but he never seems to have followed the law as a profession. His father having spent nearly all the family estate, he enjoyed but a scanty inheritance, which misfortune he bore with great equanimity, and consoled himself by an assiduous attention to literature. He was much noticed by Charles I, and the more refined wits of his early courts; and first sought distinction in the drama, being the author of three tragedies and two comedies, which were highly esteemed in their time. He also composed several poetical translations, as Virgil's "Georgics," with annotations; Lucan's "Pharsalia;" to the latter of which he supplied a continuation of his own, both in Latin hexameters and in English. He likewise translated Barclay's "Icon Animorum," and had a share in the version of his "Argenis." Of the original poems of May, the principal are his "Reign of Henry II," and "The victorious Reign of Edward III," each in seven books. The bounty of Charles I was not sufficient to secure the attachment of the poet; for, according to lord Clarendon, it was disgust at being denied a small pension, which induced him, on the breaking out of the civil war, to enter into the service of Parliament, to which he was appointed secretary; and the result was his well-known "History of the

Parliament of England, which began November 3, 1640," a work which became extremely obnoxious to the royal party, who vilified both the author and his production, without measure. Granger, however, asserts, that with little elegance of composition, there is much more candour than the royalists were willing to allow, and the opinion of Warburton is still more favourable. He afterwards made an abstract of this history, under the title of "A Breviary of the History of the Parliament of England," 1650, 8vo. He died a few months after the publication of his Breviary, at the age of fifty-five, on the 13th November, 1650; and his death, which happened suddenly, was attributed by Andrew Marvell, to a little too much previous indulgence in wine. He was buried in Westminster abbey, by the order of Parliament, which also erected a monument to his memory. This was taken away at the Restoration, and the body of May, with undignified animosity, disinterred, and tumbled, with many others, into a pit, dug for that purpose, in St Margaret's church-yard.—*Biog. Dram. Biog. Brit. Granger. Warburton's Letters to Hurd.*

MAYER (JOHN FREDERIC) a learned German Lutheran divine, was born at Leipsic in 1650. He was very deeply read in the Latin, Greek, and Hebrew languages, and being admitted to the degree of DD, he became professor successively at Wittemberg, Hamburgh, and Stettin, in Pomerania, and was appointed superintendant general of the churches in the district of that city. He died in 1742. His works are, "The History of Martin Luther's German Version of the Bible, with a short Account of the Translations of the sacred Books before his Time, &c.;" "An Account of the Moderns who have written against the sacred Scriptures;" "An Exposition of the two first Psalms;" "Bibliotheca Biblica," 4to, which treats of the most celebrated Jewish, Christian, Catholic, Calvinist, and Lutheran authors, who have illustrated the sacred Scriptures; "Enquiries;" "Dissertations;" &c.—*Moreri. Nouv. Dict. Hist.*

MAYER (TOBIAS) an eminent astronomer and mechanic, was born at Maspach in the dutchy of Wirtemberg, in 1723. He taught himself mathematics, and at a very early age he employed himself in designing machines and instruments, which was his father's profession. At the same time he applied to the study of the classics, and wrote Latin with elegance. At the age of eight-and-twenty he was appointed mathematical professor at the university of Gottingen. He made many considerable discoveries in geometry and astronomy, and invented several useful instruments for the more exact measurement of angles on a plane. He died at the early age of thirty-nine, exhausted by his labours. His table of refractions deduced from his astronomical observations, agrees very nearly with that of Dr Bradley; and his theory of the moon, and astronomical tables and precepts, were rewarded by the English board of Longitude with 3000*l.* which were paid to his

widow. He was also the author of "An Account of a Lunar Globe constructed by the Cosmographical Society of Nuremberg, from new Observations;" "A Mathematical Atlas;" "A new and general Method of resolving all Geometrical Problems by Geometrical Lines, &c." with many very exact maps.—*Nouv. Dict. Hist. Hutton's Math. Dict.*

MAYERNE (THEODORE TURQUET de) baron d'Aubonne, an eminent physician, the son of Louis de Mayerne, author of a "General History of Spain," and of the "Monarchie Aristo-democratique," was born at Geneva in 1573. He studied physic at Montpellier, where he took his doctor's degree in 1597. In 1600 he was appointed physician in ordinary to Henry IV, who sent him to attend Henry duke of Rohan, deputed ambassador to the diet at Spire. On his return he lectured publicly on pharmacy and anatomy; and applying himself to the study of chemistry, he incurred the anger of the faculty by his recommendation of chemical remedies. In 1607 he came over to England, but returning to France, he remained there until the assassination of Henry IV, when he was formally invited by James I to come and take the office of first physician, with which he complied. He continued in this post during the reign of Charles I, and died at Chelsea in 1655. His works were all published in folio in 1701, by Mr Joseph Brown. Lord Orford says, in his *Anecdotes of Painting*, that the famous Petitot owed the perfection of his colouring in enamel to some chemical secret communicated to him by Mayerne. He was also well acquainted with natural history, and was the editor of Mouffet's posthumous "Theatrum Insectorum."—*Halleri Bibl. Med. Prac. Aikin's Biog. Mem. of Med. Moreri.*

MAYNARD (sir JOHN) an English statesman and lawyer, born at Tavistock in Devonshire, in the early part of the seventeenth century. After having studied at Exeter college, Oxford, he entered at the Middle Temple, and was in due course called to the bar. He was a member of the Long Parliament, and was actively engaged in the prosecution of the earl of Strafford and archbishop Laud. He afterwards showed that he was influenced by principle, as he opposed the tyranny of Cromwell with so much firmness, that he was committed to the Tower. He attained the rank of sergeant-at-law, and after the Restoration, received the honour of knighthood, and might have been raised to the bench, but he declined the promotion. In the parliamentary debates which took place previously to the dethronement of James II, he warmly advocated that measure. His bon-mot, in reply to an observation addressed to him by William III, though well known, may be mentioned as expressive of his character and sentiments. That prince, in allusion to sergeant Maynard's great age, having remarked that he must have outlived almost all the lawyers of his time—"Yes," replied sir John, "and if your highness had not come over to our assistance, I should have outlived the law too."

He was appointed one of the commissioners of the Great Seal in 1689, and he died in the following year.—*Biog. Brit.*

MAYNARD (FRANCIS) a French poet, and member of the Royal academy, born at Toulouse in 1532. His poems obtained him considerable reputation in his day, but they are now little known. He was secretary to two queens of France, a situation probably of more honour than profit, as the poet, having neglected the most certain road to independence, by the industrious exertion of his talents, and being disappointed in his hopes of preferment, from the patronage of cardinal Richelieu, retired in disgust to his native province, where he died in 1640.—*Moreri. Dict. Hist.*

MAYNE (JASPER) a dramatic writer of the seventeenth century. He was a native of Hatherleigh in Devonshire, and was educated at Westminster school and Christchurch, Oxford, where he took the degree of DD. and he also entered into holy orders. His attachment to the royal cause exposed him to suffering during the civil war; but after the Restoration he was made a canon of Christchurch, and archdeacon of Chichester. He wrote a comedy, called "The City Match," and "The Amorous War," a tragi-comedy; and he translated some of the dialogues of Lucian; besides which he published some sermons. His theatrical productions display a good deal of humour, but of the broadest kind, though he has the merit of not being chargeable with the want of decency so common in the dramatic works of his contemporaries.—*Biog. Brit.*

MAYNWARING (ARTHUR) a political and miscellaneous writer, was born of a good family at Ightfield in Shropshire, in 1668. He was educated at the grammar school of Shrewsbury, and in due time removed to Christchurch, Oxford. He commenced life under the auspices of an uncle, who was a decided Jacobite; and one of his first literary attempts was a satire on William and Mary, entitled, "Tarquin and Tullia." He subsequently, however, fell into company with the Whig leaders, and changing his political sentiments altogether, became first commissioner of customs, and afterwards auditor of impost. In 1705 he was chosen Burgess in parliament for Preston in Lancashire. He died in 1712, leaving the celebrated Mrs Oldfield, the actress, by whom he had a son, his executrix. He published many miscellaneous productions in verse and prose, which were much esteemed in their day. All these were collected by Oldmixon into an octavo volume, entitled, "The Life and Posthumous Works of Arthur Maynwarling, Esq." which contains many curious particulars in relation to the political history of the times.—*Life by Oldmixon.*

MAYOW (JOHN) a learned physician, was born in Cornwall in 1645, and studied at Oxford. He graduated in civil law, but studied and practised physic at Bath. He died at the house of an apothecary in York-street, Covent-garden, in 1679. He wrote "De Sale Nitro et Spiritu Nitro-aërio;" "De Respi-

ratione;" "De Rachitide;" "De Respiratione Fœtus in Utero et Ovo;" "De Motu Musculari et Spiritibus Animalibus;" "Tractatus quinque Medico-physici." From these treatises he may be at least considered as a precursor to some of the most remarkable discoveries in pneumatic chemistry; and had he been living in the present day, would have been among the first of chemical philosophers.—*Halleri Bibl. Gen. Biog. Diet.*

MAZARIN (JULIUS) a celebrated statesman of the seventeenth century. He was born at Piscina, in the territory of Abruzzo, in Italy, July 14, 1602. He received his education at the Spanish university of Alcalá, and afterwards going to Rome, he entered into the service of cardinal Sacchetti, with whom he went into Lombardy. Though he had embraced the ecclesiastical profession, he made politics his chief study, and having been instrumental in arranging the contested points between the French and Spaniards, and thus contributed to the treaty of Quieras, he obtained the patronage of cardinal Richelieu, through whose influence, and the recommendation of cardinal Barberini, he was sent by the pope as nuncio-extraordinary to the court of Versailles, towards the close of the reign of Louis XIII. That prince in 1641 procured him a cardinal's hat, and on the death of Richelieu in the following year, Mazarin became prime minister. A few months after, the king died, and the new premier, by his influence with the queen regent, Anne of Austria, in the minority of her son, Louis XIV, arrived at the possession of supreme power. At first his administration was popular, but discontents arising from various causes, France became the scene of intestine commotions, and the cardinal found himself obliged to give way to the power of his enemies, and quit the helm of the state. He was forced to flee to save his life, as a price was set upon his head, and his valuable library was confiscated and sold. But the king, shortly after coming of age, recalled Mazarin to his councils, and he soon resumed his former ascendancy. He made peace with the government of Spain, by which the malcontents had been supported, and he negotiated a treaty of marriage between the king, his master, and the Spanish infanta. Having thus secured his power, he maintained his station till his death, which took place at Vincennes, March 9, 1661. Cardinal Mazarin was an able politician, but a profligate character, both as a statesman and an ecclesiastic. It is somewhat remarkable, that notwithstanding his worldly sagacity, he was a believer in astrology, and the dupe of juggling impostors. His correspondence has been published.—*Voltaire Siècle de Louis XIV. Moreri.*

MAZEPPA (JOHN) hetman of the Cossacks, the hero of lord Byron's poem, which takes its title from his name. He was born in the palatinate of Podolia, of a noble, but depressed Polish family, and became page to the king, John Casimir, in whose service he acquired a good education. Engaging in an intrigue with a married lady, which was discovered by her

husband, Mazeppa was fastened to the back of a wild horse, and left to his fate. The animal having been bred in the deserts of the Ukraine, directed his course thither, and expiring at length with fatigue, dropped beneath his miserable rider, who was found by the peasants of the country, half dead. Their hospitable cares recovered him, and he took up his residence with them. His talents and knowledge soon raised him to eminence among a people where all power was elective. The hetman of the Cossacks having been deposed in 1687, Mazeppa was substituted in his place. He displayed great ability in maintaining his authority, and acquired the confidence of the czar Peter the Great, who bestowed on him the cordon of St Andrew, and the title of privy counsellor. Created prince of the Ukraine, he became tired of his dependance on the emperor, and entered into a secret league with Charles XII. His scheme being prematurely discovered, and his capital, Batourin, having been taken by the Russians, he was obliged to flee and join the Swedish king, who was advancing towards the Ukraine with his army. The battle of Pultowa was the result of his counsels, and after that disastrous engagement, he took refuge at Bender, and died there in 1709.—*Biog. Univ.*

MAZOCCHI (ALEXIO SYMMACHO) a learned antiquary, was born in 1684, at St Maria, a village near Capua. He was ordained priest in 1709, and became professor of the Greek and Hebrew languages in the Neapolitan seminary. In 1711 he was made a canon of Capua, and afterwards theological professor at Naples, and royal interpreter of the Holy Scriptures. He died in 1771. His works are, "Commentarium in nutilum Campaniæ Amphitheatri titulum aliasque nonnullas Inscriptiones;" "Ad Bernardum Tannecium Epistola—de Dedicazione sub ascia;" "Commentarium in vetus marmoreum S. Neap. Eccles. Calendarium;" "Notes on the New Testament;" "Dissertations on the Poetry of the Hebrews;" "Antiquities of the Campagna of Rome." He also left a work in MS. on the "Origin of the City of Capua," &c.—*Fabroni Vite Italorum.*

MAZZA (ANGELLO) an eminent Italian poet, born at Parma, November 21st, 1740. After having finished his studies at the college of Reggio, where he published some verses which attracted much notice; he went to Padua, whence he removed to Venice. At the latter city he produced a translation of Akenside's "Pleasures of Imagination;" and in 1768 he was recalled to Parma to take the chair of Greek literature. Circumstances induced him to go to Bologna, and take the religious habit, which, however, he quitted after a few years. He then engaged in translating the odes of Pindar; and having attained a high degree of literary reputation, he was admitted into the Arcadian academy at Rome. He died in 1817.—*Biog. Nouv. des Contemp.*

MAZZUCHELLI (GIAMMARTA, count) a nobleman of Brescia, who flourished in the early part of the eighteenth century. He was

the author of "Notizie Istoriche e Critiche intorno alla Vita, alle Inventioni ed agli Scritti di Archimede Siracusano;" "La Vita di Pietro Aretino." He also commenced a large biographical work, "Gli Scrittori d'Italia," of which he only finished the two first letters. He left his sons a large collection of materials for the subsequent parts, which J. Bapt. Rodelli gave some expectations of publishing. Mazzuchelli died in 1765. During his life there was published, "Museum Mazzuchellianum seu Numismata virorum Doctrina præstantium quæ apud So. Mar. Comitem Mazzuchellum Brixie servantur," 1761, fol.—*Saxii Orom. Tiraboschi.*

MEAD (RICHARD) a celebrated English physician, born at Stepney, near London, August 11th, 1673. He was the son of the rev. Matthew Mead, a dissenting minister, and author of some religious publications. After some preliminary education, he went to the university of Utrecht in 1689, and in 1692 he removed to Leyden, where he more particularly applied himself to the study of medicine; and during the three years he remained there, he formed an intimate acquaintance with his fellow pupil, Boerhaave. He afterwards travelled into Italy, and having taken the degree of doctor of medicine and philosophy at Padua, in August 1695, he visited Rome and Naples. Returning to England in the following year, he settled as a physician at Stepney, and continued to practise his profession there for several years, with increasing reputation. In 1702 he made himself known in the literary world, by his "Mechanical Account of Poisons," which he long after republished in an improved form. In 1703 he was chosen physician to St Thomas's hospital; and in 1704 he became a fellow of the Royal Society, of which he was afterwards a vice-president. He was admitted a fellow of the college of Physicians in 1716, and filled the office of censor in the years 1716, 1719, and 1724. Such was the opinion entertained of his professional knowledge, that on the alarm, occasioned by the plague at Marseilles, in 1719, he was consulted by the secretary of state, as to the best methods of preventing infection, when regulations for the performance of quarantine were adopted, according to his advice; and he published a "Discourse concerning Pestilential Contagion," which passed through many editions. He interested himself much in the introduction of inoculation for the small-pox, and assisted in the preliminary experiments made on condemned criminals. In 1727 he was appointed physician to king George II, and he had the singular fortune to have for his associates his two sons-in-law, Dr Wilmot and Dr F. Nichols. In 1734 he declined the presidency of the college of physicians, being unwilling to add to the number of his avocations. Among his later writings, are his treatise "De Imperio Solis ac Luna, in corpora humana et morbis inde oriundis," 1746; "De Morbis Biblicis," 1749; and "Monita Medica," 1750. He died February 16th, 1754, and was interred in the

Temple church, and a cenotaph, with a monumental inscription, has been erected in Westminster abbey. Dr Mead collected a noble library, consisting of more than ten thousand volumes; a valuable cabinet of medals; and a gallery of paintings; all which were sold by auction after his death.—*Hutchinson's Biog. Med. Aikin's G. Biog.*

MECHAIN (PETER FRANCIS ANDREW) an able French mathematician and astronomer, was born at Laon in 1744, where his father was an architect. At an early age he discovered a strong predilection for mathematical pursuits, and became a correspondent of Lalande, even while under the instruction of his tutor. In 1772 he was invited to Paris, and employed in the dépôt of the marine, and subsequently at Versailles, where he acquired great reputation as an astronomer. He calculated the orbit of the comet of 1774, and discovered that of 1781. In 1782 he was admitted a member of the academy of Sciences, and in 1790 discovered his eighth comet, the orbit of which he calculated. In 1792, in conjunction with M. Delambre, he undertook the labour of measuring the degrees of the meridian, for the purpose of more accurately determining the magnitude of the earth; and in 1793, completed the measurement of the triangles, between Perpignan and Barcelona. He died in September 1805; and is spoken of by Lalande as one of the ablest astronomers of France.—*Rees's Cyclop.*

MECKEL (JOHN FREDERICK) a distinguished German anatomist, born at Wetzlar in 1714. He studied at Gottingen, and then at Berlin, and returned to the former university to receive the degree of MD. He was appointed demonstrator of the school of female accoucheurs in 1751; and professor of midwifery in 1753. His great reputation as an anatomist, attracted a multitude of strangers to his lectures, especially from Strasburg and Paris. He quitted the chair in 1755, and died surgeon to the king of Prussia, September 18th, 1774. He published an inaugural thesis, "De quinto pare Cerebri," 4to; "Diss. epist. de Vasis Lymphaticis, glandulisque conglobatis," 1757, 4to; and other works.—His son, PHILIP FREDERIC THEODORE MECKEL, was brought up to the father's profession. He was born at Berlin in 1756, and was educated at Gottingen and Strasburg. After having been professor of anatomy and surgery at Halle and at Strasburg, he was in 1795 invited by Paul I to Petersburg, and was nominated physician to the empress, privy-councillor, and inspector of the hospitals of that city. He died March 18th, 1803. He was the author of a great number of anatomical dissertations; and he published a translation of Haller's "Elements of Physiology," and other works.—*Biog. Univ.*

MEDE (JOSEPH) a learned divine of the seventeenth century, was born of a good family at Berden in Essex, in 1586. He became a commoner of Christchurch, Cambridge, where he took the degree of MA. in 1610, and obtained a fellowship. He was also ap-

pointed Greek lecturer on sir Walter Mildmay's foundation, and particularly employed himself in studying the history and antiquities of the Chaldeans and Egyptians. In 1618 he took the degree of BD, and in 1627 published at Cambridge, in 4to, his "Clavis Apocalyptica," which work was reprinted at London, and in English in 1650. It is esteemed by biblical critics as the ablest explanation of the obscure prophecies to which it refers. He died in 1638; and a collection of the whole of his works was published in 1677, in 2 vols. folio, by Dr Worthington, who added thereto a life of the author.—*Biog. Brit.*

MEDICI (Cosmo de') an illustrious Florentine, memorable alike for his personal abilities, and for the rank and power of his descendants. He was the son of John de' Medici, a merchant of Florence, and was born in 1389. His father died in 1428; and the vast wealth which he inherited, afforded him the means of displaying his liberality, and thus acquiring great influence in the republic. His ambition was gratified by the acquisition of the highest honours which his fellow-citizens could bestow; but the splendour and magnificence in which he lived excited jealousy and alarm, and procured him also a multitude of enemies. The Strozzi, the Albizzi and many of the first Tuscan families, combined against him; he was imprisoned on a frivolous pretext, and was in the utmost hazard of being poisoned by one of his political antagonists. By the most consummate art and prudent management, Cosmo extricated himself from the toils of his enemies, and, transporting his vast capital to Venice, he made the Florentines severely feel the decay of their country's opulence, in consequence of his migration. After about a year's absence, he was recalled with honour, and his foe, Rinaldo d'Albizzi, and others, were obliged, in turn, to become exiles. He restored the commercial prosperity of his native city, where he reigned without a rival, employing his treasures in the encouragement of literature and its cultivators. The learned Greeks, who left their country, on the capture of Constantinople, found an asylum at Florence, where Cosmo founded an academy, and collected a noble library of MSS. He died in 1464; and such was the general estimation in which he was held, that the Florentines inscribed on his tomb the title of "Father of his country."—His son, PETER de' MEDICI, inherited neither the good fortune, abilities, nor popularity of his father, to whose station he succeeded as head of the republic of Florence. Though he was educated by the learned Poggio, he made no progress in literature. Tormented with the gout and other diseases, he became, at an early age, a melancholy and peevish cripple; and envy at the wealth and power which he possessed having excited the enemies of his family to contrive perpetual plots against him, he lingered out a miserable life in superintending affairs beyond his comprehension, and in guarding a painful existence from being terminated by assassination, of which he was continually apprehensive. He died in 1469.—The splendour of this family of

princely merchants was destined to revive in LORENZO de' MEDICI, the son of Peter, who was born in 1448. Some of the first literati of the age were engaged as his tutors; and Picus, prince of Mirandola, and the celebrated Politian were his fellow pupils. His proficiency under such circumstances was creditable to his abilities; and he became distinguished, both as a patron and a cultivator of literature. At the age of 21 he succeeded his father. In his political capacity he acquired the respect of foreign potentates, and particularly of the Turkish sultan, Bajazet; but his disputes with pope Sixtus IV exposed him to great personal hazard. A conspiracy was formed by the hereditary enemies of his family, the Pazzi, in which the pope and the archbishop of Pisa were confederated, the object of which was to assassinate Lorenzo and his brother, Julio de' Medici. The attempt was made during the celebration of divine service at church, April 26, 1478. Julio fell a victim to this horrible plot, but Lorenzo defended himself with such spirit and vigour, that he escaped assassination; the ruffians who had attempted his life were taken; some of his foes were punished with death, and others banished from Florence. He subsequently subdued Volterra; and having adjusted his disputes with the pope, he was at leisure to indulge his taste in schemes for the advancement of learning and the arts, which he prosecuted with a degree of energy and success which have deservedly procured him the title of "Lorenzo the Magnificent." He revived the Academy of Pisa, established another at Florence, collected a vast treasure of literature, and founded a gallery of art, where Michael Angelo, under his patronage, pursued his youthful studies, and improved his taste and skill. He sent John Lascaris to Greece, to gather MSS. wherewith to enrich his library; and by his princely generosity to the learned, and his exertions for the improvement of literature, he showed himself an emulator of the glory of his grandfather. He died in the zenith of his renown, much lamented by the votaries of learning and the arts, as well as by his countrymen, in 1492. The poetical productions of Lorenzo de' Medici have been repeatedly published; the most complete edition being that of the abbé Serassi, entitled, "Poesie del magnifico Lorenzo de' Medici," Bergamo, 1763, 8vo. These pieces have been translated into English.—*Biog. Univ. Roscoe's Life of L. de' Medici.*

MÉDINA (sir JOHN) a portrait painter, was the son of a Spanish officer, who settled at Brussels, where he was born in 1659, and instructed in painting by Du Chatel. He married young, and came to England in 1686, where he obtained much reputation as a portrait painter, and then accepted an invitation to settle in Scotland. He was knighted by the duke of Queensberry, lord high commissioner, being the last instance of that honour conferred in Scotland as a separate kingdom. He died in 1711, aged fifty-two. Walpole describes his talents as very respectable; but although he painted the portraits of most of the Scottish

nobility, he possessed an impediment to riches in a family of twenty children.—His grandson, JOHN MEDINA, also a painter, the last of this name, died in 1796.—*Walpole's Anec.*

MEERMAN (GERARD) a Dutch writer on jurisprudence and literary history. He was born at Leyden in 1722; and at the age of 17 he became an author. Between 1744 and 1747 he made several voyages; on his return from which in 1748, he was appointed pensionary counsellor of the city of Rotterdam, which office he resigned in 1767. In the preceding year he had been made counsellor of the high tribunal of the chace of Holland and West Friseland; and he died at Aix-la-Chapelle, December 15, 1771. The emperor of Germany created him a baron of the empire; and Louis XV, to whom he presented some valuable MSS, invested him with the order of St Michael. Meerman possessed an immense and precious collection of printed books and manuscripts, which he used in the composition of several valuable works; among which may be specified "Novus Thesaurus Juris civilis et canonici," 1751—54, 7 vols. folio; and "Origines Typographicæ," 1765, 4to. In the latter production, he advocates the claims of Laurence Coster, to the invention of printing.—JOHN MEERMAN, son of the preceding, born in 1753, was early distinguished by a predilection for learning. He studied under Ernesti at Leipsic; afterwards travelled in Saxony and Prussia, and completed his education at Leyden, where he took the degree of LL.D. in 1774. He then visited France, Italy, Germany, Great Britain, and Ireland; and on his return home, he was chosen burgomaster of Leyden. His love of knowledge induced him to resign this situation, that he might spend his time in travelling. Under the reign of Louis Buonaparte he was director of the fine arts and of public instruction in the kingdom of Holland; and on the union of the country to France, he was made a count of the empire and senator. He died August 19, 1815, generously leaving to the city of the Hague, the rich library of his father, which he had greatly augmented. His published works are numerous, including a supplementary volume to his father's Thesaurus; "The History of William, earl of Holland, and king of the Romans," 5 vols. 8vo; "The Relations of Great Britain and Ireland, of Austria, of Prussia, and of Sicily," 1787—94, 5 vols. 8vo; "The Relations of the North and North-West of Europe," 1805—6, 6 vols. 8vo; comprising observations made by the author in his travels.—*Biog. Univ.*

MEHEGAN (WILLIAM ALEXANDER de) a miscellaneous French writer, was born at Sallé, in the Cevennes, in 1721, of a family of Irish extraction. The delicate state of his health prevented him from adopting the military profession, in which his family distinguished themselves, and he applied himself to the cultivation of literature. He was the author of "Considerations sur les Révolutions des Arts;" "L'Origine des Guebres, ou la Religion Na-

tuelle mise en action;" "Mémoires de la Marquise de Terville;" "Lettres d'Aspasie;" "L'Origine, les Progrès, et la Décadence de l'Idolâtrie." But his principal work was not published until some time after his death, and was entitled, "Tableau de l'Histoire Moderne," 3 vols. 12mo. It is divided into seven epochs beginning from the year 476, and concluding with the peace of Westphalia in 1648. This work is full of pictures, which are sometimes coloured too highly; but it is written in an eloquent and animated style, and is commendable on account of its generally philosophical and impartial spirit. Another posthumous work of Méhégan's is entitled "L'Histoire Considérée vis-à-vis la Religion, les Beaux Arts, et l'Etat," 3 vols. 12mo. Méhégan died in January 1766.—*Necrologie Franc. Nouv. Dict. Hist.*

MEHUL (STEPHEN HENRY) a celebrated musical composer, and member of the Institute of France, born at Givet in 1763. He received his first lessons from a blind organist at his native place, and became such a proficient, that, at the age of 12, he was appointed joint-organist to the abbey of Valledieu. The desire of improving his talents attracted him to Paris in 1779. He there studied with great advantage under Edelmann, and afterwards under Gluck; and after the departure of the latter for Vienna, Mehul presented to the Royal Academy of Music the opera of "Cora et Alonzo;" but his "Euphrosine et Coradiu" was first performed at the comic opera, in 1790. This was followed, at different periods, by "Stratonice;" "Irato;" "Joseph;" and many other operas; besides the ballets of "The Judgment of Paris;" "Dansomanie;" and "Perseus and Andromeda." Mehul was one of the three inspectors of instruction at the Conservatory of Music, from its creation in 1795, till its suppression in 1815. He was then appointed superintendant of music at the king's chapel, and professor of composition at the Royal School of Music. He was chosen a member of the Institute in 1796, and of the Academy of Fine Arts in 1816; and he was also a knight of the legion of honour. He died at Paris, October 18, 1817. Mehul read before the Institute two reports "Sur l'Etat Actuel de la Musique en France, et sur les Travaux des Elèves du Conservatoire à Rome." The "Dansomanie," and other productions of this composer, have been performed on the English stage, and have deservedly attracted the admiration of our dilettanti.—*Biog. Univ. Biog. Nouv. des Contemp.*

MEIBOM (JOHN HENRY, in Latin MEIBOMIUS) a celebrated physiciau, was a native of Helmstadt, where he was born in 1590. After travelling for improvement into Italy, and taking his doctor's degree at Basil, he returned home, and occupied a medical chair in the university of Helmstadt. In 1626 he was appointed physician of Lubeck, where he died in 1655. His works are, "Aurelii Cassiodori Formula Comitum Archiatrorum cum Commentariis," 1668, 4to; "De usu flagrorum in re medica et venerea;" "Jusjurandum Hippo-

cratis, Gr. et Lat." with commentaries relative to the history of Hippocrates, his disciples, &c. After his death appeared his treatise, "De Cerevisiis, potibusque et iuebrientibus extra Vinum aliis."—His son, HENRY MEIBOM, also a physician, was born at Lubeck in 1638. After travelling for improvement, he took his degree of MD. and became professor of medicine in the university of Helmstadt. In 1678 he was made professor of poetry and history. He was the author of numerous medical and anatomical dissertations, in which last science he greatly distinguished himself by his investigation of the sebaceous glands and ducts in the eyelids, the valves of the veins, and the papillæ of the tongue. He is best known by his historical publications, the principal of which, "Rerum Germanicarum tomus tres," is a collection of writers on German history. He also wrote many pieces concerning the dukes of Brunswick and Lüneburg; and in 1687 he published "Ad Saxoniæ inferioris in primis Historiam Introductio," treating of the works which have been composed on the history of Saxony. Henry Meibom died in 1700.—*Halleri Bibl. Med. et Anatom. Moreri.*

MEIBOMIUS (MARCUS) a learned philologist, born at Tonningen in the dutchy of Holstein, in 1611. Settling at Stockholm, he acquired the favour of queen Christina, whom he inspired with much of the same enthusiasm with respect to the ancients, which possessed himself. Having prevailed upon his royal mistress to be present at a concert which he proposed to conduct entirely upon the plan of the ancient Greeks, the ill-concealed ridicule of some of the courtiers, at the absurdity of the performance, excited his anger so violently, that, forgetful of the presence of the sovereign, he struck M. Bourdelot, a physician, who, as he fancied, encouraged it, a violent blow in the face. This indiscretion induced him to quit Sweden for Denmark, where he obtained a professorship in the college established for the education of the young nobility at Sorø, was eventually advanced to the rank of a royal counsellor, and made president of the customs. His inattention to the duties of his post soon caused his removal, on which he repaired to Amsterdam, and became historical professor there; but lost this appointment also by his petulance in refusing to give lessons to the son of one of the principal burgomasters. After visiting France and England, Meibomius returned to Amsterdam, and died there in 1711. His principal work is an edition of the seven Greek musical writers, Aristoxenus, Euclid, Nicomachus, Alypius, Gaudentius, Sacchius, and Aristides Quintilianus, with an appendix, containing the "De Musica" of Martianus Felix. His other writings are, "Dialogues on Proportions;" "On the construction of the Tirimæ Gallies of the Ancients;" and an edition of "Diogenes Laertius," 4to, 2 vols.—*Moreri. Hawkins's Hist. of Mus.*

MEIEROTTO (JOHN HENRY LEWIS) born in 1742, at Stargard in Pomerania, where his father was rector of the Calvinist school. He

was first attracted by the study of natural history, but afterwards devoted himself to classical literature. After having studied at Joachim college, Berlin, he obtained the place of sub-librarian in the university of Frankfort-on-the-Oder, which he left in 1765, to become tutor to the son of a rich financier at Berlin. In 1775 he obtained the first professorship of the college in which he had been educated, and three years after he was appointed rector. He made considerable improvements in the course of study pursued in the institution which he conducted, and he was patronized by Frederick the Great, and still more warmly by his successor. He died in September 1800. Meierotto published "Ciceronis Vita ex Oratoris Scriptis excerpta;" and other works in Latin and in German.—*Biog. Univ.*

MEINERS (CHRISTOPHER) a learned German historian and miscellaneous writer, born in the Hanoverian territories in 1747. He studied at Gottingen, where in 1771 he became professor of philosophy; and in his turn he very respectably filled the situation of pro-rector. He was also an active member of the royal academy of sciences at Gottingen; and the government of Hanover bestowed on him the title of aulic counsellor. He published, in conjunction with Spittler, "The Historical Magazine," 1791-94; and with Feder he was associated in "The Philosophical Library," 1788-91. The Life of Meiners was but little varied from the regular routine of his college duties and literary studies, except by occasional journeys into different parts of Germany and Switzerland, which gave rise to his "Letters on Switzerland," 1784, 2 vols. He died in 1810, leaving a multitude of literary productions, a complete list of which may be found in Meusel's Dictionary of German Writers, and the most important are also enumerated in the annexed authority.—*Biog. Univ.*

MEISSNER (AUGUSTUS THEOPHILUS) a German romance writer, was the son of a Saxon quarter-master, and was born at Bautzen in Lusatia, in 1753. He studied law and the belles lettres at Leipsic and Wittenberg, and after obtaining an office in the chancery, became keeper of the archives at Dresden. He commenced his literary career by translating comic operas from the French; and afterwards distinguished himself as a writer of anecdotes, tales, romances, &c. In 1785 he obtained the chair of belles lettres at Prague; and twenty years after he was invited to Fulda, to direct the superior schools, when he received the title of consistorial counsellor of the prince of Nassau. He died in 1807. Meissner translated Hume's History of England into German, 1777-1780, and wrote a number of historical romances and other works. His "Sketches" have been partly translated into French, Danish, and Dutch.—*Biog. Univ.*

MEISTER (LEONARD) an industrious Swiss writer, born in 1741. He was appointed professor of history and morals at the school of arts at Zurich in 1773; and in 1795 he obtained the prebend of St James in that city,

and afterwards other preferment. He was secretary to the Helvetic directory at Lucerne, from 1798 to 1800; and he died at Cappel, October 19, 1811. His publications amount to the number of eighty, in the German language. Among the most interesting are, "Memoirs for the History of the German Language and Literature;" "The Celebrated Men of Helvetia;" "The illustrious Natives of Zurich;" "Characters of the German Poets;" and a "History of Zurich."—*Biog. Univ.*

MELA (POMPONIUS) a geographer, who flourished during the first century of the Christian era. Little more is known of him than that he was a native of Spain, and the author of a treatise in three books, in the Latin language, "De Situ Orbis," containing a concise view of the state of the world, so far as it was known to the ancient Romans. Among the latest and best editions of this work are that of Abr. Gronovius, L. Bat. 1782, 8vo, and the very complete one of C. H. Tzschuckius, Lips. 1807, 7 vols. 8vo.—*Stollii Introd. in Hist. Litt. Moresi.*

MELANCTHON (PHILIP) a German divine, who was one of the principal associates of Luther, in the reformation of the church. He was the son of an armourer, and was born February 16, 1497, at Bretten, in the palatinate of the Rhine. He studied at the college of Pfortzheim, where he became acquainted with Reuchlin, who, in compliance with a frequent custom of the literati of that period, gave his young friend the Grecised name of Melancthon, having the same signification with that of his family, which was Schwartzerd, or black earth. He afterwards went to the universities of Heidelberg and Tübingen, at the latter of which he took the degree of master of arts at the age of sixteen. The following year he commenced doctor, and read lectures on the classics. In 1518 he was appointed professor of Greek literature in the university of Wittenberg, which situation he held to the end of his life. Here his intercourse with his colleague, Luther, led to a permanent friendship between them, and a similarity of religious sentiment, though their personal characters and dispositions were widely different; Melancthon being as remarkable for suavity of manners, mildness, and conciliation, as Luther was for coarse impetuosity and unbending firmness. In 1519, Melancthon assisted at the conference with Eccius, at Leipsic; and in 1527 he visited the Saxon churches under the sanction of the elector, and aided in framing a code of ecclesiastical constitutions. In 1530 the states of the empire being assembled at Augsburg, he made a speech in the presence of the emperor, which for its moderation excited the applause of his opponents. He was employed in drawing up the Augsburg confession, and was afterwards accused of having made alterations in it without the consent of other doctors of the reformed church. Such was the opinion entertained of his desire to promote unity among Christians, that Francis I invited him to visit his kingdom, for the purpose of settling the religious disputes among his sub-

jects. He was also invited to England in the reign of Edward VI; and he had many friends and well wishers who belonged to the communion which he had forsaken. But his liberality was productive of some inconvenience, by involving him in disputes with the zealots of his own party, who branded with the names of adiaphorists and interimists such as were not as obstinately opposed as themselves against all measures of concession or conciliation. These advocates for separation, among the most prominent of whom were Flacius Illyricus and Nicholas Gallo, fond as he was of peace, he thought it his duty to combat as long as he lived. His death took place at Wittenberg, April 19, 1560. The writings of Melancthon consist of numerous theological treatises; notes and commentaries on several of the Greek and Latin classics; Latin poems, works on history, philosophy, &c., all which were published at Wittenberg in 1580, 4 vols. folio. *Teissier Eloges des H. S. Aikin's Gen. Biog.*

MELANDERHJELM or MELANDER (DANIEL) an eminent Swedish astronomer and mathematician, born in 1726. He first distinguished himself by a memoir on fluxions; and in 1757 he became assistant to the astronomical professor at Upsal, and on the death of his principal, succeeded to the chair in 1761. He became a member of the Swedish academy of Sciences, and afterwards perpetual secretary of that institution. He was ennobled in 1778 by Gustavus III, when his name was changed to Melanderhielm. In 1789 he was made a knight of the polar star; and in 1801 a counsellor of the chancery. About the same time he was entrusted by the king to measure a degree of the meridian in Lapland, in conjunction with MM. Svanberg and Öfverbom. He died at Stockholm, in January 1810. Besides other works of science, he was the author of "Conspectus Prælectionum Astronomicarum, continens Fundamenta Astronomiæ," Upsal, 1779, 2 vols. 8vo, of which he afterwards published a Swedish translation.—*Biog. Univ.*

MELAS (M. de) an Austrian general, who served with distinction in the wars with the French republic. In 1793 and 1794 he was employed as major-general, and then as lieutenant field-marshal, on the Sambre, and in the country of Treves. In 1795 he was removed to the army of the Rhine; and in March, 1796, to that of Italy, which he commanded for a short time, and afterwards served under different generals, who succeeded him. In 1799 he was at the head of the Austrian army, which acted in concert with the Russians under Suwarrow. He distinguished himself at the battle of Cassano, and was present at those of Trebia and Novi; and he beat Championnet at Genola, November 3, and took Coni. In 1800 he was less fortunate, having lost the battle of Marengo. Though his conduct was censured, he was still trusted by his sovereign, who appointed him commander in Bohemia; and in 1806 he presided at the court of inquiry into the behaviour of Mack, relative to the capitulation of

Uhn. General Melas died at Prague in 1807.—*Dict. des H. M. de 18me S. Biog. Univ.*

MELEAGER, a Greek poet, in the first century before the commencement of the Christian era. He was a native of Gadara, and a resident at Tyre; but he died in the isle of Cos, whither he had removed in the latter part of his life. His compositions, consisting of short pieces or epigrams, are among the most beautiful relics preserved in the Grecian Anthology; and in the simple elegance of their style and sentiment they are finely contrasted with the productions of more recent bards in the same collection. Some of the verses of Meleager have been presented to the public in an English dress, by the rev. R. Bland, and others, in "Selections from the Anthology."—*Biog. Univ.*

MELETIUS, bishop of Lycopolis, in Upper Egypt, in the fourth century, and the founder of a sect called by his name. He was degraded from his functions by Peter, bishop of Alexandria, on account of some difference of opinion in regard to the treatment of such members of the church as had swerved during the persecution of Dioclesian. Being supported by a large party, he paid little attention to this act of authority, and the schism, notwithstanding the condemnation of the council of Nice, lasted for 150 years.—*Cave. Dupin.*

MELETIUS, a modern Greek geographer, born at Jannina, in Epirus, in 1661. His original name was Michael, and he took that of Meletius, on assuming the ecclesiastical habit. Having studied at home, he was sent by the archbishop of Jannina to Venice, where he gained a knowledge of the Latin language and literature. Returning to his native place, he was made professor in the college of Epiphanius; and he afterwards filled the archiepiscopal sees of Naupactus, of Arta, and of Athens. He died in 1714. His principal work is his "Ancient and Modern Geography;" and he also wrote an "Ecclesiastical History."—*Biog. Univ.*

MELITO, bishop of Sardis, in the second century, chiefly remembered as the author of "An Apology" for the Christian faith, presented to the emperor Marcus Antoninus, in behalf of the persecuted Christians, a part of which is extant. He was also author of several other works, a catalogue of which may be seen both in Eusebius and Jerome.—*Euseb. Hist. Eccles. Cave. Dupin.*

MELISSUS of Samos, a philosopher of the Eleatic sect, flourished about BC. 440. Being appointed by his countrymen to command a fleet, he obtained a great victory over the Athenians. He held that the principle of all things is one and immutable; that there is neither vacuum nor motion in the universe, nor any such thing as production or decay; all apparent changes being only illusions of our senses. Dr Cudworth, who has profoundly discussed this branch of scepticism, in his "Intellectual System," is of opinion that Melissus understood the term motion metaphysically only; and simply meant that there

is no such thing in motion as passing from entity to nonentity, and the reverse; which supposition supersedes much objection attendant on his position respecting motion, understood in its obvious and physical sense.—*Cudworth's Int. Sys. Enfield's Hist. of Philos.*

MELLAN (CLAUDE) a French engraver, was born at Abbeville in 1601. He became celebrated for his discovery of a manner of forming a whole head by one line of the graver, swelling it in various parts to produce the shade. A head of Jesus Christ, formed of one spiral line, beginning at the tip of the nose, is the most famous work in this style. Charles II invited him to England, but he was too much attached to his own country to leave it. He died at Paris in 1688.—*Strutt. Nouv. Dict. Hist.*

MELLI (JOUN) a poet, denominated the Sicilian Anacreon, born at Palermo in 1740. He was destined for the medical profession, and engaged in the requisite studies; but the belles lettres had more charms for him than the sciences. He was particularly captivated with Ariosto; and at the age of fifteen he published a poem, entitled, "The gallant Fairy." He took the degree of BM, and settled as a physician at Cinisi, a village near Palermo; but after residing there some years, he returned to Palermo, and became professor of chemistry. He died December 20, 1815. Among his works are idylls, eclogues, and canzoni, comprised in an edition of his poems, which he published a short time before his death. The city of Palermo proposed, during the life of the poet, to erect a marble statue in honour of him.—*Biog. Nouv. des Contemp.*

MELMOTH (WILLIAM) an eminent advocate and bencher of Lincoln's-inn, was born in 1666. He was the publisher of Vernon's Reports, in conjunction with Peere Williams, but is now chiefly recollected as the author of a pious and popular work, entitled, "The great Importance of a Religious Life," although not known to be so until the publication of Nichols's Literary Anecdotes. Of this work more than 100,000 copies have been sold since the death of the author. Mr Melmoth, whose conscience was tender even to superstition, scrupled taking the oaths at the Revolution, but finally complied. He died in 1743.—*Memoirs by his Son.*

MELMOTH (WILLIAM) son of the subject of the preceding article, was born in 1710. He received a liberal education, but does not appear to have studied at either of the universities. He was bred to the law, and in 1756 received the appointment of commissiour of bankrupts, but passed the chief part of his life in comparative retirement at Shrewsbury and Bath. He first appeared as a writer about 1742, in a volume of "Letters," under the name of Fitzosborne, which have been much admired for the elegance of their style, and their calm and liberal, if not profound, remarks on various topics, moral and literary. In 1747 he followed this production with a translation of the "Letters of Pliny the younger," in 2 vols. 8vo, which has been regarded as one of the happiest versions of a

Latin author in the English language, although somewhat enfeebled by a desire to obliterate every trace of a Latin style. He was also the translator of Cicero's treatises, "De Amicitia," and "De Senectute." These he enriched with remarks, literary and philosophical, in refutation of the opposing opinions of lord Shaftesbury and Soame Jenyns, the first of whom maintained that the non-existence of any precept in favour of friendship was a defect in the Christian system; while the second held that very circumstance to form a proof of its Divine origin. His last work was memoirs of his father, under the title of, "Memoirs of a late eminent Advocate, and Member of the honourable Society of Lincoln's Inn." Mr Melmoth, who was twice married, concluded his moral and exemplary life at Bath in 1799, at the age of eighty-nine.—*Gent. Mag.*

MELOZZO (FRANCISCO) an early painter, was born at Forli in 1471. His memory is respected by artists as the inventor of perspective representation and foreshortening on arched roofs and ceilings. A figure of Christ, which he painted for the vault of a chapel at Rome, is so well foreshortened, that it appears to pierce the roof. This painting has been since removed to the palace of the Quirinal, where it is still to be seen. The works of this artist, of whose history little is known, were frequently to be met with in the Venetian galleries.—*Pilkington.*

MELVIL (sir JAMES) a statesman and historian, was born at Hall-hill, in Fifeshire, in 1530; and at the age of fourteen, he became page to Mary, queen of Scots, then wife of the dauphin of France. Having continued some time in her service, he passed into that of the constable Montmorenci, who placed great confidence in him. At the end of nine years, he went upon his travels, and visited the court of the elector palatine, with whom he remained three years, and was employed in various negotiations. On the accession of Mary to the throne of Scotland, Melvil followed her, and was made privy councillor and gentleman of the bed-chamber, and continued her confidential servant until her imprisonment in Lochleven castle. He was sent to the court of Elizabeth, and maintained correspondences in England in favour of Mary's succession to the English crown. On the discovery of her attachment to Bothwell, he remonstrated with her so freely, that, in order to avoid the effect of her lover's anger, he absented himself from court. By Mary he was recommended to her son, James VI, who, on his accession to the throne of England, wished to have him for one of his ministers; but Melvil, devoid of ambition, preferred living in retirement at his family seat of Hall-hill, where he remained until his death in 1606. He left an historical work in manuscript, which lay long unknown in the castle of Edinburgh, but which was published in 1623, under the title of "Memoirs of sir James Melvil, of Hall-hill, containing an impartial Account of the most Remarkable Affairs of State during the last Age, not mentioned by other

Historians, more particularly relating to the kingdoms of England and Scotland, under the Reigns of queen Elizabeth, Mary, queen of Scots, and king James. In all which transactions the author was personally and publicly concerned." This work contains many important facts not found elsewhere, and is written with much simplicity. His brother, also in the service of Mary, was most probably the sir Andrew Melvil who was present at her death.—*Melvil's Memoirs. Nicolson's Hist. Libr. Robertson's Hist. of Scotland.*

MEMNON, a Greek historian, who appears to have flourished in the time of Augustus. He wrote a history of the affairs of Heracleian Pontus, sixteen books of which were epitomised by Photius. He bears the character of a sensible and perspicuous writer. A Latin translation of his history was published by R. Brett, Oxford, 1597.—*Vossii Hist. Græc.*

MENA (don JUAN de) a poet, who has obtained the title of the "Castilian Ennius," and is regarded as one of the greatest geniuses of his age. He was born at Cordova in 1412, and studied at Salamanca; after which he went to Italy, where, reading the works of Dante, developed his talent for poetry. His most celebrated work is the "Labyrintho," a poem; also called "Las trecentas Coplas," from the number of its stanzas. It is modelled on the *Commedia* of Dante. Mena was made royal historiographer; and died, laden with honours and riches, at Guadalaxara, in 1456.—*Big. Univ.*

MENAGE (GILLES) a distinguished man of letters of the seventeenth century, was born at Angers, August 15, 1613, in which city his father was king's advocate. After finishing his early studies with great reputation, he was admitted an advocate himself, and pursued his occupation for some time at Paris; but disgusted with that profession, he adopted the ecclesiastical character, so far as to be able to hold some benefices, without cure of souls. From this time he dedicated himself solely to literary pursuits; and being received into the house of Cardinal de Retz, he soon made himself known by his wit and erudition. He subsequently took apartments in the cloister of Notre Dame, and held weekly assemblies of the learned, where a prodigious memory rendered his conversation entertaining, although pedantic. He was, however, overbearing and opinionative, and passed all his life in the midst of petty hostilities. His character of abbé did not render him averse to be thought a man of gallantry; and he was a professed admirer of the celebrated Mesdames La Fayette and Sevigné, although little to the injury of their reputation. Being in easy circumstances, he was enabled to cultivate letters in the manner most agreeable to himself, and to print some of his works at his own expense. He precluded himself from being chosen of the French Academy, by a witty satire, entitled, "Requête des Dictionnaires," directed against the Dictionary of the Academy. He died in Paris, at the age of seventy-nine. Menage was a very various writer, in regard both to sub-

ject and language. His principal works are "Dictionnaire Etymologique, ou Origines de la langue Française;" "Origines de la langue Italienne;" "Miscellanæ," a collection of pieces in prose and verse; an edition of "Diogenes Laertius," with valuable notes and corrections; "Remarques sur la langue Française;" "Anti-Baillet," a satirical critique on that author; "Histoire de Sablé;" "Historia Mulierum Philosophorum;" satirical pieces against Montmaur, the Greek professor; "Poesies Latines, Italiennes, Grecques, et Françaises." After his death, a "Menagiana" was compiled, from notes of his conversation, anecdotes, remarks, &c., which is one of the most lively works of the kind, and has been several times reprinted.—*Bayle. Moreri. Nouv. Dict. Hist.*

MENANDER, one of the most celebrated of the Greek comic poets, was born at Athens, BC. 342. His master in philosophy was Theophrastus, and he is represented as possessing every point of a dramatic writer; elegance of language, force and delicacy of sentiment, and genuine humour. His attachment to the fair sex, and especially his mistress, Glycera, was vehement in the extreme; and his address and manners were correspondently soft and luxurious. He composed 108 comedies, of which eight only gained the prize; and he may be esteemed as the first if not the principal author of the new Grecian comedy; which, if it possessed less wit and fire, was superior to the old in delicacy, regularity, and decorum. A few fragments only remain of the numerous pieces of Menander, from whom, however, Terence is supposed to have copied all his pieces, except the "Phormio" and "Hecyra;" and consequently that author may enable us to form a tolerably correct notion of the merits of his original. The admiration of this dramatist expressed by Quintilian is very great. He refers his orator to Menander, for copiousness of invention, elegance of expression, and a general fine feeling of nature; nor is Ovid in more than one passage much less complimentary. He was equally esteemed in his life-time; even, according to Pliny, he refused express invitations from the kings of Macedonia and Egypt. He was drowned in the harbour of the Peræus, BC. 298, having, according to some accounts, thrown himself into the water, out of mortification at the prize having been unjustly awarded to his rival, Philemon. This catastrophe took place in his fiftieth year. The fragments and sentences of Menander were first collected by Morelle, Paris, 1553; but the best edition is that of Le Clerc, Amsterdam, 1702; to which, however, should be added the Emendations of Dr Bentley, printed in 1713, under the name of Philolentherus Lipsiensis.—*Vossii Poet. Græc.*

MENANDRINO (MARSILIO) better known by the name of Marsilius of Padua, the place of his birth, was an eminent lawyer of the fourteenth century. He was educated at the university of Orleans, and became counsellor to the emperor Louis of Bavaria, for whom, in 1324, he wrote an apology, entitled, "De-

fensor pacis," in which he maintained that the pope ought to submit to the emperor in spiritual as well as temporal concerns. This so provoked John XXII, at that time pope, that he issued a long decree to refute it, and excommunicated the author in 1327. He was also the author of two treatises, entitled, "De Jurisdictione Imperiali in causis matrimonialibus;" "De Translatione Imperii." He died at Montematto in 1328, and was considered at Rome as a heretic of the first class.—*Gen. Dict.*

MENARD (LEON) an historical writer, was born at Terascon in 1706. He devoted himself to the study of history and antiquities, and obtained a place in the Academy of Inscriptions and belles lettres. He died at Paris in 1767. His works are, "History of the Bishops of Nismes," 2 vols. 12mo, 1757; "L'Histoire Civile, Ecclesiastique, et Littéraire de la Ville de Nismes," 7 vols. 4to. This is a curious topographical work, but is rather too prolix for readers in general. He likewise wrote a romance, entitled, "Les Amours de Callisthene et d'Aristoclie," the chief merit of which is the delineation of Grecian manners; "Mœurs et Usages des Grecs," a work which displays much erudition, and was highly popular; "Pièces Fugitives, pour servir à l'Histoire de la France," 3 vols. 4to. In 1750 he published a "Refutation of the Arguments of Voltaire against the authenticity of the Political Testament of Cardinal Richelieu."—*Necrologie Franc. Nouv. Dict. Hist.*

MENASSEH BEN ISRAEL, a celebrated rabbi, was born in Portugal about 1604. His father was a rich merchant, who, suffering greatly, both in property and person, from the inquisition, fled into Holland, where his son was educated. At the age of eighteen, he was appointed to succeed his tutor, Isaac Usieli, as preacher and expounder of the Talmud at Amsterdam, a post which he occupied with reputation for several years. In 1632 he published, in the Spanish language, the first part of his work, entitled, "Conciliador," &c., of which, the next year, a Latin version was printed by Dionysius Vossius, entitled, "Conciliator, sive de Convenientia Locorum, S. Scripturæ quæ pugnant inter se videntur, opus ex Vetustis et Recentioribus omnibus Rabbinis magna Industria ac Fide congestum." He also engaged in the printing business, and published three editions of the Hebrew Bible. In the time of Cromwell he came to England, and actually obtained for his nation more privileges than they ever before enjoyed in this country. He died at Amsterdam in 1659. His other works are, "The Talmud Corrected, with Notes;" "De Resurrectione Mortuorum;" "Esperanza de Israel," dedicated to the parliament of England, in 1650, one object of which is to prove that the ten tribes are settled in America; and an "Apology for the Jews," in the English language; reprinted in vol. ii of the Phoenix.—*Moreri. Mod. Univ. Hist.*

MENCKE (JOHN BURCHARD) was born at Leipzig in 1674; and after travelling for improvement in 1699, he was made professor of

history at his native place. He applied himself to the study of jurisprudence, and in 1701 he took the degree of doctor of law at Halle; after which he gave instructions in history; and in 1708 he was appointed historiographer, and in 1709 counsellor to Frederick Augustus, king of Poland. He died at Leipzig in 1732. His works were, "A Latin Dissertation on the Consecration of Emperors and Empreses, as proved by medals," published at the age of nineteen; a collection of the German historians, under the title of "Scriptores rerum Germanicarum speciatim Saxonicarum," 3 vols. fol. 1728—1730; and he also planned, and had a share, in a German "Dictionary of Learned Men;" and published an edition of Lenglet's "Methode pour Etudier l'Histoire;" and on the death of his father, he continued the "Leipzig Journal." He was also the author of two Latin declamations, "De Charlataneria Eruditorum;" to which subject he certainly did not justice. They were, however, read and translated into several languages.—*Moreri*.

MENDANA DE NEYRA (ALVARO) a Spanish navigator and maritime discoverer. He was born in 1541, and the first years of his life passed in obscurity. He went to America with his uncle, who was governor of Lima, and with whose assistance he fitted out an expedition in 1568, and sailed to explore the Pacific Ocean. He discovered the isles of Guadalcanal, St Christopher, and Isabella, and returned to Lima in the following year. Having obtained from the Spanish government a fleet to visit Guadalcaual, and establish a colony, he sailed again in 1595, but was unable to find out the islands he had before visited. He, however, made fresh discoveries, particularly of the islands of Solomon and the Marquesas de Mendoça. He afterwards discovered an island called Santa Cruz, where he attempted to make a settlement; but dying there, October 18, 1595, the place was abandoned by his companions.—*Biog. Univ.*

MENDELSON (MOSES) a modern Jewish philosophical writer, was born at Dessau, in Anhalt, in 1729. After he had been educated by his father, who was a schoolmaster in humble circumstances, he was obliged, at the early age of fourteen, to proceed to Berlin, where he lived some years in great indigence. At length he got employment as a transcriber of MSS. from a rabbi, who, at the same time that he afforded him the means of subsistence, initiated him into the theology, jurisprudence, and scholastic philosophy of the Jews. To this knowledge he added an assiduous study of philosophy and literature in general, and formed some strong intimacies among the more cultivated members of his own tribe, including the doctors Kisch and Gompertz, by whose encouragement and assistance he attained a competent knowledge of the modern languages, and particularly the English. He soon after obtained the countenance and friendship of the celebrated Lessing, of whom he rapidly became the rival and associate. According to Denina, he commenced author in 1752; a brief disser-

tion "On the Senation of the Beautiful;" and a volume of "Philosophical Dialogues," being among the earliest of his publications. These works attracted considerable attention, and were particularly admired for their German style. He then associated himself with Lessing, Ramler, Abbt, and Nicolai, in conducting a periodical work, entitled, "The Library of Belles Lettres," a kind of review, which acquired great distinction, and formed an epoch in German literature. Various works followed, one of which, "Phædon, a Dialogue on the Immortality of the Soul," in the manner of Plato, obtained for him the title of the "Jewish Socrates." In another, entitled "Jerusalem," in which he maintained that the Jews possessed a revealed law, but not a revealed religion; and that opinions are not subjects of revelation, exposed him to much animadversion, both from Jewish rabbins and Christian divines. Among others the celebrated Lavater, the physiognomist, entered the field against him, to whom he published, in reply, "A Letter," remarkable for its pathetic remonstrance, and calm, dispassionate reasoning. With similar energy he refuted an attack by Jacobi, on the reputation of his deceased friend Lessing, an effort which, from the weakness of his nervous system, and extreme aversion to controversy, agitated his spirits so highly, that fits and other symptoms of mental disorder were the unhappy consequence. He died in 1785, aged fifty-seven, esteemed by persons of the most opposite opinions, on account of the excellence of his character, and philosophical mildness of his disposition. Besides the works already mentioned, he was author of "An Essay on the Evidence in Metaphysical Science;" "Morning Hours, or Discourses on the Existence of God;" a German translation of "The Psalms of David;" and a "Commentary on part of the Old Testament."—*Rees's Cyclop. Monthly Mag.*

MENDEZ (MOSES) an English poet, was born in London, of Jewish parentage, and was educated at Oxford, where he was created M.A. in 1750. He wrote the "Chaplet," and other popular musical entertainments, and several poems. He died in 1759, leaving property amounting to one hundred thousand pounds.—*Biog. Dram.*

MENDEZ-PINTO (FERDINAND) a celebrated traveller, was a native of Portugal. In 1537 he embarked in a ship bound for the Indies; but in the voyage it was attacked by the Moors, who carried it to Moca, and sold Ferdinand for a slave. After various adventures, he arrived at Ormus, whence he proceeded to the Indies, and returned to Portugal in 1538. He published a curious account of his travels, which has been translated into French and English. Mendez-Pinto, from his excessive credulity, has been classed with our English Sir John Mandeville, and both are now chiefly quoted as recording personal adventures and observations, mixed up and debased by easy belief and extravagant fiction.—*Dict. Hist.*

MENDOZA (JOHN GONZALES) an August

tine friar, of the province of Castile, was sent ambassador to the emperor of China in 1584. He was made successively bishop of Lipari, in Italy; of Chiapa, in New Spain; and of Popayan, in the West Indies. He was the author of "A History of China," which has been translated into several languages. The title of the French edition will give some idea of the work, "The History of the Great Kingdom of China, in the East Indies, in two parts; the first containing the situation, antiquity, fertility, religion, ceremonies, sacrifices, kings, magistrates, manners, customs, laws, and other memorable things of the said kingdom; the second, three voyages to it in 1577, 1579, and 1581, with the most remarkable rarities either seen or heard of there; together with an itinerary of the New World, and the discovery of New Mexico in 1583."—*Dict. Hist. Gen. Dict.*

MENELAUS, a native of Alexandria, a celebrated mathematician, flourished under the reign of the emperor Trajan. We are informed by Ptolemy, in his "Almagest," that he made astronomical observations at Rome in the first year of Trajan. He composed three books "On Spherics," or spherical figures, which have been transmitted to us through the medium of the Arabic language. The first Latin version was edited by father Mersenne, at Paris, in 1664, and the treatise in Arabic is inserted by father Labbé in his "Nov. Catal. Manuscritorum." He is thought to be the same Menelaus whom Plutarch has introduced in his dialogue "De Facie quæ in Orbe Lunæ apparet."—*Fabricii Bibl. Græc vol. ii, lib. iii, cap. v, sect. 17.*

MENESTRIER, (JOHN BAPTIST le) an antiquary, was born at Dijon in 1564, and became secretary of the chamber, king's counsellor, and provincial comptroller of the artillery for the dutchy of Burgundy. He was the author of two works, entitled, "Medailles, Monnoies, et Monumens Antiques d'Imperatrices Romaines," 1625, fol; "Medailles illustres des Anciens Empereurs et Imperatrices de Rome," 1642; neither of which is now held in much estimation. He died in 1634. There was also another LE MENESTRIER CLAUDE, also of Dijon, and an antiquary, who was keeper of the Barberini museum. He was the author of "Symbolica Dianæ Ephesiæ Statua explicatio," 1657, 4to.—*Moreri.*

MENESTRIER (CLAUDE FRANCIS) a French jesuit of the seventeenth century, known as the author of a curious treatise on music, as connected with the drama, entitled, "Des Representations en Musique, Anciennes et Modernes." This work contains many interesting particulars with respect to the state of the science among the ancient Hebrews, and assigns the introduction of dramatic music into Europe to the æra of the crusades, when the author asserts it was first made use of by pilgrims returning from Palestine, in a kind of religious interlude, then frequent among them. This book appeared in 1681, and was followed, in the subsequent year, by an essay on "Ballets, Ancient and Modern." Menestrier died in 705.—*Moreri.*

MENGOLI (PETER) an able mathematician of the seventeenth century, but the place and time of his birth are unknown. He was appointed professor of mechanics in the college of nobles at Bologna, in which situation he acquired great credit. His works are "Via Regia ad Mathematicas ornata;" "Refractio è paralasse Solare;" "Circolo;" "Spiculazione de Musica;" "Novæ Quadraturæ Arithmeticae seu de additione Fractionum;" "Arithmetica rationalis Elementa;" "Arithmetica realis;" and "Geometriæ Speciosæ Elementa," which is an essay upon infinitesimals, containing the same signs as some of those of Leibnitz. Mengoli was living in 1678.—*Moreri. Nouv. Dict. Hist.*

MENGIS (ANTHONY RAPHAEL) a distinguished modern painter, who was a native of Bohemia. His first instructions in the art in which he excelled were derived from his father, who was painter to the king of Poland. He then went to Rome, where he improved his taste by viewing the relics of ancient art, and added to his skill by the careful study of the best productions of the great masters of the Italian school. He obtained the patronage of Charles III, king of Spain, for whom some of his principal works were executed. His death took place at Rome in 1779, in the fifty-third year of his age. Mengis exercised his pen as well as his pencil, and his writings, consisting of essays, letters on taste, on painters, and the philosophy and progress of the arts, were published, collectively, at Parma, 1780, 2 vols. 4to; and there is an English translation, in 2 vols. 8vo. Many of the pictorial works of this painter are in England, among which may be particularized the altar-piece of All Souls' college, Oxford.—*Biog. Univ. Bryan.*

MENINSKI or MENIN (FRANCIS) FRANCIS A MESIGNIEN, a celebrated Orientalist, was born in Lorraine in 1623, and studied at Rome under the learned jesuit, Grattini. At the age of thirty he accompanied the Polish ambassador to Constantinople; and, applying himself to the study of the Turkish language, he became first interpreter to the Polish embassy at the Porte, and, soon after, he was appointed ambassador plenipotentiary to that court. He became naturalized in Poland, and added the termination SKI to his family name of Menin. In 1661 he became interpreter of the Oriental languages at Vienna, and was intrusted with several important commissions. In 1669, going to visit the Holy Sepulchre of Jerusalem, he was created a knight of that order, and on his return to Vienna, he was created one of the emperor's council of war. His principal work was his "Thesaurus Linguarum Orientalium," published at Vienna in 1680. A new edition of this valuable work was begun in 1780, but remains still unfinished. His other works were in controversy with J. B. Podesta, Oriental professor at Vienna. Meninski died at Vienna in 1698.—*Bib. Dict. New Biog. Dict.*

MENIPPUS, a cynic and disciple of the second Menedemus, was a native of Gadara, in Palestine. His writings were chiefly of a ludicrous and satirical kind, insomuch that he

is styled by Lucian "the most snarling of the cynics;" and the same author, in two or three of his dialogues, introduces him as the vehicle of his own sarcasms. It appears that his satires were composed in prose; on which account those of Varro were denominated Menippean; and for the same reason that of "Satire Menippée" was given in France to the celebrated piece, written in France against the faction of the league. Menippus is said to have hanged himself, in consequence of being robbed of a large sum of money. He had been originally a slave, but purchased his freedom, and was made a citizen of Thebes. No part of his works is now extant.—*Brucker. Moreri.*

MENNES (sir JOHN) an English poet and wit of the seventeenth century. He was by profession a naval officer, and was a native of Sandwich, in Kent. He received a university education, having studied at Corpus Christi college, Oxford. In the reign of Charles I, he received the honour of knighthood, and obtained the post of comptroller of the navy, he had also the command of a ship of war, but being a royalist, he was removed from his station in the civil war. On the restoration of Charles II, sir John Mennes again became comptroller of the navy, was appointed governor of Dover castle, and attained to the rank of admiral. His poetical productions are comprised in a small volume, entitled, "Musarum Deliciæ, or the Muses' Recreation," printed in 1636. He died in 1671.—*Campbell's Spec. of Brit. Poets.*

MENNO SIMONSON, a heterodox divine of the sixteenth century, founder of the sect of Mennonists, or Dutch anabaptists. He was born in 1505, in the province of Friesland, and entered into holy orders among the Catholics. Having adopted some of the tenets of the first reformers, and collected followers among the disciples of Muncer, Storck, and other German fanatics, he reduced their mysticism and extravagance to some kind of system, and formed a party in the Protestant church, which has preserved his name from oblivion. He died in the dutchy of Holstein in 1561. The modern Mennonites, who are found chiefly in Holland and in Switzerland, are favourably distinguished in society for their industry and purity of manners; though they still retain a degree of mysticism in their religious opinions and practices.—*Mosheim. Dict. Hist.*

MENOCHIO (GIACOMO) a learned jurist, was born at Pavia, and in 1555 he became professor of civil law in the university there. In 1560 he was invited by Emanuel Philibert, duke of Savoy, to his newly-erected university of Monderi; and six years afterwards he removed to Padua, as first professor of common law, which post he changed for the chair of civil law. He died in 1607. His works are still used by many lawyers, particularly his treatises "De tacitis et ambiguis Conventionibus," and "De Conjecturis ultimum voluntatem," which are much esteemed. He was considered the first doctor of his time, both in civil and canon law.—*Tiraboschi.*

MENOCHIO (JOHN STEPHEN) a learned jesuit, son of the preceding, was born at Pavia, in 1576. At the age of seventeen, he entered the society of Jesus, and having completed his academical course, he was chosen professor, and was afterwards raised to the most considerable posts of the society in the colleges and provinces of Italy. He died at Rome in 1656. His principal works were, "Hieropoliticon, seu Institutiones Politicæ à Sacris Scripturis depromptæ, lib. iii.;" "Institutiones Economicæ ex Sacris Literis depromptæ, lib. ii.;" "De Republica Hebræorum, lib. viii.;" and "Brevis Explicatio sensus Literalis totius Scripturæ." These are much esteemed for their extensive knowledge and solid learning, particularly the latter, which is distinguished for its perspicuity and judgment. Menochio was also the author of "A History of the Life of Jesus Christ;" "A Sacred History, founded upon the Acts of the Apostles;" "Dissertations on different Subjects," in six volumes; a treatise "On the Christian Economy," &c.—*Landi Hist. de la Lit. de l'Italie. Moreri. Nouv. Dict. Hist.*

MENOU (JAMES FRANCIS, baron de) a French revolutionary general, who also figured as a politician. He was deputy from the nobility of Touraine to the states-general, and was one of the first of his order who entered into the chamber of the commons. He united himself with the faction of the duke of Orleans and the Jacobins, and took every occasion to manifest his hostility to the clergy. In 1792 he was employed as mareschal-de-camp at Paris, and on the 10th of August he was second in command of the troops of the line. In 1793 he was sent against the insurgents of La Vendée, as general-in-chief, when he was beaten by La Roche-Jacquelin, and displayed such glaring incapacity, that he was superseded, and returned to Paris. Having the command of a division, in May 1795, he defended the National Convention against the Jacobins; but on a subsequent occasion the obliquity of his conduct exposed him to a decree of accusation as a traitor to the Convention, he was however acquitted. In May, 1798, he accompanied Buonaparte in his expedition to Egypt, as general of a division, in which post he displayed talents as well as bravery. But his behaviour indicated the same deficiency of principle by which he had been previously influenced. After the flight of Buonaparte, he turned Mahometan, for the sake of obtaining in marriage the daughter of the keeper of the baths of Rosetta, who was very rich. He submitted to the peculiar rites of Islamism, and called himself Abdallah James Menou. Kleber being assassinated, he assumed the chief command, and opposed, with vigour, the English under Abercromby; but he was at length obliged to capitulate. He returned to France in May 1802, and was well received by Buonaparte, who appointed him governor of Piedmont. He was afterwards sent in a similar character to Venice, and he died there, August 13, 1810.—*Dict. des H. M. du 18me S. Biog. Univ.*

MENTCHIKOF (ALEXANDER) a Russian statesman and general, was the son of two poor peasants, vassals of the monastery of Cosmopoli. At the age of thirteen he went to Moscow, and was employed by a pastry-cook to cry his wares about the street. In this situation he attracted the notice of the czar, Peter I, by the peculiarity of his cry. He entered into conversation with him, and was so much pleased with him, that he ordered him to come to court, where he soon distinguished himself by his quickness, and the czar took him to serve about his person. He was next enlisted in Le Fort's company of soldiers, and the czar gave him the post of groom of the bed-chamber. He farther ingratiated himself with the latter, by using all his efforts to forward the new city of Petersburg; and he was next made governor of the province of Ingria, with the title of prince, and the rank of major-general. He was the companion of Peter in his travels; and on several occasions he personated the czar, who appeared as a private person in his train. In the war with Charles XII, of Sweden, Mentchikof was the conqueror of Meyerfeldt, a general of that monarch; he also distinguished himself at Lesnau in 1708, and at the battle of Pultowa. He became master of great wealth, but on Peter's instituting a court of inquisition, to search into the abuses of the administration, he did not escape, and was obliged to pay a heavy fine. On the death of Peter, in 1725, Mentchikof chiefly contributed to the elevation of the empress Catharine I, in consequence of which he enjoyed great power during her reign; and in the event of her death, he took measures to secure the crown to Peter Alexievitch, on condition that he should marry his eldest daughter. The family of Dolgorucki, however, jealous of his power, and masters of the inclinations of the young emperor, procured an order for his arrest, and he was exiled to his estate of Renneburg. He departed with a splendid train, and all the marks of his dignity; which imprudence still farther irritated his enemies, and he was overtaken by an order to carry him to Siberia. He was confined at Beresof, on the banks of the Oby, where a wooden hut was assigned for his dwelling, with a daily allowance of ten rubles. He supported the hardships of his situation with great courage, and even saved enough from his allowance to build a wooden church. He died of a fit of apoplexy, two years after his banishment, November 1729. His children were recalled by the empress Anne, and were restored to an honourable rank in society.—*Manstein's Memoirs. Mod. Univ. Hist. Moreri.*

MENTZEL (CHRISTIAN) a German naturalist of the seventeenth century, who was a native of Furstenwald. His zeal in the cause of science induced him to travel into various regions of the globe, and on his return to Germany he became a member of the society of curious investigators of nature, *Societas Naturæ Curiosorum*, in whose transactions a great many of his observations are recorded. He

Biog. Dict.—Vol. II.

also published, "*Index nominum Plantarum*," 1696, folio; "*The Natural History of Brazil*," 4 vols. folio; a work on Chinese chronology; and another on the botany of Japan. *Mentzel* died in 1701, aged seventy-nine.—*Dict. Hist. Biog. Univ.*

MENZINI (BENEDETTO) an Italian poet, who was a native of Florence. He entered into the church, and obtained the canonry of St Angelo, in Piscina. His productions comprise almost every species of poetry, except that of the drama. The best of his works are, "*Il Paradiso terrestre*," and his satires *Menzini*, who was a member of the Arcadian society and the Cruscan academy, died in 1704, at the age of fifty-eight. His "*Art o Poetry*," and some of his sonnets, have been translated into English.—*Dict. Hist. Zopf.*

MERCATI (MICHAEL) a physician and naturalist, was born in 1541, at St Miniato, in Tuscany, and was the son of an eminent physician. On taking his degree in the university of Pisa, he went to Rome, where he became superintendant of the garden of the Vatican. He was in favour with popes Gregory XIII, and Sixtus V, the latter of whom made him apostolical protonotary, and sent him into Poland with cardinal Hippolito Aldobrandini. He also gained the esteem of Clement VIII, who made him his first physician, and he received various marks of favour from the emperor, the king of Poland, and Ferdinand, grand-duke of Tuscany, who gave him letters of nobility. *Mercati* died in 1593, in the arms of his friend, St Philip Neri. He was the author of a "*Dissertation on the Obelisks of Rome*;" another, "*On the Plague, on the Malaria, and on the Gout and Palsy*." He also made a description of the subjects of natural history in the Vatican Museum, formed under the auspices of Gregory XIII, and Sixtus V. This he divided into ten classes, corresponding to the cabinets of the museum. His manuscript remained in the hands of Carlo Dati, at Florence, until the time of Clement XI, who caused it to be published in 1717, when it was edited by his first physician, Lancisi, with the title of "*Metallotheca opus Posthumum Autoritate et Munificentia Clementis XI, Pont. Max. e Tenebris in Lucem eductum &c.*"—*Tiraboschi. Eloy Dict. Hist. Med.*

MERCATOR (GERARD) a cosmographer and mathematician of the sixteenth century. He was a native of Ruremond, in the Netherlands, and was distinguished for his close application to study, which he is said to have prosecuted so assiduously, as scarcely to allow himself time for eating and sleeping. He published a work on chronology, atlases, and geographical tables, besides treatises on philosophy and divinity. He also constructed celestial and terrestrial globes and mathematical instruments. He died in 1594, aged eighty-two. The nautical chart, usually termed "*Mercator's Projection*," from its having been first published by this geographer, seems to have been the invention of Edward Wright, an Englishman.—*Martin's Biog. Philos.*

MERCATOR (NICHOLAS) or Nicholas
2 H

Hauffman, an eminent mathematician, born in Holstein, about 1640. He received a liberal education, and attained a considerable knowledge of mathematical science; but he displayed his talents rather in the improvement and adaptation of the discoveries of others than in any original inventions. He held a correspondence with his learned contemporaries in England, Denmark, and Italy; and having been invited to this country, he came hither, and died here in 1694. Mercator was the author of "Logarithmotechnia," 1668, 4to; "Institutionum Astronomicarum, libri ii," 1676, 8vo; and other works. He is charged with having appropriated to himself Dr Wallis's mode of demonstrating the quadrature of the hyperbola, as he adopted without acknowledgement the principles laid down by that mathematician in his *Opus Arithmeticum*.—*Idem*.

MERCIER (BARTHOLOMEW) known by the appellation of the abbé de St Léger, an ingenious writer on bibliography and literary history. He was born at Lyons in 1734, and adopting the ecclesiastical profession, he entered into the congregation of St Genevieve, to which society he became librarian. Louis XV bestowed on him the abbey of St Léger at Soissons. His publications are, a Supplement to Prosper Marchand's "History of Printing;" "Bibliothèque de Romans traduits du Grec," 12 vols. 8vo; "Observations sur l'Essai d'un Projet de Catalogue de Bibliothèque;" "Lettres sur différentes éditions rares du xvme Siècle," 8vo, &c. His death took place in 1799.—*Dict. Hist. Biog. Univ.*

MERCIER (JOHN) a learned Hebrew critic of the sixteenth century. He was born at Uzeu in Languedoc, and was destined for the profession of jurisprudence. He relinquished the studies in which he was at first engaged, to devote himself to divinity and the Oriental languages, in which he became such a proficient that, on the death of Vatablus, he was appointed to succeed him as professor of Hebrew in the Royal College at Paris. During the civil wars in France, he retired to Venice, and returning with a design to publish the learned works which he had composed, he died at Uzeu in 1572. His works, consisting chiefly of commentaries on the books of the Old Testament, drawn from the writings of the Jewish literati, were published by his son. *Teissier Eloges des H. S.*

MERCÛRIALIS (JEROME) an eminent Italian physician, born at Forli in 1530. He studied at Padua, and having taken the degree of MD, returned to his native place, and engaged in medical practice. In 1562 he was sent on a mission to the pope, when he was induced to remain at Rome, and reside with cardinal Alexander Farnese. In 1569 he removed to Padua, to take the medical chair in that university, whence he was invited to Bologna in 1587, and five years after to Pisa. In the latter part of his life he retired to Forli, and died there November 9, 1606. His writings are numerous, consisting chiefly of works on the practice of medicine. In 1641 were pub-

lished at Venice "Opuscula aurea et selectiora J. Mercurialis, uno comprehensa volumine," including a treatise "De Arte-Gymnastica;" "Consilium de Ratione discendi Medicinam," &c. He published an edition of the works of Hippocrates, Venice 1588.—*Niceron. Hutchison's Biog. Med.*

MERIAN (SYBILLA) an eminent naturalist and artist, was the daughter of Matthew Merian, an engraver and topographer, known by a topographical work printed in Germany in 31 vols. folio. Sybilla was placed under the tuition of Abraham Mignon, and soon learned to paint insects, fruit, and flowers with great beauty; and at the same time she applied herself to the study of natural history and of the Latin language. She married Adrian Graaf, a painter and architect of Nuremberg; but household duties did not prevent her from continuing her studies, and in 1679 and 1683 she published her "History of the Insects of Europe." In 1698 she went to Surinam, for the purpose of drawing from nature the insects and reptiles with which that country abounds. On her return, she presented her drawings to the magistrates of Amsterdam, who placed them in the Stadt-house, where they still remain. She is also author of a work "On the Generation and Metamorphoses of the Insects of Surinam." This industrious female artist died in 1717, leaving two daughters, one of whom, Dorothea, added a third part to her mother's history of European Insects. *D'Argenville. Haller's Bibl. Bot.*

MERLIN (AMBROSE) a British writer who flourished about the latter end of the fifth century. The accounts we have of him are so mixed up with fiction, that to disentangle his real life from the mass would be impossible. He was supposed to be an enchanter and a prophet, and to have been begotten by an incubus. He is also said to have foretold the arrival and conquests of the Saxons. Instead of dying, it was supposed that he fell into a magic sleep, from which, after a long period, he would awake; and to this fable Spenser alludes in his "Faery Queen." Certain extravagant prophecies, and other ridiculous works have been ascribed to Merlin, and some authors have taken the trouble to write commentaries on them. In the British Museum is "Le Compte de la Vie de Merlin et de ses faiz et Compte de ses Prophecies," 2 vols. folio, on vellum, without date or place. We have also "The Life of Merlin, surnamed Ambrosius," by T. Heywood.—*Warton's Hist. of Poetry. Tanner. Spenser's Faery Queen. Macpherson's Andrew of Winton.*

MERLIN (JAMES) a learned French priest of the sixteenth century, was a native of Limoges, and studied at the university of Paris, where he took the degree of DD. in 1499. He was rector of the parish of Montmartre, and canon of Notre Dame at Paris. He used so much freedom in declaiming against the reformed religion, and against the courtiers who were supposed to be favourable to it, that Francis I caused him to be arrested and committed prisoner to the castle of Louvre in 1527.

He was enlarged, but banished to Nantes, whence he was permitted to return in 1530, and was made vicar-general to the archbishop of Paris. He died in 1541. He published "A Collection of the Councils;" and was the first who ventured to defend Origen, when publishing his works, which he did in an apology prefixed to them. He also published "The Works of St Pourçain;" "The Works of Peter of Blois;" and "The Works of Richard de St Victor."—*Dupin. Moreri. Nouv. Dict. Hist.*

MERRET (CHRISTOPHER) an English physician and naturalist of the seventeenth century. He was a native of Winchcombe in Gloucestershire, and studied at Oriel college, Oxford, where he took the degree of MD. He settled as a medical practitioner in London, and became a fellow of the Royal College of Physicians; and he was also an early member of the Royal Society, in the scientific researches of which learned body he took an active interest, prosecuting, in conjunction with Boyle and others, experiments calculated to throw light on various subjects of physical inquiry. He was the author of "Pinax Rerum naturalium Britannicarum," 8vo; a collection of charters, &c. of the college of Physicians; and a tract against the apothecaries in their dispute with the college. Dr Merret died in 1695, aged eighty-one.—*Pulteney's Sketches of the Progress of Botany.*

MERRICK (JAMES) an English divine and poet, whom bishop Lowth calls one of the best of men and most eminent of scholars, was born in 1720, and educated at Reading school, whence he removed to Trinity college, Oxford, where he took his degrees, and became fellow in 1744. He entered into orders, but seldom preached, being subject to acute pains in his head, and frequent debility. He died at Reading in 1769. He was the author of numerous prose works and poems, the principal of which are, "A Translation of Tryphiodorus;" "A metrical Version of the Psalms;" "Poems on sacred Subjects;" "A Letter on the Composition of Greek Indexes;" "Annotations on the Gospel of St John;" "Annotations on the Psalms;" "Dissertation on the ninth of Proverbs," 4to; "Messiah, a divine Essay," &c. Several of his poems are in Dodsley's Collection.—*Gen. Biog. Dict.*

MERRY (ROBERT) an English author of the last century, born in 1755 at London, where his father was a merchant. From Harrow grammar school he proceeded to Christ's college, Oxford, and on quitting the university became a member of the society of Lincoln's Inn, with a view of making the law his profession, but soon taking a disgust to the study he gave it up, and entered the army. The service did not, however, prove more congenial to his taste; he therefore parted with his commission in the Guards, and, after filling for some time the character of a wit and man of fashion about town, went to Italy. Here he became a member of the Della Crusca academy at Florence, and carried on for some time a poetical correspondence in the

English newspapers, under the signature of that society, which at length became the object of the caustic satire of Gifford, in his well-known "Baviad and Mæviad." Mr Merry in 1791 married Miss Brunton, elder sister to the present countess dowager of Craven, an actress of considerable talent and great personal attractions. He afterwards sailed with his wife to America, where the latter continued to perform, and was a great favourite. Although the poetry of Mr Merry and of the Della Cruscan school, as it was termed, obtained a temporary popularity, yet, after the severe exposure of the affected sentimentality which was its essence, by the satirist alluded to, it sank at once into oblivion; nor have his dramatic attempts been much more successful. These latter consist of "Lorenzo," a tragedy; "Fenelon;" "The Magician no Conjuror;" and "Ambitious Vengeance." His death took place in 1798.—*Gent. Mag.*

MERSENNE (MARIN) better known by his Latin denomination, Marinus Mersennus, a French author of great learning and deep research, born in September 1588, at Oyse, in the province of Maine. From the college of La Fleche, where he received the rudiments of education in company with Descartes, he removed to that of the Sorbonne; and in 1611 became a member of the order of Friars Minor at Nevers, when he distinguished himself by his proficiency in the study of divinity and Oriental literature. Father Mersenne kept up a constant correspondence with many learned men of the age, as well Frenchmen as foreigners, especially with his former friend and schoolfellow, Descartes, who consulted him generally with respect to his own publications. He was passionately fond of music, and in his "Harmonie Universelle," printed in folio at Paris in 1636, as well as in a tract "De Sonorum Naturâ," enters very deeply and scientifically into the nature and properties of sound, and gives the results of several curious experiments in acoustics, made by him for the purpose of demonstrating the principles of harmony. He is also celebrated for the discovery of what he calls the curve roulette, (the cycloid,) which gained him great credit, and he was particularly happy in suggesting as well as resolving many interesting and ingenious questions. Besides the works already mentioned, he was the author of "Questions in Genesim celeberrimæ," folio, 1623, Paris; "Les Questions inouïes;" "Cogitata Physico-Mathematica," 4to, 2 vols; "La Verité des Sciences;" "Impiety of Deists refuted," 8vo, 2 vols; "The Spherics of Menelaus;" "Learned Recreations," &c. He died of an abscess in the side in July 1648.—*Nouv. Dict. Hist.*

MERTON (WALTER de) a learned and munificent prelate of the thirteenth century, surnamed from the place of his birth, a village in Surrey. He received a classical education at a religious house in the neighbourhood, where he afterwards took the vows, and becoming distinguished both by his learning and

generalability, rose through several ecclesiastical offices of weight and importance, till in 1258, he was advanced to the post of chancellor of England. The successful insurrection of the barons removed him from his situation before the expiration of the same year. Three years afterwards he was reinstated in his office; and in 1264 commenced the foundation of a college still called after his name, in the university of Oxford; this edifice was ten years in building, and in the year of its completion its founder was installed in the see of Rochester. He presided over that diocese, however, little more than two years, dying before the expiration of 1277.—*Biog. Brit.*

MERULA (GEORGE) a critic and historian, was a native of Alessandria in Italy, and his family name was Merlani. He acquired much reputation for his classical knowledge, and passed the greatest part of his life in teaching the languages and rhetoric at Venice, Milan, and Pavia. He died at Milan in 1494. His works are, "Antiquitates Vicecomitum, sive de Gestis ducum Mediolanensium," written in an elegant style, but not without many errors; "A Description of Monserrat, and of the Eruption of Mount Vesuvius," and a small historical tract entitled, "Bellum Scodrense," describing the siege of Scutari by the Turks in 1474. He also gave editions of "Cato, Varro, Columella and Palladius" collectively; of Plautus, Juvenal, Martial, Ausonius, and the Declamations of Quintilian. He translated from the Greek of Xiphilinus, the lives of Trajan, Nerva, and Adrian, which were much commended by Erasmus. He had many disputes with contemporary writers, and degraded himself by the acrimony and violence of his language.—*Fossii Hist. Lat. Tiraboschi.*

MERULA (PAUL) an historian, was born at Dort in 1558. He travelled into France, Germany, Italy, and England, and on his return he was appointed successor to the celebrated Lipsius in the chair of history at Leyden. He died at Rostock in 1607. He published "The Fragments of Ennius, with a Commentary;" "Eutropius;" "The Lives of Erasmus and Junius;" "Cosmographia;" a "Treatise on Law;" and a "Treatise on Hunting." After his death were published, "P. Merulae Opera varia posthuma," 1684.—*Moreri.*

MESENGUY (FRANCIS PHILIP) a French abbé, was born at Beauvais in 1677, and for several years taught the classics and rhetoric at his native place. He was then sent for to Paris, to preside over the rhetorical class in the college of Beauvais, and was chosen coadjutor to Coffin, and made catechist of the pensionaries, for whose use he drew up his "Exposition of Christian Doctrine." He excited the displeasure of the court, by his vehement opposition to the constitution Unigenitus, in consequence of which he was obliged to relinquish his situation, and withdraw into privacy. He died in 1763. His works are, "Histoire de l'Ancien Testament," 10 vols. 8vo; "Notes on the New Testament;"

"Entretiens sur la Religion;" "La Constitution Unigenitus, avec des Remarques." He was also concerned in compiling "The Lives of the Saints," edited by the abbé Goujet, and was employed in the Missal of Paris.—*Nour. Dict. Hist.*

MESMER (FREDERIC ANTHONY) a German physician, author of the famous doctrine of animal magnetism, called also Mesmerism. He was born at Mersburgh in Suabia, in 1734. He first made himself known in 1760, by the publication of a thesis "De Planetarum influxu," in which he maintained that the heavenly bodies exercised an influence on the bodies of animals, and especially on the nervous system, by means of a subtile fluid diffused through the universe. But this whimsical association of the Newtonian philosophy with the reveries of astrologers being too abstruse for general reception, he added the notion of curing diseases by magnetism, and went to Vienna to put his ideas in practice. Father Hell had previously performed some supposed cures by the application of magnets, and he, considering Mesmer as a rival, charged him with borrowing, or rather stealing, his invention. The new empyric thought it prudent, therefore, to renounce the use of common magnets, and declare that his operations were conducted solely by means of the magnetism peculiar to animal bodies. He had little success at Vienna, and his applications to the academies of Sciences at Paris and Berlin, and the Royal Society of London, were treated with neglect. After an abortive attempt to cure mademoiselle Paradies, a celebrated blind musician, by the exercise of his art, Mesmer quitted Vienna for Paris in 1778. There he for some time in vain endeavoured to attract the notice of men of science, but at length he succeeded in making a convert of M. Deslon, who, from being his pupil, became his rival, and with whom he then quarrelled, and represented him as an impostor. [See DESLON (C.)] Mesmer had the impudence to demand from the French government the gift of a castle and estate, as a reward for his pretended discoveries; and what is not a little extraordinary, the baron de Breteuil seems actually to have carried on a sort of negotiation with this daring pretender, offering him a large pecuniary reward, if he would establish what he termed a magnetic bed, and instruct three persons, chosen by government, in his manoeuvres. The latter condition induced him to reject the proposal, and he removed with some credulous patients to Spa. A subscription was opened to induce him to return to Paris, and reveal the principles of his professed discovery. He consequently went thither, gained a number of proselytes, among whom was La Fayette, and he pocketed 340,000 livres. Government at length appointed a committee of physicians and members of the academy of Sciences, to investigate the pretensions of Mesmer, and the result of their inquiries appeared in an admirable memoir drawn up by M. Bailly, which completely exposed the futility of animal magnetism and the quackery of

the author. He afterwards resided some time in England under a feigned name, and then retired to Germany; and in 1799 published a new exposition of his doctrine, which attracted no notice. He died at his native place in 1815. He was the author of "Memoire de F. A. Mesmer sur ses Decouvertes" and other pieces.—*Biog. Univ.*

MESMES (JOHN ANTONY de) count d'Avaux, and marquis of Givry, was ambassador extraordinary to Venice from 1671 to 1674, and the next year was one of the plenipotentiaries at the peace of Nimeguen. He was next appointed ambassador to Holland, where he formed the truce with Spain, by which Luxemburg was given up to France. In 1689 he visited James II, while in Ireland, in the same capacity. He then visited Sweden, and assisted in settling the preliminaries of the peace of Ryswick. He went again to Holland, but returned at the renewal of the war, and died at Paris in 1709. His "Letters and Negotiations" were published in six volumes 12mo, in 1752.—*Moreri. Nouv. Dict. Hist.*

MESTON (WILLIAM) a burlesque poet, was born at Midmar in Aberdeenshire, about 1688, and was educated at Aberdeen, after which he became tutor to the young earl Marshal and his brother, and was appointed professor of philosophy in the Marischal college, which situation he lost in 1715, by joining the Pretender. He subsequently made several attempts at school-keeping, which his imprudent and convivial disposition rendered abortive, and he subsisted upon the bounty of his different friends until his death in 1745. He was the author of the burlesque poems, entitled "Mother Grim's Tales," and of some Latin poems of inferior merit. Some of his pieces are in the style of Butler, whom he imitated rather servilely. Meston was one of the best classical scholars of his time, as well as an able mathematician.—*Gen. Biog. Dict.*

METASTASIO (PIETRO) a celebrated Italian lyric and dramatic poet, was born at Rome in 1682, of parents in humble life, originally of Assisi, whose names were Trapassi. At the age of ten he was in the habit of repeating extemporary versification in the streets of Rome, where he attracted the attention of the celebrated jurist Gravina, who undertook to educate him to his own profession, and who, on taking him, changed his name from Trapassi to Metastasio. At fourteen he produced his tragedy of "Giustino," which so pleased his patron, that he took him to Naples, where he contended with, and excelled some of the most celebrated improvisatori of Italy. He still, however, continued his study of the law, and with a view to the only two channels of preferment which prevail at Rome, also assumed the minor order of priesthood, whence his title of abate. In 1718 death snatched away his benefactor, who bequeathed to him the whole of his personal property, amounting to 15,000 crowns. Of a liberal and hospitable disposition, he gradually made away with this provision, and resolved to apply more closely to law. He accordingly repaired to Naples, to

study for that purpose, but becoming acquainted with, and possibly amorously attached to Brugnatelli, usually called the Romanina, the most celebrated actress and singer in Italy, he no longer contended with his genius, but gave himself up entirely to harmony and poetry. The extraordinary success of his first opera, "Gli Orti Esperidi," confirmed him in this resolution, and joining his establishment to that of the Romanina and her husband, in a short time he composed three new dramas, "Cato in Utica;" "Ezio," and "Semiramide." He followed these with several more of still greater celebrity, until his fame extending beyond the Alps, in 1730 he received and accepted an invitation from the court of Vienna, to take up his residence in that capital, as coadjutor to the imperial laureat, Apostolo Zeno, whom he ultimately succeeded. The life of Metastasio henceforward presented a calm uniformity for upwards of half a century, during which period he retained the favour of the imperial family undiminished, his extraordinary talents being admirably seconded by the calm tenor of his private character, and avoidance of court intrigue. Indefatigable as a poet, he composed no less than twenty-six operas, and eight oratorios, or sacred dramas, besides cantatas, canzoni, sonnets, and minor pieces to a great amount. The poetical characteristics of Metastasio are sweetness, correctness, purity, simplicity, gentle pathos, and refined and elevated sentiment. There is, therefore, much less of nature, than of elegance and beauty in his dramas, which in consequence appear insipid to those who have been nourished with stronger poetic aliment. This eminent man was visited by Dr Burney, who describes him, at the age of seventy-two, as looking like one of fifty, and the handsomest man, of his time of life, that he had ever beheld. He died after a short illness at Vienna, in April 1782, having completed his eighty-fourth year, leaving a considerable property in money, books, and valuables. Besides his numerous works, which have been translated into most of the European languages, a large collection of his letters have been published since his death, which work supplied copious materials for his biography.—*Burney's Life of Metastasio.*

METEREN (EMANUEL van) a Flemish historian, was born at Antwerp in 1535. In consequence of his embracing the reformed religion, he was obliged to leave his country, and he came to England, where he died in 1612. His "History of the Low Countries," from 1500 to his own time, is much esteemed, though even the Protestant writers charge the author with partiality and credulity. It was several times reprinted, and was translated into French and German.—*Freheri Thesaur. Nouv. Dict. Hist.*

METHODIUS, a father of the church, and a martyr, was bishop of Olympus, or Patara, in Lycia, and afterwards of Tyre, in Palestine. Epiphanius says, "that he was a very learned man, and a strenuous assertor of the truth." He was the author of a large

work, "Against Porphyry the Philosopher;" "A Treatise on the Resurrection," against Origen; another on "Pythonissa;" "The Banquet of Virgins;" "On Free-will;" "Commentaries upon Genesis and the Canticles." Several fragments of this author were collected by father Combefis, and published at Paris in 1644. "The Banquet of Virgins," was found entire, and printed with a Latin version in 1657, folio.—*Cave. Lardner.*

METKERCKE (ADOLPHUS) a learned classical scholar and critic of the sixteenth century. He was a native of Bruges, in the Netherlands, and was ambassador from the Dutch republic at the court of queen Elizabeth. He is chiefly distinguished as the author of a work, entitled "De veteri et recta pronunciatione linguæ Græcæ commentarius;" and he edited the works of the Greek pastoral poets, Bion and Moschus, and translated the poems of Theocritus into Latin. He also wrote an account of the proceedings at the treaty of Cologne in 1579. His death took place in Loudon, in 1591, at the age of sixty-three.—*Chalmers's Biog. Dict.*

METO or METON, a famous mathematician of Athens, flourished 432 years BC, and was the son of Pausanias. In the first year of the eighty-seventh Olympiad he published his cycle of nineteen years, in which he endeavoured to adjust the course of the sun to that of the moon, and to make the solar and lunar years commence at the same point of time. This invention is called, from him, the Metonic cycle, also, the golden number. On the embarkation of the Athenian fleet to Sicily, Meto escaped being sent, by counterfeiting idiocy. He was assisted in his observations by a fellow-citizen named Eudemon. The time of his death is not known.—*Fabricii Bibl. Græc. Hutton's Math. Dict.*

METTRIE (JULIAN OFFRIE de la) a very eccentric French author and physician, was born at St Maloes in 1709. He studied physic under Boerhaave, after which he removed to Paris, and became an army surgeon in a regiment of French guards, commanded by the duke de Grammont. Being taken ill at the siege of Freyburg, contrary to the usual operation of sickness, he was led into doubts of the immortality of the soul, and published, under the feigned name of Charpe, a work, entitled, "Histoire Naturelle de l'Âme," 1745, in which he denied its immateriality, and classed man as an animal of the ape genus. He lost his appointment for this work after the death of the duke de Grammont; and farther irritated his brethren of the faculty, by his "Penelope, ou le Machiavel en Medicine," in which he attacked all the physicians of the time, and especially his own master, Boerhaave. He then repaired to Holland, where he published his most celebrated work, "L'Homme Machine," which being ordered to be burnt, he retired to Berlin, where he was made reader to the king, and a member of the academy. He lived tranquilly in the Prussian capital until 1751, when he died after a short illness. The king of Prussia thought so well of him,

that he composed his funeral eulogy with his own pen; but his brother philosophers represent him as a frivolous and inconsequential reasoner, who owed the attention paid him chiefly to his eccentricity and curious humour. His "Œuvres Philosophiques," published at Berlin in one volume quarto, contain, besides the production already mentioned, "L'Homme Plante;" "Recherches sur l'Origine des Animaux;" "Discours sur le Bonheur," &c. He also published in the last year of his life, "Œuvres de Medicine," which, as the work of a man who, at the age of forty-eight, deprived himself of life by his preposterous treatment of a slight disorder, obtained very little attention.—*Haller Bibl. Anat. Nouv. Dict. Hist.*

METZU (GABRIEL) a painter of the Dutch school, was born at Leyden in 1615. He studied the works of Gerard Douw and Micris, but by also adhering to nature, he created a style of his own, distinguished by delicacy and a fine colouring. He was so long employed on his pictures that they are scarce, and the Dutch so highly value them, that but few have been suffered to go out of their country. His subjects are chiefly domestic; a lady tuning her lute, and another washing her hands in a silver basin held by her maid, are among his best pieces. He died at Amsterdam in 1658 in consequence of an operation which he underwent for the cure of the stone.—*D'Argenville. Pilkington.*

MEULEN (ANTHONY FRANCIS VANDER) a Flemish painter, was born at Brussels in 1634, and was the disciple of Peter Saayers, an esteemed battle painter. His pictures attracting the notice of Colbert, he induced him to settle in Paris, and Louis XIV gave him a pension of two thousand livres, besides the price of his works. He painted almost all the remarkable events in the campaigns of Louis, though he frequently had to represent dull, insipid scenes, he diversified them in such a manner as to render them amusing. He was perfectly skilled in perspective, and executed with an agreeable, though not always a natural tone of colour, and with great delicacy. He died about 1690.—*D'Argenville. Wulpole's Anecdotes.*

MEUNG or MEUN (JOHN de) a French poet, surnamed from his lameness, Clopinel, was born at Meun on the Loire in 1230. He was generally well informed, but by his poetical talents and vivacity he rendered himself a favourite at the court of Philip le Bel. He was satirically inclined, and exercised his wit upon the ladies of the court, who were so irritated against him, that a party of them seized him, and resolved to give him a severe flogging, but his wit here came to his assistance, and he escaped the destined castigation, by desiring the most unchaste to give the first blow. He died about 1364, directing by his will that he should be buried in the church of the Dominicans at Paris, and leaving to that order a heavy chest, not to be opened until after the funeral. The friars, expecting a treasure, opened the chest, but found only some old

notes, scrawled with sums and figures. In revenge they disinterred the body, but the parliament of Paris obliged them to bury it again with fresh honours. His principal work was his continuation of the "Roman de la Rose," begun by William de Lorris, which comprises more than three parts of the whole. It is not so poetical as the other, but has more satire and knowledge of the world. He was also the author of a translation of "Boethius de Consolatione;" "The Letters of Abelard;" a work on the "Responses of the Sybils;" and a satirical piece, styled, "The Codicil of John de Meun," prefixed to Lenglet du Fresnoy's edition of the "Roman de la Rose," &c.—*Moreri. Nouv. Dict. Hist. Warton's Hist. of Engl. Poetry.*

MEURSIUS (JOHN) a Dutch critic of great erudition and research, born in 1579 at Losdun, a village near the Hague. At sixteen, while a student in the university of Leyden, he published his first work, an edition of Lycophron's *Cassandra*, with notes. He was afterwards selected by the celebrated Barneveldt, as travelling tutor to his sons, whom, about the commencement of the seventeenth century, he accompanied over great part of the European continent, and during the journey took the opportunity of perfecting himself in the study of jurisprudence at Orleans, where that science was then especially cultivated. On his return to Holland, after a ten years' absence, he was elected to the professorship of history and of Greek at Leyden, with the title of historiographer to the states-general. The fall of his patron, Barneveldt, however, had almost involved him in its vortex, when finding that his enemies were unwearied in their attempts to deprive him of his professorships, he wisely resigned a situation which there might have been danger in retaining; and accepting an invitation made him by the court of Denmark, proceeded to Copenhagen. Here he soon became established at the college erected for the education of the young nobility at Sora, in a similar post to that which he had occupied in Holland. Scaliger appears to have held both the learning and the talents of Meursius in great contempt, and has charged him at once with pedantry and ignorance; the works which he has left behind him, however, are sufficient monuments both of his learning and his genius. These consist of a "History of the Rise and Progress of the Republic of Athens;" "On the Athenian Archons;" "On the People of Athens;" "On the Festivals of the Greeks;" "On the Dances of the Antients;" new editions of the works of Porphyry; of the "Elements of Music" by Aristoxenus, Leyden, 1616; of the "Isagoge Musica" of Alypius, Leyden, 1616; and of the "Enchiridion Harmonices" of Nicomachus; "A History of Denmark," &c. The only complete edition of his works is that of Florence, in 12 folio volumes, 1743. Meursius died of the stone, at Sora, September 30, 1639, leaving behind him a son, a youth of great promise, who died at an immature age, but whose essays on the

Tibia, or pipe of the antients, and on the cultivation and preservation of trees, evince tokens of literary talent, which time only was wanting to bring to maturity.—*Nouv. Dict. Hist.*

MEUSEL (JOHN GEORGE) a learned and industrious German bibliographer, born in Franconia in 1743. After completing his first studies at Cobourg, he went to Gottingen in 1764, where he became a member of the philosophical seminary established under the auspices of Heyne; and he also applied himself to history, under professor Achenwall. In 1766 he accompanied C. A. Klotz to Halle, in expectation of obtaining the first vacant chair at that university; but two years afterwards the elector of Mayence invited him to Erfurt, to become professor of history, and at the same time he was appointed aulic counsellor of the principality of Quedlinburg. The same honour was afterwards bestowed on him by the king of Prussia. In 1779 he removed to occupy the chair of history at Erlang, where he remained till his death in 1820. Among his works are, "Bibliotheca Historica," Leips. 1782-1804, 22 vols. 8vo; "Gelehrte Teutschland," a bibliographical dictionary of German living authors, with exact lists of their works, which he carried on to the extent of 16 vols. 8vo; "The Literature of Statistics;" "Directions for the History of Literature," 1799-1800, 3 parts, 8vo; and a "Dictionary of German Writers, who died from 1750 to 1800," 1802, &c. 15 vols. 8vo; besides a multitude of useful compilations, and new improved editions of the productions of other authors.—*Biog. Univ.*

MEXIA (PEDRO) chronicler to Charles V, was born at Seville, and was the author of a history of the Caesars, including the German emperors, which has been translated by Edward Grimston. His "Silva de Varia Lccion," with the additions of Sansovino and Verdier, its French and Italian translators, is referred to by Grose, as that "treasury of ancient and modern times." Mexia was also the author of a history of Charles V, which he left unfinished, and of some colloquies in favour of the Ass, written in imitation of Lucian and Apuleius. Mexia was not deficient in learning, and he piqued himself upon his astrological skill. He died in 1552.—*Biog. Univ.*

MEYER (JAMES) an historian, was born at Vleteren in Flanders, near Baillleul, whence he took the name of Balliolanus in 1491. After studying in the university of Paris, he took orders, and became teacher of a school at Ypres and Bruges, where he had a benefice in the church of St Donatian. He corresponded with Erasmus, and other learned men, and was the author of "Flandricarum rerum Decas," 4to, 1531, being an account of the origin, antiquity, genealogy, &c. of the counts of Flanders; "Annales rerum Flandricarum," beginning with the year 445 down to 1477, and written in a pure, easy style. He died at Blankenberg in 1552.—*Saxii Onom. Moreri. Nouv. Dict. Hist.*

MEYER or MEYERS (JEREMIAH) a na-

niature painter, was born at Tübingen in 1735, and came over to England, with his father, in 1749. He studied two years under Zinck, the eminent painter in enamel, but soon surpassed him. In 1761 he obtained a prize of twenty guineas from the Society of Arts, for the best profile of the king. He was appointed miniature painter to the queen, and being naturalized, by act of Parliament, he married a lady of fortune, and in 1764 was appointed painter in enamel to the king. Meyer, who was one of the founders of the Royal Academy, died in 1789.—*Hayley's Life of Romney. Bryan's Dict. of Paint. and Eng.*

MEZERAI (FRANCIS EUDES de) a celebrated French historian, born in 1610 at Ry, in lower Normandy, was son of a surgeon in that place. After studying at Caen, he came to Paris, and obtained the post of a captain of artillery, in which capacity he served two campaigns. He then quitted the army in disgust, and shut himself up in the college of St Barbe, where he devoted himself to close study, and projected his "History of France." Encouraged by the countenance and pecuniary aid of cardinal Richelieu, he published his first folio volume in 1643, which was followed by the second and third in 1646 and 1651. This work was regarded as so superior to every thing of the kind which had appeared before it, that the court rewarded him with a pension of four thousand livres, and the title of historiographer. His success induced him to compose an abridgment of his great work, under the title of "Abrégé Chronologique de l'Histoire de France," which is reckoned much superior to the original. In the latter he gave an account of the origin of all the public imposts, accompanied by some very free reflections, which so offended the minister Colbert, that he remonstrated with the author, who promised to correct it in a second edition. He performed his promise, but at the same time informed his readers, that he was compelled to do so; the result of which was the loss of half his pension in the first instance, and on farther complaint, the withdrawing of the whole. In 1675 the French Academy gave him the place of perpetual secretary, in which character he prepared a sketch of its projected dictionary. He died in 1685. Mezerai was a man of great singularity in temper and manner, being caustic, censorious, and little attentive to the common forms of social life. As an historian he is regarded as being more bold than accurate, with a style harsh and incorrect, but clear, energetic, and occasionally exhibiting a vigorous conciseness, not unworthy of Tacitus. The second edition of the "Histoire de France," 3 vols. folio, 1685, is deemed the more correct; but several of the most spirited passages in the first are suppressed in it. The latest edition of "Abrégé" is that of 1755, in 14 vols. 12mo, in which the suppressed passages of 1668 are restored. Mezerai also wrote "Traité de l'Origine des François," a work much valued for its erudition, together with some translations. A number of satirical pieces against the government, under the name of Sandri-

coart, have also been attributed to him.—*Moreri. Nouv. Dict. Hist.*

MEZIRIAC (CLAUDE GASPARD BACHET, sieur de) a French jesuit, distinguished as a scholar, a poet, and a critic, born in 1531, at Bresse, of a noble family. He was intimately acquainted with the French, Italian, Latin, and Greek languages, and has left behind him poems of great merit, composed in each of the three former. His acquaintance with the sciences of geometry and the mathematics was also considerable, and from the variety as well as the extent of his knowledge, it was at one time in contemplation to place the direction of the studies of Louis XIII under his superintendance; the native modesty, however, of Meziriac, and, perhaps, his prudence, prevented his undertaking the task. His printed works, in addition to the poems above-mentioned, consist of an able commentary on the six books of Diophantus, a life of Æsop, and a French translation of Plutarch, beside which he is said to have left behind him some valuable manuscripts. His death took place at Bourg in 1638.—*Nouv. Dict. Hist.*

MICAL (abbé) a most ingenious mechanic, born in France about 1730. After having finished his studies, he entered into holy orders, and obtained a small benefice, which added enough to his patrimonial fortune to produce a competence for his support. He dedicated his time and talents to the construction of speaking machines; and though he appears to have succeeded only so far as to produce an imperfect imitation of the human voice, yet his mechanism excelled all other inventions of the kind, and did great credit to the talents of the artist. The first automaton, or speaking head, which the abbé made, was destroyed by himself; but he afterwards completed two more, which he presented to the Academy of Sciences in 1783. From the report of Vicq-d'Azyr, one of the commissioners appointed to examine them, it appears that the heads covered a box, in which artificial tongues were so arranged as to produce, by the impression of the air upon membranes with which they were connected, various gradations of sound, capable of being modified so as to resemble the human voice, in the pronunciation of articulate words and sentences. What became of these heads is uncertain. The inventor died in indigence in 1789 or 1790.—*Biog. Univ.*

MICHAELIS (JOHN HENRY) a learned divine and Oriental scholar, who was born at Kettenberg in Germany, in 1668. He studied at the university of Leipsic, and afterwards at Halle, where he became professor of Greek literature in 1699. He subsequently obtained the office of librarian to the university; and at length was appointed to the chair of divinity and the Oriental languages. In 1720 he published at Halle a valuable edition of the Hebrew Bible, with various readings from MSS. and printed editions, and the masoretic commentary and annotations of the rabbins; a kind of appendix to this work at the same time appeared under the title of "Annota-

stones Philologico-Exegeticae in Hagiographis," Halle 1720, 3 vols. 4to. Michaelis was also the author of a Hebrew Grammar, and other works. He died in 1738.—*Biog. Univ.*

MICHAELIS (JOHN DAVID) nephew of the foregoing, was born at Halle in 1717. He was educated at the university of his native place, and devoted himself to the clerical profession. Having visited this country, he became acquainted with Dr. Lowth and other English literati; and for a time he was preacher at the German chapel, at St James's palace. Returning to Germany, he was made professor of theology and eastern literature at the university of Gottingen, of which he was also librarian. He was appointed director of the royal society of Gottingen, and by his writings and lectures he contributed greatly to the celebrity of that university as a school of theological literature. The order of the polar star was bestowed on professor Michaelis in 1775, by the king of Sweden, and in 1786 he was made an aulic counsellor of Hanover. He died in 1791. His works are numerous, relating to Scripture criticism, and the Oriental languages and literature. Among the most valuable are his "Introduction to the New Testament," which has been translated into English by Bishop Marsh, and his "Commentaries on the Law of Moses," of which there is an English version by Dr Smith.—*Id.*

MICHAELIS (CHRISTIAN FREDERICK) son of the preceding, distinguished as a physician, was born at Halle about 1754. After studying at home, he went to Strasburg in 1775, and took the degree of MD. He practised medicine for some time at Paris, afterwards visited England, and returning to his native country, became an army physician in the service of the prince of Hesse. About the year 1780 he occupied the chair of medicine at Cassel; and in 1786 he removed to Marburg, where he was professor of anatomy, and subsequently chief medical professor till his death in 1814. He was the author of a tract, "De Angina polyposa seu Membranacea," 1778; a "Letter on the Regeneration of the Nerves," 1785; "Medical Memoirs," &c.—*Biog. Nov. des Contemp.*

MICKLE (WILLIAM JULIUS) an English poet, was the son of a presbyterian clergyman, and was born at Langholm in the county of Dumfries, in Scotland, in 1734. He received his education at Edinburgh, and in the first instance engaged in business as a brewer, but not succeeding, he devoted himself to literature, and removing to London, he was noticed by lord Lyttelton. In 1765 he was employed as corrector of the press in the Clarendon printing-office at Oxford, where he published a poem, entitled "The Concubine," in imitation of Spenser, republished with the title of "Sir Martyn." He afterwards edited what is called "Pearch's Collection of Poems," 4 vols. supplementary to that of Dodsley, and he appears to have furnished many valuable contributions to the collection of "Old Ballads," by Evans, the bookseller. In 1775 appeared his principal production, a

translation of the *Lusiad* of Camoens; i. was published by subscription, in a quarto volume, with a dedication to the duke of Buccleugh, in whose family the author's father had been chaplain. Prefixed to the poem is an historical and critical introduction, including a life of Camoens; and the work itself is executed in a manner highly creditable to the talents of the translator. In 1778 Mr Mickle accompanied commodore Johnson as his secretary on a mission to Lisbon; and after his return home, he resided at Forest-hill, in Oxfordshire, where he died October 5, 1788. His poetical works were published collectively, in 3 vols. 8vo, 1807, with a biographical memoir.—*Campbell's Specim. of Brit. Poets.*

MIDDLETON (CONYERS) a learned and ingenious divine and polemical writer. He was born at York in 1683, and was the son of an episcopal clergyman, to whom he was indebted for the early part of his education. He became a student, and afterwards a fellow of Trinity college, Cambridge, in which situation he attracted some notice by his quarrel with the celebrated Dr Bentley, the master of his college.—[See BENTLEY, R.]—In 1724 he visited Italy, and on his return he published a tract, designed to show that the medical profession was held in little esteem by the ancient Romans; and in 1729 appeared his "Letter from Rome," on the conformity between popery and paganism. Not long after he obtained the Woodwardian professorship of mineralogy, which he held till 1734, when he was chosen librarian to the university. In 1735 he published "A Dissertation concerning the Origin of Printing in England, showing that it was first introduced and practised by our countryman, William Caxton, at Westminster, and not, as is commonly believed, by a foreign printer, at Oxford." His greatest literary undertaking was "The History of the Life of M. T. Cicero," 2 vols. 4to, 1741; in which he displays an intimate acquaintance with his subject, accompanied with a degree of elegance in his style and language, which entitle him to rank among the principal modern historians of this country. In 1743 he published "The Epistles of M. T. Cicero to Brutus, and of Brutus to Cicero, with the Latin Text on the opposite Page, and English Notes, a prefatory Dissertation, &c." In 1747 Dr Middleton excited a good deal of alarm among the zealous friends of orthodoxy, by his "Free Inquiry into the Miraculous Powers which are supposed to have subsisted in the Christian Church, from the earliest Ages through several successive Centuries." This treatise, like most free inquiries, brought on the author the imputation of infidelity, and occasioned a warm controversy, which was continued after the death of Dr Middleton, which took place in 1750. Besides the preceding publications, he wrote against Bentley's proposed edition of the Greek Testament; against bishop Sherlock, Dr Waterland, and others. His miscellaneous works have been published in 2 vols. 4to, and 5 vols. 8vo.—*Biog. Brit. Nichols' Lit. Ance*
MIDDLETON (HUGH, sir) a citizen of

London, was the son of Richard Middleton, esq. governor of Denbigh Castle under Edward VI, Mary, and Elizabeth. He settled in London as a goldsmith, and entered into mining speculations, and worked a mine in Cardiganshire which was very productive. A power being obtained in the reigns of Elizabeth and James I, to bring a new supply of water to the city from streams in Middlesex or Hertfordshire, several plans were proposed, but all rejected, on account of the expense and difficulty. Middleton, however, made light of these objections, and the city securing to him and his heirs all the powers and rights conferred by act of parliament in 1603, he took all upon himself, and commenced his undertaking. The expense was, however, so great, that it almost ruined the projector, who vainly applied for assistance to the corporation of London. He at length procured that of the king, to whom a moiety of the concern was made over, on his taking an equal share of the expense. On Michaelmas-day, 1613, the work being completed, the water was let into the reservoir at Islington with much ceremony. Mr Middleton was knighted, but his fortune was so impaired, that he became a surveyor and engineer for emolument. In 1622 he was created a baronet, and his death took place in 1631. A share in this New River, originally worth one hundred, is now worth ten thousand pounds.—*Biog. Brit. Pennant's London and Tour in Wales.*

MIDDLETON, DD. FRs. (THOMAS FANSHAW) first bishop of Calcutta, was the only son of the rector of Kedleston in Derbyshire, where he was born in 1769. He was educated at Christ's hospital, whence he proceeded upon a school exhibition to Pembroke-hall, Cambridge, where he took his first degree in 1792. The same year he took orders as curate of Gainsborough in Lincolnshire, where he wrote a periodical paper called "The Country Spectator." In 1794 he attracted the attention of Dr John Pretyman, archdeacon of Lincoln, who employed him as a tutor to his two sons, and obtained for him the rectory of Tansor in Northamptonshire, to which, in 1802, was added in commendam the consolidated rectory of Little and Castle Bytham. In 1808 he took his doctor's degree, and the same year appeared his erudite work on the Greek Article, addressed to Dr Pretyman. In 1809 he was collated to a stall in the diocese of Lincoln, and presented to the vicarage of St Pancras, Middlesex, and to the rectory of Puttenham, Herts; and in 1812 he was made archdeacon of Huntingdon; and when government came to the resolution of establishing a resident bishop in India, Dr Middleton was selected for that eminent station, and being consecrated at Lambeth in May 1814, arrived at Calcutta in the November of the same year, and immediately began to exert himself zealously in his new authority. In 1820 he laid the foundation stone of a church at Calcutta, near to which a school was erected for the Christian poor, and soon after a Missionary college, towards the erection of which endowment the

societies for the propagation of the gospel in foreign parts, and for missions to Africa and the East, each contributed 5000*l.* In the midst of these labours, Dr Middleton died of a fever after a short illness, July 8, 1822. His sermons and charges have been collected into a volume by Dr Bonney, with a biographical memoir prefixed.—*Life by Bonney.*

MIEL (JOHN) an eminent painter, was born at Vlaenderen in Flanders, in 1599, and was first a pupil of Gerard Ségers. He travelled into Italy, and entered the school of Andrea Sacchi. Being employed by his master in the Barberini palace, he gave way to the natural turn of his genius, and made some grotesque figures, which so irritated Andrea, that he turned him away. Miel then went into Lombardy, to study the works of Correggio and the Carracci; and returning to Rome, he painted the picture of Moses striking the rock, in the gallery of Monte Cavallo, and composed historical pictures for several chapels at Rome. He was admitted into the academy of St Luke, in that city, whence he was invited to Turin, by Charles Emanuel, duke of Savoy, and died there in 1664. Some of his finest works are in the grand saloon of the duke's palace de la Venerie. His chief excellence consists in the delineation of carnivals, beggars, rural scenes, and particularly hunting pieces, which he executed with great spirit. He etched several of his own designs.—*D'Argenville. Pilkington.*

MIERIS (FRANCIS) a very celebrated painter of the Dutch school, was the son of a jeweller at Leyden, where he was born in 1635. He was the pupil of Vliet, Gerard Douw, and Vanden Temple, and he is generally considered as the principal scholar of the second. His works consist of portraits, and scenes in common life. He possessed the delicate finish of Gerard Douw, with more taste in his designs; his colouring, too, is more clear, and his touch more spirited. He usually worked for a ducat an hour; but through his intemperance, he always remained in poverty. One of his finest productions was a picture of a young lady fainting, a physician attempting to recover her, and an old woman standing by; and for this three thousand florins were vainly offered by the grand duke of Tuscany. Mieris died at Leyden in 1681.—He had two sons, JOHN the elder, who gave great promise of future excellence, died in 1690 at Rome.—The younger, WILLIAM MIERIS, was the pupil of his father, and adopted his style, in which he shewed great talent. He died in 1741.—His son, FRANCIS MIERIS, the younger, was also a painter, but was not very successful. He published several works relating to the history of the Low Countries, and the lives of their sovereigns.—*D'Argenville. Pilkington.*

MIGNARD (NICHOLAS) a French painter, was born in 1608 at Troyes. After studying the antiques and paintings at Fontainebleau, he went into Italy, where he passed two years. He returned to Avignon, and acquired the name of Mignard of Avignon, by way of dis-

tinguishing him from his brother, Mignard the Roman. In 1660, when cardinal Mazarin accompanied Louis XIV on his way to meet the infant of Spain, in passing through Avignon, he sat for his portrait to Mignard, who was invited to court, and for some years employed as portrait painter to the royal family. He did not, however, confine himself to portraits, but produced several considerable historical paintings. He also became professor, and finally director of the academy of painting. Mignard's heads are destitute of fire or expression; but he is graceful, and his colouring is good.—*D'Argenville. Pilkington.*

MIGNARD (PETER) surnamed the Roman, a celebrated French painter, brother to the preceding, was born at Troyes in 1610. He was originally intended for the medical profession, but his father finding that his inclinations led him to the study of painting, placed him at the school of a painter at Bourges. After receiving the instructions of Vriet in 1636, he visited Rome, and copied the works of Raphael, Michael Angelo, &c. He married a beautiful young woman, the daughter of an architect at Rome, who served him as a model for his goddesses. After residing twenty-two years in Italy, he was recalled to Paris by Louis XIV, whose favourite artist he became, and whom he painted ten different times, pleasing him as much by his flattery as by his talent. In 1687 the king ennobled Mignard, and on the death of Le Brun in 1690, he succeeded to his places of first painter and director of manufactures, and of director and chancellor of the academy. He died in 1695. His composition was rich and elegant, and colouring harmonious; but he wanted fire and expression. His works were very numerous, and the engravings from them amount to one hundred and forty-seven. Mignard was in habits of intimacy with the principal French wits, and was beloved by them for his social disposition.—*D'Argenville. Pilkington.*

MIGNON, or MINJON (ABRAHAM) an eminent flower and fruit painter, was born at Frankfort in 1639, and was at first placed as a pupil with James Murel, a flower-painter of that city. At the age of seventeen, he accompanied his master to Holland, where he took lessons of David de Heem, of Utrecht. His brilliancy of colouring, and delicate execution, rendered him unrivalled in his time; and in his style he is only surpassed by Van Huysum. He was very particular in the choice of his subjects, and by his exquisite delineations of insects, dew-drops, &c., produced an absolute illusion. By his very great assiduity he injured his health, and eventually shortened his life, dying in 1679, in Holland. His works obtained very high prices, and are to be found in most principal public and private collections.—*D'Argenville Vies des Peint. Pilkington.*

MIGNOT (STEPHEN) a French writer of the last century, member of the Academie des Inscriptions, born 1693, graduated as doctor of divinity in 1722. He was the author of a variety of tracts, principally upon subjects con-

nected with the history and the discipline of the church of Rome. Of these the principal are, "A History of the Disputes between King Henry II. of England, and St Thomas a Becket," 12mo; "On the rights of the Monarch and the Civil Government over the Revenues of the Church," 6 vols.; "A History of the Reception of the Council of Trent in the Catholic States," 2 vols.; "The real History of the Church of St. Omer;" "A Paraphrase on the Psalms, and an elaborate treatise, "Des prêtres de Commerce," in five duodecimo volumes. Mignot died in 1771.—*Nouv. Dict. Hist.*

MIGNOT (VINCENT) the nephew of Voltaire, born at Paris about 1730. He obtained, without being a priest, several benefices, among which was the abbey of Sellieres, in Champagne; and he became counsellor to the grand council, which place he resigned in 1765, only reserving to himself the honorary title. He signed, in conjunction with the Marquis de Ville-Vielle, the profession of faith, which Voltaire is said to have made just before his death; and fearing obstacles might occur to the interment of his uncle, he transported the remains of that celebrated individual to the abbey of Sellieres, whence they were subsequently removed to the Pantheon, or church of St Genevieve, at Paris. Mignot was the author of "Histoire de l'Empire Ottoman, depuis son Origine jusqu'à la Paix de Belgrade, en 1740," Paris, 1771, 4 vols. 12mo, of which there is an English translation; "Histoire de l'Imperatrice Irene," 1760, 12mo; "Histoire de Jeanne I. Reine de Naples," 12mo; "Histoire des Rois Catholiques Ferdinand et Isabelle," 2 vols. 12mo; and he translated Quintus Curtius, and Cicero de Senectute and de Amicitia. His death happened in 1790.—*Biog. Nouv. des Contemp.*

MILBOURNE (LUKE) the son of a nonjuring divine of the same name, who, refusing to take the oaths, was ejected from his living of Wroxhall in Warwickshire, where the subject of this article was born in 1667. He received a classical education at Pembrokehall, Cambridge, when he took the degree of master of arts, and entering the church, obtained the rectory of St Ethelburga, and the lectureship of St Leonard's, Shoreditch, in the city of London. He published some critical remarks on Dryden's translation of the Æneis, which Johnson, in his life of that poet, speaks of somewhat contemptuously. His name also has been introduced by Pope in the Dunciad. The remainder of his writings consist of a version of the Psalms, and about thirty sermons. He died in London in 1720.—*Biog. Brit.*

MILDMAY (SIR WALTER) a highly respectable statesman under the Tudors, was educated at Christ's college, Cambridge. He was employed under Henry VIII in the court of augmentation; and during that of Edward VI in the mint. He also sat in Parliament in the reign of Mary, as knight of the shire for Cumberland, and lastly became chancellor of the exchequer under queen Elizabeth, which

office he held for twenty-three years, and discharged it with so much zeal for the subject as well as for the crown, that he lost no small portion of court favour by his integrity. Sir Walter Mildmay was not only a zealous Protestant, but on many occasions favourable to the puritans, which conduct induced Elizabeth to tell him, when he founded Emanuel college, that she heard that he had erected a puritan foundation. He replied, that he had set an acorn, which, when it became an oak, God alone could tell what it would produce. This able and learned man died May 31, 1589.—*Biog. Brit. Fuller's Hist. of Camb.*

MILL (HENRY) an English engineer, distinguished for his acquaintance with the science of hydraulics. He was a native of London, and for many years held the office of principal surveyor to the New River company, in which station his services were highly appreciated by his employers, and by the public in general. He also erected water-works for the supply of the town of Northampton, and others for the use of the noble garden of sir Robert Walpole, at Houghton, in Norfolk. He died in 1770, in the eighty-first year of his age.—*Biog. Univ.*

MILL (JOHN) a learned English divine and Biblical critic, was born at Shapp in Westmoreland, in 1645. He became a servitor in Queen's college, Oxford, in 1661, where he graduated M.A. in 1669. Being afterwards elected a fellow, he became an eminent tutor, and having entered into orders, was much admired as an eloquent preacher. In 1680 he received from his college the living of Bletchington in Oxfordshire, and proceeding D.D. became chaplain in ordinary to Charles II. The valuable edition of the New Testament, on which Dr Mill employed thirty years of his life, appeared in 1707, under the title of "Novum Testamentum Græcum, cum Lectionibus variantibus, ex MSS. &c." Of the great learning and critical acumen of Dr Mill, this laborious work forms an indisputable testimony, although some ecclesiastical writers have stated their objections to the collection of such a vast mass of various readings, (gathered in this instance, it is said, from more than 30,000 MSS.) as supplying arms to infidelity. Dr Bentley, however, in his "Remarks," has ably supported the other side of the question. Dr Mill survived the publication of his great work only a fortnight, dying of an apoplexy in 1707, in the sixty-third year of his age.—*Biog. Brit.*

MILLAR (JOHN) a professor of law in the university of Glasgow, was born in 1735, in the parish of Shotts, in Lanarkshire. He was educated at Hamilton, whence he was removed at an early age to Glasgow. He was designed for the church, but turned his attention to law, and being invited by lord Kames to become preceptor to his son, was rendered, by his love of metaphysical disquisition, a most eligible companion for the learned judge himself. In 1760 he began to practise, and was rising into notice as an advocate, when he was induced to become a candidate for the vacant professorship of the law at Glasgow, and supported by

the interest of lord Kames and Adam Smith, was chosen in 1761; and the reputation of the university as a school for jurisprudence, was much increased by his talents as a lecturer. In 1771 he published a treatise on the "Origin of the Distinction of Ranks," in which he shows himself a disciple of Montesquieu. This work, which Mr Dugald Stewart classes under theoretical or conjectural history, was followed, after the interval of some years, in 1787, with his "Historical View of the English Government," in which he traces the progressive changes in the property, the state of the people, and the government of England, from the settlement of the Saxons to the accession of the house of Stuart. It exhibits the same love of system and partiality to hypothetical reasoning as his first production, but is at the same time valuable for its information and research. Professor Millar, who was a zealous whig, of the school which adopted Mr Fox as their leader, died May 30, 1801, at the age of sixty-nine, leaving behind him several manuscripts, from which were compiled two posthumous volumes, printed in 1803. A part of those is occupied by a continuation of his "Historical View of the English Government."—*Life prefixed to Works.*

MILLER, mus. doct. (EDWARD) was born at Norwich, of humble parentage, in 1736. Eloping from his father, who had been compelled by his poverty to bring him up to a life of labour, he came to Lynn, where Dr Burney discovered his genius for music, and gave him instruction. In 1756 he obtained the appointment of organist at Doncaster, and after continuing in this situation thirty years, took his doctor's degree in music at Cambridge. Besides his skill on the organ, he was an excellent flute-player, and performed upon that instrument in Handel's first oratorios. Dr Miller was the author of an introductory treatise, still held in considerable estimation, entitled, "The Elements of Thorough Bass and Composition;" of another called "The Institutes of Music;" and of a topographical work of merit, on the "History and Antiquities of Doncaster." He also arranged and published by subscription a set of new melodies for the Psalms, the king himself heading the list of his subscribers. His death took place at Cambridge in 1807.—*Gent. Mag.*

MILLER (JAMES) a political and dramatic writer, was born in Dorsetshire in 1703, and received his education at Wadham college, Oxford. During his residence at the university, his turn for satire led him to compose great part of a comedy, called "The Humours of Oxford," which, bearing allusion to well known characters in that city, gave much offence, and hindered his subsequent preferment. He notwithstanding took orders, and after enduring much vicissitude, at length obtained the living of Upcerne in Dorsetshire. He wrote several political pamphlets against sir Robert Walpole, and some plays, now forgotten, the principal of which is the tragedy of Mahomet. He was also concerned in a translation of Moliere.—*Biog. Dram.*

MILLER (JOSEPH) the name of a witty actor, whose name has become identified with the repetition of wit and equivocal, wherever the English language is spoken. He was born in 1684, it is supposed in London, and was a favourite low comedian about the time that Congreve's comedies were fashionable, to the success of which, it is said, his humour much contributed. In these he performed Sir Joseph Wittol, in the "Old Bachelor;" and Ben, in "Love for Love." Another of his favourite characters was Teague, in "The Committee." He died August 15, 1738, and was buried in the church-yard of St Clements, where a stone (recently renovated) was placed to his memory, with an epitaph, written by his friend, Stephen Duck. After all, the jests which have immortalised his name, seem to have connexion with aught else; for although originally compiled by a professed friend and companion, it is well known that they were collected by John Mottley, author of the life of "Peter the Great," and other works. "Joe Miller's Jest" had run through eleven editions in 1751, and was reprinted, after a lapse of thirty years, by Barker, of Russel-street, Covent-garden. A copy of the original edition was lately valued at ten guineas, in the catalogue of an eminent bookseller.

—*Watkins. Nichols's Lit. Anec.*

MILLER (PHILIP) an eminent botanist, distinguished among his contemporaries by the flattering title of "Hortulanorum Princeps." He was a native of North Britain, born in 1691, and was educated by his father, gardener to the Apothecaries' Company at Chelsea, to succeed him in his situation, which he did, on the decease of the latter, in 1722. Soon after his appointment, the good offices of sir W. Watson and Mr. Hudson introduced him to the acquaintance and correspondence of the celebrated Linnæus, whose plan he afterwards pursued in the arrangement and classification of his garden. Mr Miller, to a thorough acquaintance with the theory of botany, added great practical knowledge of that science; and from the reputation which he acquired in this particular branch of natural philosophy, was elected a member of the Horticultural Society of Florence, as well as of the Royal Society of England, among whose transactions are to be found several papers of his composition. His other writings are, "A Gardener's Dictionary," first printed in folio in 1731. Of this work, which has gone through several editions, Linnæus speaks in terms of unqualified praise. "The Gardener's Calendar," 8vo; "The Gardener and Florist's Dictionary," 8vo; "A Catalogue of Trees, Shrubs, Plants, and Flowers in the Gardens near London;" "Figures of Plants," folio, 2 vols. 1755; and "A Short Introduction to Botany." He also left behind him a valuable herbarium, or hortus siccus. His death took place in 1771.—*Rees's Cyclop.*

MILLES (THOMAS) bishop of Waterford, in Ireland, born at High Clear, Hants, of which parish his father, the reverend Isaac Milles, was many years the incumbent. He received

his education at Wadham college, in the university of Oxford, and took his degree there as bachelor of divinity in 1704. Two years afterwards, he was elected to the Greek professorship, which, however, he resigned in 1707, having accepted an invitation from Lord Pembroke to accompany him to Ireland, in quality of his domestic chaplain. The steady patronage of his lordship eventually procured his elevation to the episcopal bench. Bishop Milles was a prelate of considerable learning, and an able divine. The only productions of his pen which have appeared, are, a new edition of St Cyril's works, with annotations, in one vol. folio; and a life of his own father, in 8vo. His death took place in the city which gives a name to his diocese, in the year 1740.—*Nichols's Lit. Anec.*

MILLES (JEREMIAH) nephew of the preceding, an English divine and antiquary, was born in 1714. He was educated at Eton, whence he was removed to Queen's college, Oxford, where he graduated as DD, in 1747. Having married one of the daughters of archbishop Potter, he obtained, by the interest of that prelate, the united rectories of St Edmund the King and St Nicholas Acon, which he held, with the livings of Merstham, in Surrey, and West Terring, in Sussex. In 1762 he became dean of Exeter, and in 1765 president of the Society of Antiquaries, having been for some years previously a fellow of the Royal Society. Dean Milles is the author of several curious papers in the *Archæologia*, one of which involved him in a controversy with Horace Walpole. His zeal for antiquity was not always tempered by judgment, and his attempt to vindicate the authenticity of the poems of Rowley, in an edition which he printed in 4to in 1782, subjected him to exceeding ridicule, especially from George Steevens, and the witty author of "An Archæological Epistle." He died in 1784.—*Nichols's Lit. Anec.*

MILLIN DE GRAND-MAISON (AUGUSTE AUBIN) member of the French Institute and of the legion of honour, born at Paris in 1759. His education being completed, he was destined for the ecclesiastical profession, which he renounced, to devote himself to literature and the sciences; and being possessed of an independent fortune, he was enabled to follow his inclination. His first literary attempts were translations, published in 1785, under the title of "Mélanges de Littérature Etrangère," 6 vols. 12mo. He next attached himself particularly to the study of natural history, and formed the plan of an extensive work, in which he intended to treat of that science systematically, as Bailly and Montucla had treated astronomy and mathematics; but the scheme was too extensive to be more than partially executed. He became the founder of a Linnæan Society at Paris, which being re-organized after the Revolution in 1789, was denominated the Society of Natural History, and of which Millin was appointed perpetual secretary. At this period he ranked among the temperate friends of liberty, and published several tracts in favour of the popular cause. He

was one of the conductors of the "Chronique de Paris," till 1793, when he thought it prudent to leave Paris; but he was discovered, and imprisoned till after the fall of Robespierre. He subsequently became professor of history in the central schools; and he established, and principally conducted, the "Magasin Encyclopedique." In 1794 he succeeded the abbé Barthelemy as keeper of the medals in the National Library, which post he held till his death in 1818. His works on natural history, archæology, and the fine arts are numerous and highly esteemed.—*Biog. Nouv. des Contemp.*

MILLOT (CLAUDE FRANÇOIS XAVIER) a learned and ingenious French author, born in the spring of 1726, at Besançon. He was educated at the jesuits' college, and became a member of that fraternity, but quitted it and settled at Parma, where the patronage of the duc de Nivernois obtained him the historical professorship. This situation he filled with much ability and reputation for some years, when the prince of Condé offering to his acceptance the appointment of tutor to the young duc d'Enghien, he returned to Paris. His works, some of which are much esteemed for the spirit and elegance of their style, consist of "A History of the Troubadours," in 3 vols.; "Memoirs, Political and Military, for the History of the Reigns of Louis XIV and Louis XV," 6 vols.; "Elements of Universal History," 9 vols.; "Elements of the History of England," 3 vols.; "Elements of the History of France," 3 vols. 12mo; beside some academical papers, and a few translations from the Latin. His death took place in the French capital in 1785.—*Biog. Univ.*

MILLY (NICHOLAS CHRISTIAN de THY, comte de,) a French nobleman who distinguished himself by his researches and improvements in chemistry. He was born in 1728, and like most persons of his rank, he passed a part of his life in military service. He was present at the battle of Lafeldt in 1741, and in 1756 at those of Rosbach, Creveldt, and Minden. He afterwards became adjutant-general in the army of the duke of Wirtemberg, to whom he was also chamberlain, and who conferred on him the order of the red eagle. On the restoration of peace, returning to his native country, he engaged in the study of chemistry; and as the result of his observations and inquiries, he published a very elaborate treatise on the manufacture of the porcelain of Saxony, (Dresden china) which procured him admission into the Academy of Sciences at Paris. He was also chosen a member of the Royal Academy of Madrid and the Academy of Haerlem. His researches were principally directed to the improvement of colours for enamel, and to the construction of furnaces. The count de Milly died September 17, 1784.—*Hutchinson's Biog. Med. Biog. Univ.*

MILMAN, bart., MD. FRS. (sir FRANCIS) a physician of great eminence in his profession, son of a clergyman in Devonshire, educated at Exeter college, Oxford, by which university he was afterwards appointed a travelling physi-

cian on the Radcliffe foundation. While on his travels, he attended the duke of Gloucester at Rome, a circumstance which led to the most extensive practice on his return to England in 1780. He read the Gulston lecture before the College of Physicians, having published, the year preceding, his "Animadversiones de Natura Hydropsis," 8vo. He also wrote a treatise on the source of the scurvy and putrid fever, printed in 1782, 8vo. His death took place June 24, 1821, in the 75th year of his age.—*Gent. Mag.*

MILNE, LL.D. (COLIN) a native of Aberdeen, in which university he received his education, under the superintendance of his uncle, Dr Campbell, provost of the Marischal college. He afterwards was selected by the duke of Northumberland to direct the studies of his younger son, Lord Algonon; and having taken orders, was presented, through the interest of the Percy family, to the living of North Chapel, in the county of Essex, in requital of his services. The lectureship of Deptford was afterwards added to his preferment. Dr Milne is principally known as an excellent naturalist, and his writings, chiefly on subjects connected with botany, are much admired by those versed in that particular branch of science. They are entitled, "Institutiones Botanice Linnæi," 4to; "Indigenous Botany;" and a "Botanical Dictionary." A few sermons of his composition have also appeared. His death took place in 1815.—*Gent. Mag.*

MILNER (ISAAC) an episcopal divine, eminent as a mathematician and natural philosopher. He was a native of Yorkshire, and was of low parentage, having been brought up to the employment of weaving, which he followed for some time, dedicating every moment of leisure to the study of classical literature and the mathematics. He was then employed as an assistant in a grammar school, and afterwards admitted a student at Queen's college, Cambridge. In 1774, he gained the first mathematical prize, and becoming a tutor, he had among his pupils Mr Pitt and Mr Wilberforce, with whom he travelled abroad. Returning to the university, he was chosen professor of natural philosophy in 1783, and master of his college in 1788, when he proceeded DD, and about the same time he obtained the deanery of Carlisle. He was vice-chancellor of the university in 1792, and six years afterwards he became Lucasian professor of mathematics. Dr. Milner wrote against Marsh, in favour of the Bible Society, and produced some professional pieces; but he chiefly distinguished himself by some ingenious papers on chemistry and natural philosophy, published in the Philosophical Transactions. He died in 1820.—His elder brother, JOSEPH MILNER, also originally a weaver, raised himself by the exercise of his talents to eminence in the literary world. He was educated at a free grammar school at Leeds, where he was born, and he afterwards studied at Catherine-hall, Cambridge, and took the degree of BA. in 1766. Having taken orders in the church, he obtain-

and a lectureship at Hull, where he became master of the grammar school. He subsequently obtained the vicarage of North Ferraby, in Yorkshire, and also that of the Holy Trinity, at Hull. He died in 1797, aged 52. His works consist of a "History of the Church of Christ," 5 vols. 8vo; "Sermons," 2 vols. 8vo, published posthumously, with the author's life, by his brother, dean Milner; "Essays on the Influence of the Holy Spirit;" a tract against Gibbon, &c. Mr Milner belonged to the class of the evangelical or Calvinistical clergy; and his Ecclesiastical History is highly esteemed by those whose religious sentiments correspond with his own.—*Gent. Mag.*

MILTON (JOHN) the most eminent of English poets, setting aside Shakspeare as a dramatist, sprang from an ancient family, formerly proprietors of Milton, near Thame, in Oxfordshire. His grandfather, who was under ranger of the forest of Shotover, being a zealous Roman Catholic, disinherited his son, the father of Milton, for becoming a Protestant, on which account he was obliged to quit his studies at Oxford, and settle in London as a scrivener. This gentleman who was a good classical scholar, and remarkable for his skill in music, married a lady, also of ancient family, by whom he had two sons and a daughter: John, the poet, Christopher, who became a judge in the court of common pleas, and Anne, who married Edward Phillips, secondary at the crown office. John Milton was born at his father's house in Bread-street, December 9, 1608. He received his early education from a learned minister of the name of Young, and was afterwards placed at St Paul's school, whence he was removed, in his seventeenth year, to Christ's college, Cambridge, where he graduated MA, and seems to have distinguished himself by the purity and elegance of his Latin versification. The original purpose of Milton was to enter the church, but his dislike to subscription and to oaths, which in his opinion required what he emphatically termed "an accommodating conscience," prevented the fulfilment of this intention. On leaving college, therefore, he repaired to his father's house, who, having retired from business, had taken a residence at Horton, in Buckinghamshire. Here he passed five years in a study of the best Greek and Roman authors, and in the composition of some of his finest miscellaneous poems, including his Allegro and Penseroso, Comus and Lycidas. That his learning and talents had by this time attracted considerable attention, is proved by the production of "Comus" at the solicitation of the Bridgewater family, which was performed at Ludlow castle in 1634, by some of its youthful members; as also by his "Arcades," part of an entertainment, performed before the countess-dowager of Derby, in the same manner, at Harefield. In 1638, having obtained his father's consent to travel, he visited Paris, where he was introduced to Grotius, and thence proceeded successively to Florence, Rome, and Naples, in which latter capital he

was kindly entertained by Manso, marquis of Villa, the patron of Tasso. His general reception in Italy was also highly complimentary; and it is said that it would have been even more so, but that, in opposition to the advice of sir Henry Wotton, he would not disguise his religious opinions. After remaining abroad for fifteen months, he returned to England, giving up his intention of visiting Sicily and Greece, in consequence of accounts of the state of affairs in his own country. "I esteemed it dishonourable," he writes, "for me to be lingering abroad, even for the improvement of my mind, while my fellow-citizens were contending for their liberty at home." His turn, however, not being military, and being shut out by want of fortune from parliament, he fixed in the metropolis, and undertook the education of his two nephews, the sons of his sister, Mrs. Phillips. Other parents being also induced by his high character to apply to him, he was encouraged to engage a house and garden in Aldersgate-street, and to open an academy for education. However engrossed by tuition, he soon found time to mingle in the controversial struggles of the day, and published four treatises relative to church government, which produced him antagonists in bishop Hall and archbishop Usher. A fifth production followed, entitled "Reasons of Church Government urged against Prelacy," in which he promises to undertake something, but yet he knew not what, which "might be of use and honour to his country;" a calm anticipation of great performance, which he amply redeemed by his "Paradise Lost." About this time his father, who was disturbed in his residence by the king's troops, came to reside with his son John, who in 1643, united himself in marriage with Mary, daughter of Richard Powel, esq., a magistrate in Oxfordshire. In more than one respect, this was an unsuitable connexion; for the father of the lady being a zealous royalist, who practised the jovial hospitality of the country gentlemen of that party, the residence of her husband so disgusted the bride, that in less than a month, under the pretence of a visit, she left him, and remained for the rest of the summer with her parents. His letters and messages for her to return home being treated with neglect, Milton at length became incensed, and regarding her conduct as a desertion of the marriage contract, he sought to punish it by repudiation. To this matrimonial disagreement is to be attributed his treatises, "The Doctrine and Discipline of Divorce;" "The Judgment of Martin Bucer concerning Divorce;" and "Tetrachordon, or exposition upon the four chief places in Scripture which treat of marriage." The presbyterian assembly of divines, then sitting at Westminster, alarmed at this reasoning, had the author called up before the house of Lords, which, however, instituted no process. Convinced by his own arguments, Milton began to pay attention to an accomplished young lady, the daughter of Dr Davis, a step which alarmed the parents of his wife, who having become obnoxious to the ruling

powers, had need of the good offices of their son-in-law with his party. Thus disposed, they surprised him into an interview with Mrs Milton, whom, on her expression of penitence, he not only received again with affection, but also took her parents and brothers, in the most generous manner, into his own house. He continued to employ his pen on public topics; and in 1644, published his celebrated "Tractate on Education." The presbyterians, then in power, having continued the subsisting restraints upon the press, he also printed, in the same year, his "Areopagitica, a speech of Mr John Milton for the Liberty of Unlicensed Printing," being a spirited and energetic defence of that grand essential to public liberty, a free press, which great nations have to struggle for in the present age nearly as much as ever. In 1645, he published his juvenile poems, in Latin and English, including, for the first time, the "Allegro" and "Penseroso." Milton's notions of the origin and end of government carried him to a full approbation of the trial and execution of Charles I, which he sought to justify in a tract, entitled "The Tenure of Kings and Magistrates." Even in the title-page he asserts the right to put "a tyrant or wicked king" to death on due conviction, "by any who possess the power," should the ordinary magistrates have no means to do so. By this doctrine, which is the contrary extreme to that of passive obedience, he plainly meant to include the case of such a minority as then composed the parliament taking the performance of this national act upon themselves. He farther employed his pen in the same cause by the composition of a "History of England," of which, however, he had only completed six books, when he was interrupted, by being nominated Latin secretary to the new council of state. He had scarcely accepted the appointment, when he was requested to answer the famous book, attributed to Charles I, entitled, "Icon Basiliæ." This task he accomplished in a work, which he called "Iconoclastes," or the Image-breaker, which is considered by many writers as one of the ablest of his political tracts. His celebrated controversy with Salmasius soon after followed, which originated in the latter writing a defence of Charles I, and of monarchs, under the title of "Defensio Regis," at the instigation of the exiled Charles II. Milton entitled his reply, "Defensio pro Populo Anglicano." It was published in 1651, and though tainted with party virulence and the discreditable personal acrimony which distinguished the controversies of the times, exhibits an occasional strain of fervid eloquence, which completely overwhelmed the great but inadequate powers of his opponent. He acquired by this production a high reputation both at home and abroad, being visited on the occasion by all the foreign ambassadors then in London; he also received from the government a present of 1000*l*. He however bought this triumph dear, as an affection of the eyes, previously produced by intense study, terminated, as his physicians predicted, in an

irremediable gutta serena, owing to his exertions on this occasion. It is unnecessary to observe how nobly and feelingly he has atoned to his blindness in more than one passage of his exalted poetry. His loss of sight did not, however, impede his facility of composition, and in 1652 he wrote a second "Defence of the People of England" against an attack by Du Moulin, under the name of More, similar to that of Salmasius. In this piece Milton inserts some high-flown panegyric of Cromwell, who had now assumed the title of Protector, and this tribute, at a time when the wisest and most conscientious of the republicans had become sensible of his arts, forms one of the strongest testimonies in favour of the involuntary admiration which the vigour and energy of that extraordinary person's mind, and the correspondent greatness of his actions, produced on kindred strength of intellect. In 1652 Milton lost his wife, who had produced him three daughters, and soon after married another, the daughter of a captain Woodcock, who died in childbed the same year. To divert his grief for this loss, he resumed his History of England, and also made some progress in a Latin dictionary, and still composed much of the Latin correspondence of his office. On the death of Cromwell he employed his pen with great alacrity to stem the increasing feeling in favour of the Restoration; but mere argument in these reactions of public feeling is seldom much attended to, not to mention the difficulty with republican consistency to argue the right of the few to oppose the inclination of the many. On the Restoration, Milton took refuge for some time in the house of a friend. His "Defences" of the People and Iconoclastes were called in, and ordered to be burnt; but the author was reported to have absconded; and in the act of indemnity which followed, his name formed no exception. He appears, however, to have been some time in the custody of the sergeant-at-arms, but was at length discharged, and even treated leniently in regard to fees, as it is said, owing to the friendly interposition of sir William Davenant, who had received similar kind offices from Milton, when endangered by his adherence to the royal cause. In reduced circumstances, and under the discountenance of power, he now removed to a private residence, near his former house in the city, and his infirmity requiring female aid, was led, in his fifty-fourth year, to take as a third wife, Elizabeth Minshull, of a good family in Cheshire. He now resumed the poetical studies which he had for some years laid aside, and left in repose to meditate upon the lofty ideas that filled his mind; the noble result was his immortal "Paradise Lost," which was finished in 1665, and first printed in 1667, in a small 4to. The sum which he obtained for it proves the wretched price of literature in that day, his recompence being five pounds in hand, with a contingency of fifteen dependent upon the sale of two more impressions, the copyright subsequently, however, still remaining his own.

Paradise Lost long struggled with bad taste and political prejudices, before it took a secure place among the few prime productions of the human mind which continually rise in estimation, and are unlimited by time or place. In 1670 appeared his "Paradise Regained," which, however inferior to its predecessor, he is said to have preferred to it. In grandeur and invention, however, its inferiority is conspicuous, although by no means so unworthily the genius of its author as mere comparative criticism might imply. With "Paradise Regained," appeared the tragedy of "Samson Agonistes," composed upon the ancient model, and abounding in moral and descriptive beauties, but exhibiting little pure dramatic talent, either in the development of plot, or delineation of character, and never intended or calculated for the stage. In 1672 he composed a system of logic, after the manner of Ramus; and the following year again entered the dangerous field of polemics, with a "Treatise of True Religion, Heresy, Schism, Toleration, and the best means of Preventing the Growth of Popery." A publication of his familiar epistles, in Latin, and of some academical exercises, occupied the last year of his life, which repeated fits of the gout were now rapidly bringing to a close. He sank tranquilly under an exhaustion of the vital powers in November 1674, when he had nearly completed his sixty-sixth year. His remains, with a numerous and splendid attendance, were interred in the church of Cripplegate, where the elder Samuel Whitbread has erected a monument to his memory. It was for that inconsistent divine and politician, Dr Sprat, bishop of Rochester, as dean of Westminster, to deny him a monument in the abbey, where however, in 1737, one was erected to his memory by auditor Benson. Milton was distinguished in his youth for personal beauty, and was to the last a very comely-looking man. His habits of life were those of a student and philosopher, being strictly sober and temperate, his chief relaxations consisting of music and conversation. His temper was serene and cheerful; and although warm and acrimonious in controversy, after the manner of the times, he appears to have indulged no enmities, except on a public ground, and to have been civil and urbane in the ordinary intercourse of society. He has been called a lordly husband, and unkind father; and as he seems to have imbibed something like patriarchal notions of the authority of the male head of a family, in a comparative sense, something of this may have been discernible. His ready forgiveness of his wife, however, for certainly no small affront, shows that he was at least a very placable man; and all that can be said against him as a parent is, that when blind he obliged his daughters to read to him in languages which they did not understand. Of these he had three, by his first wife; and it is to be regretted that the accounts of their conduct to him are by no means favourable. In 1750 the masque of *Comus* was performed for the benefit of one of

his grand-daughters, named Foster, then in a very humble situation. Of the sublimity of the genius, and the depth and variety of the learning of Milton, there can be no difference of opinion; and in respect to the first, his own countrymen, at least, will scarcely admit that he has ever been equalled. Had he never even written "Paradise Lost," his "Allegro," "Penseroso," and "Comus," must have stamped him a poet in the most elevated acceptance of the title. Including that immortal production, it is a high effort of critical skill duly to appreciate his merit, and a proof of cultivated taste with discrimination to admire it. His prose writings have had fewer advocates; but his native spirit and vigour, even in these, are predominant, and his style, although sometimes harsh and uncouth, is pregnant with energy and imagination. Moving in the ranks of party himself, no man's fame has been more rancorously attacked than that of Milton, by political animosity; but after all the deductions it has been able to make, either critically or hypercritically, as a man of genius he will ever rank among the chief glories of the English nation. The best edition of the poetical works of Milton is that of Todd, in 6 vols. 8vo, with his life in one volume.—*Biog. Brit. Newton and Johnson's Lives. Aikin's G. Biog.*

MIMNERMUS. The name of an ancient Greek poet and musician, known, according to Athenæus, as the inventor of the pentameter measure in versification. Strabo assigns Colophon as the city of his birth, which took place about six centuries before the commencement of the Christian æra. Horace speaks in the highest terms of his love elegies, which he prefers to the writings of Callimachus; while Propertius places him before Homer in the expression of the softer passions. Both he and his mistress, Nanno, are said to have been musicians by profession, and to have been celebrated for their performance on the flute, especially, according to Plutarch, in a particular air called Cradiaz, used at the Athenian sacrifices. A few fragments only of his lyric poems have come down to posterity, as preserved by Stobæus; they are, however, of a character which lead us to suppose that the high reputation he enjoyed was not unmerited. Nothing is known of the time or manner of his death.—*Fab. Bib. Græc.*

MIND (GODFREY) an eminent painter, born at Berne, in Switzerland, in 1768. He studied drawing and landscape painting under Freudenberger, whose delineations of Swiss scenery and village sports he successfully imitated. At length he devoted his talents entirely to the art of designing two particular species of animals, viz. bears and cats; and in this narrow department of his profession he acquired unrivalled excellence. The feline race were his peculiar favourites, and he had always several of them in his room, whom he would allow to sit quietly perched on his shoulders for hours at a time. Madame Lebrun, a traveller in Switzerland, who visited Miud, and purchased some of his designs,

terms him the Raphael of Cats. He was hardly less successful in his portraits of bears; and he formed an intimate acquaintance with one publicly kept at Berne, in the armorial bearings of which city that animal makes a prominent figure. This eccentric painter died at Berne, November 8, 1814.—*Biog. Univ.*

MINOT (LAURENCE) an ancient English poet, who flourished in the fourteenth century, but remained unknown, until by accident Mr Tyrwhitt discovered his works, which were edited by Mr Ritson in 1794. His versification is uncommonly harmonious and easy, nor has he the dull prolixity of many early authors; but neither do his remains contain those portraits of ancient times and manners from which early writers derive their greatest value.—*Ritson's edition of Minot. Crit. Rev.*

MINUCIUS FELIX (MARCUS) a native of Africa, who, about the close of the second and the commencement of the third century of the Christian æra, attained to a considerable degree of reputation at Rome as a rhetorician. He was a Christian, and wrote a dialogue in defence of his religion, entitled, "Octavius," of which Jerome and Lactantius speak highly. This work, however, was long considered to be the composition of Arnobius, till, in 1560, Baudouin restored it to its real author. Another treatise, "De Fato," has also been ascribed to him; but from the difference of style which it exhibits, when compared with the other work, some doubts are entertained as to its authenticity. There are two English translations of the "Octavius."—*Cave. Dupin.*

MINUZIANO (ALESSANDRO) a learned printer, was born at St Severo in Puglia, in the fifteenth century. He studied under George Merula, at Milan, and succeeded him there as professor of rhetoric. He employed himself for some time in correcting and editing learned works which were then being published, and finally he established a printing-press of his own. His first publication was a splendid edition of all Cicero's works, in four volumes folio. He then proceeded to publish editions of various ancient and modern authors, with very elegant prefaces of his own. When pope Leo X caused the Annals of Tacitus to be printed at Rome for the first time, Minuziano excited his Holiness's displeasure, by procuring the sheets as they went through the press, and publishing a rival edition. The year of his death is uncertain, but the last time that he was noticed was in 1521.—*Tiraboschi.*

MIRABAUD (JEAN BAPTISTE de) a native of Paris, who adopted the profession of arms, and distinguished himself by his courage at the battle of Steenkirk; after which he quitted the army, to devote himself to letters. He entered into the congregation of the Oratory, that he might be able to pursue his studies with tranquillity; and at length he left that society to become private secretary to the dutchess of Orleans, and tutor to her daughters. In 1724 he published a translation of Tasso's "Jerusalem Delivered," which was superior to any preceding version in the

French language, and procured him much reputation. He was admitted into the French academy, of which he became perpetual secretary in 1742. His death took place June 24, 1760, at the age of eighty-five. He published in 1758 a translation of the "Orlando Furioso," but it was inferior to his former production. He was also the author of "Le Monde, son Origine, et son Antiquité;" and "Sentimens des Philosophes sur la Nature de l'Ame;" but the atheistical work, published in his name, under the title of "The System of Nature," is wholly supposititious, having been written by Diderot, D'Holbach, and others.—*Biog. Univ.*

MIRABEAU (VICTOR RIQUETTI, marquis de) one of the propagators of the doctrines of the political economists in France, born at Perthuis, October 5, 1715. His ancestors having been exiled from Florence, had, in the fourteenth century, taken refuge in Provence, where they maintained their rank among the noble families of the country. The marquis fixed his residence at Paris, where he attracted much notoriety, by advocating the doctrines of Quesnay, founder of the sect of economists. In 1755 he published his "Ami des Hommes," 5 vols. 12mo, which produced a great sensation in England, and was translated into Italian, and published at Venice in 1784. His "Theorie de l'Impôt," 1760, occasioned his imprisonment in the bastille. He died at Argenteuil, July 13, 1789. A list of his numerous publications may be found in the annexed authority.—*Biog. Univ.*

MIRABEAU (HONORE GABRIEL RIQUETTI, comte de) famous for the political influence he exercised during the French Revolution. He was the eldest son of the preceding, and was born at Bignon, near Nemours, March 9, 1749. He derived from nature strong passions, an ardent imagination, and considerable talents, to which was added by education, a varied but superficial acquaintance with literature. After having served some years in the army, in Corsica, he returned to France, and retired to an estate in the Limousin, attending to agriculture and the management of some law-suits. In 1771 he revisited Paris, and the following year he married mademoiselle de Marignane, a rich and beautiful heiress. The union was by no means fortunate, and in two years he dissipated all the available part of his wife's fortune. His father procured a royal order for his retirement to the country, where he wrote his essay on despotism. An affair of honour occasioned his confinement in the castle of If, and being transferred to the fort of Joux, in Franche Comté, he obtained permission to go to Poutarlier. There he became acquainted with Sophia le Monnier, wife of a president of the parliament of Besançon, whom he seduced, and took with him to Holland. For this crime he was sentenced to lose his head, and was executed in effigy. He meditated emigration to America, when he and his mistress were arrested at Amsterdam in 1777, and being conveyed to France, he was confined in the

castle of Vincennes, till December 1780. He then instituted an ineffectual law-suit against his wife, who obtained a separation from him. In 1784 he visited London, and afterwards Berlin; and he was variously employed in literary quarrels and occupations till the commencement of the Revolution opened a grand field for this highly talented but unprincipled statesman. Being disappointed in his attempts to become a deputy to the states-general from the noblesse of Provence, he opened a linen-draper's shop, and got himself chosen deputy from the commons of Aix. He soon became a leading member in the assembly of the Three Estates; and when the nobility and clergy had decidedly refused to coalesce with the Third Order, Mirabeau prompted the deputies to assert their power. At the memorable session of the 23d of June, 1789, when the king sent M. de Brézé to command the assembly to disperse, he boldly declared that force alone should conclude their meeting, and procured an immediate decree, proclaiming the inviolability of the representatives of the people. On many subsequent occasions he manifested the same powerful influence and directing spirit; but self-interest appears to have been his governing motive, and he at length entered into a negotiation with the court, and engaged to exert his authority in quelling the storm which he had contributed to raise. Whether he would have been able to fulfil his promises, must ever remain a matter of speculation, as he died rather suddenly, in the midst of his projects, April 2, 1791. His decease was considered as a public misfortune, and his funeral was celebrated with national honours; but his intrigues with the royal party coming to light, the national convention declared him a traitor to his country in December 1792, and his remains were dragged from the Pantheon, burnt, and dispersed in the air. The principal works of Mirabeau are, "Des Lettres de Cachet," 2 vols. 8vo; "De la Monarchie Prussienne sous Frederic II," 7 vols. 8vo, written in conjunction with Mauvillon; "Histoire secrete de la Cour de Berlin," 3 vols. 8vo; "Lettres originales ecrites du Donjon de Vincennes," 4 vols. 8vo. His speeches in the constituent assembly have also been published, as well as his letters.—*Dict. des H. M. du 13me S. Biog. Univ.*

MIRABEAU (BONIFACE RIQUETTI, vicomte de) younger brother of the preceding, was born in 1754. He served in the French army in America during the war with England, when he manifested great bravery; and from his subsequent conduct it does not appear, that like many of his brother officers, he became partial to the principles of republicanism. In the states-general he was chosen a deputy from the nobility of Limousin, and he constantly resisted the reunion of the three orders, defended the rights of the clergy, and warmly opposed the progress of the Revolution. In 1790 he emigrated to Germany, and raising a legion of loyalists, with which he joined the prince of Condé, served with much reputation. The fatigues to which he was ex-

posed brought on an inflammation in the chest, which occasioned his death at Fribourg, towards the end of 1792. Though not possessed of the splendid talents of his brother, he evinced considerable ability; and he produced "La Lanterne Magique," and a number of other light pieces.—*Biog. Univ. Dict. Hist.*

MIRÆUS (ALBERTUS) a learned German divine, was born at Brussels in 1573, and was first almoner and librarian to Albert, archduke of Austria. His works are, "Opera Historica et Diplomatica," a collection of charters and diplomas, relating to the Low Countries; "Elogia illustrium Belgii scriptorum," 1609, 4to; "Rerum Belgicarum Chronicon;" "Vita Justi Lipsii;" "Bibliotheca Ecclesiastica;" "De Rebus Bohemicis," &c. He died in 1640.—*Moreri. Dict. Hist.*

MIRANDA (FRANCIS) a general in the service of the French republic, who was a native of Peru. He entered first into the Spanish service, but having made an attempt at Guatimala to free his countrymen from the yoke of the viceroy, his project was discovered, and he made his escape to Europe. He presented to different courts plans for the emancipation of the Spanish American colonies, which are said to have been favourably received in England and in Russia. However he conceived the French government more likely to second his schemes, and going to Paris in 1792, he connected himself with Petion and the Girondists. While waiting for an opportunity to commence operations in America, Miranda was appointed general of division, in the army of Dumouriez. His conduct at the siege of Maestricht, and at the battle of Nerwilde, did him no credit; and some time after he was imprisoned in consequence of his political intrigues. In July 1794 he was liberated, but renewing his machinations, he was commanded to quit the territories of France, which order he evaded, and returned to Paris. A second sentence of deportation, in 1797, obliged him to take refuge in England. In 1804 he repaired again to Paris, when his intrigues against the consular government caused him to be a third time arrested, and ordered to leave France. He returned to America in 1806, and resumed his projects against Spain. Within five years, he succeeded in revolutionizing a part of the country, and in 1811 he endeavoured to establish a consular government at Caraccas. Assisted by the English and North Americans, he had made some progress in his schemes, when they were ruined by intestine disputes. He fled to Carthagena, where he was besieged by the Spaniards, and being taken prisoner, he was sent to Cadiz, and thrown into a dungeon, in which he remained till his death in 1816, after four years' confinement.—*Biog. Nouv. des Contemp.*

MISLIWECZEK (JOSEPH) surnamed Il Boemo, was born in 1737, at a village near Prague, where his father was the proprietor of a mill. Having studied music under Serget at Prague, he went to Italy, and put himself under the tuition of Pescetti, at Venice. His first opera, "Belle-

rofonte," produced at Naples, established his reputation as a composer of the first rank, and nine others which followed were equally successful. His career lasted till 1780, when his former good fortune seemed to have forsaken him, and his "Armida" meeting with but an indifferent reception, he took it much to heart, and died at Rome the year following, in very contracted circumstances.—*Biog. Dict. of Mus.*

MISSON (FRANCIS MAXIMILIAN) a French writer, was a counsellor in the parliament of Paris, at the time of the revocation of the edict of Nantes, when he retired to England. In 1687 he travelled to Italy with a nobleman, and on his return he published a "Nouveau Voyage d'Italie," 3 vols. 12mo. It presents a true and lively picture, but he offended the Catholics by his representations of their ceremonies and superstitions, which they say are exaggerated and unfaithful. He also wrote "Memoires d'un Voyageur en Angleterre," and "Le Théâtre Sacré de Cevennes, ou Recit des Prodiges arrivés dans cette partie de Languedoc, et des petits Prophètes," in which latter he is said to have displayed great credulity and fanaticism.—*Moreri. Addison's Travels.*

MITAN (JAMES) an historical engraver of some celebrity, born in London in 1776. His principal productions are, Gerard Douw's Musician; Leslie's Anne Page; the Interior of Worcester Cathedral; many plates for Mr Dibdin's Bibliographical Tour, and a Gem, after Palemberg, of the Masqued Ball, for Dibdin's *Ædes Althorpianae*. He died of a paralytic attack, August 16, 1822, in London.—*Gent. Mag.*

MITCHELL (JOSEPH) a dramatic writer, was the son of a stone-cutter in North Britain, and was born about 1684. He came to London, and was patronized by the earl of Stair and sir Robert Walpole. The particulars of his history are little known, but he appears to have been of a wild dissipated turn. Being very poor, his friend, Aaron Hill, presented him with the profits and reputation of a successful dramatic piece, in one act, entitled "The Fatal Extravagance." It was printed in Mitchell's name, but he was ingenious enough to undeceive the world, and to discover its true author. His own pieces were, "The Fatal Extravagance," a tragedy enlarged; "The Highland Fair," a ballad opera. He possessed but little invention, and was but a mediocre poet. He died in 1733.—*Biog. Dram. Cibber's Lives.*

MITTARELLI (JOHN BENEDICT) a learned monk of the order of the Camaldoli, was born at Venice in 1708, and in 1732 he became professor of philosophy and theology in the monastery of St Michael at Venice; and in 1747 he removed to Faenza, as chancellor of his order. In 1764 he was appointed general of his order, and he died in 1777. He wrote "Annale Camaldulenses," 9 vols. folio; "Memorie del Monisterio della santissima Tri ità in Faenza;" "Bibliotheca codicum Manuscriptorum Monasterii S. Michaelis Ve-

netiarum," folio; "Ad Scriptores rerum Italicarum Cl. Muratori accessiones Historice Faventinae;" and "De Litteratura Faventinorum."—*Fabroni Vitæ Italor. Dict. Hist.*

MITZLER (LAURENCE CHARLES de Kolof) a German musician and composer of eminence, born at Vettlesheim in 1711. He received his education at Anspach, where, in addition to the rudiments of classical literature, he studied music under Erbman and Carby. In 1731 he removed to the university of Leipsic, where he made a considerable proficiency, both in mathematics and natural philosophy, as well as in music, and after a residence of twelve years, gave public lectures in all those branches of science. While thus occupied, he published a treatise on the claims of music to be considered as a science. He at length accompanied a Polish nobleman to Warsaw, and there grew into so great favour at court, as to obtain from the king a patent of nobility. His other works are, a "Musical Library, or an Analysis of Books and Writings on Music," Leipsic, 3 vols. published between the years 1738 and 1754; "A Musical Illustration of the War carried on by the Emperor Charles VI, against the Allied Forces," Wittenberg, 1753; "The Elements of Thorough Bass," Leipsic, 1739; "The Musical Oculist, &c." 1740; and a German translation of Fux's, "Gradus ad Parnassum," 1742. His death took place in 1778.—*Biog. Dict. of Mus.*

MOCENIGO (ANDREW) a native of Venice, in the early part of the sixteenth century. He served his country with zeal, being employed in its public affairs, which he managed with great success. He was the author of a Latin "History of the War sustained by the Republic of Venice, in consequence of the League of Cambray, from 1500 to 1501, in Four Books," which, though not possessing much elegance, is esteemed for its truth and accuracy. He also wrote a Latin poem on the war with Bajazet II, which is lost.—*Moreri. Tiraboschi.*

MOEISEN (JOHN CHARLES WILLIAM) an ingenious German physician of the last century. He was born at Berlin in 1722, and studied at the universities of Jena and Halle. Having taken the degree of M.D. at the age of twenty, he returned to Berlin, and succeeded his grandfather, M. Horch, as physician to the gymnasium of Joachim. After holding other offices, he was, in 1778, appointed physician to Frederick the Great, whom he attended in the war relative to the Bavarian succession. He became a member of various learned institutions, and in 1795 was chosen an associate of the Royal Academy of Arts and Sciences at Berlin. His death took place in the course of the same year. His works display various, rather than profound erudition. They relate to the history of medicine and its professors, including a treatise "De Medicis Equestri Dignitate ornatis," 1763, 4to; "A Catalogue of a Collection of Engraved Portraits of celebrated Physicians," 1771, 4to; "A Description of Medals or Jetons struck in honour of Physicians, with Memoirs explain-

ing the Coinage of the Ancients, as connected with Medical History and Literature," 1773, 2 vols. 4to; and "Remarkable Experiments to determine the Utility of Inoculation for the Small-Pox," 1782, 8vo.—*Biog. Univ.*

MOELLENDORF (RICHARD JOACHIM HENRY, count de) a Prussian general, born 1724. He was educated in the equestrian academy of Brandenburg, and in 1740 admitted among the pages of Frederick II, whom he accompanied in the first Silesian war, and was at the battles of Molwitz and Kotowsitz. His behaviour procured him promotion, and in 1746 he obtained a company in the guards. He served at the siege of Prague in 1757, and at the battle of Rosbach and that of Leuthen; for his conduct on which last occasion he was rewarded with the order of merit. He was made a colonel in 1761, afterwards lieutenant-general, and in 1783 governor of Berlin. In the reign of Frederick William II, he was appointed general of infantry; and he commanded the Prussian troops employed in 1793, in the disgraceful dismemberment of Poland; on which occasion Moellendorf did every thing in his power to alleviate the misfortunes of the Poles. On his return home he was created a field-marshal, and soon after made governor of South Prussia. He opposed the war with France which followed; but he succeeded the duke of Brunswick in the command of the Prussian army on the Rhine, in 1794, when he gained the victory of Kaiserslautern. He was one of the principal advisers of the treaty of Basle in 1797, after which he was made grand marshal. Not being able to prevent, by his advice, hostilities with France in 1806, though far advanced in years, he accepted a command, and joining the army of the duke of Brunswick, was present at Jena and Auerstadt, where he was wounded. He retired to Berlin, and subsequently to Havelberg, where, according to an odd Prussian usage, he held a prebend in the ecclesiastical chapter. He died there January 28th, 1816.—*Biog. Univ.*

MOESER (JUSTUS) an eminent German advocate and man of letters, born at Osnaburgh in 1720. He was educated at Jena and Göttingen, and on his return to his native place, he entered on his professional career, which he exercised with so much credit in defending indigent innocence, that in 1747 he was invested with the office of advocatus patriæ. Being sent to London to arrange some financial affairs, during the seven years' war, he embraced the opportunity for obtaining an acquaintance with the political institutions of this country. When the late duke of York became bishop of Osnaburgh, and the affairs of the diocese fell under the administration of the English government, Moeser contributed much to the preservation of harmony between his fellow-citizens and their rulers. In 1783 he received the title of counsellor of justice; and in 1792 the equestrian order of Osnaburgh celebrated the fiftieth anniversary of his entrance on his public functions. He died January 7th, 1794. Among his principal

works may be noticed, "Arminius," a tragedy, 1749, 8vo; "The History of Osnaburgh," 1761, 2 vols. 8vo; "Patriotic Speculations," Berlin, 1774-86, 4 vols. 4to; a treatise on the German Language and Literature, 1781; and "Miscellanies," published with a memoir of the author, by Fred. Nicolai, 1797-8, 2 vols. 8vo.—*Biog. Univ.*

MOHAMMED (SHEICK) the founder of the famous sect of the Wahebites, who derive their appellation from Abd el Waheb, the father of Mohammed. He was born in Arabia, about the commencement of the eighteenth century, of a family claiming to be descended from Mahomet. At an early age he seems to have formed the project of founding a new sect; and he carefully studied the laws and traditions of the moslems, of which he undertook the reformation. Having been ill treated by his father, he fled and took refuge at Basora; and afterwards travelled through Syria and Arabia, where the unreserved expression of his religious opinions exposed him to danger. Mohammed Ibn Seoud, governor of one of the provinces of Arabia, at length gave him an asylum, and permitted him freely to propagate his doctrines. From this chief he obtained a detachment of troops to accompany him in his travels, and assist his missionary labours with their swords. Like Mahomet, he offered to the choice of his hearers, the alternative of conversion or death; and he thus made a multitude of proselytes, and subjugated many tribes and villages. On the death of his protector, he found equal favour with his son and successor, Abd el Aziz, who at the head of his troops, converted to Wahebism all the tribes of the vast province of Nejd. An ineffectual attempt, made by the pacha of Bagdad, to crush this sect of innovators in 1798, only added to their power; and in 1800 they made themselves masters of Mecca, though they were unable to keep possession of it. In the course of their expeditions, Sheick Mohammed died at an advanced age; and Abd el Aziz, who survived him a few years, was assassinated in 1803. The Wahebites receive the koran as of Divine authority, but reject all traditions; and their profession of faith is confined to the words, "There is no other God but God," suppressing the addition of the moslems, that "Mahomet is the prophet of God."—*Biog. Univ.*

MOINE (ABRAHAM le) a French Protestant, and minister of a French church in London, was born about the close of the seventeenth century, and died in 1760. He was the author of "A Treatise on Miracles," in answer to Mr Chubb. To this work he added a postscript, intended to vindicate the authority of the ancient fathers, in answer to Dr Middleton's "Free Inquiry." Le Moine's other works are, "A Sermon on the Fall," 1751, 8vo; "A Visitation Sermon," 1752, 4to; "A Sermon in Defence of Sacred History," in answer to lord Bolingbroke; translations into French of bishop Gibson's "Pastoral Letters;" Sherlock's "Discourses on the Intent and Use of Prophecy;" and of "The

Trial of the Witnesses of the Resurrection of Jesus," also attributed to that prelate. To these translations, he has added dissertations on the writings and lives of the unbelievers combated in those works.—*Monthly Review. Gent. Mag.*

MOINÉ (FRANCIS le) an ingenious painter, was born at Paris in 1688, and was a pupil of Galloche. He had no natural genius for painting, but acquired all his skill through his great perseverance. His manner of designing was very incorrect; nevertheless, his heads were always graceful and pleasing. He was employed four years in painting the saloon at Versailles, for which the king granted him a pension of 3000 livres. His best pictures are the Assumption of the Virgin, in fresco, at St Sulpice; a St John in the Desert, at St Eustace's; the Conversion of St Paul, at St Germain-des-Près; the Nativity, at St Roche's, &c. In a fit of melancholy he committed suicide, June 4, 1737.—*D'Argenville.*

MOINÉ (PETER le) a French poet and a jesuit, was born at Chaumon in Bassigny in 1602. He possessed more imagination than taste; Boileau said of him, "that he was too wrong-headed to be much commended, and too much of a poet to be strongly condemned." He wrote several works, in prose, on theological and other subjects, and several small poems; but his greatest work, was "Saint Louis, ou la Sainte Couronne reconquire sur les Infidelles," an epic poem, in eighteen books. He died at Paris in 1672.—*Dict. Hist. Moreri.*

MOLA (PETER FRANCIS) an eminent painter, was born at Coldra in the Milanese, in 1609. He was the pupil of the cavalier d'Arpino and of Albani. On leaving the last master he went to Venice, and studied under Guercino, perfecting himself in colouring from the productions of the Venetian school. On his return to Rome, he painted several scriptural pieces for popes Innocent X and Alexander VII, of which that of Joseph discovering himself to his brothers, in the Quirinal, is the most esteemed. He is still more distinguished as a landscape painter, for his varied composition and vigorous touch. In 1665 he received an invitation to the court of Louis XIV, with which he was about to comply, when a sudden disorder carried him off. There was another MOLA (JOHN BAPTIST) said by some to be his brother, who acquired some reputation in history and landscape; but he is much inferior to the preceding.—*D'Argenville. Pilkington's Dict. by Fuseli.*

MOLAI (JAMES de) the last grand-master of the order of the knights Templars, of the family of the lords of Longwic and of Raon. He was admitted into the order about 1265; and on the death of William de Beaujeu, he was unanimously elected to the office of grand master. The great wealth and power of the Templars, their pride and their dissolute manners, created them a multitude of enemies, and led to their destruction. In 1307 an order was issued for the general arrest of the knights throughout France. They were accused of herey, impiety, and various crimes revolting

to human nature; and of the principal charges they were, as a body, convicted on the evidence of confessions, procured by whatever means from a multitude of individuals among them. Fifty-seven were burnt in 1311, and the order was abolished the following year, by the council of Vienne. Molai, with his companions, Guy Dauphin of Auvergne and Hugh de Peralde, were detained in prison at Paris till 1313, when their trial took place before commissioners appointed by the pope, and confessing their crimes, they were condemned to perpetual seclusion. Molai and Guy, having subsequently retracted their confessions, which they had made in the hope of obtaining their freedom, were executed as relapsed heretics. They perished in the flames at Paris March 18, 1314, declaring their innocence to the last. The abolition and punishment of the knights Templars are usually represented by modern historians, as in the highest degree cruel and unjust, and as originating in the avaricious policy of Philippe le Bel, king of France, and his instrument, pope Clement V. That some of the crimes imputed to the Templars were absurd, and probably imaginary, may be conceded; but the dissipation and disgraceful criminality of these military monks was so notorious, as to supply a fair pretext for the suppression of the order, though it cannot excuse the barbarities to which some of the knights were subjected.—*Dict. Hist.*

MOLE (FRANCIS RENE) an eminent French comedian, born at Paris in 1734. He first appeared on the stage of the metropolis in 1754, when he was well received, and after having travelled in the provinces, he returned to Paris in 1760, and soon arrived at great distinction, particularly in the characters of lovers and petit-maitres. During the progress of the Revolution, he became an associate of the jacobins, and so far prostituted his talents as to officiate in the church of St Roch, as the priest of the goddess of Reason. Molé was a member of the National Institute, and was the only actor, except Monvel and Grandmésnil, who has been admitted to that honourable station. He died December 11, 1802. Some letters in the Journal de Paris, and fugitive poetry, are attributed to him, as well as an unsuccessful comedy.—*Biog. Univ. Biog. des Contemp.*

MOLESWORTH (ROBERT, viscount) an Irish statesman and political writer, born at Dublin in 1656. He received his education at Trinity college, and entering on public life displayed a liberality of principle and attachment to the cause of liberty, which rendered him obnoxious to the court of James II. During the short-lived triumph of that prince in Ireland, his estate was confiscated; but on the settlement of affairs, under William III, he was made a member of the privy-council. Being despatched on an embassy to Denmark, he gave offence to the king, and was induced to return home prematurely. He took his revenge, by publishing "An Account of Denmark," which was considered as a libel on the country, and was complained of as such

by the Danish ambassador in London, who in vain demanded the punishment of the author. He was appointed a commissioner of the customs in 1714; and in 1716 he was made a peer of the kingdom of Ireland. His death took place in 1725. He translated Hottoman's "Franco-Gallia;" and besides the work above-mentioned, he was the author of some occasional pamphlets.—*Biog. Brit.*

MOLEVILLE (ANTHONY FRANCIS BERTRAND de) a French statesman and historical writer, born in 1744. He occupied the situation of intendant of the finances in Brittany, previously to the Revolution; and in October 1791, he was appointed minister of the marine. Being accused in the Legislative Assembly of having favoured the emigration of the officers of the navy, he resigned his post in March 1792. He subsequently thought it prudent to take refuge in England, where he employed himself in various literary undertakings. He died at Paris in 1819. Among his works are, "A Chronological History of England," 6 vols. 8vo.; "Memoirs relative to the last Year of the Reign of Louis XVI.;" and "Annals of the French Revolution;" all which were first published in English, being translated from the MSS. of the author.—*Dict. des H. M. du 13me. S. Gent. Mag.*

MOLIERE (JOHN BAPTIST POQUELIN de) the most celebrated of the modern writers of comedy, was born at Paris in 1620. His father, named Poquelin, who was valet-de-chambre, and upholsterer to the king, and also kept a shop in that line of business, intending to bring his son up to his own employment, gave him a conformable education. He accordingly reached the age of fourteen without any other instruction than that of reading and writing, when having imbibed a taste for literature, by frequenting the theatre, he was, by the persuasion of his grandfather, sent to the jesuits' college as a day-student. His father becoming infirm, he was, however, obliged to officiate for him in the royal household, and in that capacity attended Louis XIII to Narbonne in 1641. On his return to Paris his passion for the theatre became unconquerable, and he associated himself with a company of young persons, who played in the suburbs of St Germain, among whom he assumed the name of Moliere, and composed several little comic pieces for the stage, in which he himself took a part. At length he joined La Bejart, a provincial actress, and they formed a company, which in 1653 presented at Lyons his first regular comedy in verse, entitled "L'Etourdi." It was followed by "Le Debit Amoureux," and "Les Precieuses Ridicules," first exhibited at Beziers, where he obtained the protection of the prince de Condé. He subsequently acted at Grenoble and Rouen, and having, during some visits to Paris, secured the favour of Gaston, duke of Orleans, the latter introduced him to the king, who, having witnessed the performance of his company at the Old Louvre, gave orders for their settlement at Paris. In 1660 he was assigned a theatre in the Palais Royal, and in 1665 he

was formally taken into the service of the king, with a pension of 1000 livres. He continually rose in reputation by his new pieces, until at length, by the general consent of Europe, he was placed at the head of genuine comedy. His more serious dramas, and those written in prose, are esteemed his master pieces, especially "Le Misanthrope," and "Le Tartuffe." The subject of the latter being religious hypocrisy, has always excited the false devotees against him; but they have not been able to prevent it from retaining its place as one of the most effective pieces on the French stage; and owing to recent circumstances, it is more popular at the present time than ever. For twenty years Moliere wrote for the stage, and being all the while an actor also, and interrupted by various avocations, his fertility was most extraordinary. His last piece was the celebrated "Le Malade Imaginaire," to the fourth representation of which he fell a sacrifice. He himself acted the imaginary sick man in the piece, but labouring at the time under a pulmonary complaint, he was requested by his wife, and Baron, the actor, to defer the performance, which, on the score of injury to the company, he declined, and exerting himself with unusual spirit, his efforts brought on the rupture of a blood-vessel, by which he was suffocated. This happened in February 1673, in the fifty-third year of his age. Harlai, archbishop of Paris, a man of loose morals himself, refused him Christian burial, and the king's authority was requisite to procure him private interment in a chapel of ease of the church of St Eustache, and even this was impeded by a portion of the superstitious populace. Such was the treatment of a man so generally esteemed an honour to his country. Louis XIV was much affected at his loss; Boileau has honoured him with some fine lines in his seventh satire, and Racine deemed him the first of the writers in that distinguished reign. Voltaire also, regards him as "the best comic writer of any nation;" nor has any one risen in his own peculiar social line to bear away the palm from him. He may, indeed, be said to have chased away a great share of the coxcomby, false wit, and pedantry of his day; and possessed as he was of a large portion of the philosophy of good sense, he seldom failed to discern the weak part of whatever was absurd or condemnable. His great excellence being exhibition of character, he is not deemed equally happy in development, and his eclairssemens are frequently brought about with precipitation. He is sometimes also deemed too lengthy in the dialogue of his serious pieces, and too farcical in that of his light ones. In private life this eminent man was humane and benevolent in a very high degree, many anecdotes being recorded of his great goodnature and philanthropy. No one had more friends of rank and talent, or was more lamented by them. In matrimony, however, he was unfortunate, being led to marry an actress younger than himself, whose conduct subjected him to all the ridicule which he ought to misfortune in that particular. Bayle re-

coids a curious scene between Moliere and a friend on the subject, the authenticity of which has however been denied. A splendid edition of his works was published by Didot in 1792, 6 vols. 4to.—*Moreri. Nouv. Dict. Hist.*

MOLIERES (JOSEPH PRIVAT de) professor of philosophy at the Royal college, and member of the academy of Sciences, was born in 1677, at Tarascon. He entered among the fathers of the Oratory, and was pupil to Malebranche; but after that philosopher's death, he quitted the Oratory, and devoted himself wholly to physics and mathematics. He was the author of "Philosophical Lectures," 4 vols. 12mo; "Mathematical Lectures;" and "La première Partie des Elémens de Géométrie," 12mo. He died in 1742. His absence of mind was so great, that a shoeblick once finding him absorbed in a profound reverie, contrived to steal the silver buckles out of his shoes, replacing them with iron ones.—*Moreri. Dict. Hist.*

MOLIN (JAMES) commonly called Dumoulin, a celebrated French physician, born in 1666. He studied at Montpellier, and afterwards at Paris, where he took his doctor's degree. He was soon after appointed professor of anatomy at the Royal garden; and at the age of twenty-six he became chief physician to the army in Catalonia. He returned to the capital in 1706, and added to his reputation by his cure of the prince of Condé. He was employed by Louis XIV and his successor, and the latter settled on him a pension of 500 livres. He died at Paris, March 21, 1755. To uncommon skill in his profession, Molin added harsh and repulsive manners, and a degree of parsimony closely bordering on avarice. His wealth, however, was often worthily employed in the relief of indigence and wretchedness; and as he had no children, he devoted much of his property to the education and establishment of a numerous train of young relatives. In his medical practice he was partial to the use of venesection, and hence it has been concluded that Le Sage, in his *Gil Blas*, intended to satirize Molin under the character of Dr Sangrado; though Hecquet, another Parisian physician, is more commonly supposed to have been aimed at. In his general character Molin seems to have resembled Dr Radcliffe, and like that celebrated practitioner he left no published work of importance.—*Dict. Hist. Biog. Univ.*

MOLINA (LEWIS de) a celebrated polemic, descended of a noble family of Cuenza in New Castile, where he was born in 1535. He became a member of the jesuits' college, after having completed his studies at Coimbra, where he had distinguished himself by his perseverance in the acquirement of classical, as well as theological learning. Molina was afterwards professor of theology at Eboræ, and filled the chair there for more than twenty years with great reputation, although his adversaries accused him of a leaning towards the Pelagian heresy. In support of this charge, they cited his treatise, "De Concordia Gratiæ et liberi Arbitrii," 4to, which gave rise to

such a fierce altercation between the followers of Loyola and Dominic, that in 1607 the pope found it advisable to issue a bull, in order to suppress them. His other works are a treatise "On Law and Equity," and some annotations on the writings of Thomas Aquinas. His death took place at Madrid in 1600.—*Nouv. Dict. Hist.*

MOLINET (CLAUDE du) regular canon and procurator-general of the congregation of St Genevieve, and a learned antiquary, was born at Chalons sur Marne, in 1620. His principal works are, an edition of the "Epistles of Stephen, Bishop of Tournay," with notes; "History of the Popes, by Medals;" "Reflexions sur l'Origine et l'Antiquité des Chanoines séculiers et réguliers;" "Dissertation sur une tête d'Isis;" "Dissertation sur la Mitre des Anciens;" "Le Cabinet de la Bibliotheque de St Genevieve," &c. He collected a large cabinet of curiosities, and placed the library of St Genevieve in the state for which it is so celebrated. He was a man of great research, but, according to his countrymen, "plus rempli d'érudition que de critique." Molinet died in 1687.—*Biog. Univ. art. Dumolinet. Moreri. Dict. Hist.*

MOLINET (JOHN) a French poet, born in the fifteenth century. He studied at the university of Paris, after which he went to Flanders, where he married, but becoming a widower, he entered into the ecclesiastical state, and obtained a canonry at Valenciennes. He was almoner and librarian to Margaret of Austria, governess of the Netherlands, and historiographer to the house of Burgundy. He died in 1507. Besides a translation of the "Roman de la Rose," he was the author of "Faits et Dits, contenant plusieurs beaux traictés, oraisons et chants royaux," Paris, 1531, folio, and 1537 and 1540, 8vo; which editions are much sought after by the lovers of scarce books. His "Poesies" were re-published at Paris in 1723, 12mo.—*Biog. Univ.*

MOLINIER (WILLIAM) distinguished in the fourteenth century as the chaucellor of an association of Toulousan troubadours, who, under the title of "Collège du gai Savoir," gave rise to the academy of the Floral games. Molinier was directed to prepare a system of the art of poetry, as practised by the professors of the "gay science," which task he executed in 1356; and copies were despatched by the college to the princes of all the countries in which the Romanic language was cultivated. The poetics, or "Lays d'Amors," compiled by Molinier, is a curious monument of the state of literature in the south of France in the fourteenth century. A specimen of this work was published by M. Raynouard in his "Grammaire Romane."—*Biog. Univ.*

MOLINOS (MICHAEL) a Spanish controversialist of the seventeenth century, founder of the sect called Quietists, from the nature of their doctrine, which inculcates perfect abstraction from the world and its concerns, in order to a complete union with the Divinity. He was born in 1627, at Saragossa, but passed the greater part of his life at Rome, where,

in 1675, he published his celebrated "Spiritual Guide," written in Spanish. On its first appearance little notice was taken of its contents, but at length the inquisition took alarm at its tenets, and on a republication, six years afterwards, arrested its author. Molinos consenting to recant his opinions, his life was spared, but he never recovered his liberty, dying in the dungeons of the Holy Office in 1696. The celebrated Fenelon, archbishop of Cambray, madame Guyon, and some other persons of eminence in France, were strongly tinctured with the opinions of Molinos.—*Biog. Univ. Nouv. Dict. Hist.*

MOLLOY (CHARLES) a political writer, was born in Dublin, and was educated at Trinity college, and on coming to England he entered of the Middle Temple. He was supposed to have contributed greatly to a periodical paper, entitled "Fog's Journal," and also to have been the principal writer of a well known paper, called "Common Sense." Large offers were made to Mr Molloy to write in defence of sir Robert Walpole, which he refused; but notwithstanding, on the change in the ministry, in 1742, he was entirely neglected. He died in 1767. He also wrote three dramatic pieces, entitled, "The Perplexed Couple;" "Half-pay Officers;" and "The Coquet."—Another CHARLES MOLLOY, was a native of Ireland, and a lawyer of the Inner Temple, and was the author of a treatise "De Jure Maritimo et Navali." He died in 1690.—FRANCIS MOLLOY, also an Irishman, was professor of divinity in the college of St Isidore at Rome, and wrote "Grammatica Latino-Hibernica compendiatæ;" and "Luccerna Fidelium," which, although the title is Latin, is written in Irish, and contains an explanation of the Christian religion according to the Roman Catholic faith.—*Biog. Dram. Harris's Ware. Lyons's Environs.*

MOLYNEUX (WILLIAM) an eminent mathematician and astronomer, born at Dublin in 1656. He was educated at Trinity college, where he stayed four years, and having taken the degree of BA, he removed to the Inner Temple, London, in 1675. Being possessed of a competent fortune, he never engaged in the law as a profession, but returning to Ireland in 1678, he occupied himself with researches into various departments of natural philosophy, and more particularly astronomy. In 1683 he formed a philosophical society at Dublin, on the plan of the Royal Society, to which he became secretary, and continued to act in that capacity till the association was broken up during the storms of the Revolution in 1688. Through the influence of the duke of Ormond, Mr Molyneux was appointed joint-surveyor of public works, and chief engineer, in consequence of which he had a commission to examine the principal fortresses in Flanders. After his return, in 1686, he published his "Sciothericum Telescopicum," containing an account of a telescopic dial which he had invented. In 1689 he removed to London, on account of the political commotions in Ireland, and shortly after he settled

with his family at Chester. There he drew up a treatise on dioptrics, published in 1692, under the title of "Dioptrica Nova," 4to. Going back to his native country, he was chosen MP. for Dublin, in 1692; and in 1695 he was elected representative of the university. In 1698 he published a tract relating to some measures adopted by the English government which he conceived to be injurious to the Irish woollen manufacture. He died October 11, 1698. Mr Molyneux was a fellow of the Royal society, and a contributor to the Philosophical Transactions.—His son, SAMUEL MOLYNEUX, who was secretary to George II, when prince of Wales, was also a cultivator of the mathematical sciences, and made some improvements in the construction of telescopes, of which Dr Robert Smith published an account in his treatise on optics.—*Martin's Biog. Philos.*

MOLZA (FRANCIS MARIA) an Italian poet of the fifteenth century, was born at Modena in 1489. He was equally distinguished for his poetical facility and the libertinism of his manners. His compositions are chiefly poems in Latin and Italian, on topics as well moral and serious, as sportive and amorous; in all of which he excelled. He died at Modena in 1544.—TARQUINIA MOLZA, a learned lady, the grand-daughter of the preceding, was born at Modena in 1542. She became a proficient in the Latin, Greek, and Hebrew languages, in logic, rhetoric, mathematics, philosophy, theology, and music. In 1560 she married Paul Porrino, with whom she lived eighteen years. On his death she went to Ferrara, and lived twelve years as lady of honour to Lucretia and Leonard d'Este; after which she retired to Modena, and passed the remainder of her life in literary pursuits. She died in 1617. Her writings consist of Italian and Latin poems; a translation of the Charmides and Crito of Plato, &c. Tasso has introduced this lady as one of the interlocutors in his Dialogue on Love, which he entitles "Molza." She received the extraordinary honour of being presented with the citizenship of Rome, in a patent, extolling her merit, and giving her the title of Unica. This privilege through her is extended to the whole family of the Molzas of Modena.—*Bayle. Tiraboschi.*

MOMBRIIUS or MOMBRIZIO (BONINUS) a native of Milan, who flourished in the fifteenth century, was the author of a work, entitled "Sanctuarium sive vitæ Sanctorum," 2 vols. folio, supposed to have been printed at Milan about 1479; it is extremely scarce, and is deemed very valuable. In this work the author took the greatest pains to distinguish truth from fable, and thus he was enabled to do by closely examining all the existing authorities, and carefully collating MSS. He also wrote several Latin poems, particularly one on the Passions, which was greatly admired.—*Brunet Manuel du Libraire. Moreri. Tiraboschi.*

MONARDES (NICHOLAS) a Spanish physician, was born at Seville, in the early part of the sixteenth century. His reputation is found-

ed chiefly upon his work, entitled "Dos Libros de las cosas que se traen de las Indias Occidentales que sirven al uso de Medicina," Sevilla, 1565, to which a third book was afterwards added, concerning the medicinal substances imported from the new world. This work was translated into Latin, with notes and figures, by Charles l'Ecluse or Clusius, under the title of "Simplicium Medicamentorum ex novo orbe delatorum, quorum in Medicina usus est Historia," Antw. 1574. It was also translated into Italian, French, and English. The other works of Monardes are a tract, "De Rosa et partibus ejus; de succi Rosarum temperatura," and "De secunda vena in Pleuritide inter Græcos et Arabes concordia," &c. The name of Monardes is perpetuated by the botanical genus Monarda, in the class Diandria of Linnæus. He died in 1578.—Antonio *Bibl. Iisp. Rees's Cyclop. Moreri.*

MONBEILLARD (PHILIBERT GUENEAU) a naturalist, was born at Semur in Auxois, in 1720. On coming to Paris, he distinguished himself in the scientific world, and continued with reputation the "Collection Academique," a work consisting of every interesting circumstance in the memoirs of the learned societies of Europe. He became the associate of Buffon, in his great work on natural history, taking part of the ornithological department. He first wrote under the name of his colleague, and no difference of style was observed, until Buffon himself announced him in his preface, saying, "that of all men he was the person whose manner of seeing, judging, and writing, was most conformable to his own." Monbeillard afterwards undertook the class of insects, on which subject he had written several articles in the new Encyclopedia; but before he could finish it, he was seized with the illness which terminated in his death in 1785. His wife, who was an excellent linguist, and otherwise accomplished, rendered him great assistance in his labours.—*Nouv. Dict. Hist.*

MONCONYS (BALTHASAR de) a writer of travels, and son of the lieutenant-criminal of Lyons, was educated in the jesuit's college. In 1628 he was driven from his country by the plague, and he went to Spain, and studied at the university of Salamanca. He afterwards visited the East, for the purpose of tracing the remains of the philosophy of Hermes Trismegistus, and Zoroaster, but meeting with little success, he returned to France, and applied himself to mathematical and physical pursuits. He died in 1665 at Lyons, and his "Travels," in 3 vols. 4to, were published by his son and the jesuit Berthier. They contain much curious matter.—*Moreri. Nouv. Dict. Hist.*

MONCRIF (FRANCIS AUGUSTIN PARADIS) a poet and miscellaneous writer, was born at Paris in 1627. He devoted himself at an early age to literature, and one of his first efforts was an "Ode on the death of Louis le Grand," by which he expected to gain the favour of the regent. He became private secretary to the count of Clermont, and reader to the queen; he was a member of the French

Academy, and associate of those of Nanci and Berlin. He was also admitted by Louis XV to the privilege of the entrées of court, a favour denied to Voltaire. Moncrif excelled chiefly in ballads, romances, complimentary verses, or theatrical pieces; the flights of his genius were not lofty. He died in 1770. His principal works are, "Essai sur la Necessité et sur les moyens de Plaire;" "Les Ames Rivales," an ingenious romance, founded on the metempsychosis; "Les Abderites," a comedy; "Poesies diverses," &c. &c. His "Histoire des Chats" was severely and unmeritedly criticised at the time of its publication, but is now forgotten.—*Necrologie des Hommes célèbres. Nouv. Dict. Hist.*

MONGAULT (NICHOLAS HUBERT de) a literary man, was the natural son of Colbert Penanges, and was born at Paris in 1674. He entered the congregation of the fathers of the Oratory, and studied philosophy at Mans. The system then generally taught was that of Aristotle, but Mongault, judging for himself, adopted that of Descartes, which he openly professed. In 1701 Colbert, archbishop of Toulouse, who had procured him a priory, invited him to Toulouse, and gave him apartments in his palace; and soon after the president, Foucault, prevailed upon him to reside with him, and obtained his admission into the Academy of Inscriptions and Belles Lettres. In 1710 Mongault became tutor to the young duke of Chartres, son of the duke of Orleans. He was the author of a "Translation of Herodian," and "A Translation of the Letters of Cicero to Atticus," in 6 vols. which he enriched with notes, which equally prove his learning and the elegance of his taste. He also published two dissertations in the Memoirs of the Academy of Inscriptions. He was admitted a member of the French Academy in 1718, and died in 1746.—*Moreri. Nouv. Dict. Hist.*

MONGE (GASPAR) a celebrated mathematician and natural philosopher, born at Beaune in 1746. He studied in the colleges of the fathers of the Oratory at Beaune and Lyons, with such success that he became a teacher at the age of sixteen. He was afterwards employed at the military school of Mezieres, where he assisted Bossut, the professor of mathematics, and afterwards Nollet, professor of physics, whom he succeeded. In 1780 he removed to Paris, on being admitted into the Academy of Sciences, and became the coadjutor of Bossut, in a course of lectures on hydrodynamics at the Louvre. He quitted Mezieres entirely in 1783, on being appointed examiner of the marine; when he composed a "Treatise on Statics," afterwards used for the Polytechnic school. In 1789, like other friends of freedom, Monge indulged in expectations of the regeneration of France. Through the influence of Condorcet, he was made minister of the marine in 1792, and he held at the same time the portfolio of minister of war, during the absence of general Servan with the army. He thus became a member of the executive council of government, in which quality he

signed the order for the execution of Louis XVI. Shortly after he resigned his functions, in consequence of which he was exposed to the persecution of the ruling party of the jacobins, against which he successfully defended himself. He was then employed, together with other men of science, in improving the manufacture of gunpowder, and otherwise augmenting the military resources of the country. The Normal School was founded, with which Monge became connected, and he then published his "Geometrie Descriptive," one of his principal works. Together with Berthollet and Guyton Morveau, he principally contributed to the establishment of the Polytechnic school; after which, in 1796, he was commissioned to go to Italy, and collect the treasures of art and science from the countries conquered by the French; and the labours of Monge and his colleagues gave rise to the splendid assemblage of works of taste and genius, which for a time ornamented the halls of the Louvre. In 1798 he went with Buonaparte to Egypt, where he was again employed in the service of science. On his return to France, he resumed his functions as professor at the Polytechnic school, in the success of which he greatly interested himself. The attachment which he on various occasions manifested to Buonaparte, led to his being nominated a member of the senate, on the first formation of that body. The emperor farther bestowed on him the title of count of Pelusium, the senatorial lordship of Liege, made him grand cordon of the legion of honour, gave him an estate in Westphalia, and, a little before he set out on his Russian expedition, a present of 200,000 francs. The fall of his benefactor involved him in misfortunes. He was expelled from the institute in 1816, one of his sons-in-law was exiled, and he was deprived of all his employments. His faculties became disordered, and he died July 28, 1818. Besides the works above noticed, Monge published "Description de l'Art de fabriquer les Canons," 4to; and "Application de l'Analyse à la Geometrie des Surfaces," 4to; as well as a multitude of memoirs on mathematical and physical science.—*Biog. Univ. Biog. Nouv. des Contemp.*

MONK (GEORGE) an English military officer, distinguished in history for the prominent part he acted in the restoration of Charles II. He was the son of sir Thomas Monk of Potheridge in Devonshire, where he was born December 6th, 1608. Entering into the army at an early age, he served under sir Richard Grenville, in an expedition to Spain, and in 1630 he went to the Netherlands, where he was promoted to a captaincy. He was engaged in the unfortunate expedition of Charles I against the Scots in 1639, at which period he was raised to the rank of lieutenant-colonel. On the rebellion taking place in Ireland he was sent thither, and his services were rewarded with the post of governor of Dublin. Hostilities occurring between the king and the parliament, colonel Monk brought over his regiment to his majesty's assistance. He was

appointed major-general in the Irish brigade, and being employed at the siege of Nantwich, he was made a prisoner, and committed to custody in the Tower of London. He devoted his leisure to writing, and composed "Observations on Military and Political Affairs," published not long after his death. Having been detained about three years in confinement, he accepted of a commission from the Parliament, on condition of being employed only against the Irish insurgents. He distinguished himself repeatedly in this service; but having made a treaty with the Catholic chieftain, O'Neal, which gave offence to the English parliamentary government, he resigned his command, and retired to his estate. After the entire overthrow of the royal party, Monk was employed with Cromwell in Scotland, and was present at the battle of Dunbar. His coadjutor returning to England, he was entrusted with the chief command. War taking place with the Dutch republic, he engaged in the naval service, and together with admirals Blake and Dean, he commanded in two engagements, in which they triumphed over the enemy, commanded by the famous seaman Van Tromp. On the re-establishment of peace, Monk returned to Scotland, where, at the head of the English army, he maintained the authority of Cromwell in that country. On the decease of the protector, the resignation of power by his son, and the contest of parties which subsequently took place, he availed himself of the commanding situation which he occupied, to crush the republicans, and promote the recal and restoration of the Stuart family to the throne, in the person of Charles II. The measures adopted for this purpose, indicate a more political sagacity than principle in Monk or his advisers; but the detail of these transactions must be sought for in our national histories. The dukedom of Albemarle, the order of the garter, and the office of privy-councillor, rewarded the loyalty of the restorer of Charles II. During the Dutch war, in the reign of that prince, Monk was again employed in the service of his country, and in 1666 he beat the Dutch fleet commanded by his former antagonist, Van Tromp, and admiral De Ruyter. He died January 3d, 1670, and was buried in Westminster abbey. He was married to a woman in low life, said to have been the daughter of his laundress; who, as may be supposed, maintained a complete ascendancy over him, so that it has been observed, that this warrior, who was not afraid of a cannonball, dreaded the tongue of his wife.—*Hume's Hist. of Eng. Brit.*

MONK (HON. MARY) daughter of lord Molesworth, and wife to George Monk, esq. was an ingenious poetess, and a proficient in the Latin, Italian, and Spanish languages. Her poems were printed after her death under the title of "Marinda" "Poems and Translations upon several Occasions," and a dedication to Caroline, princess of Wales, was prefixed by lord Molesworth. She died in 1715; and on her death-bed she wrote some very affecting verses to her husband, which may be found in

“Cibber’s Lives.”—*Ballar’s Memoirs*. *Cibber’s Lives*.

MONNET (ANTHONY GRIMOALD) an eminent French chemist, inspector-general of mines, and member of the academies of Rouen, Stockholm, and Turin. He was of low parentage, and was born in Auvergne in 1734. Having settled as an apothecary at Rouen, he distinguished himself by his acquaintance with chemical science. Becoming known, he removed to Paris, and obtained, through the patronage of Malesherbes, the place of inspector-general of mines in 1774. In conjunction with Guettard he prepared and published a mineralogical atlas of France. He was one of the very few cultivators of chemistry who rejected and opposed the great discoveries and theories of Lavoisier, a circumstance which involved him in disputes with his fellow-labourers in the field of science, and lessened his reputation. Being deprived of office at the Revolution, he passed the latter part of his life in absolute retirement, and died at Paris in 1817. He was the author of “*Memoire Historique et Politique sur les Mines de France*,” 1790, 8vo; “*Demonstration de la Fausseté des Principes des Nouveaux Chimistes*,” 1798, 8vo; and various other works, besides a great number of analyses and memoirs in the *Journal de Physique*, &c.—*Biog. Univ.*

MONNOYE (BERNARD de la) a literary man, was born at Dijon in 1641, and was brought up to the bar, but conceiving a dislike to the law, he devoted himself to literature, and contented himself with the office of corrector in the chamber of accounts at Dijon. He gained several prizes of the French Academy; but in consequence of his preferring to reside in his native province he was not associated to that body until 1715. In the latter part of his life he was reduced to distress, which was alleviated by a pension from the duke de Villeroi. He died at Paris in 1727. His principal works are, “*Remarques sur les Bibliothèques de du Verdier et de la Croix du Maine*,” “*Remarques sur les Jugemens des Savans de Baillet*,” “*Notes sur la Bibliothèque choisie de Colomies*,” “*Remarques sur le Menagiana, avec une Dissertation sur le Lire de Tribus Impostoribus*,” “*Noels Bourguignons*,” a set of Christmas carols, in the Burgundian dialect, very humorous, but condemned by the Sorbonne for their coarseness; “*Poesies Françaises*,” and “*Nouvelles Poesies*,” consisting of fables, epigrams, tales, &c. with some Latin poems, elegantly written, but in a licentious spirit. Monnoye was also the editor of a collection of French poets, and of a “*Recueil des Pièces choisies*.”—*Moreri. Nouv. Dict. Hist.*

MONOYER (JOHN BAPTISTE) commonly called Baptist, an eminent flower-painter, was born at Lisle in Flanders, in 1635, and studied his art at Antwerp. In 1663 he went to Paris, and in 1665 he was admitted into the academy of painting; but as the rules of that society did not permit him to be a professor, he received the title of counsellor. He

came to England, and was employed in embellishing Montagu house, now the British museum, Hampton court, Kensington, Burlington house, &c. He died in London in 1699. His style is bold and free, and the disposition of all his objects strikingly elegant, but he did not finish his work so highly as Van Huysum. One of his most celebrated pieces is the flower border of a mirror at Kensington palace. His son Antony, called Young Baptist, adopted his father’s style, and was member of the French academy of painting.—*Walpole’s Anec. D’Argenville. Pilkington’s Dict.*

MONRO (ALEXANDER) a celebrated physician and anatomist, of Scottish descent, but born in London in 1697. After commencing his studies under Cheselden, he travelled for improvement in various parts of Europe, observed the hospital practice at Paris, and passed some time at Leyden, where he contracted a friendship with professor Boerhaave. Returning home, he settled at Edinburgh in 1719, where he was appointed anatomical demonstrator to the company of surgeons, and he commenced a course of public lectures on anatomy. Two years after he also began to give lectures on surgery, and he contributed to the foundation of a public hospital, where he delivered courses of clinical lectures. He established his reputation as an anatomist by the publication of his treatise on Osteology, which passed through a multitude of editions, and has been translated into several foreign languages. This was followed by his anatomy of the nerves; and many valuable productions of his pen appeared in the “*Medical Essays and Observations*,” published at Edinburgh, in six volumes, octavo. His last work was a tract on the success of inoculation in Scotland, to the general introduction of which salutary practice he was greatly instrumental. He died in 1767. As professor of anatomy he contributed much to the high character which the university of Edinburgh has long maintained as a school of medical science; and he displayed his zeal for the interests of his profession, not only by his writings and his lectures, but by assisting in the formation of a society for the improvement of medicine, and aiding and encouraging the researches of his pupils and others. A collective edition of his works was published by his son, with an account of his life, in 1781, quarto.—MONRO (ALEXANDER) eldest son of the preceding, succeeded on his death to the anatomical professorship, and creditably supported the reputation of his family. He was the author of “*Observations on the Nervous System*,” 1783, folio; a treatise on the “*Structure and Physiology of Fishes*,” folio; “*A Description of all the Bursæ Mucosæ of the Human Body*,” 4to; three “*Treatises on the Brain, Eye, and Ear*,” 4to; besides other works. He died in 1817, at an advanced age.—MONRO (DONALD) brother of the last mentioned professor, was also engaged in the practice of medicine, and became a physician in the army. He died in 1802, leaving a “*Treatise on Medical and*

Pharmaceutical Chemistry," 4 vols. 8vo; and "Observations on the Means of preserving the Health of Soldiers," 2 vols. 8vo; besides some papers in the Philosophical Transactions, highly honourable to his talents.—*Hutchinson's Biog. Med. Lond. Med. Journ. Ann. Biog.*

MONRO (JOHN) an eminent physician, who devoted his attention to the treatment of insanity. He was born at Greenwich in Kent, in 1715, and was the son of Dr James Monro, physician to the hospitals of Bridewell and Bethlem. He was educated at Merchant Tailors' school, and St John's college, Oxford, where he obtained a fellowship. In 1743 he became one of the travelling fellows on Dr Radcliffe's foundation, when he visited France and Italy, and some other parts of Europe. The degree of MD. was bestowed on him by the university of Oxford during his absence; and on his return in 1751, he was elected colleague with his father, on whose death the following year he succeeded him as physician to Bridewell and Bethlem hospitals. He died December 27, 1791, at Hadley near Barnet. Dr Monro is principally known on account of his controversy with Dr Battie, who having censured the practice of the medical attendants of Bethlem, in his Treatise on Madness, the former published a small pamphlet, entitled "Remarks on Dr Battie's Treatise," designed principally as a vindication of his father.—*Hutchinson. Chulmers's Biog. Dict.*

MONSIGNY (PIERRE ALEXANDRE) a native of Artois, surnamed the French Sacchini. He was born in 1729, and was placed by his parents at an early age in the chamber of accounts of the clergy at Paris, but becoming accidentally a witness of the success of Pergolesi's opera of the "Servant Mistress," his genius for music soon developed itself, and became a passion with him. Having placed himself under Giannotti, after five months' instruction from that master, he produced an opera in one act, entitled "Les Aveux Indiscrets," which he brought out with great success in 1759. Sedaine being present at his "Le Cadi dupe" the following year, was so pleased with the talent which it exhibited, that he immediately introduced himself to the author, and the two afterwards produced seven operas in conjunction, all of which were successful. Monsigny was in 1802 director of the conservatory, but the time of his death is uncertain.—*Biog. Dict. of Mus.*

MONSON (SIR WILLIAM) an English seaman and writer on naval affairs, who was a native of Lincolnshire. He was born in 1569, and studied at Baliol college, Oxford. Having entered into the navy, he accompanied the earl of Essex in his expedition to Cadiz, and received from his commander the honour of knighthood; and he also distinguished himself in the Dutch war in the reign of James I. He died in 1643. He was the author of a volume of Naval Tracts, published in 1623.—*Campbell's Lives of Admirals.*

MONSTRELET (ENGUERRAND de) a chronicler of the fifteenth century, was born

at Cambray, of which city he became governor. He was the author of a history in French of his own times, from 1400 to 1467, the last fifteen years of which were furnished by another hand. It contains a faithful but rather tiresome narrative of the contentions of the houses of Orleans and Burgundy, the capture of Normandy and Paris by the English, with their expulsion, &c. It was published with the title of "Chronique d'Enguerrand de Monstrelet, Gentilhomme, jadis demeurant à Cambrai, en Cambresis;" and is particularly valued for the original documents which it contains. The best edition is that of Paris, 1572, 2 vols. folio. Monstrelet died in 1453. *Moret. Nouv. Dict. Hist.*

MONTAGU (CHARLES) earl of Halifax, an English statesman and poet, born at Horton in Northamptonshire, in 1661. He was descended from the family of the Montagus, earls of Manchester; and he was educated at Westminster school, and Trinity college, Cambridge. From the university he went to London, where he attracted notice by his verses on the death of Charles II; and in 1687 he wrote, in conjunction with Prior, "The City Mouse and Country Mouse," a travesty on Dryden's Hind and Panther. In the reign of William III he obtained the place of clerk of the privy council, and became a member of the house of commons, and a decided supporter of the whig party in politics. In 1694 he was raised to the post of chancellor of the exchequer, and subsequently to that of first lord of the treasury. His administration was distinguished by the adoption of the funding system, or anticipation of the public revenues, and creation of the national debt, which, from five millions, the original amount, had increased to three hundred millions at the close of the American war, and has since been most enormously augmented. The establishment of the Bank of England was another measure of that period, as was also the recoinage of the national money. In 1698 Montagu was a member of the council of regency during the temporary absence of the king; and in 1700 he was raised to the peerage. In the reign of Anne, when Tory influence prevailed, he was impeached before the house of Lords on two occasions, but the proceedings against him fell to the ground. George I created him an earl, and bestowed on him the order of the garter; but being disappointed in his expectation of obtaining the office of lord treasurer, he joined himself to the opposition. His death took place May 19, 1715. The poems and speeches of lord Halifax were published, with biographical memoirs, in 1715, 8vo; and the former were included in the edition of English poets by Dr Johnson. He held a distinguished place at one time among our minor bards, but except some of his songs, and his share of the burlesque on Dryden, his works are fallen entirely into oblivion. He aspired to the character of the Mæcenas of his age, and his patronage of Addison is creditable to his discrimination, though little can be said in praise of his munificence.—*Walpole. Johnson.*

MONTAGU (**EDWARD**) earl of Sandwich, a naval commander of distinction in the reign of Charles II. He was the son of sir Sidney Montagu, descended from an illustrious Norman family, and was born in 1695. Like many other officers of that period, he commenced his career in the army, and terminated it in the navy. During the civil war, he commanded a regiment which he had raised for the service of the parliament, and acted with great bravery in various engagements. In the subsequent war with Holland, under the government of Cromwell, he was associated in a maritime command with admiral Blake. He was then sent with a fleet into the North sea; but suspicions arising of his fidelity to the party then in power, he was dismissed on his return to England. Through the influence of general Monk, he was again employed, and he commanded the fleet on board which Charles II returned from exile, to take possession of the throne. For this piece of service he was created viscount Hinchbrooke and earl of Sandwich, July 19, 1660. In the Dutch war, which commenced in 1664, he greatly distinguished himself, especially in the battle with admiral Opdam, June 3, 1665, when he commanded a division of the English fleet under the duke of York. He was afterwards employed on a diplomatic mission to the court of Madrid. On the renewal of hostilities with the Dutch, he was again employed, and lost his life in an engagement off Southwold, on the coast of Suffolk, in 1672, owing to the vessel in which he was taking fire, when he leaped overboard and was drowned. Lord Sandwich wrote on politics, natural philosophy, &c.; in consequence of which he is noticed in Walpole's *Catalogue of Royal and Noble authors*.—*Saug. Eng. Collins*.

MONTAGU (**LADY MARY WORTLEY**) one of the most celebrated among the female literary characters of England, was the eldest daughter of Evelyn, duke of Kingston, by his wife lady Mary Fielding, the daughter of the earl of Denbigh. She was born about 1690, at Thoresby in Nottinghamshire, and displaying uncommon abilities at an early age, was educated upon a liberal plan, and instructed by the same masters as her brother, in the Greek, Latin, and French languages. In her twelfth year she gave an extraordinary proof of her erudition, by a translation of the Enchiridion of Epictetus, which version was revised by bishop Burnet, by whom her education was ultimately superintended. Her mind was nourished in great comparative retirement, previously to her marriage in 1712 with Edward Wortley Montagu, esq. son of the hon. Sidney Montagu, a relative of the earl of Halifax. Even after her marriage, she lived chiefly at her husband's seat of Wharfedale, near Sheffield, until the latter being introduced to a seat in the treasury by the earl of Halifax, he brought his lady to London. Being thus placed in the sphere of the court, she attracted that admiration which beauty and elegance, joined to wit and the charms

of conversation, seldom fail to inspire. She also became familiarly acquainted with Addison, Pope, and other distinguished writers; and rapidly obtained the character of a woman of very superior talents. In 1716 Mr Wortley being appointed ambassador to the Porte, lady Mary determined to accompany him, and hence that admirable series of correspondence which has so exalted her epistolary fame. This was chiefly formed by letters addressed to the countess of Mar, lady Rich, and Mr Pope; to whom she communicated her observations on the new and interesting scenes to which she was a witness. On many occasions she displayed a mind superior to common prejudices, but in none so happily as in a courageous adoption of the Turkish practice of inoculation for the small pox for her own son, and zealous patronage of its introduction into English practice. In 1718 Mr Wortley returned to England, and at the request of Pope, lady Mary took up her summer residence at Twickenham, and a friendship was formed between these kindred geniuses, which gradually gave way to the natural dislike produced by difference of political opinion, petulance, and instability on the side of the poet, and no small disposition to sarcastic keenness on that of the lady; and a literary war ensued, which did honour to neither party. Lady Mary preserved her ascendancy in the world of rank and fashion until 1739, when her health declining, she took the resolution of passing the remainder of her days on the continent, not without the world surmising that other causes concurred to induce her to form this resolution. She however retired with the full concurrence of her husband, with whom her subsequent correspondence betrays neither resentment nor humiliation. Venice, Avignon, and Chambery, were in turns her residence, until the death of Mr Wortley in 1761, when she complied with the solicitations of her daughter, the countess of Bute, and returned to England, after an absence of twenty-two years. She enjoyed a renewal of family intercourse for a short time only, as she died of a gradual decay in 1762, aged seventy-two. As a poetess, lady Mary Wortley Montagu exhibits ease, and some powers of description; but she is negligent and incorrect. The principal of her performances in this class is her "Town Eclogues," a satirical parody of the common pastoral, applied to fashionable life and manners. Of her smaller pieces, some are more free than would generally be thought becoming her sex. As a letter-writer, her fame stands very high; and the collection under her name is certainly not surpassed, upon the whole, by any other in the language. After having been shown about in MS, they were collected and copied by herself, and presented, in 1766, to the rev. Mr Sowden, of Amsterdam, of whom they were purchased by the earl of Bute; but a surreptitious copy of them having been obtained by a trick, they were published in 1763, in 3 vols. 12mo. The authenticity of these letters, which obtained universal admiration for their

wit, solidity, and descriptive powers, was for a long time doubted; but all distrust was done away by the following publication under the sanction of the earl of Bute: "The Works of the right-honourable lady Mary Wortley Montagu, including her Correspondence, Poems, and Essays, published by permission from her genuine papers," London, 1803, 6 vols. 12mo, with a life, by Mr Dallaway. This edition contains many additional letters, written in the latter part of her life, which display much excellent sense and solid reflection, although tinged with some of the prejudices of high rank, and indicative of increasing misanthropy. The late Mrs Montagu used to describe lady Mary as one who "neither thought, spoke, nor acted like any one else;" and doubtless, she was distinguished by a masculine freedom, which it is difficult on all occasions to reconcile with the usual standard of female sensibility and propriety.—*Life by Dallaway.*

MONTAGU (EDWARD WORTLEY) the only son of the subject of the preceding article, was born in 1713. At an early age he was sent to Westminster school, from which seminary he ran away three times, and associating himself with the lowest classes of society, passed through some extraordinary adventures, sailed to Spain as a cabin-boy, and was at length discovered by the British consul at Cadiz, and restored to his family. A private tutor was then provided for him, with whom he travelled on the continent. While at Paris he became involved in a dispute with a Jew, which subjected him to a criminal prosecution; but, exclusive of this affair, his conduct seems to have been tolerably correct; and during his residence abroad, he wrote a tract, entitled, "Reflections on the Rise and Fall of Ancient Republics." On his return to England, he obtained a seat in the House of Commons, where he sat in two successive parliaments. But living extravagantly, he after a time became involved in debt, and at length left his native country never to return. His future conduct was marked by eccentricities, not less extraordinary than those by which he had been distinguished in the early part of his life. He went to Italy, where he professed the Roman catholic religion, and from that he apostatised to become a disciple of Mahomet, and a scrupulous practiser of the formalities of Islamism. After passing many years in Egypt, and other countries bordering on the Mediterranean, he was about to return to England, when his death took place at Padua, in Italy, in 1776. Besides the work above noticed, he was the author of an "Examination into the Causes of Earthquakes;" and some papers in the Philosophical Transactions.—*Ann. Reg.*

MONTAGU (ELIZABETH) a lady of great literary celebrity in the latter part of the last century. She was the daughter of Matthew Robinson, esq. of the Rokeby family, and was born in 1720. She had an opportunity of prosecuting her studies under the direction of Dr Conyers Middleton, to whom she was pro-

bably indebted for the tincture of learning which so remarkably influenced her character and manners. In 1742 she became the wife of Mr Montagu, a descendant of the first earl of Sandwich, who had no children by her; and dying some time after, he left her mistress of a handsome fortune, which enabled her to gratify her taste for study and literary society. In 1769 she published an "Essay on the Writings and Genius of Shakspeare, compared with the Greek and French Dramatic Poets, with some Remarks upon the Misrepresentations of Mons. de Voltaire," 8vo. This work became exceedingly popular, and raised Mrs Montagu, in the opinion of a large party of the metropolitan literati, to the rank of an arbiter of public taste. She opened her house in Portman-square to the "Blue-Stocking Club," a society so denominated from a peculiarity in the dress of Mr Benjamin Stillingfleet, one of the members; and she carried on an epistolary correspondence with men of letters, published after her death, which took place August 25th, 1800. Among British female authors, Mrs. Montagu holds no mean rank; and if not a very profound, she may be considered as an acute and ingenious critic, possessing both judgment and taste, as well as learning; though she must yield the palm of mental superiority to her name-sake, lady M. W. Montagu, exclusive of whom she had, perhaps, no successful rival among her contemporaries of the fair sex.—*Life published with her Letters.*

MONTAGU (JOHN) fourth earl of Sandwich, a statesman and antiquary, born in 1718. He studied at Eton, whence he removed to Trinity college, Cambridge. On leaving the university he set out on his travels, and in 1738 and in 1739 visited Sicily, Malta, Turkey, Egypt, and other countries bordering on the Mediterranean. He brought home a valuable collection of antiquities, particularly a marble vase obtained at Athens, which he presented to the college where he was educated. An account of his "Voyage round the Mediterranean," drawn up by himself, with memoirs of his life, by his chaplain, the rev. J. Cooke, was published after his death, in 1799, 4to, and a second edition of the work appeared in 1807. After his return home he was appointed a lord of the admiralty; and in 1746 he was despatched to the congress of Breda, as minister plenipotentiary. He was subsequently employed at the pacification of Aix-la-Chapelle, and on his return to England he was made first lord of the Admiralty. He was removed in 1751; but twice afterwards he held the same office. This nobleman died in 1792.—*Biog. Peerage.*

MONTAIGNE, or MONTAGNE (MICHAEL de) a celebrated French essayist, born in 1533, was the son of Peter Eyquem, lord of Montaigne in Perigord. Induced by an early display of quickness and vivacity, his father took great pains with his education, being taught Latin as soon as he could speak, by a German, who was ordered to converse with him in that language alone. He afterwards

learned Greek under the semblance of amusement, and in this way was cheated into various acquirements, so that at the age of thirteen he had completed his course at the college of Bourdeaux. It is supposed that he subsequently cultivated jurisprudence, as, upon his marriage with a daughter of a counsellor of Bourdeaux, he for some time occupied a similar post. He soon, however, quitted the legal profession in disgust, and devoted himself to the study of men and books. In 1569 he published the "Natural Philosophy of Raymond Sebonde," a learned Spaniard; and the death of his father soon after giving him possession of the estate and seat of Montaigne, he repaired thither, and began to collect materials for his essays. In order to enlarge the sphere of his observation, he also travelled through France, and visited Germany, Switzerland, and Italy. In 1581 he was admitted a citizen of Rome, and in the same year, during his absence, was chosen mayor of Bourdeaux, and subsequently delegated by his fellow citizens to transact business at court. In 1588 he also appeared to advantage in the assembly of the states of Blois, and during one of his visits to court was honoured by Charles IX with the order of St Michael. He finally settled at his family residence, where he assiduously devoted himself to study, in which, however, he was occasionally disturbed by the disorderly events of the civil wars. In his old age he was much afflicted by the colic and nephritic pains, but could never be prevailed upon to take medicine. He died of a quinsy in 1592, in his sixtieth year, leaving an only daughter, who was advantageously married. With a considerable share of vanity and other foibles, Montaigne possessed a fund of discernment and practical philosophy, which enabled him to pass life with credit and tranquillity. His literary reputation is founded on his "Essays," which may still be deemed one of the most popular books in the French language. They embrace a great variety of topics, which are touched upon in a lively, entertaining manner, with all the raciness of strong native good sense, careless of all system or regularity. Sentences and anecdotes from the ancients are interspersed at random, with his own remarks and opinions, and with stories of himself, in a pleasant strain of egotism, and with an occasional licence, to which severer casuists can with some difficulty reconcile themselves. Their style, without being pure or correct, is simple, bold, lively, and energetic, and, according to La Harpe, is "impressed on the French language an energy which it did not before possess, and which has not become antiquated, because it is that of sentiments and ideas, and not alien to its idiom. It is not a book we are reading, but a conversation to which we are listening; and he persuades, because he does not teach." The best edition of Montaigne's Essays is that of Coster, in three volumes, 1740, of which Tonson's, London, 1724, is deemed the best. We have also two English translations, the one by Charles Cotton, and the other, an earlier one by

John Florio. In 1774, "Montaigne's Travels" were published by Querlon, but the public were disappointed, as they amounted to little more than a journal hastily written, with little of the style and manner of the author of the Essays.—*Moreri. Niceron.*

MONTALEMBERT (MARC RENE, marquis de) a French general, born at Angoulême, of a noble family, in 1714. He received a liberal education, and at the age of eighteen he entered into the army, and was at the siege of Kehl in 1733, and at that of Philipsburg in the year following. He afterwards served in Bohemia; and on the occurrence of peace he devoted himself to study. He constructed forges for casting cannon in Anjou and Perigord. In the seven years' war he was attached to the staff of the armies of Russia and Sweden, to give an account of military operations to the French ministry. In 1761 he published the prospectus of a work on Fortification, which the jealousy of his government prevented him from committing to the press till some years after. This treatise is entitled "L'Art defensif superieur à l'offensif, par une nouvelle maniere d'employer l'Artilerie, ou la Fortification perpendiculaire," Paris, 1793, 11 vols. 4to. He was also the author of several papers in the memoirs of the Academy of Sciences, besides other works. His death took place in 1800.—*Biog. Univ.*

MONTANUS, the founder of a new sect. in the second century of Christianity, was a native of Mysia, who affected to be inspired by the Holy Ghost, and to utter prophecies. According to St Jerome, he obtained an ascendancy over Priscilla and Maximilla, two wealthy ladies, whom he exalted into prophetesses, and by means of whose riches and influence he seduced many churches, and obtained numerous followers. He seems to have made Pepuza, a town in Phrygia, his first residence, where, after a while, it is asserted that he contrived to make a plentiful harvest of his deluded votaries. It does not clearly appear that this sect broached any doctrine peculiar to themselves, but, like other Christians, disputed and disagreed concerning the mystery of the Trinity. The distinguishing peculiarities of this sect related rather to discipline and manners, in which they affected greater severity. The Montanians obtained a proselyte in Tertullian, and were even countenanced by one of the bishops of Rome; but they were ultimately excommunicated, and their baptism declared null. Of the death of Montanus and his female coadjutors, there is no certain account.—*Cave Hist. Lit. Jortin's Remarks on Eccles. Hist.*

MONTANUS (BENEDICT ARIAS) a learned Spaniard, was born at Frexenel in Estremadura, in 1527. After studying in the university of Alcalá, he took the habit of a Benedictine, and attended the council of Trent in 1562, where he obtained considerable reputation. On his return to Spain, he retired to a hermitage, whence he was withdrawn by Philip II, to edit a new Polyglot, which he completed in 8 vols. folio, Antwerp, 1572.

After satisfactorily clearing himself at Rome, from a charge of corrupting the text, he was offered a bishopric by Philip, but preferred a second retirement, from which he was again solicited by the king to return, and become librarian of the Escorial. He died in 1598, aged seventy-one. Besides the Antwerp Polyglott, Arias, who was one of the most learned divines of the sixteenth century, published several other works, which are chiefly erudite commentaries on Scripture, and will be found enumerated in Antonio and Nicéron.—*Antonio Bibl. Hispan. Nicéron. Biog. Universelle.*

MONIANUS (REGINALD GONSALVO) vernacularly Montano, a Spanish Protestant of the sixteenth century, whose history is merely gleaned from his own work. He lived at Seville, and was the intimate friend of the Spanish martyr, Juan Ponce de Leon. The only work he published was entitled, “*Sancta Inquisitionis Hispanicæ Artes aliquot detectæ ac palam traductæ,*” and is the earliest account of the inquisition, whence other accounts have chiefly been taken. It was written for the purpose of teaching his fellow Protestants in what manner to escape, and what they would have to suffer, if they fell under the notice of that horrid tribunal. The trials and examples which he gives were those of his own personal friends, and the details of examinations, &c. were principally furnished by those who had been prisoners themselves, though some think this passage alludes to himself—“*Quæ hic exempla recensentur unius modo Inquisitionis tribunalibus nempe Hispalensis sunt; cujus solius mysteria cognoscere et majori ex parte in se ipsis experiri, traductoribus est datum.*” Montanus’s work has been inserted in a volume with this title, “*Hispanicæ Inquisitionis et Carnificum Secretoria per Joachim Ursinum, Anti-Jesuitam,*” Anibergæ, 1611.—*Aikin’s Gen. Biog.*

MONTANUS, or DA MONTE (JOHN BAPTIST) an Italian physician of great eminence, was born at Verona in 1438, of a noble family, and was sent by his father to Padua, to study civil law. He however turned his attention to physic, which so displeased his father that he withdrew from him all support. He lived for some time at Rome with cardinal Hippolytus, but on procuring a competence he retired to Padua, where he was installed by the senate in the professor’s chair, and notwithstanding the liberal offers of many sovereigns, he would not quit his post. He died in 1551. He was the author of several works, consisting principally of comments upon the ancients, and illustrations of their theories. He translated into Latin the works of Aëtius. He also translated into Latin verse the poem of Musæus, and made translations of the Argonautics, attributed to Orpheus, and of Lucian’s Tragopodagra.—*Eloy Dict. Hist. de la Médecine.*

MONTECUCULI (RAYMOND de) a celebrated general in the service of the emperors of Germany, was born in 1608, of a distinguished family in the Modenese. In 1634, at the head of two thousand horse, he surprised

ten thousand Swedes, besieging Nemeslaw in Silesia, and took their baggage and artillery; but he was soon after defeated, and taken prisoner by general Bannier. In 1637 the emperor appointed him *maréchal de camp* general, and sent him to assist John Casimir, king of Poland. He defeated Razolzi, prince of Transylvania, drove out the Swedes, and distinguished himself against the Turks in Transylvania and Hungary, gaining the battle of S-Gothard, in 1664. In 1673 Montecuculi commanded the imperial forces against France, and acquired much honour by the capture of Bonn. On the death of M. de Turenne, the great prince of Condé was sent to the Rhine, and stopped Montecuculi’s progress; and this was his last campaign, which he considered his most glorious one; not because he was a conqueror, but because he was not conquered by Turenne and Condé. He passed the remainder of his life at the emperor’s court, and died in 1680. Montecuculi was the author of some excellent “*Memoires*” on the military art, and to him the academy of naturalists owes its establishment.—*Dict. Hist. Moreri.*

MONTEMAYOR (GEORGE de) a Castilian poet, who took his name from the place of his birth, was born in 1520. In his youth he entered the army, but afterwards he appears to have obtained an employment in the suite of Philip II, on account of his musical talents; he was also patronised by queen Catharine, sister to the emperor Charles V. He died in 1562. His principal work is a pastoral romance, entitled “*Diana,*” which is much admired. A continuation of it was published by Gaspar Polo in 1778.—*Ant. Bibl. Hisp. Dict. Hist.*

MONTEREUL or MONTEREUIL (BERNARDIN de) a learned jesuit, was born at Paris in 1569. He became professor of moral philosophy, and afterwards of theology, in his college, and was greatly admired as a preacher. He died at Paris in 1646. His works were, “*A History of the early State of the Church, comprising the Acts of the Apostles,*” 1641, 12mo; “*The last Conflicts of the Church, as explained in the Apocalypse,*” 1619, 4to; and “*A Life of Jesus Christ,*” originally published in two volumes, quarto, but afterwards augmented to four. It is much esteemed, and is said to be a good substitute for a harmony of the Evangelists. It was afterwards revised by father Brignon, and reprinted in 1741, in 3 vols. 12mo.—*Strelli Bibl. Scrip. Soc. Jesu. Nov. Dict. Hist.*

MONTESQUIEU (CHARLES DE SECONDAT, baron de) an eminent French magistrate and writer, descended from a distinguished family in Guienne, was born at the castle of Brede, near Bourdeaux, in 1689. Great care was taken of his education, and at the age of twenty he had even collected materials for his “*Esprit des Lois.*” He was the son of a younger brother, but a paternal uncle at his death left him his property, together with the office of president-a-mortier to the parliament of Bourdeaux. In 1721 he published his “*Persian Letters,*” so well known for

their wit, pleasantries, and freedom, in reference to politics and religion. The literary reputation acquired by this production, induced him to become a candidate for a place in the French academy, which honour, after some proceedings more dexterous than ingenious, to soften the opposition of the devotees, he attained in January 1728. With a view to the literary and philosophical labours on which he was so intent, he determined to travel for information, and after visiting Germany, Hungary, Italy, Switzerland, and Holland, he finished with a residence of two years in England, which he observed he found "the best country to think in." Being favoured with the esteem of queen Caroline, and the friendship of the most eminent characters in literature and science in this country, he passed his time with much satisfaction, and endeavoured to acquire a correct notion of the British constitution. In 1734 he gave to the world his work "Sur la Cause de la Grandeur et de la Decadence des Romains," in which he has contrived to render a trite subject extremely interesting, by the acuteness of his remarks, the energy of his style, and an animated regard for liberty. It was not until 1748 that he published his celebrated "Esprit des Loix," in 2 vols. 4to, in preparing which he had been occupied so many years. The great reputation of this work, which discusses at large the nature of different forms of government from which laws emanate, and to which they ought to be adapted, is now considerably declined; but it will ever remain worthy the attention of the philosopher and politician, notwithstanding its many errors in theory, and inaccuracies in facts. According to Voltaire, if he does not always instruct his readers, he uniformly makes them think; and his wit and ingenious expression, in which he rivals his countryman Montaigne, will always render him a favourite in France. As Montesquieu exhibited as much freedom in this work as in his "Persian Letters," on the subject of religion, he encountered similar censure, and among the rest, the Sorbonne undertook an examination, but scared by the ridicule heaped upon other adversaries, it never appeared. A more weighty critique was prepared by a M. Dupin, a man of considerable reading and information, and it is not to the honour of Montesquieu, that he got it suppressed by the influence of madame de Pompadour. This eminent writer died of a pulmonary complaint, on February 16 1755, in his sixty-sixth year, not without considerable annoyance on the part of the jesuits, who were eager to intimidate him into that death-bed sort of retraction, on which so much stress is unduly laid. One of this body indeed published a pretended confession in his name, of which the authority under such circumstances is wholly unimportant. The private character of Montesquieu is described as having been extremely amiable and benevolent, and although habitually frugal, some very striking instances of his liberality and beneficence are on record. He was also mild in temper, free from ambition, and simple and

unaffected in manners. After his death, a collection of his works appeared in three volumes, quarto, in which was included some previously unpublished pieces, the principal of which are, "Le Temple de Gnide," a sort of poem in prose; "Lysimachus;" and an "Essay on Taste."—He left a son, JOHN BAPTIST DE SECONDAT, counsellor of the parliament of Bourdeaux, and member of the Royal society of London, who died in 1796, aged seventy-nine. He wrote "Observations de Physique et d'Histoire Naturelle sur les Eaux Minerales des Pyrenées;" "Considerations sur la Commerce et la Navigation de la Grande Bretagne," 1744; "Considerations sur la Marine Militaire de France."—*Siecle de Louis XIV. Nouv. Dict. Hist.*

MONTEZUMA, emperor of Mexico, at the time of the Spanish invasion. In 1519, when Cortes arrived on the coast of Mexico, and expressed his intention of visiting the emperor in his capital, Montezuma sent him a rich present, but forbade his farther advance. Cortes, however, heeded not this prohibition, and the emperor, intimidated, began vainly to negotiate for the departure of the Spaniards. His despotic government having procured him many enemies, who willingly joined Cortes, and assisted him in his progress to Mexico, he was obliged to consent to the advance of the Spaniards, to whom he assigned quarters in the town of Cholula, where he plotted their destruction. His plot being discovered, a massacre of the Cholulans followed, and Cortes proceeded to the gates of the capital, before Montezuma was determined how to receive him. His timidity prevailed, and meeting him in great state, he conducted the Spanish leader with much respect to the quarters allotted to him. The mask was however soon removed, and coming to open contention, Cortes seized Montezuma in the heart of his capital, and kept him as a hostage at the Spanish quarters. (See CORTES.) He was at first treated with respect, which was soon changed to insult, that was carried so far, that fetters were put on his legs, on which he burst into loud lamentations, which were changed to expressions of joy on their being taken off again. He was at length obliged to acknowledge his vassalage to the king of Spain, but he could not be brought to change his religion, although in the custody of the Spaniards. He was constantly planning how to deliver himself and his countrymen, and when Cortes, with great part of his forces, was obliged to march out to oppose Narvaez, the Mexicans rose up, and furiously attacked the Spaniards which remained. The return of their commander alone saved the latter from destruction, and hostilities were still going forward, when Montezuma was induced to advance to the battlements of the Spanish fortress in his royal robes, and attempt to pacify his subjects. His pusillanimous address only excited indignation against himself, and being struck on the temple with a stone, he fell to the ground. Every attention was paid to him by Cortes, from motives of policy, but rejecting all non-

richment, he tore off his bandages, and soon after expired, spurning every attempt at conversion. This event took place in the summer of 1520. He left two sons and three daughters, who were converted to the Catholic faith. Charles V gave a grant of lands, and the title of count of Montezuma to one of the sons, who was the founder of a noble family in Spain.—*Robertson's Hist. of America. Moreri.*

MONTFAUCON (BERNARD de) a French Benedictine of the congregation of St Maur, celebrated as a critic and antiquary. He was of noble descent, and was born at the castle of Soulage in Languedoc, in 1655. When young he engaged in military service, which he quitted, and in 1675 took the monastic vows. In 1688 he published, conjointly with fathers Lopiü and Pouget, a volume, entitled "Analecta Græca, sive varia Opuscula." He afterwards translated a tract on mensuration, from the Greek; and in 1690 he published a piece on the apocryphal history of Judith. One of his great undertakings was an edition of the works of Athanasius, which appeared in 1698, in three volumes, folio. He then visited Rome, where he exercised the functions of agent-general of the congregation; and in 1700 he printed "Vindicia Editionis Sti Augustini a Benedictinis adornatæ," 12mo, in reply to the criticisms of the abbé Aleman. On his return from Rome, he published an account of his observations, under the title of "Diarium Italicum;" and in 1706 a collection of the works of the ancient Greek fathers, with a Latin translation, notes, and remarks. In 1708 appeared his "Palæographia Græca, sive de ortu et progressu Literarum Græcarum;" and this was followed by a translation of a Greek tract of Philo Judeus, on the contemplative life, which gave rise to a controversy with president Bouhier. Among the subsequent literary labours of Montfaucon, are the Hexapla of Origen, 1713, 2 vols. folio, and an edition of the works of St John Chrysostom, extending to thirteen volumes, folio. But the most important of all his productions is the treasury of classical archæology, entitled "L'Antiquité expliquée et représentée en Figures," forming, with the supplement, fifteen volumes folio. He also published a catalogue of MSS. in the Coislinian library, and a work, entitled "Bibliotheca Bibliothecarum." His death took place at the abbey of St Germain des Pres, December 21, 1741. English translations have been published of the *Diarium Italicum et Antiquité Expliquée.*—*Le Cerf. Biog. Univ.*

MONTFLEURY (ANTONY JACOB) a writer of comedies, was the son of an eminent actor, and was born at Paris in 1640. He was brought up to the bar, but his inclination for theatrical pursuits prevailed, and he devoted himself to writing for the stage. He was the author of several popular comedies, among which "La Fame Juge et Partié," and "Crispio Gentilhomme," are distinguished for their humour and pleasantry. He died in 1685, and his "Theatre" was published in 4 vols. 12mo, 1775.—*Nouv. Dict. Hist.*

MONTGERON (LOUIS BASIL CARRE de) a dupe to the impostures practised at the tomb of the abbé Paris, was the son of a master of requests at Paris, where he was born in 1686. He was brought up to the bar, and at the age of twenty-five he became one of the counsellors of parliament. Like many of the young men of his time, he was sceptically inclined, and in 1731, hearing of the miracles performed at the tomb of the abbé Paris, he repaired thither with the intention of detecting and discovering the impostures. Of these, however, he became so completely the dupe, that he immediately abandoned his former opinion, and assuming the character of a religious fanatic, maintained with the greatest zeal the truth of the wonderful cures effected by the relics of the abbé. He subsequently employed himself on his work, entitled "The Truth of the Miracles wrought through the Intercession of M. Paris;" a copy of which work he presented to the king; but its effect was far different from what he expected, the author being arrested and imprisoned in the bastille, whence he was removed to several prisons, and finally to the citadel of Valence, where he died in 1754.—*Nouv. Dict. Hist.*

MONTGOLFIER (STEPHEN JAMES) a native of Amiens, who distinguished himself by the invention of air-balloons. He was a paper-manufacturer at Annonay, where in 1782 in conjunction with his brother, he made the first successful experiments on record in the art of ærostation. Their plan consisted in the inflation of a large paper bag, by kindling under the mouth of it a fire, which rarefied the air contained in it; and being thus rendered specifically lighter than an equal bulk of atmospheric air at the usual temperature, it rose to a considerable height. It having been ascertained that a balloon, with a car attached to it, could thus be kept suspended by a supply of heated air, the experiment was repeated on a large scale at Versailles, when the marquis d'Arlandes ascended in the presence of the royal family, and a vast concourse of spectators. An important improvement was afterwards made in the practice of aéronautics, by substituting for heated air hydrogen gas, which is probably the lightest aerial fluid in nature. S. J. Montgolfier, who invented a kind of vellum paper, was rewarded with a pension and the order of St Michael. He died in 1799, at the age of fifty-two.—**MONTGOLFIER** (JOSEPH) the brother and coadjutor of the preceding, was an ingenious experimentalist, and was the inventor or improver of a machine which he denominated the hydrostatic ram. He died at the baths of Balaruc, whither he had gone for the benefit of his health, in June 1810, in the seventieth year of his age.—*Dict. Hist. Biog. Univ.*

MONTMORIN ST HEREM (ARMAND MARC, comte de) minister and secretary of state for foreign affairs to Louis XVI. He was a member of the assembly of the notables, held at Versailles in 1787, and was secretary of state at the opening of the states-general. In July 1789 he was dismissed at the same

time with Necker, and was recalled to office together with that minister. In April 1790, he published observations on the Red Book, and the calculations which accompanied it, and thus exposed himself to the hatred of the authors of those calculations. He nevertheless remained in office after the removal of his colleagues, and for a while he also held the portfolio of the home department. He now connected himself with the revolutionary party, and joined in several popular measures; but having given offence to the jacobins, he thought proper to resign his post. His attachment to the king occasioned his arrest, in August 1792, and after having defended himself at the bar of the National Convention, he was ordered to be confined in the prison of the abbey at Paris, where he fell a victim to popular fury, on the 2d of September.—*Dict. des H. M. du 18me. S. Biog. Univ.*

MONTMORT (PETER RAYMOND de) an able mathematician, was born at Paris in 1678. He travelled into various countries of Europe, until the death of his father, who had destined him for the law, and then taking possession of an ample fortune, he devoted himself to the study of philosophy and mathematics, under the direction of Malebranche. In 1700 he came to England a second time, and on his return he assumed the ecclesiastical habit, and became a canon of the church of Notre Dame at Paris. In 1703 he published an "Analytical Essay on Games of Chance." In 1715 he paid a third visit to England, for the purpose of observing a solar eclipse, and was elected a fellow of the Royal Society, to which he transmitted a treatise on "Infinite Series," inserted in the Philosophical Transactions. He died of the small-pox at the age of forty-one. He was employed several years in writing "A History of Geometry," which he did not live to complete. He also edited the works of M. Guisnée, on "The Application of Algebra to Geometry," and that of Newton on the "Quadrature of Curves."—*Moreri. Dict. Hist. Rees's Cyclopædia.*

MONTPENSIER (ANNE MARIA LOUISA d'Orléans) better known by the name of mademoiselle de Montpensier, was the daughter of Gaston, duke of Orleans, brother to Louis XIII. She inherited from her father an uneasy and restless temper, and sided with Condé in the civil contests which distinguished the minority of Louis XIV. After a variety of intrigues, this princess, who all her life was battling about the privileges of her rank and station, was led by passion to privately marry the count de Lauzun, a nobleman of no distinguished origin, and simply exalted by the favour of Louis XIV. This capricious adventurer treated her with great insolence, and returning one day from hunting, exclaimed,

Louisa of Orleans, take off my boots;" a piece of brutality which roused her native spirit, and she would never see him more. This extraordinary woman wrote her own memoirs, which have been published in 8 vols. 2mo, together with her "Letters." She was also author of two romances, entitled "Rela-

tion de l'Isle imaginaire," and "La Princesse de Paphlagonie." She died in 1693.—*Nouv. Dict. Hist.*

MONTPETIT (ARNOLD VINCENT) an artist, was born at Maçon in 1713. He was the inventor of several machines, and a manner of painting called eludoric, which consists in supporting a design in water colours with a coat of oil. He made several improvements in the steam-engine, and also presented to Louis XVI the model of an iron bridge of a single arch, the span of which was four hundred feet. He wrote an essay on his eludoric discovery, and died at Paris in 1800.—*Dict. Hist.*

MONTUCLA (JOHN STEPHEN) an eminent French mathematician, born at Lyons in 1725. He studied in the college of the jesuits, and completed his education at Toulouse, with a view to the legal profession. He then engaged in practice as a counsellor, but afterwards relinquished jurisprudence to devote himself to the cultivation of mathematical science. He published a treatise on the quadrature of the circle; and in 1753 appeared his "Histoire des Mathématiques," 2 vols. 4to, a work of great research, highly creditable to his industry and abilities. He was appointed secretary to the intendant of Grenoble, and subsequently went to Cayenne, with the title of royal astronomer. The latter part of his life was devoted to the augmentation of his history, of which a new edition was published at Paris, in four volumes, quarto, in 1799, reprinted in 1810. Montucla also published an enlarged edition of the "Recreations Mathématiques et Physiques," of Ozanam, an English translation of which, by Dr Charles Hutton, appeared in 1803, 4 vols. 8vo. His death took place in 1799.—*Dict. Hist. Biog. Univ.*

MOOR (KAREL de) an eminent portrait painter, was born at Leyden in 1656, and was the pupil of Gerard Douw, Francis Mieris, and Godfrey Schalken. He painted portraits in a beautiful style, emulating the taste and delicacy of Vandyke, with the force and spirit of Rembrandt, and his pictures are always neatly and highly finished. The grand duke of Tuscany desired to have the portrait of De Moor painted by himself, to be placed in the Florentine gallery, and on the receipt of it, he sent the original a chain and large medal of gold. He was engaged by count Zinzendorf, the imperial ambassador, to paint the portraits of prince Eugene and the duke of Marlborough on horseback, which he did in so masterly a manner, as to occasion several commendatory poems in Latin, and the emperor created De Moor a knight of the empire. He died in 1738.—*Pilkington. D'Argenville.*

MOORE (EDWARD) an English poet and dramatic writer of the last century. He was the son of a dissenting clergyman at Abingdon in Berkshire, where he was born in 1712. He was brought up to the business of a linen-draper, which he carried on for some time in the metropolis. In 1744 he published "Fables for the Female Sex;" and having been noticed by lord Lyttelton, he complimented

that nobleman in a poetical piece, entitled "The Trial of Selim." His dramatic works are, "The Foundling," a comedy, 1748: "Gil Blas," another comic drama; and "The Gamester," a tragedy, 1753; all acted at Drury-lane theatre. The two former had little success; but the last became a stock piece, and it is perhaps one of the best examples of a domestic tragedy which our literature affords. Mr Moore engaged in conducting a periodical paper, called "The World," to which lords Lyttelton, Chesterfield, Bath, and Cork, Mr H. Walpole, R. O. Cambridge, and Soame Jenyns, became contributors. The last number of the World was published on the day of the editor's death, February 17th, 1757. The literary reputation of Moore rests on his tragedy and his fables, the latter of which have less humour and point than those of Gay, and are also inferior to his compositions, in ease and elegance of style; but they exhibit lessons of morality in pleasing language, and have become deservedly popular.—*Biog. Dram.*

MOORE (JOHN) a physician, distinguished as a cultivator of polite literature. He was the son of an episcopal divine, and was born in 1730, at Stirling in North Britain. He became a student at the university of Glasgow, and having obtained a knowledge of medicine and surgery, he went to the Netherlands in 1747, and served as a mate in the military hospitals. Peace taking place, he became household surgeon to the British ambassador at Paris; and afterwards returning to Scotland, he practised as a surgeon till 1772, when he took the degree of MD. at Glasgow. He was soon after engaged by the dutchess of Argyle, as medical attendant to her son, (the late duke of Hamilton,) who was in a delicate state of health, and whom he accompanied to the continent, and spent there five years in travelling. In 1778 he returned to London, and in the following year published "A View of Society and Manners in France, Switzerland, and Germany," 2 vols. 8vo, which passed through numerous editions, and has been translated into several foreign languages. In 1781 appeared his "View of Society and Manners in Italy," 2 vols.; and in 1785, a volume, entitled "Medical Sketches." The next production of his pen, was "Zeluco," a novel, containing interesting delineations of Italian character and manners. In 1795 he published "A View of the Causes and Progress of the French Revolution," 2 vols. 8vo, describing scenes which he had witnessed during a residence at Paris. The following year he produced a novel, entitled "Edward, or various Views of Human Nature;" and in 1800, another, called "Mordaunt, or Sketches of Life, Character, and Manners in various Countries." He also published a collective edition of the works of his countryman Smollett, with the life of the author. Dr Moore died at Richmond in Surrey, February 20th, 1802.—*Ann. Reg.*

MOORE (sir JOHN) a military officer, elder son of the subject of the last article. He

was born at Glasgow, November 13th, 1761; and at the age of fifteen entered the army, as ensign of the 51st regiment of foot. In 1790 he was made a lieutenant-colonel, and he afterwards served in Corsica, when he was wounded at the siege of Calvi. In 1796 he accompanied sir Ralph Abercromby to the West Indies, as brigadier-general, and having assisted in the capture of St Lucia, he was appointed governor of that island. The following year he was employed against the insurgents in Ireland, when he was promoted to the rank of major-general. In 1799 he was sent to Holland, where he was severely wounded; and he was subsequently engaged in the expedition to Egypt, on which occasion he again experienced personal injury. He was made a knight of the Bath after his return to England; and in 1808 he commanded a body of troops sent to the assistance of the king of Sweden, but he became involved in a dispute with that prince, which occasioned his being placed under personal restraint, from which, however, he extricated himself, and returned home. In October, the same year, he landed in Spain, at the head of an English army, to aid the people of that country in resisting the ambitious projects of Buonaparte. After advancing some distance into the interior, and meeting with little support from the Spaniards, he was obliged to retreat before a superior body of French troops, and having reached Corunna, and part of his forces having embarked on board transports to return home, an attack took place on the 16th of January, 1809, when the general was killed by a cannon-ball, and was interred on the field of battle, the enemy having been defeated.—*Gent. Mag.*

MOORE (sir JONAS) an English mathematician, born in Lancashire in 1617. In the reign of Charles I, he was employed to teach mathematics to the duke of York, but being deprived of that office, in consequence of the civil war, he was obliged to open a school for his support. Under the government of Cromwell, he obtained the appointment of surveyor of the Fens; and on the restoration of Charles II, he was knighted, and was nominated surveyor-general of the ordnance. Being chosen governor of Christ's hospital, he exerted his influence at court to obtain the establishment of a mathematical school in that seminary; and another measure which he advocated was the foundation of the Royal observatory at Greenwich. He died in 1679. Sir Jonas Moore was the author of a general system of mathematics, published posthumously, London, 1681, 2 vols. 4to.—*Martin's Biog. Philos.*

MORABIN (JAMES) secretary to the lieutenant of the police in Paris, was a native of La Fleche, and died in 1762. He was the author of a "Translation of Cicero's Treatise on Laws, and of the Dialogue on Orators, attributed to Tacitus," 1722; "Nomenclator Ciceronianus," 1757; "A Translation of Boethius de Consolatione," 1753; "Histoire de l'Exil de Cicéron;" and "Histoire de Ci

cion;" which two latter were translated into English, and were much esteemed.—*Nouv. Dict. Hist.*

MORALES (AMBROSE) a learned Spanish priest, was born in 1513 at Cordova, and taught with reputation in the university of Alcala. He was appointed historiographer to Philip II, king of Spain, and died at Alcala in 1590. His principal works are, "The General Chronicle of Spain," begun by Florian Ocampo; "The Antiquities of Spain," a curious and valuable work; "Scholia," in Latin, on the works of Eulogius; the "Genealogy of St Dominic." He was a man of learning, but of extreme credulity, scarcely rising above the gross superstitions of his age and religion. He was originally a Dominican; but he was obliged to quit that order in consequence of being induced, by a mistaken piety, to follow the example of Origen.—*Antonio Bibl. Hisp. Sarii Onom. Moreri.*

MORAND (PETER DE) a poet and dramatist, was born at Arles in 1701. An unfortunate marriage drove him to the capital, where he devoted himself to a life of dissipation and the drama. In 1737 he brought forward his tragedy of "Teglis," which was successful, and was followed by "Childeric," that failed. In revenge on his mother-in-law, who had instituted a process against him, and published a factum very injurious to his character; he brought her on the stage in a comedy, called "L'Esprit de Divorce." This was one of his best pieces, but on its being reported to the author, that the character of his mother-in-law was considered unnatural, he came forward to prove that it was drawn from life. He was, however, upon the whole, an unsuccessful writer. In 1749 he was nominated literary correspondent to the king of Prussia, but he held the post only eight months. He died in 1757, and his works were published in 3 vols. 12mo. They are not without marks of talent; but are deficient in grace and elegance.—*Moreri.*

MORANT (PHILIP) an antiquary, was born in 1700, at St Saviour's, in the isle of Jersey, and was educated at Abingdon school, and at Pembroke college, Oxford, where he took his degree of MA. in 1724. He was presented successively to several benefices in Essex, one of which was in Colchester, of which town he published a history in 1748. His acquaintance with Norman French caused him to be appointed successor to Mr. Blyke, in preparing for the press a copy of the rolls of parliament, and in this he was employed until his death in 1770. Several of his works relate to English history, and among them was the comparison of Rapin's history, with all Rymer's Fœderz, and all the ancient and modern historians, the result of which furnished most of the notes to the folio edition of 1728, 1734. He was also the author of a "History of Essex," 2 vols. folio, and he composed all the lives, marked C, in the Biographia Britannica.—*Nichols's Lit. Anec.*

MORATA (OLYMPIA FULVIA) a learned and unfortunate lady, was born at Ferrara,

where her father was a teacher of languages in 1596. At an early age she was invited to the court of Ferrara, and made companion to the princess Anne of Este. She soon distinguished herself by her extraordinary talents, and received the homage of many of the men of letters of her time. Calcagnini wrote two letters to her full of praise. She retired from court in consequence of the machinations of her enemies, who had injured her in the opinion of the dutchess. She embraced the Protestant faith, and soon after she married a young German physician, Andrew Grunther, who had graduated at Ferrara. She accompanied her husband, in 1548, to Schweinfurt, but ere they could be well settled, the entrance of hostile troops drove them thence, stript of all their property. They wandered for some time about Germany in great distress. The elector-palatine at length offered Grunther the professorship of physic, and Olympia that of Greek in the university of Heidelberg; but it was too late, her health was ruined, and she did not survive above a year longer, dying in the twenty-ninth year of her age. Her works, consisting of letters, dialogues, Latin orations, and Greek poems, were collected by Celo Secondo Curione, and published at Basil in 1558.—*Tiraboschi.*

MORDAUNT (CHARLES) earl of Peterborough, the son of John lord Mordaunt, whom he succeeded in his title and estate in 1675. Entering into the army, he was engaged in the expedition to Tangier in 1680, in which he served with distinction against the Mahometans. He went over to Holland in the reign of James II, and entering into the scheme for his dethronement, returned to England with his successor, by whom he was created earl of Monmouth, and he was likewise appointed first commissioner of the Treasury. Having succeeded to the earldom of Peterborough, on the death of his uncle in 1697, he was subsequently employed as commander of the English army in Spain, in the war relative to the succession to the crown of that kingdom. He distinguished himself greatly by his courage, activity, and conduct, in taking Barcelona, and obtaining many other advantages over the French; in consequence of which he was appointed generalissimo of the imperial forces, and he received the thanks of the British parliament. In the reign of George I, he was made a knight of the garter, and received the appointment of general of marines. His death took place during a voyage to Lisbon in 1735. Lord Peterborough was intimate with his literary contemporaries, and was himself a writer of poetry, some of which has been published. In the correspondence of the countess of Suffolk, recently edited by Mr Croker, are several letters of this nobleman. His second wife, Anastasia Robinson, was, previously to her marriage, much distinguished as a public singer.—*Lord Orford's Cat. of R. and N. Auth.*

MORE (ALEXANDER) a French Protestant divine, was born of a Scottish family at Castres in Languedoc, in 1616. He became successively professor of Greek and divinity, at

Geneva; but being suspected of laxity of morals, in regard to the other sex, he retired to Middleburgh in Zealand, where, by the interest of Salmasius, he obtained a professorship of divinity, which three years afterwards he exchanged for another at Amsterdam. While in Holland he became engaged in a contest with Milton, by sending into the world Du Moulin's "Regii Sanguinis Clamor ad Cœlum," and in consequence wrote "Alexandri Mori Fides Publica." In 1654 he visited Italy, and while at Venice, received a golden chain, for writing a fine Latin poem, on a naval victory over the Turks. He afterwards settled in Paris; where he died in 1670. His other works are, "De Gratia et Libero Arbitrio;" "De Scriptura Sacra."—*Bayle*.

MORE (ANTONIO) a celebrated portrait painter, was born at Utrecht in 1519, and was pupil of John Schoreel. He was recommended by cardinal Granville to the emperor Charles V, who sent him into Portugal, where he painted the portraits of most of the royal family. He then came to England to paint the portrait of queen Mary, in which he succeeded so well, that he was appointed painter to their majesties, with a handsome pension. On the death of Mary, he accompanied Philip to Spain, and was admitted by him to great familiarity, upon which he presumed too much, and incurring the displeasure of the king, he retired to Flanders, and though Philip sent to recal him, he entered the service of the duke of Alva; who, after a time, made him receiver of the revenues of West Flanders. Upon this he burnt his easel, and gave away his tools, and lived in ease, and even magnificence, the rest of his life. He died in 1575. Besides his portraits, he painted some esteemed historical pieces. His style resembled that of Holbein, but with less delicacy; and his colour, according to Mr. Fuseli, was "Titianesque."—*Walpole's Anecd. of Paint. Pilkington's Dict.*

MORE or MOORE (SIR FRANCIS) an eminent lawyer, was born in Berkshire in 1538. He was admitted of St John's college, Oxford, whence he removed to the Middle Temple. He died in 1621. His works are, "Cases collected and reported," London, 1663, folio. His reading upon 4 Jac. I, in the Middle Temple, concerning charitable uses, abridged by himself, was published in 1676. He was a member of that parliament which passed the statutes for charitable uses, and it is said the bill as it passed was penned by him. A MS. of his, consisting of cases principally agreeing with those in print, is in the hands of Mr Brooke, compiler of the "Bibliotheca Legum Angliæ."—*Athen. Oxon. Bridgeman's Legal Bibl.*

MORE (HENRY) a celebrated divine of the church of England, and Platonic philosopher, was born at Grantham in Lincolnshire, in 1614. He was the son of a gentleman of good estate, who educated him at Eton, whence he was sent to Christ's college, Cambridge, in 1631. While at the university he deeply studied the most celebrated systems of philosophy, and finally settled into a decided prefer-

ence for that of Plato, and for his followers of the school of Alexandria. In 1639 he graduated MA, and in the following year published his "Psycho-Zoia; or the First Part of the Song of the Soul, containing a Christiano-Platonical Display of Life." Having been elected a fellow of his college, he became a tutor to several persons of rank. One of these was sir John Finch, whose sister, lady Conway, an enthusiast of his own stamp, brought him acquainted with the famous Van Helmont, and that singular pretender, Valentine Greatrakes. In 1675 he accepted a prebend in the church of Gloucester, which it is supposed he accepted only to resign it to his friend Dr Fowler. He also gave up his rectory of Ingolsby in Lincolnshire, the perpetual advowson of which had been purchased for him by his father, and would never afterwards accept of preferment of any kind, refusing deaneries, bishoprics, and even the mastership of his own college, so desirous was he of unmolested study. During the civil war, although he refused to take the covenant, he was left unmolested. In 1661 he became a fellow of the Royal Society, and for twenty years after the Restoration, his writings are said to have sold better than any other of their day. Dr More died in September 1687, aged seventy-three, leaving behind him the character of a man of profound learning and great genius, alloyed by a deep tincture of enthusiasm, chiefly coloured by the supposition that divine knowledge had been communicated to Pythagoras by the Hebrews, and from him to Plato. He was also persuaded that supernatural communications were made to him by God's appointment, by a particular genius, like that of Socrates. The writings of this singular, but amiable man, who was beloved by all parties, have been published in two volumes, folio. The most admired are his "Enchiridion Ethicum," and "Divine Dialogues," concerning the attributes and providence of God.—*Ward's Life of Dr More*.

MORE (SIR THOMAS) a celebrated chancellor of England, was the only son of sir John More, one of the judges of the court of King's Bench, and was born in London in 1430. He received his education from a schoolmaster of great reputation in Threadneedle-street, and at a proper age was placed in the family of cardinal Morton, archbishop of Canterbury, and chancellor, who, struck with the quickness of his parts, prophecied his future eminence. In 1497 he went to Canterbury college, now Christchurch, Oxford, and in 1499 became a student in Lincoln's Inn. At the age of twenty-one, he obtained a seat in Parliament, and distinguished himself with so much spirit in opposition to a subsidy, demanded by Henry VII, that the exasperated and avaricious monarch in revenge contrived a quarrel with his father, whom he imprisoned until he had exacted an arbitrary fine. After being admitted to the bar, he was appointed law reader of Furnival's Inn, and by the advice of his friend, Dean Colet, having married the daughter of Mr Colt, of New Hall, Essex, he

took a house, and applied assiduously to the practice of law. In 1508 he was made a judge of the Sheriff's court, and justice of peace, and enjoyed great reputation as a pleader. In 1516 he accompanied the commissioners sent to renew the alliance between Henry VIII and Charles, then archduke of Austria, and showed so much ability, that the king was desirous of engaging him in his particular service. In 1518 he published his celebrated political romance of "Utopia," which shows a mind which had exercised itself freely and vigorously on several important topics, and evinced a liberality of sentiment, respecting religion, which was strongly opposed to the author's subsequent bigotry. This production engaged him in a correspondence with Erasmus, with whom he had previously contracted an intimacy while in England; as well as with several other eminent men of letters. About this time, too, cardinal Wolsey pressed him to receive a pension, which, with his usual disinterestedness, he refused, as inconsistent with his official duties; but after awhile he was induced to accept the place of master of the requests. He was also shortly after knighted, and taken into the privy council; and the king becoming delighted with his conversation, he was received in the highest degree of familiarity. In 1520 he was appointed treasurer of the Exchequer, and in 1523, at the instance of Wolsey, elected speaker of the house of Commons, in which capacity having done much to frustrate an oppressive subsidy he much exasperated the cardinal. If he gave any personal offence to the court by this conduct, it was not of long duration, as in 1527 he was joined with Wolsey in a mission to France, and on his return was made chancellor of the duchy of Lancaster. In 1530 he succeeded the disgraceful cardinal as lord high chancellor, whose office he filled three years with scrupulous integrity, sullied only by employing all the authority of his office in assisting the popish clergy in their rigorous proceedings against the reformers. It is even asserted, on good authority, that he caused one Baiulham, a gentleman of the Temple, to be whipped and tortured in his own presence. That he was conscientious in the opinions which prompted this severity and bigotry however, there can be no doubt, and he soon proved it in a manner which has immortalized his memory. Unable to acquiesce in the king's wishes respecting his divorce from Catherine of Arragon, he obtained permission to resign the seals, which, although received graciously, the affront rankled in the vindictive mind of Henry, which was still farther inflamed by his refusal to attend the coronation of Anne Boleyn. An attempt was made to implicate him in the practices of Elizabeth Barton, which altogether failed; and he also perfectly cleared himself of another singular charge, which was that of inducing the king to publish the book against Luther, in which the pope's authority, was held forth, a doctrine that was now found inconsistent with the intended attack on the Roman see. At length the famous oath of

supremacy being required by act of parliament, sir Thomas More was cited before the council to take it; and in spite of all the sophistry of Crammer and others to induce him to compliance, he nobly persisted in a refusal to act in opposition to the dictates of his conscience and was consequently committed to the tower, and indicted for treason. After an imprisonment of twelve months, during which time he resisted all attempts both public and private to induce him to retract, he was brought to trial, and after an eloquent defence, condemned, and sentenced to be hanged and quartered. He received this barbarous sentence with his usual composure, which was disturbed only by the circumstance of a singularly affecting interview with his favourite daughter, Mrs Roper, on his return to the Tower. The king spontaneously changed the sentence from hanging and quartering to beheading, which act of grace he received with his usual vein of humour, and also acquiesced in the tyrannical mandate, "that he should not use many words at the scaffold." His execution took place on the 6th July, 1535, when he deported himself with a degree of good humour, which, in another sort of man, might be termed levity, but which Addison attributes to the satisfaction arising from conscious integrity; and lord Byron, to a species of temperament too strong even for the control of circumstance, and which conceals a sense of misery without destroying it. Thus died sir Thomas More, at the age of fifty-five, than whom a character of more disinterestedness and integrity is scarcely to be met with in either ancient or modern history. Erasmus, who passed much time with him at his residence near Chelsea, gives a very interesting account of the internal state of the family of this eminent man, and the admirable manner in which he united moral and religious observance, with a taste for liberal science, music, and the fine arts. His learning was at the same time various and extensive, his wit abundant, and his elocution ready and agreeable. Except on the one topic of toleration indeed, the qualities of his mind were so happily blended and tempered, that he wants but some allowance on this score to make a perfect character, at least as to virtue and integrity. On the score of profundity of intellect, he has possibly been overrated. His writings, which were chiefly polemic, have, with the exception of the "Utopia," long ago reached merited oblivion. His English works were published collectively by order of queen Mary, in 1557, and his Latin in 1567, at Basle. His "Utopia" has been translated by bishop Burnet and Dr Warner. By his first wife sir Thomas More had three daughters and one son. The latter, like his father, was condemned for refusing the oath of supremacy, but pardoned, and he soon after died.—MARGARET, his eldest and favourite daughter, married William Roper, esq. of Eltham, in Kent, who wrote the life of his father-in-law, published in 1716. She was a mistress of the Greek and Latin languages, and composed with elegance both in English and Latin. Her

reverence and affection for her father was unbounded. After his head had been exposed fourteen days on London bridge, she contrived to obtain it, and when she died, it was at her dying request buried in her arms.—MARY, her daughter, who became one of the bed-chamber women to queen Mary, translated into Latin the Ecclesiastical History of Eusebius, and into English a portion of the exposition of the Passion by her grandfather.—*Biog. Brit. Life by Warner.*

MOREAU (JAMES NICOLAS) a French advocate, counsellor of the subsidies of Provence, historiographer of France, and librarian to the queen, was born at St Florentine in 1717, and died at Chambouci near St Germain-en-Laye, in 1799. He was employed in collecting and arranging all the charters, edicts, historical documents, and declarations of the French legislature, which were published under the title of "Dépôt des Chartres et de Legislation." He was also the author of "Observateur Hollandais," a political journal; "Mémoire pour servir à l'Histoire des Cacouacs," a satire; "Mémoires pour servir à l'Histoire de notre Temps;" "Devoirs d'un Prince;" and "Principes de Morale Politique et du Droit Publique, ou Discours sur l'Histoire de France." It was the maxim of Moreau, that every thing should be done for the people, nothing by them; and that the best state of France would be, that in which the people received their laws from the absolute will of a chief. In consequence of his boldness in expressing these sentiments, he was refused a place in the French academy.—*Dict. Hist.*

MOREAU (JEAN VICTOR) one of the oldest and most celebrated generals of the French republic, was born at Morlaix in Bretagne, in 1763. His father destined him for the law, but led by his decided predilection for the military profession, he fled from his studies, and enlisted in a regiment before he had attained his eighteenth year. He was not, however, suffered to indulge his ruling passion, but was obliged to apply himself anew to the study of law at Rennes, of which school he became provost. When the Revolution broke out, he had acquired considerable reputation, and in 1789 a general confederacy of the Bretons being formed at Poitiers, he was chosen its president, and also became commander of the first battalion of volunteers, raised in the department of Morbihan, at the head of which he joined the army of the north. He subsequently favoured the party of the Gironde, the fall of which much affected him, and it was with great repugnance that he accepted the constitution of 1793, when formally presented to the army. In the mean time he much distinguished himself at the head of his battalion; and Pichegru, under whom he served, did all he could to befriend him. The same year he was made general of brigade, and in 1794 general of division, and was entrusted with a separate force, to act in Maritime Flanders, where he took many towns. He also had a share in the memorable winter campaign of 1794, in which he commanded

the right wing of Pichegru's army. He was soon after named commander-in-chief of the army of the Rhine; and commenced that course of arduous operations which terminated in the celebrated retreat from the extremity of Germany to the French frontier, in the face of a superior army, by which his skill as a consummate tactician was so much exalted. Meantime, the republic was torn with intestine divisions, and a conspiracy was entered into by Pichegru, which it was the fortune of Moreau to discover, by a correspondence which accidentally fell into his possession. After struggling for some time with his friendship for his old commander, he finally gave up these documents to the directory; but the evident reluctance with which he took this step, excited suspicions at Paris, and finding that he could not explain himself satisfactorily, he begged leave to retire, which was granted. His talents as a general again brought him forward, and in 1798 he was sent to command the army of Italy, where, after some brilliant successes, he was obliged to give way to the Russian force under Suwarrow, and he managed another retreat with great skill. On quitting the command in Italy, for that on the Rhine, he visited Paris, where he received some propositions to strengthen the party of the declining directory, to which he would not accede. On the return of Buonaparte from Egypt, he at first cordially supported him; but a coldness and jealousy ensued, notwithstanding which the latter, as First Consul, entrusted him with the command of the armies of the Danube and the Rhine. The passage of these rivers, with the battles of Moeskirch, Eupen, Memmingen, Biberach, Hochstedt, Nedenheim, and others, followed, ending with the decisive victory of Hohenlinden, which induced the Austrians to ask for peace. On his return to Paris he was received by the First Consul with the most flattering attention, and he soon after contracted an alliance with a young lady of birth and fortune, whose ambition, with that of her connexions, is supposed to have fomented the discontent which soon after induced him to retire to his estate at Grosbois, and finally to implicate himself in the conspiracy of Pichegru and Georges. He was brought to trial on the latter charge, with fifty-four other persons, and finally declared guilty, and sentenced to two years' imprisonment, and to bear the expenses of the suit. He was, however, allowed to travel in lieu of imprisonment, and to seek an asylum in the United States of America, on condition that he would not return to France without permission from the government. He accordingly embarked at Cadiz in 1805, and safely reached America, where he bought a fine estate, near Morinville, at the foot of the Delaware. Here he remained some years in peace, until listening to the invitation of the allies, and more especially of Russia, he embarked for Europe in the July of that year, and reaching Gottenburg, proceeded to Prague. Here he found the emperors of Austria and Russia, with the king of Prussia, all of whom received him with great cordiality, and he was induced

to aid in the direction of the allied armies against his own country. It was a fatal resolution to himself, for on the 27th of August, soon after his arrival, on a recognition before Dresden, one of the first shots from the French fractured his right knee and leg, and carried away the calf of the left, so as to render the amputation of both necessary. To crown this disaster, the allied army was obliged to retreat, and bear the wounded general with them, who, after languishing five days, expired in the night of the 1st of September 1813. He was buried at St Petersburg, and the emperor of Russia made an ample provision for his widow, who also received the title of *maréchale* from Louis XVIII. The manners of Moreau were simple, and he was humane and generous, as well as brave. He was, however, one of those officers who are great only professionally; and are better adapted to head armies than to shine in political intrigue. Of his great merits as a soldier, all parties are agreed; but much of his personal conduct as a partizan, and especially that which led to the termination of his life, will be judged of agreeably to the different theories of those who pronounce upon it. It certainly has not met with the suffrages of the majority.—*Biog. Univ.*

MOREL. There were several eminent French printers of this name; **FREDERICK MOREL**, the elder, was born at Champagne. He was king's printer at Paris, and also his Greek and Latin interpreter. He was heir to the celebrated printer Vascosan, whose daughter he married. He was the author of several works. He died at Paris in 1583.—**FREDERICK MOREL**, the younger, and the most celebrated, was son of the preceding, and succeeded his father in 1581 as king's printer. He translated from the Greek, and published several authors from the manuscripts in the king's library, among which were treatises of St Basil, Galen, Philo-Judæus, Synesius, Theodoret, &c.; and the works of Libanius, with his own annotations. He was so devoted to study, that when in the midst of a sentence, he was told that his wife was dying, he would not quit it, and on a second messenger bringing news of her death, he looked up and replied, "I am very sorry for it—she was a good woman." He died in 1638.—His son, **NICHOLAS**, was the king's interpreter for the learned languages, and the author of several poems.—

CLAUDE MOREL, brother to the foregoing, was named king's printer in 1602, and gave editions of several Greek fathers, to which he wrote the prefaces. He died in 1626, leaving unfinished an edition of St Athanasius and Libanius, which were completed by his son and successor **CLAUDE**.—**CHARLES MOREL**, another son of Frederick, was also king's printer, but resigned his office in 1639 to his brother, **GILES**, who printed an edition of "Aristotle," Gr. Lat. 4 vols. folio, and the "Bibliotheca Patrum," in 17 vols. folio.—*Moreri.*

MOREL (ANDREW) an eminent antiquary, was a Protestant and a native of Berne. He came at an early age to Paris, and distin-

guishing himself by his antiquarian learning, he was advised by his learned friends to form a description collectively of all the medals that had already been made public or were in his own cabinet. He complied, and in 1683 he gave a prospectus of this work in a publication, entitled "Specimen universæ rei nummariæ antiquæ quod literatorum reipublicæ proponit Andreas Morellius Helvetus." When M. Rainsaut was arranging the royal cabinet of antiques, he requested Morel to design all the ancient medals which it contained; and the king, Louis XIV, observing his zeal, and hearing of his intended work, ordered him to insert in it all the medals of the royal cabinet, which he did, but finding that no reward was intended, he applied to Louvois, who gave him an unsatisfactory answer, of which he complained so unceremoniously, that in July 1688 he was committed to the bastille. On the death of Rainsaut in 1689, M. de Villacerf went to Morel in the bastille, and offered him the vacant place, on condition of his conversion to the Roman Catholic faith. On his rejecting this proposal, his confinement was doubly strict. Through the intercession of Villacerf he obtained his liberty in the following August, but he was again imprisoned in 1690, and liberated at the intercession of the grand council of Berne, whither he returned in 1692. He then went on a visit to the count of Schwartzenburg at Arnstadt, with whom he remained until he was introduced to M. Danckelmann, prime minister to the elector of Brandenburg, who promised him his master's patronage in the publication of his great work, which was published in 1734 by Siebert Flavercamp, under the title of "Thesaurus Morellianus sive Familiarum Romanarum numismata omnia," and though not so full as the author intended it, it is greatly esteemed by the learned. The medals were beautifully engraved by Morel himself, and are 3539 in number.—*Moreri. Nouv. Dict. Hist.*

MOREL (ROBERT) a French monk, was born at La Chaise-Dieu in Auvergne, in 1653. At the early age of eighteen, he entered the order of Benedictines of the congregation of St Maur, in the abbey of St Faren, at Meaux, when he was removed to the abbey of St Germain-des-Près, of which in 1680 he was made librarian. He became successively prior of Meulen, prior of St Crispin's at Soissons, and secretary to the visitor of France; but in 1699 he declined all business, and retired for the remainder of his life to St Denis, where he died in 1731. His writings became very popular; they are written in a very devotional style, abounding in scripture language and expressions, borrowed from the ascetic writings of the fathers. His popularity excited the envy of his enemies, who called him a Jansenist, and as such he is described in the "Dictionary of Jansenists." His works are, "Spiritual Conversations in the Form of Prayers, on the Gospels for Sundays, and throughout the whole Year," 1720, 4 vols. 12mo; "Spiritual Conversations in the Form of Prayers, intended as a Preparation for Death;" "Of

Christian Hope and Confidence in the Mercy of God," 12mo; "Effusions of the Heart on the Song of Songs," 12mo; "Christian Meditations on the Gospels for the whole Year," 2 vols. 12mo; "Effusions of the Heart on each Verse of the Psalms and the Hymns of the Church," 4 vols. 12mo, &c.—*Nouv. Dict. Hist.*

MOREL (WILLIAM) was born in Normandy, but in what year is uncertain. He was professor royal of Greek, and succeeded Turnebe in 1555 as director of the royal press. He died in 1564. He was the author of "A Table of the Sects of Philosophers;" a "Commentary on Cicero de Finibus," 1545, 4to; and a "Dictionary in Greek, Latin, and French," which are mentioned with applause—*Moreri*.

MORELL (THOMAS) an eminent writer on philology and criticism in the last century. He was a native of Eton, and received his education in the college there, as a scholar on the foundation. He removed to King's college, Cambridge, of which he was chosen a fellow, and in 1743 he took the degree of DD. Having entered into holy orders, he became rector of Buckland in Hertfordshire, and chaplain of the garrison at Portsmouth, and he also was curate of Kew and Twickenham. His death took place in 1784, at the age of eighty. Dr Morell republished with improvements, King's edition of four of the tragedies of Euripides, 1748, 2 vols. 8vo; and published an edition of the Prometheus Viuctus of Æschylus, 4to; a Lexicon of Greek Prosody, 4to; an Abridgment of Ainsworth's Latin Dictionary; and a translation of the Epistles of Seneca, with notes, 2 vols. 4to; besides which he selected the words for some of Handel's oratorios, and assisted in a modernized version of the Canterbury Tales of Chaucer. He also left notes on Locke's Essay on Human Understanding, published after his death.—*Nichols's Lit. Anec.*

MORERI (LEWIS) a French ecclesiastic and biographical writer, born in Provence in 1643. He was educated among the jesuits at Aix; and entering into Loly orders, he became abnener to M. Gaillard de Longjumeau, bishop of Apt. That prelate having formed the plan of a universal historical dictionary, caused researches for materials to be made in various countries, and particularly in the Vatican library at Rome. Not choosing to let the work appear in his own name, he transferred his collections to Moreri, by whom they were arranged and prepared for the press. He published his "Dictionnaire Historique" at Lyons, in 1674, in one volume, folio; and a second edition enlarged to two volumes appeared in 1681. Moreri died in the course of the preceding year. The voluminous compilation to which his labours gave birth, having been variously augmented by Le Clerc, and other writers, extends in the last edition, published at Paris in 1759, to ten volumes, folio.—*Aikin's G. Biog. Dict. Hist. Biog. Univ.*

MORES (EDWARD ROWE) a topographer, was born in 1730, at Tunstall in Kent, of which

place his father was rector. He was educated at merchant-tailors' school, whence he was removed to Queen's college, Oxford, where, in conjunction with Mr Romaine, he edited Calasio's Hebrew Concordance, in 4 vols. folio. In 1753 he took the degree of MA, after which he went abroad, and received the degree of LLD. in some foreign university. Towards the latter part of his life, he fell into habits of dissipation, which brought on a mortification, of which he died in 1778. His other works are, a new edition of Dionysius Halicarnassensis "De Claris Rhetoribus;" "Nomina et Insignia gentilitia Nobilium Equitumque sub Edvardo primo rege Militantium;" "History and Antiquities of Tunstall in Kent;" and several pamphlets on the subject of the Equitable Society for Assurance on Lives, of which he was the founder.—*Gen. Biog. Dict.*

MORGAGNI (JOHN BAPTIST) an eminent physician and anatomist, born at Forli in Italy, in 1682. He studied at the university of Bologna, where he is said to have taken his doctor's degree at the early age of sixteen. He afterwards delivered lectures on anatomy, and at length was appointed to fill the medical chair at Bologna. In 1706, 1717, and 1719, he published various observations and discoveries, under the title of "Adversaria Anatomica," which extended his reputation beyond the limits of his native country. He was afterwards made professor of the theory of medicine at Padua, where he published his "Nova Institutionum Medicarum Idea;" and at length he obtained the first professorship of anatomy, which he retained till his death in 1771. Morgagni, who was a member of the Royal Societies of London and Paris, was the author of a very important work on morbid anatomy, "De Causis et Sedibus Morborum per Anatonem indagatis;" besides many professional tracts, published, together with those above mentioned, in 1765, 5 vols. folio.—*Hutchinson's Biog. Med. Biog. Univ.*

MORHOF (DANIEL GEORGE) a learned philological writer, born at Wismar, in the dutchy of Mecklenburg, in 1639. He was educated at Stetin and Rostock, where he studied jurisprudence, but in 1660 he was chosen professor of poetry at the latter university. Previously to engaging in the duties of his office, he travelled for two years in Holland and England. In 1665 he became professor of poetry and rhetoric at Kiel. He visited this country as well as Holland a second time in 1670, when he contracted an intimacy with Boyle, and with Oldenburg, secretary to the Royal Society, as well as with several of the Dutch literati. In 1673 he obtained the chair of history at Kiel, and in 1680 he was appointed librarian to the university. He died in 1691, at Pymont, whither he had gone for the benefit of his health. He was the author of a valuable work, entitled, "Polyhistor Litterarius, Philosophicus, et Practicus," part of which he published at Lubec, in 1688, and it was reprinted with additions in 1695; but the most complete edition is that of 1747, 2 vols. 4to. Morhof was also the author of a tract,

"De pura Dictione Latina," and other works.—*Stollii Introd. in Hist. Lit. Biog. Univ.*

MORIN (JOHN BAPTIST) physician and regius professor of mathematics at Paris in the seventeenth century. He was born in 1583, and studied philosophy at Aix in Provence, and medicine at Avignon, where he commenced MD. in 1613. He then resided at Paris with the bishop of Boulogne, who employed him to examine the mines of Hungary, after which he published his "Mundi sublanaris Anatomia," in 1619. He afterwards became infatuated with the mysteries of judicial astrology, and obtained extraordinary credit with cardinal Richelieu, and other persons of distinction, for his skill in that ridiculous, but then fashionable science. He died at Paris, November 6, 1656. He published a number of works not worth specifying; but his principal production, entitled, "Astrologia Gallica," the fruits of thirty years' labour, did not appear till after his death in 1661, when it was printed at the Hague, in one volume folio, with two epistles dedicatory, one addressed to Jesus Christ, and the other to Louisa Maria de Gonzaga, queen of Poland, a patroness of the author.—*Hutchinson's Biog. Med.*

MORIN (JOHN) a French ecclesiastic, who was a native of Blois. His parents were Protestants, and he was educated at Rochelle and Leyden. Returning to France he embraced the Roman Catholic religion, and entered among the fathers of the Oratory. He distinguished himself by his proficiency in Biblical and Oriental literature; and he published an edition of the Septuagint version of the Old Testament, and assisted in the Parisian polyglott of Le Jay. In 1653 he caused to be printed a letter against certain customs of the congregation of the Oratory, which was speedily suppressed, and the author was forced to ask pardon of his general. This good father is said to have made a collection of all the satirical reflections he met with in ancient authors; and in his controversies with his contemporaries he freely availed himself of this treasury of literary vituperation. Morin died in 1659. Besides the works above noticed, he was the author of exercitations on the Samaritan Pentateuch; the antiquities of the Eastern church; &c.—*Moreri. Dict. Hist.*

MORIN (LEWIS) a French physician and naturalist, born at Mans in 1655. He was educated at Paris, and having taken the degree of MD, he engaged in medical practice, and was at length nominated physician to the Hotel Dieu. In 1699 he was appointed associate botanist to the Royal Academy of Sciences; and he succeeded Tournefort, as botanical demonstrator at the Jardin du Roi, when that naturalist set off on his journey to the Levant. Morin died in 1714.—*Dict. Hist.*

MORIN (STEPHEN) a learned Protestant divine, born at Caen in Normandy, January 1, 1625. He became pastor of a congregation in the vicinity of Caen in 1649, and fifteen years after he removed to take charge of another in that city. The revocation of the edict of Nante, obliging him to quit France, he re-

tired to Leyden, and afterwards became professor of the Oriental languages at Amsterdam. He died there May 5, 1700. He was the author of "Explanations sacræ et philologicæ in aliquot Veteris et Novi Testamenti Loca;" "Exercitationes de Lingua primæva;" "Dissertatio de Paradiso terrestri;" and other works relating to Biblical literature. He published a letter on the origin of the Hebrew language in French; and Huet says, Morin held "sentimens un peu outre," relative to that subject, which however he had deeply studied.—*Huet Origines de Caen. Dict. Hist.*

MORISON (JAMES) an ingenious writer, was the son of a bookseller at Perth, and carried on the same business at Leith. He died at Perth in 1809. He belonged for some years to the sect of the Glassites, from which he seceded, and founded a sect of his own. He was the author of "Bibliotheca Sacra; or a Dictionary of the Bible," and an "Introductory Key to the Scriptures," in which he endeavours to prove that the Gospel was preached in Paradise.—*Evans's Denominations of the Christian World.*

MORISON (ROBERT) an eminent English physician and botanist of the seventeenth century. He was born at Aberdeen in 1620, and after studying at the university of his native place, he went to Paris, and then to Angers, where he took the degree of MD. in 1648. His reputation as a botanist induced the duke of Orleans to appoint him superintendent of the royal gardens at Blois in 1650, when he published a catalogue of plants. He removed to England in 1660, and was made physician to the king, and royal professor of botany; and he was afterwards chosen a fellow of the college of physicians. In 1669 he published his "Preludium Botanicum," and soon after he was elected botanical professor at Oxford. In 1672 appeared a specimen of his "Historia Plantarum," a portion of which was published in 1680. The death of the author, which took place in London in 1683, prevented him from finishing this work, in which he adopted a new method of botanical arrangement. Another volume of the History of Plants was added by Jacob Bobart in 1696.—*Hutchinson's Biog. Med. Pulteney's Sketches of the Progress of Botany.*

MORLAND (GEORGE) an eminent painter of rustic scenery and low life. He was born in London in 1764, and was the son of Henry Morland, an artist of some merit, from whom he received instruction in his profession. He acquired a great degree of skill as a faithful copier of nature, and in the early part of his career, confined himself to the delineation of picturesque landscape; but having contracted irregular habits, and a partiality for the bottle and low company, he forsook the woods and fields for the alehouse; and stage-coachmen, postillions, and drovers drinking, became the favourite subjects of his pencil. Some of his best pieces exhibit farm-yards and stables, with dogs, horses, pigs, and cattle; or scenes at the door of the village ale-house, designed with all the truth and feeling, which commu-

cate a charm to the meanest objects, and proclaims the genius of the artist. Morland's unfortunate habits of dissipation prevented him from reaping the fruits of his exertions, and left him at the mercy of designing individuals, by whom he was surrounded. Many of his pictures were painted in the midst of embarrassments occasioned by his imprudence, and some of them while under confinement for debts which he had contracted. He at length fell a victim to intemperance, dying while in durance, October 29, 1804. As an artist, Morland has been compared with Adrian Brouwer, whom he resembled in a propensity to vicious indulgence; but the works of the Dutch painter generally relate to subjects as disagreeable as those of our countryman are pleasing and attractive.—*Fuseli's Edit. of Pilkington's Dict. of Paint.*

MORLAND (sir SAMUEL) an ingenious mechanic and natural philosopher, born in Berkshire in 1625. His father was a clergyman, and he received his education at Winchester school and Magdalen college, Cambridge. He went to Sweden in 1653 with Bulstrode White-lock, the English ambassador; and on his return was employed under Thurloe, secretary of state to Cromwell, who sent Morland to remonstrate with the duke of Savoy against the persecution of the Piedmontese Protestants. Returning to England, he published an interesting work, entitled, "The History of the Evangelical Churches of the Valleys of Piedmont," 1658, folio. Having had an opportunity of rendering some services to the exiled royal family, he was, at the Restoration, created a baronet, and made a gentleman of the bed-chamber to Charles II. Though he also received some more substantial marks of court favour, his taste for speculation led him into expensive schemes, which proved very injurious to his fortune. Among his inventions are reckoned the speaking-trumpet, the fire-engine, a capstan for heaving anchors, and the steam engine, as well as a mechanical contrivance for performing arithmetical operations. But he was rather the improver than the original discoverer of some of the objects referred to, though doubtless a man of considerable ingenuity, and like many other projectors, a benefactor to the public to the detriment of his private concerns. He had a house at Vauxhall, where he expended a great deal of money in the prosecution of his favourite speculations. His death happened about 1696.—*Chalmers's Biog. Dict.*

MORNAY (PHILIP de) sieur du Plessis Morlay, a distinguished French nobleman of the sixteenth century. He was born in 1549, at Buh, in Vexin, and was educated by his mother in the tenets of the reformed religion. In 1567 he entered the army, and bore his part in the civil wars, which, about that period, tore France in pieces: an accident, however, compelling him for a time to quit the service, he retired to Geneva, thence into Switzerland, and at length settled at Heidelberg, in Germany, with the view of studying Jurisprudence. After making some stay at

the latter place, he again set out on his travels, visiting Italy, and a great part of the north of Europe, including England, when Elizabeth, who was then upon the throne, received him with distinguished marks of favour as an able supporter of the Protestant cause. When, in 1576, Henry of Navarre, afterwards Henry the Fourth of France, had succeeded in escaping from the Catholic faction, and openly placed himself at the head of the Huguenot party, De Mornay once more took up arms, and so far gained the favour of that sovereign, that he was appointed by him one of his privy counsellors. In the service of this monarch he continued during the whole of his struggles against the league; but when, in 1593, Henry, in order to secure his seat upon the throne, made his public recantation, and reconciled himself to the church of Rome, De Mornay sent in his resignation, and retiring from court, devoted the remainder of his life to literary pursuits, and to advocating, with his pen, the cause of that religion which he had so well defended with his sword. His first work had appeared as early as 1578, under the title of "A Treatise on the Church," which he followed up the succeeding year by another, "On the Truth of Christianity." It was not, however, till 1598, four years after his secession from the court of Henry, that his most able, as well as most celebrated work, was given to the world; this was a treatise on the sacrament of the Lord's Supper, in which he so ably vindicated the Calvinistic doctrines, as opposed to that of transubstantiation, that the book made a great noise, and cardinal Du Perron, two years after its publication, entering into a personal disputation with the author on the subject, in a conference at Fontainebleau, the latter maintained his argument with so much ability, as to acquire from those of his own persuasion the honorary appellation of the "Protestant Pope." Seven years afterwards he printed a history of the papacy, under the title of "The Mystery of Iniquity." He was also the author of an address to the Jews, on the subject of the Messiah. This estimable man, whose learning, constancy, and unblemished morals, acquired the respect even of those most opposed to him in religious and political opinions, died in 1623, at his chateau of La Forest, in Poitou, whither he had retired in 1621, after having been deprived, two years previously, of his government of Saumur, by Lewis the Thirteenth.—*Nouv. Dict. Hist.*

MOROSINI, the name of an illustrious Venetian family, many members of which attained to eminence on various accounts and in different ages.—DOMINIC MOROSINI was elected doge in 1148, MARINO in 1249, and MICHAEL in 1381. The latter died of the plague, which raged in that city, the same year. In 1235, MARCO MOROSINI was consecrated bishop of Venice, as was NICOLO in 1338, and GIOVANNI FRANCESCO in 1664. ANDREA, born in 1558, and his brother PAOLO, were distinguished by their literary abilities as much as by their rank. Of these, the former

was a member of the council of Ten, and at the age of forty was appointed historiographer to the state. Besides his continuation of Paolo Paruta's history of the republic, which did not appear till 1623, five years after his decease, he was the author of a volume of letters, and miscellaneous pieces, written in the Latin language, and a work on Palestine, in his native tongue. The younger brother also wrote a history of Venice, from the earliest period to the year 1637. FRANCESCO MOROSINI, born 1618, was a gallant soldier, who, about the middle of the seventeenth century, in his capacity of governor of Candia, defended that island with thirty thousand men against a Turkish force of four times that amount. Compelled at length to surrender, he obtained terms which were better observed by the Ottoman conquerors than was their wont: and although on his return to Venice he suffered a temporary disgrace, yet he soon recovered his credit with the government, and was appointed to the office of procurator of St Mark's. Sailing afterwards against his former antagonists, the Turks, he attacked their fleet not far from the Dardanelles, and totally defeated it, with great loss both of ships and men. Returning in triumph to Venice, he continued to enjoy great popularity till 1688, in which year he was elected doge, and survived his elevation about six years, dying at Napoli di Romania.—*Biog. Univ.*

MORTIMER (JOHN) an English gentleman, who, in the early part of the last century, published a treatise on the art of husbandry, which was much esteemed. He died in 1736.—His son, THOMAS MORTIMER, was secretary to sir Joseph Jekyll, master of the rolls, and to his successor Mr Verney. He died at the age of thirty-five, in 1741.—THOMAS MORTIMER, son of the preceding, was born in London in 1730. He received a liberal education, and obtained the appointment of his majesty's vice-consul for the Austrian Netherlands; but having been displaced after a few years, he adopted the profession of an author, which he exercised with great assiduity and respectability during the remainder of his life. His principal works are, "The British Plutarch," 1762, 6 vols. 12mo; "Dictionary of Trade and Commerce," 1766, 2 vols. folio; "The Elements of Commerce, Politics, and Finances," 1772, 4to, of which a German translation, by J. A. Englebrecht, was published at Leipzig in 1781; "History of England," 3 vols. folio; and "The Student's Pocket Dictionary, or Compendium of History, Chronology, and Biography," 12mo. He also translated Necker's treatise on the administration of the finances of France; and edited Beawes's *Lex Mercatoria*. In 1809 this literary veteran published a "General Dictionary of Commerce, Trade, and Manufactures," 8vo, distinct from his former dictionary; and he died in December the same year.—*Biog. Univ. Reuss. Jones.*

MORTIMER (JOHN HAMILTON) an English painter, was born in 1741, at Eastbourne, in Sussex, where his father was collector of

customs. His father perceiving the bent of his inclination, placed him as a pupil with Hudson, then the most fashionable portrait painter in London. About this time the duke of Richmond opened his gallery of models and antiques to students of painting, and this was Mortimer's principal school. At the exhibition of artists in Spring gardens, before the institution of the Royal Academy, he greatly distinguished himself by his picture of the conversion of the Britons, now the altar-piece in the church of Clipping-Wycombe. He had fallen into a dissipated course of life, which had injured his constitution, but upon his marriage he became more regular. He died in 1777, at the house of his friend Dr Bates, at Aylesbury, whither he had been induced to go for the recovery of his health. He painted many historic pieces, which were much admired for their strength of conception and boldness of execution; but his colouring is defective, and his drawings and sketches are preferred to his finished pictures.—*Monthly Mag.* vol. i. *Pilkington.*

MORTON (JOHN) archbishop of Canterbury, and a member of the Roman conclave, an English prelate of considerable note during the wars of the Roses. He was a native of Bere, near Dorchester, born 1410. He studied divinity and jurisprudence with great success at Oxford, where he was a member of Baliol college, and afterwards succeeded to the headship of Peckwater-inn, now merged in Christchurch. His knowledge of the law, and general character for ability and uprightness, recommended him to the notice and favour of Henry the Sixth, who made him master of the Rolls in 1473, with a seat in the privy council. The fidelity and steady adherence of Morton to this unhappy sovereign, during all his reverses and turns of fortune, evinced the sincerity of his gratitude and the steadiness of his principles; nor did his conduct injure him in the estimation of the Yorkists, as Edward the Fourth, after the deposition and death of his predecessor, not only continued to Morton his seat at the council-board, but advanced him to the see of Ely, to which, in 1478, he added the high and responsible office of lord-high-chancellor. During the reign of Richard the Third, his known attachment to the house of Lancaster rendered him an object of suspicion to that usurper, who ordered his arrest, and he was in consequence committed to the custody of the duke of Buckingham in Brecknock castle. From this fortress, however, he managed to escape, and succeeding in his endeavours to quit the kingdom, fled for protection into Brittany, where he attached himself to the earl of Richmond, then meditating a descent upon England. On the fall of Richard at Bosworth, in 1485, bishop Morton returned to his native country, and the following year was elevated to the archiepiscopal see of Canterbury, when he distinguished himself by his munificence, and built the principal tower of that cathedral, which is still called after his name. In 1487 the great seal was again committed to his

charge; and in 1493 the pope conferred upon him a cardinal's hat. The year following, the university of Oxford elected him their chancellor. He was a prelate of great liberality, as well as learning and abilities, and was a generous promoter of many public works of great utility, as well as a benefactor to all the establishments with which he was connected. His death took place about the commencement of the sixteenth century, in the ninetyeth year of his age.—*Biog. Brit. Hume's Hist. of Eng.*

MORYSIN, *Knt., LL.D.* (sir RICHARD) an eminent civilian of the sixteenth century, a native of Hertfordshire. From Eton college, where he received the rudiments of a classical education, he removed to Cambridge, and graduated there as doctor of civil law. He ingratiated himself much with Henry the Eighth, by his reply to John Cochlaus, who wrote against that monarch's divorce from queen Anne Boleyn with great asperity: doctor Morysin (or Morrison, as his name is sometimes spelt by succeeding authors,) took up the gauntlet, and in the controversy which ensued exhibited at least as much acrimony as his antagonist. He was afterwards despatched on a diplomatic mission to the emperor; and on the accession of Edward the Sixth continued to enjoy the sunshine of court favour. He received the honour of knighthood, was named on the Oxford commission, and eventually sent ambassador to Brussels. When, in the succeeding reign, the professors of the reformed doctrines, especially those who had in any way signalled themselves by assisting in their introduction into England, became obnoxious to persecution, sir Richard retired to the continent, and died at Strasburg in 1556.—*Biog. Brit.*

MORYSON (FINES) an English writer, was born in Lincolnshire in 1566, and was educated at Cambridge, where he became a fellow, and studied civil law, but he was created MA. at Oxford. He then set out on his travels, and remained abroad ten years. On his return he settled in Ireland, where his brother was vice-president of Munster, and was there made secretary to the lord-deputy Mountjoy. He died in 1614. His works are, "A History of Ireland, from 1599 to 1603, with a short Narration of the State of the Kingdom from the year 1169," 2 vols. 8vo, 1735; "An Itinerary, containing Ten Years' Travels through the Twelve Dominions of Germany, &c." 1617, folio.—*Ware's Hist. of Ireland.*

MOSCHUS, a Greek pastoral poet, was a native of Syracuse. The time when he flourished is not accurately known, some making him a pupil of Bion, who is supposed to have lived under Ptolemy Philadelphus; while others suppose him a contemporary of Ptolemy Philometer, BC, 160. The tenderness with which he speaks of Bion, in his beautiful elegy on that poet, by implying a personal acquaintance, seems to render the former opinion most probable. A few idyls form the whole of the remains of Moschus, which exhibit great elegance of style and

delicacy of conception. They are generally printed in conjunction with those of Bion, and may be found in the "Poetæ Minores," as also in a separate volume by Meckercke.—*Fabricii Bibl. Græc.*

MOSELEY (BENJAMIN) a physician, was born in Essex, and practised as a surgeon and apothecary at Kingstou, in Jamaica, for several years. On returning to Europe he took his doctor's degree at Leyden, and obtained the situation of physician at Chelsea hospital. He was a man of eccentric character, and distinguished himself by his violent opposition to the vaccine inoculation. He wrote, "Observations on the Dysentery of the West Indies," and "Two Treatises on Coffee and Sugar." He died in 1819.—*Ann. Biog.*

MOSES CHORENENSIS an historian and geographer, and archbishop of Chorene, now Kerona, in Armenia, flourished about AD. 462. He translated several Greek works into the Armenian, and was also well acquainted with the Syriac, and a proficient in music and poetry. His principal work, "A History of Armenia," from the deluge to the middle of the fifth century, was first published with a Latin version by John and William Whiston, sons of William Whiston, in 1736, and though mixed up with a great deal of fable, is a valuable history, containing many narratives not elsewhere to be found. He was also the author of an "Abridgment of Geography," first published at Amsterdam in 1668, and several canticles, which are sung in Armenian on the anniversary of Christ's presentation at the temple. *Moreri. Gibbon. Saxii Onom.*

MOSHEIM (JOHN LAURENCE) a learned German writer of the last century, descended from a noble family of Lubec, where he was born in 1695. He devoted himself principally to the study of divinity, and after distinguishing himself in several of the universities of Germany, went into Denmark, in the metropolis of which country he remained some time, and read his lectures with great reputation, under the immediate patronage of the king. On his return to Germany, the duke of Brunswick appointed him master of the schools at Helmstadt, with the divinity chair, and the rank of ecclesiastical counsellor. These situations he afterwards resigned for the chancellorship of the university at Gottingen. His ecclesiastical history, written in Latin, under the title of "Institutiones Historiæ Christianæ," is a standard book, almost indispensable to the study of divinity, and has gone through many editions. The English translation of this work by Dr Maclaine is to be found in most theological libraries in the kingdom. His other works are, "De rebus Christianorum ante Constantinum magnum Commentarii," translated by Vidal; a "Life of Ser-vetus;" "The Ecclesiastical History of the Tartars;" "A Vindication of the Discipline of the Primitive Christians;" "Observationes Sacræ;" "De Ætate Apol geticæ Tertulliani;" and a Latin translation of Cudworth's "Intellectual System of the Universe," 4to, 2 vols. His death took place in

1755.—*Cooté's Preface to Mosheim's Eccles. Hist. Nouv. Dict. Hist.*

MOSS (ROBERT) an English divine, was born at Gillingham in Norfolk, in 1666. He was a fellow of Bennet college, Cambridge, and after taking his degree as B.D. in 1698, he was chosen preacher to the society of Gray's-inn, which place he held during his life. The year after he was made preacher assistant at St James's, Westminster, and soon after he was nominated chaplain in ordinary to king William III. Being created doctor in divinity, he became lecturer of St Lawrence Jewry, and in 1712 dean of Ely. On the accession of George I, he was again appointed chaplain; but the part he took in the Bangorian contest gave such displeasure at court, that he was dismissed with Drs Hare and Sherlock. He died in 1729. He wrote several sermons, which, after his death, were collected and published by Dr Andrew Snape, provost of King's college, Cambridge. He was also the author of a treatise, entitled "The Report vindicated from Mis reports, being a Defence of my Lords the Bishops, as well as the Clergy of the Lower House of Convocation; in a Letter from a Member of that House to the Prolocutor, concerning their late Consultations about the Bishop of Bangor's Writings, &c." 1717, 8vo, and of some short Latin and English poems.—*Gen. Dict. Biog. Brit. British Biog.*

MOSS (CHARLES) nephew of the preceding, was educated at Caius college, Cambridge, where he took his doctor's degree in 1747. After passing through various promotions in 1766, he was consecrated bishop of St David's, whence he was translated to Bath and Wells. He died in 1802. He published a tract, entitled "The Evidence of the Resurrection cleared from the Exceptions of a late Pamphlet," in vindication of Dr Sherlock's "Trial of the Witnesses" against Chubb. He was also the author of several sermons, and of a charge.—His son, Dr CHARLES MOSS, was bishop of Oxford, and died in 1811.—*Nichols's Lit. Anec.*

MOSSOM (ROBERT) an Irish prelate, of whose history we have but an imperfect account. He suffered much in the civil wars, but on the Restoration he was made dean of Christchurch, Dublin, and prebendary of Knaresborough, and was finally promoted to the see of Derry. He died at Londonderry in 1679. His works are, "Variæ colloquendi Formulæ," 1659; "The Preacher's Tripartite," 1657; "Narrative of George Wild, Bishop of Derry;" "Zion's Prospect in its first View," 4to; Sermons, &c.—*Harris's Edition of Ware.*

MOSSOP (HENRY) an eminent tragic actor, born in Ireland in 1729. He was the son of a clergyman, who held a rectory in the province of Connaught, and he was educated at Trinity college, Dublin, where he took a degree. He made his first appearance on the stage at Dublin in November 1749, in the character of Zanga, in Dr Young's tragedy of Revenge, and was extremely well received.

Having quarrelled with the manager, he soon removed to London, where, next to Garrick and Barry, he was esteemed the principal tragedian of his time. In 1761 he became manager of one of the Dublin theatres, in opposition to Barry and Woodward; and the rivalry proved ruinous to all parties, and especially so to Mossop, whose vanity and intemperate conduct having at length excluded him from the exertion of his professional abilities on the metropolitan stage, he was reduced to great distress, and died in absolute penury at Chelsea in November 1773.—*Thesp. Dict.*

MOTANABBI (ABUL TAYIB AHMED al) a celebrated Arabian poet, born at Cufa in 915. He studied at Damascus, and applied himself especially to grammar and the belles lettres. At length, being inflamed with a passion for poetry, he gave himself up to the cultivation of that species of literature with the utmost enthusiasm, and professed to believe that he was divinely inspired. He aspired to become the rival of Mahomet, and by the charms of his versification, he seduced a multitude of the Arabs to become his disciples. The governor of Emesa stopped the progress of the new sect, by seizing their chief, and dispersing his followers. Motanabbi, reduced to reason by confinement, renounced his chimerical pretensions to inspiration, and on regaining his liberty, applied himself wholly to poetical composition. He was entertained at the court of the prince of Aleppo, whence he removed to Egypt, and afterwards to Shiraz, where he was loaded with benefits by the sultan Adadodowla. He was at length killed by robbers in crossing the desert to visit his native country in 965. Translations of some of his poetry have been published by the French and German literati; and a memoir of Motanabbi, with two of his poems, may be found in Ouseley's Oriental Collections.—*Biog. Univ.*

MOTHE LE VAYER (FRANCIS de la) a learned French writer, was born in Paris in 1583, and bred to the profession of the law. He occupied, in succession to his father, the post of assistant procureur-general in the parliament of Paris; which office, however, he resigned, in order to dedicate himself entirely to literature. He soon opened himself a road to the French Academy, by his learned labours; and he was also appointed preceptor to the duke of Anjou, afterwards of Orleans, brother to Louis XIV, as well as historiographer of France. His known tendency to scepticism exposed him to some annoyance, which he bore with great equanimity, and seemed rather to value himself for imputed singularity than otherwise. He died in 1672, in the eighty-fifth year of his age. He was a writer on a great variety of subjects, in which he discovered more erudition and judgment, than taste or invention. His works were collected in two volumes, folio, in 1662, from which are excluded his "Dialogues after the Manner of the Antients," in which he gave free scope to his scepticism, and his "Hexameron Rustico," a work not quite free from licentiousness.—*Bayle. Moreri.*

MOTIE (ANTHONY HOUDART de la) an eminent and ingenious French writer, was born at Paris in 1672. He was sent by his father, a rich hatter, to a jesuit's seminary for education, and was destined for the profession of the law; but after pursuing for some time the studies proper for the bar, he deserted them in disgust, and devoted himself to polite literature. At the age of twenty-one he composed a comedy, which being condemned, he flew to the monastery of La Trappe; but the celebrated abbé de Rancé, doubting the reality of his vocation, induced him to return, and he took to composing operas, which tolerably well succeeded. In 1707 he published a volume of "Odes," which were deemed more philosophical than poetical; and in 1710 he was admitted a member of the French Academy. He next tried his hand at tragedy, and partially succeeded, especially in his "Inez de Castro," which still keeps the stage. Resolved to leave no part of the drama untried, he then essayed comedy, and wrote several pieces, which were favourably received. In 1714 he gave a poetical version of Homer's Iliad, although entirely ignorant of the original language; and affixed thereto a free censure of the plan of that celebrated poem. This literary heresy set the learned world in arms, and drew a severe and pedantic attack from madame Dacier, to which he replied with the most polished wit and elegance. In 1719 he published a volume of "Fables," but, although exceedingly ingenious, he could not reach the natural simplicity of La Fontaine. Some pastoral eclogues, cantatas, psalms, and hymns, complete the list of his remaining poetical labours, all which exhibit much ingenuity, but little of the poet. As a prose writer, he was greatly esteemed, and his pen was often borrowed for purposes that were foreign to the general tenor of his writings. He was much beloved for the urbanity of his temper, both on literary controversy, and all other occasions. Being once in a crowd, he chanced to tread on the foot of a young man, who immediately struck him. "Sir," said he, "you will be sorry for what you have done—I am blind;" which was the case, for many years before his death. He died of a decline in 1731, at the age of fifty-nine. His works are printed in 11 vols. 8vo, Paris, 1764.—*Nouv. Dict. Hist. Eloge par D'Alembert*

MOTTEUX (PIERRE ANTOINE) a gentleman of a good family in Normandy, born at Rouen in that province, February 19, 1660. He came to London in 1665, on the revocation of the edict of Nantes, and embarking his property in commerce, opened an East-India warehouse in Leadenhall-street, where he carried on business to a considerable extent. His familiar acquaintance with most of the modern languages of Europe, obtained him a respectable situation in the foreign department at the post-office, while his leisure hours were devoted to the cultivation of poetry and the belles lettres. He had early acquired the most perfect familiarity with the English language; and not only translated into it the Don

Biog. Dict.—Vol. II.

Quixote of Cervantes, and the works of Rabelais, but also composed several original dramatic pieces in it, which met, however, with but indifferent success, although their author unquestionably possessed both talent and humour. He had just attained his fifty-eighth year, when he was discovered on the morning of his birth-day, dead, in a house of ill-fame, near the church of St Clement Danes in the Strand, not without strong suspicion of foul play.—*Biog. Brit.*

MOTTEVILLE (FRANCES BERTAUD de) a celebrated French lady, and niece of Bertaud, bishop of Sees, was born in Normandy about 1615. She was brought up at the court of Anne of Austria; but the jealousy of cardinal Richelieu caused her to be banished, and she retired into Normandy, where she married Nicolas Langlois, lord of Motteville, first president of the chamber of accounts at Rouen, and an old man. She was left a widow two years after. On the death of Richelieu she was recalled by the queen, then regent, who kept her constantly about her person. She also enjoyed the friendship of Henrietta Maria, widow of Charles I. She was the author of "Mémoires pour servir à l'Histoire d'Anne d'Autriche," 1723, 5 vols. 12mo, and 1750, 6 vols. 12mo, which are written in a candid, unaffected style, though not very elegant. Madame de Motteville died in 1689.—*Moreri. Nour. Dict. Hist.*

MOTTLEY (JOHN) the son of an English officer, who, adhering to James II, during the Revolution of 1688, followed the fortunes of that monarch to the continent. His son was born in 1692 in England, and received his education at the school of St Martin's library. Many promises of a provision were made him by persons in power, who had been connected with his father; but he had the mortification to see several situations under government, the reversions of which he had fully calculated on, bestowed upon others. At length he obtained a small place in the customs, which, however, he soon resigned, and in 1720 became, from necessity, an author by profession. In this capacity he gave to the world the lives of Peter the Great of Russia, and of the empress Catherine; the former in three, the latter in two octavo volumes. He also wrote five plays, which met with a tolerable share of success; but the work of his which obtained by far the greatest degree of popularity, is the well-known collection of facetiæ, which goes under the title of "Joe Miller's Jests," of which the humorous comedian, to whom it is ascribed, and who lies interred in the burial-ground of Portugal-street, Lincoln's Inn Fields, contributed nothing but his name. Mottley died in 1750.—*Biog. Dram.*

MOUFET or **MUFFETT** (THOMAS) a physician and naturalist, was born in London in the sixteenth century, and studied at Cambridge. He then travelled for improvement, and while abroad he took the degree of MD; after which he returned, and settling in London, he practised with much reputation. He was patronized by Peregrine Bertie, lord Wil-

loughly, whom he accompanied on an embassy to the king of Denmark. He was also with the earl of Essex, when he encamped in Normandy. He received a pension from the Pembroke family, and died at Bulbridge near Wilton, in Wilts, towards the close of queen Elizabeth's reign. His works are, "De Jure et præstantia Chemicorum Medicamentorum," 1584; "Nosomantica Hippocratica;" 1588; "Epistolæ quinque Medicinales;" "Health's Improvement, or Rules for preparing Food," 4to. As a naturalist, he distinguished himself by his work, "Insectorum sive minimorum Animalium Theatrum," published by sir Theod. Mayerne, in 1634.—*Halleri Boerhaave. Meth. Stud. Med. Rees's Cyclop.*

MOULIN (CHARLES du) a very eminent French jurist, was born at Paris, of an ancient and noble family, in 1500. He was educated at Orleans, where he read lectures on law in 1521, and the year following was admitted an advocate in the Parliament of Paris. An impediment in his speech, however, induced him to quit the bar, and to devote himself to the composition of the legal works which obtained him so much celebrity. He embraced the Protestant religion; and in 1552 attacked the authority and practices of the court of Rome with much severity, in his "Observations sur l'Edit du Roi Henri II, contre les Petites Dates." The parliament pronounced the suppression of this piece, and he found it necessary for his present safety, to quit Paris and repair to Germany. He spent some years in that country, lecturing in various towns with great reputation. On his return to France, he suffered imprisonment, at the instigation of the jesuits, and could only obtain his release by a promise to print nothing without the royal permission. The parliament of Paris, sensible of his high professional merit, offered him the post of counsellor, which he refused. Before his death, which took place in 1566, he had entirely reconciled himself to the Catholic church. Charles du Moulin was considered an oracle of jurisprudence; and being of a confident, inquiring spirit, he carried his researches into matters of faith, as well as questions of law; a boldness which was seldom tolerated in his age. His works, forming a great mass of legal erudition, were printed collectively in 1681, in five volumes, folio.—*Moreri. Nouv. Dict. Hist.*

MOULIN (PETER du). There were two eminent theologians of this name, father and son. The elder of the two, better known by his Latin denomination, Molinæus, was born at Bechny in the Vexin, in 1568. After receiving the rudiments of a classical education at Sedan, he came to England, and entered himself at Christ's college, Cambridge, where he, many years afterwards, graduated as doctor in divinity. Previously, however, to his obtaining this academical honour, an offer of the professorship of philosophy at Leyden induced him to return to the continent, where he ranked amongst his scholars the celebrated Grotius. In 1599 he went to France, and obtained the benefice of Charenton, being about

the same time appointed chaplain to Catherine, sister of Henry the Great. When that monarch reconciled himself to the church of Rome, many efforts were made by the Roman Catholic party to obtain a similar recantation from Catherine, from which step the influence and exhortations of Du Moulin were supposed to have been one great means of diverting her. In 1611 a serious controversy was carried on between him and the society of jesuits, whom he accused in no very measured terms of having originated the assassination of Henry; and the height to which the dispute was carried, at length induced him to accept an invitation from James I of England. He accordingly came to this country in 1615, and received from his new patron a stall in Canterbury cathedral. In England he did not continue long, but was deputed by the French Protestants, to represent them at the synod of Dort; a dispute, however, arising respecting his nomination, he did not, ultimately, accept the appointment. In 1618 the divinity professorship at Leyden was offered to his acceptance, which he declined; but his old antagonists, the jesuits, exerting their efforts once more to annoy him, he finally settled at Sedan, of which place he became the pastor, filling at the same time the theological chair there. Among his writings are "A History of Monachism," and a treatise "On the recent Origin of Popery," with a great variety of other controversial tracts. His death took place in the spring of 1658.—*His son, PETER, born in 1600, at Paris, graduated at Leyden, but coming afterwards to England, obtained, like his father, a prebend at Canterbury, and was one of the chaplains to king Charles II. He published a French treatise, entitled "The Peace of the Soul," of which there is an English translation by Scrope; "Clamor Regii Sanguinis ad Cælum," a tract which Milton answered, and which was published under the name of Alex. More; and a "Defence of the Protestant Church."—*LOUIS DU MOULIN, a younger brother of the last, was born in 1605, and distinguished himself during the time of the commonwealth, by his violence as an Independent. He was the author of two tracts, the one entitled "Patronus Bonæ Fidei," an attack on the established church; the other, "Parænesis ad Ædificatores Imperii," which latter he dedicated to Oliver Cromwell. He saw reason, however, to change many of his opinions before his death, which did not take place till 1683.—There was also a French historian named GABRIEL DU MOULIN, an ecclesiastic of Manneval, known as the author of a "History of Normandy," folio, 1631, and another "Of the Norman Conquests in Sicily" 1658.—*Aikin's G. Biog.***

MOUNIER (JOHN JOSEPH) a French politician, one of the most distinguished members of the states-general of 1789. He was born at Grenoble in 1758, and being prevented from entering the army, he devoted himself to the legal profession, and at the age of eighteen took the degree of bachelor of law at the university of Orange. In 1779 he was admitted

an advocate of the parliament of Grenoble; and a few years after he became judge royal, one of the two magistrates to whom was confided the administration of justice in that city. On the occurrence of revolutionary commotions, he took an active part in politics, and became a member of the states-general, and afterwards of the national assembly. When that body determined not to disperse till the constitution they demanded should be granted, Mounier was appointed one of the committee established for the furtherance of that object. He afterwards exerted all his talents and influence to promote the establishment in France of a limited monarchy; but finding his efforts vain, he at length retired to Grenoble. He afterwards removed to Geneva, where he published "*Recherches sur les Causes qui ont empêché les Français de devenir Libres*," 2 vols. 8vo, 1792. He went to London in 1793, and afterwards resided in Switzerland, Italy, and Germany, till 1801, when he returned to his native country. In 1802 he was appointed prefect of l'Ille and Vilaine, but was removed from office in 1804, when he was nominated a counsellor of state. He died January 26, 1806, leaving behind him a high reputation for talents and virtue.—*Biog. Univ.*

MOUNTAGUE (RICHARD) whose name is also variously spelled Montague and Montagu, bishop of Norwich, a prelate of considerable learning and great polemical ability, born in 1576, at Dorney, Bucks, of which parish his father was the incumbent. From Eton he removed in due course on a foundation fellowship to King's college, Cambridge. In 1613 he obtained the rectory of Stamford Rivers, in Essex, with a fellowship at Eton, and three years subsequently the deanery of Hereford. His next piece of preferment was a stall at Windsor, where he read the divinity lecture from 1720, the date of his appointment, till 1728. In the mean time he commenced an attack on the first part of the learned Selden's "*History of Tythes*," which performance James I was much pleased with, and encouraged him to proceed in his examination of early church history. This work appeared in 1621, and in the following year he published his "*Analecta Ecclesiasticarum Exercitationum*." In 1624, finding that some of the society of jesuits were making converts in his parish of Stamford, he gave them a challenge to answer certain queries, to which they replied by a short pamphlet, entitled "*A New Gag for the old Gospel*." To this Dr Mountague rejoined another, "*An Answer to the late Gagger of the Protestants*." In the management of this controversy, however, he gave considerable offence to the Calvinistic party, who accused him before the house of Commons as a favourer of Arminianism; but the encouragement which he received from the king induced him to publish a vindication of the work, under the title of "*Apello Cæsarem*." This aggravated his offence in the eyes of his antagonists, and he was brought, in 1625, before the first parliament of Charles I, in spite of whose personal countenance the book

was voted seditious, the author reprimanded by the speaker at the bar, and ordered to find security for his appearance in 2000*l.* being committed in the mean while to the custody of the serjeant-at-arms. Archbishop Laud now interfered in his favour, and with such success, that in the following year, although on a revision of the case, parliament still pronounced the work "*calculated to discourage the well-affected in religion from the true church*;" yet the proceedings against its author were discontinued, and in 1628 Charles advanced him to the episcopal bench, as bishop of Chichester. Over this diocese he presided ten years, at the expiration of which period he was translated to Norwich, but survived this last elevation only a short time, dying in 1641. Besides the writings already enumerated, he assisted in bringing out sir H. Savile's edition of St Chrysostom's works, which appeared in 1613, and was the author of a "*Commentary on the Epistles of Potius*," folio, Gr. et Lat. "*Originum Ecclesiasticarum*," folio; "*The Acts and Monuments of the church before Christ*," folio; and "*Theanthropicon, seu de Vita Jesu Christi*." Bishop Mountague was a prelate of great acuteness as well as learning, and even his opponent Selden, among the number, do justice to his scholarship and Biblical learning.—*Biog. Brit.*

MOUNTFORT (WILLIAM) a dramatic poet and actor of considerable merit, both in tragedy and comedy, a native of Staffordshire, born in 1652. Colley Cibber speaks highly of his abilities in his apology for his own life; and the talent of mimicry especially he appears to have possessed in great perfection. Mountfort was the author of five plays, and was in the zenith of his reputation when he fell a victim to the jealousy and treachery of a rival. Being in the flower of his age, and one of the handsomest men upon the boards, the parts of the lovers were usually allotted to him, in one of which he had captivated the affections of Mrs Bracegirdle, an actress much admired for her personal charms. Returning one night home to his lodgings in Norfolk-street, Strand, in the winter of 1692, he was waylaid by a captain Hill (whose addresses Mrs Bracegirdle had rejected) in company with lord Mohun. The parties were seen in conversation when Mountfort fell, being run through the body with a small sword, before he could draw his own. Hill, who was supposed to have given the blow, fled to the continent, while lord Mohun was tried by his peers for the murder, but was acquitted upon some informality. This nobleman was himself eventually killed by the duke of Hamilton, in a duel fought in Hyde park.—*Biog. Dram.*

MOURAD BEY, a famous mameluk chief, born in Circassia, about the middle of the eighteenth century. He was purchased as a slave by Mahomet Abu Dhahab, and becoming one of the twenty-four beys of Egypt, he partook of the enmity of his patron against Ali Bey, and assisted in the destruction of that chief in 1773. He afterwards obtained the government of Cairo, in conjunction with

Ibrahim Bey; but they were driven from that place by a combination, at the head of which was Ismael Bey. After various contests with their rivals and with the Turkish government, they recovered their power, and re-established themselves at Cairo. Some oppressions, to which the French merchants and consul were subjected, served as a pretext for the invasion of Egypt, by Buonaparte. Mourad opposed the French with great vigour, but he was at length obliged to retreat to Upper Egypt. He subsequently entered into a treaty with general Kleber, and accepted the title of prince of Assouan and Jirgeh, under the protection of France. After the death of Kleber, he offered assistance and advice to his successor, Menou, who rejected the overtures of Mourad Bey. The latter was about to join with his troops general Belliard at Cairo, when, being attacked by the plague, he died at Benissouef, April 22, 1801, aged about fifty.—*Biog. Univ.*

MOURADGIA D'OHSSON (IGNATIUS) an Armenian by descent, born at Constantinople, in 1740. His father was Swedish consul at Smyrna, and he was educated with a view to a similar situation. At the age of twenty-four he understood most of the Oriental languages, and had made himself acquainted with the history of various nations. After having been secretary and first interpreter to the Swedish embassy, he received the title of charge-d'affaires of Sweden, in 1782, and was decorated with the order of Vasa. He had formed the design to compose a work which should afford to Christian Europe correct and extensive information relative to the Turkish empire; and going to Paris in 1784, with the assistance of Mallet du Pan, he arranged his materials for the press. The result of his labours was his "Tableau générale de l'Empire Othoman," prem. part. Paris, 1787—1790, 2 vols. folio. He left France on account of the revolutionary troubles, and in 1795 he was appointed minister of Sweden at Constantinople. He returned to Paris in 1799 to continue his work, and in 1804 appeared an introduction to the former publication, entitled, "Tableau Historique de l'Orient," 2 vols. 8vo. On war breaking out between France and Sweden, he retired to the castle of Bievre, where he died in 1807. His son, the chevalier D'Ohsson, published in 1821, a third volume of the View of the Othoman empire. Of the former part of that work there is an English translation.—*Biog. Univ.*

MOURGUES (MICHAEL) a French jesuit and philosopher, was born in the province of Auvergne, about 1643. He taught the mathematics and rhetoric in several houses of his order, and finally became professor-royal of those sciences in the academy of Toulouse, where he died in 1713. He was a man of profound erudition, to which he united polished and amiable manners. His most esteemed works are, "A Parallel between Christian Morality, and that of the Ancient Philosophers," 1702; "An Explanation of the Theology of the Pythagoreans, and of the other learned sects in Greece," 2 vols. 8vo,

1712; "New Elements of Geometry;" "A Treatise on French Poetry;" and a choice "Collection of Bon-mots," in French verse, &c.—*Moreri. Nouv. Dict. Hist.*

MOYLE (WALTER) an ingenious writer, was born in Cornwall in 1672. He studied at Oxford, and next in the Temple; but having an independent fortune, he devoted himself to the pursuit of polite literature, and he cultivated the acquaintance of most of the wits of his day. In 1695, when a translation of the works of Lucian was proposed, he undertook to give a version of four of that author's pieces, which he executed with spirit and correctness. In 1695 he sat in Parliament for the borough of Saltash; but being disinclined to public business, he made no attempts to renew his seat. At the instance of Dr Charles Davenant, he translated Xenophon's "Discourse upon improving the Revenues of Athens," which was prefixed to that writer's work upon "The Trade and Revenues of England." In conjunction with Mr Trenchard, he published, "An Argument against a Standing Army." His other works are, "An Essay on the Miracle of the Thundering Legion;" "An Essay on the Lacedemonian Government;" another on the Roman constitution; "A Dissertation upon the Age of the Philopatri;" "Remarks on Prideaux's Connection;" "Letters," &c. which were published after his death, with a biographical memoir, in 3 vols. 8vo.—*Biog. Brit*

MOZART (JOHANN CHRYSOSTOM WOLFGANG THEOPHILUS) one of the most eminent musical composers that Germany, or any other country, ever gave birth to. He was the son of Leopold Mozart, sub-chapel-master of Saltzburg, and himself a respectable musician, by Anna Maria Perti, a woman of great personal beauty, who bore her husband seven children. Of these, the subject of this article, born at Saltzburg, January 27, 1756, and a sister named Mary Ann, four years older than himself, were, even in infancy, remarked as musical prodigies; and the extraordinary talent which they exhibited, at length induced their father to give up his other avocations altogether, in order to devote himself entirely to their instruction. At the age of three years the son began to display astonishing abilities for music, and in the two following years composed some trifling pieces, which he performed to his father, who carefully preserved them. He evinced in his childhood the greatest sensibility and affection; and as soon as he had the slightest notion of music, his love for the gambols of his age entirely vanished; and for any amusement to please him it became necessary in some way to introduce music with it. When he had attained the age of six years, all Mozart's family, consisting of his father, mother, sister, and himself, removed to Munich, where the elector heard the two children perform, who received unbounded applause. The famous Wagenseil happening to be in Munich, young Mozart, who preferred the approbation of a good master to that of any other, begged the emperor to allow Wa-

genseil to be present at his performance. "Send for him," said the child, "he understands the thing." Francis I desired Wagenseil might be called, who resigned to him his place at the harpsichord. "Sir," said the young virtuoso, then six years old, "I am going to play one of your concertos; you must turn over the leaves for me." In July, 1763, when Mozart was just seven years old, his whole family left Germany; and in the month of November arrived in Paris, where he was introduced to play the organ in the king's chapel at Versailles, in the presence of the whole court. In 1764 he left Paris for England, and was there received with equal approbation, both at court and in the city. Some of the most difficult pieces of Bach, Handel, &c. were presented to him, which he performed at first sight, with the greatest accuracy, and in the strictest time. At another time, Christian Bach, music-master to the queen, took him on his knees, and played a few bars; Mozart then continued the air, and they thus performed an entire sonata, with such precision, that those who were present imagined it was played by the same person. Having returned to Salzburg, towards the close of the year 1766, he ardently applied himself to the study of composition, Emanuel Bach, Hasse, and Handel, being his guides and models. In 1768, he composed, by command of the emperor Joseph II, an opera buffa, entitled, "La Finta Semplice," which was approved both by Hasse and Metastasio, but was never performed. In December, 1769, he went with his father into Italy, having, some months previously to his departure, been nominated concert-master to the archbishop of Salzburg. In that country he met with the most flattering reception. At Bologna, the Padre Martini, and other musicians, were delighted at hearing him execute the most difficult fugues on the harpsichord without hesitation, and with the greatest precision. Mozart arrived at Rome in the Passion-week, and on the Wednesday evening went with his father to the Sistine chapel, to hear the celebrated Miserere, a composition, of which it had been prohibited to give or take a copy, on pain of excommunication. Aware of this prohibition, he listened so attentively, that on his return home he noted down the whole piece. On Good-Friday the Miserere was repeated, when Mozart was again present, and during the performance held his manuscript in his hat, by which means he was enabled to make the necessary corrections. From Rome the family continued their journey to Naples, whence, after a short stay, they returned, when the pope, who had much wished to see Mozart, created him knight of the golden spur. In repassing through Bologna, he was named by universal consent a member of the Philharmonic academy, on which occasion an anthem for four voices was given him to compose; and, as was customary on such occasions, he was shut into a room alone, where he concluded his task in half an hour. A previous engagement now called him to Milan. On

the 26th of December, 1770, two months after his arrival, being at that time not quite fifteen years old, he produced his serious opera, called "Mithridate," which had a run of twenty nights: the manager immediately made a written engagement with him for the composition of the first opera for the year 1773, which opera was called, "Lucio Silla," and was equally successful with the former. He had also composed for Milan, in 1771, "Ascanio in Alba;" and for Salzburg, in 1772, "Il Sogno di Scipione," to celebrate the election of the new archbishop. Being subsequently invited to Vienna, Munich, and Salzburg, he, among other works, composed "Le Finta Giardeniera," an opera buffa, two grand masses for the chapel of the elector of Bavaria, and one for the archduke Ferdinand at Salzburg; and, on the occasion of the archduke Maximilian remaining for a few days at Salzburg, the cantata, "Il re Pastore." Mozart was, at this time, nineteen years of age; and his fame was so extensive, that he could now make choice of any capital in Europe, in which to establish himself. His father thinking that Paris would be most suitable for him, in 1777 he commenced his second journey thither, accompanied by his mother. Having the misfortune to lose her during his stay, and also taking some disgust at the style of vocal music adopted in that city, he returned to his father at the commencement of the year 1779, having only produced a symphony at the spiritual concerts, and a few other instrumental pieces. Mozart subsequently indulged himself in ridiculing the musical taste of the French, in a set of burlesque instrumental quartets, by bringing together all the striking peculiarities of their style, with the most irresistibly comic effect. He next composed the opera of "Idomeneo," under the most favourable auspices, having been called to Vienna by the command of his sovereign, the archbishop of Salzburg. This work was undertaken at the request of the elector of Bavaria for Munich; and it was here that Mozart's genius, now fully matured, displayed its great strength and boundless resources. He was at this time five-and-twenty, and in love with a young lady to whom he was afterwards united. The stimulus given to his mind by this passion, did not desert him through life: from this period, his melodies grew more refined, his harmonies bolder, the design of his productions became exquisitely symmetrical, his ideas subtle and recondite. Mozart left Munich for Vienna, where he entered the service of the emperor, to whom, though but indifferently treated, he ever remained attached. Some vexatious occurrences at court excited him at length, however, to demand his dismissal of Joseph; but one word from that prince, who really loved his composer, and more particularly his music, made him change his mind. Mozart received, in capacity of chamber composer, the small annual sum of eight hundred florins, for which no service was required, and it was never augmented. At one time he was legally asked, in consequence of

one of those general orders of government, so frequent at Vienna, what pension he received from the court. He wrote back word, in a sealed note, "Too much for what I have done, too little for what I might have done." "L'Enlèvement du Serail" was performed in 1782; Joseph II remarked to Mozart, "It is too grand for our ears; there are a prodigious quantity of notes." "There are just as many as there ought to be," replied the musician. During the composition of this opera, he married Mlle Weber, an amateur of great talent, by whom he had two children. "The Marriage of Figaro" was a piece then much in vogue at the theatres, and Mozart was desired by the emperor to set it to music. He obeyed; and this opera was performed at Prague the whole of the winter of 1787. Mozart went himself to Prague that winter, and there composed for the Bohemians his opera of "Don Giovanni," which met with still more brilliant success than even the "Marriage of Figaro." The music of "Don Giovanni" was the triumph of dramatic composition, and the author, who wrote it merely to please himself and his friends, anticipated that the amateurs of Vienna would not be able to appreciate its merits. His expectations were realised, for the opera was not understood on its first performance in that city. Mozart lived, however, to see justice done to his great work, although his health had now begun to decline, and his death followed on the 5th of December, 1792, when he had not attained his thirty-sixth year. During the last months of his life, though weak in body, he was "full of the god," and his application, though indefatigable, could not keep pace with his invention. "Il Flauto Magico," "La Clemeuzza di Tito," and a requiem, which he had scarcely time to finish, were among his last efforts. Mozart was particularly partial to his opera of "Il Flauto Magico," though not of the parts of it which had been most admired by the public. The debility under which he laboured, prevented him from conducting the orchestra for more than the first nine or ten representations. The composition of the requiem, in the decline of his bodily powers, and under great mental excitement, hastened his dissolution; he was seized with repeated fainting fits, brought on by his extreme assiduity in writing, in one of which he expired. Mozart was in person rather short, thin, of a pale complexion, with an abundance of fair hair, and of a temperament eminently luxurious and voluptuous. The melancholy which characterises his compositions is rather the feeling of one who has indulged passion to excess, and who seeks relief from the intensity of his happiness, than that which is produced by misfortune or disappointment. It is here that the great distinction exists between Mozart and other composers, who have possessed, in common with him, an eye for symmetrical proportion, and a great nicety and correctness in the finishing of their scores. But whatever style he adopts, the daring ambition of a great master, whose thoughts will neither bear addition nor diminution, is evi-

dent. If he has not originated so much in the first principles of the art as some other composers, music owes to Mozart a stride from mediocrity to perfection. No musician has ever possessed so comprehensive a genius; in the church style he may be said to vie with Handel, in fugue writing with Sebastian Bach; he surpasses Haydn in the symphony and quartet, and Gluck in the operatic. The true fame of Mozart is, however, founded on his four great operas, "Idomeneo," "Le Nozze di Figaro," "La Clemeuzza di Tito," and "Il Don Giovanni," the music of which is dramatic but not theatrical. His love of refinement led him to correct his compositions with minuteness, yet he was no dealer in petty detail. As he drew near his end, the grandeur of his ideas became still more obvious; the music of the requiem is truly funereal, a mixture of sublimity and heartfelt entreaty; and it was the excitement produced by the crowd of images which came unsought before his mind, which hastened his death. A few hours before that event took place, he is reported to have said, "Now I begin to see what might be done in music."—*Original Communication.*

MUDGE (ZACHARY) an eminent divine of the church of England in the last century. He was a native of Exeter, and his friends being nonconformists, he was educated for the ministry at one of their seminaries. But he obtained episcopal ordination, and in 1716 he became master of a free grammar-school at Biddeford, in his native county, whence he removed in 1736 to Plymouth, on being presented to the rectory of St Andrew's, at that place, besides which he was a prebend of Exeter. In 1739 he published a volume of "Sermons on different Subjects," which have been warmly praised by Dr Johnson. He died in 1769.—JOHN MUDGE, MD. youngest son of the preceding, was educated for the medical profession, and settled in practice as a surgeon at Plymouth. He afterwards procured the diploma of MD. and was distinguished not only for his skill as a physician, but also for his mechanical genius and his scientific acquirements. He was the author of a tract on the inoculated small-pox, 1776, 8vo, which was translated into German; and a "Cure for a recent Catarrhus Cough," 1778, 8vo; besides medical, surgical, and obstetrical cases and essays, published in the Philosophical Transactions, and other periodical works. Dr Mudge was a fellow of the Royal Society, in whose Transactions also appeared his "Directions for making the best Composition for the Mirrors of reflecting Telescopes, together with a Description of the process of grinding, polishing, and giving the great Speculum the true parabolic Curve," which essay was rewarded with the Copleian prize medal. This ingenious philosopher died in 1793.—His son, WILLIAM MUDGE, entered into the army, in which he arrived at the rank of major-general. He inherited from his father a taste for science, and particularly distinguished himself by the skill and accuracy which he displayed in the trigonometrical survey of Great Bri-

tain, a considerable part of which was executed under his direction. In the Transactions of the Royal Society, of which he was a fellow, are several of his communications relative to this undertaking. His death took place in 1820.—THOMAS MUDGE, elder brother of Dr. J. Mudge, was apprenticed to Graham, the philosophical instrument-maker, whom he emulated in mechanical ingenuity and scientific knowledge. He devoted much labour and talent to the improvement of time-keepers; and he was one of the persons employed by the Board of Longitude to examine the inventions of Harrison. He also obtained a reward from Parliament for a chronometer of his own construction. He died in 1794, at the age of seventy-eight.—*Ann. Reg. Chalmers's Biog. Dict. Biog. Univ.*

MULCASTER (RICHARD) a celebrated schoolmaster, was born at Carlisle, and was educated at Eton, whence he was removed first to King's college, Cambridge, and next to Christchurch, Oxford, where in 1555 he was elected student. In 1561, for his extraordinary accomplishments in philology, he was appointed first master of Merchant Taylors' school. In 1594 he was collated to the prebendal stall of Gatesbury, in the cathedral of Sarum; and in 1596 he resigned the mastership of Merchant Taylors', and the same year was chosen master of St. Paul's school, where he remained twelve years, and then retired to the rich rectory of Stamford-Rivers, in Essex, to which he had been instituted at the presentation of the queen. He died in 1611. As a scholar he ranks high; his Latin works were celebrated in their day, and he enjoyed a high reputation as a Greek and Orientalist. His works are, "Positions wherein those primitive Circumstances be examined, which are necessary for the training up of Children, either for skill in their Booke, or Health in their Bodie," Lond. 1581, 1587. of which a second part was published in the "First Part of the Elementaire, which entreateth chiefly of the right writing of the English Tung." He also wrote several commendatory and other Latin poems, which were much esteemed.—*Gent. Mag. Fuller's Worthies. Gen. Biog. Dict.*

MULLER (ANDREW) a learned Pomeranian, born in 1630. He came to England, where his celebrity as one of the first Oriental scholars and Biblical critics of the age in which he lived, procured him an engagement among the other learned men who compiled Walton's Polyglott. His other works are, an edition of Abdallah Beidhavi's History of China, in the original Persic, with a Latin version; a work on the Antiquities of the Chinese empire, with notes, entitled, "Monumentum Sini-cum;" a Chinese dictionary; and another treatise on the state of that empire, called "Hebdomas Observationum de Rebus Sini-ci;" "Symbolu Syriaca cum duabus Dissertationibus;" and some other miscellaneous tracts on subjects connected with Eastern literature. Moreri adduces a curious instance of his abstraction and entire devotion to his stu-

dies, to the exclusion of all external objects, his refusal to walk to the window to see Charles the Second's triumphal entry into London on his Restoration. Muller eventually returned to the continent, and died at Stetting in 1694.—*Moreri.*

MULLER (GERARD FREDERICK) a celebrated German traveller, was born in 1705, at Herforden in Westphalia, and was educated at Rinteln and Leipsic, at which latter place he so distinguished himself, that professor Mencke obtained for him the place of adjunct in the historical class of the academy founded by Peter the Great at Petersburg, in which city he also taught Latin, geography, and history. In 1728 he was made under-keeper of the imperial library, and in 1730 he was chosen professor of history. The following year he visited England, and was elected a fellow of the Royal Society, and on his return to Russia he accompanied Gmelin and de l'Isle in a tour through Siberia, which occupied them ten years. In 1744, at the desire of prince Jusupof, Muller wrote "A Dissertation on the Trade of Siberia," which was published in 1750. In 1747 he was created historiographer of Russia, in 1754 secretary of the academy of Sciences, and 1766 keeper of the archives. He died in 1783. His principal work is "A Collection of Russian Histories," in 9 vols. 8vo, which is a storehouse of information with regard to the antiquities, history, geography, and commerce of Russia.—*Coxe's Travels in Russia. Rees's Cyclopaedia.*

MULLER or MULLERUS (JOHN) surnamed Regiomontanus, from Koningsberg (Mons Regius) in Franconia, the place of his nativity. He exhibited great precocity of talent at a very early age, and having received an excellent classical education at Leipsic, placed himself under Purbachius, the celebrated professor of mathematics at Vienna. Under so able an instructor he soon acquired the greatest proficiency, and became one of the first astronomers as well as mechanics of that age. Of his skill in the latter capacity many curious specimens are recorded, such as automata of different descriptions, and other ingenious trifles of art. Muller afterwards, together with Purbachius, accompanied cardinal Bessarion to Rome, where Theodore Beza gave him farther instructions in the abstruser parts of Greek literature, which enabled him to complete a new abridgment in Latin, of the "Almagestum of Ptolemy;" and to correct many serious errors in the former translation made by George of Trebizond. In 1471 he built an observatory at Nuremberg, to assist him in his astronomical pursuits, and established a press; but after a stay of little more than three years, returned once more to Rome, on the invitation of Sixtus IV, who employed him in the reformation of the calendar, and rewarded his services by raising him to the archbishopric of Ratisbon. He did not long survive his elevation, dying in 1476. The manner of his decease is variously related, some authors ascribing it to the plague, while others assert that it was occasioned by poison administered

to him by the son of George of Trebizond, out of revenge for his having superseded the reputation of his father.—*Life by Cassendi.*

MULLER (JOHN VON) a very eminent Swiss historian, born at Schaffhausen, January 3d, 1752. He studied at the university of Göttingen, and was destined for the ecclesiastical profession, but his own inclination led him to devote his attention to history. In 1772 he published at Zurich, the history of the Cimbric war; and he undertook to write the annals of his native country. Returning to Schaffhausen, he was appointed professor of Greek, but he still pursued his favourite studies. In 1780 he published the first part of his "History of the Swiss Confederation;" and shortly after he went to Berlin, where he printed "Historical Essays." He then became professor of history at Cassel; but in 1783 he returned to Switzerland. The elector of Mayence made him his secretary of state and privy-councillor; and he continued at Mayence till that place was taken by the French, when he removed to Vienna. In 1804 he settled at Berlin, where he became attached to the Royal academy, and undertook to write the life of Frederic the Great. The war between Prussia and France occasioned his removal to Paris, and he was appointed secretary of state for the ephemeral kingdom of Westphalia, and afterwards director-general of public instruction. He died May 29th, 1809. Besides the "History of the Helvetic Confederation," translated into French by Labaume, 12 vols. 8vo; and a "Course of Universal History," of which there are French and English translations, he was the author of several other works, published collectively at Tübingen, in 27 vols. 8vo.—*Biog. Univ. Biog. Nouv. des Contemp.*

MULLER (JOHN SEBASTIAN) a German diplomatist and antiquary of eminence in the beginning of the last century. He was secretary and keeper of the public records to the duke of Saxe Weimar, by whom he was often employed in a variety of negotiations, which he conducted with great ability and success. He devoted the latter part of his life to the composition of a work on the history of the family of the prince in whose service he was engaged, which was published at Weimar, 1701, folio, under the title of "Genealogische und Chronologische Tabellen von Chur und Fürstl. Hause zu Sachsen." He died at Weimar in 1708, aged seventy-seven.—*Stollii Introd. in Hist. Lit.*

MULLER (LOUIS) a celebrated Prussian engineer. He served under the great Frederic in the seven years' war; and in 1786 he was appointed captain and director of the studies of the cadets, in the corps of engineers at Berlin. In 1797 he was promoted to the rank of major, and he died in 1804, at the age of seventy. He was the author of a view of the wars of Frederic the Great, and other works relating to the military art, published together at Berlin, 1806, 2 vols. 4to.—*Biog. Univ.*

MULLER (OTTO FREDERICK) an eminent Danish naturalist, born at Copenhagen in 1730

He became tutor to the young count de Schulin, with whom he travelled into the south of Europe. Returning to Copenhagen in 1767, he published, in two volumes octavo, an entomological work, entitled "Fauna Insectorum Friedrichsdaliana," to which was appended, "Flora Friedrichsdaliana." He was then employed by the Danish government to continue the Flora of Denmark, commenced by G. Chr. Oeder, in 1761. Muller was appointed a counsellor of chancery in 1769, and in 1771 archivist of the chancery of Norway. He died in 1784. He published the introductory part of an extensive work on the Zoology of Denmark, which was continued by Abildgaard.—*Biog. Univ.*

MUNCER (THOMAS) or as he is sometimes called, Muntzer, a fanatic, who, in the early part of the sixteenth century, rendered himself for awhile extremely formidable in Germany by his enthusiasm, and the atrocities to which it led. The place of his birth has been variously stated to be Zwickau in Misnia, and Stolberg in the Hartz; it is certain, however, that the latter was the scene of his first appearance in public life, after he had quitted the university of Wittenberg. From being a convert to Lutheranism, he suddenly turned round, declaiming with great violence against the reformed church; and, in conjunction with one Nicholas Stork, a half-crazy anabaptist, not only preached up the necessity of being rebaptised naked, and the practice of the greatest austerities, but the community of goods, and the abolition of all distinctions and temporalities, as contrary to the word of God and the law of nature. His disciples increasing to the number of nearly 40,000, he put himself at their head, and prepared to reduce his principles to practice, by summoning all the princes of Germany to abdicate their thrones, and plundering all the buildings, ecclesiastical and civil, which lay in his line of march. The landgrave of Hesse at length proceeded against him with a strong force, and putting him to the route, with the loss of seven thousand of his deluded followers (to whom he had prophesied a complete victory), chased him to Franchhausen, where he took him prisoner, and executed him shortly after at Mulhausen, in 1526.—*Milner's Church Hist.*

MUNCKLEY, MD. (NICHOLAS) an eminent English physician, who died in 1771. He was a fellow of the Royal Society, and published in the Philosophical Transactions, a "Case of the Efficacy of Bark in the Delirium of Fever;" "An Account of the Comet of May 1759;" and "Observations on the Comet of January 1760, at London;" and he was also the author of a curious "History and Cure of a dangerous Affection of the Œsophagus;" and of "A Case of the Hydrophobia," which appeared in the Medical Transactions.—*Reuss. Ed.*

MUNDAY (ANTHONY) a dramatic writer of the sixteenth century, whose plays and pageants are said to have been popular in their day, though none of them have come down to posterity. Born of a Protestant family, he re-

conciled himself to the Romish church, which he afterwards again abjured, and rendered himself notorious by his treachery to the jesuit, Edmund Campian, executed for high treason, under Elizabeth. Little more is known of him, except that he was afterwards in the service of lord Oxford, and a messenger of the queen's bedchamber. The only work by which he is now known, is an enlarged edition, which he published in 1618, of Stowe's Survey. His death took place in 1633.—*Biog. Dram.*

MUNDINUS or MONDINO, a physician, was born at Milan, and flourished in the fourteenth century. In 1316 he held the professorship of medicine at Bologna. He was the first among the moderns who dissected human bodies, upon which subject he wrote a work, reprinted at least fourteen times, and entitled "Anatomia omnium humani Corporis interiorum Membrorum," Pavia, 1478, folio: with all its errors, which are numerous, it was of real use to the infant science, and the statutes of Padua, and some other medical schools of Italy, prohibited the use of every other work, as a text book for the students of anatomy. Mundinus died at Bologna in 1318.—*Eloy. Dict. Hist. Freind's Hist. of Physic.*

MUNNICH (BURCHARD CHRISTOPHER, count von) a German officer, distinguished in the annals of Russia. He was a native of the dutchy of Oldenburgh, and having adopted the military profession, he served with credit in the wars of Germany. Afterwards going to Russia, he acquired great power under the empress Anne, and in the regency of the grand duchess, and obtained the rank of field-marshal; but on the assumption of imperial authority by Elizabeth, the daughter of Peter the Great, in 1741, marshal von Munnich was condemned to lose his life, which sentence was changed to that of perpetual exile to Siberia. He was, however, recalled from banishment on the accession of Peter III; when he made his appearance at court in the sheep-skin habit which he had been accustomed to wear during his exile. His death took place in 1767, at the age of eighty-four. He was the author of treatises on fortification, and other subjects.—*B. Uni.*

MUNOZ (JOHN BAPTIST) a Spanish historian, was born in 1745, at Museros, a village near Valentia, and studied in the university of Madrid. At the age of twenty-two he wrote prefaces to the rhetoric of Louis of Grenada, and the logic of Vernei, both which displayed great erudition. He was appointed cosmographer of the Indies, in which situation, by order of the king, he began a history of America, of which he lived to publish only one volume, under the title of "Historia del Nuovo Mondo," Madrid, 1795, in folio. His other works, by which he acquired great reputation, are "De Scriptorum gentilium Lectione et Profanarum Disciplinarum Studiis ad Christianæ pietatis Normam exigendis," Valent. 1768; "De recto Philosophiæ recentis in Theologia usu, Dissertatio," *ibid.* 1767; "Institutiones Philosophicæ," *ibid.* 1768; "A Treatise on the Philosophy of Aristotle," &c. 1768.—*Dict. Hist. British Critic*, vol. iiii.

MURAT (JOACHIM) one of the lieutenants of Buonaparte, born March 25, 1771, at la Bastide, near Cahors, in the department of Lot, where his father kept a tavern. Being patronized by an ancient family of Perigord, he obtained a scholarship in the college of Cahors, and finished his studies at Toulouse, with a view to the priesthood. But his disposition induced him to relinquish his prospects, and enlist in the army. Dismissed from his regiment for insubordination, he returned home, and remained there till the formation of the national guard, into which he entered, and was sent to Paris. He left this service, and became sub-lieutenant in a regiment of chasseurs. Displaying an active zeal for revolutionary principles, he was soon advanced to the rank of lieutenant-colonel. The overthrow of the terrorists checked his progress; but he soon recovered his station, and was by the executive directory made a chief of brigade. In 1796 he accompanied Buonaparte to Italy as his aid-de-camp. He was employed by that chief as a diplomatist at Turin and at Genoa; and in 1798 he commanded the army sent to effect the subordination of the Valtelline to the new Cisalpine republic. He followed his leader to Egypt, and distinguished himself at the battle of Mount Tabor, during the Syrian expedition. On his return to France, he afforded Buonaparte material assistance in his progress to the attainment of the sovereignty. He was then made commander of the consular guard, and soon after married to the sister of the first consul, whose favours he profusely experienced. He commanded the cavalry at the battle of Marengo; and in 1802 he governed the Cisalpine republic, with the title of general. In January 1804 he was appointed governor of Paris, with the title of general-in-chief, and he directed the military force when Buonaparte was proclaimed emperor. Soon after he was made a marshal of the empire; and in the campaign of 1806 he repeatedly distinguished himself. Having been invested with the grand-duchy of Berg, he assumed the state of a sovereign prince, and figured as such in two campaigns, particularly at the battle of Jena. He commanded the cavalry at Eylau and at Friedland; and showed himself on every occasion the devoted instrument of his brother-in-law. In 1808 he was sent with an army to Spain, when he effected the temporary submission of that country. On the 1st of August the same year he was proclaimed king of the two Sicilies, and he had reigned peaceably at Naples four years, when he was called upon to join Buonaparte in his Russian expedition. He commanded the cavalry of the French army; and after the defeat of Smolensko he imitated the example of his leader, and left the army for Naples. In the campaign of 1813 he joined the French; but after the loss of the battle of Leipsic, he endeavoured to make terms with the enemies of the emperor. He entered into separate negotiations with England and with Austria, and his vacillating conduct at length proved his ruin, and he was

precipitated from his throne. He then resided for some time at Plaisance, near Toulon, till after the battle of Waterloo, when he took refuge in Corsica. Thence with a few followers he sailed to Italy, in the hope of recovering his crown; but he was made prisoner soon after his landing, and conducted to the castle of Pizzo, where he was shot October 13, 1815.—*Biog. Univ. Biog. Nouv. des Contemp.*

MURATORI (LEWIS ANTHONY) a distinguished Italian antiquary and historian. He was born at Vignola, in the Modenese territories, in 1672. Having adopted the ecclesiastical profession, and received the order of priesthood, he obtained some preferment in the church; but he is said to have appropriated to charitable purposes the greater part of his income arising from this source. He was made keeper of the Ambrosian library at Milan, and subsequently librarian and archivist to the duke of Modena. His literary productions are extremely voluminous, and in general highly valuable; but his fame principally depends on his labours as an editor of the works of others. He published a treatise, "Della Carità Christiana," Mediol. 1723, 4to; "Della perfetta Poesia Italiana," 1706, 2 vols. 4to; "Antiquitates Italicae mediæ ævi," 1738, 6 vols. folio; "Novus Thesaurus Veterum Inscriptionum," 1739, 4 vols. folio; "Anecdota Latina," 4 vols. 4to; "Anecdota Græca," 4to; besides his great historical collection, entitled "Rerum Italicarum Scriptores ab anno Æræ Christianæ 500 ad 1500," 27 vols. folio, of which the two supplementary volumes appeared after his death. He was also the author of "Annali d'Italia," 1744-1749, 12 vols. 4to, repeatedly republished in 18 vols. 8vo; "Dissertazioni sopra Antichità Italiane," 1751, 3 vols. 4to; and several other works. This very erudite and industrious scholar died in 1750.—*Biog. Univ.*

MURET or MURETUS (MARC ANTHONY) a learned French grammarian, so called from a village of the same name in the neighbourhood of Limoges, where he was born in April 1526. He became a pupil of Cæsar Scaliger at Agen, having previously distinguished himself at Auch, and afterwards taught languages at Villeneuve, Poitiers, Bourdeaux, and Paris. In the latter university he was contemporary with Turnebus and George Buchanan, till an accusation of an infamous and disgusting nature caused him to be thrown into prison. At Toulouse, where he had settled, after obtaining his liberation, he taught jurisprudence for some time, when a second charge of a similar nature was brought against him; and in 1554 he and one Memmius Fremoit, a native of Dijon, were condemned to be burnt in effigy. From the indignation of the public he on this occasion escaped, not without difficulty, to Padua, where, as well as at Venice, he continued to give public lectures till 1560, when he accepted an invitation given him by cardinal Ippolito d'Este to Rome. Muret afterwards accompanied his patron to Paris, when the latter went thither in 1562 as the papal legate. After an interval of fourteen years, he took the vows, became a member of the college of je-

suits, and obtained a valuable benefice. His works, consisting of orations, letters, poems sacred hymns, &c.; four disputations on the Pandects, "On the Origin of Laws;" "De Constitutionibus Principum;" "De Legibus et Senatus-consulto;" "Carmina Juvenilia," &c. all written with much purity and elegance, were collected in 1727, and published in three octavo volumes at Verona. Another edition appeared at Leyden in 4 vols. in 1789.—*Moreri.*

MURILLO (BARTOLOMEO ESTEVAN) one of the most pleasing of the Spanish school of painters, was born at Pilas near Seville, in 1613, being descended from an ancient family in the province of Andalusia. He studied under his maternal uncle, Juan del Castillo, a painter of some eminence. The first objects in which he exercised his pencils, were rustics and beggar-boys, in which he discovers a faithful and accurate attention to nature; and an attractive simplicity of character, which is almost peculiar to himself. Encouraged to visit Madrid, he acquired the countenance and patronage of the celebrated painter Velasquez, then in the height of his reputation, who, independently of his own instructions, obtained him a free access to the royal collections. After a few years of study, under these favourable circumstances, he returned to Seville, and resumed the practice of his art, with the most flattering success. Most of the principal churches in Seville, as also in Greuada, Cadiz, and Cordova, are enriched by the labours of his pencil. His last work was the picture of St Catharine, in the church of the Capuchins at Cadiz. While painting this admired picture he fell from the scaffold, and thereby brought on a complaint which terminated his existence in 1685, in his seventy-second year. Few painters have a juster claim to originality of style than Murillo. He is at the same time more distinguished by a close and lively imitation of nature, than by much infusion of the ideal; and his pictures of virgins, lambs, and even saviours, are stamped with the features and characteristic expressions of his country. His colouring, which is clear and harmonious, partakes of the manner both of Titian and Vandyke, and his general manner may be deemed a pleasing medium between the unpolished nature of the Flemish school and the elevated and graceful style of Italy. The character of this eminent painter was very amiable, being equally insensible to ambition and avarice; and such was his benevolence, he died in confined circumstances, although his own conduct was strictly regular, and his remuneration usually ample.—*Bryan's Dict. of Paint. and Eng.*

MURPHY (ARTHUR) an ingenious dramatic and miscellaneous writer, was born at Cloonquin, in the county of Roscommon, Ireland, December 27, 1727. His father, who was a merchant, perished in 1729, on his passage to Philadelphia, in one of his own vessels, so that his education devolved upon his mother, who, at the age of ten, sent him for education to the college of St Omers. Here he remained six years, and on his return was

employed in the counting-house of his uncle, who intended to make him superintendant of a large estate, which he possessed in Jamaica; but his inclination being averse to this destination, he repaired to his mother, then resident in London. In the first instance he accepted a situation in a banking-house, but was soon altogether engrossed by a turn for literature and the drama. In October 1752, he published the first number of the "Gray's Inn Journal," a literary periodical, which made him known to the public as a writer and a critic. He first essayed his dramatic powers in the face of "The Apprentice," which was soon followed by "The Upholsterer," founded on a humorous delineation by Addison, in the *Tatler*. He soon after made an attempt as an actor, in the character of Othello, and held an engagement with Foote for a single season, and then retired, not without incurring a share of ridicule from Charchill. On quitting the stage he determined to study the law, and was admitted a barrister by the society of Lincoln's Inn in 1757. He seems never, however, to have acquired much practice, although he occasionally attended the circuits. In 1759 he produced "The Orphan of China," which he adapted from a tragedy under the same title, by Voltaire; and a variety of other pieces, consisting of tragedy, comedy, and farce, successively proceeded from his pen, for the groundwork of which he was generally indebted to some foreign original. Of these, "The Grecian Daughter;" "The Way to Keep Him;" "All in the Wrong;" and "Know your own Mind," still keep the stage. He also published several occasional poems, and gave Latin versions of some popular English poems, by which he obtained considerable credit as an elegant scholar. At one time too, he engaged in political warfare, as a ministerial pamphleteer, for which he was by no means qualified; and in consequence endured much exposure from the ridicule of Wilkes and Churchill, whose politics he endeavoured to repel. In 1788 he retired altogether from the bar, and occupied himself entirely for the press. In 1792 appeared his "Essay on the Life and Genius of Dr Johnson;" and in 1793 he published his translation of Tacitus, with historical supplements of all the imperfect parts, which respectable, if not masterly performance, he addressed to Mr Burke. In 1798 appeared his tragedy of Arminius; and by his warmth in favour of the then pending war, he entitled himself to the countenance of persons in power, one of whom, lord Loughborough, made him a commissioner of bankrupts, and he also received a pension of 200*l.* per annum. He died in June 1805, in his eighty-fifth year. One of his latest works was, a "Life of Garrick;" and a translation of Sallust from his pen has appeared since his death. His works, so early as 1786, were printed in seven volumes octavo. His later writings are only to be met with separately.—*Biog. Dram. Monthly Rev.*

MURPHY (JAMES CAVANAGH) an eminent English architect, antiquary, and travel-

ler. He was a native of Ireland, and in 1738 he made a voyage to Portugal, when he collected the materials for the following works: "Travels in Portugal in 1789 and 1790," Lond. 1795, 4to; "Plans, Elevations, Sections, and Views of the Church of Batalha, in the Province of Estremadura, in Portugal," 1795, folio. He afterwards published, "Antiquities of the Arabians in Spain," 1816, folio. His death took place in 1816, during the progressive publication of the last-mentioned work.—*Biog. Univ.*

MURR (CHRISTOPHER THEOPHILUS VON) an eminent writer on bibliography and literary history and antiquities. He was born at Nuremberg, in 1755, and died in 1811. He studied in the university of Altdorf, and afterwards visited the public libraries in most of the principal cities in Europe. Returning home, he became director of the customs in his native city in 1770; and having experienced a matrimonial disappointment, he led a life of celibacy, and devoting his leisure to literary pursuits, produced a vast number of learned works, specified in the annexed authorities.—*Biog. Univ. Biog. Nouv. des Contemp.*

MURRAY (ADOLPH) professor of anatomy, and physician to the king of Sweden, was born at Stockholm in 1750, and died at Upsal, May 5, 1803. His father was the minister of the German church at Stockholm, and he was educated at Upsal, and afterwards travelled to Italy. In 1774 he returned to Sweden, to occupy the anatomical chair at Upsal, where he long taught with great reputation. He was a member of the Royal Academy of Stockholm, whose memoirs he enriched with many scientific dissertations; and he published a "Description of the Arteries of the Human Body," of which an English translation appeared at Edinburgh, 1801, 8vo.—MURRAY (JOHN PHILIP) elder brother of the foregoing, was born at Sleswick in 1726, and died in 1776, at Gottingen, where he was professor of history. He translated into German Voltaire's history of Charles XII, and published, in the transactions of the Royal Society of Gottingen, many curious dissertations on the geography and history of the north of Europe.—MURRAY (JOHN ANDREW) another brother of the same family, born in 1740, became professor of medicine and keeper of the botanical garden at Gottingen. Besides many other publications enumerated by Meusel, he was the author of "Enumeratio Librorum præcipuorum Medici argumenti," 1773, 8vo; "A Library of Practical Medicine," 3 vols. 8vo; and, "Apparatus Medicaminum," 1776—1792, 6 vols. 8vo, of which a new edition was published at Gottingen in 1793, 8 vols. 8vo. Professor Murray died in 1791.—*Biog. Univ.*

MURRAY (ALEXANDER) an extraordinary self-taught scholar, was born at Kitterick, in the highlands of Scotland, October 22, 1775. His father was a shepherd, who taught him to read and write at home, after which he was sent to school for two years, at the expense of an uncle; but at the age of ten was em-

ployed to assist the rest of the family as a shepherd's boy. By his own application, he enabled himself to communicate the elements of instruction to others, which assisted him to acquire more education himself; and by extraordinary application he made himself master of the Latin, Greek, Hebrew, and French languages. He also wrote some poems; and the fame of his acquirements at length gained him admission to the university of Edinburgh, in 1794. He devoted much attention to Eastern literature, and having acquired a knowledge of the Abyssinian language, was employed to superintend a new edition of the travels of Bruce. In 1806 he became assistant minister at Urr; and in 1808 was called to fill the chair of Oriental languages at Edinburgh, and created D.D. He did not enjoy this honourable office long, dying of a consumption on the 15th of April, 1813. He left a "History of the European Languages," which was printed, with his life prefixed, 2 vols. 8vo, 1823.—*Life as above.*

MURRAY (CHARLES) an eminent theatrical performer, born at Cheshunt, in Hertfordshire, in 1754. He was the son of sir John Murray, of Broughton, who acted as secretary to the Pretender in 1745, and was arraigned for high-treason, on account of his share in the rebellion, but received the royal pardon. The subject of this article was partly educated in France, and on his return home was apprenticed to a surgeon in London. He then became a surgeon's-mate in the naval service, which he quitted to go on the stage. He made his first appearance at York, in April 1775, under the assumed name of Raymur. He afterwards performed at various other places in the country, and for some time belonged to the theatre of Norwich, where he resumed his family appellation. During the time he remained there, he produced two dramatic pieces, "The New Maid of the Oaks," 1778; and "The Experiment," 1779, both of which were published. From Norwich he went to Bath, where he became a great favorite, and obtained an engagement for five years. His first appearance in London was at Covent-garden, in 1796, in the character of Shylock. At length he became manager of the theatre at Edinburgh, and passed the latter part of his life in that city. He died November 8, 1821.—*Thesp. Dict. New Month. Mag.* vol. vi.

MURRAY (JOHN) an eminent physician, was a native of Scotland, the date of whose birth is not recorded. He was educated at Edinburgh, where he rose to great eminence as a lecturer in natural philosophy, chemistry, the materia medica, and pharmacy. He was the author of "Elements of Chemistry," 2 vols. 8vo; "Elements of Materia Medica and Pharmacy," 2 vols. 8vo; "A System of Chemistry," 4 vols. 8vo; and "A System of Materia Medica and Pharmacy," 2 vols. 8vo. Dr Murray died in the prime of life and reputation, July 22, 1820.—*Gent. Mag.*

MURRAY (LINDLEY) an ingenious grammarian and didactic writer, born in 1745, at

Swetara, near Lancaster, in Pennsylvania. His father, a member of the society of Friends, was originally the proprietor of a flour mill there, but in 1753 became a merchant at New York. It had been his earnest wish to bring up his son to the same profession; but after receiving a good education from a private tutor, he was allowed, at his own desire, to study the law, and was admitted a member of the American bar, and soon after married. His practice as a lawyer was, at first, not very extensive, and received a temporary interruption from a visit which he paid to England; but on his return to New York, in 1771, he resumed it with more success. On the commencement of the disputes with the mother country, Mr Murray, whose religious principles prevented his taking an active part in the struggle, retired to Islip, in Long Island, where he employed the leisure which he possessed in an abortive attempt to manufacture salt. The bar holding out, at this period, but little prospect, he became, like his father, a general merchant, and was so fortunate in his ventures, that about the period of the establishment of American independence, he found himself enabled to retire from business with a handsome competency. But while his pecuniary resources were thus prosperous, his health had received a severe shock, and after vainly trying the most celebrated medicinal springs of America, he was at length induced to take a second voyage to England, the bracing air of Yorkshire being especially recommended for his complaint. At Holdgate, a village within three miles of the capital of that county, he was fortunate enough to find a small estate which exactly suited his wishes. This he soon purchased, and continued to reside upon till his death. For many of the latter years of his life, all exercise, with the exception of occasional airings in his carriage, was too severe for the debilitated state of his frame; his mind, however, continued in full vigour, and the tedium of a protracted confinement was much alleviated by the composition of several instructive works of considerable value and utility. The first of these was a tract entitled, "The Power of Religion on the Mind," of which he printed five hundred copies, and distributed them gratuitously among his friends, till the popularity into which it rose induced him to make a present of the copyright to a London bookseller, under whose auspices it has run through no fewer than seventeen editions. His next work, and that by which he is principally known, was his "English Grammar," first published in 1795, which was succeeded by his "English Exercises," and "Key," calculated to correspond with, and illustrate the Grammar, an abridgment of which treatises was, in 1797, published in conjunction, and met with a most extensive sale, which it still maintains. His other writings are, "The English Reader," with an introduction and sequel, both subsequently composed; two compilations, on the same plan, in the French language, "Le Lecteur François," and "Introduction au Lecteur

François;" "The English Spelling Book," a small volume, compiled with great judgment and ingenuity; a new edition of his Grammar, Exercises, and Key, in two 8vo volumes, which has obtained a highly favorable character; a "Selection from Horne's Commentary on the Psalms;" and "The Duty and Benefit of Reading the Scriptures." Mr Murray was seized with a paralytic affection on the 10th of January, 1826, which, although he experienced a temporary relief from friction, terminated his mortal career on the 16th of the February following.—*Ann. Biog.*

MURRAY (WILLIAM) earl of Mansfield, the fourth son of David, lord Stormont, was born at Perth, in Scotland, March 2, 1705. He received his education at Westminster school, and Christchurch, Oxford, where he proceeded B.A. in 1727, and M.A. in 1730, soon after which he appears to have left the university. He then made the grand tour, and on his return became a student at Lincoln's Inn, and after the usual term of probation was called to the bar. He gradually made his way to eminence in his profession; and in 1742 he was appointed solicitor-general, about which time he also obtained a seat in parliament. After distinguishing himself as an advocate at Edinburgh in 1743, and as one of the managers of the impeachment of lord Lovat in 1747, he succeeded sir Dudley Ryder as attorney-general in 1754, and as chief-justice of the king's bench in 1756; soon after which he was created baron Murray of Mansfield. For a few months, in 1757, he held the office of chancellor of the Exchequer. During that interval, he effected a coalition of parties, which led to the administration of Pitt, afterwards lord Chatham, productive of events which extended the power and influence of Great Britain in various quarters of the world. The same year he declined the offer of the great seal, as he did twice afterwards. A change of parties in the cabinet, in 1765, which introduced into office the marquis of Rockingham and his friends, for a while threw lord Mansfield into the ranks of the opposition. The year 1770 was memorable for attacks on his character in a judicial capacity, in both houses of parliament, which, however, led to no serious result. His conduct on the trial of Woodfall, for publishing Junius's Letters, and on other occasions, when he showed himself the zealous supporter of government, had previously subjected him to the animadversions of the partizans of the popular cause. In October, 1776, he was advanced to the dignity of an earl of Great Britain. During the riots in London, June, 1780, the town house of this nobleman was attacked by the anti-catholic mob, and his valuable collection of books and manuscripts fell a sacrifice to the undistinguishing fury of the ignorant and misled multitude, by whom the mansion was burnt to the ground. He continued for some years longer to exercise his judicial functions with considerable reputation. At length, in 1788, he resigned his office of chief-justice; and the remainder of his life

was spent in retirement, principally at his seat at Caen-wood, near Hampstead. He died March 20, 1793. As a politician, lord Mansfield may be deemed a favourer of high maxims of government in general; and in the law of libel, he supported the opinion, since practically given up, that the jury is the judge of the fact only, and not of the law. He was, however, generally, an enemy to violent exertion of power, as well as a friend to religious toleration. On various occasions he set himself against vexatious prosecutions under intolerant laws; and, as already related, suffered for his vote in favour of the bill for the relief of the Roman Catholics. Indeed, in many instances, his ideas of legislation were large and liberal, although, on the whole, his conduct as a politician is not generally regarded as that part of his public life which does him the most honour. As an orator, he displayed more of the persuasive elegance of Cicero, than of the bold and declamatory force of Demosthenes; but he might fairly have contested the palm of eloquence with any of his contemporaries, except lord Chatham. In reference to his subtle powers of argumentation, lord Ashburton used to say, that when he was wrong, the faults of his reasoning were not easily detected; and when he was right, he was irresistible. His fame will rest chiefly on his conduct as a judge; and it is no mean proof of his sagacity and integrity, that his decisions have rarely been reversed. It has been mentioned, as an instance of disinterestedness, that he would not accept of the legal compensation to which he was entitled for the destruction of his property in 1780.—*Life of Lord M. by Holliday.*

MUSÆUS, a poet and musician of Athens, said by some to have been the son, by others, only the pupil, of Orpheus. The Arundelian marbles fix the æra in which he flourished, about fourteen centuries before the Christian epoch. He was at the head of the Eleusinian mysteries, instituted at Naples, in honour of the goddess Ceres.—There is another Musæus, called the Grammarian, author of a Greek poem on "The Loves of Hero and Leander," which has been frequently reprinted. He is supposed to have lived in the fourth century.—*Vossius de Poet. Græc.*

MUSÆUS (JOHN CHARLES AUGUSTUS) a German writer of eminence, who was professor at the gymnasium of Weimar. His "Popular Tales;"—"Die Deutschen Volksmärchen,"—re-published by Wieland, at Gotha, 1804, 1805, in 5 vols. 8vo; and his "Physiognomical Travels," contribute to vindicate his right to be reckoned among the classic authors of Germany. He died in 1787.—*Zopf. Biog. Univ.*

MUSCHENBROECK (PETER de) an eminent Dutch mathematician and natural philosopher, born in 1692 at Utrecht, or as some say, at Leyden, in both which places he eventually held the professorships of his favourite sciences. Muschenbroeck came to England, where he was elected a fellow of the Royal Society, and afterwards obtained a similar

honour from the Parisian academy of Sciences. The works by which he is principally known, are his "Elementa Physicæ," and his "Compendium Physicæ Experimentalis," 12mo, an excellent English translation of which has been given by Colson, printed together in two octavo volumes. His other writings are "Institutiones Physicæ," 4to; "Tentamina Experimentorum;" and some other useful scientific tracts. His death took place at Leyden in 1761.—*Nouv. Dict. Hist.*

MUSCULUS (WOLFGANG) a celebrated German diviue and reformer, was the son of a cooper, and was born at Dieuze upon Lorraine, in 1497. His parents could give him no education, so that he begged from door to door by singing, until his talents attracting the notice of a convent of Benedictines, they offered to receive him into their order, which he accordingly entered, and applying himself to study, he became a good preacher. About the year 1518 he embraced Lutheranism, which he supported with great zeal; and this, as may be supposed, creating him a great many enemies, he made an open profession of his religion, and fled to Strasburg in 1527, where he soon after publicly married; but having no provision whatever, he was obliged to send his wife to service in a clergyman's family, and bind himself apprentice to a weaver, who soon dismissed him on account of his religious principles. In 1531 he removed to Augsburg, where, on the expulsion of all the priests and monks in 1537, he was made minister of the church consecrated to the Holy Virgin, which he held until 1548, when Charles V, having entered the city and re-established popery, he found it necessary to retire to Switzerland, where, in 1549, he was invited by the magistrates of Berne to the professorship of divinity. He died at Berne in 1563. Musculus was a man of great learning and application, and considerable master of the Greek and Hebrew languages. He translated the "Comment of St Chrysostom upon St Paul's Epistles;" the second volume of the "Works of St Basil;" the "Scholia of the same Father upon the Psalms;" and "The Ecclesiastical History of Eusebius, Socrates, Sozomen, Theodoret, Evagrius, and the History of Polybius." He also published "Comments upon some Parts of both the Old and New Testaments," and was the author of some original works, both in Latin and German, particularly his "Loci Communes," or "Common Places;" which, with other of his tracts, were published in England during the reign of Elizabeth, in conjunction with the writings of the principal foreign reformers.—*Melchior Adam. Gen. Dict. Bæzæ Icones, &c.*

MUSGRAVE (sir RICHARD) an Irish baronet, who was born about 1758. Having married a lady of the family of Cavendish, he obtained, through her connexions, the place of collector of the excise for Dublin, and a seat in the Irish parliament, as well as a baronetcy. He died in 1818. Sir R. Musgrave published "Memoirs of the Rebellions in Ireland," 1801, 4to, in which he exhibited such a picture of the atrocities of the Catholic insurgents in

1798, as provoked the animadversions of some writers of the Catholic party, who questioned the authenticity of his statements.—*Ann. Biog.*

MUSGRAVE (WILLIAM) an eminent English antiquary and physician, born in Somersetshire in 1657. He was educated at Winchester school, whence he removed to New college, Oxford, in 1675, and took the degree of LLB in 1682. He afterwards engaged in the study of medicine, and having graduated as MD. in 1689, he was afterwards admitted a fellow of the Royal College of Physicians. He was also a fellow of the Royal Society, to which he became secretary in 1684. He settled as a medical practitioner at Exeter, in 1691, and long exercised his profession with great reputation and success. He died December 23d, 1721. Dr Musgrave was the author of some Latin tracts on the gout; and various publications, relating to the Roman antiquities of Britain, the most important of which are, "Geta Britannicus," 1715, 8vo; and "Belgium Britannicum," 1719, 8vo.—*Hutchinson's Biog. Med.*—MUSGRAVE, MD. FRS. (SAMUEL) a physician and classical editor, was the grandson of the preceding. He was engaged in medical practice at Exeter, and attracted some notice as a politician, by a vague accusation against the English ministry, of having accepted bribes to conclude a peace advantageous to France in 1763; but he is more advantageously known on account of his attention to Greek literature. He published "Exercitationes in Euripidem," L. Bat. 1762, 8vo; and a complete edition of the tragedies of Euripides, with notes, Oxon. 1778, 4 vols. 4to, reprinted at Glasgow, 1797, 10 vols. 8vo; besides dissertations on the Grecian mythology, and the Olympiads. He died July 4, 1780.—*Nichols's Lit. Anec.*

MUSSATO (ALBERTINO) an Italian poet and historian, was born at Padua in 1261. From a state of great poverty he became notary and pleader of causes, and was made a knight, and admitted to the public council. Towards the close of his life, he was involved in a charge of sedition, brought against his brother and son, and was banished to Chiozza, where he died in 1330. He wrote several Latin poems and tragedies, inserted in the "Thesaurus Hist. Ital." and "Historia Augusta Henrici VII." He also began the "Life of Lewis the Bavarian," but did not live to finish it. They are written with eloquence, and are esteemed the best Latin compositions from the decline of letters to that time.—*Tiraboschi.*

MUSURUS (MARCUS) a learned Greek, was born in the island of Crete, about 1481, and came over to Italy, where he studied under John Lascaris. He became professor of Greek at Padua, and when that university was dissolved, he went to Venice, where he taught publicly for many years. He also assisted Aldus Manutius in his editions of the Greek authors, prefixing Greek epigrams or prefaces of his own. In 1516 he was invited to Rome by Leo X, who made him archbishop of Malvasia; but he did not long enjoy this dignity,

dying the next year, at the early age of thirty-six. Several of his epigrams were published, with his encomium of Plato.—*Hodii Græc. Illust. Tiraboschi.*

MUTIANO (GIROLAMO) an eminent painter, was born at Aquafredda, in the territory of Brescia, in 1528. He visited Venice and Rome, where he was employed by Gregory XIII. in the Capella Gregoriana, and by cardinal Farnese to decorate his vigne at Tivoli. He died at Rome in 1590. His colouring is true and harmonious, and his landscapes are executed in a masterly style, which acquired him the surname of Il Giovanni de' Paesi. His works exhibit much grandeur of design, his heads are dignified and expressive, and he appears to have emulated Buonarotti, whose friend he was, in his display of muscular anatomy.—*Bryan's Dict. of Paint and Eng.*

MUYS (WILLIAM) an eminent Dutch physician and physiologist, born at Steenwyck, in the province of Overysse, in 1682, and died at Francker in 1744. He was the author of "The Elements of Physics," 4to; "Opuscula;" and a treatise, "De virtute Seminali, qua Plantæ et Animalia generi suo propagando sufficiunt," of which a French translation was published under the title of "Dissertation sur la Perfection du Monde Corporel et Intelligent." But he principally distinguished himself by his investigation of the structure of the muscles, of which he gave an account in his *Musculorum Artificioza*

Fabrica," L. Bat. 1751, 4to. He likewise published a tract, "De Salis Ammoniaci in Febribus interminantibus musu," 4to.—*Zopf.*

MYLNE (ROBERT) an architect of considerable eminence, memorable as the builder of Blackfriars bridge across the Thames. He was the son of an architect, who was a magistrate of the city of Edinburgh, where he was born in 1734. After receiving an education adapted to his profession, he was sent to Rome, and while in that capital he had the honour to gain the first prize in the architectural class at the academy of St. Luke. He was also chosen a member of that institution, and of the academies of Florence and of Bologna. Returning home, he established himself in the metropolis, and among other undertakings in which he engaged was the erection of Blackfriars bridge, which was commenced in 1760, and completed in 1770, in a manner highly creditable to the reputation of the artist. It was the first work of the kind executed in this country, in which arches approaching to the form of an ellipsis were substituted for semicircles, by means of which the roadway is brought much nearer to a level surface than in bridges constructed on the old plan. Mr. Mylne obtained the appointment of surveyor of St. Paul's cathedral, and was employed in the erection of many private edifices in various parts of the kingdom. His death took place in 1811.—*Nichols's Lit. Anec. Edit.*
